Notices
Knowledge and best practice in this field are constantly changing. As new research and experience broaden our understanding, changes in research methods, professional practices, or medical treatment may become necessary.

Practitioners and researchers must always rely on their own experience and knowledge in evaluating and using any information, methods, compounds, or experiments described herein. In using such information or methods they should be mindful of their own safety and the safety of others, including parties for whom they have a professional responsibility.

With respect to any drug or pharmaceutical products identified, readers are advised to check the most current information provided (i) on procedures featured or (ii) by the manufacturer of each product to be administered, to verify the recommended dose or formula, the method and duration of administration, and contraindications. It is the responsibility of practitioners, relying on their own experience and knowledge of their patients, to make diagnoses, to determine dosages and the best treatment for each individual patient, and to take all appropriate safety precautions.

To the fullest extent of the law, neither the Publisher nor the authors, contributors, or editors, assume any liability for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions, or ideas contained in the material herein.

Preface to the Fourth Edition

In its fourth edition, the objective of this dictionary remains essentially unchanged – to include all the veterinary technical and scientific words and phrases which veterinary undergraduates, graduates, veterinary technicians and nurses might encounter in their studies and daily work. Our feedback suggests this usage has been very extensive and this has been its most successful function. However, this does not preclude its value as a reference dictionary in public libraries and those of non-veterinary tertiary educational institutions. It is also used by administrative and technical assistants at all levels.

We believe that the dictionary's success has been largely due to the composition of the individual entries. For the most part, they go beyond just defining the word or phrase and give a supplementary description of structure or function. There is a concise description for each disease and the relevance of this is enhanced by the authors' clinical experience. Synonyms are included and cross references are used extensively to enhance usability by readers with all levels of prior knowledge, regardless of their first point of entry into the dictionary. Terms from related disciplines are included, not only because of their relevance to some fields of veterinary practice, but also for the benefit of readers in other related professions, those aspiring to be veterinarians and persons with a general interest in animals who want to learn more about animal health and animal disease.

Professor Virginia Studdert and Professor Clive Gay are senior authors of this edition, assisted by Professor Douglas Blood. Collectively they represent over 120 years of experience in clinical veterinary medicine in several countries and they have published extensively in both text and journal publications in this field. This edition also sees an expansion of expert consultant editors from around the world that individually have recognized species or discipline expertise that contributes to the depth of this edition.

The ever-expanding body of knowledge and range of disciplines being incorporated into veterinary medicine accounts for the growth in terminology and candidate entries for the dictionary. In the preparation of this edition there has been an extensive review of entries, particulary pertaining to clinical veterinary medicine, and the incorporation of new entries, particularly in holistic medicine, camelids and terms of animal husbandry, animal welfare and food safety that relate to veterinary medicine.

The Appendices have been updated with some new additions and all are presented in an improved style for easier reading. A pronunciation guide has been added to entries and the number of illustrations has more than doubled.

In our continuing effort to keep apace with the veterinary vocabulary, the authors invite readers to tell us of word omissions or disciplines overlooked which might be included in the next edition.

Our sincere thanks are due to all the editorial and production staff at Elsevier for all their support and advice.

VetBooks.ir

Notes on the use of this dictionary

VetBooks.ir

This book is a compilation of terms, alphabetically arranged, together with their definitions. In order to economize on space, and to facilitate word searches, a number of conventions have been adopted. These are summarized below.

Terms within this Dictionary are located either as main entries, which are printed in **bold type** (see Section 1 below) or as sub-entries printed in smaller **bold type,** which occur after the main entry and its definition (see Section 2 below).

1 MAIN ENTRIES

The main entries of this Dictionary occur as single words, hyphenated words or two or more words separated by spaces. They are alphabetized as follows:

1.1 Single words: single words, acronyms and abbreviations are alphabetized letter by letter, with capital letters coming *before* lower-case letters. For example:

PT
Pt
pt
PTA
ptarmic
REM
rem
remedy

1.2 Multiple words: main entries of more than one word, which are separated by spaces, hyphens or dashes, are alphabetized according to the first word and then (if needed) according to the second word (or other subsequent words). For example:

heart
heart-base tumor
heart block
heart failure
heart–lung unit
heart sounds
heartbeat
thin
thin ewe syndrome
thin-shelled egg
thin sow syndrome
thinness

(see also Section 1.3 below)

However, where the hyphen simply separates two identical vowels, the word is treated as though it were a single word without a hyphen. For example:

intra-
intra vitam
intra-abdominal
intra-aortic
intra-arterial
intra-articular
intracanalicular

1.3 Compound terms: when a term is composed of two or more words, it will usually be found under more than one of the words, although discretion has been used to avoid unnecessary repetition of the definition. For example, benign prostatic hyperplasia is found under both benign and prostatic, but the main definition is found under prostatic (with appropriate cross-referencing). Similarly, feline sarcoma virus is found under both feline and sarcoma, but the main definition is found under feline, again with appropriate cross-referencing (see Section 3 for an outline of cross-referencing).

1.4 Combining forms (word elements): prefixes and suffixes are listed alphabetically, including any characters in parentheses. For example:

cheilitis
cheil(o)-
cheilognathopalatoschisis
cheilognathoschisis
macrencephalia
macro
macr(o)-
macroamylase

1.5 Terms with unusual characters: certain characters of the main entry are ignored in the alphabetization, i.e. Greek letters, numbers, small capital characters and subscript/superscript characters. For example:

aminophylline
β-aminopropionitrile
4-aminopyridine
aminopyrine
5-aminosalicylic acid
***p*-aminosalicylic acid**
aminosidine
glutamine
β-(γ-l-glutamyl) aminopropionitrile
L-glutamyl-β-cyanoalanine
γ-glutamyl cycle
γ-glutamyl transferase
γ-glutamyl transpeptidase
glutaral

1.6 Eponyms/possessive terms: where the suffix *'s* occurs, it is ignored in the alphabetization. For example:

Cushing's disease
Cushing-like
Cushing response
Cushing suture pattern
Cushing's syndrome
cushingoid
sal
salamander
Sala's cells

1.7 Mc/Mac and St./Saint terms: entries beginning with Mc- are listed as if they were spelled Mac-. Similarly, those beginning St. (for Saint) are listed as if they were spelled Saint.

1.8 Homographs, i.e. words that have the same spelling but have different *etymological derivations* are designated as separate main entries with superscript bold numbers. For example:

lead[1] a chemical element, atomic number 82, . . .
lead[2] 1. . . . electrodes. 2. . . . to facilitate walking a dog.

Not to be confused with different *definitions* of the same word! For example, in the second of the two examples above, there are two different (numbered) definitions. Another example is:

film 1. a thin layer or coating. 2. a thin sheet of material (e.g. gelatin, cellulose acetate) specially treated for use in photography or radiography; . . .

2 SUB-ENTRIES

The term being sought may be a main entry or a sub-entry under the main entry. In general, the word will be a sub-entry if it has a common area of interest with the main entry. The sub-entries are listed alphabetically under the main entry, with the initial letter(s) of the main entry repeated. For example:

chylous
c. ascites
c. effusion
c. hydrothorax

enterocolitis
antibiotic-associated e.
hemorrhagic e.
protochecal e.
pseudomembranous e.

skim milk
s. m. extender
s. m. powder

The alphabetization of sub-entries *ignores* the repeated main entry (and such words as *a, and, in, of, on, the, to,* etc.). For example:

organ
o. of Corti
effector o.
enamel o.
female reproductive o.
genital o.
Golgi tendon o.
Gustatory o.
gustus o.
o. of Jacobson

tendon
bowed t.
calcaneal t.
congenital t. contracture
contracted t's
t. cartilaginous metaplasia
common calcanean t.
congenital t. contracture
contracted t's.
flexor t's.

Occasionally, the repeated main entry is spelt out in full when needed. For example, when the irregular plural form is referred to:

linea
l. aspera
lineae atrophicae

macula
maculae acusticae
m. atrophica

3 CROSS-REFERENCING

Throughout the Dictionary, cross-references are given within the text as **bold**.

When two or several entries have the same meaning (synonyms), we have placed the definition under the most commonly used and best understood term, in our judgment. At the alternative entry(ies), a cross-reference is given. They appear as 'see'. For example:

sand rat see **gerbil.**

rat-tail syndrome
see **sarcocystosis.**

auricular . . .
a. mange
infestation with ear mites. See **otodectic mange.**

gerbil mouse or rat-like, nocturnal creature, sand-colored on top, . . .
sarcocystosis a rare clinical disease but a common clinical condition in all food animal species, caused by the intermediate stage of the protozoan parasite Sarcocystis spp.
otodectic mange the ear and skin disease caused by infestation with *Otodectes cynotis*.

There are also situations where it is simply more convenient to define the word in a different location, to which the reader is then referred.

In some instances it is appropriate to direct the reader to definitions other than that specifically sought. These cross-references are supportive in that they provide ancillary information to the basic definition and act as a cue to consult the related entry. For example:

REM rapid eye movement. See also **sleep.**
Thea chinensis one of the few plants that absorbs fluorine. . . See also **camellia,** which is much more toxic.

uncinariasis the disease caused by uncinaria in cats and dogs. Similar to, but less severe than **ancyclostomiasis** with only mild blood loss and enteritis.

Cross-references are either to main entries (see the examples above) or to sub-entries. In the latter case, only the main entry word(s) appears as small capitals. For example:

wall . . .
abdominal w.
see **abdominal** wall.
abdominal . . .
a. tunic see **tunica** flava abdominis.

galactocerebrosidosis
see globoid cell **leukodystrophy.**

tympanic . . .
t. plexus see tympanic **plexus.**

abdominal . . .
a. wall consists of the parietal peritoneum, . . .

tunica . . .
t. flava abdominis an extensive sheet of elastic tissue that helps to support the abdomen.

leukodystrophy . . .
globoid cell l. an inherited lysosomal storage disease of polled Dorset sheep, cats and dogs, . . .

plexus . . .
tympanic p. a network of nerve fibres supplying the mucous lining of the tympanum and auditory tube.

VetBooks.ir

VetBooks.ir

4 ALTERNATIVE FORMS

In many entries, alternative spellings or terms are given as part of the definition. (These variant terms may or may not be entries elsewhere in the dictionary.) They are indicated by 'called also'. For example:

paraffin . . . Called also alkane, kerosene, lamp oil.

shell rot softening and ulceration of the carapace and plastron of softshell turtles . . . Called also rust, ulcerative shell disease.

5 IRREGULAR PLURALS

Where a noun takes an irregular plural, this is indicated in *italic type* immediately following the abbreviation pl. For example:

fistula pl. *fistulae, fistulas*; any abnormal, tube-like passage. . .

imago pl. *imagoes, imagines* [L.] the adult or definitive form of an insect.

6 TRANSLATIONS

Where a translation of a foreign term occurs, it is indicated in *italic type* immediately following the abbreviation for the language (which is in square brackets). For example:

hydrargyrum [L.] *mercury* (symbol Hg).

-iasis word element [Gr.] *condition, state*.

7 ABBREVIATIONS USED IN THIS DICTIONARY

adj.	**adjective**	**pl.**	**plural**
Af.	**Afrikaans**	**Scand.**	**Scandinavian**
Ar.	**Arabic**	**Span.**	**Spanish**
Fr.	**French**	**spp.**	**species**
Ger.	**German**	**St.**	**Saint**
Gr.	**Greek**	**syn.**	**synonym**
L.	**Latin**		

8 TABLES

All tabular material is presented as an Appendix at the end of the Dictionary.

9 DRUG NAMES

Where possible, only generic names are used.

10 PRONUNCIATION

The pronunciation of key words is indicated by a phonetic respelling that appears in parentheses immediately following each main entry. The most common pronunciation is generally given without listing any variants, although exceptions to this do occur. The phonetic respellings, devised for ease of interpretation, are presented with a minimum of diacritical markings; the only special character used is ə, the schwa, used to represent the unstressed vowel sound heard at the end of *sofa*. The schwa is also used in combination with *r* in unstressed syllables to represent the sound heard in the second syllable of *sulfur* or *other*.

There are several basic rules. An unmarked vowel ending a syllable is long; an unmarked vowel in a syllable ending in a consonant is short. A long vowel in a syllable ending with a consonant is indicated by a macron (ā, ē, ī, ō, ū) and a short vowel that ends or itself constitutes a syllable is indicated by a breve (ă, ĕ, ĭ, ŏ, ŭ).

Primary (′) and secondary (″) stresses are shown in polysyllabic words, with unstressed syllables followed by hyphens, as in *rep″lĭ-kā′shən*. Monosyllables have no stress mark unless they are part of a compound term, in which case each word is given a stress mark for clarity. However, even in compound terms, stresses are omitted from prepositions, conjunctions, and other similar small words.

It is impossible with the dictionary's simplified phonetics to represent the native pronunciations of many foreign words and proper names. These are shown as closely as possible in English phonetics.

PRONUNCIATION GUIDE

VetBooks.ir

A

A accommodation; adenine; ampere; anode (anodal); anterior; axial; mass number.
A_2 aortic second sound (see **heart sounds**).
A_w water activity. Relative to food for human consumption it is an indication of the amount of water available in the food as a substrate for bacterial growth. An A_w of 1 means pure water and no chance of bacterial growth.
Å angstrom.
a- word element. [L.] *without, not*.
α alpha, small letter; first letter in the Greek alphabet.
(A-a) Po_2 alveolar–arterial oxygen tension difference.
A band filaments of myosin forming a dark (anisotropic) band in the sarcomere.
A CRASH PLAN the acronym for a triage system: A= airway; C= circulation; R= respiratory; A= abdomen; S= spine; H= head; P= pelvis; L= limbs; A= arteries and veins; N= nerves.
A fibers nerve fibers in nerve trunks and peripheral nerves which have the fastest rate of transmission of nervous impulses.
A-mode amplitude mode. See A-mode **ultrasonography**.
A–R–F sequence remodeling sequence of bone cell activity; means activation–resorption–formation.
A site see aminoacyl-**tRNA** binding site.
aa. pl. *arteriae* [L.] arteries.
āā [Gr.] *ana* (of each), in prescriptions.
AAALAC Association for Assessment and Accreditation of Laboratory Animal Care.
AAAS American Association for the Advancement of Science.
$AaDo_2$ alveolar-arterial oxygen tension difference.
AAFCO American Association of Feed Control Officials.
AA-MRSA animal-associated methicillin-resistant *Staphylococcus aureus*.
AA protein a product of α-globulin and the major protein component of reactive amyloid.
AAHA American Animal Hospital Association.
AALAS American Association of Laboratory Animal Science
aalveld alveld.
Aanes' method surgical reconstruction after a third-degree perineal laceration in the mare. There are two stages: the first operation constructs a shelf between the rectum and the vagina, the second reconstructs the perineal body.
aardvark (*Orycteropus afer*) a medium-sized, pig-like animal from sub-Saharan Africa. They have a long snout, a massive body, spadelike claws and a short, sparse haircoat. They are gray-brown in color, nocturnal in habit, live in burrows and exist mainly on a diet of ants. Called also earth pig.
aardwolf (*Proteles cristata*) a small African carnivore, member of the family Hyaenidae, but unlike other hyenas they feed mainly on termites and carrion. They have yellow fur with black stripes, live in burrows and are active mainly at night.
AAUAAA sequence see **polyadenylation**.
AAVC American Association of Veterinary Clinicians.
AAVMC Association of American Veterinary Medical Colleges.
AAVSB American Association of Veterinary State Boards.
Ab antibody. Called also gamma globulin (γ). See **immunoglobulin**.
ab [L.] preposition, *from*.
ab- word element. [L.] *from, off, away from*.
abalone ***Haliotis***.
a. viral mortality a viral disease of molluscs with a very high mortality rate. A disease notifiable to the OIE (see Table 22).
abamectin a mixture of avermectins derived from ***Streptomyces avermitilis***.
abandoned patient 1. a patient whose owner cannot be located or is unwilling to take the patient away, sometimes as a result of their inability or refusal to pay for veterinary services provided. 2. legal term in Veterinary practice acts meaning to forsake entirely, to neglect or refuse to provide or perform legal obligations for the care and support of an animal, or to refuse to pay for treatment or other services without an assertion of good cause. Constitutes the relinquishment of all rights and claims by the client to such an animal.
abarticular [*ab"ahr-tik'u-lər*] not affecting a joint; away from a joint.
abarticulation [*ab"ahr-tik"u-la'shən*] a dislocation.
abasia [*ə-ba'zhə*] inability to walk.
a.–astasia astasia–abasia.
a. atactica abasia with uncertain movements, due to a defect of coordination.
choreic a. abasia due to chorea of the limbs.
paralytic a. abasia due to paralysis.
paroxysmal trepidant a. abasia due to spastic stiffening of the limbs on attempting to stand. Called also spastic abasia.
spastic a. see paroxysmal trepidant abasia (above).
trembling a., a. trepidans abasia due to trembling of the limbs.
abattoir a British, European and Australasian term for a facility for the slaughter of animals for human food. In North America this is more comonly called a **meat packing plant**. Called also slaughterhouse.
a. fever see **Q fever**.
abaxial situated away from the axis of the body, limb or part.
abbokinase see **urokinase**.
Abbreviata a genus of nematodes in the subfamily Physalopterinae, parasites of reptiles (especially saurians) or more rarely in amphibians and primates.
ABC 1. aspiration biopsy cytology. 2. a mnemonic for *A*irway, *B*reathing, *C*irculation. See **cardiopulmonary** resuscitation. 3. antecedent, behavior, consequence. See three-term **contingencies**.
ABCDE a mnemonic for advanced life support measures: *A*irway, *B*reathing, *C*irculation, *D*rugs, and *E*lectrical stimulation.
abdomen [*ab'də-mən*] the portion of the body between the thorax and the pelvis containing the abdominal cavity and abdominal organs. See also **abdominal**.
acute a. an acute intra-abdominal condition of abrupt onset, usually associated with pain due to inflammation, perforation, obstruction, infarction or rupture of abdominal organs, and usually requiring emergency intervention. Called also surgical abdomen.
gaunt a. decreased abdominal size.
surgical a. see acute abdomen (above).
abdominal [*ab-dom'ĭ-nəl*] pertaining to, affecting or originating in the abdomen. See also abdominal **paracentesis**, **abdominal sounds**.
a. binding a wide bandage applied to the abdomen to raise intra-abdominal pressure. Its primary purposes are (1) to limit the displacement of the diaphragm during thoracic compression of cardiopulmonary resuscitation, thereby raising intrathoracic pressures achieved and improving forward blood flow, and (2) to maintain blood volume in the central circulation during hemorrhagic shock.
a. breathing an abnormal form of respiratory movement in which the thorax is fixed and the inspiratory and expiratory movement of the lungs are carried out by the diaphragm and the abdominal muscles so that there are exaggerated movements of the abdominal wall.
a. cavity the body cavity between the diaphragm and the pelvis containing the abdominal organs.
a. enlargement may result from fluid effusions (transudate, exudate or blood), enlargement of viscera (neoplasia, dilatation, engorgement or physiological phenomena, e.g. pregnancy), intra-abdominal masses or fat. Weakness of the abdominal wall usually results in a pendulous rather than enlarged abdomen.

VetBooks.ir

A

A-1: Pig with distended abdomen due to rectal stricture causing marked distension of the large intestine.

a. hernia the abnormal protrusion of an organ or tissue through a defect (of traumatic or congenital origin) of the abdominal wall.
a. lavage see abdominal **lavage**.
a. muscle ischemia an unexplained ischemic necrosis of the internal oblique muscle of ewes in late pregnancy which are carrying twins or triplets. Results in ventral hernia but often with little apparent effect on the ease of lambing.
a. muscles the paired muscles of the flank and belly that surround and support the abdominal viscera; made up of the internal and external abdominal obliques, the rectus and the transverse abdominis. See abdominal wall (below).
a. pad see abdominal **pad**.
a. pain may arise from an abdominal organ, the peritoneum or be referred as from spinal nerves.
a. regions arbitrary, descriptive subdivisions of the abdomen made up of three groups of three (like a noughts-and-crosses grid), three along the middle—xiphoid, umbilical and pubic, and three lateral pairs—hypochondriac, lateral abdominal and inguinal.
a. silhouette the shape of the abdomen viewed from behind.
a. trier see **trier**.
a. tunic see **tunica** flava abdominis.
a. viscera the organs contained within the abdominal cavity; they include the stomach, intestines, liver, spleen, pancreas, and parts of the urinary and reproductive tracts.
a. wall the fibro-muscular sheet that encloses the abdominal organs; its deepest layer consists of the parietal peritoneum, the deep and superficial layers of fascia, the transverse abdominal, internal and external abdominal oblique muscles, the subcutaneous tissue and finally the skin. It contains the linea alba and the umbilicus, the cicatrix marking the entry point of the umbilical cord, and is traversed by the inguinal canal, and at its caudal extremity carries the prepubic tendon, the ventral attachment of the wall to the pubic bones.
a. wall rigidity reflex response to pain of peritonitis, accompanied by pain on palpation or percussion.
abdominal sounds [*ab-dom'ĭ-nal soundz*] sounds heard on auscultation of the abdomen.
abdomin(o)- word element, *abdomen*.
abdominocentesis [*ab-dom"ĭ-no-sen-te'sis*] paracentesis of the abdomen. See also abdominal **paracentesis**.
abdominohysterotomy [*ab-dom"ĭ-no-his"tər-ot'ə-me*] hysterotomy through an abdominal incision.
abdominoparacentesis [*ab-dom"ĭ-no par"ə-sen-te'sis*] abdominocentesis.
abdominoscope [*ab-dom"ĭ-no skōp*] an endoscope that, by passage through the abdominal wall into the abdominal cavity, permits direct visualization of the abdomen and its contents. See also **laparoscope**.
abdominoscopy [*ab-dom"ĭ-nos'kə-pe*] examination of the abdomen and its contents with an endoscopic instrument inserted through the abdominal wall. See also **laparoscopy**.
abduce to abduct, or draw away.
abducens [*ab-doo'sənz*] [L.] *drawing away*; pertaining to a movement away from the midline of the body.
a. nerve see **abducent** nerve, and Table 14.
abducent [*ab-doo'sənt*] abducting.
a. nerve either of the paired sixth cranial nerves; each arises from the pons and supplies the lateral rectus and retractor bulbi muscles of the eye, allowing for motion. Paralysis of the nerve causes a medial strabismus and absence of third eyelid protrusion when the corneal reflex is tested. See also Table 14.
abduct [*ab-dukt'*] to draw away from an axis or the median plane.
abduction [*ab-duk'shən*] the act of abducting; the state of being abducted. For a digit, the drawing away from the axis of the limb.
abductor [*ab-duk'tor*] that which abducts.
Aberdeen Angus a black, polled, popular breed of beef cattle that originated in the counties of Aberdeen and Angus in NE Scotland. It is considered by many to have major advantages over other beef breeds in desirable carcass characteristics and was arguably the first breed to have a branded beef program (certified Angus beef®).
aberrant pigment metabolism [*ă-ber'ənt pig'mənt mə-tab'ə-liz"əm*] see inherited **porphyria**.
aberration [*ab"ər-a'shən*] 1. deviation from the normal or usual. 2. imperfect refraction or focalization of a lens, e.g. the lens of the eye.
chromatic a. color distortion in an image caused by the inability of the lens to bring the various colors of light to focus at a single point due to their different refrangibility. In an optical instrument such as a microscope this represents an error in the lens system.
spherical a. defocused image due to light from the margin of a spherical lens coming to a shorter focus than light from the central portion. In an optical instrument this represents a fault in construction.
Abildgaard method named after P.C. Abildgaard, a Danish veterinarian; a method of casting horses and cattle. The horse method is a combination of sidelines and hobbles in which all four feet are included in a rope and harness system which brings all four hooves up to the belly. The cattle method is also one in which all four hooves are trapped and pulled together, but they are not brought up to the midline. The harness is made entirely of rope.
abiosis [*a"bi-o'sis*] absence or deficiency of life.
abiotrophic disease [*a"bi-o-tro'fik*] see **abiotrophy**.
abiotrophy [*a"bi-ot'rə-fe*] inherited developmental defect resulting in a lack of a biologic substance within a cell type which is necessary for the maintenance of that cell and which leads to premature degeneration.
cerebellar a. occurs in Arabian horses, cattle, pigs and dogs. Affected young are normal at birth but at an early age ataxia and signs of cerebellar dysfunction appear, often progressing to complete immobilization. Cerebral function is usually normal. An inherited basis is suspected. In Kerry blue terriers, it is inherited as an autosomal recessive trait. Called also cerebellar neuronal abiotrophy.
cochlear a. an inherited degeneration of the cochlear duct of dogs causing deafness which becomes evident after several weeks of age.
hereditary neuronal a. of Swedish Lapland dogs an autosomal recessive trait with lower motor neuron abiotrophy causing arthrogryposis, tetraplegia and muscle atrophy from 5 weeks of age.
spinal cord a. see hereditary neuronal abiotrophy of Swedish Lapland dogs (above).
abirritant 1. diminishing irritation; soothing. 2. an agent that relieves irritation.
abirritation [*ab-ir-ĭ-ta'shən*] diminished irritability; atony.
ablactation [*ab"lak-ta'shən*] weaning.
ablastin [*a"blas'tin*] an antibody that inhibits the reproduction of some protozoan parasites.
ablate [*ab-lāt'*] to remove, especially by surgical means.
ablatio [*ab-la'she-o*] [L.] *detachment*.
a. retinae detachment of the retina.
ablation [*ab-la'shən*] 1. separation or detachment; extirpation; eradication. 2. removal, especially by cutting.

A-2: A needle is slowly introduced into the peritoneal cavity on midline 2–3 cm caudal to the umbilicus for abdominocentesis.
From Taylor SM, Small Animal Clinical Techniques. Saunders 2010.

VetBooks.ir

ear canal a. a surgical procedure in which the cartilaginous external ear canal is removed. Indicated in neoplasia of the canal or chronic otitis externa in dogs which are unresponsive to all other forms of treatment.
scrotal a. removal of the scrotal sac, usually because of trauma or neoplasia or in association with scrotal **urethrostomy**.
subconjunctival a. a method of removal or enucleation in which the globe is removed leaving the conjunctiva.
ablepharia [*a"blĕ-far'e-ə*] congenital absence of the eyelids.
ablepharon [*a"blef'ə-ron*] see **ablepharia**.
abluent [*ab'loo-ənt*] 1. detergent; cleansing. 2. a cleansing agent.
abnormality [*ab"nor-mal'ĭ-te*] 1. the state of being unlike the usual condition. 2. a malformation.
inherited a. a defect of anatomy or function acquired by the patient from its parents by way of inherited material passed through the germ cells from which the patient originated. See also **inheritance**.
abnutzen pigment see **lipofuscin**.
abomasal [*ab"o-ma'səl*] pertaining to, affecting or originating from the abomasum.
a. anterior displacement syndrome in cattle in which the abomasum is displaced anteriorly to a position between the reticulum and the diaphragm; characterized clinically by anorexia, ketonuria, and absence of abomasal sounds in the right or left flanks as in right or left displacement.
a. atony lack of tone of abomasal wall, thought to be basic cause of displacements and torsion. Possibly due to prolonged feeding on finely ground concentrates.
a. bloat distention of abomasum with gas produced by fermentation of milk in abomasum of young ruminants, especially artificially reared lambs fed large volumes of warm milk infrequently. See **Sarcina**-like organisms.
a. dilatation see right abomasal displacement (below).
a. displacement see left abomasal displacement, right abomasal displacement (below).
a. emptying defect wasting disease of long clinical course and poor prognosis, particularly in Suffolk sheep, in which the defining feature is a markedly distended and impacted abomasum. Possibly an acquired form of dysautonomia.
a. fundus the cranial blind end of the abomasum, lying over the xiphoid process of the sternum and to the right of the reticulum; not readily distinguished from the body of the abomasum (corpus abomasi). Called also *fundus abomasi*.
a. gastrocentesis cannulation of a distended abomasum, usually through the right flank, to allow evacuation of the distending gas. The technique may be used for diagnostic reasons, but is more commonly used therapeutically to gain temporary relief for the animal before surgery is undertaken.
a. groove the third and last part of the gastric groove of ruminants that occupies the lesser curvature of the abomasum and which is free from mucosal folds. See also gastric **groove**. Called also *sulcus abomasi*.
a. impaction a disease of beef cows with large energy requirements, e.g. during very cold weather or when fed poor quality roughage with low energy content and poor digestibility. The abomasum impacts with dry roughage and the abdomen distends on the right; clinical signs are scant feces and emaciation.
left a. displacement chronic disease of high producing, recently calved cows with anorexia, ketosis and abdominal gauntness and characterized by a distended abomasum trapped under the rumen, detectable on the left side by poorly audible reticulorumen movements and the presence of a ping on percussion over the left paralumbar fossa and cranial to it. Fatty liver and abomasal ulcers are possible complications. Corrected by surgical methods.
a. perforation may be perforation by erosion through a preexisting ulcer, or by rupture along the greater curvature due to dilatation. Perforation results in acute or peracute peritonitis; rupture is followed by sudden death. See also abomasal ulcer (below).
a. phytobezoar see **phytobezoar**.
a. reflux the reflux of fluid from the abomasum into the rumen that occurs when flow to the intestine from the abomasum is obstructed. Rumen chloride concentrations increase, there is a fall in the buffering capacity of the rumen and a hypochloremic, hypokalemic metabolic alkalosis. See also **intestinal** obstruction, **pyloric** obstruction.
right a. displacement a disease of recently calved cows characterized by anorexia, depression, absence of rumination, scant abnormal feces, distention of right abdomen, ping over right flank, and fluid splashing sounds on the ballottement of the right flank. Corrected by deflation of the abomasum or surgery. May terminate as abomasal volvulus.
a. rupture see abomasal perforation (above).
a. torsion see abomasal volvulus (below).
a. trichobezoar see **trichobezoar**.
a. tympany see abomasal bloat (above).
a. ulcer many calves have clinically silent ulcers during the period of change from a milk diet to one of fiber. In adult animals the ulcer may be hemorrhagic, with a sudden onset of subacute abdominal pain with alimentary tract stasis and heavily blood-tinged feces, or perforating. See abomasal perforation (above).
a. volvulus a disease of sudden onset in dairy cows, often following a subacute illness due to abomasal dilatation. There is shock, acute abdominal pain, distention of the right abdomen with sounds of fluid present, blood-stained feces and a fatal outcome in 24–48 hours.
abomasitis [*ab"o-mə-si'tis*] inflammation of abomasum; occurs as part of many gastroenteritides but seldom diagnosed as a separate condition. The organ's location aboral to the forestomachs provides some protection against dietary insults. Abomasitis caused by *Clostridium sordelli* is an emerging problem in sheep in Great Britain, manifest with sudden death. Lambs between 6 and 10 weeks are particularly at risk. See also **abomasum**.
abomasopexy [*ab"o-ma'so-pek"se*] fixation of the replaced abomasum, after correction of a displacement, by suturing the abomasal wall or its attached omentum to the abdominal wall. See also **omentofixation**.
abomasotomy [*ab"o-ma-sot'ə-me*] surgical opening of the abomasum, usually to remove impacted food or foreign material, especially phytobezoars.
abomasum [*ab"o-ma'sum*] the fourth and glandular compartment of the ruminant stomach. It is an elongated sac, comparable in structure and function to the simple stomach of nonruminants. It lies in the right half of the abdominal cavity, largely on the abdominal floor, except in late pregnancy when it is pushed cranially by the enlarging uterus and may also be lifted from the abdominal floor. See also **abomasal**, **forestomachs**.
Abondance cattle French breed of dual-purpose cattle, mostly red, some red on belly and extremities.
aborad [*ab-or'ad*] away from the mouth; aborally. A useful term to describe a location along the digestive tract when terms like cranial and caudal are inappropriate. See also **orad**.
aboral [*ab-or'əl*] away from the mouth.
abort [*ə-bort'*] 1. to arrest prematurely a disease or developmental process. 2. to expel the products of conception before the fetus is viable.
abortifacient [*ə-bor"tĭ-fa'shənt*] 1. causing abortion. 2. an agent that induces abortion.
abortion [*ə-bor'shən*] premature expulsion from the uterus of the products of conception; termination of pregnancy before the fetus is viable.
artificial a. voluntary or elective termination of pregnancy. See also **parturition** induction.
campylobacter a. see infectious abortion (below).
complete a. complete expulsion of all the products of conception.
early a. abortion within the first third of pregnancy. Defined also as an early pregnancy loss (EPL), early embryo loss (EEL) or early embryonic death (EED). In cattle and horses most of these losses occur in the first 50–60 days of pregnancy.
epizootic bovine a. characterized by serious fetal disease followed by abortion or birth of weak calves. Endemic in California's coastal range and in the foothill region of the Sierra Nevada, USA. Necropsy findings in the fetus are diagnostic; they include profuse petechiation and severe granulomatous hepatitis. Cause appears to be a novel deltaproteobacterium closely related to members of the order *Myxococcales*. Transmitted by the tick, *Ornithodoros coriaceus*. Called also foothill abortion.
habitual a. spontaneous abortion occurring in three or more successive pregnancies. An inherited disorder of older Angora goats which is the result of adrenal malfunction. Goats abort around 100 days of pregnancy. Affected does have fine hair coats and high yield. Also described in alpacas as a result of low circulating progesterone.

VetBooks.ir

A

incomplete a. abortion in which parts of the products of conception are retained in the uterus.

induced a. abortion procured by the veterinarian to eliminate a misalliance, to reduce wastage in animals in a feedlot, to encourage commencement of lactation earlier than would otherwise occur. In large animals (equine and bovine), manipulation through the rectal wall is a possible way of destroying the viability of the fetus. Induction by the administration of prostaglandins or corticosteroids is more usual. See also **pregnancy** termination.

infectious a. the common causes in the various species are: CATTLE: *Brucella abortus* (brucellosis); *Campylobacter fetus* subsp. *venerealis* (bovine genital campylobacteriosis); *Campylobacter fetus* subsp. *fetus*; *Leptospira pomona*, *L. hardjo* (leptospirosis); *Listeria monocytogenes* (listeriosis); *Arcanobacterium pyogenes; Aspergillus, Lichtheimia* and *Mucor* spp. (fungal abortion); bovine virus diarrhea virus; infectious bovine rhinotracheitis herpesvirus; *Chlamydophila abortus*; a deltaproteobacterium (epizootic bovine **abortion**); *Coxiella burnetii* (Q fever), *Neospora caninum*. SHEEP AND GOATS: *Campylobacter fetus* subsp. *fetus*; *Campylobacter jejuni; Chlamydophila abortus* (**enzootic** abortion of ewes); *Listeria monocytogenes* (listeriosis); *Salmonella abortus-ovis*; *Brucella melitensis; Toxoplasma gondii* (toxoplasmosis); *Brucella ovis* (limited occurrence); bluetongue virus; border disease, *Coxiella burnetti* (Q fever). HORSES: *Streptococcus equi* subsp *zooepidemicus; Actinobacillus equuli, A. equisimilis; Crossiella equi, Rhodococcus equi*; leptospirosis, most commonly the pomona serogroup and less frequently serovar grippotyphosa; equine herpesvirus (EHV1); equine viral arteritis (EVA); equine arteritis; Potomac horse fever; and in the USA the mare reproductive loss syndrome associated with ingestion of the Eastern tent caterpillar *Malacosoma americanum*. PIGS: *Leptospira pomona*, *L. grippotyphosa*, *L. canicola*, *L. icterohaemorrhagiae* (leptospirosis); *Erysipelothrix rhusiopathiae* (erysipelas); porcine reproductive respiratory syndrome (PRRS) virus; parvovirus; porcine circovirus 2; Aujesky's disease; classical swine fever; and African swine fever. CAMELIDS: *Campylobacter fetus* subsp. *fetus* (vibriosis); *Chlamydophila abortus*; *Listeria monocytogenes* (listeriosis); *Brucella melitensis, B. abortus, Toxoplasma gondii* (toxoplasmosis); bovine virus diarrhea virus; *Leptospira* spp.; *Neospora caninum*; *Coxiella burnettii* (Q fever); *Streptococcus equi* subsp. *zooepidemicus*. DOGS AND CATS: *Brucella canis*, feline leukemia virus, feline herpesvirus.

missed a. the animal was diagnosed pregnant, but found later to be open.

pine needle a. a late-term abortion with retained fetal membranes in cattle caused by ingestion of isocupressic acid in the needles of *Pinus* spp., commonly *P. ponderosa*, but also *P. jeffryi, P. contorta and Juniperus scopulorum* and *J. communis.* Nutrient deficiency and tree management practices may promote ingestion off the ground as cattle graze through while eating early growing spring grass.

a. rate number of abortions as a percentage of the cows in the herd which were diagnosed pregnant in early pregnancy; the target is less than 2% but rates commonly approach 8% in dairy cattle and 5% in beef cattle.

septic a. abortion associated with serious infection of the uterus leading to generalized infection.

spontaneous a. abortion occurring naturally. See also **spontaneous** abortion.

a. storm a cluster of abortions occurring at about the same time or in rapid sequence within a group of pregnant females. See also equine **viral** abortion.

therapeutic a. abortion induced by a veterinarian for medical or other health reasons.

abortive [*ə-bor'tiv*] 1. incompletely developed. 2. abortifacient.

abortus [*ə-bor'təs*] a dead or nonviable fetus.

ABP see **androgen** binding protein.

ABPEE acronym for acute bovine pulmonary emphysema–edema. See **atypical interstitial pneumonia**.

ABR auditory brainstem response.

ABR test abortus-bang-ring test. See also **brucellosis** testing, **milk** ring test.

abrachia [*ə-bra'ke-ə*] congenital absence of the forelimbs.

abrachiocephalia [*ə-brā"ke-o-sĕ-fa'le-ə*] acephalobrachia.

abrasion [*ə-bra'zhən*] a wound caused by rubbing or scraping the skin or mucous membrane. A 'skinned knee' and a 'rope burn' are common examples.

dental a. abnormal wearing away of tooth substance caused by mechanical process such as chewing of rocks or metal cages. Compare with dental **attrition**.

abrasive [*ə-bra'siv*] 1. causing abrasion. 2. an agent that produces abrasion.

abrin [*a'brin*] lectin or toxalbumin consisting of two peptide chains linked by a disulfide bridge in the seeds of *Abrus precatorius*. Causes gastroenteritis, liver necrosis and sometimes convulsions.

Abrus [*a'brəs*] pantropical plant genus of the legume family Fabaceae.

A. precatorius seeds contain a toxin, abrin, which causes gastroenteritis, liver necrosis and convulsions. Dogs have been poisoned by chewing on necklaces and jewelry made from the seeds (beans). Called also jequirity, love precatory, lucky or paternoster bean, rosary or coral pea, crab's eye, minnie-minnie, Indian liquorice.

abscess [*ab'ses*] a localized collection of pus in a cavity formed by the disintegration of tissue. Most abscesses are formed by invasion of tissues by bacteria, but some are caused by fungi or protozoa or even helminths, and some are sterile. They are usually separated from parent tissue by a fibrous tissue capsule, and are examples of chronic inflammation. For specific abscesses see under anatomical sites, e.g. brain abscess.

apical a. a localized suppurative inflammation of tissues about the apex of a tooth root.

Brodie's a. a circumscribed abscess in bone, caused by hematogenous infection that becomes a chronic nidus of infection.

cervical a. see **vertebral** abscess.

cold a. one of slow development, little local irritation and hence minimal fibrous encapsulation, e.g. caseous lymphadenitis of sheep and goat.

cornea stromal a. abscesses within the corneal stroma due to bacteria or fungi which gain entry through ulcers or punctures that subsequently re-epithelialize. Particularly important in horses.

diffuse a. a collection of pus not enclosed by a capsule. More properly described as **cellulitis**.

facial subcutaneous a. a disease of cattle eating hay or pasture containing mature grass awns.

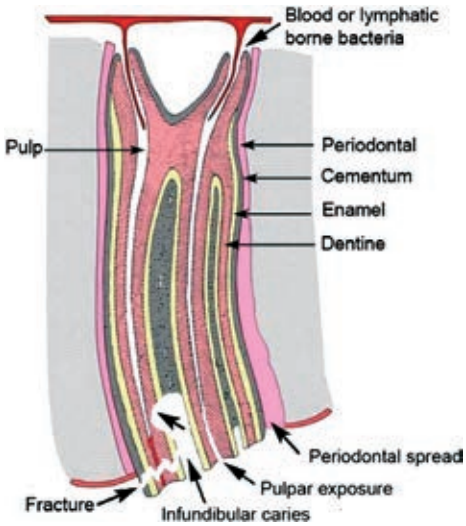
gas a. one containing gas, caused by gas-forming bacteria such as *Clostridium perfringens*.

grass seed a. in cattle occurs as a subcutaneous abscess at the throat or on the mandible and is often diagnosed but rarely confirmed. In dogs it occurs in many sites, but most commonly between the toes. The causative grass awn(s) may be recovered by forceps or, in more extensive lesions, surgical exploration.

hepatic a. abscess of the liver caused by a variety of infectious agents.

infraorbital a. occurs in birds as a sequel to chronic upper respiratory infection with sinusitis.

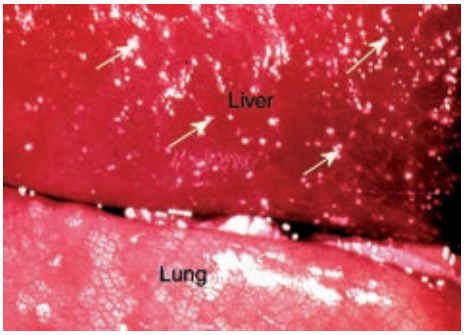
injection site a. an iatrogenic lesion resulting from incomplete skin disinfection before injection; usually contains *Arcanobacterium pyogenes* and anaerobes in cattle, and commonly contain



A-3: Potential routes of apical infectiion of equine maxillary cheek teeth.
From Dacre IT, Kempson S, Dixon PM: Pathological studies of cheek teeth apical infections in the horse: 5. Aetiopathological findings in 57 apically infected maxillary cheek teeth and histological and ultrastructural findings. Vet J 178:352-368, 2008. Elsevier.

VetBooks.ir

anaerobes in other species. Sterile abscesses can occur from reaction to the material injected, for example copper glycinate.
internal abdominal a. see **retroperitoneal** abscess.
intra-abdominal a. include diaphragmatic, mesenteric, retroperitoneal; many are subclinical; clinical signs include those of chronic peritonitis. Called also omental bursitis.
maxillary a. see **malar** abscess.
mediastinal a. a very large abscess in this site may cause signs of congestive heart failure due to compression of pericardium and venae cavae.
miliary a. one of a set of small abscesses; the name derived from millet seed (size).
milk a. abscess of the mammary gland occurring during lactation.
pancreatic a. abscess of the pancreas, most commonly seen as a sequel to pancreatitis.
pectoral a. a disease of horses in which abscesses occur in the pectoral muscles and ventral midline, and in some cases in internal organs, causing local pain and swelling and eventually rupturing and draining to the exterior. Endemic to areas of California, Texas and Colorado in the USA where it is also known as pigeon fever and has epidemic occurrence in the autumn of some years with possible insect vector transmission. Caused by *Corynebacterium pseudotuberculosis*.
periapical a. inflammation and destruction of dental pulp and surrounding tissues, including the periodontal membrane and alveolar bone. The radiographic appearance is a translucency of the tooth apex and adjacent alveolar bone. Most common in dogs.
periorbital a. firm masses above or below the eyes occur in birds as a sequel to chronic respiratory disease and sinusitis.
phlegmonous a. one associated with acute inflammation of the subcutaneous connective tissue; more properly called **cellulitis**.
phoenix a. acute recurrence of a chronic periapical abscess.
primary a. one formed at the seat of the infection.
prostatic a. of the prostate galnd, most commonly seen in entire male dogs and commonly containing *Escherichia coli, Proteus* spp., staphylococci, streptococci and *Pseudomonas*.
rete mirabile a. see **pituitary** abscess.
retroarticular a. one located between the intermediate phalanx and the deep flexor tendon in the hooves of cattle. It may be caused by extension of infection from the navicular bursa or from suppurative arthritis of the distal interphalangeal joint.
retrobulbar a. abscess within the orbit behind the globe; causes pain on opening of the mouth, chemosis and exophthalmos, protrusion of the nictitating membrane, and sometimes systemic signs of infection. Most common in dogs and cats.
stitch a., suture a. one developed about a stitch or suture.
vertebral body/epidural a. usually of cervical or lumbar vertebrae; causes compression of the spinal cord resulting in clinical signs of pain, ataxia and paresis.
wandering a. one that escapes from its fibrous capsule, tracks through adjacent tissue and may discharge at a distance from the site of origin.



A-4: Miliary abscesses in the liver of a near-term aborted lamb.

A-5: Pectoral abscess (pigeon fever) with swelling of the left pectoral region and the lower neck.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

abscessation formation of an abscess.
abscise to cut off or remove.
abscissa [*ab-sis'ə*] the distance of the x-coordinate along the horizontal or x-axis from the vertical or y-axis in a rectangular coordinate system. Also, now commonly used as an alternate term for the horizontal or x-axis of a graph.
abscission [*ab-sĭ'zhən*] removal of a part or growth by cutting.
abscopal [*ab-sko'pəl*] pertaining to the effect on nonirradiated tissue resulting from irradiation of other tissues of the body.
Absidia see ***Lichtheimia***.
absorb [*ab-sorb'*] 1. to take in or assimilate, as to take up substances into or across tissues, e.g. the skin or intestine. 2. to stop particles of radiation so that their energy is totally transferred to the absorbing material.
absorbance [*ab-sor'bəns*] in radiology, a measure of the ability of a medium to absorb radiation, expressed as the logarithm of the quotient of the intensity of the radiation entering the medium divided by that leaving it.
absorbefacient [*ab-sor"bə-fa'shənt*] 1. causing absorption. 2. an agent that promotes absorption.
absorbent [*ab-sor'bənt*] 1. able to take in, or suck up and incorporate. 2. a tissue structure, lymphatic or other vessel, involved in absorption. 3. a substance that absorbs or promotes absorption. Absorbents used pharmaceutically are usually finely ground inert substances applied locally to prevent friction and reduce tissue irritation, e.g. talc, zinc stearate, a mixture of boric acid and calcium oxide. Similar substances, e.g. finely ground charcoal, kaolin, are administered orally for the same purposes and also to absorb toxins.
absorption [*ab-sorp'shən*] 1. the act of taking up or in by specific chemical or molecular action; especially the passage of liquids or other substances through a surface of the body into body fluids and tissues, as in the absorption of the end products of **digestion** into the villi that line the intestine. 2. in radiology, uptake of energy by matter with which the radiation interacts.
chemical a. any process by which one substance in liquid or solid form penetrates the surface of another substance.
Compton a. effect see **Compton effect**.
differential a. the difference in the absorption of X-rays by different tissues.
digestive a. the passage of the end products of **digestion** from the gastrointestinal tract into the blood and lymphatic vessels and the cells of tissues. Absorption of this kind can take place either by diffusion or by active transport.
percutaneous a. absorption of drugs or noxious substances through the skin.
radiation a. the dissipation of radiant energy as it passes through matter. This phenomenon is of particular importance in diagnostic and therapeutic radiology, which depends on the interaction between ionizing radiations and matter. As radiation passes through matter, it is absorbed by an amount dependent on the atomic and molecular structure and thickness of the substance, and the energy of the primary photons. If radiations pass through a medium of living or nonliving material without absorption (loss of energy), no biological or photographic effects can occur. In true absorption the photons of radiation waves give up or transfer all of their energy to electrons within the atoms of the matter through which they are passing.
a. tests are used to assess absorptive function of the small intestine. Glucose, D-xylose and fats are substances administered orally and at timed intervals later measured in the blood. See also digestive absorption (above), **fat** absorption test.
absorptive [*ab-sorp'tiv*] having the power of absorption; involving absorption.

VetBooks.ir

A

abtorsion [*ab-tor'shən*] outward rotation of the globe around the line of sight when the eye is at its central primary position.

abu nini [Sudanese] see **contagious** caprine/ovine pleuropneumonia.

abuse [*ə-būs'*] misuse, maltreatment or excessive use.

animal a. a modern day concept by which the trust that animals should have in humans, in return for the benefits that they bestow, is betrayed when humans abuse animals physically or psychologically. The abuses often stop short of cruelty in a legal sense but can be classified as harassment. The term has a variable but generally wide scope and includes physical cruelty by assault, by deprivation of adequate food, water, transport and shelter, and proper care during illness, pregnancy and parturition, and participation in sporting events at a level beyond the animal's capacity to perform. This form of abuse covers such misuses as excessively arduous endurance rides, ignominious performances and exhibits, oppressive displays of obedience. Mental or psychological abuse is less readily defined but in today's culture is usually taken to include undue confinement, demeaning performance as entertainment and harassment by teasing.

ABVP American Board of Veterinary Practitioners.

Abyssinian 1. a mediumhaired breed of domestic cat with yellow or green eyes and a characteristic coat that results from the double or triple bars of pigmentation (agouti ticking) on individual hairs giving an appearance similar to that of a hare. The breed is affected by amyloidosis and retinal atrophy. 2. a variety of **guinea pig** with harsh coat that forms swirls and rosettes.

Ac chemical symbol, *actinium*.

a.c. [L.] *ante cibum* (before meals).

Acacia [*ə-ka'shə*] a large genus of trees and shrubs of warm, dry regions, belonging to the legume family Mimosaceae, which provides valuable browse for grazing ruminants but also contains some poisonous plants. About 5% of Australian *Acacia* spp. are cyanogenic. *Acacia* spp. capable of causing cyanide poisoning: *A. atkinsiana*, *A. binerva* (*A. glaucescens*), *A. blakei*, *A. burrowii*, *A. caffra*, *A. caroleae*, *A. cheelii* (*motherumbah*), *A. concurrens* (*A. cunninghamii*), *A. conniana* (*A. cognata*), *A. crassa* (*A. cunninghamii*), *A. cunninghamii* (black wattle), *A. curvinervia*, *A. deanei* (*A. paucijuga*), *A. doratoxylon*, *A. erioloba* (camel thorn), *A. exilis*, *A. glaucescens* (sally wattle), *A. granitica*, *A. gregii* (catclaw), *A. lasiocalyx*, *A. lasiopetala* (*A. sieberana*), *A. leiocalyx* (*A. melanoxylon*), *A. longifolia*, *A. longispicata* (*A. cunninghamii*), *A. olgana*, *A. osswaldii*, *A. polybotrya*, *A. pulchella*, *A. pycnostachya*, *A. schinoides*, *A. sibina*, *A. sieberana*, *A. sparsiflora*, *A. sutherlandii* (*A. melaleucoides*), *A. yorkrakinensis*.

A. aneura Called also mulga. See acquired **melanosis**.

A. berlandieri contains tyramine which causes ataxia in sheep and goats. Called also guajillo.

A. cana can accumulate selenium if the soil selenium content is unusually large.

A. catechu cyanogenic plant. See **catechu**.

A. erioloba host plant of *Gonometa* spp. (molopo moth); the moth larva produces indigestible silk in its cocoon; causes rumen impaction; a South African phenomenon.

A. georginae has a high concentration of fluoroacetate and can cause sudden death. Called also Georgina gidgee or Georgina gidyea.

A. melanoxylon contains toxic tannins; rarely causes ataxia, recumbency, alimentary tract irritation.

A. mellifera host plant for *Gonometa* spp. (molopo moth), the larva of which produces indigestible silk in its cocoon; causes ruminal impaction.

A. nilotica* subsp. *kraussiana pods contain toxins which cause hemolysis, methemoglobinemia and diarrhea.

A. salicina contains toxic tannins; rarely causes incoordination, recumbency.

acacia [*ə-ka'shə*] 1. general term for the very large number of species of shrubs and trees in the genus *Acacia*; many known also generally as wattles in Australia. 2. the dried exudate from *Acacia senegal* and other *Acacia* species of African origin, used as an emulsifier, stabilizer and suspending agent. Called also gum arabic and gum acacia.

false a., black a. see ***Robinia pseudoacacia***.

academic associates extramural instructors appointed by universities who have much experience in the vocational aspects of veterinary science. Undergraduate and postgraduate students are sent to the practices of these veterinarians to acquire practical experience which may not be available over the whole scope of the profession's interests at the university. See also **seeing practice**.

academic education education in the principles of the subject or course. In veterinary science this includes anatomy, physiology, biochemistry, pharmacology, nutrition, genetics, general pathology, microbiology and parasitology, epidemiology and the disciplines in medicine and surgery and theriogenology. Complemented by vocational education aimed at the more practical aspects of the profession.

ACAID anterior chamber-associated immune deviation

acampsia [*ə-kamp'se-ə*] rigidity of a part or limb.

acantha [*ə-kan'thə*] *thorn[* [Gr.]; a spine-like structure.

acanthamebiasis [*acan'tha'me'bi'a'sis*] infection by amebae of the genus *Acanthamoeba*; has been observed rarely in dogs.

Acanthamoeba [*ə-kan"thə-me'bə*] free-living amebae that can cause pneumonia, general systemic infection and encephalomyelitis in animals and humans.

acanth(o)- word element. [Gr.] *sharp spine, thorn*.

Acanthocephala [*ə-kan"tho-sef'ə-lə*] a phylum of elongate, mostly cylindrical organisms (thorny-headed worms) parasitic in the intestines of all classes of vertebrates.

acanthocephalans [*ə-kan"tho-sef'ə-ləns*] members of the phylum Acanthocephala.

acanthocephaliasis [*ə-kan"tho-sef"ə-li'ə-sis*] disease caused by infection with members of the phylum Acanthocephala.

acanthocephalid see **acanthocephalans**.

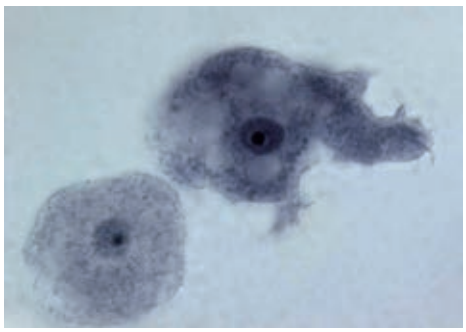
Acanthocephalus [*ə-kan"tho-sef'ə-ləs*] a genus of thorny-headed worms of the family Echinorhynchinae. Includes *A. jacksoni* (in trout).

Acanthocheilonema reconditum [*ə-kan"tho-ki"lo-ne'mə*] found in body cavities and connective tissue of dogs. Called also *Dipetalonema reconditum*.

acanthocyte [*ə-kan'tho-sīt*] an erythrocyte with protoplasmic projections giving it a thorny appearance; results from intravascular erythrocyte fragmentation associated with microangiopathy. Most commonly seen in dogs vasculitis or other vascular anomalies, hemangiosarcomas or liver disease. Morphologically similar to spur cells, but biochemically distinct.

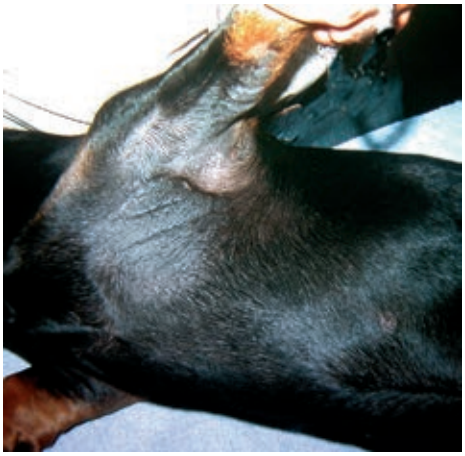
acanthocytosis [*ə-kan"tho-si-to'sis*] the presence in the blood of acanthocytes.

A-6: Abyssinian guinea pig.
From Mitchell M, Manual of Exotic Pet Practice. Saunders 2009.



A-7: *Acanthamoeba* trophozoites from culture. Note the filamentous pseudopods and the large central karyosome within the nucleus.
From Bowman DD, Georgis' Parasitology for Veterinarians, 9th Edition. Saunders, 2008.

acantholysis [*ak"an-tholĭ-sis*] loss of cohesion between epidermal cells, resulting in intraepidermal clefts, vesicles and bullae. Seen in inflammatory, viral, heritable and autoimmune skin diseases, particularly the pemphigus complex.
a. bullosa see **epidermolysis** bullosa.
familial a. a congenital disease of Aberdeen Angus calves and lambs characterized by ulceration of the oral mucosa and the skin over the distal limb joints and the coronet and loss of claws with minor trauma.
acanthoma [*ak"an-tho'mə*] a tumor in the prickle cell layer of the skin. See intracutaneous cornifying **epithelioma**.
infundibular keratinizing a. see intracutaneous cornifying **epithelioma**.
Acanthophis [*ə-kan'tho-fis*] the genus of death **adders**; includes *A. antarcticus* (common death adder) and *A. pyrrhus* (desert death adder).
acanthor larva contained within the mature eggs of acanthocephalans; the egg is thick-shelled and the larva carries an anterior circlet of hooks and spines.
acanthosis [*ak"an-tho'sis*] an increased thickness of the stratum spinosum, due to either an increased number or hypertrophy of cells.
frictional a. see acanthosis nigricans (below).
a. nigricans a skin disease of dogs, characterized by hyperpigmentation, lichenification, seborrhea, and alopecia commencing in the axillae and often spreading to involve flexural surfaces of all limbs, and the ventral body. Dachshunds are particularly predisposed to primary acanthosis, often developing the first changes at a young age. Sporadic cases are secondary to systemic disease, endocrinopathies, hypersensitivity reactions and friction in body folds.
Acanthospermum plant genus of the Asteraceae family; originated in tropical America.
A. hispidum capable of causing nitrate-nitrite poisoning. May contain a hepatotoxin. Called also star burr.
Acanthospiculum [*ak"an-tho spik'u-ləm*] see ***Onchocerca***.
acapnia decrease of carbon dioxide in the blood.
acarapisosis a disease of the adult honey bee (*Apis mellifera*) and possibly other *Apis* species caused by the honey bee tracheal mite *Acarapis woodi*, which parasitizes the respiratory system resulting in moderate to high mortality. A disease notifiable to the OIE (see Table 22).
acarbia [*a-kahr'be-ə*] decrease of bicarbonate in the blood.
acarbose [*a'kahr-bōs*] an alpha-glucosidase inhibitor which reduces postprandial hyperglycemia. It has been used in the management of diabetes mellitus.
acardia [*a-kahr'de-ə*] a developmental anomaly with absence of the heart.
acardiacus [*a"kahr-di'ə-kus*] [L.] *having no heart*.
acardius [*a-kahr'de-us*] an imperfectly formed twin fetus without a heart and invariably lacking other body parts.
acariasis [*ak"ə-ri'ə-sis*] infestation with arthropod parasites of the order Acarina including the ticks and mites. See also tick **infestation**.
cutaneous a. see **mange**.



A-8: Acanthosis nigricans in the axillae of a 1-year-old Dachshund.

nasal a. see **nasal** acariasis.
oto-a. see ***Otodectes*** *cynotis*.
otodectic a. see ***Otodectes*** *cynotis*.
pulmonary a. see ***Pneumonyssoides***.
acaricide [*ə-kar'ĭ-sīd*] an agent that destroys ticks and mites. The common ones are the organophosphorus compounds, the synthetic pyrethroids, the carbamates and the macrocyclic lactones. The chlorinated hydrocarbons are no longer much used on farm animals because of the problems with residue in tissues.
acarid [*ak'ə-rid*] a tick or a mite of the order Acarina.
Acarina [*ak"ə-ri'nə*] an order of arthropods (class Arachnida), including mites and ticks.
acarine [*ak'ə-rīn*] pertaining to or of the nature of members of the order Acarina, including the ticks and mites.
acarinosis [*ə-kar"ĭ-no'sis*] any disease caused by mites.
acarodermatitis [*ak"ə-ro-dur"mə-ti'tis*] skin inflammation due to bites of parasitic mites (acarids).
Acaroidea a superfamily of the order Acarina.
Acarus [*ak'ə-rus*] a genus of free-living mites, including *A. farinae*, *A. longion*, *A. siro* and*A. tawinae*; see ***Tyroglyphus***.
acaryote 1. non-nucleated. 2. a non-nucleated cell.
ACAT acyl CoA:cholesterol acyltransferase; an important enzyme responsible for the esterification of cholesterol with long chain fatty acids, a reaction that removes the inhibitory influence of free cholesterol on activity of HMG CoA reductase and the synthesis of LDL receptors.
accelerated conduction syndrome see accessory tract atrioventricular **conduction**.
accelerator [*ak-sel'ər-a"tər*] [L.] an agent or apparatus that increases the rate at which something occurs or progresses.
developing a. alkaline constituent of an X-ray developer which controls the rate of development. Called also activator.
a. factor, a. globulin factor V, one of the blood **clotting** factors. Called also proaccelerin, labile factor.
linear a. very high energy (1–20 mega volt) X-ray machine to administer radiation therapy treatment.
serum prothrombin conversion a. (SPCA) clotting factor VII; see **proconvertin**.
acceptability of food the measure of whether an animal will consume enough of a food to meet its caloric needs.
acceptable daily intake the amount of a drug or chemical residue to which an animal can be exposed daily for a lifetime without suffering a deleterious or injurious effect, on the basis of all of the facts known at the time.
acceptance sampling statistical quality control method to determine the quality of a product by sampling a small portion of it. Reduces the likelihood of acceptance of a defective product.
acceptor [*ak-sep'tər*] a substance that unites with another substance.
hydrogen a. the molecule accepting hydrogen in an oxidation–reduction reaction.
access [*ak'ses*] surgical term for the ease of reaching the target organ or site in an operation.
accessory [*ak-ses'ə-re*] supplementary or affording aid to another similar and generally more important thing.
a. nerve see Table 14.
a. sex glands any gland, other than the gonad, associated with the genital tract, such as the ampulla of the ductus deferens, the bulbourethral, prostate and vesicular glands of the male. The term is usually restricted to the male. Called also *glandulae genitales accessoriae*.
Accipiter genus of birds of prey that includes **goshawks** and sparrowhawks.
acclimation [*ak"lĭ-ma'shən*] the process of becoming accustomed to a new environment.
acclimatization [*ə-kli"mə-tĭ-za'shən*] the adaptation of an animal to the climatic conditions in an area. The ability to adapt in this way is an important characteristic of livestock.
accommodation [*ə-kom"ə-da'shən*] adjustment, especially rapid adjustment, of the eye for focusing on objects at various distances. Accomplished by the ciliary body muscles, which (depending on species) alter lens position or shape, globe length, or corneal radius of curvature as needed for distant or near vision.
amplitude of a. the accommodative range of an eye.
histological a. changes in morphology and function of cells following changed conditions.

VetBooks.ir

VetBooks.ir

A

accreditation given a stamp of legitimacy and dependability by an authorized agency.

accredited recognition by an appropriate authority that the performance of a particular institution has satisfied a prestated set of criteria.

a. flocks chicken focks proven to be free of diseases designated by the National Poultry Improvement Plan.

a. herds cattle herds which have achieved a low level of reactors to, e.g. the tuberculin or brucellosis agglutination tests.

a. inspectors veterinarians who have attended appropriate continuing education courses and performed well enough through a probationary period to be accredited as part-time veterinary inspectors; employed by governments or more local authorities.

a. schools in some countries a governmental or professional body conducts periodic examinations of the country's veterinary schools to determine their efficacy as teaching schools. Schools which lose their accreditation usually lose their status as providers of veterinary graduates who are adequate to the needs of the country's animals. Accreditation assures prospective students that they will meet a competency threshold for entry into practice, including eligibility for professional credentialing and/or licensure; faculty, deans and administrators that their programs measure satisfactorily against national standards and their own stated missions and goals; and employees that graduates have achieved specified learning goals and are prepared to begin professional practice. In North America, veterinary schools receive accreditation by the AVMA Council on education (COE) and institutions training veterinary technicians by the AVMA Committee on Veterinary Technician Education and Activities (CVTEA).

a. veterinarian one who is licensed to practice in a state and has passed a set of state/federal examinations to be accredited to act as an agent of the government and perform such activities as Bangs vaccination, examination of animals and subsequent issuing of health certificates for inter-state movement.

accretion [*ə-kre'shən*] 1. growth by addition of material. 2. accumulation. 3. adherence of parts normally separated.

accumulation points in acupuncture located on the meridian where the energy is greatest. Called also *Xi*-Cleft points.

accumulator plants plants which accumulate unusually large amounts of particular elements; includes facultative accumulators, e.g. *Aster*, *Atriplex* spp. which accumulate a particular element, e.g. selenium, but can grow quite well without it, and obligate accumulators which only grow in soils where high concentrations of the elements exist, e.g. *Oonopsis*, *Xylorrhiza* and some *Astragalus* spp.

accumulator plates battery components made of lead and a frequent cause of poisoning when chewed or licked.

accuracy [*ak'u-rə-se*] 1. the closeness with which an observation or a measurement of a variable approximates its true value. An important component of diagnostic tests. An accurate test implies freedom from both random and systematic error. See also **precision**. 2. degree of conformance between the estimated or measured position of a GPS receiver and its true position. Differential positioning can be used to improve positioning accuracy by determining the positioning error at a known location by comparison to a known reference position.

ACD acid citrate dextrose; an anticoagulant solution used for the collection of blood for purposes of storage and transfusion. The active principle is sodium citrate with citric acid and dextrose..

ACE angiotensin-converting enzyme.

ACE inhibitors a group of drugs used as vasodilators in the management of heart failure. They act to decrease circulating concentrations of angiotensin II and aldosterone. See **captopril**, **enalapril**, **lisinopril**.

ace acepromazine.

acedapsone [*as"ə dap'sōn*] a sulfone, related to dapsone, used in the treatment of leprosy in humans and atypical mycobacterial infections in animals.

acellular [*a-sel'u-lər*] not cellular in structure.

acelomate [*a-se'lə-māt*] having no celom or body cavity.

acemannan [*a-se man'an*] a complex polysaccharide derived from the plant **aloe** *barbadensis* (**aloe** *vera*) and used as an immunostimulant.

acenocoumarol [*ə-se"no-koo'mə-rol*] a warfarin derivative used as an anticoagulant. Called also nicoumalone.

acentric [*a-sen'trik*] 1. not central; not located in the center. 2. a chromatid or chromosome which lacks a centromere.

acephalobrachia [*a-sef"ə-lo-bra'ke-ə*] congenital absence of the head and forelimbs.

acephalocardia [*a-sef"ə-lo-kahr'de-ə*] congenital absence of the head and heart.

acephalocardius [*a-sef"ə-lo-kahr'de-us*] a fetus without a head or heart.

acephalochiria [*a-sef"ə-lo-ki're-ə*] congenital absence of the head and forefeet.

acephalogastria [*a-sef"ə-lo-gas'tre-ə*] congenital absence of the head, thorax and stomach.

acephalopodia [*a-sef"ə-lo-po'de-ə*] congenital absence of the head and hindfeet.

acephalopodius [*a-sef"ə-lo-po'de-us*] a fetus without a head or hindfeet.

acephalorachia [*a-sef"ə-lo-ra'ke-ə*] congenital absence of the head and vertebral column.

acephalostomia [*a-sef"ə-lo-sto'me-ə*] congenital absence of the head, with the mouth aperture on the upper aspect of the body.

acephalothoracia [*a-sef"ə-lo-tho-ra'se-ə*] congenital absence of the head and thorax.

acephalous [*a-sef'ə-ləs*] headless.

acephalus [*a-sef'ə-ləs*] a headless fetus.

acepromazine [*as"ə-pro'mə-zēn*] one of the phenothiazine derivative psychotropic drugs, used in animals as a means of chemical restraint. Its principal value is in quietening and calming frightened and aggressive animals. The standard pharmaceutical preparation, acepromazine maleate, is used extensively in horses, cats and dogs, especially as a preanesthetic agent. Called also acetylpromazine.

Acer [*a'sər*] trees of the family Aceraceae.

A. rubrum ingestion of wilted or dries leaves of this tree causes acute hemolytic anemia characterized by red urine, jaundice, anemia and methemoglobinemia in horses. Called also red maple, swamp maple.

acervuli calcified granules sometimes found in the pineal body and choroid plexus, especially in horses; structure similar to hydroxyapatite crystals; appear to have glial or stromal origin. Called also brain sand, corpora arenacea, psammoma bodies.

acervuline [*ə-sur'vu-līn*] aggregated; heaped up; said of certain glands.

acervulus [*ə-sur'vu-ləs*] pl. *acervuli* [L.] sandy calcifications in or about the pineal body and choroid plexus.

acetabular [*as"ə-tab'u-lər*] pertaining to the acetabulum.

a. cup the acetabular component of a total artificial hip arthroplasty.

a. dysplasia see **hip** dysplasia.

a. plate an orthopedic plate designed specifically for repair or fixation of the acetabulum.

a. sourcil see **sourcil**.

acetabulectomy [*as"ə-tab"u-lek'tə-me*] excision of the acetabulum.

acetabuloplasty [*as"ə-tab'u-lo-plas"te*] plastic repair of the acetabulum.

acetabulum [*as"ə-tab'u-ləm*] the cup-shaped socket of the hip joint that receives the head of the femur. See also **acetabular**.

inherited a. defect in Dole horses; clinically normal at birth but with shallow acetabulum and flattened femoral head. Osteoarthritis and round ligament disruption develop later.

acetal [*as'ə-təl*] an organic compound formed by a combination of an aldehyde with an alcohol.

acetaldehyde [*as"ət-al'də-hīd"*] a colorless volatile liquid, CH_3CHO, found in freshly distilled spirits, which is irritating to mucous membranes and has a general narcotic action. It is also an intermediate in the metabolism of alcohol.

acetaminophen [*ə-se"tə-min'ə-fen*] an analgesic and antipyretic drug in dogs. It is contraindicated for cats because of serious side-effects which include intravascular hemolysis, methemoglobinemia and hepatic necrosis. Called also paracetamol (INN).

acetanilide an analgesic and antipyretic. Like the other para-aminophenol derivatives, its toxicity is greater than that of salicylates and other analgesics so that it is not much used.

acetarsol, acetarsone [*as"ət-ahr'sol, as"ət-ahr'sōn*] an organic arsenical used as an antiprotozoal agent, especially in turkeys and geese. See also organic **arsenic** poisoning.

acetate [*as'ə-tāt*] a salt of acetic acid.

VetBooks.ir

a. base cellulose acetate sheet used as support or base for X-ray film.

a. tape slide a method of collecting ectoparasites such as mites, lice or fleas, and their eggs, for diagnostic purposes by pressing the sticky side of the tape against the skin and haircoat and applying the tape to a glass slide which is then examined microscopically.

acetazolamide [*as"et-ə-zol'ə-mīd*] a carbonic anhydrase inhibitor used to reduce aqueous humor production and thereby intraocular pressure in the treatment of glaucoma.

acetic [*ə-se'tik*] pertaining to vinegar or its acid; sour.

a. acid CH_3COOH, a short-chain, saturated fatty acid, the characteristic component of vinegar and one of the principal acids formed in the rumen by fermentation. It has the odor of vinegar and a sharp acid taste. A 36.5% solution of acetic acid is used topically as a caustic and rubefacient. A dilute acetic acid solution (6%) may be used as an antidote to alkali, e.g. in urea poisoning in cattle where the urea is converted to ammonia in the rumen. Glacial acetic acid is a 99.4% solution.

acetoacetate [*ə-se"to-as'ə-tāt*] see **acetoacetic acid**.

acetoacetic acid [*ə-se"to-ə-se'tik*] CH_3COCH_2COOH, one of the ketone bodies formed in the body in metabolism of certain substances, particularly in the liver in the oxidation of fats, and utilized in extrahepatic tissues to obtain energy. It is present in the body in increased amounts in abnormal conditions such as uncontrolled **diabetes** mellitus and starvation, and in bovine **ketosis** and **pregnancy** toxemia of cows and ewes. Occurs in the body as acetoacetate.

acetoacetyl CoA [*as"ə-to-as'ə-təl, ə-se'to-as-ə-tēl" ko-a'*] intermediate in ketogenesis and utilization of the ketones, β-hydroxybutyrate and acetoacetate. Penultimate intermediate in the beta-oxidation of fatty acids.

acetohexamide [*as"ə-to-hek'sə-mīd*] a first generation sulfonylurea derivative, used as an oral hypoglycemic agent in the treatment of diabetes mellitus.

acetohydroxamic acid (AHA) [*as"ə-to-hi"droks-am'ik*] a hydroxamic acid that specifically inhibits urease; it retards alkalinization of the urine caused by urease-producing bacteria and may inhibit bacterial growth. Used in the prevention and dissolution of uroliths, but in dogs causes a dose-related, reversible hemolytic anemia and blood dyscrasia.

acetokinase [*as"ə-to ki'nās*] enzyme catalyzing the phosphorylation of acetate using ATP.

acetone [*as'ə-tōn*] a compound, CH_3COCH_3, with solvent properties and characteristic odor, obtained by fermentation or produced synthetically; it is a by-product of acetoacetic acid. Acetone is one of the **ketone** bodies produced in abnormal amounts in uncontrolled **diabetes** mellitus, metabolic **acidosis**, **pregnancy** toxemia and **ketosis** of ruminants. Unlike the other ketone bodies, acetone cannot be used by the tissues to generate energy and is excreted as a waste product in the urine and by exhalation. The characteristic fruity odor on the breath of animals with ketosis is due to the exhalation of acetone.

a. bodies acetone, acetoacetic acid and β-hydroxybutyric acid, being intermediates in fat metabolism. Called also **ketone** bodies.

a. poisoning in companion animals causes narcosis, gastritis and renal and hepatic damage.

acetonemia [*as"ə-to-ne'me-ə*] ketonemia; see **ketosis**.

acetonuria [*as"ə-to-nu're-ə*] ketonuria.

acetophenazine a phenothiazine, similar to chlorpromazine, used as a tranquilizer.

acetophenetidin see **phenacetin**.

Acetosella vulgaris ***Rumex*** *acetosella*.

acetretin a synthetic derivative of vitamin A; a retinoid. Used in the treatment of primary seborrhea to normalize epithelial keratinization.

acetrizoate sodium [*as"ə-tri-zo'āt*] the sodium salt of acetrizoic acid, used as a contrast medium in radiography.

acetyl [*as'ə-təl, as'ə-tēl" ə-se'təl*] the monovalent radical, CH_3CO, a combining form of acetic acid.

acetyl CoA [*as'ə-təl, as"ə-tēl' ko-a'*] key intermediate in aerobic intermediary metabolism of carbohydrates, lipids and some amino acids. Carrier of acetyl groups into the tricarboxylic acid (Krebs) cycle and the chief precursor of lipids; it is formed by the attachment to coenzyme A of an acetyl group during the oxidation of pyruvate, fatty acids or amino acids. The only intermediate used up (ie not re-generated) in the Krebs cycle. Allosteric regulator of the activity of the pyruvate dehydrogenase complex and pyruvate carboxylase. Present in low concentrations but with high turnover. Dependent on B-group vitamin, pantothenic acid for structure of coenzyme A.

acetyl CoA carboxylase [*as'ə-təl-, as"ə-tēl'ko-a' kahr-bok'sə-lās*] a biotin-containing enzyme which participates in the synthesis of fatty acids by catalyzing the carboxylation reaction in which acetyl-CoA is converted to malonyl-CoA. It has the important effect of regulating the rate of fatty acid synthesis and is itself influenced in its activity by the local concentration of magnesium, citrate, palmitylcarnitine and ATP and is stimulated by the action of insulin.

acetylandromedol [*as"ə-təl-, as"ə-tēl-an-drom'ə-dol*] grayanotoxin (andromedotoxin).

acetylation [*ə-set"ə-la'shən*] one of the synthetic biotransformations which operate in the metabolism of drugs in which metabolites are produced that are more readily excreted than the parent drug. Dogs are exceptional amongst the domesticated species in that acetylation does not occur in their tissues. Acetylation is one of the principal metabolic pathways of the sulfonamides.

acetylator [*ə-set"ə-la'tər*] an organism capable of metabolic acetylation. Those animals that differ in their inherited ability to metabolize certain drugs, e.g. isoniazid, are termed fast or slow acetylators.

acetylcarnitine [*as"ə-təl kahr'nĭ-tēn*] a substance which can act as a carrier for acetyl groups across the inner mitochondrial membrane in mammalian liver.

acetylcholine (ACh) [*as"ə-təl-, as"ə-tēl-ko'lēn*] the acetic acid ester of choline, normally present in many parts of the body and having important physiological functions. It is a neurotransmitter at cholinergic synapses in the central, sympathetic and parasympathetic nervous systems. It is not used clinically but it is the classical cholinergic agonist.

a. receptors structures located at the endorgans, e.g. at the skeletal muscle fibers. The myofibers are stimulated to contract by the interaction of acetylcholine with acetylcholine receptors which are located on the motor end plate or postsynaptic sarcolemma. See also **neuromuscular** junction. An immunologic test for acetylchoine receptors is used in the diagnosis of acquired myasthenia gravis.

acetylcholinesterase (AChE) [*as"ə-təl-, as"ə-tēl-ko"lĭ-nes'tə-rās*] an enzyme present in nervous tissue, muscle and red cells that catalyzes the hydrolysis of acetylcholine to choline and acetic acid; called also true **cholinesterase**.

a. antagonists organophosphorus compounds and carbamates that act by inactivating acetylcholinesterase; hence poisoning by these compounds has parasympatheticomimetic manifestations.

acetylcoenzyme A [*as'ə-tal, as"ə-tēl' ko-en'zīm*] see **acetyl CoA**.

***N*-acetylcysteine** [*as"ə-təl-, as"ə-tēl-sis'te-ēn*] a mucolytic agent used to reduce the viscosity of secretions of the respiratory tract. The principal method of administration is by aerosol, which in animals requires the use of a face mask or aerosol chamber. Also used parenterally in the treatment of acetaminophen poisoning in cats where it aids in detoxification of the drug and enhances its elimination, and topically in the treatment of collagenase-associated corneal ulcers.

acetylene [*ə-set'ə-lēn*] a colorless, combustible, explosive gas, the simplest triple-bonded hydrocarbon.

acetylethylenimine [*as"ə-təl eth"əl-en'ĭ-mēn*] one of a group of related alkylating agents used in the preparation of inactivated vaccines.

***N*-acetylgalactosamine** [*as"ə-təl-, as"ə-tēl-gal"ak-tōs'ə-mēn*] one of the repeating disaccharide units in glycosaminoglycans.

***N*-acetyl-glucosamine-6-sulfatase** [*as"ə-təl-, as"ə-tēl"gloo-kōs'ə-mēn sul'fə-tās*] an enzyme which when deficient in Nubian goats causes a condition similar to Sanfilippo's III-D syndrome in humans; the clinical syndrome includes delay in rising and walking in neonates, ataxia, bowing of front limbs, clouding of the cornea, dwarfism, and cartilaginous and bony deformities; histological examination reveals lysosomal overload.

***N*-acetylglutamate** [*as"ə-təl-, as"ə-tēl-gloo'tə-māt*] compound produced from acetyl CoA and glutamate that provides the regulator stimulus to the activity of carbamoyl synthetase II of the urea cycle.

***N*-acetyl loline alkaloid** a compound thought to contribute to fescue poisoning.

acetyl-β-methylcholine see **methacholine**.

VetBooks.ir

A

acetylpromazine [ə-se'təl pro'mə-zēn] acepromazine.
acetylsalicylic acid [ə-se'təl-sal"ə-sil'ik] see **aspirin**.
acetylstrophanthidin [as"ə-təl-, as"ə-tēl"stro-fan'thə-din] a semisynthetic cardiac glycoside, similar to strophanthin.
AcG accelerator globulin (clotting factor V).
ACh acetylcholine.
acha see ***Digitaria exilis***.
achalasia [ak"ə-la'zhə] failure to relax of the smooth muscle fibers of the gastrointestinal tract at any junction of one part with another; especially failure of the lower esophagus to relax with swallowing, due to an abnormality of innervation. Called also cardiospasm. See also **megaesophagus**.
cricoesophageal a. failure of the cranial esophageal sphincter to relax during swallowing to accommodate the approaching bolus. Gagging, nasal regurgitation and aspiration result. Called also cricoesophageal incoordination.
cricopharyngeal a. is motor dysfunction of the cricopharyngeal sphincter in which a failure of relaxation prevents the bolus from entering the esophagus during swallowing. Called also cricopharyngeal dysphagia.
esophageal a. see **megaesophagus**.
pyloric a. failure of the pylorus to open in neonates so that distention of the stomach occurs and causes continuous vomiting. This may be reflex in response to local ulceration, e.g. in young calves, or be a congenital defect.
reticulo-omasal sphincter a. is probably a factor in the development of the gut stasis in bovine vagal indigestion with onward passage of ingesta obstructed at the exit from the rumenoreticulum. Results in rumen distention and frothiness of contents.
AChE acetylcholinesterase.
ache [āk] 1. continuous pain, as opposed to sharp pangs or twinges. An ache can be either dull and constant, as in some types of backache, or throbbing, as in some types of headache and toothache. An ache is a subjective sensation and its occurrence in animals is only assumed. 2. to suffer such pain.
acheilia [ə-ki'le-ə] a developmental anomaly with absence of the lips.
acheiria [ə-ki're-ə] a developmental anomaly with absence of the forefeet.
acheiropodia [ə-ki"ro-po'de-ə] a developmental anomaly characterized by absence of all feet, both fore and hind.
Achilles tendon [ə-kil'ēz] the group of tendons that insert on the calcaneus near the point of the hock made up of the tendons of the gastrocnemius, soleus, superficial digital flexor, semitendinosus and biceps femoris muscles. Called also common calcaneal tendon. See also **gastrocnemius muscle** tendon.
achillobursitis [ə-kil"o-bər-si'tis] inflammation of the bursae about the gastrocnemius tendon.
achillodynia [ə-kil"o-din'e-ə] pain in the Achilles tendon or its bursa.
achillorrhaphy [ak"i-lor'ə-fe] suturing of the gastrocnemius tendon.
achillotenotomy [ə-kil"o-tə-not'ə-me] surgical division of the gastrocnemius tendon.
achlorhydria [a"klor-hi'dre-ə] absence of hydrochloric acid from gastric juice.
Achly [ak'le-ə] fungus which causes white, cotton-wool like growths on cutaneous trauma sites of fish and their newly spawned eggs; most common at colder water temperatures.
Achnatherum* spp.** see ***Stipa.
Acholeplasma [a"ko-le-plaz'mə] a genus of the class *Mollicutes* and related to the genus *Mycoplasma*.
A. laidlawii a common isolate from the lungs of calves with enzootic pneumonia but of doubtful significance.
A. oculi is a common finding in the conjunctivae of sheep with contagious ophthalmia but not proven to be pathogenic in this situation.
acholia [a-ko'le-ə] lack or absence of bile secretion.
acholic feces [a-ko'lik] gray, putty-colored feces resulting from an absence of oxidized bile pigments in the intestinal tract; usually indicative of complete bile duct obstruction, but pale color can also be caused by dietary factors or reduced bacterial activity in the intestine, e.g. decreased transit time, or by antibacterial therapy.
acholuria absence of bile pigments from the urine.
achondrogenesis [a-kon"dro-jen'ə-sis] a hereditary disorder characterized by hypoplasia of bone, resulting in markedly shortened limbs; the head and trunk are normal.
achondroplasia [a-kon"dro-pla'zhə] a failure of growth of cartilage in the young, leading to a type of short-legged **dwarfism**. Several breeds of dogs display this in their standard conformation, e.g. Dachshund, Basset hound, Corgi. In dogs of this stature, this has been related to an extra copy of the gene that codes for a growth-promoting protein, called fibroblast growth factor 4 (FGF-4). See also **chondrodysplasia**.
inherited congenital a. see achondroplastic **dwarfism**.
inherited a. dwarfism see achondroplastic **dwarfism**.
inherited a. with hydrocephalus see **bulldog calves**.
AChR acetylcholine receptor.
Achorion see ***Trichophyton***.
achromasia [ak"ro-ma'zhə] 1. lack of normal skin pigmentation. 2. the inability of tissues or cells to be stained.
achromat [ak'ro-mat] an achromatic microscope objective.
achromatic [ak"ro-mat'ik] 1. producing no discoloration, or staining with difficulty. 2. refracting light without decomposing it into its component colors.
achromatism [ə-kro'mə-tiz-əm] the quality or the condition of being achromatic; staining with difficulty.
achromatophil [ak"ro-mat'o-fil] 1. not easily stainable. 2. an organism or tissue that does not stain easily.
achromatosis [ə-kro"mə-to'sis] 1. deficiency of pigmentation in the tissues. 2. lack of staining power in a cell or tissue.
achromatous [ə-kro'mə-tus] colorless.
achromaturia [ə-kro"mə-tu're-ə] colorless state of the urine.
achromia [ə-kro'me-ə] the lack or absence of normal color or pigmentation, as of the skin.
achromocyte [ə-kro'mo-sīt] a red cell artifact that stains more faintly than intact red cells.
achromoderma amelanosis; lack of pigment in the skin.
achromophil [ə-kro'mo-fil] see **achromatophil**.
achromotrichia [a-kro"mo-trik'e-ə] loss or absence of pigment in hair. It may be complete or patchy, affect the length of the fiber or be in well-defined bands or speckled. Can be caused by nutritional deficiency, selective freezing, radiation or pressure. See also **vitiligo**, **copper** nutritional deficiency.
Achtheres a genus of the class Crustacea which parasitize freshwater fish.
Achyla a genus of fungi which cause disease in fish reared by fish culturists and aquarists.
achylia [ə-ki'le-ə] absence of hydrochloric acid and enzymes in the gastric secretions.
achylous deficient in chyle.
achymia [ə-ki'me-ə] deficiency of chyme.
acicular [ə-sik'u-lər] *acicularis* [L.]; needle-shaped.
acid [as'id] 1. sour. 2. a molecule or ion with a tendency to give up a proton to the solvent according to Bronsted and Lowry theory. All acids react with bases to form salts and water (neutralization). Other properties of acids include a sour taste and the ability to cause certain dyes to undergo a color change. A common example of this is the ability of acids to change litmus paper from blue to red. Acids play a vital role in the chemical processes that are a normal part of the functions of the cells and tissues of the body. A stable balance between acids and bases in the body is essential to life. See also **acidic**, **acid–base balance**, and individual acids.
amino a. any one of a class of organic compounds containing the amino and the carboxyl group, occurring naturally in plant and animal tissues and forming the chief constituents of protein. See also **amino acid**.
bile a's steroid acids derived from cholesterol. See also **bile** acids.
chlorinated a's. some, e.g. trichlorbenzoic acid, sodium chloroacetate, sodium trichloroacetate, are used as weedkillers and are relatively harmless as far as animals are concerned.
a. excretion blood buffers prevent a sudden change in pH of body fluids when they receive excess acid or alkali from absorption or metabolic processes. This temporary measure is supplemented by a mechanism for the excretion of hydrogen ions via the kidney in the form of dihydrogen phosphate and ammonium ions.
fatty a. any monobasic aliphatic acid containing only carbon, hydrogen and oxygen. See also **fatty acid**.
a. hydrolases major group of enzymes present in lysosomes.
inorganic a. an acid containing no carbon atoms.
keto a's compounds containing the groups CO (carbonyl) and COOH (carboxyl).

a. methyl green stain stains protozoal nuclei a bright green and is recommended for the detection of *Balantidium coli* in fecal smears.

net a. excretion (NAE) the measurement of urinary NAE to provide a method for evaluating acid-base balance in companion animals. Based on the fact that the kidneys play a central role in acid-base homeostasis by adjusting urine electrolyte excretion to maintain constant blood pH. Measurement of net base excretion (NBE) is more appropriate in cattle and other herbivores because urine pH is usually alkaline. NBE=-NAE, with both being measured in milliequivalents per liter.

nucleic a's macromolecules containing phosphoric acid, sugars, and purine and pyrimidine bases that carry genetic information. Deoxyribose nucleic acid (DNA) and ribose nucleic acid (RNA) are the most common nucleic acids. See also **nucleic acids**.

a. phosphatase see **acid phosphatase**.

a. retention retention of metabolic acids, including sulfates and phosphates, as a result of acute and chronic renal disease.

acid–antigen plate test [*as'id an'tĭ-jən plāt*] see **rose bengal** test.

acid–base balance [*as'id-bās bal'əns*] a state of equilibrium between acidity and alkalinity of the body fluids; called also hydrogen ion (H+) balance because, by definition, an acid is a substance capable of giving up a hydrogen ion during a chemical exchange, and a base is a substance that can accept it. The positively charged hydrogen ion (H+) is the active constituent of all acids. Most of the body's metabolic processes produce acids as their end products, but a somewhat alkaline body fluid (pH 7.4) is required as a medium for vital cellular activities. Therefore chemical exchanges of hydrogen ions must take place continuously in order to maintain a state of equilibrium. An optimal pH (hydrogen ion concentration) between 7.35 and 7.45 must be maintained; otherwise, the enzyme systems and other biochemical and metabolic activities will not function normally. Although the body can tolerate and compensate for slight deviations in acidity and alkalinity, if the pH drops below 7.30, the potentially serious condition of **acidosis** exists. If the pH goes higher than 7.50, the patient is in a state of **alkalosis**. In either case the disturbance of the acid–base balance is considered serious, even though there are control mechanisms by which the body can compensate for an upward or downward change in the pH. Shifts in the pH of body fluids are controlled by three major regulatory systems which may be classified as *chemical* (the buffer systems), *biological* (blood and cellular activity), and *physiological* (the lungs and kidneys). The **Henderson-Hasselbalch equation** is used to categorize four primary acid-base disturbances: respiratory acidosis (increased PCO_2), respiratory alkalosis (decreased PCO_2), metabolic acidosis (decreased extracellular base excess), or metabolic alkalosis (increased extracellular base excess). The anion gap is calculated to detect the presence of unidentified anions in plasma. This approach works well with clinical problems when serum total protein, albumin, and phosphate concentrations are approximately normal. The *strong-ion difference* method of evaluating acid-base balance, based on the concept that pH is primarily determined by PCO_2, strong ion difference (SID), and nonvolatile buffer concentration (A_{TOT}) and categorizes acid-base disturbances into six categories: respiratory acidosis and alkalosis, strong ion acidosis and alkalosis, nonvolatile buffer ion acidosis and alkalosis. It is recommended for use whenever serum total protein, albumin, and phosphate concentrations are markedly abnormal and where lactate, ketoacids, and uremic anions are contributory to the acid-base disturbance.

acid citrate dextrose [*as'id sit'rāt dek'strōs*] see **ACD**.

acid-detergent fiber [*as'id de-tur'jənt fi'bər*] see acid-detergent **fiber**[2].

acid etch technique [*as'id ech tek-nēk'*] the use of dilute acid, commonly phosphoric acid, on teeth to improve their ability to retain restorative materials.

acid-fast [*as'id-fast*] 1. not readily decolorized by acids after staining; said of bacteria, especially *Mycobacterium* spp. 2. stain demonstrating this characteristic. See also **Ziehl-Neelsen stain.**

modified a.-f. bacteria resist decolorization by mild acid solutions; includes *Brucella* and *Nocardia*.

acidification a technology used by processors to preserve foods by adding acids (such as acetic, citric, phosphoric, propionic and lactic acid) and thereby reduce the risk of growth of harmful bacteria. Also used to preserve colostrum and milk for feeding calves.

a. of feed used to enhance the stomach acidity, reducing pH and salmonella infection as well as improving pig performance.

acid phosphatase [*as'id fos'fə-tās*] a lysosomal enzyme that hydrolyzes phosphate esters liberating phosphate, showing optimal activity at a pH between 3 and 6; found in erythrocytes, prostatic tissue, spleen, kidney and other tissues.

acid-proof acid-fast.

acid rain rain which contains materials, sulfates and oxidation products of nitrogen and sulfur particularly, produced by combustion of coal and oil in industrial processes and by motor vehicles; lowers the pH of water bodies; see **acid waters**; credited with local decline of fish culture.

acid waters waters with a low pH occurring naturally and where water contaminated by acid rain and run-off from mine sites; acid waters often contain higher concentrations than normal of cadmium, copper, zinc and lead. Water affected by heavy leaching from soil may contain high concentrations of aluminum, copper, manganese and iron. These waters adversely affect production in fish cultures. See also water **acidity**.

acidaminuria aminoaciduria.

acidemia [*as"ĭ-de'me-ə*] abnormal acidity of the blood.

acidic [*ə-sid'ik*] of or pertaining to an acid; acid-forming.

a. urine is usual in carnivores, that of herbivores is usually neutral or slightly alkaline. Urine increases in acidity when a large load of acid is passed into the extracellular fluid and is excreted by the kidneys. If the kidneys can cope with the excretion load the pH of the blood will return to normal. If the acid load is too great or the kidney function inadequate, acidemia results.

acidified milk replacer liquid milk substitute acidified to pH 5.2 to preserve it and to reduce the intake so that the calf takes more frequent but smaller meals during the day.

acidifier [*ə-sid"ĭ-fi'ər*] an agent that causes acidity; a substance used to increase gastric or urine acidity.

acidifying solution a solution used in fluid therapy for alkalosis.

acidity [*ə-sid'ĭ-te*] 1. the quality of being acid; the power to unite with positively charged ions or with basic substances. 2. excess acid quality, as of the gastric juice.

gastric a. is maintained by the secretion of hydrochloric acid by the oxyntic or parietal cells located in the mucosa of stomach or abomasum.

water a. fish can tolerate only a narrow range of pH in the water in which they swim. Naturally occurring acidification, such as occurs in waters draining from acid soils, can cause fish deaths.

acidophil [*ə-sid'o-fil"*] 1. a histological structure, cell, or other element staining readily with acid dyes. 2. two types of cells in the pars distalis of the pituitary gland that secrete somatotropin and luteotropin. 3. an organism that grows well in highly acid media. 4. acidophilic.

a. neoplasms adenomas and adenocarcinomas of the pars distalis of the pituitary gland are recorded in cats, dogs, sheep and rats. These are infrequently functional but may have space-occupying effects on the pituitary and hypothalamus. They have been associated with diabetes mellitus in cats, galactorrhea in ewes, and metahypophyseal diabetes in dogs.

acidophile [*ə-sid'o-fil"*] see **acidophil**.

acidophilic [*as"ĭ-do-fil'ik*] 1. easily stained with acid dyes. 2. growing best on acid media.

hepatocellular a. bodies see **cytosegresome formation**.

acidosis [*as"ĭ-do'sis*] a pathological condition resulting from accumulation of acid or depletion of the alkaline reserve (bicarbonate content) in the blood and body tissues, and characterized by increase in hydrogen ion concentration (decrease in pH). The optimal **acid–base balance** is maintained by chemical buffers, biological activities of the cells, and effective functioning of the lungs and kidneys. The opposite of acidosis is **alkalosis**. It is rare that acidosis occurs in the absence of some underlying disease process. The more obvious signs of severe acidosis are muscle twitching, involuntary movement, cardiac arrhythmias, disorientation and coma.

compensated a. condition in which the compensatory mechanisms have returned the pH toward normal.

diabetic a. a metabolic acidosis produced by accumulation of ketones in uncontrolled diabetes mellitus.

hypercapnic a. respiratory acidosis.

iatrogenic a. may result from administration of drugs, such as urinary acidifiers, or anesthetic agents which depress respiration.

VetBooks.ir

VetBooks.ir

A

lactic a. a form of metabolic acidosis associated with accumulation of lactic acid, resulting from tissue hypoperfusion and hypoxia leading to anaerobic glycolysis or, rarely, errors of metabolism. Reptiles are particularly susceptible to lactic acidosis. The accumulation of lactate in the rumen in ruminants and the stomach of horses, and hence in the blood, occurs as a result of overfeeding with readily fermentable carbohydrate. See also **carbohydrate engorgement**.

metabolic a. acidosis resulting from accumulation in the blood of keto acids (derived from fat metabolism) at the expense of bicarbonate, thus diminishing the body's ability to neutralize acids. This type of acidosis can occur when there is an acid gain, as in diabetic ketoacidosis, lactic acidosis, poisoning and failure of the renal tubules to reabsorb bicarbonate. It can also result from bicarbonate loss due to diarrhea or a gastrointestinal fistula.

mixed alkalosis and a. characterized by low serum chloride, normal or slightly elevated plasma bicarbonate and a very high anion gap.

nonrespiratory a. results from loss of bicarbonate from the extracellular fluid, e.g. in diarrhea and paralytic ileus. Called also metabolic acidosis.

organic a. accumulation of organic anions occurs in uremia, diabetic acidosis and lactic acidosis, and ingestion of salicylates, ethylene glycol or methanol.

renal tubular a. renal tubular malfunction leads to faulty resorption of bicarbonate or excretion of acid and the production of alkaline urine; types I (distal tubular acidosis) and II (proximal tubular acidosis) are identified.

respiratory a. acidosis resulting from ventilatory impairment and subsequent retention of carbon dioxide.

ruminal a. acidosis caused by an altered metabolic state, usually lactic acidosis, in the rumen.

starvation a. a metabolic acidosis due to accumulation of ketones following a severe caloric deficit.

uncompensated a. a condition in which the compensatory mechanisms have not been applied sufficiently to return the pH of the blood to normal.

uremic a. see metabolic acidosis (above).

acidum [L.] *acid*.

aciduria [*as"ĭ-du're-ə*] the excretion of acid in the urine. See also specific forms, such as aminoaciduria, orotic aciduria (below).

orotic a. appearance of orotic acid, an intermediate of pyrimidine synthesis, in the urine due to a lack of orotate phosphoribosyltransferase activity.

paradoxical a. occurs when a metabolic alkalosis caused by severe vomiting or pooling of gastric secretions in the abomasum leads to renal bicarbonate reabsorption and sodium–hydrogen exchange with the inappropriate production of acid urine.

aciduric [*as"ĭ-doo'rik*] capable of growing well in extremely acid media.

acinar [*as'ĭ-nər*] pertaining to or affecting an acinus or acini.

acinetic [*as"ĭ-net'ik*] akinetic.

Acinetobacter [*as"ĭ-net"o-bak'tər*] gram-negative bacteria commonly found in the environment and often normal flora in animals and humans, but have been associated with nosocomial and opportunistic infections in a range of species with bronchopneumonia in mink and occasionally seen as a cause of bovine mastitis.

aciniform [*ə-sin'ĭ-form*] grapelike.

acinitis [*as"ĭ-ni'tis*] inflammation of the acini of a gland.

acinitrazole used as a treatment and prophylactic for blackhead in turkeys; low toxicity but excessive dosing causes infertility and liver and kidney damage.

acinonodular aciniform.

acinous [*as'ĭ-nəs*] made up of acini.

acinus [*as'ĭ-nəs*] pl. *acini* [L.] a small sac-like dilation; any of the smallest lobules of a compound gland.

hepatocellular a., hepatic a. an alternative concept of liver microstructure to that of the lobule. The hepatic acinus has as its center the portal triad whch is surrounded by an ovoid mass of hepatocytes, the most peripheral of which constitute the periacinar parenchyma. Between these masses and draining them are the hepatic venules (known as central veins by adherents to the lobular concept of liver structure).

liver a., hepatic a. the smallest functional unit of the liver made up of two wedge-shaped masses of liver parenchyma that are supplied by two neighboring, terminal branches of the portal vein and hepatic artery and drained by two central veins and by terminal branches of the bile duct.

acitretin [*as"e-tret'in*] an active metabolite of etretinate, with similar actions, but less toxic and with a shorter half-life; used in dermatology for the treatment of keratinization disorders.

ACLAM American College of Laboratory Animal Medicine.

aclasia, aclasis [*ə-kla'zhə, ak'lə-sis*] pathological continuity of structure, as in chondrodystrophy.

acme [*ak'me*] the critical stage or crisis of a disease.

acne [*ak'ne*] a disorder of the skin characterized by comedones that arise from papules and pustules. Secondary bacterial infection of hair follicles often occurs.

canine a. a skin disease of young, shorthaired dogs affecting the chin and lips. There are papules, which may be sterile, and later suppurative folliculitis and furunculosis. See chin **pyoderma**.

contagious equine a. see **Canadian horsepox**.

feline a. occurs in cats of any age, involving the skin on the point of the chin and the lips. There are crusts and comedones, which in severe cases may progress to suppurative folliculitis, furuncolosis and cellulitis. Although often idiopathic, *Malassezia*, dermatophytes and *Demodex* may be agents in some cases.

interdigital a. see interdigital **pyoderma**.

acneiform [*ak'ne-form*] resembling acne.

Acokanthera [*ak"o-kan-the'rə*] a genus of the plant family Apocynaceae used in Africa in the preparation of arrow poisons. Poisoned livestock show diarrhea, irregular heartbeat and sudden death. Contain cardiac glycosides. Includes *A. longiflora*, *A. oblongifolia*, *A. oppositifolia*, *A. schimperi*, *A. spectabilis* (*A. oblongifolia*), *A. venenata* (*A. oppositifolia*). Some species were formerly classified in *Carissa* spp.

acokantherosis the state of being poisoned by *Acokanthera* spp.

Acomatacarus a trombidiform mite of the family Trombiculidae. The larvae are parasitic. Called also chiggers, scrub itch-mite. Includes *A. australiensis* (humans, dogs) and *A. galli* (chickens, mice, rats, rabbits).

Acomys cahirinus see spiny **mouse**.

aconite [*ak'ə-nīt*] see ***Aconitum***.

aconitine [*ə-kon'ĭ-tin*] a mixture of alkaloids in ***Aconitum*** *napellus*. Causes abdominal pain, dyspnea, vomiting, diarrhea, cardiac irregularity.

Aconitum [*ak"ə-ni'təm*] a genus of the Ranunculaceae family from northern temperate areas. Includes *A. brachypodium*, *A. carmichaelii*, *A. chasmanthum*, *A. columbianum*, *A. ferox*, *A. lycoctonum*, *A. vaccarum*, *A. vulpari*.

A. napellus one of the most poisonous of European plants; cultivated in gardens. All parts of the plant contain aconitine, one of the plant's toxic alkaloids. The dried tuberous root was used pharmaceutically as a counterirritant and local anesthetic. The plant is not usually eaten and field poisoning with it is uncommon. Signs of poisoning include vomiting, colic, slow heart rate, paralysis, pupillary dilatation and death due to asphyxia. Called also monkshood, wolf's bane, aconite.

acoprosis absence or paucity of feces in the intestines.

acorea [*ə-kor'e-ə*] absence of the pupil.

A-9: Feline acne.
From Kummel BA, Color Atlas of Small Animal Dermatology. Mosby, 1989.

acoria [ə-kor'e-ə] insatiable appetite.
acorn [a'korn] the fruit of the oak—*Quercus* spp. In many countries the acorns are ground and used as a carbohydrate-rich food but there is some danger of causing renal damage from hydrolysable tannins. See also ***Quercus***.
acorn calves [a'korn] congenital defect of calves characterized by an abnormally short or long head, shortened limb bones and bent joints, difficulty in standing, deformity of the back, incoordination and bloating. See also achondroplastic **dwarfism**.
acouchi (*Myoprocta* spp.) a small South American forest rodent related to the agouti and similar in appearance.
acoustic [ə-k s'tik] relating to sound or hearing.
a. enhancement an artifact seen in ultrasound examination. There is an area of increased brightness underneath fluid resulting from the lack of impedance when sound waves pass through fluid and increased echoes from underlying structures.
a. gel see **coupling**.
a. nerve one of the pair of eighth cranial nerves. Called also **vestibulocochlear** nerve, acoustic nerve. See Table 14.
a. reflex test used primarily in humans to differentiate between sensorineural and conductive hearing loss.
a. shadowing an artifact seen in ultrasound imaging in which an intensely echogenic line appears at the surface of structures which block the passage of sound waves.
a. window the body surface area selected for application of the ultrasound transducer, through which sound waves will be transmitted. Consideration must be given to underlying bone or gas-filled structures which would impair image quality.
acoustics [ə-kōōs'tiks] the science of sound and hearing.
acoust(o) combining form meaning sound.
ACP acronym for acepromazine; acyl carrier protein.
acquired [ə-kwīrd'] incurred as a result of factors acting from or originating outside the organism; not inherited.
a. bleeding a tendency to bleed caused by factors other than inherited and congenital ones. Includes dicoumarol and warfarin poisonings, nutritional deficiency of vitamin K, liver disease and autoimmune thrombocytopenias.
feline a. immunodeficiency syndrome see **feline** immunodeficiency virus.
acral [ak'rəl] affecting the extremities.
a. lick dermatitis a skin disorder in dogs caused by their licking of a localized area of skin, usually on the lower limbs and particularly over the carpus or metatarsal region. The initiating cause may be psychological, but there is often an underlying disorder, including musculoskeletal or neurological disease or injury, bacterial or fungal infection, demodecosis, and atopy. The area quickly becomes traumatized and often secondarily infected, which serves to intensify the licking and worsening of the lesion. Called also neurodermatitis, acral pruritic nodule, acropruritic nodule or granuloma, acral lick granuloma.
a. mutilation syndrome see hereditary sensory **neuropathy**.
a. pruritic nodule see acral lick dermatitis (above).
acrania [ə-kra'ne-ə] partial or complete absence of the cranium.
acranius [ə-kra'ne-əs] a fetus in which the cranium is absent or rudimentary.
Acremonium [ak"rə-mo'ne-əm] see ***Neotyphodium***. Unspecified species have been reported as a cause of eumycotic mycetoma and systemic mycosis in dogs, but these may now be classified as within the genus *Neotyphodium*.
acridine [ak'rĭ-dēn] a dibenzopyridine compound used in the synthesis of dyes and drugs. Derivatives of acridine are successful as antibacterial agents, finding their principal use as local antiseptics. They were popular at one time as antibabesial and trypanocidal agents. See also **acriflavine**, **proflavine**.
a. orange stain binds nonspecifically to nucleic acids, proteins, polysaccharides and glycosaminoglycans. Together with fluorescent microscopy, it is reportedly more sensitive than conventional staining methods for demonstrating *Mycoplasma haemofelis* in blood smears.
acriflavine an antiseptic dye used for topical application; used in the treatment of external fungal diseases of aquarium fish.
acritical [a-krit'ĭ-kəl] having no crisis.
acro- word element. [Gr.] *extreme, top, extremity*.
acroanesthesia [ak"ro-an"es-the'zhə] anesthesia of the extremities.
acrocentric [ak"ro-sen'trik] having the centromere toward one end of the chromosome or chromatid; see **telocentric chromosome**.
acrocephalia [ak"ro-sə-fa'le-ə] see **oxycephaly**.
acrocephalic [ak"ro-sə-fal'ik] see **oxycephaly**.
acrocephaly [ak"ro-sef'ə-le] see **oxycephaly**.
Acrochordidae a family of snakes that consists of the genus *Acrochordus* with file snakes and wart snakes that are found in Indonesia and Australia.
acrochordon [ak"ro-kor'dən] see fibrovascular **papilloma**.
acrocinesis [ak"ro-si-ne'sis] see **acrokinesia**.
acrocyanosis [ak"ro-si"ə-no'sis] a human condition characterized by symmetrical cyanosis of the extremities; seen in calves recovering from septicemia, often accompanied by gangrene.
acrodermatitis [ak"ro-dur"mə-ti'tis] inflammation of the skin of the extremities, particularly the paws or feet. See also **acral** lick dermatitis.
enteropathic a., a. enteropathica a hereditary disorder of humans associated with a defect of zinc uptake. Gastrointestinal disturbances accompany the dermatological signs. Inherited **parakeratosis** in calves (lethal trait 46) resembles this disorder.
lethal a. an inherited, autosomal recessive abnormality of zinc and copper metabolism in Bull terriers. Clinical signs include stunted growth, severe hyperkeratosis of foot pads and pressure points, and secondary infections, particularly in the skin.
acrodermatosis [ak"ro-dur"mə-to'sis] any disease of the skin of the extremities, particularly the paws or hooves.
acroesthesia [ak"ro-es-the'zhə] 1. exaggerated sensitiveness. 2. pain in the extremities.
acrokinesia [ak"ro-kĭ-ne'zhə] abnormal motility or movement of the extremities.
acrolein [ak-ro'le-in] aldehyde of allyl, formed by the destructive distillation of glycerin and during the burning of fat; has a pungent odor.
a. poisoning exposure to fumes causes conjunctivitis, rhinitis, pulmonary edema.
acromegaly [ak"ro-mə-ga'le-ə] a clinical syndrome that includes abnormal enlargement of the extremities of the skeleton due to overgrowth of connective tissue and increased appositional growth of bone. Caused by hypersecretion of growth hormone (GH) from the **pituitary** gland, usually an adenoma, or administration of compounds with similar effects. The condition has been reported in cats and dogs. Affected animals may be diabetic. Called also hypersomatotropism.
iatrogenic a. may be caused by the administration of drugs that stimulate growth hormone-secreting acidophils. Progestational agents, usually administered for estrus control, have been responsible for this disorder in dogs and cats. Affected dogs show coarsening of facial features, widening of interdental spaces, enlargement of the abdomen, thickening of skin with excessive hair growth, and inspiratory stridor.
acromelanism genetically determined, temperature-dependent pigmentation pattern, with full expression only occurring on legs, ears, tail and face. Called also himalayan coat color pattern. Seen in Siamese and Himalayan cats and rabbits.
acromelic [ak"ro-me'lik] pertaining to the end of a limb.
acromicria [ak"ro-mik're-ə] abnormal smallness of the extremities of the skeleton—nose, jaws and feet.
acromi(o)- word element. [Gr.] *acromion*.
acromiohumeral [ə-kro"me-o-hu'mər-əl] pertaining to the acromion and humerus.
acromion [ə-kro'me-on] the prominence at the distal end of the spine of the scapula; well developed in ruminants, carnivores and humans.

A-10: Acral lick dermatitis.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

VetBooks.ir

A

acromionectomy [ə-kro"me-o-nek'tə-me] resection of the acromion.
acromotrichia see **leukotrichia**.
acromphalus [ə-krom'fə-ləs] 1. bulging of the navel; sometimes a sign of umbilical hernia. 2. the center of the navel.
acroneurosis [ak"ro-n-ro'sis] any neuropathy of the extremities.
acropachia [ak"ro-pak'e-ə] hypertrophic osteopathy.
acroparalysis [ak"ro-pə-ral'ĭ-sis] paralysis of the extremities.
acropathy [ă-krop'ə-the] any disease of the extremities.
acropodium the part of the limb made up of digits. See also **metapodium**.
acroposthitis inflammation of the prepuce.
Acroptilon repens ***Rhaponticum repens***.
acrosin [ak'ro-sin] one of the enzymes in the acrosome on the head of a mammalian spermatozoon. Involved in the penetration of the zona pellucida of the ovum by the spermatozoon.
acrosomal vesicles a structure participating in the conversion of the spermatid to the spermatozoon. Proacrosomal granules coalesce to form a single large vesicle which contains the acrosome. The vesicle collapses on the nucleus forming the head cap of the spermatozoon.
acrosome [ak'ro-sōm] the caplike, membrane-bounded structure that covers the anterior portion of the head of the mammalian spermatozoon; it is bounded by an inner and an outer membrane and contains enzymes involved in penetration of the ovum.
a. reaction fusion of the outer acrosomal membrane with the sperm plasma membrane, and the breakdown of the fused complex, after the attachment of the spermatozoon to the zona pellucida. It is induced by substances from the egg investments and releases enzymes involved in penetration of the ovum.
acrosoxacin see **rosoxacin**.
acroteriasis congenital absence or part absence of limbs. Called also amputates.
bovine a. an inherited defect, particularly of European breeds, involving amputation of limbs, defects of facial bones, cleft palate and mandibular shortness.
acrotism [ak'ro-tiz-əm] absence or imperceptibility of the pulse.
acrylic glue [ə-kril'ik] a glue used to repair damaged beaks of birds; care must be taken to avoid inhalation of vapors.
ACT activated clotting (coagulation) time.
Actaea [ak-te'ə] a genus of the Ranunculaceae family.
A. spicata contains a gastrointestinal and buccal irritant. Called also baneberry, herb Christopher, doll's eyes, black cohosh.
ACTH adrenocorticotropic hormone; produced by the anterior lobe (pars distalis) of the **pituitary** gland that stimulates the cortex of the **adrenal** gland to secrete its hormones, including corticosterone. If production of ACTH falls below normal, the adrenal cortex atrophies and production of the cortical hormones declines. Called also adrenocorticotropin and corticotropin.
ACTH assay determination of plasma concentrations of ACTH may be used in diagnosing hyperadrenocorticism to differentiate between an ACTH-secreting pituitary adenoma, in which plasma concentrations are high, and a functional adrenal tumor, most of which cause markedly decreased concentrations, and in hypoadrenocorticism to identify whether it is primary or secondary.
ACTH cells see **chromophobe**.
ACTH gel a commercially available form of ACTH in gelatin with prolonged action.
ACTH response test, ACTH stimulation test measures the secretory capacity of the adrenal cortex in response to a supraphysiological dose of exogenous ACTH. This test is commonly used in the investigation of hypo- and hyperadrenocorticism in dogs and cats. There is very litte or no increase in concentration in primary hypoadrenocorticism and iatrogenic Cushing's disease, whereas plasma concentrations increase in normal animals or those with hyperadrenocorticism from other causes.
ACTH-secreting adenoma see **corticotroph adenoma**.
actin [ak'tin] a muscle protein localized in the I band of myofibrils; acting along with myosin particles, it is responsible for the contraction and relaxation of muscle.
a. F assembly of actin G monomers into filaments.
a. filaments smallest filamentous proteins involved in a static role in cell structure and a dynamic role in cell movement.
a. G monomeric globular protein which assembles into actin filaments.
Actinea see ***Hymenoxys***.
actinic [ak-tin'ik] relating to radiation, particularly solar radiation.
a. dermatitis that produced by exposure to actinic radiation, such as that from the sun, ultraviolet waves, or x- or gamma radiation. Called also dermatitis actinica. See also **solar** dermatitis.
a. radiation said of rays of light beyond the violet end of the spectrum.
actinium (Ac) [ak-tin'e-um] a chemical element, atomic number 89, atomic weight 227. See Table 4.
actin(o)- word element. [Gr.] *ray, radiation*.
actinobacillary [ac˙ti˙no bas"ĭ-lar"e] caused by infection with *Actinobacillus* spp.
equine a. peritonitis see **peritonitis**.
a. glossitis see **actinobacillosis**.
a. mastitis an occasional occurrence in ewes.
ovine a. epididymitis see **epididymitis**.
a. seminal vesiculitis see **seminal** vesiculitis.
actinobacillosis [ak"tĭ-no-bas"ĭ-lo'sis] an infectious disease characterized by inflammation of the soft tissues of the head, especially the tongue, pharyngeal lymph nodes and esophageal groove in cattle and the subcutaneous tissues of the head and neck in sheep caused by *Actinobacillus lignieresi*. The acute disease in cattle is characterized by a swollen, painful tongue and hypersalivation. Called also wooden tongue.
cutaneous a. of sheep and cattle there are ulcers and nodules in the subcutaneous tissue, often on lymphatics, which contain yellow to green pus. Local lymph nodes are often involved. The lesions are mostly about the head, often in the mouth, but do not affect the tongue. In contrast to cattle, where actinobacillsosis affects primarily the tongue, infection in sheep is in the lips and facial tissues. The difference is because sheep use predominantly the lips rather than the tongue for prehension of food.
nasal a. in sheep is characterized by nasal obstruction and stertor and a nasal discharge. See also **nasal** actinobacillosis.

A-11: Ewe with actinobacillosis showing the swelling of the lips, nose and frontal areas of the face resulting from multiple abscesses with fistulous tracts. Pus can be seen draining from one fistulous tract.

A-12: Lateral view of the face of the same ewe as Fig. A-11.

VetBooks.ir

a. of rumenoreticulum causes interference with normal motility and development of a vagus indigestion.

Actinobacillus [ak"tĭ-no-bə-sil'us] a genus of bacteria which are gram-negative, pleomorphic rods. Most are commensals of mucous membranes.

A. actinoides a secondary agent in seminal vesiculitis in bulls and enzootic pneumonia in calves. The status of this species is unclear and it is not currently classified in the genus *Actinobacillus*.

A. actinomycetemcomitans associated with epididymitis in rams and periodontal disease and endocarditis in humans.

A. capsulatus the cause of arthritis and septicemia in rabbits.

A. equuli the cause of septicemia and subsequent focal lesions in young foals and also peritonitis in adult horses. Previously called *Shigella equirulis* and *S. equuli*. The disease is usually endemic on individual farms and can cause many deaths. The clinical syndrome is one of fever, prostration, diarrhea, dyspnea, collapse and coma. Surviving foals show signs related to localization of infection in specific organs. Called also sleepy foal disease. Previously called shigellosis.

A. lignieresi the cause of actinobacillosis of cattle and sheep, and occasionally in pigs, dogs and humans.

A. mallei see ***Burkholderia*** *mallei*.

A. pleuropneumoniae causes severe pleuropneumonia and pleuritis in pigs. Previously *Haemophilus pleuropneumoniae*.

A. salpingitidis see ***Gallibacterium salpingitidis***.

A. seminis the cause of epididymitis and periorchitis in rams.

A. suis the cause of septicemia and subsequent focal lesions in young pigs.

A. ureae may be a cause of abortion in sows.

Actinobaculum suis [ak"tĭ-no-bak'u-ləm] a gram-positive, anaerobic actinomycete causing pyelonephritis and cystitis in swine. Previously called *Eubacterium suis* and *Corynebacterium suis*.

Actinocleidus a genus of flukes parasitic in fish.

actinodermatitis [ak"tĭ-no-dur"mə-ti'tis] dermatitis from exposure to X-rays.

actinolyte [ak-tin'ə-līt] an apparatus for concentrating the rays of electric light in phototherapy.

Actinomadura [ak"tĭ-no-mə-d r'ə] a genus of the family *Nocardiaceae*, associated with cutaneous granulomata in horses.

Actinomyces [ak"tĭ-no-mi'sēz] a genus of non-acid-fast, pleomorphic gram-positive organisms that form a mycelium of branching filaments that fragment into irregular-sized fragments.

A. bovis the cause of **actinomycosis** of cattle and sheep.

A. congolensis, A. dermatonomus see ***Dermatophilus*** *congolensis*.

A. hordeovulneris a cause of abscesses, pleuritis and systemic infections in dogs where it is often associated with penetration by grass awns (foxtails) of *Hordeum* spp.

A. hyovaginalis a cause of necrotic lung lesions in pigs.

A. israelii an uncommon cause of actinomycosis in cattle and pigs.

A. necrophorus see ***Fusobacterium*** *necrophorum*.

A. pyogenes now called *Arcanobacterium pyogenes*.

A. suimastitidi a cause of actinomycosis of the swine mammary gland.

A. viscosus the cause of periodontal disease in hamsters, and opportunistic infections of dogs.

actinomycete [ak"tĭ-no-mi'sēt] a general name for the complex bacteria within the order *Actinomycetales*. Most are pleomorphic and stain gram-positive, the exception being mycobacteria.

actinomycetoma [ak"tĭ-no-mi"sə-to'mə] see actinomycotic **mycetoma**.

actinomycin [ak"tĭ-no-mi'sin] a family of antibiotics from various species of *Streptomyces*, which are active against bacteria and fungi; it includes the antineoplastic agents actinomycin C (**cactinomycin**) and actinomycin D (**dactinomycin**).

actinomycoma [ak-tĭ-no-mi-ko'mə] a tumorlike reactive lesion due to *Actinomyces* spp. See **actinomycosis**.

actinomycosis [ak"tĭ-no-mi-ko'sis] in cattle, caused by *Actinomyces bovis*, commonly a rarefying osteomyelitis of the bones of the head particularly the maxilla and mandible. There is obvious swelling of the bone which is painful and causes interference with eating, and sinuses onto the cheek which discharge sticky, honey-like material containing granules. Rare occurrences are granulomatous lesions of the skin about the head, soft tissue lesions in the testicles and sow mammary gland, and infection of the esophageal groove causing a vagus indigestion. Called also lumpy jaw. See also **actinobacillosis**, **actinomycotic**. In dogs and cats, actinomycosis usually consists of localized pyogranulomatous infections, most often in subcutaneous tissues around the head and neck, bone, and thoracic or abdominal cavities. Disseminated infections are uncommon. See also **nocardiosis**.

cutaneous a. see **mycotic** dermatitis.

actinomycotic [ak"tĭ-no-mi-kot'ik] caused by infection with *Actinomyces* spp.

a. fistulous withers see **fistulous** withers.

a. lesion 'actinomycotic' lesions resemble those caused by *Actinomyces* spp. and may contain small particulate granules, such as occur in actinomycosis. These granules also have an asteroid appearance under the microscope. The lesions are slow growing and often caused by *Aspergillus* spp. or *Coccidioides immitis*.

a. mandibular osteomyelitis see **actinomycosis**.

a. mycetoma see **mycetoma**.

a. poll evil see **poll** evil.

action [ak'shən] 1. the accomplishment of an effect, whether mechanical or chemical, or the effect so produced. 2. the gait or type of movement of an animal.

cumulative a. the sudden and markedly increased action of a drug after administration of several doses.

a. lists are produced by a computerized herd health program from the analysis of reproduction data, which set out which cows are to be examined for a variety of reproductive reasons, such as pregnancy, failure to conceive and postnatal clearance for resumption of breeding.

action potential the large, momentary reversal of electrical potential that occurs across a plasma membrane of a neuron or muscle fiber when stimulated with a signal of sufficient strength.

compound a. p. the sum of the activity in a number of nerve fibers. It applies to the degree of activity in a nerve trunk in which a variable proportion of nerve fibers are discharging.

activated a state of being more than usually active. In biological systems this is usually brought about by chemical or electrical means. Commonly said of pharmaceutical and chemical products.

a. clotting time (ACT) a quick, one tube test of the intrinsic and common pathways of coagulation, using diatomaceous earth as an activating agent to hasten coagulation of whole blood, the time being measured. It is a common screening test for coagulopathies, but does not identify which factors are deficient. Called also activated coagulation time.

a. partial thromboplastin time (APTT) see activated partial **thromboplastin** time.

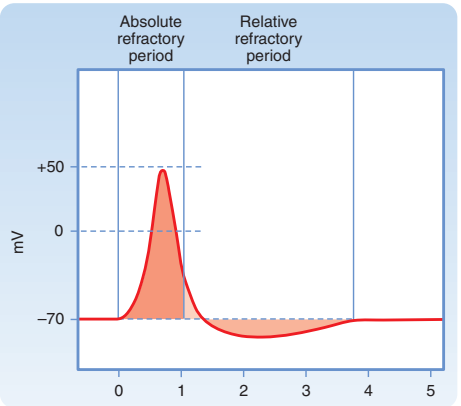
activation [ak"tĭ-va'shən] the process of activating.

a. analysis a method of analyzing the content of elements in samples of biological material. The sample is bombarded with nuclear particles and the elements in it measured by the radiation emitted by their radioactive daughter products. Called also radioactivation analysis.

a. energy the difference in energy between the ground state of the reactants in a reaction and the point of maximum energy or transition state of the reactions. Usually lowered by enzyme catalysts.

a. factor see **Hageman factor**.

a.-induced cell death apoptosis induced by a number of physiological and pathological factors.



A-13: Action potential - refractory periods. From Koeppen BM, Stanton BA, Berne & Levy Physiology, 6th Edition. Mosby, 2008.

VetBooks.ir

A

a. unit the combination of complement (C4, C2 and C3) that binds to the antigen–antibody complex in the initial reaction step in the classical pathway of complement activation. Called also C5 convertase. See also **complement**.

activator [*ak'tĭ-va"tər*] a substance that makes another substance active or that renders an inactive enzyme capable of exerting its proper effect.

developing a. see developing **accelerator**.

plasminogen a. activates plasminogen and converts it into plasmin.

active [*ak'tiv*] not passive.

a. principle the drugs or chemicals in a pharmaceutical preparation that exert an effect pharmacologically; as distinct from the inert fillers, wetting agents and other excipients also often included.

a. site that region of a protein, usually an enzyme, that binds to another molecule such as the substrate of the enzyme.

activin [*ak'tĭ-vin*] a gonadal peptide hormone isolated from follicular fluid; has an unidentified role in stimulating FSH secretion.

activity [*ak-tiv'ĭ-te*] the quality or process of releasing energy or of accomplishing an effect.

displacement a. an instinctive behavior pattern, exhibited out of context and believed to be a means of relieving tension in the animal. Usually performed when the animal is in a state of high arousal or when it is frustrated in the performance of some instinctive activity. Seen as sexual mounting, digging, tail chasing, or excessive grooming in cats.

enzyme a. the catalytic effect exerted by an enzyme, expressed as units per milligram of enzyme (*specific* activity) or molecules of substrate transformed per minute per molecule of enzyme (*molecular* activity).

intermediate a. production of a commodity which is not sold but is used as an input to some other enterprise, e.g. crop used on the farm as stock feed.

molecular a. see enzyme activity (above).

optical a. the ability of a chemical compound to rotate the plane of polarization of plane-polarized light.

actomyosin [*ak"to-mi'o-sin*] the complex of actin and myosin constituting muscle fibers and responsible for the contraction and relaxation of muscle.

acts of veterinary science those acts, such as making diagnoses, performing surgical operations, anesthetizing, performing embryo transfers, carrying out radiographic examinations which are considered, in law, to be the prerogative of registered, professional veterinarians. Persons who are not veterinarians and who perform these acts are liable to prosecution under the registration legislation.

actuarial methods statistical techniques relating to preparation of mortality and other analytical tables.

Acuaria [*ak"u-a're-ə*] a genus of parasitic nematodes of birds. Includes *A. hamulosa* (see ***Cheilospirura hamulosa***), *A. spiralis* (see ***Synhimantus spiralis***) and *A. uncinata* (see ***Echinuria uncinata***).

acuity [*ə-ku'ĭ-te*] acuteness or clearness.

acuminate [*ə-ku'mĭ-nāt*] sharp-pointed.

acuminocyte fusiform or spindle-shaped erythrocyte in the blood of healthy adult Angora goats and some breeds of British sheep. Similar to the drepanocyte in deer blood.

acupoints [*ak'u-point*] **acupuncture** points.

acupressure [*ak'u-presh"ər*] manual stimulation of an acupuncture point; said to stimulate the flow of *Qi*.

a. massage see acupressure **massage**.

acupuncture [*ak'u-punk"chər*] the Chinese practice of inserting needles into specific points (acupoints) along the 'meridians' of the body and manipulated to relieve the discomfort associated with painful disorders, to induce surgical anesthesia, and for preventive and therapeutic purposes. It is proposed that acupuncture produces its effects by the conduction of electromagnetic signals at a greater-than-normal rate, thus aiding the activity of pain-killing biochemicals, such as endorphins and immune system cells, at specific sites in the body. Studies have also shown that acupuncture may alter brain chemistry by changing the release of neurotransmitters and neurohormones and affecting sensory perception and involuntary body functions. In veterinary medicine, acupuncture is used mainly for pain management, particularly in musculoskeletal conditions, geriatric medicine and sports medicine. See also **acupressure**, **aquapuncture**, **electroacupuncture**, and **hemo-acupuncture**, **laser** acupuncture, **pneumoacupuncture**, **sonopuncture**.

a. instruments includes cups for vacuum creation, needles, hot needles, **moxibustion**, electronic heating devices, coolant spray, ultrasound, electroacupuncture machines, laser equipment.

ear a. based on the theory that all parts of the body are represented on the ear; auricular acupuncture points can be used for diagnosis (auriculodiagnosis) and treatment (auriculotherapy).

local a. points points which can be found only when a localized pathological process develops. Called also trigger points.

a. points specific areas on the body, often mapped out on reference charts, considered to be the appropriate location for effective delivery of acupuncture treatment by stimulation of the points by one of several means. See **accumulation points**, **alarm points**, **association** points, **auricular** points, **diagnostic** points, **horary points**, **local** points, **luo points**, **sedation** points, **source points**, special action **points**, **tonification** points.

acus [*a'kəs*] a needle or needle-like process.

acute [*ə-kūt'*] 1. brief. 2. common usage is 'having severe signs and a short course of 12–24 hours'. See also under organ (e.g. pancreatitis), system (e.g. respiratory), causative agent (e.g. arsenic) or lesion (e.g. myonecrosis).

a. bovine pulmonary emphysema-edema see **atypical interstitial pneumonia**.

a. care see **secondary** health care.

a. death syndrome of chickens sudden death, for no apparent reason, in broiler chickens; clinical signs of falling, wing flapping and convulsions may occur for about a minute before death. The syndrome has also been described as sudden death syndrome, heart attack, and flip over. The latter tem used because birds dead from the syndrome are often found on their backs.

a. phase response see **acute phase proteins**.

a. physiology and chronic health evaluation (APACHE) see **APACHE system**.

a. respiratory distress syndrome (ARDS) see acute **respiratory** distress syndrome.

acute equine respiratory syndrome [*ə-kūt' e'kwīn res'pĭ-rə-tor"e sin'drōm*] see acute **equine** respiratory syndrome.

acutherapy utilizes needles or non-needle techniques with electrical stimulation or pressure applied to the traditional **acupuncture** points. See also acupressure **massage**.

acute-phase proteins [*ə-kūt' fāz pro'tēns*] in response to infection, trauma or inflammation, proinflammatory cytokines stimulate hepatic synthesis of certain plasma proteins, particularly fibrinogen, C-reactive protein, serum amyloid A, haptoglobin, α_1-acid glycoprotein and ceruloplasmin. Erythrocyte sedimentation rate (ESR) is a laboratory indicator of the acute phase response. See also **C-reactive protein** and **tumor** necrosis factor.

ACVO American College of Veterinary Ophthalmologists.

ACVS American College of Veterinary Surgeons.

ACVSc Australian College of Veterinary Scientists; recently changed to Australian and New Zealand College of Veterinary Scientists.

acyanotic [*a-si"ə-not'ik*] not characterized or accompanied by cyanosis.

a. heart malformations congenital cardiac malformations which permit life-sustaining levels of activity; includes pulmonary **stenosis**, aortic **stenosis**, **interatrial** septal defect, small **ventricular** septal defect, **dextrocardia** and some cases of ectopia cordis.

acycloguanosine acyclovir.

acyclovir, aciclovir [*a-si'klo-vēr*] a synthetic analog of guanosine which selectively interferes with viral DNA synthesis. Used parenterally and topically as an antiviral agent, but more effective compounds are available for treatment of herpetic keratitis in cats and horses.

acyesis 1. sterility in a female animal. 2. absence of pregnancy.

acyl [*a'səl*] 1. an organic radical derived from a fatty acid by removal of the hydroxyl group. 2. generic term for fatty acid groups.

a. carrier protein ACP; a carrier protein molecule which is part of the fatty acid synthesizing enzyme complex in non-mammalian systems and which carries acyl groups.

a. CoA thioester of coenzyme A and a fatty acid of unspecified, but usually more than 14 carbon length.

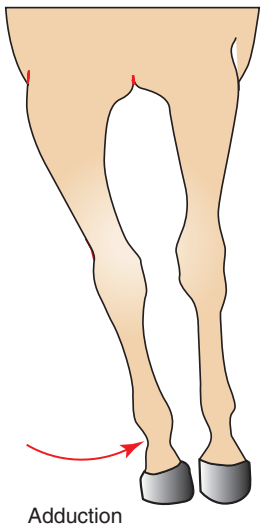
a. CoA dehydrogenase deficiency lack of the first enzyme of beta-oxidation, acyl CoA dehydrogenase, a flavoprotein which catalyzes the removal of two hydrogens from the acyl chain.

acylaminopenicillins see **ureidopenicillins**.

acylation [*a"sə-la'shən*] introduction of an acyl radical into the molecules of a compound.

VetBooks.ir

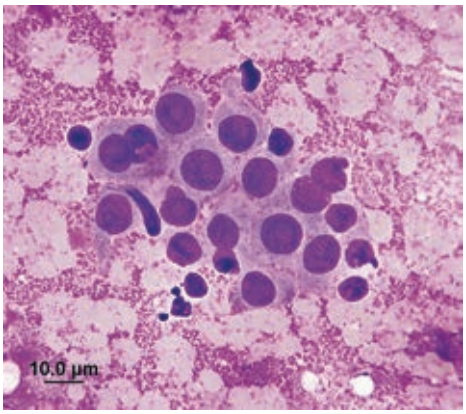
1-acyl-sn-glycerol-3-phosphate acyltransferase enzyme catalyzing the preferential transfer of unsaturated fatty acids to the 2-position of the glycerol backbone of phospholipids and triacylglycerols.
acystia [*ā-sis'te-ə*] congenital absence of the urinary bladder.
acystinervia paralysis of the urinary bladder.
AD Aleutian mink disease.
ad [L.] preposition, *to*.
-ad suffix meaning toward.
ad- prefix meaning towards.
ad lib. ad libitum.
ad libitum without restraint.
a. l. feeding food available at all times with the quantity and frequency of consumption being the free choice of the animal.
ada-a see ***Morinda reticulata***.
adactylia, adactyly [*ə-dak-til'e-ə*] congenital absence of the digits.
adamantine [*ad"ə-man'tin*] pertaining to the enamel of the teeth.
adamantinoma [*ad"ə-man"tĭ-no'mə*] see **ameloblastoma**, adamantomatous **epulis**.
adamantoblast [*ad"ə-man'to-blast*] see **ameloblast**.
adamantoblastoma, adamantoma [*ad"ə-man"to-blas-to'mə*] see **ameloblastoma**.
Adams–Stokes disease [*ad'əmz stōks'*] see **Stokes–Adams disease**.
Adamson's fringe in growing hairs, the margin between the mitotically active hair bulb and the inactive hair shaft.
adapalene [*ə-dap'ə-lēn*] a synthetic, second generation retinoid used as a topical gel; has fewer side effects than other, systemically administered retinoids.
adaptation [*ad"ap-ta'shən*] 1. adjustment of the pupil to light, constricting with increased light intensity, dilating with decreased intensity. 2. any anatomical, physiological, developmental or behavioral adjustment to the environment of an organism which enhances its chances of leaving descendants. The ability of animals to adapt to a limited supply of drinking water and to high or low environmental temperatures is an important aspect of animal husbandry. The selection of animals which are capable of a high level of such adaptation has made it possible to improve the productivity of herds and flocks in some countries. See also **general adaptation syndrome**. 3. the process by which organisms are modified so as to improve their chances of survival in an environment.
dark a. physiologic adaptations of the eye that occur with reduced illumination; serve to increase retinal light sensitivity.
light a. physiologic adaptation of the eye that occur with increased illumination; serve to decrease retinal light sensitivity.
negative a. see **habituation**.
a. rate the rate at which afferent sensory receptors discharge into their afferent axons. The rates differ between different types of receptors. For example, there are slow adaptors which signal the more persistent changes such as steady pressure. See also receptor adaptation (below).
receptor a. sensory receptors vary in their individual response to stimuli, the response declining after an initial period of rapid response. The rate at which different kinds of receptors change these responses is the adaptation rate (see above).
adaptive nephron hypothesis see **intact-nephron hypothesis**.
ADCC antibody-dependent cell-mediated cytotoxicity, a process by which immune system cells (NK cells, eosinophils) can kill target cells recognized by surface-bound antibody.
addax (*Addax nasomaculatus*) a North African desert antelope with long, ribbed, spiral horns; an endangered species.
added filtration sheets of metal placed in the path of the primary X-ray beam to make it a more penetrating beam.
adder [*ad'ər*] a loose nomenclature of snakes which cuts across scientific classification. Includes puff adder, common English adder which are **viperine** snakes, and the Australian adder which is an **elapid** snake.
common death a. *Acanthophis antarcticus*; gray-brown, dark, banded, 30-inch Australian elapid snake that is aggressive and a rapid striker. The venom is a potent toxin. The bite often leaves no mark but is usually fatal.
desert death a. *Acanthophis pyrrhus*; a specially adapted, smaller desert form of the death adder.
puff a. *Bitis arietans*; an unaggressive but highly poisonous African snake, 3–5 ft long with a thick body.
addiction [*ə-dik'shən*] physiological dependence on some agent, usually a plant, with a tendency to increase its use. Whether true addiction ever occurs in animals is doubtful. Field evidence does point to preferential grazing of some known toxic plants, e.g. *Astragalus*, *Swainsona* spp.
drug a. abuse of narcotic drugs is a hazard of veterinary practice because of the availability of addictive agents to registered veterinarians. The same laws apply to members of the veterinary profession as to the medical profession and are designed to protect them against becoming dependent upon any drug. Deregistration and a consequent isolation from the prohibited substances is the usual penalty.
Addison's disease [*ad'ĭ-sən*] see primary **hypoadrenocorticism**.
addisonian crisis [*ad"ĭ-so'ne-ən*] signs of weakness, vomiting, diarrhea and sometimes collapse accompanying an acute adrenocortical insufficiency. See also **hypoadrenocorticism**.
additive [*ad'ĭ-tiv*] 1. characterized by addition. 2. see **food** additive.
a. gene action 1. total contribution made by all loci to a polygenic trait. 2. when the heterozygote is intermediate in phenotype between the two homozygotes, i.e. a lack of dominance.
a. genetic relationship the degree of relationship (number of genes held in common) between two individuals neither of which is inbred; the minimum relationship is 0 and the maximum is 1.0.
a. genetic variance variance attributed to the mean effect of substituting one allele for another at any given loci.
intramammary infusion a. agents, e.g. anti-inflammatories, added to improve pharmacological efficacy.
a. relationship see additive genetic relationship (above).
addressins [*ə-dres'ins*] tissue-specific molecules in vascular endothelium which are involved in directing extravasation of recirculating lymphocytes.
adduct [*ə-dukt', ă'dukt*] to draw toward a center or median line.
adduction [*ə-duk'shən*] the act of adducting; the state of being adducted.
adductor [*ă-duk'tor*] that which adducts.
thigh a. muscles the muscles that draw the hindlimbs together; they include the pectineus, the gracilis and the adductor itself. These and the external obturator muscle can be affected by obturator nerve paralysis which allows the legs to spread. Section of the pectineus and adductor has been suggested as a palliative treatment for canine hip dysplasia.
ADE adverse drug event.
Adema disease see inherited **parakeratosis** of cattle.
adenalgia [*ad"ə-nal'jə*] pain in a gland.
adenasthenia deficient glandular activity.
adendritic [*ă"den-drit'ik*] without dendrites.
adenectomy [*ad"ə-nek'tə-me*] excision of a gland.
adenectopia [*ad"ə-nek-to'pe-ə*] displacement of a gland.
Adenia [*ə-de'ne-ə*] plant genus in family Passifloraceae; originates in Africa. *A. digitata* contains cyanogenetic glycosides and a potent toxalbumin—modeccin. *A. volkensi* may be similarly toxic.
adeniform [*ə-den'ĭ-form*] gland-shaped.
adenine [*ad'ə-nēn*] a purine base present in nucleoproteins of cells of plants and animals. Adenine and guanine are essential components of **nucleic acids**.



A-14: Adduction.
From Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians, 2nd Edition. Mosby, 2008.

A-15: Idiopathic salivary adenitis in a horse.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

a. arabinoside see **vidarabine**.
a. nucleotide translocator protein in the inner mitochondrial membrane; exchanges ADP produced by reactions in the cytosol for ATP produced in the mitochondrion by oxidative phosphorylation.
adenitis [*ad"ə-ni'tis*] inflammation of a gland.
granulomatous cervical a. granulomatous inflammation of the lymph nodes of the neck in pigs; asymptomatic and found only at slaughter; caused by *Rhodococcus equi* or atypical mycobacteria, rarely by *Mycobacterium tuberculosis*, *M. avium*, *M. bovis*.
granulomatous sebaceous a. see **sebaceous** adenitis (2).
lacrimal gland a. see **dacryoadenitis**.
meibomian a. inflammation of the tarsal or meibomian glands of the eyelids; important in dogs.
vesicular a. see **seminal** vesiculitis.
adenization assumption by other tissue of an abnormal glandlike appearance.
aden(o)- word element. [Gr.] *gland*.
adeno-associated virus a replication-defective, single-stranded DNA virus classifed in the genus *Dependovirus* of the family *Parvoviridae*, subffamily *Parvovirinae*. They depend on help provided by coinfection with adenoviruses for their replication. Not known to cause disease.
adenoameloblastoma [*ad"ə-no-ə-mel"o-blas-to'mə*] an odontogenic tumor with formation of ductlike structures in place of, or in addition to, a typical ameloblastic pattern.
adenoblast [*ad'ə-no-blast"*] an embryonic cell capable of forming glandular tissue.
adenoCa an abbreviation used in medical records for adenocarcinoma.
adenocarcinoid see goblet-cell **carcinoid**.
adenocarcinoma [*ad"ə-no-kahr"si-no'mə*] carcinoma derived from glandular tissue or in which the tumor cells form recognizable glandular structures. Some are listed under the tissues or organs they invade.
a. of the ileum a higher than usual prevalence is described in sheep and cattle in some very localized geographical areas. Caused by **ptaquiloside** in bracken ferns. The lesions may cause intestinal obstruction or ascites.
nasal a. see enzootic **nasal** adenocarcinoma.
renal a. causes little clinical abnormality in large animals but may be detectable as kidney enlargement during physical examination.
adenocele [*ad'ə-no-sēl"*] a cystic adenomatous tumor.



A-16: Salivary adenocarcinoma. Individual epithelial cells with round nuclei and lightly basophilic cytoplasm are present in a thick eosinophilic background of secretory material.
From Cowell RL, Diagnostic Cytology and Hematology of the Dog and Cat, 3rd Edition. Mosby, 2007.

adenocellulitis [*ad"ə-no-sel"u-li'tis*] inflammation of a gland and the cellular tissue around it.
adenochondroma [*ad"ə-no- kon-dro'mə*] a neoplasm containing both glandular, cartilaginous elements.
adenocystoma [*ad"ə-no-sis-to'mə*] adenoma in which there is cyst formation.
adenodynia [*ad"ə-no-din'e-ə*] pain in a gland.
adenogenous [*ad"ə-noj'ə-nəs*] originating from glandular tissue.
adenohypophyseal [*ad"ə-no-hi-po-fiz'e-əl*] pertaining to the adenohypophysis.
a. aplasia see **pituitary** hypoplasia.
a. corticotrophs cells which secrete ACTH, beta lipotropin.
a. gonadotrophs cells which secrete follicle-stimulating and luteinizing hormones.
a. hypoplasia see **pituitary** hypoplasia.
a. mammotrophs cells which secrete prolactin.
a. neoplasms include **acidophil** and **basophil** adenomas, normally inactive **chromophobe** adenoma and an ACTH-secreting corticotroph adenoma.
a. pouch see **Rathke's pouch**.
a. somatotrophs cells which secrete growth hormone.
a. system the hypothalamus, the pituitary gland and the interconnecting blood supply.
a. thyrotrophs cells which secrete thyroid-stimulating hormone.
adenohypophysis [*ad"ə-no-hi-pof'i-sis*] the so-called anterior lobe of the hypophysis cerebri (see also **pituitary**), which in domestic animals mostly surrounds the posterior lobe. It develops from the roof of the embryonic mouth and is divided into a large pars distalis, a smaller pars tuberalis and a pars intermedia. It secretes hormones under the control of releasing agents which arrive from the hypothalamus via a hypothalamohypophyseal portal system. The hormones include growth hormone, ACTH, beta-lipotropin, prolactin, thyrotropic hormone, follicle-stimulating hormone and luteinizing hormone. See also **adenohypophyseal**.
adenoid [*ad'ə-noid*] 1. resembling a gland. 2. enlarged pharyngeal tonsils.
adenolipoma [*ad"ə-no-li-po'mə*] a tumor composed of both glandular and fatty tissue elements.
adenology the sum of knowledge regarding glands.
adenolymphitis [*ad"ə-no-lim-fi'tis*] lymphadenitis; inflammation of lymph nodes.
adenolymphoma [*ad"ə-no-lim-fo'mə*] a cystic salivary-gland tumor containing epithelial and lymphoid tissue.
adenoma [*ad"ə-no'mə*] a benign epithelial tumor in which the cells form recognizable glandular structures or in which the cells are derived from glandular epithelium. Called also **pituitary** tumor (acidophil), **adrenal gland** tumor, **apocrine** tumor, ceruminous gland tumor, **eccrine** tumor.
adenomalacia [*ad"ə-no-mə-la'shə*] undue softness of a gland.
adenomatoid [*ad"ə-no'mə-toid*] resembling adenoma.
congenital a. malformation see **bronchial** hypoplasia.
adenomatosis [*ad"ə-no-mə-to'tis*] the formation of numerous adenomatous growths.
enzootic bovine a. see **atypical interstitial pneumonia**.
porcine intestinal a. see porcine proliferative **enteropathy**.
pulmonary a. see ovine **pulmonary** adenomatosis.
adenomatous [*ad"ə-nom'ə-təs*] adenomatoid; pertaining to adenoma or to nodular hyperplasia of a gland.
a. polyps see **polyp**.
a. intestinal hyperplasia see porcine proliferative **enteropathy**.
adenomectomy [*ad"ə-no-mek'tə-me*] excision of an adenoma.
adenomere [*ad'ə-no-mēr"*] the blind terminal portion of a developing gland that will become the functional portion of the organ. Used also as a title for a mature secretory endpiece. Depending on the type of gland the adenomere may be mucous or serous. It may also be tubular, alveolar, acinar or tubuloalveolar.
adenomyoma [*ad"ə-no-mi-o'mə*] a tumor made up of endometrium and muscle tissue, found in the uterus, or more frequently, in the uterine ligaments.
adenomyometritis [*ad"ə-no-mi"o-mə-tri'tis*] adenomyosis of the uterus.
adenomyosarcoma [*ad"ə-no-mi"o-sahr-ko'mə*] adenosarcoma containing striated muscle.
adenomyosis [*ad"ə-no-mi-o'sis*] invasion of the muscular wall of an organ (e.g. uterus) by glandular tissue.

epididymal a. occurs in aged dogs and bulls, probably due to chronic estrogenic stimulation, such as occurs in dogs with Sertoli cell tumors. Spermatic granulomas are a common sequel.
uterine a. a rare lesion seen occasionally in cows and bitches.
adenopathy [*ad"ə-nop'ə-the*] enlargement of glands, especially of the lymph nodes.
adenosarcoma [*ad"ə-no-sahr-ko'mə*] adenoma blended with sarcoma.
adenosclerosis [*ad"ə-no-sklĕ-ro'sis*] hardening of a gland.
adenosine [*ə-den'o-sēn*] one of the four bases that make up RNA and DNA containing adenine and the pentose sugar, 2-deoxy-D-ribose. Adenosine nucleotides are involved in the energy metabolism of all cells. Adenosine can be linked to a chain of one, two or three phosphate groups to form *adenosine monophosphate* (AMP), *adenosine diphosphate* (ADP) or *adenosine triphosphate* (ATP). The bond between the phosphate groups in ADP or the two bonds between the phosphate groups in ATP are called *high-energy bonds* because hydrolysis of a high-energy bond provides a large amount of free energy that can be used to drive other processes that would not otherwise occur spontaneously. The energy that is derived from the oxidation of carbohydrates, fats or proteins is used to synthesize ATP. The energy stored in ATP is then used directly or indirectly to drive all other cellular processes that require energy, of which there are four major types: (1) the transport of molecules and ions across cell membranes against concentration gradients, which maintains the internal environment of the cell and produces the membrane potential for the conduction of nerve impulses; (2) the contraction of muscle fibers and other fibers producing the motion of cells; (3) the synthesis of chemical compounds; (4) the synthesis of other high-energy compounds.
cyclic a. monophosphate (cyclic AMP, cAMP, 3′,5′-cAMP) a cyclic nucleotide, adenosine 3′,5′-cyclic monophosphate, involved in the action of many hormones, including catecholamines, ACTH and vasopressin. The hormone (first message) binds to a specific β-receptor on the cell membrane of target cells. This activates an enzyme, adenylate cyclase, which produces cyclic AMP from ATP. Cyclic AMP acts as a second messenger activating other enzymes via covalent modulation within the cell.
a. deaminase key enzyme in degradation pathway of adenosine; catalyzes the deamination of adenosine to inosine. Many cases of severe combined immunodeficiency syndrome in humans result from a heritable lack of adenosine deaminase.
a.'5-diphosphate (ADP) a nucleotide, adenosine 5′-pyrophosphate, produced by the hydrolysis of adenosine triphosphate (ATP). It is then converted back to ATP by oxidative, substrate or photosynthetic phosphorylation. See also **ADP**.
a. monophosphate (AMP) a nucleotide, adenosine 5′-phosphate, involved in energy metabolism and nucleotide synthesis. Called also adenylic acid.
a. triphosphatase (ATPase) a term used to refer to the enzymatic activity of certain intercellular processes that split ATP to form ADP and inorganic phosphate, when the energy released is not used for the synthesis of chemical compounds. Examples are the splitting of ATP in muscle contraction in myosin head-groups and the transport of ions across cell membranes.
a. triphosphatase test used as a quantitative assay of the amount of avian leukosis virus in chicken tissues or tissue cultures. It depends on the virus's characteristic of carrying on its surface a phosphatase enzyme that dephosphorylates adenosine triphosphate.
a. triphosphate (ATP) a nucleotide, adenosine 5′-triphosphate, occurring in all cells, where it is a source of energy in the form of high-energy phosphate bonds. Free energy of hydrolysis is supplied to drive metabolic reactions or to transport molecules against concentration gradients, when ATP is hydrolyzed to ADP and inorganic phosphate or to AMP and inorganic pyrophosphate. ATP is also used to produce high-energy phosphorylated intermediary metabolites, such as glucose-6-phosphate.
a. triphosphate synthase enzyme responsible for the synthesis of ATP from ADP and inorganic phosphate in the process of oxidative phosphorylation; energy for this reaction is provided by a proton motive force generated by pumping of protons from the matrix of mitochondria into the intermembrane space as electrons are passed down the respiratory chain.
adenosis [*ad"ə-no'sis*] 1. any disease of a gland. 2. abnormal development of a gland.
adenosquamous carcinoma [*ad"ə-no-skwa'məs*] a malignant epithelial neoplasm with both glandular and squamous epithelial features.
S-adenosyl-L-methionine (SAMe) [*ə-den'o-sil"*] a natural metabolite in hepatocytes and a precursor for cysteine, which is one of the amino acids in glutathione. Used as a nutritional supplement to protect the liver from free radical damage. See also **hepatoprotectant**.
adenotomy incision or dissection of glands.
Adenoviridae [*ad"ə-no-vir'ĭ-de*] a family of viruses containing five genera, *Mastadenovirus*, which contains the mammalian adenoviruses; *Aviadenovirus*, which contains some bird adenoviruses; *Atadenovirus*, which includes viruses that infect various ruminant, avian, reptilian and marsupial hosts; *Siadenovirusw*, which contains viruses isolated from birds and frogs; and *Ichtadenovirus*, which contains a virus isolated from sturgeon. Virons are nonenveloped, 70 nm diameter and contain a double-stranded DNA molecule of about 30–35 kilobase pairs. They grow in cell cultures producing cytopathology and each species has a relatively narrow host range. Adenoviruses are common causes of relatively mild upper respiratory disease and of enteric infections. The type species is human adenovirus h1.
adenovirus [*ad'ə-no-vi"rəs*] a member of the family ***Adenoviridae***.
avian a. types 1–11 groups I, II and III cause respiratory or enteric disease, aplastic anemia, atrophy of bursa of Fabricius, egg-drop syndrome, turkey hemorrhagic enteritis and marble spleen disease in quail.
bovine a. types 1–9 cause conjunctivitis, pneumonia, diarrhea, pneumoenteritis.
canine a. type 1 (CAV-1) causes infectious canine **hepatitis**.
canine a. type 2 (CAV-2) is a cause of **kennel cough** (tracheobronchitis).
equine a. type 1 causes pneumonia, the most severe form being primary, severe combined immunodeficiency disease of Arab foals.
equine a. type 2 associated with enteric infections.
ovine a. types 1–5 cause mild respiratory and enteric diseases.
porcine a. types 1–4 cause respiratory disease; type 4 causes diarrhea and/or meningitis.
turkey a. causes respiratory or enteric disease, marble spleen disease.
adenyl cyclase [*ə-den'ə-lāt si'klās*] see **adenylate** cyclase.
adenylate [*ə-den'ə-lāt*] a salt, anion or ester of adenylic acid.
a. cyclase an enzyme that catalyzes the conversion of adenosine triphosphate (ATP) to cyclic adenosine monophosphate (cAMP) and inorganic pyrophosphate. It is activated by the attachment of a hormone or neurotransmitter to a specific membrane-bound receptor.
a. kinase enzyme catalyzing the conversion of two moles of ADP to ATP and AMP, thereby equilibrating ADP with ATP and AMP. Controls the adenylate energy charge of a cell, particularly muscle cells. Called also myokinase.
adenylic acid [*ad"ə-nil'ik*] adenosine 5′-monophosphate (AMP); a component of nucleic acids, consisting of adenine, ribose and phosphoric acid.
adermia [*ə-dur'me-ə*] congenital defect or absence of the skin.
adermin see **pyridoxine**.
ADF acid-detergent fiber.
ADG average daily gain.
ADH antidiuretic hormone.
ADH response test see **antidiuretic** hormone.
adhesins [*ad-he'zins*] substances which enable bacteria to adhere to epithelial surfaces. See also **pilus**, **fimbria**.
AAF a. *a*ggregative *a*dherence *f*imbriae; involved in the adherence of enteroaggregative *Escherichia coli* to intestinal epithelial cells.
adhesion [*ad-he'zhən*] union of two surfaces that are normally separate; also, any fibrous band that connects them. Surgery within the abdomen sometimes results in adhesions. As an organ heals, fibrous scar tissue forms around the incision. Fibrinous exudate and scar tissue may cling to the surface of adjoining organs, causing them to kink. Adhesions are usually painless and cause no difficulties, although occasionally they produce obstruction or malfunction by distorting the organ. They can also occur following peritonitis and other inflammatory conditions. They may also occur in the pleura, in the pericardium, and

VetBooks.ir

around the pelvic organs. Surgery is sometimes recommended to relieve adhesions.

bowel a. see peritoneal adhesion (below).

cervical a's adhesions in the uterine cervix; they usually result from trauma during parturition and occasionally infection; in mares and camelids they encourage the development of **pyometra**.

interthalamic a. the midline union of the two halves of the thalamus; during development of the brain the two thalami encroach into the primitive disk-shaped third ventricle transforming it into a ring.

intestinal a. takes the form of nonelastic bands between loops of intestine or between the intestine and other organs, or of constricting bands around the intestine. They often cause no clinical signs. Long bands may cause intermittent colic due to obstruction of the intestinal lumen which is relieved spontaneously. When they are not relieved they are life-threatening. Cicatricial bands within the wall of the intestine are more likely to cause persistent, subacute abdominal pain. See also equine **colic**.

pericardial a's fibrous adhesions that restrict the action of the heart and that follow late stages of pericarditis. This may cause cardiac inefficiency that leads to congestive heart failure.

peritoneal a. part of the healing process in peritonitis, and disruption by surgical means or by violent activity may result in recrudescence of peritonitis. In the late cicatrization stage, adhesions may, by contraction, cause partial obstruction of the intestine and chronic or intermittent pain; a common cause of chronic colic in horses.

pleural a. develops in the healing stages of pleurisy but is soon attenuated by constant thoracic movement and causes little respiratory insufficiency.

reticular a. if extensive, can restrict the movements of the reticulum so much that the reticular groove cannot open to allow emptying of the rumen through the reticulo-omasal orifice. Chronic distention and frothy bloat result.

vaginal a's common only in mares and camelids. Often a result of prolonged obstetrical manipulations. Interfere with mating by preventing penetration of the penis, or with fertilization by blocking the movement of spermatozoa. Vaginal and rectal examination reveal bands of adhesion across the passage, or transverse partitions that completely block it. In the latter there may be an accumulation of exudate or secretion cranial to it. Three-dimensional adhesions convert the vagina into a solid mass with a similar obstructive effect. See also **vaginal**.

adhesiotomy [*ad-he"ze-ot'ə-me*] surgical division of adhesions.

adhesive [*ad-he'siv*] 1. pertaining to, characterized by, or causing close adherence of adjoining surfaces. 2. a substance that causes close adherence of adjoining surfaces.

tissue a's materials, of biological origin (eg fibrin) or synthetic origin (eg cyanoacrylates) used for control of hemorrhage from cut surfaces, oral surgery, intestinal anastomosis and corneal ulcerations.

ADI acceptable daily intake.

adiaphoria [*a"di-ə-for'e-ə*] nonresponse to stimuli as a result of previous exposure to similar stimuli.

adiaspiromycosis [*ad"e-ə-spi"ro-mi-ko'sis*] a respiratory disease of humans and many animal species caused by the fungus *Chrysosporium* spp. and characterized by large, thick-walled spherules (adiaspores).

ADIC a cancer chemotherapy rescue protocol using doxorubicin and dacarbazine.

adipectomy [*ad"i-pek'tə-me*] excision of adipose tissue.

adipic [*ə-dip'ik*] pertaining to fat.

adip(o)- word element. [L.] *fat*.

adipocele [*ad'i-po-sēl"*] a hernia containing fat.

adipocellular [*ad"i-po-sel'u-lər*] composed of fat and connective tissue.

adipocyte [*ad'i-po-sīt*] a cell specialized for the storage of fat; the fat is stored in a large cytoplasmic vesicle.

embryonic a. develop in the subcutis during the second half of pregnancy.

adipofibroma [*ad'i-po-fi-bro'mə*] a fibrous tumor with fatty elements.

adipogenic, adipogenous [*ad"i-po-jen'ik*] producing fat.

adipokine a polypeptide produced by adipocytes. Called also adipocytokine.

adipokinesis [*ad"i-po-ki-ne'sis*] the mobilization of fat in the body.

adipolysis [*ad"i-pol'i-sis*] the digestion of fats.

adiponecrosis [*ad"i-po-nə-kro'sis*] necrosis of fatty tissue.

a. neonatorum induration of subcutaneous fat, thought to be caused by obstetric trauma, in the newborn. Called also adiposis subcutanea.

adipopexis [*ad"i-po-pek'sis*] the fixation or storing of fat.

adipose [*ad'i-pōs*] fatty.

brown a. tissue a connective tissue that contains multilocular fat cells whose color results from cytochrome pigments and a high density of mitochondria; it functions primarily in heat production and control of body weight. Is especially notable in young and hibernating animals for non-shivering thermogenesis. Whereas fat has been likened to a blanket, brown fat has been compared to an electric blanket.

white a. tissue a connective tissue that contains large spherical or polyhedral fat cells each storing a single fat droplet; it is the form in which a majority of the body's available energy is stored as triacylglycerols.

adiposis [*ad"i-po'sis*] a condition marked by deposits or degeneration of fatty tissue.

a. cerebralis obesity due to cerebral or pituitary disease.

a. dolorosa a painful condition due to pressure on nerves caused by fatty deposits.

a. hepatica fatty degeneration of liver.

a. neonatorum see **adiponecrosis** neonatorum.

adiposity [*ad"i-pos'i-te*] obesity.

adiposogenital dystrophy, adiposogenital syndrome a disease characterized by abnormal distribution of fat (obesity) accompanied by underdevelopment of the genitalia. The condition is caused by damage to certain parts of the **hypothalamus**, with a decrease in the secretion of gonadotropic hormones from the anterior lobe of the **pituitary** gland. Treatment depends on the primary cause of the condition, usually a tumor or infection involving the hypothalamus. Called also Fröhlich's syndrome.

adiposuria [*ad"i-po-su're-ə*] the occurrence of fat in the urine.

adipsia [*ə-dip'se-ə*] absence of thirst; abnormal avoidance of drinking.

aditoprim an antibacterial agent that inhibits dihydrofolate reductase; similar to **trimethoprim**.

aditus [*ad'i-təs*] [NAV] pl. *aditus* [L.] an entrance or opening.

a. laryngis the entrance to the larynx, bounded by the epiglottis, the aryepiglottic folds and the tubercula corniculata.

a. orbitae [NAV] the entrance to the orbit, surrounded by the orbital margin and the orbital ligament.

adjusted weaning weight off-the-cow weight adjusted to 205 days of age and to a mature dam age equivalence.

adjusted yearling weight weight adjusted to either 365, 452 or 550 days of age and for age of dam.

adjustment [*ə-just'mənt*] 1. summarization of statistical measures in which the effects of differences in composition of the populations being compared have been minimized by statistical methods. An example would be weaning weights standardized to a calf age of 205 days and a mature dam equivalent which allows fair, age-equivalent comparisons among calves. 2. statistical adjustment to data made to accommodate predictable fluctations such as occur with season, rainfall.

chiropractic a. application of force to a vertebral articulation to restore biomechanical and neurological function.

adjuvant [*aj'ə-vənt, ă-joo'vənt*] 1. assisting or aiding. 2. a substance that aids another, such as an auxiliary remedy. Commonly used in reference to substances, commonly mineral oil or alum, added to vaccines to enhance antigenicity. See also **Freund's complete adjuvant**.

adlay *Coix lachryma-jobi*. Called also Job's tears.

adluminal connected to the lumen.

admission criteria the rules for the establishment of comparable groups in any comparison of differences in the performance or responses of the group. The criteria may be permissible age group, the previous productivity, the freedom from disease and so on.

adnerval, adneural [*ad-nur'vəl*] toward a nerve.

adnexa [*ad-nek'sə*] [L.] *appendages;* accessory organs.

ocular a., a. oculi periocular structures, consisting of orbit, orbital contents, eyelids, nasolacrimal system, conjunctiva, and third eyelid. Called also *organa oculi accessoria*.

a. uteri the ovaries, supporting membranes and adjacent tissues associated with the uterus.

adnexal [*ad-nek'səl*] pertaining to, or emanating from, the adnexa.

a. tumors see under names of individual structures such as sebaceous gland adenoma.

adonidin cardiac glycoside present in plants of the *Adonis* genus.

Adonis a genus of the plant family Ranunculaceae; contain the cardiac glycosides adonitoxin and adonidin. Includes *A. autumnalis*, *A. aestivalis*, *A. annua*, *A. microcarpa* (pheasant's eye), *A. vernalis*.

adonitoxin cardiac glycoside in plants of genus ***Adonis***.

adontia absence of teeth.

adoption 1. of alien young. Individual dams of all species may adopt strange neonates, and some ewes will even attempt to poach from others, but special measures have to be taken in most cases to foster alien young. Sows are probably the easiest to deceive. Queens will accept foster kittens if they are within about 2 weeks of the age of their own kittens. Reluctant ewes may accept strange lambs only if they are rubbed with secretions from their own. 2. also used in reference to the placing of stray or otherwise unwanted dogs and cats into ownership, as stray animals obtained from an animal shelter.

adoptive transfer the transfer of cells, commonly lymphocytes from an immunized individual, to a non-immune histocompatible recipient.

adoral [*ad-or'əl*] 1. situated near the mouth. 2. directed toward the mouth. See also **aborad**, **aboral**.

ADP **adenosine**'5-diphosphate.

ADP-ribosylation the attachment of ADP-ribose to elongation factor 2 that blocks the translocation of the nascent polypeptide. The mode of action of diphtheria toxin.

ADR 1. adverse drug reaction. 2. abbreviation for colloquial expression 'ain't doing right'.

adrenal [*ə-dre'nəl*] 1. near the kidney. 2. of or produced by the adrenal glands. 3. an adrenal gland.

a. cortex the outer part of the adrenal gland made up of an external zona glomerulosa, a deeper zona fasciculata and a zona reticularis. It produces three main groups of hormones, the glucocorticoids which are concerned with increasing blood glucose concentrations, the mineralocorticoids concerned with the maintenance of electrolyte concentrations in the extracellular fluid, and androgens which have the same masculinizing effect as the hormone testosterone produced by the testis. Called also adrenal gland cortex. See **glucocorticoid**, **mineralocorticoid**, **androgen**.

a. cortex inhibitors see **adrenolytic**.

a.-cortical see **adrenocortical**.

a. cortical dysfunction see **hyperadrenocorticism**, **hypoadrenocorticism**.

a. corticoids see **mineralocorticoid**, **glucocorticoid**, **corticosteroid**.

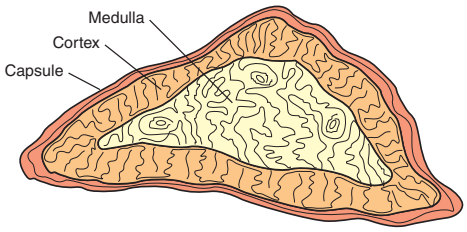
a. function tests see **ACTH** response test, **dexamethasone** suppression test, V-**test**.

a. hyperplasia-like syndrome a congenital abnormality of adrenal steroidogenesis reported in dogs which results in hyperprogestinism and hyperandrogenism. Clinical signs include bilaterally symmetrical alopecia resembling that seen with other endocrinopathies. See **alopecia** X.

a. insufficiency hypofunction of the adrenal gland, particularly the cortex, leading to signs of weakness and loss of sodium, chloride and water. See also primary **hypoadrenocorticism**.

a. medulla a glandular extension of the effector fibers of the sympathetic nervous system that releases into the bloodstream the hormones **epinephrine** (adrenaline) and **norepinephrine** (noradrenaline). When the sympathetic nervous system is stimulated the adrenal medulla responds also and its hormones are carried via the bloodstream to cause increases in cardiac output and metabolic rate, vasoconstriction and reduction of gastrointestinal peristalsis. The hormones have similar functions but epinephrine is removed from the bloodstream more slowly and has a more prolonged effect. Called also adrenal gland medulla. Adrenal medullary hormones are not essential to life. Hypersecretion, such as occurs in some functional pheochromocytomas, causes tachycardia, edema and cardiac hypertrophy.

a. steroids cortisol, corticosterone, cortisone, 11-dehydroxycortisone, desoxycorticosterone, 17-hydroxy-11-desoxycorticosterone, aldosterone, the adrenal corticoids from the adrenal cortex. Called also corticosteroids.



A-17: Cross section of an adrenal gland showing cortex and medulla. From Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians, 2nd Edition. Mosby, 2008.

adrenal gland [*ə-dre'nəl gland*] one of the pair of endocrine organs located near the cranial pole of the kidneys. Each is composed of two parts, an outer cortex and an inner medulla, that are anatomically, embryologically and functionally distinct. See also **adrenal** cortex, **adrenal** medulla. Called also *glandula suprarenalis*, suprarenal gland.

a. g. fetal cortex the first adrenal cortex in the fetus; it is subsequently surrounded by a permanent cortex and has disappeared by the time of birth; the function is unknown.

a. g. hormones includes epinephrine, norepinephrine from the adrenal medulla and cortisol, corticosterone, cortisone, 11-dehydroxycortisone, desoxycorticosterone, 17-hydroxy-11-desoxycorticosterone, aldosterone, the steroid hormones from the adrenal cortex.

a. g. medulla see **adrenal** medulla.

a. g. tumors includes pheochromocytomas and neuroblastomas arising in the medulla myelolipoma and cortical adenomas and carcinomas. Cause local tissue compression. Both adenomas and carcinomas may be functional and cause **hyperadrenocorticism**.

adrenalectomy [*ə-dre"nəl-ek'tə-me*] surgical excision of an adrenal gland. This procedure is indicated when a disorder of the adrenal gland, such as **Cushing's syndrome** or pheochromocytoma, causes an overproduction of adrenal hormones.

adrenaline [*ə-dren'ə-lin*] see **epinephrine**.

adrenergic [*ad"ren-ur'jik*] 1. activated by, characteristic of, or secreting epinephrine or substances with activities similar to those of epinephrine. The term is applied to those nerve fibers of the sympathetic nervous system that release norepinephrine (and possibly small amounts of epinephrine) at a synapse when a nerve impulse passes. 2. an agent that acts like epinephrine. Called also sympathomimetic.

a. agents sympathomimetic amines which exert their effects on adrenergic receptors of effector cells innervated by the sympathetic nervous system. The administration of these adrenergic agonists mimics the physiological effects of sympathoadrenal discharge.

a. alpha-blockers, beta-blockers see adrenergic blockade (below).

a. amines these are the sympathomimetic amines. They have similar but not identical structures and actions. Epinephrine, norepinephrine and isoproterenol are catecholamines but differ in their effects. Norepinephrine is primarily an activator of alpha-receptors whereas isoproterenol is a selective beta-receptor agonist. Epinephrine is an active agonist for both alpha- and beta-receptors. Ephedrine is the classical noncatecholamine sympathetic agonist.

a. blockade adrenergic blocking agents prevent the activation of adrenergic receptors. They may be alpha-blockers, e.g. ergot, or beta-blockers such as propranolol.

a. blocking agent a drug that blocks the secretion of epinephrine and norepinephrine at the postganglionic nerve endings of the sympathetic nervous system. By blocking these adrenergic substances, which cause constriction of blood vessels and increased cardiac output, adrenergic blocking agents produce a dilatation of the blood vessels and a decrease in cardiac output.

a. nerves see adrenergic (1) (above).

a. nervous system see **sympathetic** nervous system.

a. receptors class of receptors named after the action of adrenalin (e), the alternative name for epinephrine. Alpha receptors, which are stimulated by norepinephrine and blocked by agents such as phenoxybenzamine, are categorized into two classes, α_1 and α_2, which have different actions. α_1 adrenergic actions include contraction of the iris, decreased motility in the intestine, and

VetBooks.ir

VetBooks.ir

A

potassium and water secretions from the salivary glands. α_2 adrenergic receptors inhibit adenylate cyclase, rather than activating it. Beta receptors, which are stimulated by epinephrine and blocked by agents such as propranolol, are also categorized into two types; β_1 adrenergic receptors, which produce lipolysis and cardiostimulation, and β_2 adrenergic receptors, which produce bronchodilatation and vasodilatation.

α-adrenergic blocking agent see **adrenergic** blocking agent.

β-adrenergic blockade the blockade of beta-adrenergic receptors by beta-blockers, e.g. propranolol.

adren(o)- word element. [L.] *adrenal glands*.

adrenoceptor [*ə-dre"no-sep'tər*] see **adrenergic** receptors.

adrenochromes pigments produced by chromaffin-positive granules contained in the glandular cells of the adrenal medulla.

adrenocortical [*ə-dre"no-kor'tĭ-kəl*] pertaining to or arising from the cortex of the adrenal gland.

a. hormones any of the corticosteroids elaborated by the **adrenal** cortex, the major ones being the glucocorticoids and mineralocorticoids, and including some androgens, progesterone and perhaps estrogens. See also **corticosteroid**.

a. hyperplasia may be bilateral, resulting from stimulation by a functional corticotropic adenoma of the pars distalis or the pars intermedia of the pituitary gland. See **hyperadrenocorticism**.

idiopathic a. atrophy see primary **hypoadrenocorticism**.

a. neoplasms adenomas usually do not cause clinical signs and are incidental findings at necropsy. Carcinomas are highly invasive of surrounding tissues and into the caudal vena cava. Rarely, adrenal neoplasms are functional and may cause signs of **hyperadrenocorticism**.

adrenocorticoid [*ə-dre"no-kor'tĭ-koid"*] a compound produced by the adrenal cortex.

adrenocorticolysis destruction of cells in the adrenal cortex. See **mitotane**.

adrenocorticomimetic [*ə-dre"no-kor"tĭ-ko-mi-met'ik*] having effects similar to those of hormones of the adrenal cortex.

adrenocorticosteroid [*ə-dre"no- kor"tĭ-ko-ster'oid*] one of the steroid compounds produced by the adrenal cortex.

adrenocorticotrophic [*ə-dre"no-kor"tĭ-ko-tro'fik*] adrenocorticotropic; corticotropic.

a. hormone a hormone elaborated by the anterior lobe of the **pituitary** gland that stimulates the action of the **adrenal** cortex. See also **ACTH**.

a. hormone secreting tumor adenoma of either posterior or intermediate lobe; causes a syndrome of cortical excess (Cushing's syndrome).

adrenocorticotrophin [*ə-dre"no-kor'tĭ-ko-tro"fin*] adrenocorticotropic hormone, or corticotropin.

adrenocorticotropic [*ə-dre"no-kor"tĭ-ko-tro'pik*] having a stimulating effect on the adrenal cortex; corticotropic.

a. hormone **ACTH**, a hormone secreted by the anterior **pituitary** gland which has a stimulating effect on the **adrenal** cortex. Called also corticotropin.

adrenocorticotropin [*ə-dre"no-kor"tĭ-ko-tro'pin*] adrenocorticotropic hormone (**ACTH**) or corticotropin.

adrenocorticotropin-releasing factor [*ə-dre"no-kor"tĭ-ko-tro'pin*] thought to be released from the fetal hypothalamus late in gestation in normal pregnancy. Stimulates release of adrenocorticotropin from the anterior pituitary.

adrenodoxin [*ə-dre"no-dok'sin*] a nonheme iron protein.

adrenolytic [*ə-dre"no-lit'ik*] 1. antagonizing the action of adrenaline (epinephrine). See also **antiadrenergic**; **adrenergic** blocking agent. 2. inhibits secretions of the adrenal gland. See **mitotane**.

adrenomedullary [*ə-dre"no-med'u-lar"e*] pertaining to or arising from the medulla of the adrenal gland.

adrenomegaly [*ə-dre"no-meg'ə-le*] abnormal enlargement of the adrenal gland.

adrenomimetic [*ə-dre"no-mi-met'ik*] having actions similar to those of adrenergic compounds; sympathomimetic.

adrenopathy [*ad"rən-op'ə-the*] any disease of the adrenal glands.

adrenoreceptor [*ə-dre"no-re-sep'tər*] a receptor essential to neurohumoral transmission, situated on or within the surface membranes of cells innervated by adrenergic neurons and in some cells which are not so innervated.

adria cell vacuolar degeneration of myocardial myocytes; one of the manifestations of microscopic myocardial changes in dogs poisoned with the antineoplastic **anthracycline** antibiotics. The clinical picture is one of congestive heart failure.

A-18: Adson tissue forceps.
From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide. Mosby, 2011.

Adson tissue forceps [*ad'sən*] standard thumb-operated, wishbone type forceps for grasping tissue, with a rat-tooth tip with a single point on one side fitting in between two teeth on the other. *Adson-Brown* tissue forceps have multiple fine teeth at the edges of the tips.

adsorb [*ad-sorb'*] to attract and retain other material on the surface.

adsorbent [*ad-sor'bənt*] 1. pertaining to or characterized by adsorption. 2. a substance that attracts other materials or particles to its surface.

gastrointestinal a. a substance, usually a powder, administered to adsorb gases, toxins and bacteria in the stomach and intestines. Examples include activated charcoal and kaolin.

adsorption [*ad-sorp'shən*] the action of a substance in attracting and holding other materials or particles on its surface.

adtorsion [*ad-tor'shən*] inward rotation of the globe around the line of sight when the eye is at its central primary position.

adult [*ə-dult'*] having attained full growth or maturity, or an organism that has done so.

adulteration [*ə-dul"tər-a'shən*] addition of an impure, cheap or unnecessary ingredient to cheat, cheapen or falsify a preparation. Adulteration of ox beef with horsemeat is an example. See also **substitution**.

adulticide treatment aimed at the adult, rather than eggs or immature stages of parasites, such as fleas or heartworm (*Dirofilaria immitis*). Some drugs are capable of both effects.

advancement [*ad-vans'mənt*] detachment of a portion of tissue, especially muscle, and reattachment at an advanced point.

a. pedicle graft detachment of a portion of skin by making single or bipedicle incisions, and reattachment at an advanced point.

adventitia [*ad"ven-tish'e-ə*] the outer, connective tissue coat of an organ or structure, especially the outer coat of an artery or vein.

adventitious [*ad"ven-tish'əs*] 1. accidental or acquired. 2. not in the usual place.

a. breath sounds see **breath** sounds.

a. movements purposeless movements; as seen in distemper **myoclonus** in dogs.

adverse opposing the interests of the patient.

a. drug event (ADE) an adverse event involving drug use; includes adverse drug reaction (ADR) (see below) as well as events due to error.

a. drug reaction (ADR) an undesirable and unintentional effect caused by a drug administered at the normal therapeutic manner.

a. event any injury or disability due to medical care, as opposed to an underlying disease process.

a. food reaction an abnormal response to ingested food components. It may be immunologic or non-immunologic. See also **food**.

adversive syndrome lesions of the prosencephalon causing head turning, circling or deviation of the eyes toward the side of the lesion.

advertising the making of public statements about services offered and facilities available in a professional practice. Personal advertisement in this way is frowned upon because of the risk that there will be misrepresentation and that it will unfairly attract business to the detriment of the client. The contrary view is that the public is disadvantaged because they will not be aware of the range of services offered and the fees attached to them. In most countries now, in which it used to be controlled by the registering authority, the scope of personal advertising is left to the discretion of the individual and veterinarians may legally advertise in any way that is not false, misleading, or deceptive. Advertising of board certification in veterinary specialties and of an accredited hospital

facility is allowed. Corporate advertising which advertises the profession as a whole is encouraged.

advisory services advisory services provided to the public, in their capacity as owners and managers of animals, are an important part of veterinary science. They may be provided by government bureau, by commercial companies who deal in pharmaceuticals or animals or animal products, or by veterinary species specialists practicing privately or in incorporated institutions.

adynamia [*a-di-na'me-ə*] lack of normal or vital powers.

adynamic ileus [*a-di-nam'ik il'e-əs*] see **ileus**.

AE1 anion exchanger 1.

Aedes [*a-e'dēz*] a genus of the family Culicidae, the mosquitoes, and known to transmit the *Plasmodium* spp. causing bird malaria, and the viruses of Rift Valley fever and Japanese encephalitis. Some species are vectors of equine encephalomyelitis virus. *Dirofilaria immitis* uses *Aedes* spp. as intermediate hosts for the development of microfilariae. Can also cause 'insect worry' in animals and vicious species, e.g. *A. vigilax*, may cause fatalities amongst puppies and piglets.

AEEC attaching and effacing *Escherichia coli*; called also enteropathogenic *E. coli*.

aegobronchophony see **egobronchophony**.

aegophony see **egobronchophony**.

Aegyptianella [*e-jip"she-ə-nel'ə*] a genus of the family of rickettsia-like organisms within the *Anaplasmataceae*.

A. pullorum the bacterial cause of **aegyptianellosis** in birds. Transmitted by the tick *Argas persicus*.

aegyptianellosis the disease of birds caused by *A. pullorum*, and possibly other organisms of the same genus. It is characterized by fever, anorexia, diarrhea and paralysis.

Aelurostrongylus [*e-loo"ro-stron'jə-lus*] a genus of lungworm of the family Angiostrongylidae; causes chronic cough and weight loss. Includes *A. abstrusus* (cat), *A. falciformis* (badger), and *A. pridhami* (wild mink).

-aemia word element; for words ending thus see words ending -emia. [Gr.] *condition of the blood*.

aeration [*ār-a'shən*] 1. the exchange of carbon dioxide for oxygen by the blood in the lungs. 2. the charging of a liquid with air or gas.

aerial part the part of the plant above the ground.

aerial surveys low-level surveying, usually from a helicopter, of plots or areas of land and transferring the information manually onto a base map. Can be used for a variety of studies including, for example, establishing an estimate of the population density of wild or feral animals and their habitat.

aer(o)- word element. [Gr.] *air, gas*.

Aerobacter aerogenes [*ār"o-bak'tər*] a name formerly used to describe some strains of ***Klebsiella*** *pneumoniae*.

aerobe [*ār'ōb*] a microorganism that grows in the presence of free oxygen and utilizes oxygen for oxidative phosphorylation.

facultative a. an organism that can adapt to using oxygen.

obligate a. an organism that cannot live without oxygen.

aerobic [*ār-o'bik*] a microbe or microbiological process that functions fully only in the presence of free oxygen.

a. effluent treatment the activated **sludge** method of handling sewage and effluent from meat packing plants.

a. exercise moderate exercise performed in the circumstance where the blood supply is able to maintain an adequate supply of oxygen to the tissues during the exercise.

A-19: Larva of *Aelurostrongylus abstrusus*. From Nelson RW, Couto CG, Small Animal Internal Medicine, 3rd Edition. Mosby, 2003.

aerocele [*ār'o-sēl"*)] a tumor formed by air filling an adventitious pouch, such as laryngocele and tracheocele.

aerodermectasia [*ār"o-dur"mek-ta'zhə*] subcutaneous or surgical emphysema.

aeroembolism [*ār"o-em'bo-liz-əm*] obstruction of a blood vessel by air or gas.

aerogen [*ār'o-jen"*] a gas-producing bacillus.

aerogenesis [*ār"o-jen'ə-sis*] formation or production of gas.

Aeromonas [*ār"o-mo'nəs*] a genus of facultatively anaerobic, gram-negative rod-shaped bacteria in the family *Pseudomonadaceae*, usually resident in richly organic water and soil, and on fish species.

atypical *A. salmonicida* cause of miscellaneous infections of fish, but not included in *A. salmonicida* subspecies *salmonicida*, the cause of furunculosis in salmonids. May cause goldfish ulcer disease.

A. hydrophilia causes ulcerative stomatitis (mouthrot, canker) of captive reptiles. Ulcerative lesions in the mouth may extend to cause osteomyelitis of the jaw bone, inflammation of the harderian gland and invasion of the corneospectacular area causing severe swelling. This bacterium may also cause septicemia, especially in aquatic snakes with access to infected water; causes fin, tail and snout erosions (**red sore disease**) in captive fish. May also cause diarrhea in foals.

A. liquefaciens a group of closely related, motile aeromonads which cause hemorrhagic septicemia in many cultured pond-fish, aquarium fish and salmonids.

A. salmonicida* subspecies *salmonicida causes **goldfish** ulcer disease, **furunculosis** in salmonids and **erythrodermatitis** in carp.

aerophagia [*ār"o-fa'jə*] habitual swallowing of air. See **crib**-biting.

aerophilic [*ār"o-fil'ik*] requiring air for proper growth.

aerophilous [*ār-of'i-lus*] aerophilic.

aeroplethysmograph [*ār"o-plĕ-thiz'mo-graf*] an apparatus for graphically recording respiratory volumes.

aerosinusitis [*ār"o-si"nəs-i'tis*] barosinusitis.

aerosol [*ār'o-sol*] a colloid system in which solid or liquid particles are suspended in a gas, especially a suspension of a drug or other substance to be dispensed in a cloud or mist.

a. clearance removal of particles that have been deposited in the respiratory tissues. Clearance may occur by ciliary transport, by phagocytosis, by encapsulation and immobilization in a deposit of fibrous tissue (in which case the particles remain in the body), and by dissolving in tissue fluid and subsequently diffusing into the general circulation where the particles are metabolized.

a. deposition the depositing of aerosol particles onto a nearby surface, especially deposition or retention of the particles within the respiratory system. Closely related to aerosol penetration and affected by the same factors.

a. penetration the maximum distance aerosol particles can be carried into the respiratory tract by inhaled air. Depth of penetration increases as particle size decreases. Factors affecting where aerosol particles will be deposited and how deeply they can penetrate are: gravity, kinetic activity of gas molecules, inertial impaction, physical nature of the particle, and the ventilatory pattern.

a. therapy nebulization; delivery of a therapeutic agent as a fine mist or spray to the mucociliary layer of the respiratory tract.

aerotolerant [*ār"o-tol'ər-ənt*] surviving and growing in air, but not using oxygen; said of anaerobic microorganisms.

aerotropism [*ār-ot'ro-piz"əm*] growth of aerobic organisms towards or around a source of oxygen.

Aeschynomene a genus of shrubs in the family Leguminosae used as browse by grazing animals.

A. indica seeds contain a neurotoxin causing vomiting and ataxia through damage to cerebellar and vestibular nuclei in pigs. Called also budda pea.

aesculin [*es'ku-lin*] esculin.

Aesculus [*es'ku-ləs*] a genus of the family Sapindaceae (Hippocastanaceae) of shrubs and trees. Called also horsechestnut, buckeye. Contains a toxic hydroxycoumarin glycoside esculin in seed pods and shoots; causes depression, tremor, incoordination, paralysis. Includes *A. californica* (California buckeye), *A. flava (A. octandra)* (sweet buckeye), *A. glabra* (Ohio buckeye), *A. hippocastanum* (horsechestnut), *A. indica* (Indian horsechestnut), *A. pavia* (red buckeye).

aestivation see **estivation**.

aethimizol see **etimizol**.

VetBooks.ir

VetBooks.ir

A

Aethusa a member of the plant family Apiaceae (Umbelliferae); contains a piperidine alkaloid cynapine capable of causing posterior paralysis which may be fatal. Includes *A. cynapium* (fool's parsley, lesser hemlock).

aetiology etiology.

af- prefix meaning towards.

afebrile [*a-feb'ril*] without fever.

Affenpinscher a very small (6–9 lb), lively dog with a prominent chin, small erect ears and docked tail. The coat, usually black, gray or red, is shaggy and in general short, but longer around the eyes, nose and chin, and there is a slightly undershot jaw, giving a typical monkey-like expression. Called also monkey dog, monkey terrier or Affen.

afferent [*af'ər-ənt*] conducting toward a center or specific site of reference; incoming.

a. arterioles branches of the interlobular arteries of the kidney that supply the glomerular capillaries of the renal corpuscle.

a. loop syndrome chronic partial obstruction of the proximal loop (duodenum and jejunum) after gastrojejunostomy, resulting in duodenal distention, pain and nausea following ingestion of food.

a. lymphatics lymphatic vessels which transmit lymph from the periphery to a lymph node.

a. nerve any nerve that transmits impulses from the periphery toward the central nervous system. See also **neuron**, afferent nerve fibers (below).

a. nerve fibers nerve fibers in the peripheral nervous system carrying information to the brain and spinal cord. Their cell bodies are in ganglia and their telodendria in the central nervous system.

a. nervous activity the number of afferent nerve fibers that are activated by the stimulus. This depends on the number of receptive fields that are included in the zone being stimulated.

a. system the collective sensory fibers from all parts of the body.

affinity [*ə-fin'i-te*] 1. attraction; a tendency to seek out or unite with another object or substance. 2. in chemistry, the tendency of two substances to form strong or weak chemical bonds forming molecules or complexes. 3. in immunology, the strength (i.e. the affinity constant) of the interaction between a single antibody combining site and its epitope.

antibody a. the strength of the binding interaction between antibody and epitope.

drug a. the attraction of a particular class of receptor to a drug, at a concentration sufficient to give an observable reaction. Such a drug is an **agonist**.

a. maturation the increased affinity of antibody for an antigen which occurs during the course of an immune response through the processes of somatic hypermutation and clonal selection.

Afghan hound a tall, long silky-coated dog (50–60 lb) with pendulous ears, high tail carriage and a very elegant appearance. The breed originated on the Sinai peninsula and was later used as a sight hunter in northern Afghanistan. Called also Tazi. The breed suffers from inherited cataracts and a hereditary **myelopathy**.

afibrinogenemia [*a"fi-brin"o-jə-ne'me-ə*] absence or deficiency of fibrinogen in the circulating blood. The defect is inherited in goats, causing a severe hemorrhagic diathesis. See also **hypofibrinogenemia**, **dysfibrinogenemia**.

AFIP Arm Forces Institute of Pathology.

aflatoxicosis [*af"lə-tok"si-ko'sis*] the disease caused by aflatoxins which are toxic metabolites produced by fungi growing on spoiled feeds, including grain-based dog foods. Aflatoxins are of major importance being hepatotoxic, carcinogenic, teratogenic and immune suppressant. The common syndrome in animals is of hepatic insufficiency including jaundice, blindness, circling, falling and convulsions. Called also groundnut poisoning.

aflatoxin [*af'lə-tok"sin*] a mycotoxin produced during growth, maminly by fungi in the genus *Aspergillus*, particularly on groundnuts or stored grain. See also **aflatoxicosis**.

AFO/CAFO used in the USA to designate and define an animal feeding operation (AFO) from a confined animal feeding operation (CAFO), the distinction being of considerable importance in terms of regulatory input by the federal Environmental Protection Agency (EPA) and State Departments of Ecology. The distinction and definition is complicated but a CAFO is defined as a facility with more than 1000 animal units confined on a site for more than 45 days. Any sized AFO that discharges manure or wastewater into a natural or man-made ditch, stream or other waterway is defined as a CAFO. Animal equivalents for 1000 Animal Units are: beef, 1000 head; dairy, 700 head; swine, 2500 pigs weighing more than 55 lbs; poultry, 125 000 broilers or 82 000 laying hens or pullets.

AFP alpha-fetoprotein.

African pertaining to or originating in Africa.

A. farcy epizootic lymphangitis.

A. horse sickness a highly infectious, fatal disease of horses, donkeys and mules. It is caused by an orbivirus transmitted by ticks and mosquitoes, *Culicoides* spp. The clinical picture includes an acute pulmonary form manifested by dyspnea, cough and profuse nasal discharge, and a subacute, cardiac form in which the principal signs are edema of the head and internally, oral petechiation and esophageal paralysis. The mortality rate is very high. Notifiable to the OIE (see Table 22).

A. lion hound see **Rhodesian ridgeback**.

A. mouth brooder African freshwater tropical fish distinguished by their behavior of carrying the fertilized eggs in their mouths. Called also *Tilapia macrocephala*. See also **mouth** brooders.

A. pig disease see African swine fever (below).

A. pseduoglanders see **epizootic** lymphangitis.

A. pygmy pig see miniature **pig**.

A. swine fever a peracute, highly contagious, highly fatal disease of pigs caused by African swine fever virus, previously a member of the family *Iridoviridae*, now the only member of the genus *Asfivirus*. The virus is carried by wart hogs in which it produces no disease and is transmitted to European pigs via the tick *Ornithodoros moubata porcinus*. The disease was originally confined to southern Africa, but is now enzootic in most countries in sub-Saharan Africa and has spread on occasion to Europe, including Spain, Sardinia, Portugal and Belgium, and also to Cuba and the Dominican Republic. In Europe, the disease can be transmitted by the soft tick *Ornithodoros erraticus*. Transmission is also by direct contact and facilitated by the occurrence of persistently infected pigs and the presence of feral pigs. Currently the disease is eradicated from South America and the Caribbean countries but remains on Sardinia. The disease resembles classical swine fever (hog cholera). Clinically there is high fever, severe depression, purple skin discoloration, incoordination and posterior paresis. Death occurs about 2 days after the first signs of illness. In recent times the proportion of outbreaks with less severe disease and low case fatality has increased markedly. Notifiable to the OIE (see Table 22).

A. trypanosomiasis nagana. See **trypanosomiasis**.

Africander an African breed of cattle derived from British breeds (about 25%) and Brahmans (about 75%). A Sanga type with long lateral horns, used usually for red meat and draft. Africa's answer to the Santa Gertrudis. See also **Sanga**, **Bonsmara**, **Drakensberger**, **Afrikaner**.

Afrikander a common misspelling for **Africander**.

Afrikaner Afrikaans name for *Bos indicus* cattle. Called also Africander.

afterbirth [*af'tər-bərth*] the special tissues associated with the development of a fetus in the uterus that are expelled after the birth of a neonate. These are the **placenta**, or the structure attached to the wall of the uterus through which nourishment passes from the mother to the fetus, and the **umbilical** cord, which attaches the fetus to the placenta. See also **fetal** membranes.

afterbrain [*af'tər-brān*] metencephalon.

aftercare [*af'tər-kār*] the care and treatment of a convalescent patient, especially one that has undergone surgery.

aftercongestion [*af'tər- kən-jes'chən*] a chronic reactive hyperemia of nasal mucosa that may follow prolonged use of topical decongestants.

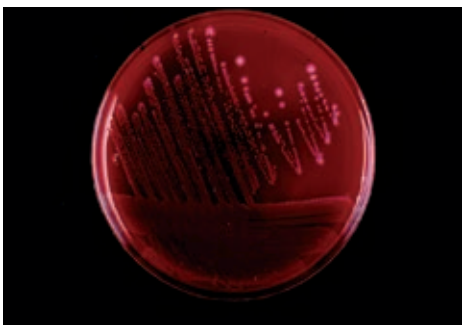
afterdepolarization [*af"tər-de-po"lər-i-za'shən*] in myocardial activity a polarization, sufficient to trigger a cardiac cycle, which results from a preceding impulse or series of impulses.

afterdrop a decrease in body temperature observed as a complication during rewarming of a hypothermic patient. It is believed to be the result of redistribution of cooler blood.

afterfeather a small feather underneath the large main feather produced by most plumaceous and pennaceous feather follicles. It varies from a simple tuft to a structure identical to the main feather. It is missing in some birds, including the ostrich and some passerines. and very well developed in the emu.

afterglow small amounts of light emitted by a phosphor after the stimulating radiation has ceased. Seen in X-ray intensifying screens and fluoroscopic screens.

afterhyperdepolarization similar to **afterdepolarization** but does not trigger conducted impulses.
afterload [*af'tər-lōd"*] see **cardiac** afterload.
aftermath [*af'tər-math*] the exuberant autumn regrowth of pasture which has been harvested for meadow hay in the late summer. Grazing cattle on it is a common history preceding an outbreak of atypical interstitial pneumonia. Called also fog, foggage, feg.
a. disease see **atypical interstitial pneumonia**.
a. emphysema see **atypical interstitial pneumonia**.
aftosa the Mexican name for foot-and-mouth disease. Called also aphthous fever.
Ag 1. chemical symbol, *silver* (L. *argentum*). 2. abbreviation for antigen.
A–G ratio the ratio of albumin to globulin in blood serum, plasma or urine.
agalactia [*a"gə-lak'she-ah*] partial or complete absence of milk flow in the absence of disease of the mammary gland. It may be due to the presence of other disease, to emotional disturbances or to lack of let-down hormones or hormonal stimulation for the development of the mammary glands. See also **mastitis–metritis–agalactia**, **farrowing** hysteria, **ergotism**.
contagious ovine/caprine a. see **contagious** agalactia.
primary a. reduced milk flow is the only abnormality.
agammaglobulinemia [*a-gam"ə-glob"u-lĭ-ne'me-ə*] severe or complete deficiency of immunoglobulins (antibodies) in the blood. Due to reliance on colostral versus placental transfer of immunoglobulins most domestic animals are agammaglobulinemic at birth, prior to suckling. An inherited defect is not commonly recorded in animals, but does occur as a primary inherited condition and as part of a combined immune deficiency, both of them in horses. The deficiency or absence of antibodies results in susceptibility to severe and recurrent infections. See also **hypogammaglobulinemia**, **combined immune deficiency syndrome (disease)**, maternal **immunity**.
Bruton's a. an inherited, X-linked recessive condition in humans involving a deficiency of B lymphocytes and plasma cells.
aganglionic [*a-gang"gle-on'ik*] lacking ganglion cells.
a. colon see colonic **aganglionosis**.
a. intestine see colonic **aganglionosis**.
aganglionosis, agangliosis [*ə-gang"gle-on-o'sis*] congenital absence of parasympathetic ganglion cells.
congenital intestinal a. see lethal white **foal** disease.
ileocolonic a. see lethal white **foal** disease.
Agapornis see **lovebird**.
agar [*ag'ahr*] a dried hydrophilic, colloidal substance extracted from various species of red algae. When suspended in a liquid medium and heated to 212°F (100°C), the agar dissolves. When it is allowed to cool to 110°F (43°C) the medium becomes a solid gel. It is used in culture media for bacteria and other microorganisms, in making emulsions, and as a supporting medium for immunodiffusion and immunoelectrophoresis. Because of its bulk it is also used in medicines to promote peristalsis and relieve constipation.
birdseed a. one containing *Guizotia abyssinicia* (Niger) seed and creatinine, used for growing *Cryptococcus neoformans*. Called also Niger agar.
bismuth sulfite a. a special preparation used for isolation of salmonellae from food.
blood a. a culture medium used for the growth of bacteria. Consists of agar and intact erythrocytes.



A-20: Colonies of bacteria growing on a blood agar plate. The material to be cultured has been streaked across the plate in a manner to result in an area of individual colonies.

brain heart infusion a. used for cultivating the yeast phase of dimorphic fungi and other fastidious microorganisms.
brilliant green a. used to cultivate salmonellae.
chocolate a. an enriched agar for the growth of *Haemophilus*, some *Actinobacillus*, and *Taylorella* spp. A molten agar and blood mixture is held at 122°F (50°C) prior to pouring plates. The additional nutrients supplied are hemin and NAD.
a. diffusion test see **antimicrobial** sensitivity test.
eosin-methylene blue (EMB) a. used for the identification of *Escherichia coli*.
a. gel immunodiffusion test see **immunodiffusion** tests.
MacConkey a. contains bile salts, lactose and neutral red indicator for selection and differentiation of members of the Enterobacteriaceae.
mannitol salt a. selective differential medium for isolation of staphylococci. and differentiation of potential coagulase positive species, which are able to ferment mannitol.
milk a. contains skim milk and used to demonstrate casein digestion.
Niger seed a. see birdseed agar (above).
nutrient a. the basic growth medium for bacteria, composed of beef extract and peptone.
potato dextrose a. used in cultivating fungi; promotes sporulation and pigmentation.
Sabouraud's dextrose a. used for isolation of fungi. See also **dermatophyte** test medium.
a. sausage see **medium** sausage.
xylose lysine (XLD) a. used to differentiate Enterbacteriaceae.
agarose more highly purified form of agar with similar uses to agar and widely used in the separation of nucleic acid fragments.
agastric [*a-gas'trik*] having no stomach.
Agauria salifolia a poisonous shrub, in the family Ericaceae; contains grayanotoxin (andromedotoxin). Ingestion by ruminants causes salivation, vomiting, colic, staggering, collapse and death.
Agavaceae plant family containing the toxic genera *Agave* and *Nolina*.
Agave [*ə-ga've*] a genus of the plant family Agavaceae.
A. americana contains an unknown toxin; causes lameness, recumbency and muscle damage. Called also century plant, American aloe.
A. lecheguilla contains a steroidal or lithogenic saponin; causes photosensitive dermatitis. Called also lecheguilla, tula ixtle.
AGD amebic gill disease.
age [*āj*] 1. the duration, or the measure of time of the existence of an animal or object. 2. to undergo change as a result of passage of time.
a. adjustment see **data** adjustment.
a. associated disease diseases which occur at particular ages, either because of changes in the animal's biochemistry or immunity or because of variations in exposure of the animals because of a change in management.
chronologic a. that measured by days, months, or years since birth.
a. descriptor terms other than years used to indicate the age of animals, e.g. two-tooth, first-lactation.
a. determination in the absence of explicit records about birth dates the estimation of age is a frequent task for veterinarians. The eruption, then the growth of teeth to apposition and then the wear of the teeth are the best guide to age in horses, cattle, sheep and goat, but not in the pig. In the pig and the dog some assistance can be obtained from examination of the teeth, but the general appearance of the animal and the history are the best means. See also **rule of six**.
a. distribution the proportion of the total population which is in each of the specified age groups.
a. groups cattle and sheep being grazed extensively are commonly segregated into age groups because they are dealt with as groups for purposes of mating, quality of feed, vaccination, prophylactic treatment and eventually culling for old age.
a.-matched control in a comparison of performance between groups it is desirable to create the groups by pairing a series of treatment animals and control animals for all significant variables, of which age would be one of the most important.
physiologic a. age as measured by events rather than years. For example: first-calf heifer, fourth litter sow, stallion in his fourth season.

VetBooks.ir

VetBooks.ir

A

slaughter a. the age at which the animals in a group are to be slaughtered. Varies with the meat objective, the price in the market, opportunities for replacement and the capacity to carry additional animals on the feed available.

a.-specific rate a rate which specifies the age parameter for the rate.

a.-specific death rate the death rate for a specified age group as a proportion of a total number of specified animal time period, such as cow years.

weaning a. see **weaning** age.

age classes [*āj*] the classification of animals according to age is an important part of animal farming but is difficult to carry out and has limited value because of varying interpretations of the terms used. Some of the classifications, based on average farming practices, are: Calf, birth to 1 year; yearling 1 to 2 years; heifer, to first calf born; first calf heifer, dairy cattle between first and second calf. Calf and yearling may be classified as bull or heifer. Cow, female after first calf; bull is entire male over 2 years old. Castrated males: steer calf to 1 year, steer or bullock—over 1 year, stag—adult, castrated when mature. Lamb, birth to weaning (average 4 months), weaner—4 months to 2-tooth. 2-tooth to 15 months. 4-tooth to 2 years. 6-tooth to 3 years. Full mouth to 4 years. All groups may be subdivided into ram and ewe groups. Females are ewe lambs, 2-tooth ewes, etc. Ewes at first lambing. Gimmer is ewe that has not borne a lamb. Adult entire males are rams or tups. Castrated males are wethers or hoggets or hoggs; these may also be subdivided into age groups, e.g. 2-tooth hoggets. Piglet—birth to undetermined period, probably synonymous with suckler. Suckler—birth to weaning. Weaner—after weaning to attainment of approximately 30 kg, or 65 pounds, bodyweight. Boar—entire male over 6 months old, usually for breeding but not necessarily so. Maiden gilt—female in the breeding herd, over 6 months old but not yet mated. Gilt—female in breeding herd but not yet farrowed for first time. Sow—female that has farrowed. First litter sow—from first fertile mating to second. Barrow—castrated male in fattening herd. Foal—birth to one year, filly or colt foal. Yearling—1 to 2 years, filly or colt. Then, 2 year old, 3 year old and so on. Filly—under 4 years. Mare—4 years and over. Then, classified on a use basis—e.g. brood mare. Colt—2 to 4 years. Stallion—entire male 4 years and over. Gelding—castrated male any age. Show classes for pups have different age limits in different places. Males and females graduate from puppydom at sexual maturity when about 6 months old. Kittens until sexual maturity at 5 to 6 months for females, slightly older for males. Chicken, hatching to 4 weeks. Pullet—4 weeks to 5 months. Cockerel—4 weeks to 5 months. Rooster and hen—over 5 months. Turkeys—as for fowls except that young birds are poults and adult males are toms. Ducks similarly, with young birds called ducklings, the adult females are ducks and the males are drakes. In all species the dividing line between adult and young birds is not age but sexual maturity as evidenced by commencing egg laying or, in the case of males, mating females.

aged animals of advanced age; in horses, more than 8 years old.

agene process bleaching of flour with nitrogen chloride, a process no longer in use. The denatured protein in the treated flour is toxic and causes a condition of hysteria and seizures in dogs eating biscuits made from the flour.

agenesis [*a-jen'ə-sis*] absence of an organ due to nonappearance of its primordium in the embryo.

agenitalism [*a-jen'ī-təl-iz"əm*] a condition due to lack of secretion of the testes or ovaries.

agenized flour see **agene process**.

agenosomia [*a-jen"o-so'me-ə*] imperfect development of reproductive organs.

agent [*ā'jənt*] 1. any power, principle or substance by which something is accomplished, or which is capable of producing a chemical, physical or biological effect such as a disease. 2. of disease; any factor whose excessive presence or relative absence is essential for the occurrence of a disease.

adrenergic neuron blocking a. one that inhibits the release of norepinephrine from postganglionic adrenergic nerve endings.

alkylating a. a cytotoxic agent, e.g. a nitrogen mustard, which is highly reactive and can donate an alkyl group to another compound. Alkylating agents inhibit cell division by reacting with DNA and are used as **antineoplastic** agents.

anesthetic a. substance capable of producing reversible general or local anesthesia.

anticholinergic a. cholinergic blocking agent.

a. change change in an animal's chemical or antigenic configuration can alter its pathogenicity. For example, a case of nitrate–nitrite poisoning in a cow can become a case of nitrite poisoning after conversion of the nitrate in the rumen. Mutation and antigenic drift are other types of change that vary agent pathogenicity.

chelating a. a compound that combines with metals to form weakly dissociated complexes in which the metal is part of a ring, and is used to extract certain elements from a system.

chemical a. substance that produces change by virtue of its chemical composition and its effects on living tissues and organisms.

cholinergic blocking a. one that blocks the action of acetylcholine at nicotinic or muscarinic receptors of nerves or effector organs.

determinant a. only some agents are determinants of diseases in that they always cause disease, and the same disease, and the disease does not occur without the agent. Many agents require the intervention of other factors, such as anaerobicity of tissue, hepatic insufficiency or physiological stress before they can establish their pathogenicity.

ganglionic blocking a. one that blocks cholinergic transmission at autonomic ganglionic synapses.

immobilizing a. see **neuromuscular** blockade.

infectious a. an organism able to live in or on the tissue of a living animal; may not necessarily cause disease.

a. interaction is the interaction between precipitating and predisposing causes of disease.

oxidizing a. a substance that acts as an electron acceptor in a chemical oxidation–reduction reaction.

physical a. the physical causes of disease. Includes altitude, radiation, wetness, exercise, fire, electricity including lightning.

a. properties are the properties which determine the pathogenicity of the agent, the solubility and acidity or biodegradability of a chemical, the virulence, adhesiveness, resistance to antibacterial agents of bacteria and viruses and so on.

reducing a. a substance that acts as an electron donor in a chemical oxidation–reduction reaction.

surface-active a. a substance that exerts a change on the surface properties of a liquid, especially one, such as a detergent, that reduces its surface tension. Called also surfactant.

therapeutic a. a substance capable of producing a curative effect in a disease state.

Ageratina a genus in family Asteraceae; contains unidentified toxins. Includes *A. altissima* (causes syndrome of trembles or milk sickness), *A. riparia* (mist flower), *A. adenophora* (Crofton weed); in Australia, New Zealand and Hawaii, pulmonary fibrosis is the principal lesions, and dyspnea and cough the cardinal sign in poisoning of horses by *A. adenophora*. Called also Niminbah horse sickness, Tallebudgera horse disease.

agger [*aj'er*] small mounds, elevation or eminence such as the agger nasi found in the human nose just in front of the middle nasal concha.

Aglaonema a genus of plants popular in the garden and as indoor plants. Pets chewing the leaves may show excessive salivation and vomiting due to irritation from the oxalate content. Called also Chinese evergreen.

agglomerated [*ə-glom'ər-āt"əd*] of particles, compacted together into a mass.

a. feeds particulated feeds compacted or extruded into pellets and similar forms.

agglutinable [*ə-gloo'tī-nə-bəl*] capable of agglutination.

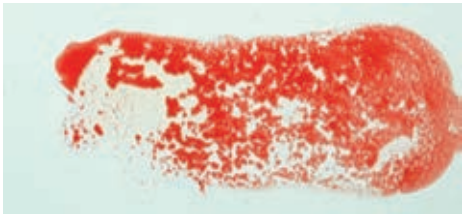
agglutinant [*ə-gloo'tī-nənt*] 1. acting like glue. 2. a substance that promotes union of parts.

agglutinate to stick together and form clumps.

agglutination [*ə-gloo"tī-na'shən*] aggregation of separate particles into clumps or masses; especially the clumping of bacteria, blood cells or latex beads by antibody specific to, or directed against, surface antigenic determinants. See also **agglutinin**.

bacterial a. test a diagnostic procedure that employs serum or other body fluid of unknown antibody titer, titrated with standard suspension of bacteria as antigen. These may be performed quantitatively in 96-well microtitration plates or qualitatively on slides.

cross a. the agglutination of particulate antigen by an antibody raised against a different but related antigen; see also group agglutination (below).



A-21: Macroscopic slide agglutination of erythrocytes in a cat with primary immune-mediated hemolytic anemia.
From August JR, Consultations in Feline Internal Medicine, Volume 6, 6th Edition. Saunders, 2009.

group a. agglutination-usually to a lower titer-of various members of a group of biologically related organisms by an agglutinating antibody made to one of that group.
intravascular a. clumping of particulate elements within the blood vessels; used conventionally to denote red blood cell agglutination.
latex a. test see passive agglutination test (below).
microscopic a. test a test which requires or typically utilizes microscopic examination to detect the agglutination.
passive a. test an agglutination reaction in which a soluble antigen, such as gonadotropin, is linked to inert particles such as latex beads or red blood cells.
slide a. test a rapid screening or semiquantitative test in which antibody and antigen are mixed on a glass slide and observed for agglutination.
a. test see bacterial agglutination test (above).
tube a. test an agglutination test for the identification of bacteria carried out in a test tube, a positive reaction consisting of a clearing of a prior opalescence.

agglutinin [*ə-gloo'tĭ-nin*] any substance causing agglutination (clumping together) of cells, particularly a specific antibody formed in the blood in response to an invading agent. Such agglutinating antibodies (see **immunoglobulin**) function as part of the immune response of the body. When the invading agents that bring about the production of agglutinins are bacteria, the agglutinins produced bring about agglutination of the bacterial cells both in vivo and in vitro. Erythrocytes also may be agglutinated by agglutinins that are naturally present in the blood, such as the presence of anti A antibody in humans with the blood group B erythrocytes. Such agglutinins may also be formed in response to the entrance of incompatible blood cells into the bloodstream, as when a transfusion reaction results from agglutination of blood cells brought about by agglutinins present in the recipient's blood.
cold a. antibody, generally IgM, that acts only at low temperature.
cold a. disease an autoimmune disease in which erythrocyte autoantibodies, usually IgM, are most active at temperatures below 98.6˚F (37˚C). Agglutination occurs in capillaries of the extremities (tail, ears, nose and feet), particularly on exposure to cold, resulting in tissue necrosis in those areas. Hemolytic anemia is a variable feature.
group a. antibody made against a particular organism. One that has a specific action on certain organisms, but will agglutinate other, usually related species as well.
H a. one that is specific for flagellar antigens of bacteria.
immune a. a specific antibody found in the blood after recovery from infection, exposure to a vaccine, or any other means of exposure to a microorganism.
incomplete a. antibody that at appropriate concentrations fails to agglutinate the homologous antigen, usually due to steric interference.
normal a. a specific antibody found in the blood of an animal or of humans that has had no known exposure to the antigen with which it combines; these may be natural antibodies such as those directed against A and B blood group antigens in humans or cross-reacting antibodies produced after infection with a related microorganism.
O a. antibody specific for polysaccharide antigens on the lipopolysaccharide of gram-negative bacteria.
partial a. antibody which agglutinates organisms expressing antigens closely related to that expressed by the immunizing organism, but usually at a lower dilution.
warm a. an incomplete antibody that sensitizes and reacts optimally with erythrocytes at 98.6˚F (37˚C).

agglutinogen [*ag"loo-tin'o-jen*] a substance (antigen) that stimulates the animal body to produce an agglutinating antibody immune response.
aggravation in homeopathy, worsening of symptoms associated with inadequate potency of the remedy used.
aggrecan [*ag'rə-kan*] the shortened name for the large aggregating chondroitin sulphate proteoglycan, a major component of the structure of cartilage.
aggregate selection criteria [*ag'rə-gāt*] the sum of all of the criteria to be used in a selection program with each criterion multiplied by its relative importance to the other criteria.
aggregated lymphatic nodules formal term for **Peyer's patches**.
aggregation [*ag"rə-ga'shən*] 1. massing or clumping of materials together. 2. a clumped mass of material.
familial a. the occurrence of more cases of a given disorder in close relatives of an animal with the disorder than in control families.
platelet a. in primary hemostasis, the result of platelet activation and the action of fibrinogen which binds to glycoprotein IIb/IIIa on adjacent platelets, resulting in the formation of the primary platelet plug.
aggregometry [*ag"rə-gom'ə-tre*] an in vitro test of platelet aggregation using spectrophotometry to measure platelet aggregation in response to various agonists.
aggressin [*ə-gres'in*] substance or substances formed in the body by bacteria which enhance the bacteria's virulence. Include capsular material, enzymes and toxins. Called also virulin.
aggression [*ə-gresh'ən*] behavior that is angry and destructive and intended to be injurious, physically or emotionally, and aimed at domination of one animal by another. It may be manifested by overt attacking and destructive behavior or by covert attitudes of hostility and obstructionism. The most common behavioral problem seen in dogs.
affective a. involves intense, patterned autonomic activation with sympathetic and adrenal stimulation.
fear-induced a. accompanied by fear and usually when escape is not possible; may be associated with previous unpleasant experiences.
food-related a. directed towards people or animals when approached while eating. In dogs, an early indicator of the risk of developing dominance aggression. Does not occur with livestock on pasture, but can be common at the feed bunk in animals housed indoors, especially when overcrowded or regrouped. Gaining access to feed is a high priority for cattle and is often paralleled with a high incidence of aggressive interactions that can be reduced by providing more feeding space and installing partitions between adjacent cows. The use of barriers between feeding stations reduces aggression among group-housed calves.
interfemale a. dominance aggression between females.
intermale a. fighting between males; includes elements of competitive, territorial and sexual aggression.
maternal a. the dam's protection of her young; a variant of dominance aggression.
nonaffective a. without autonomic activation.
pain-induced a. defensive aggression triggered by pain.
parental a. in agricultural animals observed only in sows. See **farrowing** hysteria.
play a. biting, nipping and growling at people or other animals during play.
possessive a. a form of dominance aggression; the animal is reacting against someone or another animal trying to remove something, usually food.
predatory a. directed towards any kind of animal, including dogs and humans, or even inanimate objects. Typically, it is elicited by something that is moving quickly.
protective a. the animal is protecting its territory. See territorial aggression (below).
redirected a. occurs when the animal is touched or restrained by a human or another animal, while it is fighting or threatening.
territorial a. behavior directed toward the defense of an area by an individual or a group against entry by others, usually members of the same species but the trait is developed in guard dogs that protect property from human intruders.
aggressiveness see **aggression**.
aging, ageing [*āj'ing*] 1. the process of growing older. It includes a reduction in strength, endurance, speed of reaction, agility, basal

VetBooks.ir

VetBooks.ir

A

metabolism, sexual activity and hearing acuity. The bones are more brittle, the skin drier and less elastic and the teeth are shed. 2. assessing the age of an animal.

a. of fetuses based largely on crown–rump length plus hair follicles and other external features.

a. by teeth often the most convenient means of assessing an animal patient's age; errors occur because of the effect of nutrition and varying rates of dental attrition.

agist to provide grazing for another farmer's livestock on a rental basis.

agistment see **agist**.

aglepristone a progesterone receptor antagonist used for pregnancy termination in bitches and the treatment of benign mammary fibroadenomatous hyperplasia in queens.

aglossia [*a-glos'e-ə*] congenital absence of the tongue.

aglossostomia [*a"glos-o-sto'me-ə*] congenital absence of the tongue and the mouth opening.

aglutition [*a-gloo-tish'ən*] inability to swallow.

aglycemia [*a"gli-se'me-ə*] absence of sugar from the blood. See also **hypoglycemia**.

aglycone [*a-gli'kōn*] the noncarbohydrate portion of a glycoside molecule.

aglycosuric [*a-gli"ko-sur'ik*] free from glycosuria.

aglyphous non-venomous snakes without fangs.

agnathia [*ag-na'the-ə*] congenital absence of the lower jaw.

inherited a. a lethal recessive in sheep which are unable to graze; ventral displacement of the ears is a common accompaniment.

agnogenic [*ag"no-jen'ik*] of unknown origin.

a. myeloid metaplasia see **myeloid** metaplasia.

-agogue word element. [Gr.] *something that leads or induces.*

agonad, agonadal [*a-go'nad*] having no sex glands (gonads).

agonal [*ag'ə-nəl*] pertaining to death or extreme suffering.

a. gasp the spasmodic open mouth with contraction of the diaphragm and retraction of the hyoid apparatus which occurs at death.

agonist [*ag'ə-nist*] 1. in physiology a muscle which in contracting to move a part is opposed by another muscle (the antagonist). 2. in pharmacology, a drug which has affinity for the cellular receptors of another drug or natural substance and which produces a physiological effect.

adrenergic a. (2) see **adrenergic** agents.

cholinergic a. (2) see **cholinergic**.

partial a. (2) a drug that combines with the relevant receptors but not with the efficiency of the agonist.

agony [*ag'ə-ne*] 1. death struggle. 2. extreme suffering.

agoraphobia [*ag"ə-rə-fo'be-ə*] in animals, a reluctance to go outside. Includes companion animals and especially horses that have been kept in stables for long periods. See also **barn** rat.

agouti [*ə-goo'te*] 1. (*Dasyprocta* spp.) speedy, stout-bodied, nocturnal, South American rodent that bounds like a hare. They resemble guinea pigs. 2. a pattern of pigmentation in which individual hairs have several bands of light and dark pigment with black tips. Seen in hares, Abyssinian cats, guinea pigs, and the agouti, after which it is named. See also **tabby**

agouti-related protein (AgRP) [*ə-goo'te*] a neuropeptide that stimulates appetite and decreases energy expenditure.

-agra word element. [Gr.] *attack, seizure.*

agranular reticulum smooth-surfaced endoplasmic reticulum (SER).

agranulocyte [*a-gran'u-lo-sīt"*] white blood cells such as lymphocytes and monocytes which are without obvious cytoplasmic granules when viewed under a light microscope.

agranulocytopoiesis [*a-gran"u-lo-si-to'sis)*] the absence of granulocyte production.

agranulocytosis a disease state characterized by a marked reduction in the granulocyte count in the blood and in the body's defenses against bacterial invasion. Called also granulocytopenia. See also **feline** panleukopenia.

agranuloplastic [*a-gran"u-lo-plas'tik*] forming nongranular cells only.

agranulosis agranulocytosis.

agreement similar results obtained, e.g. by two tests.

chance a. the agreement between results which would be expected by chance.

a. by more than chance similarity of results obtained in excess of that expected by chance, i.e. estimated by statistical tests such as Kappa.

agretope the amino acid residues of a processed antigenic peptide that bind to an MHC molecule.

agricultural advisers agricultural engineers, agronomists, agrostologists, nutritionists, geneticists, accountants, veterinarians and the like.

agricultural chemical industry suppliers and manufacturers of fertilizers, insecticides, anthelmintics, mineral and vitamin supplements, pharmaceuticals, growth promotants, feed additives, sanitation materials. The industry produces much of agriculture's applied research and maintains the data base of agricultural technical and scientific knowledge.

Agricultural Research Council (ARC) an organization in the United Kingdom that periodically published reviews and summaries of the nutrient requirements of livestock. Equivalent to the National Research Council (NRC) in the USA. In 1983 it was renamed the Agricultural and Food Research Council and later merged with the Science and Engineering Research Council to become the Biotechnology and Biological Sciences Research Council (BBSRC), now a major research funding council in agriculture and other sciences.

Agriolimax meticulatus [*ag"re-o-li'maks*] the common garden slug, which can act as an intermediate host of the sheep lungworm, *Cystocaulus ocreatus.*

Agriostomum a genus of the subfamily Chaberitinae of nematode worms. Includes *A. vryburgi* (of *Bos indicus* cattle).

Agrostemma [*ag"ro-stem'ə*] a genus of the plant family Caryophyllaceae; seeds contain githagin, a toxic saponin which causes diarrhea and nervous signs. Includes *A. githago* (corn cockles).

Agrostis avenacea [*ə-gros'tis*] see ***Lachnagrostis filiformis***.

agrostology the scientific study of grasses.

agroterrorism, agriterrorism a criminal act perpetrated on some segment of the agriculture industry and/or the food system, intended to inflict harm (public health crisis or economic disruption) and to achieve the objectives of the terrorist.

AgRP agouti-related protein.

agyria [*a-ji're-ə*] see **lissencephaly**.

AHA acetohydroxamic acid.

AHF antihemophilic factor (clotting factor VIII).

AHG antihemophilic globulin (clotting factor VIII).

AHT Animal Health Trust.

AHV-1 alcelaphine herpesvirus-1.

AI 1. aortic incompetence. 2. aortic insufficiency. 3. apical impulse. 4. artificial insemination.

AI (4) center an establishment for the housing of males, usually bulls, the collection and storage of semen, the dispatch of preserved semen, the keeping of records of performance and usually the provision of a problem-solving veterinary service.

AI (4) technician a person qualified to inseminate animals with stored semen.

AICD activation-induced cell death.

AIDS *a*cquired *i*mmune *d*eficiency *s*yndrome of humans, caused by the lentivirus, human immunodeficiency virus 1 (HIV1), less commonly HIV2. The virus initially infects macrophages and then attacks and destroys T helper CD4 lymphocytes, thereby producing immunodeficiency and resulting in death, usually after a very prolonged incubation period followed by a very prolonged clinical course. A very similar virus SIV1 causes simian AIDS in captive macaque monkeys. A further similar virus SIV2 has been isolated from healthy green monkeys.

feline AIDS see **feline** immunodeficiency virus.

AIHA autoimmune hemolytic anemia.

ailurophile a person who loves cats.

ailurophobia [*i-loor"o-fo'be-ə*] morbid fear of cats.

Aino virus a bunyavirus transmitted by insects.

A. v. disease a disease that causes congenital arthrogryposis and hydranencephaly in calves. See also **Akabane virus** disease.

air [*ār*] the gaseous mixture that makes up the atmosphere.

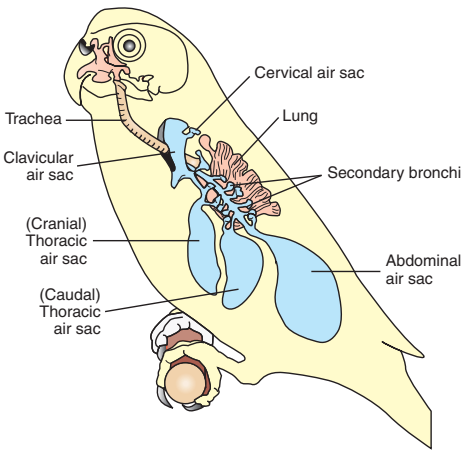
a. capillaries minute airways that connect the parabronchi in avian lungs, in which there are no blind-ended tubules.

a. cell the air-filled space between the internal and external shell membranes of a bird's egg.

a. changes per hour the standard measurements used to indicate the level of ventilation in a building especially with respect to removal of humidity, noxious gases and carbon dioxide.

VetBooks.ir

a. dried said of feed that is dried in the open with only natural movement of air, e.g. conventional hay. Contains about 10–12% water.
a. filtration used as a means of reducing contamination inside a building, the efficiency depending on the pore size of the filter. A technique of some value when combined with temperature control in reducing the prevalence of pneumonia in calves in intensive veal producing units.
a. flow rates are important in assessing the suitability of a ventilating system in animal accommodation. Standards for suitable flow rates for different species and age groups for heating and cooling are available.
a. gap technique in radiography, a technique to reduce scatter of radiation by increasing the distance between the patient and the surface of the cassette.
a. hunger a distressing dyspnea affecting both inspiration and expiration which occurs in paroxysms; characteristic of diabetic acidosis and coma. Called also Kussmaul's respiration.
a. movement includes air changes voiding humidity and gases to the exterior plus movements within the space which facilitate cooling.
a. passages the combined air delivery system of the upper and lower respiratory tracts including nasal cavities, pharynx, laryngeal cavity, trachea, bronchi and bronchioles.
a. pollution contamination of the air with deleterious or esthetically unattractive chemical, physical or biological material. Usually reserved for pollutants generated by humans.
a. pump a small electrically driven appliance used in aquaria to provide a rising stream of air bubbles in a tube. The bubbles themselves add little oxygen to the water but their movement draws water through the aquarium filters.
a. quality the determination of airflow rate, temperature, humidity, freedom from bacteria, solid particles, obnoxious effluvia and poisonous gases—especially hydrogen sulfide and methane from sullage pits under the animal accommodation.
a. trapping dilatation of alveoli without destruction of their walls.
a. vesicles minute air sacs that extend radially from parabronchi in the lungs of birds and connect with air capillaries, in which gaseous exchange occurs with vascular capillaries.
air plant [*ār plant*] see ***Bryophyllum pinnatum***.
air sac disease [*ār sak dĭ-zēz'*] see **airsacculitis**.
air sacs [*ār saks*] sacs that communicate with the respiratory, air-filled respiratory system in birds and with the larynx in some primates.
avian a. s. there are eight air sacs in the chicken: an unpaired cervical, an unpaired clavicular, a pair of cranial thoracic, a pair of caudal thoracic and a pair of abdominal sacs. They connect with the lungs through ostia along the ventrolateral borders of the lungs. The connections are to large and small bronchi. The sacs are also connected to and aerate the bones of the thoracic cage, including the vertebrae, the pelvis and the upper limb bones. Ducks have a similar pattern of air sacs to that of chickens. Turkeys have seven sacs: an unpaired cervicoclavicular sac, a pair of medial clavicular, a pair of cranial thoracic and a pair of abdominal sacs.



A-22: Diagram of the avian respiratory system showing location of air sacs.
From Colville TP, Bassert JM: Clinical Anatomy and Physiology for Veterinary Technicians, 2nd Edition. Mosby, 2008.

a. s. disease includes **airsacculitis** and air sac mite infestation (***Cytodites nudus***).
a. s. inflammation see **airsacculitis**.
primate a. s. laryngeal diverticula of variable size that reach extreme development in some gibbons such as the siamang.
airborne [*ār'born*] see airborne **transmission**.
Airedale terrier a medium-large size black and tan, or grizzle and tan terrier with a wiry coat, originating in the Aire River valley in the Yorkshire district of England for hunting small game. The breed is subject to cerebellar hypoplasia and an increased risk of certain types of neoplasms. Called also Working terrier, Waterside terrier, King of terriers.
airsacculitis [*ār"sak-u-lī'tis*] inflammation of the air sacs.
avian a. occurs as part of a respiratory tract infection by numerous organisms and may be precipitated by *Mycoplasma gallisepticum* infections; usually referred to as chronic respiratory disease. Airsacculitis as such is notable for the high rate of carcass condemnations that it causes. Postmortem lesions include the presence of caseous exudate, or a beaded appearance of the lining. There are usually accompanying lesions in the bronchi and lungs.
primate a. a large variety of bacterial species participate in the disease. Clinical signs include cough, dyspnea and swelling of the submandibular area.
airway [*ār'wa*] 1. the passage by which air enters and leaves the lungs. 2. a mechanical device used for securing unobstructed respiration during general anesthesia or other occasions in which the patient is not ventilating or exchanging gases properly. Includes an endotracheal tube, a tracheostomy tube or a laryngeal mask.
artificial a. endotracheal or tracheostomy tubes.
lower a. the trachea from the entrance to the thorax, bronchi and bronchioles.
a. obstruction in the unanesthetized animal is usually caused by vomitus or laryngeal spasm due to foreign material in the larynx. In the nonintubated anesthetized animal, it is caused by caudal displacement of the tongue and epiglottis, accumulation of mucus, saliva and blood in the pharynx or laryngeal spasm resulting from that accumulation. In the intubated animal, faulty placement or functioning of the endotracheal tube or kinking of it can cause obstruction of the airway. The signs of obstruction are deep, asphyxial respirations, struggling and great agitation in the conscious animal. Deeply anesthetized animals simply show a decline in respiratory efficiency.
a. pressure therapy the use of positive end-expiratory pressure and mechanical ventilation to prevent and reverse alveolar collapse.
a. reflexes aid in the removal of secretions and foreign material. See also **cough**, **sneeze**.
a. resistance the resistance to airflow through the respiratory tree and any addition to the airway, such as the endotracheal tube and connectors in the breathing circuit of an anesthetic machine.
upper a. upper respiratory tract.
AIS see **Illawarra cattle**.
aishi in acupuncture, a sensitive, nonspecific acupoint which reflects pain or abnormality in some part of the body.
aitchbone butcher's term for the hip bone in a carcass.
AIV silage silage to which acid is added during preparation to ensure adequate acidification for preservation. Not a common procedure.
Aix galericulata brightly colored mandarin duck with a white front and red, green, yellow, brown patches; pairs show great mutual affection; the Chinese symbol of conjugal fidelity!
Ajellomyces dermatitidis [*a"jə-lo-mi'sēz*] the sexual stage of ***Blastomyces*** *dermatitidis*.
Akabane virus a bunyavirus transmitted by insects, including *Culicoides brevitarsis,* and the cause of arthrogryposis and hydranencephaly, recognized in newborn calves and lambs following in utero infection in the early months of gestation.
A. v. disease the causative bunyavirus is carried by insects, e.g. *Culicoides brevitarsis,* and affects only young fetuses in pregnant ruminants. At birth the calves are either without intelligence (imbecile calves) or have joint fixation, in flexion or extension, and create a dystocia (curly calves). See also **Aino virus** disease, **hydranencephaly**. Called also enzootic bovine arthrogryposis.
Akbash dog a Turkish flock-guarding dog; it is very large (80–140 lb) with a thick, smooth or long, double coat in solid white.
AKC American Kennel Club.

VetBooks.ir

A

akinesia [*a"kĭ-ne'zhə*] 1. abnormal absence or poverty of movements. 2. the temporary paralysis of a muscle by the injection of a local anesthetic agent.
eyelid a. produced by performing an auriculopalpebral nerve block.
akinetic [*a-kĭ-net'ik*] affected with akinesia.
Akita a large, robust dog with a dense coat, a tail that curls over the back, small eyes and small, erect ears. Sometimes called the American Akita or Great Japanese Dog to distinguish it from the **Japanese Akita Inu**, which is recognized outside the USA and Canada as a separate breed.
aklomide [*ak'lo-mīd*] a nitrobenzamide anticoccidial agent acting mainly on first generation schizonts.
Al chemical symbol, *aluminum*.
-al suffix meaning pertaining to.
Al-Dhabh see **Muslim slaughter**.
AL protein insoluble polymerized immunoglobulin light chains deposited in tissues in the most frequent form of systemic amyloidosis.
ALA aminolevulinic acid.
Ala [*a'lə*] alanine.
ala [*a'lə*] pl. *alae* [L.] a winglike process, e.g. the cervical and caudal alae of nematodes; the wing-like structures at the anterior and tail regions of a worm.
a. cinerea an area on the floor of the 4th ventricle; the trigonum nervus vagi of the medulla oblongata.
a. lobuli centralis a lobule of the rostral part of the cerebellar hemispheres that extends from the vermis.
a. nasi the wing of the nose; the cartilaginous flap on the outer side of either nostril.
a. ossis illium wing of the ilium.
sacral a. the lateral parts of the base of the sacrum which carry the articular surfaces for the ilium and the transverse processes of the last lumbar vertebra.
a. spuria see **alula**.
Alabama rot see idiopathic **cutaneous** and renal glomerular disease.
alacrima [*a-lak'rĭ-mə*] absence of secretion of tears.
congenital a. uncommon condition occurring mainly in toy breeds of dogs.
ALAD δ-aminolevulinic acid dehydratase.
Alaeuris brachylophi oxyurid worms found in the intestines of lizards and turtles.
Alagar virus a Brazilian subtype of the vesicular stomatitis virus.
alanine [*al'ə-nēn*] a naturally occurring, nonessential amino acid.
a. cycle cycle of alanine produced in muscle from transamination of pyruvate produced from glycolysis of glucose during exercise, transported in the plasma to the liver where the alanine amino-nitrogen is converted to urea for excretion and the carbon from the keto-acid of alanine, pyruvate, is recycled via gluconeogenesis to glucose, which is finally transported back to the muscle.
alanine aminotransferase (ALT) [*al·a·nine ami·no·trans·fer·ase*] an enzyme that catalyzes the reversible transfer of an amino group in the reaction:

$$\text{alanine} + \text{2-oxoglutarate} \rightleftharpoons \text{pyruvate} + \text{glutamate}$$

requiring the coenzyme pyridoxal phosphate. It is present in high concentrations in hepatocytes of dogs, cats and humans. The serum concentration is elevated, especially when there is acute damage to liver cells, as in viral or toxic hepatitis, and obstructive jaundice. Significant elevation of the serum concentrations of ALT is a specific indicator of liver damage only in small animals and primates. Formerly known as (serum) glutamic–pyruvic transaminase (GPT or SGPT).

alaphosphin a phosphonic acid compound with antibacterial activity. Called also alafosfalin.
alar [*a'lar*] pertaining to or like a wing.
a. cartilage one of the nasal cartilages that supports the rim of the nostril of some animals such as the horse.
a. fold the fold that extends from the nostril to the ventral nasal concha. It forms the medial and ventral walls of the false nostril in the horse.
a. plate dorsal bulge of the embryonic neural tube, destined to develop into the dorsal horn of the spinal cord.
ALARA concept of radiation safety, *As Low As Reasonably Achievable*.

A-23: Egg of *Alaria* spp. From Hendrix CM, Robinson E, Diagnostic Parasitology for Veterinary Technicians, 4th Edition. Mosby, 2012.

Alaria [*ə-la're-ə*] a genus of the family Diplostomatidae of digenetic trematodes. Includes *A. alata* (largely non-pathogenic and found in intestines of wild and domestic carnivores).
alariasis infestation with the intestinal fluke *Alaria* spp. Many infested animals are clinically normal. Very heavy infestations may cause an increase in fecal mucus and occasionally hemorrhagic enteritis.
alarm points in acupuncture, points located on the ventral abdomen, one for each of the **Zang-fu organs**. Called also *Mu* points.
alarm reaction the response of the sympathetic nervous system either to physical stress or to a strong emotional state. Called also stress reaction and fight or flight reaction. It is an automatic and instantaneous response that increases the body's capability to cope with a sudden emergency. The physiological changes occurring during this reaction increase physical strength and mental activity. The blood pressure is elevated, the blood glucose concentration is raised for additional energy, the blood coagulates more readily, and the flow of blood to muscles needed for activity is increased, while those organs not needed for fight or flight receive a diminished blood supply. One of the most striking manifestations of this reaction is the involution of lymphoid tissues due to the action of adrenal hormones.
Alaskan husky an Artic type, mixed-breed dog, not recognized as a separate breed; very popular in sled racing.
A. h. encephalopathy a familial neurodegenerative disease with acute onset of ataxia, behavioral abnormalities, seizures and blindness at an early age.
Alaskan Klee Kai a miniature husky breed developed in the 1970s. There are toy, miniature and standard varieties. The dogs have a distinctive facial mask of a contrasting color.
Alaskan malamute a heavy boned, powerfully built, gray or black and white, thick-coated dog with great strength and endurance, used originally for pulling sleds in Alaska. A native Alaskan Arctic breed. The breed is subject to an inherited chondrodysplasia with hemolytic anemia, factor VII deficiency and hemeralopia.
alba [*al'bə*] [L.] *white*.
albaconazole a broad spectrum triazole with antifungal activity against azole resistant yeasts and *Aspergillus* spp.
albamycin [*al'bə-mi"sin*] see **novobiocin**.
Albanian cattle yellow to red-black dual-purpose Albanian cattle; similar brachyceros-type cattle breeds in Yugoslavia and Greece.
albendazole [*al-ben'də-zōl*] a benzimidazole anthelmintic with high efficiency in sheep and cattle against all intestinal nematodes, except *Trichuris* spp., intestinal tapeworms and lungworms; increased dose rates, will kill adult liver fluke.
Albers–Schönberg disease [*ahl'berz-shərn'bərg*] a rare inherited disorder of humans characterized by severe generalized osteosclerosis. **osteopetrosis** of cattle and rabbits resembles this disease.
Alberta Certified Preconditioned Feeder Program a government backed certification program for **preconditioning** calves going into feedlots for fattening in Canada.
albicans [*al'bĭ-kanz*] [L.] *white*.
albiduria [*al"bĭ-du're-ə*] the discharge of white or pale urine.
Albini's nodules [*ahl-be'ne*] gray nodules of the size of small grains, sometimes seen on the free edges of the atrioventricular valves of the newborn; they are fetal remnants.
albinism [*al'bĭ-niz-əm*] congenital absence of normal pigmentation in the body (hair, skin, eyes).
inherited equine a. true albinism is very rare in animals. A true white can be produced by mating two overo horses, but the foals have congenital atresia of the colon. There is a true albino Icelandic sheep with no other apparent defects. There are a number of

A-24: Albino mare and foal.
From Pascoe R, Knottenbelt DC, Manual of Equine Dermatology. Saunders, 1999.

pseudoalbinos, one in horses being a lethal trait because of early fetal death.

albino [*al-bi'no*] an individual affected with albinism.
true a. true albinos have pink eyes without pigment, impaired vision and white skin; so-called albino horses are usually pseudo-albinos because they have pigmented eyes.

albino muscle [*al-bi'no mus'əl*] a condition in which all muscle, except cardiac, diaphragmatic and coccygeal, are lighter in color than normal in cattle that appear normal in other respects.

albinuria [*al"bĭ-nu're-ə*] albiduria.

Albizia a genus of legumes in the plant family Mimosaceae; seed pods of the toxic species contain 4-methoxy-pyridone a pyridoxine analog which causes cardiomyopathy, pulmonary edema and polioencephalomalacia. Includes *A. chinensis* (*A. stipulata*), *A. versicolor* and *A. tanganyicensis* (*A. lebbeck* var. *australis*, *A. rhodesia*, fever tree, red paperbark).

albizia plants in the genus ***Albizia***.
paper bark a. *Albizia tanganyicensis*.
poison pod a. *Albizia versicolor*.

albuginea [*al"bu-jin'e-ə*] 1. a tough, whitish layer of fibrous tissue investing a part or organ. 2. the tunica albuginea.

albugo a translucent corneal opacity.

albumen the white of the egg; typically comprising 60% of a bird egg. It consists of a middle dense layer surrounded by an inner liquid layer and an outer liquid layer. It surrounds the yolk and is surrounded by the egg membrane and shell.

albumin [*al-bu'min*] 1. any protein that is soluble in water and moderately concentrated salt solutions and is coagulable by heat. 2. serum albumin; a plasma protein, formed principally in the liver and constituting about four-sevenths of the 6–8% protein concentration in the plasma. Albumin is responsible for much of the colloidal osmotic pressure of the blood, and thus is a very important factor in regulating the exchange of water between the plasma and the interstitial compartment (space between the cells). The presence of albumin in the urine (see **albuminuria**) indicates malfunction of the kidney, and may accompany kidney disease or heart failure. A decrease in the serum albumin concentration (hypoalbuminemia) may occur with protein-losing nephropathy or enteropathy. Other conditions such as advanced liver disease, malnutrition and extensive burns may result in serious decrease of plasma proteins.
^{51}Cr-labeled a. excretion a method of determining gastrointestinal protein loss. After intravenous administration of ^{51}Cr-labeled albumin, radioactivity in the feces is measured.
a.–globulin (A-G) ratio the ratio of albumin to globulin in blood serum, plasma or urine.
iodinated ^{125}I a. a radiopharmaceutical used in plasma volume determinations, consisting of albumin human labeled with iodine-125.
iodinated ^{131}I a. a radiopharmaceutical used in blood pool imaging and plasma volume determinations, consisting of albumin human labeled with iodine-131.

albuminocytologic dissociation [*al'bu'mi'no'si"to-loj'ik dĭ-so"se-a'shən*] increase in the concentration of albumin in cerebrospinal fluid without an accompanying increase in the number of cells.

albuminoid, albuminous [*al-bu'mĭ-noid"*] 1. resembling albumin. 2. an albumin-like substance; the term is sometimes applied to **scleroproteins**.

albuminuria [*al"bu-mĭ-nu're-ə*] the presence in the urine of serum albumin, which can indicate glomerular injury, defective tubular resorption or urinary tract inflammation. There may be a sufficient loss to cause **hypoalbuminemia**. See also**microalbuminuria**.

albuterol [*al-bu'tər-ol*] a relatively selective β_2-adrenergic bronchodilator used for relief of bronchospasm in patients with reversible obstructive airway disease. Called also salbutamol (INN).

Alcaligenes [*al"kə-lij'ə-nēz*] a genus of saprophytic obligately aerobic bacilli occasionally found in the intestines of vertebrates or in dairy products and sometimes in nosocomial infections.

alcapton, alkapton a class of substances with an affinity for alkali, found in the urine and causing the condition known as alkaptonuria. The compound commonly found, and most commonly referred to by the term, is homogentisic acid.

alcaptonuria, alkaptonuria [*al-kap"to-nu're-ə*] excretion in the urine of homogentisic acid and its oxidation products as a result of a genetic disorder of phenylalanine–tyrosine metabolism in humans and orang-utans.

Alcataenia cerorhincae a cestode found in the bird, the rhinoceros auklet (*Cerorhinca monocerata*).

Alcataenia fraterculae a cestode found in horned puffin (*Fratercula coniculata*).

alcelaphine pertaining to the members of the family Alcelaphinae of antelopes of which the hartebeest and wildebeest are members.
a. herpesvirus-1 (AHV-1) in the genus *Macavirus* of the subfamily *Gammaherpesvirinae*. This is the cause of wildebeest-related bovine **malignant catarrhal fever** in European cattle.

alcian blue a basic phthalocyanin dye that stains mucopolysaccharides blue.

alcohol [*al'kə-hol*] 1. any organic compound containing the hydroxy (−OH) functional group except those in which the OH group is attached to an aromatic ring, which are called *phenols*. Alcohols are classified as *primary*, *secondary* or *tertiary* according to whether the carbon atom to which the OH group is attached is bonded to one, two or three other carbon atoms and as *monohydric*, *dihydric* or *trihydric* according to whether they contain one, two or three −OH groups; the latter two are called *diols* and *triols*, respectively. 2. common name for ethyl alcohol (ethanol). See also **alcoholic**.
absolute a. ethyl alcohol free from water and impurities.
allyl a. a potent cause of hepatic necrosis. Metabolized in the liver by alcohol dehydrogenase to acrolein, the ultimate hepatoxin.
complex plant a. includes cicutoxin, oenanthotoxin, tremetol, all toxic, causing heavy mortalities and signs including incoordination, tremor, convulsions and vomiting.
denatured a. ethyl alcohol made unfit for consumption by the addition of substances known as denaturants. Although it should never be taken internally, denatured alcohol is widely used on the skin as a cooling agent and skin disinfectant.
ethoxylate a. detergents alcohols containing an ethyl radical with an attached oxygen group; used in the treatment and prevention of ruminal bloat.
ethyl a. a transparent, colorless, mobile, volatile liquid miscible with water, ether or chloroform, and obtained by the fermentation of carbohydrate with yeast. It is the major ingredient of alcoholic beverages consumed by humans. Called also ethanol and grain alcohol. It is used in veterinary medicine in the preparation of mixtures for topical application and for skin disinfection.
grain a. ethyl alcohol.
isopropyl a. a transparent, volatile colorless liquid used as a rubbing compound. Called also isopropanol, rubbing alcohol.
methyl a. a mobile, colorless liquid used as a solvent. Called also wood alcohol or methanol. It is a useful fuel, but is poisonous if taken internally. Consumption may lead to blindness or death in humans. In companion animals, signs of poisoning may include ataxia, weakness, depression and even death..
monohydric a's methanol, ethanol, amyl aocohol and cetyl alcohol.
a. poisoning in animals this does not present the social problems that it does in humans; can be produced even in cattle and sheep fed brewer's grains and distiller's solubles. Ethyl alcohol is produced in some feeds which are fermented accidentally and rarely cause poisoning of animals. Carbohydrate engorgement is a more likely occurrence. Isopropyl alcohol is an end product of ketone body degradation in the rumen in cattle and does cause signs of inebriation in cows with nervous ketosis. Small companion animals are sometimes exposed to toxic amounts of ethyl alcohol

VetBooks.ir

VetBooks.ir

A

by owners and it may be readily consumed. Alcohol poisoning can also result from consumption of fermenting bread dough. Excessive amounts can lead to vomiting, various levels of central nervous system depression, including excitement, seizures and respiratory depression.

rubbing a. isopropyl alcohol.

wood a. methyl alcohol.

alcuronium chloride [*al-ku-ro'ne-əm*] a muscle relaxant, a derivative of toxiferene obtained from curare. It is an antidepolarizing (nondepolarizing) agent with a medium duration of action.

ALD aldolase.

aldehyde [*al'də-hīd*] an organic compound containing the aldehyde functional group (−CHO); that is, one with a carbonyl group (C=O) located at one end of the carbon chain. Aldehydes are formed in meat during the rancidification of fat and in the degradation of alcohols in biological materials. They have an acrid unpleasant taste and are toxic if taken in sufficient quantities. Some aldehydes (formaldehyde and glutaraldehyde) are used as disinfectants and fixatives.

ALDF Animal Legal Defense Fund.

aldicarb [*al'dĭ-kahrb*] a carbamate pesticide.

aldolase [*al'do-lās*] an enzyme involved in the Embden–Meyerhof or glycolytic pathway which reversibly catalyzes the reaction fructose-1,6-bisphosphate to glyceraldehyde-3-phosphate and dihydroxyacetone phosphate. Present in all cells and may be measured in the serum as an indicator of muscle, heart or liver disease. Called also ALS and ALD.

aldopentose [*al"do-pen'tōs*] any one of a class of sugars that contain five carbon atoms and an aldehyde group (−CHO).

aldose [*al'dōs*] a sugar containing an aldehyde group (–CHO).

aldosterone [*al-dos'tər-ōn*] the main **mineralocorticoid** hormone secreted by the adrenal cortex, the principal biological activity of which is the regulation of electrolyte and water balance by promoting the retention of sodium (and, therefore, of water) and the excretion of potassium; the retention of water induces an increase in plasma volume and an increase in blood pressure. Its secretion is stimulated by angiotensin II. Deficiency is **hypoadrenocorticism** (Addison's disease).

aldosteronism [*al-dos'tə-ro-niz"əm*] an abnormality of electrolyte balance caused by excessive secretion of aldosterone; hyperaldosteronism.

primary a. that arising from oversecretion of aldosterone by an adrenal adenoma, characterized typically by hypokalemia, alkalosis, muscular weakness, polyuria, polydipsia and hypertension. Called also Conn's syndrome.

pseudoprimary a. that caused by bilateral adrenal hyperplasia and having the same signs and symptoms as primary aldosteronism.

secondary a. that due to extra-adrenal stimulation of aldosterone secretion; it is associated with edematous states, as in nephrotic syndrome, hepatic cirrhosis and heart failure.

aldoxycarb a carbamate pesticide.

aldrin [*al'drin*] an insecticide. See **chlorinated hydrocarbons**.

alecithal [*a-lesĭ-thəl*] having no distinct yolk.

alecrim see ***Holocalyx glaziovii***.

Alectryon a genus in the plant family Sapindaceae; plants capable of causing cyanide poisoning. Includes *A. excelcus* (titoki), *A. oleifolius* (boonaree, rosewood, *Heterodendron oleifolium*).

Aleppo button, Aleppo boil see **leishmaniasis**. Called also Aleppo boil.

alertness the mental state of aroused awareness. Inferred in animals.

aleukemia [*a"loo-ke'me-ə*] 1. absence or deficiency of leukocytes in the blood. 2. aleukemic **leukemia**.

aleukemic leukemia [*a"loo-ke'mik loo-ke'me-ə*] see **leukemia**.

aleukia [*a-loo'ke-ə*] leukopenia.

aleukocytosis [*a-loo"ko-sĭ-to'sis*] diminished proportion of leukocytes in the blood.

aleurioconidia the single cell conidia produced by extrusion from the conidiophores of fungi such as *Microsporum* and *Trichophyton*.

aleuriospore [*ə-l're-o-spor*] a terminal or lateral spore that separates by breaking the wall of the hypha.

Aleurites a genus of the plant family Euphorbiaceae. Plants may contain toxic albumins, saponins, diterpenes; rarely cause hemorrhagic enteritis and profuse diarrhea. Includes *A. cordata* (Japan oil tree), *A. fordii* (tung oil tree), *A. moluccana* (*A. triloba*, candlenut tree), *A. montana* (mu-oil tree), *A. trisperma* (lumbang nut). Called also *Vernicia*.

Aleutian mink disease a slowly progressive disease of certain mink (e.g. Aleutian mink which are mutants for a pale colored pelt) caused by persistent parvovirus (*Amdovirus*) infection and associated with polyclonal, virus specific hypergammaglobulinemia and immune complex-mediated lesions, especially arteritis and glomerulonephritis. It is manifested by emaciation, reproductive inefficiency and death from renal failure. The characteristic laboratory findings are hypergammaglobulinemia and a massive proliferation and infiltration of plasma cells into the swollen kidneys and into the spleen, liver, lymph nodes and bone marrow.

alevin advanced **fry**.

Alexander gouge [*al"eg-zan'dər gouj*] a heavy duty bone gouge with a fluted blade, a sharp chisel point and a rounded end to the shaft adapted to hitting with a hammer.

Alexander's disease [*al"eg-zan'dər*] a congenital, fibrinoid leukodystrophy of humans and described in dogs. The condition is characterized by spongiform change in white matter with astrocytic inclusion bodies and has been recognized in Scottish terriers and miniature Poodles.

alexin see **complement**.

aleydigism [*a-li'dig-iz"əm*] absence of secretion of the interstitial cells of the testis (Leydig cells).

ALF Animal Liberation Front.

alfacalcidol [*al"fə-kal'sĭ-dol*] 1-alpha-hydroxycholecalciferol

alfadolone, alphadolone one of the two pregnanediones in Saffan, the steroidal anesthetic. Called also steroid II. See also **Saffan**.

alfalfa [*al-fal'fə*] see ***Medicago***.

alfaxalone, alphaxalone one of the two pregnanediones in Saffan, the steroidal anesthetic used widely in cats. Called also steroid I.

alfentanil [*al-fen'tə-nil*] a short-acting opioid analgesic; an analog of fentanyl with lower potency but more rapid action.

alfombrilla ***Drymaria*** *arenarioides*.

Alfortia edentatus see ***Strongylus*** *edentatus*.

ALG anti-lymphocyte globulin.

algae [*al'je*] a group of plants living in the water, including all seaweeds, and ranging in size from microscopic cells to fronds many meters long. A group of unicellular algae, the *Cyanobacter*, growing on dams, ponds and lakes can cause severe mortalities in animals drinking the water. See also **algal**, ***Microcystis***, ***Prototheca***. Artificial culture of algae as a source of livestock feed is being tried in some arid countries.

toxic a. see **algal** poisoning.

algal [*al'gəl*] pertaining to or caused by algae.

a. infection is very rare but systemic and udder infections are recorded. See **protothecosis**.

a. mastitis the algae *Prototheca trispora* and *P. zopfii* cause chronic bovine mastitis.

a. poisoning toxic *Cyanobacteria* grow in stagnant water and, in the correct circumstances for massive growth and with certain species of bacteria, the top layer of water can be very poisonous. There are two syndromes: sudden death caused by neurotoxins, and severe liver damage with jaundice and photosensitization caused by hepatotoxins. Called also water bloom. See also **algae**, **anatoxin**, **cyanobacteria**, **microcystin**.

algarroba [*al"gə-ro'bə*] see ***Prosopis***.

Algerian Arab sheep meat and carpetwool sheep, both horned and polled.

algesia [*al-je'ze-ə*] sensitiveness to pain; hyperesthesia.

algesic [*al-je'zik*] pertaining to or emanating from algesia.

a. substances endogenous substances involved in the production of the pain that is associated with inflammation. Includes serotonin, bradykinin and prostaglandins.

algesimetry [*al"jə-sim'ə-tre*] measurement of sensitivity of pain.

algesthesis [*al"jes-the'sis*] a painful sensation.

algetic [*al-jet'ik*] pertaining to algesia.

-algia word element. [Gr.] *pain*.

algicide [*al'jĭ-sīd*] 1. destructive to algae. 2. an agent that destroys algae.

algid [*al'jid*] chilly; cold.

alginate [*al'jĭ-nāt*] a salt of alginic acid, a colloidal substance from brown seaweed; used, in the form of calcium, sodium or ammonium alginate, as foam, clot or gauze for absorbable surgical dressings. Also used as an irreversible hydrocolloid impression material in dentistry for making impressions of jaws in the preparation of orthodontic appliances.

alg(o)- word element. [Gr.] *pain, cold.*
algodystrophy [*al"go-dis'trə-fē*] a combination of pain and dystrophic changes in bone.
algogenic [*al-go-jen'ik*] 1. causing pain. 2. lowering temperature.
algology 1. the scientific study of pain. 2. the study of algae; called also phycology.
algometer [*al-gom'ə-tər*] a device for quantitiative measurement of pain using controlled force or electrical current.
algometry [*al-gom'ə-tre*] estimation of the sensitivity to painful stimuli.
algor chill or rigor; coldness.
a. mortis the cooling of the body after death, which proceeds at a definite rate, influenced by the environmental temperature, insulation and other factors.
algorithm [*al'gə-rith-əm*] a set of rules designed to solve a specific problem by proceeding through a series of prearranged, logical steps. Originally referred to purely mathematical problems, now used in a wider sphere, e.g. to solve diagnostic problems. Often depicted in the form of a box and line diagram which sets out the logic of the procedure or program.
diagnostic a. mapping of the logical steps to be taken in eliminating potential diagnoses which do not match clinical signs or pathological findings and arranging possible diagnoses in order of probability.
aliasing [*a'le-əs-ing*] an imaging artifact in Doppler ultrasound, governed by the Nyquist limit, in which the blood flow direction appears to be reversed. An experienced operator can readily distinguish the aliased image from the true image.
alienation [*ā|"e-ən-a'shən*] isolation or separation from the standard.
alienia [*a-li-e'ne-ə*] absence of the spleen.
aliflurane [*al"ī-floo'rān*] a halogenated inhalant anesthetic agent.
aliform [*al'ī-form*] shaped like a wing.
Aliivibrio salmonicida a gram-negative pathogen of salmonid fish. Causes cold water vibriosis, with tissue destruction, hemolysis and sepsis.
aliment [*al'ə-ment*] food; nutritive material.
alimentary [*al"ə-men'tər-e*] pertaining to or caused by food, or nutritive material.
a. canal all the organs making up the route taken by food as it passes through the body from mouth to anus; it comprises the esophagus, stomach, and small and large intestines. Called also digestive tract. See also **digestive** system.
a. ketosis see alimentary **ketosis**.
a. system the alimentary canal plus the large digestive glands of the abdomen. See also **digestive** system.
a. toxic aleukia leukopenia due to ingested toxin, e.g. *Fusarium* spp. poisoning, stachybotrytoxicosis.
alimentary tract [*al"ə-men'tər-e trakt*] see **alimentary** canal, **digestive** system.
a. t. abnormal motility includes hypermotility, hypermotility, stasis.
a. t. congenital defects includes agenesis, aplasia, achalasia.
a. t. dysfunction inability of the alimentary tract to carry out properly the functions of prehension, swallowing, digestion and absorption of food. The mode of the dysfunction may be one of abnormal motor function, expressed by errors in motility, or of chemical function relating to secretion of digestive juices, including hypersecretion and fluid loss, and absorption of the products of digestion.
a. t. functional movement arrests see **ileus**.
a. t. motility the movements of the stomach and intestines which are the means of propelling food through the tract. They include peristalsis, segmenting movements and sphincter relaxation. Abnormality may take the form of hyper- or hypomotility.
a. t. mycosis see **phycomycosis**, **candidiasis**, **aspergillosis**, **histoplasmosis**.
a. t. pain see **colic**.
a. t. secretory function includes gastric and pancreatic secretion, and secretion of intestinal glands.
a. t. stimulant a traditional pharmaceutical maneuver of increasing gut motility by the oral administration of medicines which cause physical irritation of the mucosa, e.g. aloin, castor oil, croton oil.
alimentation [*al"ə-men-ta'shən*] giving or receiving of nourishment.
intravenous a. the administration by intravenous injection of a solution containing sufficient nutrients in appropriate concentration to maintain life.
oral a. feeding by mouth.
total parenteral a. see **hyperalimentation**.
alinasal [*al"ī-na'səl*] pertaining to the sides or wings of the nostril.
aliphatic [*al"ī-fat'ik*] 1. fatty or oily. 2. pertaining to a hydrocarbon that does not contain an aromatic ring.
a. organic arsenicals include the pharmaceuticals—cacodylic, phenarsonic acids and the herbicides—monosodium and disodium methanearsontes. See also organic **arsenical**.
aliquot [*al'ī-kwot*] 1. a sample that is representative of the whole. 2. a number that will divide another without a remainder; e.g. 2 is an aliquot of 6.
alkalemia [*al"kə-le'me-ə*] abnormal alkalinity, or increased pH, of the blood. See also **alkalosis**.
alkali [*al'kə-li*] any one of a class of compounds such as sodium hydroxide that form salts with acids and soaps with fats; a base, or substance capable of neutralizing acids. Other properties include a bitter taste and the ability to turn litmus paper from red to blue. Alkalis play a vital role in maintaining the normal functioning of the body chemistry. See also **acid–base balance**, **alkaline**, **base**.
a. disease see **selenium** poisoning.
a. reserve the ability of the combined buffer systems of the blood to neutralize acid. The pH of the blood normally is slightly on the alkaline side, between 7.35 and 7.45. Since the principal buffer in the blood is bicarbonate, the alkali reserve is essentially represented by the plasma bicarbonate concentration. However, hemoglobin, phosphates and other bases also act as buffers. A lowered alkali reserve means a state of acidosis; increased reserve indicates alkalosis. Alkali reserve is measured by the combining power of carbon dioxide, which is the amount of carbon dioxide that can be bound as bicarbonate by the blood.
alkali disease [*al'kə-li dĭ-zēz'*] see **selenium** poisoning.
alkaline [*al'kə-līn, -lin*] having the reactions of an alkali.
a. incompatibilities a basic chemical fact that acids and alkalis react together so that the mixing of them in medications is likely to render the medicine ineffective. The phenomenon is utilized in the treatment of poisoning when the objective is to combat the effects of an ingested substance.
a. tide see postprandial alkaline **tide**.
a. urine the urine of carnivores is generally acidic, that of herbivores is generally alkaline. The presence of an alkaline urine in a carnivore, provided the sample is fresh and uncontaminated, can be an indication that the patient is alkalotic or the result of urea-splitting bacteria.
alkaline phosphatase (ALP) [*al'kə-līn, -lin fos'fə-tās*] a nonspecific enzyme localized on cell membranes that hydrolyzes phosphate esters liberating inorganic phosphate; found in bone, liver, kidney, leukocytes, adrenal cortex and other tissues. Serum alkaline phosphatase activity is elevated in hepatobiliary disease, especially in obstructive jaundice, and in bone diseases with increased osteoblastic activity such as **hyperparathyroidism**, **osteitis** deformans and bone cancer. The liver and bone tissue each produce a distinct isoenzyme. Called also alkaline phosphomonoesterase, glycerophosphatase.
alkalinity [*al"kə-lin'ĭ-te*] 1. the quality of being alkaline. 2. the combining power of a base, expressed as the maximum number of equivalents of acid with which it reacts to form a salt.
alkalinizing the capacity to alkalinize, or confer alkalinity.
a. agent sodium bicarbonate, potassium citrate, calcium carbonate or calcium acetate may be added to food in the management of acidosis associated with renal failure.
a. solution one used in fluid therapy of acidosis to raise blood pH, e.g. sodium bicarbonate or sodium lactate.
alkalinuria [*al"kə-lī-nu're-ə*] an alkaline condition of the urine. See **alkaline** urine.
alkalization the act of making alkaline.
alkalizer [*al'kə-li"zər*] an agent that causes alkalization.
alkaloid [*al'kə-loid"*] one of a large group of small organic compounds, mainly derived from amino acids, and containing nitrogen, found in plants. They are water-soluble, usually bitter in taste and are characterized by powerful physiological activity. Examples are morphine, strychnine, atropine, quinine, nicotine and caffeine. The term is also applied to synthetic substances that have structures similar to plant alkaloids, such as procaine. When treated with acids they are converted to water-soluble salts. In cases of poisoning by alkaloids the recommended antidote is tannic acid, but heavy metal salts and iodine also precipitate them. Includes pyrrolizidine and solanaceous alkaloids.
β-carboline indoleamine a. a plant poison found in *Phalaris*, *Peganum*, *Tribulus*, and *Kallstroemia* spp. Poisoning causes a

VetBooks.ir

VetBooks.ir

A

nervous syndrome of hyper- or hypomotility, muscle tremor, flexed paresis of fore- or hindlimbs, hypermetria, walking backwards, and convulsions.

alkaloidosis alkaloid poisoning.

alkalosis [*al"kə-lo'sis*] a pathological condition resulting from accumulation of base, or from loss of acid without comparable loss of base in the body fluids, and characterized by decrease in hydrogen ion concentration (increase in pH). Alkalosis is the opposite of **acidosis**. See also **acid–base balance**.

compensated a. a condition in which compensatory mechanisms have returned the pH toward normal.

concentration a. associated with deficit in free body water, hypotonic fluid losses or increased sodium concentrations.

gastric a. alkalosis due to loss of gastric fluid because of persistent vomiting. See also hypochloremic alkalosis (below).

hypochloremic a. a metabolic alkalosis in which gastric losses of chloride are disproportionately greater than sodium loss because of corresponding increase in potassium loss.

hypokalemic a. a metabolic alkalosis associated with a low serum potassium concentration; retention of alkali or loss of acid occurs in the extracellular (but not intracellular) fluid compartment; although the pH of the intracellular fluid may be below normal.

metabolic a. a disturbance in which the acid–base status shifts toward the alkaline because of uncompensated loss of acids, ingestion or retention of excess base, or potassium depletion. The condition can occur with vomiting or accompany treatment with diuretics.

nonrespiratory a. results from loss of chloride ions, e.g. in gastric dilatation, vomiting, abomasal torsion.

respiratory a. reduced carbon dioxide tension in the extracellular fluid caused by excessive excretion of carbon dioxide through the lungs (**hyperventilation**). Conditions commonly associated with respiratory alkalosis include pain, hypoxia, fever, high environmental temperature, poisoning, early pulmonary edema, pulmonary embolism and central nervous system disease.

alkalotic [*al"kə-lot'ik*] pertaining to or characterized by alkalosis.

alkane [*al'kān*] a saturated hydrocarbon, i.e. one that has no carbon–carbon multiple bonds; formerly called paraffin.

alkavervir a standardized mixture of alkaloids extracted from *Veratrum viride*, used as a rumenatoric.

alkene [*al'kēn*] an aliphatic hydrocarbon containing a double bond.

alkyl [*al'kəl*] the radical that results when an aliphatic hydrocarbon loses one hydrogen atom.

a. lead may be in effluent from petrochemical plants and cause lead poisoning in local wildfowl and livestock.

a. sulfonates a group of compounds with the carcinotherapeutic activity of the **alkylating agent**.

alkylate [*al'kə-lāt*] to treat with an alkylating agent.

alkylating agent a compound containing alkyl groups that combine readily with other molecules. Their action seems to be chiefly on the deoxyribonucleic acid (DNA) in the nucleus of the cell. They are used in chemotherapy of cancer although they do not damage malignant cells selectively, but also have a toxic action on normal cells. Locally they cause blistering of the skin and damage to the eyes and respiratory tract. Systemic toxic effects are nausea and vomiting, reduction in both leukocytes and erythrocytes, and hemorrhagic tendencies. Among the agents of this group used in therapy are the **nitrogen** mustards, including mechlorethamine hydrochloride and chlorambucil, and busulfan and cyclophosphamide. Also used for the inactivation of organisms in the preparation of vaccines as it does not significantly interfere with antigenicity. β-propiolactone is an example.

alkylmethyl-benzyl ammonium chloride used as a disinfectant; accidental contamination of poultry water supplies has caused poisoning.

alkyne [*al'kīn*] an aliphatic hydrocarbon containing a triple bond.

ALL acute lymphoblastic leukemia.

all-in–all-out housing a strategy directed at the control of infectious disease, especially enzootic pneumonia of pigs and viral pneumonia of calves. The barn is emptied of all animals on a particular day, the accommodation is cleaned and disinfected, often left vacant for a short period of time, and then refilled in one day.

all-meat syndrome a nutritional secondary hyperparathyroidism with osteodystrophia fibrosa in dogs and cats, resulting from the high phosphorus and low calcium content of a diet consisting mainly of meat.

all-or-none trait patients either have all of the clinical signs of a disease or are clinically normal without any of the signs.

all-or-nothing law the phenomenon, characteristic of individual axons and nerve fibers, of responding only to a stimulus above a specific threshold and then responding with the maximum discharge or contraction of which the unit is capable under the particular conditions operating at the time.

Allamanda a genus in the plant family Apocynaceae; latex may contain indole alkaloids that may produce enteritis. Includes *A. cathartica*, *A. neriifolia*.

allantochorion [*ə-lan"to-kor'e-on*] the fused or juxtaposed parts of the allantois and chorion as one structure. See also **vitellochorion**.

allantoic [*al"an-to'ik*] pertaining to the allantois.

a. fluid the fluid contained within the allantois.

a. vesicle the saclike hollow portion of the allantois.

allantoid [*ə-lan'toid*] 1. sausage-shaped. 2. pertaining to the allantois.

allantoidoangiopagous [*al"ən-toi"do-an"je-op'ə-gəs*] twin fetuses joined by the umbilical blood vessels.

allantoin [*ə-lan'to-in*] a crystalline substance, the product of the oxidation of uric acid by uricase in the final step of purine catabolism and present in urine of most mammals except primates and Dalmation dogs (which lack uricase), and in plants. At one time used topically to promote wound healing.

allantoinuria [*ə-lan"to-in-u're-ə*] allantoin in the urine. See **allantoin**.

allantois [*ə-lan'to-is*] a ventral outgrowth of the hindgut of the early embryo, which expands to form a large sac, filled with urine-like fluid, that fuses with the chorion to make up a major part of the placenta; vestigial in humans and some other species.

a. adenomatous dysplasia adenomatous nodules and plaques on the allantois of mares; usually associated with fetal disease.

allele [*ə-lēl'*] one of two or more alternative forms of a gene at the same site or locus in each of a pair of chromosomes, which determine alternative characters in inheritance. Called also allelomorph.

blank a. an allele which produces an antigen which cannot be detected.

null a. see silent allele (below).

silent a. one that produces no detectable effect.

allelic exclusion [*ə-le'lik*] the process in which B and T lymphocytes express the rearranged antigen specific heavy and light chains of immunoglobulins in B cells and T-cell receptors in T cells from only one chromosome.

allelomorph see **allele**.

allelotaxis [*ə-le"lo-tak'sis*] development of an organ from several embryonic structures.

allergen [*al'ər-jen*] 1. a substance, protein or non-protein, capable of inducing allergy or specific hypersensitivity. 2. an extract of any substance known to cause allergy. Allergens are used to test a patient for hypersensitivity to specific substances (see **skin** test). They are also used to desensitize or hyposensitize allergic individuals. See **immunotherapy**. Almost any substance in the environment can be an allergen. The list of known allergens includes plant pollens, spores of mold, food preservatives, dyes, drugs, inorganic chemicals and vaccines. Allergens can enter the body by being inhaled, swallowed, touched or injected. Following primary exposure to an allergen, subsequent exposures result in hypersensitivity (allergic) reactions which may be immediate or delayed, local or systemic and include anaphylaxis and contact dermatitis.

alum-precipated a. an allergen extract used in intradermal and scratch allergy skin testing; the allergen is adsorbed onto alum to slow antigen release and provide slower, more persistent immune stimulation. Local tissue reactions and skin nodules may follow their use.

aqueous a. a form of allergen extract used in intradermal and scratch allergy skin testing. In hyposensitization regimes, it is rapidly absorbed, but requires more frequent administration.

emulsion a. allergen extracts prepared in propylene glycol, glycerin, or mineral oil. They give the most sustained effect when used in hyposensitization regimes.

allergic [*ə-lur'jik*] pertaining to or caused by allergy.

a. breakthrough a theory which attributes temporary increases in clinical severity of atopy to influences, such as concurrent disease or hormonal variations, acting to inhibit the mechanisms which normally regulate production of IgE at low levels following sensitization.

a. bronchitis see **bronchitis**, feline **bronchial** asthma, **PIE syndrome**.

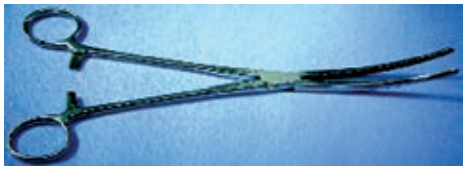
VetBooks.ir

a. contact dermatitis results from percutaneous sensitization to allergens, usually haptens, that form covalent bonds with epidermal proteins, and the development of a delayed (type IV) hypersensitivity. Lesions typically correspond in location to the area of contact between allergen and skin which in animals is often in relatively hairless areas unless the allergen is presented in liquid form.
a. dermatitis inflammation of the skin resulting from exposure to antigens to which the animal is hypersensitive. Usually involving immediate (type I) hypersensitivity but also commonly applied to reactions involving delayed (type IV) hypersensitivity. The specific skin reaction, lesions and pattern of disease produced depend on many factors including the type of allergen and immune mechanism, route of exposure and species differences. See also **atopy**, equine allergic dermatitis (below), allergic contact dermatitis (above).
a. encephalitis see experimental allergic **encephalomyelitis**.
equine a. dermatitis an intensely itchy dermatitis of horses caused by hypersensitivity to the bites of *Culicoides* spp. The lesions are worst in the summer months and most evident along the middle of the back. The skin is thickened and the hair is missing. Called also Queensland itch, sweet itch.
a. inhalant dermatitis see **atopy**.
a. reaction an immune-mediated, adverse clinical response, following the inhalation, ingestion or injection of an antigen by a sensitized animal. Manifestations include **urticaria** or **anaphylaxis**.
a. rhinitis see **enzootic** nasal granuloma, **summer** snuffles.
a. urticaria see **urticaria**.
allergization [*al"ər-jĭ-za'shən*] active sensitization by introduction of allergens into the body.
allergy an abnormal excessive immunologic reactivity following second or subsequent exposure to antigen (allergen). See also **hypersensitivity**, **allergic**.
atopic a. an allergy affecting body sites not contacted by the allergen. See **atopy**.
bacterial a. a specific hypersensitivity to a particular bacterial antigen, e.g. *Mycobacterium tuberculosis*; it is dependent on previous infection with the specific organism.
bronchial a. asthma.
cold a. a condition manifested by local and systemic reactions, mediated by histamine, which is released from mast cells and basophils as a result of exposure to cold.
delayed a. see delayed **hypersensitivity**.
drug a. see **drug** allergy.
drying-off a. see milk allergy (below).
food a. called also gastrointestinal allergy; see food **hypersensitivity**.
gastrointestinal a. see food allergy (above).
hereditary a. an allergy with a hereditary predisposition. The tendency to develop some forms of allergy is inherited, but the specific clinical form is not. IgE, formerly called reagin or reaginic antibody, may be involved. See also **atopy**.
induced a. allergy resulting from antigen exposure by contact with an antigen, or infection with a microorganism, as contrasted with hereditary allergy.
inhaled a. see **atopy**.
milk a. a hypersensitivity to the milk protein, α-casein. Signs, varying from urticaria to anaphylaxis, have occurred in Jersey cows when milk proteins escape from the udder into the bloodstream during the drying off period.
physical a. a condition in which physical agents, such as heat, cold or light, trigger an allergic response.

A-25: Equine allergic dermatitis. Sweet itch (Queensland itch) on the neck of a horse.
From Pascoe R, Knottenbelt DC, Manual of Equine Dermatology. Saunders, 1999.

Allerton virus the herpesvirus (bovine herpesvirus 2) which causes a form of lumpy skin disease. Originally named for a region in South Africa. See also **lumpy skin disease**.
Allescheria boydii [*al"es-ke're-ə*] see ***Petriellidium boydii***.
allescheriosis [*al"əs-ke-re-o'sis*] eumycotic mycetoma caused by the fungus *Petriellidium* (*Allescheria*) spp.
allethrin [*al'ə-thrin*] a first-generation pyrethroid; used to control ectoparasites on dogs.
alley an area in a cow barn identified by its particular purpose such as a loafing alley, a walking alley or feeding alley.
dunging a. alley behind free stalls in a dairy barn in which cows walk and defecate. Cleaned by scraping with a tractor blade or by flushing periodially with a wave of water.
allidochlor, α-chloro-*N*,*N*-diallylacetamide an amide herbicide, poisonous if given in large amounts but not if used according to instructions. Causes anorexia, salivation, depression and prostration. Called also CDAA.
alligator a large, primarily freshwater reptile of the order Crocodylia, subfamily Alligatorinae. Native to the USA (*Alligator mississippiensis*) and China (*A. sinensis*). The closely related crocodile, caiman and gavials are also crocodilians.
a. clips spring-loaded, slightly-toothed clamps with long jaws; used particularly as electrodes on an electrocardiograph because they can be easily attached to the animal's skin.
a. weed *Alternanthera philoxeroides*.
Allis tissue forceps [*al'is tish'oo for'seps*] forceps with inward-curving toothed blades and a ratcheted handle. Designed for grasping fascia and tendons.
Allium [*al'e-əm*] a genus of plants belonging to the Liliaceae family; contain *N*-propyl-disulfide. A constant heavy diet of many species causes severe hemolytic anemia. See also **onion** poisoning. Includes *A. ameloprasm* (wild onion), *A. canadense* (wild onion), *A. cepa* (cultivated onion), *A. sativum* (garlic), *A. schoenprasm* (chives), *A. triquetrum* (three-cornered garlic), *A. ursinum* (wild garlic), *A. validum* (wild onion), *A. vineale* (false garlic).
all(o)- word element. [Gr.] *other, deviating from normal*.
alloantibody [*al"o-an'tĭ-bod"e*] an antibody produced by one individual that reacts with alloantigens of another individual of the same species.
alloantigen [*al"o-an'tĭ-jən*] an antigen existing in alternative (allelic) forms in a species, thus inducing an immune response when one form is transferred to members of the species who lack it; typical alloantigens are the blood group antigens.
canine secretory a. system (CSA) a minor histocompatibility system in dog; an obsolete term.
alloantiserum [*al"o-an"tĭ-sēr'əm*] antiserum produced by injecting antigens into another member of the same species.
allobarbital diallylbarbituric acid, an intermediate- to long-acting sedative and hypnotic. Called also allobarbitone.
allobarbitone allobarbital.
allocation the technique of forming groups in a population for the purpose of carrying out comparisons between them. The objective

A-26: Feed alley in a dairy. The cows are feeding through lock-ups on a total-mixed ration that has been delivered by a feed wagon. Cattle in the pen on the right will be in the milking shed.



A-27: Allis tissue forceps.
From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide. Mosby, 2011.

VetBooks.ir

A

is to create comparable groups and to avoid bias. Techniques used include random allocation, self-selection or clinical judgment.

allochromasia change in color of hair or skin.

allocortex [*al"o-kor'teks*] the phylogenetically older part of the cerebral cortex that includes the cortex of the paleopallium and the archipallium. The newer part of the cortex is the neocortex or isocortex.

Allodermanyssus [*al"o-dur"mə-nis'əs*] a genus of mites, members of the family Dermanyssidae. Includes *A. sanguineus* (blood-sucker in rodents).

allodynia [*al"o-din'e-ə*] pain produced by a non-noxious stimulus.

allogen allergen.

allogeneic [*al"o-jə-ne'ik*] denoting individuals of the same species but of different genetic constitution (antigenically distinct).

allograft [*al'o-graft*] a graft between individuals of the same species, but of a different genotype. Formerly called homograft.

a. rejection see **rejection**.

alloimmune [*al"o-ĭ-mūn'*] immunity to an alloantigen.

a. hemolytic anemia of the newborn occurs in humans, where it is also called Rh disease, in foals as a naturally occurring disease, and in pigs and cattle receiving vaccines containing allotypic red blood cell antigens. In naturally occurring Rh-like syndrome, there are usually no untoward consequences for the first pregnancy, but at parturition red blood cells from the offspring enter the maternal circulation and, if the red blood cell antigens differ from the dam, result in the production of antibodies. A subsequent pregnancy from the same mating in which an offspring of the same blood type is produced will result in a hemolytic anemia in the offspring when maternal antibodies are acquired.

alloimmunization [*al"o-im"u-nĭ-za'shən*] development of antibodies in response to alloantigens; antigens derived from a genetically dissimilar animal of the same species. See also **alloantigen**.

a. of pregnancy sensitization of the dam against fetal red blood cell antigens that leak into the maternal circulation across the placenta or during parturition. This is uncommon except in the mare and sow where it gives rise to **alloimmune** hemolytic anemia of the newborn.

allometric scaling [*al"o-met'rik*] scaling of dose rates of drugs, diet ratios to relative growth and size of each part of the animal, or each animal relative to the others.

allometry [*al-om'ə-tre*] measurement of the changes in shape of an animal relative to increases in its size.

allopathy [*al-op'ə-the*] in homeopathy, the use of treatments that induce symptoms or a condition that is different from or incompatible with the disease process itself.

allophenic [*al"o-fe'nik*] pertaining to individual animals that have cells of different phenotypes in various tissues of the body.

alloploid the state of having any number of chromosome sets derived from different ancestral species. Called also allopolyploid.

allopolyploidy see **alloploid**.

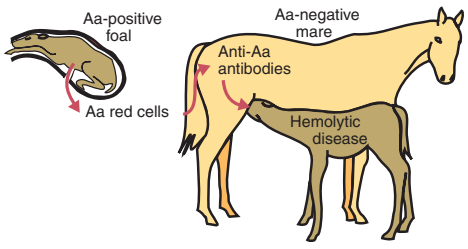
allopurinol [*al"o-pūr'ĭ-nol*] a drug that inhibits uric acid production and reduces serum and urinary uric acid concentrations; used in the treatment of urate uroliths in dogs.

alloreactivity the reaction of lymphocytes or antibodies with alloantigens.

allorhythmia [*al"o-rith'me-ə*] irregularity of the pulse.

allosensitization [*al"o-sen"sĭ-ti-za'shən*] sensitization to alloantigens (isoantigens) during pregnancy.

allosteric [*al"o-ster'ik*] pertaining to a regulatory effect on the biological function of a protein, produced by a compound, usually a small molecule, not directly involved in that function (an allosteric effector) or to regulation of an enzyme involving cooperativity between multiple binding sites (allosteric sites).



A-28: Alloimmune hemolytic anemia of the newborn.
From Tizard IR, Veterinary Immunology: an Introduction, 6th Edition. Saunders, 2001.

a. enzymes any enzymes containing an allosteric site, where effector molecules can bind to increase or decrease the rate of reaction, in addition to an active site for substrate binding. Allosteric enzymes exhibit sigmoidal rather than Michaelis–Menten kinetics.

a. site that site on an enzyme molecule which binds with a nonsubstrate molecule, inducing a conformational change that results in an alteration of the affinity of the enzyme for its substrate.

allotherm [*al'o-thərm"*] an organism whose body temperature changes with its environment. Called also poikilotherm.

allotriophagia see **pica**.

allotropic [*al"o-tro'pik*] exhibiting allotropism.

allotropism [*ə-lot'rə-piz"əm*] existence of an element in two or more distinct forms.

allotropy [*ə-lot'rə-pe*] allotropism.

allotype [*al'o-tīp*] a genetically determined variation in plasma proteins which may be recognized as antigenic by other members of the same species. Commonly applied to subclasses of immunoglobulins.

alloxan [*ə-lok'san*] an oxidized product of uric acid which destroys β cells of the islets of Langerhans in the pancreas. It has been used in experimental studies of diabetes mellitus and in the treatment of insulinomas in dogs.

alloxuremia the presence of purine bases in the blood.

allyl [*al'əl*] a univalent organic group previously used in the manufacture of pharmaceuticals.

a. formate has the same effect as allyl **alcohol**.

a. isothiocyanate used as a counterirritant and in the manufacture of war gases. Called also volatile oil of mustard. Occurs naturally in members of the plant family Brassicaceae (Cruciferae) which cause acute indigestion, polioencephalomalacia and atypical interstitial pneumonia in cattle. A goitrogen.

allylamines [*al"əl-am'in*] a class of antifungals that act by inhibiting synthesis of ergosterol; includes **terbenafine**.

***N*-allylnormorphine** see **nalorphine**.

almond [*ah'mənd*] ***Prunus amygdalus***. Bitter almond is a variety grown for the production of almond oil. The kernel of its seed contains sufficient cyanogenetic glycoside to be a possible cause of cyanide poisoning. The smell of bitter almonds is often quoted as being a characteristic finding in cases of cyanide poisoning in animals.

a. oil used topically as an emollient and medicinally in alternative medicine.

a. shells causes abomasal impaction in stall-fed cattle where the shells are added to the ration as a roughage supplement.

Alocasia plant genus in the Araceae family. Contain raphide calcium oxalate crystals which cause severe stomatitis if eaten. Includes *A. brisbanensis* (*A. macrorrhizos*). Called also elephant ear, cunjevoi, giant taro.

aloe [*al'ə-we*] the dried juice of plants of the genus *Aloe* of the Liliaceae family. It is an anthraquinone cathartic and was at one time the favored purgative for horses. Called also aloes. The name aloe is also used to refer to the fragrant wood of the tree *Aquilaria agallocha*.

American a. ***Agave americana***.

a. vera a mucinous substance obtained from the leaves of the plant, *Aloe vera*. Various therapeutic properties are claimed, including antibacterial, antifungal and anti-inflammatory activity. It is often used on burns.

aloe-emodin [*al'ə-we em'o-din*] a hydroxyanthraquinone; the cathartic principle in aloes. Also present in senna and rhubarb. Investigated as an anticancer agent.

aloin [*al'o-in*] the active constituent in aloes; used at one time as a purgative for horses.

alopecia deficiency of the hair or wool coat; may be caused by failure to grow or by loss after growth. There is a significant difference amongst those in which grown fibers are lost, between those in which stumps of fibers remain, and those in which the hair root has been shed from the follicle. See also **hypotrichosis**, **alopecic**.

a. areata noninflammatory hair loss in sharply defined areas. A rare condition seen in dogs, cats, horses and primates; the cause is unknown, but immune-mediated mechanisms are suspected.

bilaterally symmetric a. a clinical feature associated with endocrine and metabolic causes of hair loss in dogs and cats, although other causes including self-trauma are sometimes responsible.

A-29: Bilaterally symmetrical alopecia in a cat caused by self-epilation, resulting in a characteristic 'racing stripe' of normal hair.

cicatricial a., a. cicatrisata irreversible loss of hair associated with scarring; causes include physical, chemical and thermal injury, severe bacterial infection, neoplasia, and severe inflammatory reactions, sometimes immune-mediated, in the skin.
collar frictional a. loss of hair around the neck occurs in some cats wearing collars. It is reversible when the collar is removed.
color dilution a. a clinical syndrome seen in dogs with blue or fawn coat color caused by the dilution gene at the D locus. Clinical signs include bacterial folliculitis, scaling and hair loss, mainly over the back and commencing within the first year or two of life. Hairs contain clumped melanin (macromelanosomes) with distortion and fracture of the shaft. Seen most often in Doberman pinschers but reported in a number of other breeds. Called also blue Doberman syndrome, fawn Irish setter syndrome, color mutant alopecia. Seen also in many breeds of cattle, especially Simmental, Angus. Characterized by short, sparse, curly haircoats and wispy tail switch.
color mutant a. color dilution alopecia (above).
a. congenitalis complete or partial absence of the hair at birth.
cyclic flank a. see recurrent flank alopecia (below).
dorsal nasal a. on the nose of camelids, caused by rubbing. Causes include fly bite hypersensitivity; some consider it a vice.
endocrine a. hair loss caused by an endocrine abnormality that adversely affects hair growth. Usually characterized by symmetrical distribution and noninflammatory changes in the skin. See also estrus alopecia (below).
estrus a. a bilaterally symmetrical hair loss seen in female ferrets who fail to ovulate and remain in estrus for 30 days or longer. There is also enlargement of the vulva and may be a nonregenerative anemia.
feline acquired symmetric a. a bilaterally symmetric hair loss on the posterior abdomen, inner thighs, perineum and, less consistently, ventral thorax, flanks and forelegs of cats, most commonly neutered males. The skin is usually normal and nonpruritic. The cause is unknown; sex hormone deficiency was previously believed to be responsible, but abnormal thyroid function is also suspected. Some cases are in reality self-inflicted by excessive grooming or the cat's response to unrecognized pruritus. Called also feline endocrine alopecia.
fur seal a. caused in captive seals by overgrooming, a displacement activity. Alopecia occurs on the head and the posterior body, the easiest places for the seal to scratch.
inherited symmetrical a. calves born with a normal haircoat lose their hair over bilaterally distributed specific areas of the skin. See also inherited congenital **hypotrichosis**.
a. medicamentosa hair loss due to ingestion of a drug.
a. mucinosa see follicular **mucinosis**.
paraneoplastic a. an acute, progressive, symetrical alopecia seen in cats in association with pancreatic carcinoma. There is alopecia on the medial aspect of the legs and ventrum; paw pads may become dry, crusted, fissured and painful.
pattern a. see pattern **baldness**.
periodic a. a pinnal alopecia observed in miniature poodles. Regrowth usually occurs in 3–4 months.
pinnal a. gradual loss of hair on the pinnae until there is total alopecia. Occurs mainly in Dachshunds and may have a hereditary basis.
pituitary a. see alopecia X (below).
post-clipping a. in dogs, a failure of hair to regrow or only partially regrow after clipping. The cause is unknown but suspected to be simply the result of cyclic patterns of hair growth and regrowth. The condition is usually self-limiting.
postvaccination a. a focal area of scaling, hair loss, plaques, hyperpigmentation, nodules, erosions, crusts and scarring occurring at the site of rabies vaccination; miniature poodles are predisposed.
progressive a., congenital anemia and dyskeratosis a condition seen in Hereford cattle; affected calves are born with sparse, short kinky or curly hair which is gradually lost. They are also anemic.
psychogenic a. hair loss resulting from intensive self-trauma such as licking, biting, pulling or barbering and for which no underlying cause can be found. Usually, the skin remains normal although secondary excoriations may appear. In dogs, boredom or stress are often considered factors, particularly in kenneled dogs. In cats, it appears essentially as excessive and inappropriate grooming, but may be an obsessive-compulsive disorder associated with stress or anxiety. Hair may be detected in the feces or around the incisor teeth. See also **acral** lick dermatitis, idiopathic **hyperesthesia** syndrome, **barbering**.
recurrent flank a. a cyclic follicular dysplasia which tends to occur seasonally, mainly in spring or fall. There is a nonpruritic hair loss and often hyperpigmentation of the skin in irregular, defined areas on the flanks and lateral thorax. Many cases regrow hair after 3 to 6 months, but recurrences at the corresponding time in following years is common. Boxers, Airedale terriers, English bulldogs, and Miniature schnauzers are predisposed breeds, but it has been reported in others. Called also cyclic follicular dysplasia, seasonal flank alopecia, cyclic flank alopecia.
seasonal flank a. see recurrent flank alopecia (above).
shilling a. a focal area of congenital alopecia commonly seen on the frontal area of short haired terriers, particularly Staffordshire terriers and Bull terriers.
symptomatic a., a. symptomatica loss of hair due to systemic or psychogenic causes, such as general ill health, infections of the skin, nervousness, a specific disease, or to stress. The hair may fall out in patches, or there may be diffuse loss of hair instead of complete baldness in one area.
tail a. a sometimes cyclical, diffuse to complete loss of hair on the tail of ferrets; believed to be due to hormonal fluctations. Usually resolves without treatment. Not to be confused with the estrus alopecia (see above) that occurs in females in prolonged estrus.
traction a. loss of hair due to traction, as occurs in dogs of breeds in which hair on the head is held by rubber bands or hair clips.
traumatic a. that caused by self-trauma (licking, scratching, chewing or pulling); possible in any pruritic skin disease in any species, but particularly severe in cats. The area of hair loss corresponds to those areas most accessible to the form of self-trauma.
a. universalis congenital absence of hair from the entire body. A characteristic of the Canadian hairless cat and Sphinx cat.
a. X an uncommon skin disease of young adult dogs, particularly miniature Poodles, Pomeranians, Alaskan malamutes, Samoyeds and other Nordic breeds, characterized by progressive bilaterally symmetrical, non-inflammatory hair loss, predominantly on the trunk, with hyperpigmentation. The cause is unknown, but various endocrine abnormalities have been proposed, including abnormal adrenal steroidogenesis and deficiency of growth hormone. Called also growth-hormone responsive dermatosis or alopecia, hyposomatotropism, pseudo-Cushing's syndrome, adult-onset growth hormone deficiency, castration-responsive dermatosis, congenital adrenal hyperplasia-like syndrome, pituitary alopecia. In Alaskan Malamutes, called 'coat funk'

alopecic [*al"o-pe'sik*] affected by alopecia.
a. breeds the Mexican hairless and Chinese crested dogs and Sphinx cats have partial or near total absence of hair as a characteristic of their breed.

Alopekis a small fox-like Greek dog with a short, smooth coat, sickle tail and pricked ears. Smaller and lighter than the Small Greek Domestic Dog.

VetBooks.ir

VetBooks.ir

A

Alouattamyia parasitic fly whose larva causes cutaneous cysts in *Alouatta* spp., the howling monkeys of New World primates.

Aloysia gratissima North American plant in the family Verbenaceae; an unidentified toxin causes weight loss, incoordination, sweating and recumbency in horses. Called also *A. lycioides*, *Lippia ligustrina*, *L. lycioides*, *Junellia ligustrina*, white brush.

ALP alkaline phosphatase.

alpaca a domesticated South American mammal (*Lama pacos*). There are two types of alpaca, Huacaya and Suri, not officially separate breeds but sometimes referred to as such, due to their distinct characteristics. Both have been bred from the vicuña alpaca. The Huacaya accounts for over 97% of the world's alpaca population and is characterized by a thick dense fleece growing perpendicularly from the body. The Suri is distinguished by long silky fiber that grows parallel to the body and hangs in long, separate, distinctive locks and parts at the dorsal spine. Both types are raised commercially for the value of the fleece.

alpha [*al'fə*] the first letter of the Greek alphabet, A or α; used to denote the first position in a classification system; as in names of chemical compounds to distinguish the first in a series of isomers, or to indicate the position of substituent atoms or groups; also used to distinguish types of radioactive decay, brain waves or rhythms, adrenergic receptors, and secretory cells that stain with acid dyes, such as the alpha cells of the pancreas.

a.-adrenergic antagonist see alpha-blocking agents (below).

a. animal the animal that occupies the dominant position in a group. See also **beta** animal.

a./beta barrel type of β-barrel in which each β-strand is attached to the next by an α-helical region of the polypeptide chain.

a.-blocking agents a group of drugs that selectively inhibit the activities of alpha receptors in the sympathetic nervous system. As with beta-blocking agents, alpha-adrenergic blocking agents compete with the catecholamines at peripheral autonomic receptor sites. This group includes ergot and its derivatives, and phenotolamine.

a. brain waves human brain-wave currents during electroencephalography having a frequency of approximately 8–13 hertz (pulsations per second), best seen when patient's eyes are closed and the patient is physically relaxed. See also **electroencephalography**.

a. cells glucagon-producing cells of the **pancreas**.

a. helix common secondary structural feature of many proteins in which a single polypeptide chain turns regularly about itself to make a helix in which each peptide bond is regularly hydrogen-bonded to other peptide bonds elsewhere in the chain.

a.-hemolysin see alpha **hemolysis**.

a. hemolysis partial hemolysis of erythrocytes incorporated into blood agar around a bacterial colony. Indicative of secretion of an alpha hemolysis. The medium usually develops a green color in the region of hemolysis.

a. particles two protons and two neutrons, emitted by the disintegration of a radioactive substance; these streams of energy (alpha rays) are used to advantage in the treatment of various malignancies. See also **radiation** and **radiotherapy**.

a.-responsive sympathomimetic drugs drugs which cause vasoconstriction and maintain correct vascular permeability.

a.-sheet, α sheet protein secondary structure resembling a β-sheet, but with a different orientation of the amino and carbonyl groups in the peptide bonds. rarely found in naturally occurring proteins.

a. toxin the toxins of many bacteria are classified as alpha, beta, etc.

alpha-adrenergic receptor [*al'fə- ad"ren-ur'jik re-sep'tər*] receptors in effector organs which respond to epinephrine and norepinephrine; includes receptors in heart muscle which are responsible for increasing rate and force of cardiac contractions.

alpha$_1$-antitrypsin [*al'fə*] a plasma protein (α_1-globulin) produced in the liver, which inhibits the activity of trypsin and other proteolytic enzymes. Deficiency of this protein is associated with **round heart disease** in turkeys. Called also α_1-protease inhibitor.

a. mastitis test after the first month of lactation, it is an indication of leakage through damaged endothelium.

alpha carbon atom carbon-2 of a molecule or the carbon atom next to the function group of a molecule, the carbon(s) of which are not included in the lettering.

alpha-fetoprotein [*al'fə fe"to-pro'tēn*] a plasma protein produced by the fetal liver, yolk sac and gastrointestinal tract and also by some cancers in humans. In animals it binds testosterone and estrogens in the blood and provides a reservoir for these hormones. Called also AFP. In humans the serum AFP concentration is used to monitor the effectiveness of cancer treatment, and the amniotic fluid AFP concentration is used in the prenatal diagnosis of neural tube defects.

alpha-globulin [*al'fə glob'u-lin*] any of a number of negatively charged proteins in blood serum that migrate between albumen and beta globulins on serum electrophoresis.

alpha helix conformation a common secondary protein structure characterized by a crystallographic repeat, pitch and rise; the repeats occur after exactly 18 residues, and 5 turns which equates to 3.6 residues per turn.

alpha-naphthylisothiocyanate (ANTU) a compound used experimentally to produce bile duct hyperplasia.

alpha receptors tissue receptors which respond well to epinephrine and norepinephrine but less so to isoprotenerol.

alpha subunit first-named chain (or subunit) occurring in the functional organization of macromolecules, usually proteins, containing two or more chains.

alpha$_2$-antiplasmin the most important inhibitor of plasmin mediated fibrinolysis.

Alphaherpesvirinae [*al"fə-hur"pēz-vir-i'ne*] one of the three subfamilies within the family ***Herpesviridae***.

alphaprodine an opioid related to meperidine, used as an analgesic and narcotic.

Alpharetrovirus [*al'fə-vi"rəs*] a genus of the family *Retroviridae*. Member viruses have a type C morphology and cause sarcomas, other tumors, and anemia in wild and domestic birds and also infect rats.

2-4-alphathiazolyl-5-benzimidazole the carbamate is marketed as fenbendazole.

Alphavirus one of the two genera in the family *Togaviridae*; includes Eastern, Western and Venezuelan equine encephalomyelitis viruses and Ross River and Getah virus. All of them replicate in arthropod vectors including mosquitoes.

Alphitobius diaperinus a beetle common in the litter in most poultry houses. Suspected of involvement in transmission of Marek's disease. Larval stages called the lesser mealworm.

alpine pasture deaths sudden deaths due to poisoning of drinking water in Swiss alpine lakes during summer months. There is no visible bloom on the water, the causative cyanobacteria growing on submerged rocks. See also **benthos**.

Alpine sheep see **Lop-eared Alpine**.

Alport syndrome [*al'port*] an autosomal dominant disorder in humans characterized by glomerulonephritis, hematuria, hearing loss, lenticonus and renal failure at a variable age; caused by mutations in genes responsible for biosynthesis of type IV collagen. Hereditary nephritis in Bull terriers and Dalmations are animal models.

alprazolam [*al-pra'zo-lam*] a short-acting benzodiazepine tranquilizer used as an anxiolytic.

alprenolol [*al-pren'o-lol*] a β-adrenoreceptor blocking agent used as a cardiac antiarrhythmic drug.

ALS 1. antilymphocyte serum. 2. the serum enzyme, aldolase.

Alsatian see **German shepherd dog**.

Alstonia a genus of the Apocynaceae family of creepers and shrubs, many of them toxic. Includes *A. scolaris* (cheesewood, milky pine).

A. constricta contains the indole alkaloids alstonine, alstonidine and reserpine and causes hyperesthesia, tetany and convulsions. Called also quinine tree, bitter bark.

alstonidine one of the toxic group of alstonine alkaloids in bark or root of *Alstonia* spp.

alstonine a group of toxic indole alkaloids in *Alstonia constricta.*

ALT alanine aminotransferase.

alter [*awl'tər*] euphemism for castration of a male animal; sometimes used as a synonym for spay of a female. Called also cut, geld or, especially in small companion animals, neuter or desex.

alterative a medicine given to a horse with the objective of improving its general condition without purging it. Called also tonic.

Alternanthera a genus of plants in the Amaranthaceae family.

A. denticulata capable of causing nitrate–nitrite poisoning.

A. philoxeroides capable of causing photosensitization in cattle. Called also alligator weed.

Alternaria [awl"tər-nar'e-ə] a saprophytic fungus commonly found on the skin; also has been associated with subcutaneous infections (**phaeohyphomycosis**) and reputed to be one of the causes of the indeterminate syndrome of forage poisoning in farm animals. Tenuazonic acid is a toxic metabolite.

alternariosis [awl"tər-nar-e-o'sis] infection by *Alternaria* spp.

alternate-day therapy [awl'tər-nət] treatment once every 48 hours. Depending on the drug's duration of effect, this may reduce side effects. Used most commonly with glucocorticoids.

alternative medicine see **complementary and alternative medicine**.

Althaea officinalis non-toxic plant known in UK as marshmallow; not to be confused with *Malva parviflora*.

althesin see **Saffan**.

altitude sickness, altitude disease a disease of animals in North and South America and north Africa at altitudes above 1500–2000 m. Caused by the particular sensitivity and constrictive response of ruminant pulmonary arteriolar musculature to anoxia. The result is pulmonary hypertension and the risk of cor pulmonale. There is an age and resident risk. Those with even a minor impairment of the circulatory or respiratory systems may not be able to find sufficient cardiac reserve to compensate for the extra dynamic load created by the altitudinal anoxia, so that congestive heart failure develops. The risk for heart failure is increased by the ingestion of the indolizidine alkaloid swainsonine present in pasture *Astragalus* and *Oxytropis*. Called also brisket disease, mountain sickness, high mountain disease.

altrenogest a synthetic progestogen used in the synchronization of estrus and maintenance of pregnancyor suppression of estrus in mares and in reducing libido in stalliions. Known also as allyl trenbolone.

altretamine [al-tret'ə-mēn] an alkylating agent used as and antineoplastic, similar to **tretamine**.

altricial said of some speices of birds and mammals that give birth to relatively immature young with eyes that are not open, have little if any covering of feathers or hair and are unable to move around independently. The opposite of **precocial** species.

Alu family interspersed repetitive DNA sequences characteristic of primate genomes; they occur nearly a million times in the human genome and were originally named because they are cleaved by the restriction enzyme AluI.

alula, alula spuria the freely articulated first digit of the avian hand. Called also bastard wing.

a. remiges the feathers born on the first digit of a bird's wing; see **remex**.

alum [al'əm] any of several substances, including potassium alum, aluminum alum, ammonium alum, potash alum and aluminum potassium sulfate, with strong astringent properties. May be used as a styptic or hemostatic and as a topical antimycotic agent. It also may be given by mouth to induce vomiting. Large doses may cause gastrointestinal disturbances.

alumina [ə-loo'mĭ-nə] aluminum oxide.

aluminum (Al) [ə-loo'mĭ-nəm] a chemical element, atomic number 13, atomic weight 26.982. See Table 4.

a. acetate a preparation of aluminum subacetate and glacial acetic acid, used for its antiseptic and astringent action on the skin. Called also Burow's solution.

a. binding agents usually includes aluminum carbonate and hydroxide. See **phosphate** binders.

a. chloride a deliquescent, crystalline powder used topically as an astringent solution and antiperspirant.

a. equivalent a radiological measurement expressing the thickness of aluminum that produces the same attenuation of the X-ray beam as the thickness of the material being examined.

a. factory prime source of fluorine pollution of pasture.

a. filter inserted in the window of X-ray tubes to filter out X-rays of long wavelength; reduces potentially harmful and unnecessary radiation.

a. hydroxide, a. phosphate aluminum preparations, available in suspension, as a gel, or in dried form, used as an antacid in the treatment of peptic ulcer in humans and gastric hyperacidity and in **phosphate** binders.

a. phosphide used commercially to control insect and rodent populations. Phosphine gas is liberated when the parent compound comes into contact with acidic moist environments. Clinical signs in poisoned animals are due to multisystemic effects (lung, liver, heart, kidney) of the parent and metabolite, although initial gastrointestinal signs predominate.

a. poisoning pollution of pasture occurs from dust from factories handling aluminum products and in acid rain near such industrial works; contributes to nutritional deficiency of phosphorus by interfering with phosphorus absorption. Bodies of water which receive drainage from soils rich in aluminum may experience fish kills in circumstances in which the amount of aluminum is increased.

a. sulfate see **alum**.

alveld, aalveld see ***Narthecium***.

Alveococcus multilocularis see ***Echinococcus*** *multilocularis*.

alveolar[1] [al-ve'ə-lər] pertaining to or arising from the alveolus (or socket) of a tooth.

a. abscess a localized, suppurative inflammation of tissues about the apex of the root of the tooth. Causes local pain and swelling and may discharge onto the face or into the maxillary sinus, and thence the nasal cavity.

a. bone the bone around the roots of a tooth.

a. periostitis new bone growth about the tooth root usually the result of infection. Chronic periostitis causes local swelling and difficulty in extraction of the tooth. Acute periostitis of the posterior upper molars may cause maxillary sinusitis; acute periostitis of the front upper and lower molars causes osteomyelitis, and sometimes a draining sinus.

a. process see alveolar **process**.

alveolar[2] [al-ve'ə-lər] pertaining to or arising from the lung alveolar epithelium.

a. capillary any capillary in immediate contact with the lung alveoli.

a.-capillary membrane the membranous partition between the alveolar space and the venous blood, consisting of an alveolar epithelium and capillary endothelium.

a. cell cover the pulmonary alveolar surface. *Type 1* cells are flattened and extended, offering maximum opportunity for oxygen diffusion, but vulnerable to damage and slow to repair. They cover the bulk of the healthy alveolar wall. Called also membranous pneumocytes. *Type 2* cells are cuboidal and cover much less of the alveolar surface than do type 1 cells. Their function is to secrete surfactant in response to injury and the renewal and repair of the alveolar wall. Called also granular or secretory pneumocytes. See also alveolar epithelialization (below).

a. collapse the microscopic basis of acquired **atelectasis**.

congenital a. dysplasia a disease of the newborn in which the alveoli are uneven in distribution and shape and there is too much interstitial tissue. The lungs are poorly aerated and retain their fetal appearance.

a. cyst dilatations of pulmonary alveoli, which may fuse by breakdown of their septa to form large air cysts (pneumatoceles).

a. dead space that part of the dead space located in the alveoli. The space in the alveoli where gaseous exchange does not occur.

a. ducts terminal extensions from respiratory bronchioles that lead into a number of alveoli-lined saccules through a common atrium.

a. dysplasia see congenital alveolar dysplasia (above).

a. echinococcosis see alveolar hydatid cyst (below).

a. emphysema abnormal enlargement of the alveoli, the air spaces at the end of the bronchioles, with some destruction of the alveolar walls. Alveolar emphysema is rarely a problem except in the horse. See also chronic obstructive **pulmonary** disease.

a. epithelial cells see alveolar cell (above).

a. epithelialization after severe damage to the alveolar lining there is a significant loss of type 1 membranous pneumocytes which are physiologically effective in gaseous transport but susceptible to injury. Their place may be taken by type 2 cells, the secretory pneumocytes, which are more cuboidal and active as producers of surfactant. The alveolar wall is thickened and is described as being in a stage of epithelialization.

a. fibroblast connective tissue cells in the lungs with contractile functions, cell and matrix interactions, and secrete substances important to the mechanical properties of lung.

a. filling disorders a group of incidental conditions characterized by the filling of alveoli by lipid-filled macrophages with minimal inflammation.

VetBooks.ir

A-30: Smallest terminal bronchioles divide into alveolar ducts that lead to clusters of alveoli called alveolar sacs. From Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians, 2nd Edition. Mosby, 2008.

a. gas exchange the diffusion of CO_2 and O_2 across the alveolar-capillary membrane.
a. histiocytosis a pulmonary condition characterized by large, focal accumulations of foamy macrophages.
a. hydatid cyst multivesicular, infiltrative form of hydatid cyst found in rodents, e.g. ground squirrel, field mouse.
a. lipoproteinosis an accumulation of acidophilic, acellular material within pulmonary alveoli. The condition can be experimentally reproduced but has been associated with chronic interstitial pneumonia of goats. See also **caprine** arthritis encephalitis.
a. macrophage derived from monocytes in the bone marrow, contains many lysosomes and phagosomes, and forms a major element in the pulmonary defense mechanism.
a. metaplasia see alveolar epithelialization (above).
a. microlithiasis see **microlithiasis**.
a. oxygen tension the measure of partial pressure of oxygen within the alveoli and a factor influencing diffusion of gases across the alveolar-capillary membrane; increased with oxygen administration to the patient.
a. pattern see **alveologram**.
a. phospholipidosis characterized by the accumulation of acidophilic, acellular material in pulmonary alveoli.
a. pore pore of Kohn.
a. saccules the intervening structures between pulmonary alveolar ducts and alveoli.
a. transport system refers to the clearance mechanisms within the lower respiratory system, including alveolar macrophages, mucociliary escalator and peribronchial lymphatics.
a. ventilation the volume of air entering and leaving the alveoli per unit of time.
a. volume the volume of the alveolar space. The dead space volume and the alveolar volume make up the total volume of the respiratory tract.
alveolectomy [*al"ve-o-lek'tə-me*] surgical excision of part of the alveolar process.
alveolitis [*al"ve-o-li'tis*] inflammation of the walls of the alveoli; definition of pulmonary, dental, mammary preferred.
allergic a. see **atypical interstitial pneumonia**.
diffuse a. see interstitial **pneumonia**.
diffuse fibrosing a. see **atypical interstitial pneumonia**, interstitial **pneumonia**.
external allergic a. see hypersensitivity **pneumonitis**.
alveolodental [*al-ve"ə-lo-den'təl*] pertaining to teeth and the alveolar process.
a. membrane periodontium.
alveologram [*al·ve·o·lo· gram*] on radiographs, the irregular, mottled appearance of lung tissue, caused by the contrast in density between some alveoli being filled with fluid or cellular material and others filled with air.
alveolotomy [*al"ve-ə-lot'ə-me*] incision of the alveolar process.
alveolus [*al-ve'ə-ləs*] pl. *alveoli* 1. a small cavity. 2. one of the thousands of tiny sacs borne on the terminal parts of the bronchial tree. 3. a tooth socket. 4. the dilated saclike part of the secretory unit of an alveolar gland such as a lactating mammary gland. See also alveolar.
mammary a. because its epithelia produce milk the alveolus is the basic functioning unit of the lactating mammary gland.
alveoplasty [*al-ve'ə-lo-plas"te*] reshaping of alveolar bone surrounding a tooth, which may be for the purpose of orthodontic tooth repositioning.
alveus [*al've-əs*] pl. *alvei* [L.] a canal or trough.
a. hippocampi the white fibers covering the ventricular surface of the hippocampus that contribute to the fornix.
alymphia [*a-lim'fe-ə*] absence or lack of lymph.
alymphocytosis [*a-lim"fo-si-to'sis*] deficiency of lymphocytes in the blood; lymphocytopenia.
alymphoplasia [*a-lim-fo-pla'zhə*] failure of development of lymphoid tissue.
thymic a. congenital agammaglobulinemia in which there is thymic hypoplasia.
Am chemical symbol, *americium*.
amacrine [*am'ə-krēn*] without long processes.
a. cell a branched retinal nerve cell without an axon.
amalgam [*ə-mal'gəm*] a commonly used dental restorative material consisting of various combinations of silver, tin, copper and zinc in combination with mercury.
a. burnisher an instrument used to smooth the surface of an amalgam filling.
a. condenser, a. plugger an instrument used to pack amalgam into a filling.
a. well a small bowl used to hold amalgam until it is used in the restoration.
amalgamator [*ə-mal'gə-māt"ər*] a piece of equipment used in dentistry for triturating the alloy in preparation of restorative materials such as amalgam or glass-ionomer.
Amanita [*am"ə-ni'tə*] a genus of macro fungi many of which can be poisonous to humans, less frequently to animals unless eaten in large quantities. Called also mushrooms. Include *A. mappa*, *A. muscaria* (fly ageric), *A. pantherina*, *A. phalloides*, *A. verna*, *A. virosa*. Contain hepatoxic peptides and hallucinogens.
amanitin one of the toxins in *Amanita* spp. See also phalloidin.
amantadine hydrochloride [*ə-man'tə-dēn*] an antiviral agent which prevents penetration and uncoating of several RNA viruses.
amaranth [*am'ə-ranth*] plants in the genus *Amaranthus*. Called also pigweed. Includes green amaranth (*A. viridis*), panicled amaranth, wild amaranth (*A. cruentus*), prostrate amaranth (*A. blitoides*), red amaranth, red-root amaranth (*A. retroflexus*), slim amaranth (*A. hybridus*), and spiny amaranth (*A. spinosum*).
Amaranthus [*am"ə-ran'thəs*] a genus of the plant family Amaranthaceae, many of them succulent weeds of cultivated fields. Variously contain high concentrations of nitrate, oxalate or both. Some contain an unidentified nephrotoxin causing non-oxalate nephrosis in cattle and pigs. Includes *A. blitoides*, *A. blitum*, *A. cruentus*, *A. deflexus*, *A. hybridus*, *A. mitchellii*, *A. palmeri*, *A. paniculatus*, *A. powellii*, *A. quitensis*, *A. retroflexus*, *A. spinosus*, *A. thunbergii*, *A. viridis*.
A. retroflexus if eaten in large quantities is capable of causing non-oxalate-induced nephrosis and fatal uremia in cattle and pigs. Called also Prince of Wales feather, redleg, red amaranth, pigweed.
Amaryllis a genus of the plant family Amaryllidaceae (Liliaceae), all with bulbs or tuberous roots. Garden plants reputed to be poisonous. Called also *Hippeastrum*.
amastia [*ə-mas'te-ə*] congenital absence of one or more mammary glands.
amastigote [*ə-mas'tĭ-gōt*] a stage in the life cycle of some flagellates, found in invertebrates. The body is rounded and the flagellum is absent. The kinetoplast is present.
amaurosis [*am"aw-ro'sis*] partial or complete blindness without overt ocular cause. See central **blindness**.
amaurotic [*am"aw-rot'ik*] pertaining to, or of the nature of, amaurosis.
a. familial idiocy a group of hereditary disorders in humans characterized by cerebromacular degeneration, blindness, progressive dementia, and progressive and unremitting paralysis. The term has been applied to ceroid lipofuscinosis in English setters and Chihuahuas which have very similar clinical features.

VetBooks.ir

Amazon foot necrosis blisters and crusting self trauma, sometimes cyclical, to the feet and hocks of Amazon parrots; *Staphylococcus* spp. may be recovered, but are probably secondary. The cause is unknown.

Amazon parrots see ***Amazona***.

Amazona a large genus of gaudy parrots in the family Psittacidae.

A. farina the best known of the very large number of species of this parrot genus.

ambenonium [am"bə-no'ne-əm] a moderately long-acting cholinesterase inhibitor used to increase muscular strength in myasthenia gravis.

amber ***Hypericum perforatum***.

ambergris a solid, gray intestinal concretion of sperm whales. It has an unpleasant odor but is very valuable in the formulation of expensive perfumes, but is now largely replaced by other compounds. Is found floating free or on beaches after evacuation.

amberjack finfish in the genus ***Seriola***.

ambilateral [am"bĭ-lat'ər-əl] pertaining to or affecting both sides.

Ambiphyra a genus of ciliated protozoan of the phylum Ciliophora. Causes heavy mortality in young fish.

ambisense applied to single-stranded viral genomes; part of the nucleotide sequence is of (positive-) sense, part is of anti-sense.

ambisexual [am"bĭ-sek'shoo-əl] denoting sexual characteristics common to both sexes. Also referred to as ambiguous sex.

amble a slower, non-racing version of the pace gait in horses. Ambling gaits include the fox trot, paso, rack, running walk, slow gait and toelt.

broken a. has many characteristics of the amble but there are four beats to the gait with each foot contacting the ground independently. Called also single-foot.

Amblyomma [am"ble-om'ə] a genus of ticks of the family Ixodidae.

A. americanum a three-host tick which causes painful bites and tick paralysis, and transmits Q fever, tularemia and Rocky Mountain spotted fever of humans. Called also the Lone Star tick.

A. cajennense a three-host tick that transmits spotted fever of humans and leptospirosis due to *L. pomona.* Called also cayenne tick.

A. hebraeum a three-host tick that transmits *Ehrlichia ruminantium*, the cause of heartwater. It also causes severe bite wounds. Called also bont tick.

A. maculatum a three-host tick; transmits *Hepatozoon americanum.*

A. pomposum a three-host tick, a vector for *Ehrlichia ruminantium,* the cause of heartwater.

A. variegatum a three-host tick which transmits *Ehrlichia ruminantium*, the cause of heartwater, *Coxiella burnetii* (Q fever) and Nairobi sheep disease. Called also variegated or tropical bont tick.

amblyopia [am"ble-o'pe-ə] reduced or absent vision without obvious ocular cause; especially in one eye only and when associated with altered development of the eye.

hereditary a. with quadriplegia a severe cerebellar cortical degeneration with quadriplegia at an early age has been observed in Irish setters. It is believed to be an autosomal recessive trait.

A-31: Engorged female *Amblyomma americanum.* Courtesy of CDC/Dr Amanda Loftis, Dr William Nicholson, Dr Will Reeves, Dr Chris Paddock; Photo: James Gathany.

ambo-, ambi- a prefix meaning round, all, both.

amboceptor [am'bo-sep"tər] (obsolete) term for complement-fixing antibody that binds to the surface of erythrocytes.

Ambrosia [am-bro'zhə] a genus of plants in the family Asteraceae (Compositae). Annual weeds producing a highly irritant pollen commonly associated with hay fever in humans. Called also ragweeds.

A. discolor may cause nitrate-nitrite poisoning. Called also *Franseria discolor*, white ragweed.

Ambu bag a flexible reservoir bag connected by tubing and a non-rebreathing valve to a face mask or endotracheal tube and used for artificial ventilation. It is self-inflating with room air or from an oxygen source.

ambulant, ambulatory [am'bu-lənt, am'bu-lə-tor"e] walking or able to walk.

Ambystoma [am-bis'to-mə] a genus of amphibians of the class Amphibia; includes salamanders and the **axolotl** (*A. mexicanum*).

amcinonide [am-sin'ə-nīd"] a synthetic corticosteroid used for topical application in the treatment of corticosteroid-responsive dermatoses.

amdinocillin [am-de'no-sil"in] a semisynthetic penicillin, active mainly against gram-negative bacteria. Called also mecillinam.

amdinopenicillins semisynthetic derivatives of amidinopenicillanic acid. See **amdinocillin**, **pivamdinocillin**.

Amdovirus a genus of the family *Parvoviridae*, subfamily *Parvovirinae* that includes Aleutian mink disease virus.

AMDUCA Animal Medicinal Drug Use Clarification Act.

ameba [ə-me'bə] pl. *amebae, amebas* [L.]; a minute protozoan. A common laboratory example is *Amoeba proteus*.

amebiasis [am"e-bi'ə-sis] infection with amebae, especially in the intestine with *Entamoeba histolytica*. Saprophytic amebae also occasionally cause disease. See also **amebic** dysentery, **amebic** meningoencephalitis, **acanthamebiasis**.

amebic [ə-me'bik] pertaining to, caused by, or of the nature of, an ameba.

a. dysentery an acute amebic dysentery of humans caused by *Entamoeba histolytica* which rarely occurs spontaneously in dogs and cats. A similar disease of reptiles and amphibians is caused by *E. invadens* and *E. ranarum*.

a. granulomatosis world-wide disease of goldfish; cause not definitely known; characterized by white nodules on the skin, visceral granulomata and ascites.

a. meningoencephalitis caused by *Naegleria fowleri* and is restricted in occurrence to humans.

amebic dysentery dysentery caused by *Entamoeba histolytica* in humans and nonhuman primates; a mild to severe necroulcerative enterocolitis.

amebicide [ə-me'bĭ-sīd] destructive to amebae.

amebocyte [ə-me'bo-sīt"] a cell showing ameboid movement.

ameboid [ə-me'boid] resembling an ameba.

Ameiurus a genus of North American catfish, in the family Ictaluridae, commonly called bullheads. Includes *A. melas* (black bullhead) and *A. nebulosus* (brown bullhead), both of which are paratenic hosts for ***Dioctophyme renale***. Harvested commercially in some areas.

Amelanchier alnifolia a plant in the family Rosaceae; its foliage is sufficiently cyanogenetic to cause poisoning of animals. Called also Saskatoon serviceberry, juneberry.

amelanosis [ə-mel"ə-no'sis] lack of pigment; see also **achromotrichia**, **achromoderma**.

A-32: Use of an Ambu bag to deliver room air to an intubated patient. From Thomas J, Lerche P, Anesthesia and Analgesia for Veterinary Technicians, 4th Edition. Mosby, 2011.

VetBooks.ir

A

amelia [ə-me'le-ə] a developmental anomaly with absence of the limbs; an inherited defect in cattle.

amelification [ə-mel"ĭ-fĭ-ka'shən] the process of enamel formation by ameloblasts.

ameloblast [am'ə-lo-blast"] a cell which takes part in forming dental enamel.

ameloblastic pertaining to the formation of dental enamel.

a. fibro-odontoma see ameloblastic odontoma (below).

a. layer the inner layer of cells of the enamel organ, which forms the enamel prisms of the teeth.

a. odontoma resembles ameloblastic fibroma but the tumor contains enamel and dentin rather than only enamel.

ameloblastoma [am"ə-lo-blas-to'mə] a locally invasive, highly destructive tumor of the jaw consisting of proliferating odontogenic epithelium in a fibrous stroma.

pituitary a. see **craniopharyngioma**.

amelodentinal [am"ə-lo-den'tĭ-nəl] pertaining to dental enamel and dentin.

amelogenesis [am"ə-lo-jen'ə-sis] formation of dental enamel.

a. imperfecta imperfect formation of enamel, resulting in brownish coloration and friability of the teeth.

amelogenic [am"ə-lo-jen'ik] capable of forming enamel.

amelus [am'ə-ləs] an animal exhibiting amelia.

amensalism [ə-men'səl-iz-əm] interaction between coexisting populations of different species, one of which is adversely affected and the other unaffected.

American Animal Hospital Association (AAHA) [Amer'i'can an"ĭ-məl hos'pĭ-təl ə-so"se-a'shən] an association of veterinarians and others who primarily treat small animals. The organization promotes quality care, sets standards for small animal veterinary hospitals and publishes a monthly journal.

American Association for Laboratory Animal Science (AALAS) [Amer'i'can ə-so"se-a'shən lab'rə-tor"e an"ĭ-məl si'əns] an organization of scientists and veterinarians who work with laboratory animals and exchange of information and expertise in the care and use of laboratory animals. It offers certification for technicians in the field of laboratory animal science. The association publishes the journal, *Laboratory Animal Science*.

American Association for the Advancement of Science (AAAS) a non-profit, international organization active in the advancement of science through education, leadership and representation. It publishes a number of newsletters, books and reports as well as the journal, *Science*.

American Association of Feed Control Officials (AAFCO) an association of state, federal or other governmental agency officials concerned with the regulation of commercially prepared animal diets. Established to provide a mechanism for developing and implementing uniform and equitable laws, regulations, standards and enforcement policies for regulating the manufacture, distribution and sale of animal feeds.

A-33: Canine acanthomatous ameloblastoma. From DuPont GA, Atlas of Dental Radiography in Dogs and Cats. Saunders, 2009.

American Association of Feline Practitioners an organization of veterinary practitioners devoted to improving the health and welfare of cats by supporting high standards of practice, continuing education, and scientific investigation.

American Association of Veterinary Clinicians (AAVC) an organization of veterinary clinicians engaged in the education of veterinarians in internships and residencies. It sponsors the **Veterinary Internship and Residency Matching Program** (VIRMP) to expedite the selection of interns and residents for participating veterinary schools, colleges, institutions and private practices.

American Association of Veterinary State Boards (AAVSB) association of the state veterinary licensing boards within the USA, its territories and certain provinces of Canada. Its primary function is to protect the public by regulating veterinarians and the practice of veterinary medicine by providing services for veterinary licensing authorities in the USA and Canada. It operates the Program for the Assessment of Veterinary Education Equivalence (PAVE) which assesses the education equivalence of international veterinary graduates (a veterinarian whose degree was conferred by a school of veterinary medicine outside of the USA and Canada that is 'recognized' by the government of its country and renders its graduates eligible to practice in that country, or one that is recognized by the World Health Organization) on behalf of participating AAVSB member boards.

American bandogge mastiff this type of dog is derived from American pit bull terriers and Neopolitan mastiffs; not a recognized breed. They are valued as protection dogs.

American blue Gascon hound a large hound-type dog with a short, dense coat of white with tan points and heavy black ticking. Called also Big n' blue.

American Board of Veterinary Practitioners (ABVP) see **American veterinary specialty boards**.

American bobtail a medium to large sized breed of domestic cat characterized by a naturally short tail of varying length. That, together with a short or long haircoat with tabbly markings accounts for its name.

American bronze, Australian bronze domestic turkey. See **bronzewing**.

American brown Swiss an American variety of Swiss brown or Brown mountain cattle. A gray-brown breed of dairy cattle, of heavy build, which are used in Europe for beef, draft and milk.

American cocker spaniel see **Cocker spaniel**.

American College of Laboratory Animal Medicine (ACLAM) an organization of certified specialists in the field of laboratory animal medicine, a recognized specialty within the veterinary medical profession. It advances the humane care and responsible use of laboratory animals through certification of veterinary specialists, professional development, education and research.

American College of Veterinary Surgeons (ACVS) a voluntary, professional organization dedicated to the advancement of the art and science of veterinary surgery. It is concerned only with graduate veterinarians and constitutes a certifying agency to qualify members as specialists. It also encourages postgraduate study and research.

American curl a medium-sized cat with short coat. Their distinguishing feature is a smooth curl of the ear cartilage with the tips pointing toward the middle of the head. This is inherited as a dominant trait; kittens develop the curl in the first week of life.

American dog tick see ***Dermacentor** variabilis*.

American dogweed see ***Verbesina encelioides***.

American encephalitis see equine viral **encephalomyelitis**.

American English coonhound a medium-large sized, lean hound-type dog with a lean, muscular body, deep chest, low-set long ears and a long slender tail. The coat is medium length, red and white ticked, blue and white ticked, or tricolored. Bred in the southern USA for hunting raccoons. Called also Redtick coonhound, English coonhound.

American-English spelling the American version of English spelling as distinct from British-English.

American equine encephalomyelitis see equine viral **encephalomyelitis**.

American Eskimo dog a compact, alert dog with a long, white or cream double hair coat, erect triangular shaped ears and distinctive black nose, eyes and eyelid margins. The plumed tail is

carried over the back. There are three sizes: toy, miniature and standard. Previously known as the American spitz.

American fox terrier see **Toy fox terrier**.

American foxhound see **Foxhound**.

American hairless terrier a modern breed, 7–16 inches and 5–16 lbs, derived from rat terriers; unlike other hairless dogs, the trait is autosomal recessive and not lethal in the homozygous state. DNA testing is available to identify coated dogs that carry the hairless mutation.

American Kennel Club (AKC) a non-profit organization, made up of a large number of individual clubs, devoted to the advancement of purebred dogs and their health, and promoting responsible dog ownership. It serves as the official body for maintaining the stud book and registration of purebred dogs, and it conducts competitions.

American mandrake see *Podophyllum peltatum*.

American miniature horse Shetland ponies ≤ 34 inches high at maturity; the foals are more susceptible to colonic impaction and development of fecaliths than foals of other breeds.

American Paint horse a type of horse recognized as a breed; characterized by distinctive coat color patterns and a stock-horse body type. The colors are a mix of white and any other coat color in patterns known as **overo**, **tobiano** and **tovero**.

American pit bull terrier a powerful, muscular dog with short, smooth hair, broad head and ears which naturally fold over but in some countries are cropped. It has earned a reputation as a fighting dog.

American quarter horse see **Quarter horse**.

American Rambouillet sheep American adaptation of French Rambouillet, originally a Merino type sheep gifted from Spain to France and kept at Rambouillet, France; fine-wool, polled or horned.

American sable breed of fur rabbit that is dark sepia with paler underside in a dense, soft coat. There are two varieties, Siamese and Marten, the latter having white markings on the belly and legs.

American Saddle horse a bay, brown, black or chestnut horse, preferably with white markings, 15–16 hands high. A show-ring horse performing as a harness horse or as a three- or five-gaited saddle horse. Very showy in appearance and action. Originated from Thoroughbred, Morgan horse, American Trotter and Canadian Trotter.

American shorthair a medium- to large-sized cat, longer than it is tall, with a large head, large eyes, and a thick, short coat in many different colors.

American singer a song-type canary, bred in the USA by crossing the Roller to the Border Fancy.

American spitz see **American Eskimo dog**.

American Staffordshire terrier a medium-size, muscular dog, similar to the **Staffordshire bull terrier**, but heavier. It has a powerful head, well-muscled body, short tail and a short, colored haircoat. Called also 'Am Staff'.

American tiger cat see **margay**.

American Trotter American horse used in trotting races. Short legs, long body, plain head, about 15.2 hands high. Any solid color. Races as a pacer or diagonal trotter. Originated from Thoroughbred, Hackney and Morgan horse. Called also Standardbred.

American Veterinary Boards bodies such as the American Board of Veterinary Practitioners (ABVP), American Board of Veterinary Toxicology (ABVT).

American Veterinary Colleges[1] need to be differentiated from American veterinary colleges, the educational institutions which provide educational programs leading to the basic, registrable degree of DVM, and the associated postgraduate degrees. See also **American veterinary specialty boards**. Includes American College of Laboratory Animal Medicine, American College of Poultry Veterinarians, American College of Theriogenologists, American College of Veterinary Behaviorists, American College of Veterinary Anesthetists, American College of Veterinary Clinical Pharmacology, American College of Veterinary Dermatology, American College of Veterinary Emergency and Critical Care, American College of Veterinary Internal Medicine, American College of Veterinary Microbiologists, American College of Veterinary Nutrition, American College of Veterinary Ophthalmologists, American College of Veterinary Pathologists, American College of Veterinary Preventive Medicine, American College of Veterinary Radiology, American College of Veterinary Surgeons, American College of Zoological Medicine, American Veterinary Dental College.

American veterinary colleges[2] the state and private educational institutions which provide undergraduate teaching programs leading to the basic, registrable degree of DVM, and the associated postgraduate degrees. Need to be differentiated from **American Veterinary Colleges**[1], which provide professional postgraduate qualifications which earn the recipients recognition as specialists.

American Veterinary Medical Association a nonprofit, professional organization of veterinarians in the USA, whose stated objective is to advance the science and art of veterinary medicine, including its relationship to public health and agriculture.

American veterinary specialty boards the American Veterinary Boards and American Veterinary Colleges which conduct examinations and award diplomas of competence in veterinary professional specialties to graduate veterinarians. Passing the examinations is known colloquially as 'getting your boards' and is one of the most highly prized qualifications in the veterinary world. See also **American Veterinary Colleges**[1].

American water spaniel a medium-sized (25–45 lb) dog with liver- or chocolate-colored curly coat on the body and ears. The legs and tail have feathering. Similar in appearance to the Irish water spaniel, but smaller and lacking the topknot and rattail of that breed. Known as the State Dog of Wisconsin.

American wirehair similar to the **American shorthair** cat, but with coarse, crimped hair.

americium (Am) [am"ər-is'e-əm] a chemical element, atomic number 95, atomic weight 243. See Table 4.

ameroid constrictor a device for gradual occlusion of blood flow used on single, congenital extrahepatic portosysemic vascular shunts. There is an inner ring of casein, which swells as it absorbs tissue fluid, inside a ring of stainless steel.

AmerToy see **Fox terrier**.

Ames test [āmz] a test for mutagenic substances, in which a strain of *Salmonella typhimurium* that lacks the enzyme necessary for histidine synthesis is cultured in the absence of histidine and in the presence of the suspected mutagen treated with liver extract. If the substance causes DNA damage resulting in mutations, an increased number of the bacteria will regain the ability to synthesize histidine and will proliferate to form colonies. An important test for detecting potentially carcinogenic agents such as agricultural chemical and food additives.

ametazole see **betazole**.

amethocaine [ə-meth'o-kān] see **tetracaine**.

ametria [ə-me'tre-ə] congenital absence of the uterus.

ametropia [am"ə-tro'pe-ə] ocular state when an image is not accurately focused on the retina due to a defect in refraction.

AMGP antimicrobial growth promoters.

Amianthium muscitoxicum a plant species belonging to the family Liliaceae. A small onion-like plant; causes salivation, dyspnea, weakness. Called also fly poison, crow poison, staggergrass, *Chrosperma muscitoxicum*, *Zigadenus muscitoxicum*.

amicarbalide an aromatic diamidine used as an antiprotozoal agent in the treatment of babesiosis, particularly in cattle, and has also been used to treat ehrlichia infections.

amicrobic not produced by microorganisms.

amiculum [ə-mik'u-ləm] a dense surrounding coat of white fibers, as the sheath of the inferior olive and of the dentate nucleus.

amide [am'īd] any compound derived from ammonia by substitution of an acid radical for hydrogen, or from an acid by replacing the −OH group by $-NH_2$.

a. compound herbicides diphenamid and CDAA may cause poisoning if given in large doses. Signs include depression, weight loss and muscular weakness of the hindquarters.

amido the monovalent radical $-NH_2$ united with an acid radical.

amidopyrine see **aminophenazone**.

Amidostomum [am"ĭ-dos'to-məm] a genus of nematodes of the family of Amidostomatidae (Trichostrongyloidea).

A. anseris parasitic in the gizzard of ducks and geese. Lethal to young birds because of blood-sucking activity and mucosal damage.

amifloxacin a fluoroquinolone antibiotic, similar in activity to ciprofloxacin.

amikacin [am"ĭ-ka'sin] a semisynthetic aminoglycoside antibiotic derived from kanamycin, used parenterally in the treatment of

VetBooks.ir

VetBooks.ir

A

bacterial infections, particularly those caused by gram-negative organisms.

amiloride [ə-mil'ə-rīd] a potassium-sparing diuretic.

aminacrine [am-in-ak'rin] a fluorescent dye used topically as a topical antiseptic

amine [ə-mēn', am'in] an organic compound containing nitrogen.

biogenic a's amine neurotransmitters, e.g. norepinephrine, serotonin and dopamine.

direct-acting sympathomimetic a's activate adrenergic effector cells, e.g. **catecholamine**, directly and do not need adrenergic nerves to exert their effects.

a. hormones enteroendocrine cells, distributed widely in the gastric, intestinal and pancreatic tissue, synthesize peptide and amine hormones that control the secretion of digestive juices. See also **APUD cells**.

a. precursor uptake and decarboxylation cells see **APUD cells**.

toxic a's occur in plants, e.g. cyclopamine, tyramine.

vasoactive a. amine that causes vasodilatation and increases small vessel permeability, e.g. histamine and serotonin.

aminergic hormone [am"i-nur'jik] hormones classified as being derived from amino acids, e.g. epinephrine or thyroid hormone.

amino [ə-me'no, am'i-no"] the monovalent radical $-NH_2$, when not united with an acid radical.

amino acid [ə-me'no ac'id] any one of a class of organic compounds containing the amino (NH_2) and the carboxyl (COOH) group, occurring naturally in plant and animal tissues and forming the chief constituents of protein. In certain inherited or acquired disorders of metabolism, specific amino acids accumulate in the blood (*aminoacidemia*) or are excreted in excess in the urine (*aminoaciduria*). Urinary amino acid concentrations are increased in liver disease, muscular dystrophies, phenylketonuria (PKU), lead poisoning and folic acid deficiency.

acidic a. a's those containing carboxylic acids in their side chains, e.g. aspartate and glutamate.

basic a. a's amino acids containing side chains that accept protons at physiological pH, e.g. lysine, arginine, and histidine.

branched-chain a. a's methyl branched amino acids, e.g. leucine, isoleucine, valine.

a. a. dehydratase an enzyme which contributes significantly to the total production of ammonia in the body.

essential a. a's the amino acids which animals cannot synthesize and must ingest with their diets and which vary between species and physiological status. Called also nutritionally essential amino acids. The commonly accepted list of essential amino acids includes arginine, histidine, isoleucine, leucine, lysine, methionine, phenylalanine, threonine, tryptophan and valine. Birds also require glycine and cats require taurine in their diets. The quality of a protein, in terms of its value as an animal feed, depends upon its content of essential amino acids.

free a. a's amino acids free in the blood, providing an available source for all tissues for catabolism.

glucogenic a. a. an amino acid which yields either pyruvate or oxaloacetate after catabolism of the carbon skeleton, enabling and glucose synthesis to occur.

ketogenic a. a. an amino acid whose carbon skeleton yields ketone bodies; leucine is an example.

a. a. nutritional deficiency the effects may be the same as a deficiency of total protein, reduced growth and production, reduced food intake, loss of body weight, but deficiencies of individual amino acids may have specific effects, e.g. **taurine** in cats. See also **methionine**, **lysine**, **arginine**.

a. a. poisoning methionine toxicity affects chickens and quail and has caused growth retardation and cervical paralysis in turkey poults. Methionine attenuates calcium induced kidney damage.

a. a. ratio a decreased ratio of branched chain to aromatic amino acids in plasma can be used to detect chronic liver disease or portacaval shunts in dogs.

a. a. sequencer automatic machine for determining the amino acid sequence of a protein.

sulfur a. a's amino acids containing sulfur, **cysteine**, **cystine** and **methionine**.

a. a. transamidation see **transamidation**.

a. a. transamination see **transamination**.

urinary a. a's analysis may be used to detect inherited disorders of metabolism, such as cystinuria, tyrosinemia and citrullinemia.

amino acid oxidases [ə-me'no ac'id ok'si-dās] a group of specialized enzymes which are capable of oxidative deamination of amino acids; they contain flavin mononucleotide as the coenzyme.

aminoacetic acid [ə-me"no-ə-se'tik] glycine.

aminoacetonitrile a lathyrogen capable of inducing limb deformities in fetal calves when it is fed to their dams. See also **arthrogryposis**.

aminoacidemia [ə-me"no-as"i-de'me-ə] an excess of amino acids in the blood.

aminoacidopathy [ə-me"no-as"i-dop'ə-the] any inborn error of amino acid metabolism producing a metabolic block that results in accumulation of one or more amino acids in the blood (aminoacidemia) or excess excretion in the urine (aminoaciduria) or both.

aminoaciduria [ə-me"no-as"i-du're-ə] an excess in the urine of amino acids. Occurs in **Fanconi's syndrome**, a familial renal disease of Norwegian elkhounds and Basenji dogs, and as a predisposing factor in the development of cystine uroliths.

aminoacridine [ə-me"no-ak'ri-din] aminacrine.

aminoacylation [ə-me"no- a"sə-la'shən] a two stage process whereby amino acids are 'activated' in order to be incorporated into proteins; energy in the form of ATP is required and one of a family of 20 aminoacyl-tRNA synthetases, one specific for each amino acid, links the carboxyl group of the amino acid to either the 2'- or 3'-hydroxyl group of the ribose unit at the 3'-end of tRNA.

***p*-aminobenzoic acid (PABA)** see **para-aminobenzoic acid**.

γ-aminobutyric acid (GABA) the predominant inhibitory neurotransmitter in the central nervous system.

ε-aminocaproic acid [ə-me"no-bu-tēr'ik] an inhibitor of plasminogen activation, used as an antifibrinolytic agent.

aminocarb a carbamate pesticide.

aminocyclitol see **aminoglycoside**.

2-aminoethanesulfonic acid see **taurine**.

aminoglutethimide [ə-me"no-gloo-teth'i-mīd] a compound that inhibits the adrenal cortex and peripheral aromatase, thereby blocking production of adrenal steroids. Used in the treatment of hyperadrenocorticism.

aminoglycoside [ə-me"no-gli'ko-sīd] any of a group of bacterial antibiotics derived from various species of *Streptomyces* that interfere with the function of bacterial ribosomes. These compounds contain an inositol moiety substituted with two amino or guanidino groups and with one or more sugars or aminosugars. The aminoglycosides include gentamicin, streptomycin, tobramycin, amikacin, kanamycin and neomycin. They are used to treat infections caused by gram-negative organisms and are classified as bactericidal agents because of their interference with bacterial replication. All of the aminoglycoside antibiotics are highly toxic, requiring monitoring of blood serum concentrations at frequent intervals and careful observation of the patient for early signs of toxicity, particularly ototoxicity and nephrotoxicity.

aminogram [ə-me"no-gram] the pattern of amino acids present in a substance.

aminohippuric acid [ə-me"no-hi-pūr'ik] an acid used in renal function tests. See also **para-aminohippuric acid**.

aminolevulinate [ə-me"no-lev"u-lin'āt] the conjugate isomer of aminolevulinic acid.

aminolevulinate dehydratase (ALAD) [ə-me"no-lev"u-lin'āt de-hi'drə-tās] an enzyme involved in the synthesis of heme. The enzyme is inhibited by lead. In cases of lead poisoning blood concentrations of the enzyme fall, protoporphyrins and **δ-aminolevulinic acid** accumulate in the blood. The acid spills over into the urine thus forming the basis of a test now infrrequently used for lead poisoning. Called also porphobilinogen synthase.

δ-aminolevulinic acid a precursor of porphyrins and hemoglobin. Serum concentrations of the acid are elevated in lead poisoning. See also **aminolevulinate dehydratase**.

aminolevulinic acid dehydratase (ALAD) [ə-me"no-lev"u-lin'ik] the erythrocytic enzyme which is lowered in lead poisoning in most species.

aminolevulinic acid synthetase [ə-me"no-lev"u-lin'ik] the enzyme catalyzing the first step in the synthesis of porphyrins, glycine + succinyl-CoA to delta-aminolevulinic acid (ALA).

aminonitrazole [ə-me"no-ni"tro-thi'ə-zōl] a hormonal weedkiller which can poison animals allowed to graze on sprayed pasture. Signs include colic in horses and incoordination in sheep.

aminonitrile [ə-me"no- ni'tril] one of the two toxic substances in plants of the *Lathyrus* genus, causing skeletal deformity by virtue of its effect on bone matrix formation. Called also β-aminopropionitrile.

aminonitrothiazole a nitrothiazole derivative used in the treatment of histoplasmosis in turkeys. Excessive dose rates cause infertility and renal and hepatic disease.

aminopenicillins antibiotics which are chemically similar to penicillin G, have some activity against gram-negative bacteria and are not susceptible to acid hydrolysis. The group includes ampicillin, amoxycillin, epicillin and bacampicillin.

aminopentamide [ə-me"no-pen'tə-mīd] an anticholinergic and antispasmodic used in the treatment of vomiting and diarrhea in dogs and cats.

aminopeptidase [ə-me"no-pep'tĭ-dās] an enzyme produced by the intestinal mucosa which completes the process of protein digestion by hydrolyzing the amino-terminal amino acids of peptides and some proteins, after the initial breakdown of protein to peptides has already taken place, e.g. the enzyme that removes the methionine coded by the initiation codon AUG.

aminophenazone [ə-me"no-fen'ə-zōn] an analgesic and antipyretic. Called also amidopyrine and aminopyrine.

aminophylline [am"ĭ-nof'ə-lin] a mixture of theophylline and ethylenediamine; used as a respiratory stimulant, smooth muscle relaxant, myocardial stimulant and diuretic. Administration of the drug may be by mouth, intramuscularly, intravenously or rectally.

aminopromazine [ə-me"no- pro'mə-zēn] a phenothiazine derivative with antispasmodic effects; the fumarate is used as a smooth muscle relaxant.

β-aminopropionitrile (BAPN) see **aminonitrile**.

4-aminopyridine 1. a central nervous system stimulant and a pharmacological antagonist to *d*-tubocurarine and ketamine-diazepam. Used experimentally as a neuromuscular potentiator in the treatment of botulism. 2. a bird repellent which will poison animals that eat the treated grain accidentally. Animals show fright, sweating, convulsions and sudden death.

aminopyrine [ə-me"no-pi'rēn] see **aminophenazone**.

5-aminosalicylic acid see **mesalamine**.

***p*-aminosalicylic acid (PAS, PASA)** a derivative of benzoic acid used in the treatment of tuberculosis. It enhances the potency of streptomycin and delays development of bacilli resistant to streptomycin. Also used to treat mycobacterial infections in fish.

aminosidine [ə-me"no-si'din] see **paromomycin**.

aminotransferase [ə-me"no-trans'fər-ās] an enzyme that catalyzes the reversible transfer of an amino group from an α-amino acid to an α-keto acid using the coenzyme pyridoxal phosphate. Called also transaminase.

alanine a. (ALT) see **alanine aminotransferase**.

aspartate a. (AST) see **aspartate aminotransferase**.

aminotriazole [ə-me"no-tri'ə-zōl] a herbicide with relatively low toxicity. Poisoning causes a syndrome of pulmonary edema and alimentary tract hemorrhage.

aminouracils [ə-me"no- ūr'ə-sil] a group of synthetic heterocyclic compounds with diuretic activity due to their direct action on renal tubules.

aminuria [am"ĭ-nu're-ə] an excess of amines in the urine.

amiodarone [ə-me'o-də-rōn"] a Class III antiarrhythmic drug that lengthens action potential duration and acts as a coronary vasodilator. Used in the treatment of ventricular and supraventricular arrhythmias.

amitosis [am"ĭ-to'sis] direct cell division; simple cleavage of the nucleus without the formation of a spireme spindle figure or chromosomes.

amitraz [am'ĭ-traz] a formamidine used as a topical acaricide on cattle, sheep, pigs and fruit crops and as a miticide in the treatment of generalized demodectic mange in dogs. In horses it causes fatal impaction of the intestine. Poisonings in companion animals often lead to central nervous system depression. See also colon impaction **colic**.

amitriptyline [am"ĭ-trip'tə-lēn] a tricyclic antidepressant in humans; used in dogs and cats to treat psychodermatosis and as an antipruritic.

amlodipine [am-lo'dĭ-pēn"] a long-acting dihydropyridine calcium channel blocking agent and vasodilator, used in the treatment of hypertension in dogs and cats.

ammate see **ammonium** sulfamate.

Ammi [am'e] a genus of the plant family Apiaceae; these plants contain furocoumarins which are direct photosensitizing compounds and cause light-sensitive dermatitis. Includes bishop's weed, meadow sweet (*A. majus*), visnaga (*A. visnaga*).

ammodendrine a piperidine alkaloid found in *Lupinus* spp., associated with crooked calf disease. See lupine-induced **arthrogryposis**.

ammonia [ə-mōn'yə] a colorless alkaline gas, NH_3, with a pungent odor and acrid taste, and highly soluble in water. See also **ammonium**.

blood a. ammonia is a cerebrointoxicant and a high blood concentration causes a degenerative brain lesion. High blood concentrations of ammonia can occur in a number of diseases of the liver, in portosystemic shunts, urea poisoning and liver dysfunction.

a. clearance see ammonia tolerance test (below).

a. poisoning ammonia gas may be released from artificial fertilizers or from decomposing manure and urine in slurry pits and silos and cause chronic poisoning manifested by conjunctivitis and coughing, sneezing and dyspnea. May cause dermatitis in animals bedded for long periods on deep litter. Acute poisoning causes heavy mortalities, as in urea poisoning. A secondary effect of chronic poisoning is hepatic **encephalopathy**. High ammonia content in water can cause deaths of fish, although additional factors such as high concentrations of suspended organic matter may be contributory.

a. pollution of barn gases by production from fermentation of urine.

a. tolerance test (ATT) assesses liver function and is particularly useful in detecting abnormalities of the hepatic portal vascular system. Blood ammonia concentrations are measured before and after the oral administration of ammonium chloride. See also **portosystemic** shunt.

ammoniate [ə-mo'ne-āt] to combine with ammonia.

ammoniated forage poisoning changes such as increased sugar content in ammoniated-treated hay cause the production of 4-methylimidazole resulting in poisoning manifested in cattle and sheep by restlessness, blinking, pupillary dilation, ear flicking, frequent urination and defecation, dyspnea, frothing at the mouth, bellowing, charging, circling and convulsions. Called also bovine bonkers.

ammoniemia [ə-mo"ne-e'me-ə] hyperammonemia.

ammonium [ə-mo'ne-əm] a hypothetical radical, $NH_4^{\pm}$, forming salts analogous to those of the alkaline metals. Thought to lead to rumen alkalosis seen in ruminants suffering from nonprotein nitrogen intoxication (e.g. ures). See also **ammonia**.

a. acetate a weak diuretic and feed additive.

a. bifluoride wood preservative; causes diarrhea and fall in milk yield in cattle.

a. carbonate saline expectorants used for the purpose of liquefying pulmonary secretions. Effectiveness has not been proven. They are sometimes used as a reflex stimulant (smelling salt) because of the strong ammonia given off.

a. chloride used as an expectorant, diuretic and urinary acidifier.

a. magnesium phosphate see **magnesium** ammonium phosphate.

a. metavanadate experimentally causes **vanadium** poisoning.

a. nitrate causes **nitrate** poisoning.

a. oxalate causes **oxalate** poisoning.

a. phosphate a feed additive for cattle. The monobasic salt provides 27% phosphorus and 13% nitrogen, while the dibasic salt provides 23% phosphorus and 21% nitrogen.

a. sulfamate used as a herbicide; cattle and deer eating treated plants may be poisoned.

a. sulfate causes **ammonia** poisoning.

a. sulfate precipitation test a test that differentiates between hemoglobinuria and myoglobinuria; mixed a sample of urine, it causes hemoglobin to precipitate and the supernatant to clear after centrifugation, whereas myoglobin does not.

ammoniuria [ə-mo"ne-u're-ə] excess of ammonia in the urine.

Amnicola limosa porosa a snail, the intermediate host of *Metorchis conjunctus*, a liver fluke of cats and dogs.

amniocentesis [am"ne-o-sen-te'sis] transabdominal, transrectal or surgical perforation of the amniotic sac for the purpose of obtaining a sample of amniotic fluid, which contains cells shed from the skin of the fetus as well as biochemical substances.

VetBooks.ir

VetBooks.ir

A

amniochorial [*am"ne-o-kor'e-əl*] pertaining to amnion and chorion.
amniogenesis [*am"ne-o-jen'ə-sis*] the development of the amnion.
amnion [*am'ne-on*] the innermost membrane enclosing the developing fetus and which is filled with amniotic fluid; characteristic of reptiles, birds and mammals. See also **fetal** membranes, **amniotic**.
a. nodosum a nodular condition of the fetal surface of the amnion, observed in oligohydramnios associated with absence of the kidneys in the fetus.
amnionitis [*am"ne-o-ni'tis*] inflammation of the amnion.
equine a. and fetal loss syndrome reported in Australia and manifest by abortions from mid-pregnancy to late term with inflammatory change in the amnion and amniotic portion of the umbilical cord, but minor non-specific inflammatory change in the aborted fetus. The syndrome has similarities to the **mare reproductive loss syndrome** in the USA, but tent caterpillars are not present in Australia.
amniorrhea [*am"ne-o-re'ə*] escape of the amniotic fluid.
amniorrhexis [*am"ne-o-rek'sis*] rupture of the amnion.
amnioscope [*am'ne-o-skōp"*] an endoscope that, by passage through the abdominal wall into the amniotic cavity, permits direct visualization of the fetus and amniotic fluid.
amnioscopy [*am"ne-os'kə-pe*] examination of the fetus and amniotic fluid with an amnioscope.
amniote [*am'ne-ōt*] any member of the taxonomic superclass of vertebrates that have an amnion around the embryo, which includes reptiles, birds and mammals. Called also *Amniota*. Compare with **anamniote**, **tetrapod**.
amniotic [*am"ne-ot'ik*] pertaining to the amnion.
a. fluid the fluid contained in the amniotic sac that bathes the developing fetus and protects it from mechanical injury. Known also as liquor amnii.
a. plaque small, 2–4 mm diameter, poxlike lesion on the inside of the amnion. Constant on the bovine amnion during the middle trimester and causes no problems nor has any known function.
a. sac the amnion; the sac enclosing the fetus suspended in the amniotic fluid.
a. vesicle see amniotic sac (above). Palpation of the vesicle per rectum in the cow is a common pregnancy diagnosis method between the 35th and 65th day of pregnancy. Size of the amnionic vesicle is often used to estimate the age of pregnancy.
amniotome [*am'ne-ə-tōm"*] an instrument for cutting the fetal membranes.
amniotomy [*am"ne-ot'ə-me*] surgical rupture of the fetal membranes.
amobarbital sodium [*am"o-bahr'bĭ-təl*] an intermediate-acting barbiturate used as a sedative and hypnotic. It has been used as an anesthetic agent in fish.
Amoeba [*ə-me'bə*] a genus of the subphylum *Sarcodina*. It is a single-celled mass of protoplasm which changes shape by extending cytoplasmic processes called pseudopodia by which it moves about and absorbs nutrients. The majority of amebae are free-living in soil and water. See also **amebic**.
Amoebotaenia [*ə-me"bo-te'ne-ə*] a genus of tapeworms of the family Dilepididae.
A. cuneata a tapeworm of poultry. Heavy infestations cause a hemorrhagic enteritis. Chronic infections cause wasting and reduced growth rate.
A. sphenoides *Amoebotaenia cuneata*.
amorolfin a morpholine derivative with antifungal activity.
amorph [*a'morf*] an inactive mutant gene, i.e. one that produces no detectable effect.
amorphia, amorphism [*ə-mor'fe-ə*] state of being amorphous.
amorphous [*ə-mor'fəs*] having no definite form; shapeless.
amorphus globosus [*ə-mor'fəs*] a rounded structure of normal tissues covered with normal, pigmented skin typical of the breed, which occurs in the uterus of cattle. May cause dystocia. Called also fetal mole.
amoxapine [*ə-mok'sə-pēn*] a tetracyclic antidepressant, similar to amitriptyline, used in the treatment of psychogenic dermatoses in dogs and cats.
amoxicillin [*ə-mok"sĭ-sil'in*] an aminopenicillin, similar in action to ampicillin and susceptible to β-lactamase, but more efficiently absorbed from the gastrointestinal tract and with a longer duration of action. Spelled also amoxycillin (BAN).
a.-clavulanic acid addition of clavulanic acid widens the spectrum of activity and renders amoxicillin resistant to β-lactamase. A widely used antibiotic in dogs and cats.
AMP adenosine monophosphate.
cyclic AMP, 3′,5′-cAMP cyclic adenosine monophosphate.
amp 1. previously, abbreviation for ampere but now replaced by A. 2. sometimes used as abbreviation for ampoule.
ampere (A) [*am'pēr*] a unit of electric current strength, the current yielded by one volt of electromotive force against one ohm of resistance.
amphenicols a class of antibiotics that includes **chloramphenicol**, **thiamphenicol**, azidamfenicol and **florfenicol**.
amphenone an aniline derivative capable of inhibiting the organification of thyroglobulin.
amphetamine [*am-fet'ə-mēn"*] a central nervous system stimulant with marked α and β adrenoreceptor activity. Its use is strictly controlled and indications for its therapeutic use in veterinary medicine are quite limited. It is more often a cause of toxicosis. Called also benzedrine.
amphi- word element. [Gr.] *both, on both sides.*
amphiarthrosis [*am"fe-ahr-thro'sis*] an outmoded term for a symphyseal joint, i.e. one in which the surfaces are connected by fibrocartilage, as between vertebrae. Called also cartilaginous **joint**. See also **symphysis**, **synchondrosis**.
amphibians egg-laying animals in class Amphibia; includes frogs, toads, newts, salamanders and cecilians. Characterized by juvenile forms that live in water, but undergo metamorphosis to become air breathing adults.
amphibolic [*am"fĭ-bol'ik*] a biochemical pathway that is catabolic but also provides precursors for anabolic pathways.
a. intermediate a compound that is both the end product of a breakdown pathway and the starting substrate for an anabolic pathway.
amphicelous [*am"fe-se'lus*] concave on either side or end as in both ends of some vertebrae such as those of some fish.
amphicentric [*am"fĭ-sen'trik*] beginning and ending in the same vessel, like the branches of the rete mirabile.
amphicytes [*am'fĭ-sīt*] the neuroglial cells that surround the neurons of ganglia. They are closely related to oligodendrogliocytes.
amphidiarthrosis [*am"fĭ-di"ahr-thro'sis*] an outmoded term for a joint having the nature of both ginglymus and arthrodia, as that of the temporomandibular joint.
Amphimerus [*am-fim'ər-əs*] avian digenetic trematodes of the family Opisthorchidae. Includes *A. elongatus* (blocks biliary, pancreatic ducts in poultry, ducks and pigeons), *A. pseudofelineus* (liver fluke in cats and coyotes).
amphinomids members of the family Amphinomidae, a group of browsing marine worms with bristles that cause skin irritation.
amphipathic [*am"fĭ-path'ik*] molecules containing both polar and non-polar regions in their structure.
amphistomes [*am-fis'tōms*] see **paramphistomes**.
amphistomiasis [*am"fĭ-sto-mi'ə-sis*] see **paramphistomiasis**. Called also stomach fluke infestation.
amphitrichous [*am-fit'rĭ-kəs*] having one or more flagella at each end.
amphixozes diseases that affect humans and other animals with equal facility, e.g. salmonellosis.
ampholytes [*am'fo-līt*] see **amphoteric** sanitizing agents.
amphophil [*am'fo-fil*] an amphophilic cell or element. See also **heterophil**.
amphophilic [*am-fo-fil'ik*] staining with either acid or basic dyes.
amphoric [*am-for'ik*] pertaining to a bottle; resembling the sound made by blowing across the neck of a bottle.
amphoteric [*am-fə-ter'ik*] capable of acting as both an acid and a base; capable of neutralizing either bases or acids.
a. sanitizing agents long chain substituted amino acids or betaines, compatible with other detergents, sanitizers and hard water. Called also ampholytes.
amphotericin B [*am"fə-ter'ĭ-sin*] an antifungal antibiotic produced by *Streptomyces nodosus*, used to treat deep mycotic infections and also to treat cutaneous and mucocutaneous candidiasis. Potential nephrotoxicity limits its use.
amphotony [*am-fot'ə-ne*] hypertonia of the entire autonomic nervous system.
ampicillin [*am"pĭ-sil'in*] an aminopenicillin of synthetic origin, susceptible to β-lactamase, with activity similar to amoxicillin but shorter duration of activity. It can be administered orally or parenterally.
AMPLE a mnemonic for obtaining patient history: *A*llergies, *M*edications, *P*ast history, *L*asts (meal, medication, urination, defecation), and *E*vents.

VetBooks.ir

amplexus [*am-plek'səs*] in amphibians, the period during which fertilization of eggs by the male occurs as they are passed by the female.

amplification [*am"plĭ-fĭ-ka'shən*] 1. the process of making larger, as the increase of an auditory or visual stimulus, as a means of improving its perception. 2. said of a virus means multiplication; replication. 3. in polymerase chain reaction, the synthesis of multiple copies of a particular nucleic acid template sequence.

amplifier [*am'plĭ-fi"ər*] see **image** amplifier system.

amplitude [*am'plə-t d*] largeness, fullness; wideness or breadth of range or extent.

a. mode see A-mode **ultrasonography**.

ampoule [*am'pūl*] ampule.

amprolium [*am-pro'le-əm*] a thiamine analog, widely used coccidiostat that is stable in chicken rations and compatible with most ration ingredients. Needs to be combined with other compounds to achieve all-round protection and treatment.

a. poisoning causes encephalopathy in cattle and sheep, possibly by causing brain swelling because of its antithiamin action. See also **polioencephalomalacia**.

ampule [*am'pūl*] a small, hermetically sealed glass or plastic container, e.g. one containing medication for parenteral administration or semen for insemination. Called also ampoule.

ampulla [*am-pul'ə*] pl. *ampullae* [L.] a flask-like dilatation of a tubular structure, such as the expanded ends of the semicircular canals of the ear. See also **ampullar**.

a. chyli cisterna chyli.

a. coli the enormously dilated part of the right dorsal colon of the horse.

a. ductus deferentis the enlarged glandular urethral end of the ductus deferens.

Henle's a. ampulla ductus deferentis.

hepatopancreatic a. a flask-like cavity in the major duodenal papilla into which the common bile duct and pancreatic duct open in the cat and the horse; in the sheep and goat the bile and pancreatic ducts unite before they reach the duodenum. Formerly called *ampulla of Vater*.

Lieberkühn's a. an outmoded term for the blind termination of the lacteals in the villi of the intestines.

ampullae membranaceae [*am-pul'e*] the dilatations at one end of each of the three semicircular ducts.

ampullae osseae [*am-pul'e*] the dilatations at one of the ends of the semicircular canals.

rectal a. the dilated portion of the rectum just proximal to the anal canal, prominent in the horse.

a. of Thoma one of the small terminal expansions of an interlobar artery in the pulp of the spleen.

uterine tube a. the longest and widest portion of the uterine tube, between the infundibulum and the isthmus of the tube.

vas deferens a. dilatation of the terminal part of the vas deferens caused by glandular thickening of the wall.

a. of Vater hepatopancreatic ampulla.

ampullae [*am-pul'e*] plural of ampulla.

plugged a. syndrome disorder of emptying of the ampullae of the ductus deferens in stallions resulting in intermittent azoospermia or excessively high concentration of dead spermatozoa in the ejaculate. See also **epididymal** stagnation.

ampullar [*am-pul'ər*] pertaining to or originating from an **ampulla**.

a. anomalies unilateral aplasia, fusion of, and appendages to the ampullae of the ductus deferens occur in bulls and unilateral aplasia in stallions.

a. spermastasis occurs in stallions (blocked ampullae or occluded) after prolonged periods of sexual rest and leads to ejaculates with no spermatozoa or with very high concentration of dead spermatozoa..

ampullitis [*am"pul-li'tis*] inflammation of the ampulla of the vas deferens. Clinical signs are not usually observed.

amputates see **amelia**, **acroteriasis**.

amputation [*am"pu-ta'shən*] the removal of a limb or other appendage or outgrowth of the body. The most common indication for amputation of an upper limb is severe trauma. Other indications may include appendicular malignancy or infection, such as osteomyelitis.

closed a. flap amputation; one in which flaps are made from skin and subcutaneous tissue and sutured over the bone end of the stump.

congenital a. absence of a limb at birth, attributed to constriction of the part by an encircling band during intrauterine development.

a. in contiguity amputation at a joint.

a. in continuity amputation of a limb elsewhere than at a joint.

diaclastic a. amputation in which the bone is broken by an osteoclast and the soft tissues divided by an écraseur.

flap a. closed amputation.

forequarter a. amputation of the forelimb including the scapula.

guillotine a. open amputation; one in which the entire cross-section is left open (flapless) for dressing.

interpelviabdominal a. amputation of the thigh with excision of the lateral portion of the pelvic girdle.

interscapulothoracic a. amputation of the forelimb with excision of the lateral portion of the shoulder girdle.

open a. guillotine amputation.

spontaneous a. loss of a part without surgical intervention, as in leprosy, etc.

amrinone [*am'rĭ-nōn*] a synthetic phosphodiesterase inhibitor compound, used to provide inotropic support to the failing myocardium.

AMS α-amylase. See **amylase**.

Amsinckia plant genus of the Boraginaceae family. Many species contain **pyrrolizidine** alkaloids. Includes *A. calycina*, *A. gloriosa*, *A. hispida*, *A. intermedia*, *A. lycopsoides*, *A. menziesii*; seeds contaminate feed grain. Called also tarweed, ironweed, yellow burrweed.

amyelia [*a"mi-e'le-ə*] congenital absence of the spinal cord.

amyelinic [*a-mi"ə-lin'ik*] without myelin.

amyelonic [*a-mi"ə-lon'ik*] 1. having no spinal cord. 2. having no bone marrow.

amyelus [*a-mi'ə-ləs*] a fetus with no spinal cord.

amygdala [*ə-mig'də-lə*] the corpus amygdaloideum.

amygdalin [*ə-mig'də-lin*] the cyanogenetic glycoside in bitter almonds.

amygdaline [*ə-mig'də-lēn"*] like an almond.

amygdaloid body [*ə-mig'də-loid*] a complex of nuclei of the telencephalon located in the pyriform lobe deep within the olfactory cortex.

amygdalolith a calculus in a tonsil.

Amygdalus communis tree in the plant family Rosaceae; can cause cyanide poisoning. Called also *Prunus amygdalus*, **almond**.

amylaceous [*am"ə-la'shəs*] composed of or resembling starch.

amylase [*am'ə-lās*] a calcium dependent enzyme found in saliva in most mammals, but not in the cat, dog or horse, and in pancreatic secretions in all mammals, which hydrolyzes starch and glycogen to dextrins, maltose, maltotriose. The action of salivary α-amylase is limited in animals where food is quickly swallowed, since it is not active at the pH of the stomach. Pancreatic α-amylase is active in the small intestine and is responsible for most carbohydrate digestion in non herbivores.

a. isoenzymes serum amylase is composed of a number of isoenzymes, isoamylases, probably originating from different tissues. Elevation of an isoenzyme of hepatic origin is found in **hyperadrenocorticism**.

a. reaction an identification test, based on an extracellular product of group A β-hemolytic streptococci.

serum a. a laboratory aid in the diagnosis of acute pancreatitis or exacerbations of chronic pancreatitis in dogs; less reliable in cats. Other organs or tissues may also produce the enzyme, or its isoenzymes, but elevations in the serum are usually moderate. Chronic renal insufficiency or decreased glomerular filtration rate can also result in elevation of serum amylase.

urine a. dogs excrete very little amylase in the urine in contrast to humans where urine concentrations of the enzyme may be valuable in assessing the progress of a case of pancreatitis.

amylin [*am'ə-lin*] see **amyloid**.

amyl(o)- word element. [Gr.] *starch*.

amylo-1,6-glucosidase deficiency see **glycogenosis** type III.

amylobarbitone [*am"ə-lo-bahr'bĭ-tōn*] amobarbital.

amylogenesis [*am"ə-lo-jen'ə-sis*] the formation of starch.

amyloid [*am'ə-loid*] 1. starch-like; amylaceous. 2. an eosinophilic homogeneous hyaline material deposited extracellularly in glomeruli in particular. Because of its characteristic β-pleated pattern it is resistant to proteolysis and is insoluble.

a. AA derived from serum amyloid A protein in reactive systemic (secondary) amyloidosis.

a. AL derived from immunoglobulin light chains in immunocytic or primary amyloidosis; usually associated with myeloma.

VetBooks.ir

islet a. polypeptide a polypeptide produced in the pancreatic β-cells and co-released with insulin; inhibits insulin release and may counteract insulin action in peripheral tissues. Deposits are found in the pancreas of cats with diabetes mellitus.

amyloidosis [*am"ə-loi-do'sis*] the deposition in various tissues of amyloid. This protein is almost insoluble and once it infiltrates the tissues they become waxy and nonfunctioning. Systemic amyloidosis may be immunocytic or reactive (see below). See also familial Shar pei **fever**.

cutaneous a. multiple cutaneous, hard, painless, chronic plaques occur over the head, neck and shoulders of horses. There may be involvement of the nasal mucosa and resulting dyspnea.

familial renal a. of Shar pei dogs characterized by marked proteinuria, hypercholesterolemia, hypoalbuminemia, episodic fever and sometimes swelling of one or both hocks. The condition is resistant to treatment and eventually there is renal and/or hepatic failure.

immunocytic a., immunogenic a., primary a. amyloid produced from light chains of immunoglobulins as in plasma-cell dyscrasias. See also **AL protein**.

reactive a. is derived from excess serum protein SAA produced as a result of chronic antigenic stimulation. The kidney is most often affected and the amyloid is most often deposited in glomeruli but medullary deposits are seen in cats and cattle. Idiopathic amyloidosis is common in the dog and less common in cats. It is associated with chronic suppurative disease processes in cattle, antiserum production in horses, and it occurs rarely in pigs. Called also secondary amyloidosis.

renal a. characterized by severe proteinuria and uremia. There is chronic diarrhea, polydipsia and anasarca. Seen particularly in dogs and cats.

secondary a. reactive amyloidosis (above).

Amyloodinium a protozoan, a member of the Sarcomastigophora; the cause of velvet disease of aquarium fish. The gills are the primary site of inflammation, but the lesions may spread to the skin. See also ***Oodinium***.

amylopectin [*am"ə-lo-pek'tin*] the insoluble constituent of starch containing α-1-4 and α-1-6 glycosidic bonds ; the soluble constituent is amylose.

amylopectinosis [*am"ə-lo-pek"tĭ-no'sis*] **glycogenosis** type IV.

amyloplast a starch-forming leuko-plastid in a plant.

amylopsin see **amylase**.

amylorrhea [*am"ə-lo-re'ə*] the presence of an abnormal amount of starch in the feces.

amylose [*am'ə-lōs*] 1. polysaccharide of D-glucose containing α-1→4 glycosidic bonds. 2. the soluble constituent of starch, as opposed to amylopectin.

amyocardia weakness of the heart muscle.

amyoplasia [*a-mi"o-pla'zhə*] lack of muscle formation or development.

a. congenita generalized lack in the newborn of muscular development and growth, with contracture and deformity of most joints.

amyostasia [*a-mi"o-sta'zhə*] a tremor of the muscles.

amyosthenia failure of muscular strength.

amyosthenic 1. characterized by amyosthenia. 2. an agent that diminishes muscular power.

amyotonia [*a"mi-o-to'ne-ə*] atonic condition of the muscles.

congenital a. any congenital disease marked by general hypotonia of the muscles.

amyotrophia [*a-mi"o-tro'fe-ə*] amyotrophy.

amyotrophic lateral sclerosis [*a-mi"o-tro'fik*] a type of motor disorder of the nervous system in humans in which there is destruction of the anterior horn cells and pyramidal tract. The cause is unknown. It is characterized by weakness, spasticity and muscle atrophy and is fatal in most cases. One form of hereditary canine spinal **muscular** atrophy is similar to this disease.

amyotrophy [*a"mi-ot'rə-fe*] atrophy of muscles.

neurogenic a. see **muscular** atrophy.

Amyrsidea dedonsai louse of guinea fowl.

amyxia [*ə-mik'se-ə*] absence of mucus.

amyxorrhea absence of mucous secretion.

AMZ see **Australian** Milking Zebu.

An anode.

ANA antinuclear antibody.

ana [Gr.] *of each;* used in prescription writing; abbreviated ā ā.

ana- word element. [Gr.] *upward, again, backward, excessively.*

Anabaena [*an"ə-be'nə*] a genus of planktonic Cyanobacteria which frequents still, fresh water. Important because of its capacity to produce potent toxins including **anatoxin**, **saxitoxin** and **microcystin**. Causes nervous syndrome, highly fatal within a few hours, and hepatic necrosis with photosensitization. Called also water or algal bloom. Includes *A. circinalis*, *A. flos-aquae*, *A. spiroides*.

anabasine [*ə-nab'ə-sēn*] teratogenic piperidine alkaloid in *Nicotiana* spp. Called also neonicotine.

anabasis the stage of increase in a disease.

anabiosis [*an"ə-bi-o'sis*] restoration of life processes after their apparent cessation.

anabolic [*an"ə-bol'ik*] pertaining to or arising from anabolism.

a. steroid steroids with a tissue-building effect. Testosterone is an example of a natural anabolic steroid with the, sometimes undesirable, effect of causing masculinization. Synthetic steroids are designed to avoid this problem as much as possible. The purpose of their use includes improvement in body weight in old animals and in the young after debilitating disease or major surgery.

anabolism [*ə-nab'ə-liz"əm*] the constructive phase of metabolism, in which the body cells synthesize the molecules needed for maintenance, growth and repair.

anacidity [*an"ə-sid'ĭ-te*] abnormal lack or deficiency of acid.

gastric a. achlorhydria.

anacrotism [*ə-nak'rə-tiz-əm*] a pulse anomaly evidenced by the presence of a prominent notch on the ascending limb of the pulse tracing.

anaculture vaccine containing toxoid and killed bacteria; used to immunize against some clostridial diseases.

Anacystis cyanea [*an"ə-sis'tis*] ***Microcystis*** *aeruginosa*.

anadipsia [*an"ə-dip'shə*] intense thirst.

anadrenalism [*an"ə-dre'nəl-iz-əm*] absence or failure of adrenal function.

anadromous said of fish; those living most of their lives in the sea but entering rivers to spawn. Compare with **catadromous**.

anadromy migration of fish, as adults or subadults, from salt water to fresh.

anaemia anemia.

anaerobe [*an'ə-rōb*] an organism that lives and grows in the absence of molecular oxygen.

facultative a. a microorganism that can grow with or without molecular oxygen.

obligate a. an organism that can grow only in the complete absence of molecular oxygen.

anaerobic [*an"ə-ro'bik*] the absence of air.

a. bacteria see **anaerobe**.

a. effluent treatment is usually conducted in deep ponds where air does not penetrate. A fully contained system is also available.

a. exercise exercise at high work intensity during which the needs of muscle metabolism for oxygen exceeds the capacity of the circulation to supply it and an oxygen debt is incurred.

a. infection one caused by anaerobic organisms.

anaerobiosis [*an"ə-ro"bi-o'sis*] life in the absence of oxygen; a term applied most commonly to microbes.

Anaeroplasma [*an˙aero˙plaz'mə*] anaerobic commensal found in the rumen.

anaerosis interruption of the respiratory function.

Anaerovibrio lipolytica one of the many ruminal bacteria.

anaesthesia anesthesia.

Anafilaroides a subgenus of *Oslerus*. Includes *A. rostratus* (cause of tracheobronchitis in cats).

Anagallis a genus of the Primulaceae family of plants; contains an unidentified nephrotoxin and causes diarrhea. Includes *A. arvensis* (scarlet pimpernel), *A. arvensis* var. *caerulea* (blue pimpernel).

anagen [*an'ə-jen*] in the cycle of hair growth, the period of active production by the hair follicle.

a. defluxion, a. effluvium loss and abnormal formation of hair that is in the anagen stage of growth; occurs with antimitotic drugs, endocrinopathies, metabolic disorders.

a.–telogen ratio a comparison of the numbers of anagen and telogen hair bulbs, which is an indication of the percentage of active hair follicles. Normally, the majority should be in anagen.

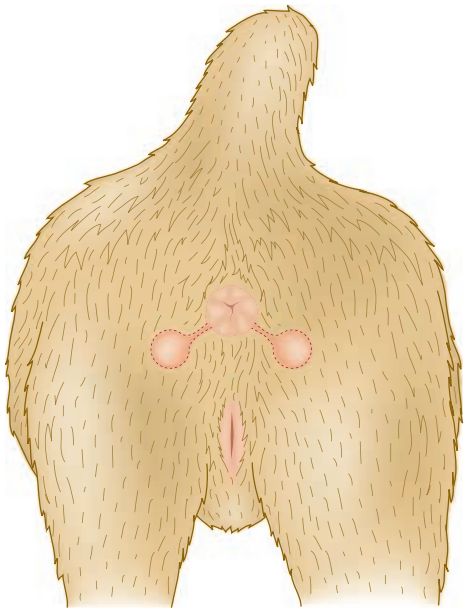
anagyrine an alkaloid produced by several species of western bitter lupins that can result in paralysis of the fetus and arthrogryposis if ingested by the dam in early pregnancy when present in concentrations greater than 1.4 mg/gm dried lupine.

A-34: Anagen defluxion in a calf with chronic calf scours.

anakatadidymus [*an"ə-kat"ə-did'ĭ-məs*] conjoined twins, separate above and below, but united in the trunk.
anakusis [*an"ə-koo'sis*] total deafness.
anal [*a'nəl*] relating to the **anus**.
a. abscess acute, purulent infections in the area of the anus, usually caused by gram-negative organisms. In dogs, these most often arise from the **anal sacs**.
a. atresia, atresia ani congenital absence or stenosis of the anus manifested by an absence of feces and a gradual development of abdominal distention. Fistulae may develop between the rectum and urogenital tract. The anomalous development can occur in several forms and may be accompanied by similar atresia at higher levels of the intestine. There is usually normal development of sphincters. A dimple is usually evident at the point at which surgical intervention is required.
a. canal the short, terminal, retroperitoneal segment of the intestinal tract between the rectum and anus.
a. constriction a congenital constriction combined with vulvar constriction occurs in Jersey cattle.
a. fibroma occurs in cattle and excision effected for esthetic reasons.
a. fistula see **perianal** fistula.
a. fold see anal **fold**[2].
a. furunculosis see **perianal** fistula.
a. membrane the dorsal part of the cloacal membrane in the embryo; when it eventually breaks down the dorsal passage becomes the rectoanal passage.
a.–perineal laceration see **rectovaginal** fistula.
a. reflex the pursing of the anal orifice when the perineum is stimulated; indicative of an animal with intact sacral spinal cord segments and pudendal nerves.
a. sac see **anal sacs**.
a. sacculectomy surgical removal of the anal sacs using either a closed or open technique.
a. sacculitis inflammation of the anal sacs.
a. sphincter a pair of concentric rings of muscle of which the internal anal sphincter is formed from smooth muscle of the anal canal while the external anal sphincter is larger and of greater importance in fecal continence, consists of striated muscle.
a. sphincter hypertrophy occurs in aged dogs and may give rise to difficult and painful defecation.
a. stenosis scar formation after perianal fistulae, trauma, severe anal sac disease, or treatment for neoplasia may result in a reduced lumen and particularly a loss of the capacity to dilate with passage of feces. Straining, passage of ribbon-like feces and constipation result.

A-35: Atresia ani in a piglet.

a. ulceration inflammation and ulceration of the perianal skin which may be associated with anal sac disease. Seen most commonly in German shepherd dogs.
anal sacs [*a'nəl saks*] a pair of sacs nestled between the internal and external anal sphincter muscles, that open on either side at the mucocutaneous junction of the anus in carnivores (at positions of 4 and 8 o'clock). The walls are lined with large sebaceous glands and in dogs also with apocrine glands. The combined secretions are malodorous, gray-brown, granular material that is expelled in small quantities with each defecation, as a form of territorial marking, or in larger amounts from vigorous struggling or due to fear and may occur during treatment by a veterinarian. These sacs are subject to hypersecretion, ductal blockage, impaction and abscess formation which may necessitate surgical removal. Discomfort associated with disease may give rise to 'scooting', rubbing or licking of the anal area in dogs.
a. s. abscess infection, aided by impaction of secretions, of anal sacs can lead to abscess formation which may rupture and drain to perianal skin or into deep tissues surrounding the rectum. See also **perianal** fistula.
a. s. impaction distended and not easily emptied; may be painful. In dogs, a cause of dragging ('scooting') and licking around the anus.
a. s. tumor the most common tumors of the anal sacs are apocrine adenocarcinomas, occurring most often in aged bitches. These tumors are sometimes associated with the paraneoplastic syndrome of **pseudohyperparathyroidism**.
analbuminemia [*an"al-bu"mĭ-ne'me-ə*] absence or deficiency of serum albumins.



A-36: Anal sacs in the dog.
From McCurnin D, Poffenbarger EM, Small Animal Physical Diagnosis and Clinical Procedures. Saunders, 1991.

A-37: Ruptured anal sac abscess in a dog.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

VetBooks.ir

VetBooks.ir

A

analeptic [*an"ə-lep'tik*] 1. a drug that acts as a stimulant to the central nervous system, such as caffeine and amphetamine. 2. a restorative medicine.

Analges a genus of the family Analgesidae of mites. Includes *A. passerinus* (in the plumage of passerine birds).

analgesia [*an"əl-je'ze-ə*] absence of sensibility to pain, particularly the relief of pain without loss of consciousness; absence of pain or noxious stimulation. See also **analgesic**.

agonist/antagonist a. see sequential analgesia (below).

balanced a. see multimodal analgesia (below).

continuous caudal a. continuous injection of an anesthetic solution into the sacral and lumbar plexuses via a thin catheter within the epidural space to relieve the pain of parturition; also used in general surgery to block the pain pathways caudal to the umbilicus. See also **caudal** anesthesia.

electric a. see electrical **immobilization**.

epidural a. analgesia induced by introduction of the analgesic agent into the epidural space of the vertebral canal. See also **epidural**.

infiltration a. paralysis of the nerve endings at the site of operation by subcutaneous injection of an anesthetic.

intrasynovial a. surface analgesia, produced by the introduction of a local analgesic agent into the synovial cavity and massaged into tendon sheaths.

intravenous regional a. the local anesthetic agent is injected intravenously caudal to a tourniquet. The tissues below the tourniquet become anesthetized. The tourniquet and the anesthesia can be maintained for up to 15 minutes. Called also Bier block (technique).

local a. injection of an anesthetic agent to create local analgesia. Includes infiltration, nerve block, epidural, intrathecal, intrasynovial, subarachnoid. See **anesthesia**.

lumbar epidural a. see epidural **anesthesia**.

multimodal a. combining agents that act on different mechanisms of nociceptive modulation to enhance additive and synergistic effects. Called also balanced analgesia.

perioperative a. given before, during and after the surgical procedure.

pre-emptive a. administration of long-lasting analgesics before surgery to help to avoid the establishment of a sensitized state and result in diminished postoperative pain.

regional a. see regional **anesthesia**.

segmental a. see segmental dorsolumbar epidural **block**.

sequential a. the use of a partial opioid agonist after a pure agonist to reverse respiratory depression but maintain analgesia. Called also agonist/antagonist analgesia.

spinal a. injection of an analgesic agent into the spinal canal, generally either into the subarachnoid or epidural space. See also spinal **anesthesia**.

surface a. local analgesia produced by an anesthetic applied to the surface of mucous membranes, e.g. those of the eye, nose, throat and urethra.

analgesic [*an"əl-je'zik*] 1. relieving pain. 2. pertaining to analgesia. 3. a drug that relieves pain. See also **opium**, **morphine**, **methadone**, **meperidine**, **pentazocine lactate**, **propoxyphene**, **diethylthiambutene hydrochloride**.

a. antagonist used for the control of excessive reaction to or overdosing with the narcotic analgesics. See also **nalorphine**, **naloxone**.

endogenous a. system includes the secretion by the brain of **endorphins** in response to the central perception of pain.

a. nephropathy papillary necrosis due to local ischemia resulting from the antiprostaglandin effect of aspirin, phenylbutazone and phenacetin.

non-narcotic a. includes **salicylate**, **acetanilid**, **phenylbutazone**, **dipyrone**, **meclofenamic acid**, indomethacin, **naproxen**, **flunixin meglumine**, **xylazine**.

analgia [*an-al'jə*] painlessness.

analog, analogue [*an'ə-log*] 1. a part or organ having the same function as another, but of different evolutionary origin. 2. a chemical compound having a structure similar to that of another but differing from it in respect of certain atoms or groups; it may have similar or opposite action metabolically.

analysis [*ə-nal'ĭ-sis*] separation into component parts.

cohort a. the separation of each of two cohorts into component parts and comparing the results.

current a. analysis performed on contemporary data.

discriminant a. a form of multivariate analysis in which the objective is to establish a discriminate function. The function (typically a mathematical formula) discriminates between individuals in the population and allocates each of them to a group within the population. The function is established on the basis of a series of measurements or observations made on the individuals.

economic a. evaluation of the costs and benefits of a commercial enterprise that takes into account additional returns, returns no longer obtained, additional costs and costs no longer incurred, discounting of gains back to the time when the project began, and opportunity costs relating to potential profitability from alternative use of the investment.

factor a. a multivariate technique which analyzes the underlying structure of a set of data. It is useful in explaining observed relationships amongst a large number of variables in terms of simpler relations.

guaranteed a. declares the range within which nutrients occur in a manufactured animal food.

multivariate a. techniques for the study of simultaneous variation in a number of variables. Includes linear discriminant functions, cluster analysis and factor and principal component analysis.

near infrared reflectance spectroscopy a. (NIRS) common method for analysis of feedstuffs, forage and grain; uses infrared light to determine protein, fiber, energy and mineral content.

path a. a statistical technique for testing a limited number of causal hypotheses, the causal relationships between variables, by manipulation of one or more of the variables and predicting the outcome.

p. analysis a chemical method of assessing and expressing the nutritional value of a feed. It divides each feed into six categories and states the percentage of each that is present in the feed: (1) water (or dry matter); (2) total or crude protein (total nitrogen×6.25); (3) fat (or ether extract); (4) ash (minerals); (5) crude fiber (incompletely digested carbohydrates); (6) nitrogen-free extract (readily digestible carbohydrate).

qualitative a. determination of the nature of the constituents of a compound or mixture.

quantitative a. determination of the proportionate quantities of the constituents of a compound or mixture.

regression a. a general statistical technique that analyzes the relationship between a dependent (criterion) variable and a set of independent (predictor) variables.

sequential a. data are analyzed as they become available so that the experiment or survey can be terminated as soon as the required result is available at the desired rate of statistical significance.

systems a. analysis of the interaction of a system, e.g. a biological system, often for the purpose of analyzing the differences between systems. See also **system**.

a. of variance a statistical method for comparing variables by partitioning the variance of the observations between the effects of the different variables and comparing it with the underlying random variation.

vector a. analysis of a moving force to determine both its magnitude and its direction, e.g. analysis of the scalar electrocardiogram to determine the magnitude and direction of the electromotive force for one complete cycle of the heart.

analyte [*an'ə-līt*] a substance or material to be analyzed; a molecule to be analyzed by mass spectrometry.

analytical, analytic [*an"ə-lit'ik*] pertaining to or emanating from analysis.

a. control control of confounding by analysis of the results of a trial or test.

a. epidemiology draws statistical inferences, mostly about causes, about disease in populations based on available samples of it.

a. methods techniques used to draw statistical inferences including multiple regression, path analysis, discriminate analysis and logistic analysis.

a. study a method for testing a hypothesis as part of an investigation of the association between a disease and possible causes of the disease.

anamnesis [*an"am-ne'sis*] 1. the faculty of memory. 2. the history of a patient and its relatives.

anamnestic [*an"am-nes'tik*] 1. pertaining to anamnesis. 2. aiding the memory.

a. response a secondary or recall immune response; occurs with a second or subsequent exposure to an antigen. The antibody or cell-mediated response is more rapid and greater than occurred following the primary exposure.

VetBooks.ir

anamniote [an-am'ne-ōt"] any member of the taxonomic superclass of vertebrates that do not have an amnion around the embryo, which includes fish and amphibia. Called also *Anamniota*. Compare with **amniote**, **tetrapod**.

anamorph [an'ə-morf"] the asexual form of a fungus.

anamu see ***Petiveria alliacea***.

anaphase [an'ə-fāz] the third stage of division of the nucleus of a cell in either meiosis or mitosis.

anaphoresis [an-ə-fə-re'sis] diminished activity of the sweat glands.

anaphrodisia absence or loss of sexual desire.

anaphrodisiac [an"af-ro-diz'e-ak] 1. repressing sexual desire. 2. a drug that represses sexual desire.

anaphylactic [an"ə-fə-lak'tik] pertaining to anaphylaxis.

a. reaction see **anaphylaxis**.

a. shock a serious and generalized state of shock brought about by hypersensitivity (**anaphylaxis**) to an **allergen**, such as a drug, foreign protein or toxin.

anaphylactogen [an"ə-fə-lak'to-jen] a substance that produces anaphylaxis.

anaphylactogenesis [an"ə-fə-lak"to-jen'ə-sis] the production of anaphylaxis.

anaphylactoid [an"ə-fə-lak'toid] resembling anaphylaxis, but not involving an immunological mechanism.

a. purpura see anaphylactoid **purpura**.

anaphylatoxin [an"ə-fil'ə-tok"sin] substances produced in blood serum when complement is activated; generally referring to C3a and C5a; serve as mediators of inflammation by inducing mast cell degranulation, histamine release and increased vascular permeability, and on injection into animals, it causes anaphylactic shock.

a. inhibitor a specific serum carboxypeptidase, one of the complement proteins.

anaphylaxis [an"ə-fə-lak'sis] an unusual or exaggerated allergic reaction of an animal to foreign protein or other substances. Anaphylaxis is a severe and generalized immediate type I hypersensitivity reaction, which induces the release of vasoactive agents such as histamine and serotonin, inflammatory mediators such as prostaglandins and leukotrienes, and inflammatory cytokines including tumor necrosis factor alpha (TNFα). Release is a consequence of the binding of antigen to IgE antibodies arming Fc receptors on the surface of mast cells and basophils. Antigen binding to two adjacent IgE molecules causes perturbation of the cell membrane leading to the release of vasoactive substances. Called also anaphylactic shock. Substances most likely to produce anaphylaxis include drugs, particularly antibiotics and local anesthetics; protein therapeutic agents prepared from animals, such as insulin, adrenocorticotropic hormone and enzymes; diagnostic agents, such as iodinated X-ray contrast media; biologicals used to provide immunity, such as vaccines, antitoxins and gamma globulin; protein foods; the venom of bees, wasps and hornets; and pollens and molds. See also **hypersensitivity**, **anaphylactic**.

acquired a. that in which sensitization is known to have been produced by administration of a foreign antigen.

active a. see acquired anaphylaxis (above).

aggregate a. caused by an antigen forming large amounts of soluble antibody–antigen complexes that activate complement and resulting in degranulation of mast cells.

antiserum a. passive anaphylaxis.

cutaneous a. a localized form of anaphylaxis, which follows the injection of antigen into the skin.

cytotoxic a. a form of anaphylaxis triggered by antibodies against self antigens. Blood transfusion reactions and Rh reactions are examples.

cytotropic a. refers to binding of IgE to Fc receptors.

heterologous a. passive anaphylaxis induced by transfer of serum from an animal of a different species.

homologous a. passive anaphylaxis induced by transfer of serum from an animal of the same species.

indirect a. that induced by an animal's own protein modified in some way.

passive a. that resulting in a normal animal from injection of serum of a sensitized animal.

passive cutaneous a. (PCA) localized anaphylaxis passively transferred by intradermal injection of an antibody and, after a latent period (about 24–72 hours), intravenous injection of the homologous antigen and Evans blue dye; blueing of the skin at the site of the intradermal injection is evidence of PCA.

reverse passive cutaneous a. antigen is injected first, succeeded by the injection of antiserum.

systemic a. a generalized anaphylactic reaction most often observed when the antigen is injected intravenously but may also be produced after local administration of antigen. The main shock organs in cattle and sheep are the lungs, in the horse, cat and pig the lungs and intestines, and in dogs the liver, specifically the hepatic veins.

anaplasia [an"ə-pla'zhə] loss of differentiation of cells, an irreversible alteration in adult cells toward more primitive (embryonic) cell types; a characteristic of tumor cells.

Anaplasma [an"ə-plaz'mə] a genus of organisms in the family *Anaplasmataceae*, order Rickettsiales. Members parasitize erythrocytes, thrombocytes and leukocytes and are transmitted by arthropods.

A. bovis causes benign bovine rickettsiosis in Asia and Africa. Previously *Ehrlichia bovis*.

A. caudatum often found in mixed infections with *A. marginale* in cattle.

A. centrale causes a mild form of **anaplasmosis** in cattle and has been used as a vaccine against *A. marginale*.

A. marginale a significant pathogen, the cause of anaplasmosis in ruminants. The infection is transmitted mechanically by many biting arthropods. Ticks, including *Rhipicephalus (Boophilus)* spp. and *Dermacentor* spp., are biological vectors.

A. ovis the cause of **anaplasmosis** of sheep.

A. phagocytophilum causes tickborne fever or 'pasture disease' in cattle, goats, sheep and wild ruminants; granulocytic ehrlichiosis in cattle, dogs, cats and llamas, both of which are characterized by leukopenia and thrombocytopenia, equine ehrlichiosis, and human granulocytic ehrlichiosis. Transmitted by *Ixodes* ticks. Previously *Ehrlichia equi* (*Rickettsia phagocytophila* and *Rickettsia equi*), *E. phagocytophila* and the human granulocytic ehrlichiosis (HGE) agent.

A. platys the cause of canine infectious cyclic **thrombocytopenia**. The only rickettsia known to infect platelets. Thought to be transmitted by *Rhipicephalus sanguineus*. Previously called *Ehrlichia platys*.

Anaplasmataceae [an"ə-plaz"mə-ta'se-e] a family of bacteria in the order *Rickettsiales*, including the genera *Anaplasma*, **Ehrlichia**, **Neorickettsia** and Wolbachia.

anaplasmosis [an"ə-plaz-mo'sis] a disease caused by *Anaplasma* spp.; common in tropical and sub-tropical regions, but sporadic in temperate regions. In cattle it is a chronic, often remitting disease characterized by fever, jaundice, emaciation and anemia, but never hemoglobinuria. Carrier animals are the source of infection. Transmitted by ticks, mechanically by tabanid vectors, iatrogenically, and transplacentally. Disease can be endemic in tick areas or sporadic in interface regions between endemic and free areas. In sheep and goats the disease is subclinical. In dogs, it is often mild with non-specific clinical signs. Bovine anaplasmosis is a disease notifiable to OIE (see Table 22). See also **babesiosis**.

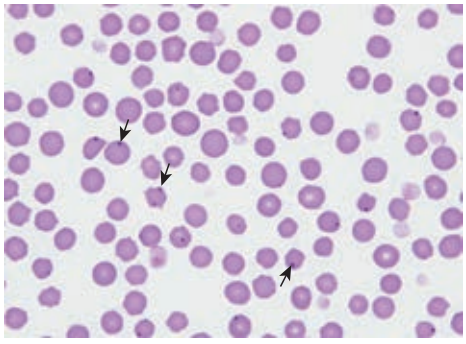
anaplastic [an"ə-plas'tik] characterized by anaplasia.

anaplerotic reaction [an"ə-plĕ-rot'ik] a reaction that replenishes the concentration of an intermediate in a metabolic pathway.

anapophysis [an"ə-pof'ĭ-sis] an outmoded term for the accessory vertebral process.

Anas platyrhynchos the mallard, a monogamous, broad-billed dabbling duck. One of the original ducks from which the domestic ducks have originated.

anasarca [an"ə-sahr'kə] extensive subcutaneous edema; an expression of a generalized edema such as occurs in congestive heart



A-38: *Anaplasma maginale* (arrows) in bovine erythrocytes. From Bowman DD, Georgis' Parasitology for Veterinarians, 9th Edition. Saunders, 2008.

VetBooks.ir

failure. There is diffuse subcutaneous swelling which is cool to the touch and retains the imprint of a fingertip after pressure is released—hence 'pitting edema'. The principal locations are the intermandibular space and the ventral aspects of the neck and trunk. In horses the limbs are also commonly involved.

fetal a. generalized edema of fetal tissues, either as a result of developmental deficiency of lymphatics (lymphatic hypoplasia), or of fetal circulatory failure. See also **pulmonary** hypoplasia with anasarca.

anastole retraction, as of the lips of a wound.

anastomosis [*ə-nas"tə-mo'sis*] 1. communication between two tubular organs. 2. surgical, traumatic or pathological formation of a connection between two normally distinct structures.

arteriovenous a. anastomosis between an artery and a vein.

cobra-head a. a technique used in joining grafts to blood vessels. Ends of grafts are trimmed to form an enlarged lumen.

end-to-end a. uniting the free ends of two tubular organs.

end-to-side a. uniting the free end of a tubular organ to the side of the organ to which it is joined.

esophageal a. uniting the free ends after complete resection of a part of the esophagus.

heterocladic a. one between branches of different arteries.

intercarotid a. a naturally occurring communication between the internal and external carotid arteries in birds. It provides a collateral pathway for blood to the brain, the counterpart of the cerebral arterial circle of Willis in mammals.

intestinal a. establishment of a communication between two formerly distinct portions of the intestine.

side-to-side a. uniting the sides of two tubular organs.

skin arteriovenous a. frequent natural occurrence; capable of diverting large volumes of blood to splanchnic circulation during cardiovascular stress.

tracheal a. end-to-end anastomosis of the trachea after resection of a part.

ureterocolonic a. see **ureterocolostomy**.

vascular a. joining the transected ends of either a vein or artery.

anat. anatomy.

Anaticola a genus of bird lice in the superfamily Ischnocera. Includes *A. anseris* and *A. crassicornis* (duck lice).

anatid said of birds; members of the family Anatidae, ducks, geese and swans.

Anatidae family of aquatic birds, including the ducks, geese and swans, and their sub-families.

anatine a bird of the subfamily Anatinae; includes the dabbling ducks.

anatipestifer syndrome see ***Riemerella anatipestifer***.

Anatoecus a genus of lice in the suborder Mallophaga. Includes *A. dentatus* and *A. icterodes* (duck lice).

Anatolian black cattle black dual-purpose brachyceros type Turkish cattle.

Anatolian shepherd dog a large, tall (28–32 inches) dog with a short, dense coat, broad head, and long tail curled over the back. It is usually fawn with a black mask, but other colors also occur. A Turkish breed used for guarding sheep, goats and other livestock. Called also Anatolian Karabash dog.

A-39: Anatolian shepherd dog.

anatomic, anatomical [*an"ə-tom'ik, an"ə-tom'ĭ-kəl*] pertaining to anatomy, or to the structure of the body.

a. dead space (respiratory) the space in the air passages, oral to the parenchymatous lung tissue, where no respiratory exchange takes place.

anatomist [*ə-nat'ə-mist*] one skilled in anatomy.

anatomy [*ə-nat'ə-me*] the science dealing with the form and structure of living organisms.

comparative a. description and comparison of the form and structure of different animals.

developmental a. the changes in form from fertilization to adulthood, including embryology, fetology and postnatal development.

gross a. that dealing with structures visible with the unaided eye. Called also macroscopic anatomy.

macroscopic a. see gross anatomy (above).

microscopic a. anatomy revealed by microscopy; includes histology and cytology.

morbid a. anatomy of diseased tissues. Called also pathological anatomy, gross pathology.

pathological a. see morbid anatomy (above).

radiological a. anatomy revealed by the techniques of radiography, fluoroscopy and ultrasonography.

regional a. see topographic anatomy (below).

special a. anatomy devoted to the study of particular organs or parts.

topographic a. anatomy devoted to determination of the relative positions of various body parts and structures; regional anatomy.

X-ray a. see radiological anatomy (above).

anatoxin [*an'ə-tok"sin*] neurotoxin produced by some cyanobacteria including species of *Anabaena*, *Oscillatoria*, *Aphanizoomenon*. Includes anatoxin-a, a potent nicotinic toxin, which is toxic to a wide range of species, and the cholinesterase inhibitor anatoxin-a(s), which is highly toxic to pigs, dogs and some waterfowl but seems to be unable to reach the brain or the retina in many species. Called also sudden death factor.

Anatrichosoma a genus of the nematode subfamily Capillariinae.

A. cutaneum, A. cuteum parasitizes most Old World non-human primates. See also **anatrichosomiasis**.

anatrichosomiasis a creeping eruption of captive Old World non-human primates. Cause is ***Anatrichosoma*** *cutaneum*.

anatriptic a medicine applied by rubbing.

anchor worm [*ang'kər werm*] ***Lernaea*** *elegans*, a copepod parasite of freshwater fishes.

anchorage [*ang'kər-əj*] fixation, e.g. surgical fixation of a displaced viscus.

anchoring fibers collagenous attachments between bone and ligaments, tendons and fibrous capsules.

anchoring filaments collagenous and reticular fibers connecting endothelial cells of lymphatics to surrounding connective tissue space.

anchoring plaques structures on the plasma membrane of smooth muscle fibers; points of contact between muscle fibers.

anchovies a cause of diarrhea, vomiting, salivation, lacrimation, depression, miosis, polypnea, tachycardia, hypothermia in cats.

anchovy paste as a supplement in poultry diets causes severe hepatitis and nephrosis characterized by low egg production, diarrhea, cyanosis, thirst, paralysis.

ancipital [*an-sip'ĭ-təl*] two-edged; two-headed.

Ançon a mutant, achondroplastic sheep that appeared in Massachusetts, USA, in 1791 and became extinct in 1876. A similar mutant appeared in Norway in 1919. Called also Otter.

anconad [*ang'ko-nad*] toward the elbow or olecranon.

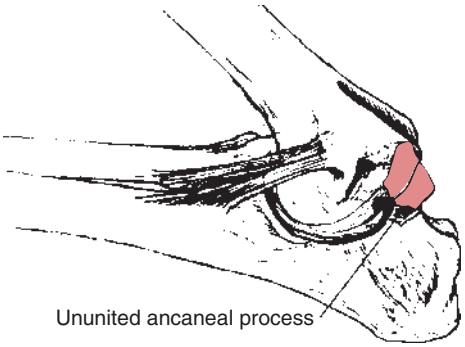
anconal [*ang'kə-nəl*] anconeal.

anconeal, anconal [*ang-ko'ne-əl*] pertaining to the elbow.

a. process the projection of the ulna that occupies the olecranon fossa of the humerus when the elbow is extended and which develops as a separate ossification center in some dogs.

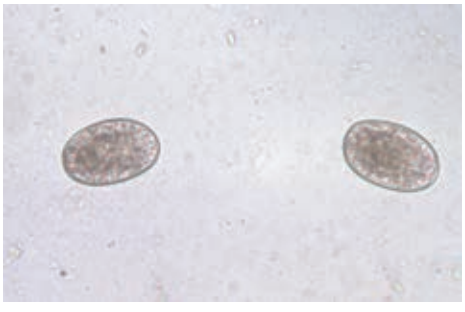
ununited a. process a failure of the anconeal process to unite with the ulna, resulting in fracture through the growth plate. Seen mainly in young dogs of large breeds, causing varying degrees of weight-bearing lameness and arthritis. Demonstrated radiographically after 5 months of age and usually treated surgically by removal of the fragment. Called also elbow dysplasia.

anconitis [*ang"ko-ni'tis*] inflammation of the elbow joint.



A-40: Ununited anconeal process.
From Birchard SJ, Saunders Manual of Small Animal Practice, 3rd Edition. Saunders, 2006.

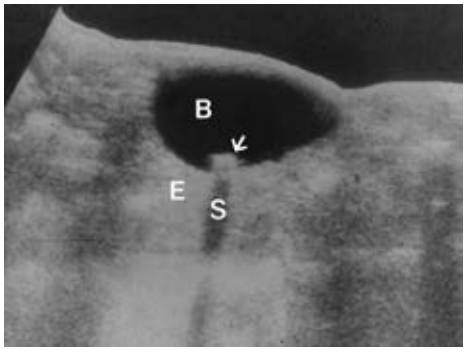
ancoria absence of a pupil.
Ancryocephalus a genus of monogenetic trematodes in the family Dactylogyridae. A parasite of fish.
ancyl(o)- for words beginning thus, see also those beginning *ankylo-*.
Ancylostoma [*ang"kĭ-los'tə-mə, an"sĭ-los'tə-mə*] a genus of nematode parasites (hookworm) belonging to the family Ancylostomatidae.
A. brasiliense a species of hookworm of dogs and cats in tropical and subtropical regions; its larvae may cause creeping eruption in humans.
A. caninum the common hookworm of dogs.
A. ceylanicum a hookworm of dogs and cats in Asia; resembles *A. braziliense*.
A. tubaeforme the hookworm of cats.
Ancylostomatidae [*ang"kĭ-lo-, an"sĭ-lo-sto-mat'ĭ-de*] a family of parasitic nematodes having teeth or two ventrolateral cutting plates at the entrance to a large buccal capsule, and small teeth at its base; the hookworms.
ancylostomiasis [*an"sĭ-los"to-mi'ə-sis*] infection by worms of the genus *Ancylostoma*. See also **hookworm**.
ancylostomosis the syndrome caused by hookworm infestation. It includes melena, pallor of mucosae, hyperpnea, poor exercise tolerance, anasarca, and anemia. Called also hookworm disease.
ancyroid, ankyroid [*an'sə-roid*] hooklike; like the fluke of an anchor.
Ancystropus zeleborii a parasitic mite found under the eyelids and in plugged meibomian glands of Chiroptera (bats).
Andalusian, Andalucian breeds of animals named after the Spanish province of Andalusia.
A. ass gray donkey; the origin of American and other ass breeds.
A. cattle three varieties, a dark, black-brown, a yellow, and gray, of meat and draft cattle, with open lyre horns, bred in southern Spain.
A. horse Spanish breed of light horse originating from Arab and Barb. Brown, gray or black, about 15.2 hands high. Origin of many breeds of horses and of **Criollo** and **mustang**.
Anderson disease [*an'dər-sən*] glycogenosis type IV
Andersonstrongylus milksi a metastrongyloid nematode found in the respiratory tract of dogs.
Andrachne decaisnei see ***Leptopus decaisnei***.
andr(o)- word element. [Gr.] *male, masculine.*
Androctonus [*an-drok'tə-nəs*] genus of fat-tailed **scorpions**.
androgen [*an'dro-jən*] any steroid hormone which promotes male characteristics. The two main androgens are androstenedione and testosterone.



A-41: Ancylostoma caninum.
From Hendrix CM, Robinson E, Diagnostic Parasitology for Veterinary Technicians, 4th Edition. Mosby, 2012.

A-42: Andalusian horse.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

a. antigonist a compound that inhibits or antagonizes the biosynthesis or actions of andorgens.
a. binding protein generated by Sertoli cells; binds androgens within the adluminal compartment of the testis.
a. insensitivity see testicular **feminization**.
androgenic steroids [*an"dro-jen'ik*] the androgens produced in small amounts in the adrenal cortex.
Andromeda japonica [*an-drom'ə-də*] ***Pieris***[1] *japonica*.
andromedotoxin [*an-drom'ə-do-tok"sin*] see **grayanotoxin**.
Andropogon a large genus of grasses in the family Poaceae. A volunteer in naive pasture in many countries. Palatable when young. Makes good meadow hay. Called also bluestem, bluesedge, turkeyfoot.
androstane [*an'dro-stān*] the hydrocarbon nucleus, $C_{19}H_{32}$, from which androgens are derived.
androstanediol [*an"dro-stān'de-ol*] an androgen, $C_{19}H_{32}O_2$, prepared by reducing androsterone.
androstene [*an'dro-stēn*] an unsaturated cyclic hydrocarbon, $C_{19}H_{30}$, forming the nucleus of testosterone and certain other androgens.
androstenediol [*an"dro-stēn'de-ol*] a crystalline androgenic steroid, $C_{19}H_{30}O_2$.
androstenedione [*an"dro-stēn'de-ōn*] an androgenic steroid produced by the testis, adrenal cortex and ovary. Immunization against it gives excellent results in promoting fertility in ewes by increasing the ovulation rate.
androsterone [*an-dros'tər-ōn*] an androgenic hormone, $C_{19}H_{30}O_2$, excreted in the urine. When injected intramuscularly, it counteracts the effects of castration.
anechoic [*an-ə-ko'ik*] in ultrasonography, an absence of internal echoes.
anectasis [*an-ek'tə-sis*] congenital atelectasis due to developmental immaturity.
Aneilema accuminatum African plant in the family Commelinaceae; known to cause nitrite poisoning.
Anellovirus a floating genus (no family assignment) that contains a genetically diverse group of small spherical ~20 nm diameter, non-enveloped viruses with circular single-stranded DNA genomes that includes torque teno virus that infects humans



A-43: Ultrasound scan of a urinary bladder in a dog with signs of lower urinary tract infection to show ultrasound principles and artifacts. The bladder (B) is filled with anechoic urine. There is a hyperechogenic stone (arrow) with acoustic shadowing beneath it (S) and distant enhancement (E) on either side of the shadow, distal to the bladder.
From Lavin L, Radiography in Veterinary Technology. Saunders, 2006.

A

and other viruses that infect non-human primates, dogs, cats, pigs and California sea lions.

anelodont see anelodont **teeth**

anemia [*ə-ne'me-ə*] a reduction below normal in the number or volume of erythrocytes or in the quantity of hemoglobin in the blood. Clinically it is manifested by weakness, exercise intolerance, hyperpnea which is only moderate, pallor of mucosae, tachycardia and a large increase in the intensity of the heart sounds. There are often accompanying signs related to the site of blood or hemoglobin loss.

aplastic a. a form of anemia generally unresponsive to specific antianemia therapy. It is often chronic, accompanied by granulocytopenia and thrombocytopenia, in which the bone marrow is usually acellular or hypoplastic. It may, however, be rapidly fatal. The term is actually all-inclusive and most probably encompasses several clinical syndromes. See also pure red cell **aplasia**.

autoimmune hemolytic a. (AIHA) see **immune-mediated** hemolytic anemia.

avian infectious a. see **chicken** anemia.

blood loss a. see hemorrhagic anemia (below).

a. of chronic disease see anemia of inflammatory disease (below).

cold antibody a. an immune-mediated hemolytic anemia in which the antibody is maximally active at temperatures below 98.6°F (37°C). See also cold **agglutinin** disease.

cold (or cold water) a. a disease of cattle, especially calves, housed in warm barns and given near freezing water to drink. Dyspnea and the passage of red urine occur several hours after a large drink.

Coombs-positive a. immunoglobulin-mediated anemia that gives a positive reaction to Coombs tests, indicating the presence of immunoglobulins on the red cell surface. See also **immune-mediated** hemolytic anemia, **alloimmune** hemolytic anemia of the newborn.

deficiency a. nutritional anemia.

drug-induced hemolytic a. some drugs such as quinine, quinidine, para-aminosalicylic acid, phenacetin, penicillin, insecticides, chlorpromazine, sulfonamides and dipyrone may be directly injurious to red cells or act to initiate an immune response in which red cells are destroyed.

familial nonspherocytic a. of Basenji dogs an inherited pyruvate kinase deficiency causes a hemolytic anemia with shortened red cell life span. In early stages, the disease is characterized by very active erythropoiesis but eventually, usually by the second or third year of life, a terminal myelofibrosis and osteosclerosis develops. The disease is inherited as an autosomal recessive trait.

feline infectious a. see **feline** infectious anemia.

fragmentation a. see microangiopathic anemia (below).

Heinz body a. hemolytic anemia resulting from oxidation of globin and formation of Heinz bodies, which are seen in blood smears as dark refractile intracytoplasmic bodies and stain with new methylene blue. Some common causes are ingestion of onions and plants in the Brassicaeae family, phenazopyridine, methylene blue and **acetaminophen** (paracetamol). Cats are particularly susceptible to Heinz **body** formation.

hemolytic a. anemia caused by the increased destruction of erythrocytes which may occur in the vascular system—*intravascular* hemolysis, or due to phagocytosis by the monocyte–macrophage system—*extravascular* or intracellular hemolysis. It may result from incompatibility (see **alloimmune** hemolytic anemia of the newborn), from mismatched blood transfusions, from poisons such as copper, organic agents in plants such as kale, from nutritional deficiencies such as phosphorus and from protozoan infections such as **babesiosis**. Hemolytic anemia may also occur as a result of a disorder of the **immune** response in which B cell-produced antibodies fail to recognize erythrocytes that are 'self' and directly attack and destroy them. In addition to the usual signs of anemia, the patient may also exhibit jaundice.

A-44: The color of the sclera and conjunctiva is used to asses to presence of anemia in the clinical examination of sheep. The marked pallor in this sheep is due to anemia resulting from hemonchosis.

hemorrhagic a. acute or chronic and the blood may be lost internally or externally. In acute sudden blood loss hypovolemic shock may develop. At a slower rate, the effects may be subclinical for varying periods of time. Called also blood loss anemia.

hypochromic a. anemia in which the decrease in hemoglobin is proportionately much greater than the decrease in number of erythrocytes.

hypoplastic a. anemia due to incapacity of blood-forming organs, i.e. inactivity of the bone marrow. See also aplastic anemia (above).

idiopathic immune a. see autoimmune hemolytic anemia (above).

infectious equine a. see **equine** infectious anemia.

infectious salmon a. see **infectious** salmon anemia.

a. of inflammatory disease a nonregenerative, usually mild, anemia that occurs in association with malignancy or chronic infection. Although other causes of anemia such as hemolysis and blood loss may also occur with these conditions, there is altered iron metabolism with decreased serum iron and iron-binding capacity but with increased iron storage that results in decreased erythropoiesis.

iron-deficiency a. a form characterized by low or absent iron stores, low serum iron concentration, low transferrin saturation, elevated transferrin (iron-binding capacity), low hemoglobin concentration or hematocrit, and hypochromic, microcytic red blood corpuscles, and thrombocytosis. Typical of chronic, external blood loss as occurs in bleeding gastrointestinal lesions and blood-sucking external parasitism, particularly in young, small animals. See also **iron**.

isoimmune hemolytic a. see **alloimmune** hemolytic anemia of the newborn.

macrocytic a. anemia in which the erythrocytes are much larger than normal; the MCV (mean corpuscular volume) is increased. Generally indicative of a responsive bone marrow that is releasinge larger, immature erythrocytes and reticulocytes.

megaloblastic a. anemia characterized by the presence of megaloblasts in the bone marrow and macrocytic erythrocytes. It occurs in vitamin B_{12}, cobalt and folic acid deficiencies and in some myeloproliferative disorders in cats.

microangiopathic a. anemia due to fragmentation of erythrocytes in blood vessels whose endothelium has been badly damaged, usually by a microvascular neoplasm, particularly hemangiosarcoma in dogs, or disseminated intravascular coagulation. Called also fragmentation anemia.

microcytic a. anemia characterized by decrease in size of the erythrocytes; the MCV (mean corpuscular volume) is decreased, usually accompanied by hypochromasia (reduced MCHC) and caused by iron deficiency, although there are other other less common causes.

myelopathic a., myelophthisic a. anemia due to destruction or crowding out of hematopoietic tissues by space-occupying lesions, neoplasms and fibrosis.

nonregenerative a. one occurring without an appropriate erythropoietic response by the bone marrow; typical of the anemia accompanying chronic disease or chronic inflammation.

normochromic a. that in which the hemoglobin content of the red cells as measured by the MCHC and MCH is within the normal range.

normocytic a. the anemia in which the red blood cells are normal in size.

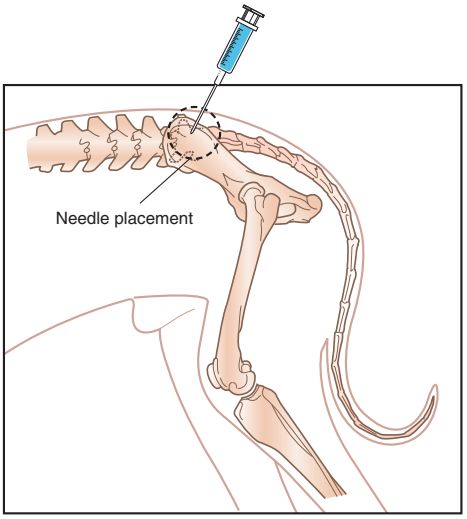
nutritional a. anemia due to a deficiency of an essential substance in the diet, which may be caused by poor dietary intake or by malabsorption; called also deficiency anemia. See also **pyridoxine**, **vitamin B_{12}**, **folic acid**, **copper**, **iron**.

parasitic a. hemorrhagic anemia due to blood loss caused by blood-sucking parasites such as fleas, hookworms and *Haemonchus contortus*.

pernicious a. see **pernicious anemia**.

physiological a. the anemia which occurs as part of a natural event, e.g. in neonates.

piglet a. see **iron** nutritional deficiency.
primary immune a. see **immune-mediated** hemolytic anemia.
regenerative a., responsive a. associated with active erythropoiesis with increased numbers of reticulocytes, nucleated red blood cells, anisocytosis and polychromasia in the peripheral blood.
unresponsive a. see nonregenerative anemia (above).
anemic [*ə-ne'mik*] pertaining to anemia.
Anemone [*ə-nem'o-ne*] a genus of the plant family Ranunculaceae. Contains the toxic glycoside protoanemonin which causes abdominal pain, oral mucosal erosions, salivation, diarrhea. Includes *A. hortensis* (*A. stellata*), *A. nemorosa* (wood anemone), *A. patens* (*A. pavonina*), *A. pulsatilla* (pasque flower).
anemonin a pharmacologically inert substance which results from detoxication in the animal of **protoanemonin**, a toxin in plants of the Ranunculaceae family.
anencephaly [*an"ən-sef'ə-le*] congenital absence of the cranial vault, with the cerebral hemispheres completely missing or reduced to small masses.
anephric [*a-nef'rik*] being without kidneys.
anergy [*an'ər-je*] diminished reactivity to specific antigen(s).
anesthekinesia, anesthecinesia [*an-es"the-ki-ne'zhə*] combined sensory and motor paralysis.
anesthesia [*an"es-the'zhə*] loss of feeling or sensation. Artificial anesthesia may be produced by a number of agents capable of bringing about partial or complete loss of sensation. It is induced to permit the performance of surgery or other painful procedures. See also **anesthetic**.
balanced a. anesthesia that balances the depressing effects on the motor, sensory, reflex and mental aspects of nervous system function by the anesthetic agents. The philosophy encourages the use of several agents, each designed to affect one of the functions.
basal a. narcosis produced by preliminary medication so that the inhalation of anesthetic necessary to produce surgical anesthesia is greatly reduced.
block a. regional anesthesia. See also **block**.
caudal a. injection of an anesthetic into the sacral canal. See also **caudal** anesthesia.
central a. lack of sensation caused by disease of the nerve centers.
closed a. that produced by continuous rebreathing of a small amount of anesthetic gas in a closed system with an apparatus for removing carbon dioxide.
conduction a. local anesthesia produced by the injection of an anesthetic agent close to a nerve in order to prevent transmission of nerve impulses along it.
crossed a. loss of sensation on one side of the face and loss of pain and temperature sense on the opposite side of the body.
diagnostic a. the use of regional anesthetics to localize painful areas or structures; used in the investigation of lameness in horses. See also **block**.
dissociated a., dissociation a. loss of perception of certain stimuli while that of others remains intact.
electric a. anesthesia induced by passage of an electric current. See also electrical **immobilization**.
endotracheal a. anesthesia produced by introduction of a gaseous mixture through a tube inserted into the trachea.
epidural a. produced by injecting local anesthetic agent into the epidural space of the spinal canal at the first or second intercoccygeal space. Injection of a small amount of anesthetic agent produces anesthesia of the perineum without paralysis of the hindlimbs, a low epidural. Injection of a large volume at the same site produces a high epidural. The same effect is achieved by injecting the anesthetic at the lumbosacral or first interlumbar space. Called also extradural anesthesia, or analgesia, extradural block, epidural block.
field block a. the anesthetic agent is injected around the boundaries of the area to be anesthetized, with no attempt to locate specific nerves.
fish a. anesthetic agents are added to water in which the fish is immersed. Absorption occurs as the agent flows across the gills, unlike transcutaneous anesthesia (below) in amphibians. When anesthetized the fish is removed for the necessary, short-term procedure. Recovery takes place when returned to fresh water. Fish can also be injected with anesthetic agents.
frost a. abolition of feeling or sensation as a result of topical refrigeration produced by a jet of a highly volatile liquid.



A-45: Needle placement for lumbosacral epidural anesthesia in the dog. From Thomas J, Lerche P, Anesthesia and Analgesia for Veterinary Technicians, 4th Edition. Mosby, 2011.

general a. a state of unconsciousness produced by anesthestic agents, with absence of pain sensation over the entire body and a greater or lesser degree of muscular relaxation; the drugs producing this state can be administered by inhalation, intravenously, intramuscularly, or rectally, or via the gastrointestinal tract.
infiltration a. local anesthesia produced by injection of the anesthetic solution directly into the area of terminal nerve endings.
inhalation a. anesthesia produced by the respiration of a volatile liquid or gaseous anesthetic agent. Halothane, methoxyflurane, isoflurane, sevoflurane and a combination of nitrous oxide and oxygen are the common agents in veterinary use.
insufflation a. anesthesia produced by introduction of a gaseous mixture into the trachea through a slender tube.
intrasynovial a. injection of a local anesthetic agent into a joint or tendon sheath.
intrathecal a. introduction of local anesthetic agent into the spinal fluid by penetration of the spinal dura. Causes anesthesia in the tissues supplied by the nerves in the spinal cord zone that has been anesthetized. There is danger of injury to the cord and the technique is little used in veterinary surgery. Called also subarachnoid, subdural or intradural anesthesia/analgesia.
intravenous a. the anesthetic agent, e.g. a barbiturate, is administered intravenously to effect. If an intravenous catheter is used, 'topping-up' amounts can also be administered as required.
intravenous regional a. see **Bier technique**.
irreversible a. the loss of sensory and motor function of the part is permanent. The local injection of isopropyl alcohol has this effect.
local a. that produced in a limited area, as by injection of a local anesthetic or by freezing with ethyl chloride. Includes infiltration, nerve block, field block, surface, regional, retrograde regional, spinal, epidural.
mixed a. that produced by use of more than one anesthetic agent.
nerve block a. the anesthetic agent is deposited from a syringe and needle as close to the target nerve as possible. Several injections are often made if the landmarks for the location of the nerve are not outstanding.
obstetrical a. see **obstetric** anesthesia.
open a. general inhalation anesthesia in which there is no rebreathing of the expired gases.
parasacral a. regional anesthesia produced by injection of a local anesthetic around the sacral nerves as they emerge from the sacral foramina.
paravertebral a. regional anesthesia produced by the injection of a local anesthetic around the spinal nerves at their exit from the spinal column, and outside the spinal dura.
parenteral a. anesthesia induced by the injection of the agent, either intravenously, intraperitoneally, subcutaneously or intramuscularly.
peridural a. see epidural anesthesia (above).
peripheral a. lack of sensation due to changes in the peripheral nerves.

VetBooks.ir

VetBooks.ir

A

permeation a. analgesia of a body surface produced by application of a local anesthetic, most commonly to the mucous membranes. Called also surface anesthesia.
rectal a. anesthesia produced by introduction of the anesthetic agent into the rectum.
refrigeration a. local anesthesia produced by applying a tourniquet and chilling the part to near freezing temperature. Called also cryoanesthesia.
regional a. insensibility caused by interrupting the sensory nerve conductivity of any region of the body: produced by (1) field block, encircling the operative field by means of injections of a local anesthetic; or (2) nerve block, making injections in close proximity to the nerves supplying the area.
saddle block a. the production of anesthesia in the region of the body corresponding roughly with the areas of the buttocks, perineum and inner aspects of the thighs, by introducing the anesthetic agent low in the dural sac.
segmental a. loss of sensation in a segment of the body due to a lesion of a nerve root.
spinal a. 1. anesthesia due to a spinal lesion. 2. anesthesia produced by injection of the agent beneath the membrane of the spinal cord.
splanchnic a. block anesthesia for visceral operation by injection of the anesthetic agent into the region of the celiac ganglia.
subarachnoid a. see intrathecal anesthesia (above).
surface a. the application of a local anesthetic agent in solution, as in eye drops, or as a jelly, cream or ointment. The use of cold materials which freeze the superficial layers of skin is not much used in veterinary surgery. See also permeation anesthesia (above).
surgical a. that degree of anesthesia at which operation may safely be performed. There is muscular relaxation, and coordinated movements, consciousness and pain sensations disappear; many of the spinal neuromuscular reflexes are abolished.
topical a. that produced by application of a local anesthetic directly to the area involved.
transcutaneous a. the skin is a respiratory surface in terrestrial amphibia; they can be anesthetized by exposing their skin to water containing an anesthetic agent, such as isoflurane.
anesthesiologist [*an"əs-the"ze-ol'ə-jist*] a veterinarian or physician who specializes in anesthesiology.
anesthesiology [*an"əs-the"ze-ol'ə-je*] that branch of veterinary medicine or medicine concerned with administration of anesthetics and the condition of the patient while under anesthesia.
anesthetic [*an"əs-thet'ik*] 1. pertaining to, characterized by, or producing anesthesia. 2. a drug or agent used to abolish the sensation of pain, to achieve adequate muscle relaxation during surgery, to calm fear and allay anxiety. See also **anesthesia**.
dissociative a. an anesthetic causing interruption of cerebral association pathways between the limbic system and cortical system. It produces a catalepsy-like state, in which the patient feels dissociated from its environment, and marked analgesia. Ketamine, phencyclidine and tiletamine hydrochloride are examples.
gaseous a. inhalation anesthesia. Halothane, isoflurane and sevoflurane are commonly used agents.
general a. see general **anesthesia**.
a.-induced rhabdomyolysis see **porcine** stress syndrome.
inhalation a. gas or volatile liquid that produces general anesthesia when inhaled. The older agents, ether and cyclopropane, have been replaced by halothane, isoflurane and sevoflurane.
injectable a. sedative-hypnotic drugs produce anesthesia when administered in large doses. It can be administered intraperitoneally, but intravenous injection is much the most common route. Short-acting drugs, such as thiopentone, are used alone for very rapid procedures or for instrument examinations, or as induction for a longer term inhalation anesthetic. See also **barbiturate**. One anesthetic agent that is administered intramuscularly is ketamine.
irreversible a. the injection of a substance that destroys the peripheral nerve, e.g. ethyl or propyl alcohol.
local a. a drug that blocks nerve transmission in the nerves affected by the local presence of the drug. It may be applied topically, e.g. into the conjunctival sac, or by injection into tissues near the target nerve. Most local anesthetics are in the -caine series.
a. machine apparatus or equipment used to administer gaseous anesthetic agents; functions of the apparatus should include, 1. delivery of oxygen, 2. removal of carbon dioxide, 3. quantifiable delivery of anesthetic vapor or gas, and 4. capability of providing artificial respiration to the patient.
a. scavenging the use of any device to reduce the pollution of the air in surgeries caused by exhaled anesthetic gases. May be canisters of filtering material attached to the machine or suction lines at stragetic positions in the theater.
volatile a. see inhalation anesthetic (above).
anesthetist [*ə-nes'thə-tist*] a person trained in administering anesthetics.
anesthetization [*ə-nes"thə-tī-za'shən*] production of anesthesia.
anestrum [*an-es'trəm*] see anestrus.
anestrus, anoestrus [*an-es'trəs*] nonoccurrence of estrus so that the female is not sexually receptive at any time. Absence of estrus behavior (receptivity) may be true (lack of cyclicity and follicular development) or false (silent estrus, unobserved or shallow estrus). See also no visible **estrus**, silent **estrus**.
false a. the female is cyclic, but not seen in estrus due to silent estrus, unobserved or shallow estrus.
true a. lack of cyclicity and follicular development.
winter a. failure of mares to come into estrus during the months when daylight hours are below the minimal level. Can be overcome to some extent by exposing the mares to strong artificial light at night.
anethole trithione [*an'ə-thōl*] a direct-acting salivary stimulant.
anetoderma [*an"ə-to-dur'mə*] looseness and atrophy of the skin.
aneuploidy [*an'u-ploi"de*] the state of having chromosomes in a number that is not an exact multiple of the haploid number; seen in karyotypes which have a small number of extra chromosomes or have a small number less than normal.
aneurin, aneurine [*an-u'rin*] see **thiamine**.
aneurysm [*an'u-riz"əm*] a sac formed by the localized dilatation of the wall of an artery, vein or the heart.
aortic a. see **aortic** aneurysm.
arteriovenous a. an abnormal communication between an artery and a vein in which the blood flows directly into a neighboring vein or is carried into the vein by a connecting sac.
atherosclerotic a. one arising as a result of weakening of the tunica media in severe atherosclerosis.
bacterial a. an aneurysm infected by bacteria.
berry a. a small saccular aneurysm of a cerebral artery, usually at the junction of vessels in the circle of Willis; such aneurysms frequently rupture, causing subarachnoid hemorrhage. Called also **brain** aneurysm.
cardiac a. thinning and dilatation of a portion of the wall of the left ventricle, usually a consequence of myocardial infarction.
cirsoid a. dilatation and tortuous lengthening of part of an artery.
compound a. one in which some of the layers of the wall of the vessel are ruptured and some merely dilated. Called also mixed aneurysm.
congenital a. observed sporadically in the aorta and pulmonary artery.
dissecting a. one resulting from hemorrhage that causes lengthwise splitting of the arterial wall, producing a tear in the inner wall (intima) and establishing communication with the lumen of the vessel; it usually affects the thoracic aorta. Seen most commonly in horses and caused by larvae of *Strongylus vulgaris*. See **strongylosis**. A specific disease of turkeys.
fusiform a. a spindle-shaped aneurysm.
infected a. one produced by growth of microorganisms (bacteria or fungi) in the vessel wall, or infection arising within a preexisting arteriosclerotic aneurysm.
inherited aortic a. causes a high mortality rate in the affected cattle breed. The defect is in the abdominal aorta.
lung a. may result from the lodgement of pulmonary emboli; rupture and pulmonary hemorrhage are potential sequelae.
mixed a. compound aneurysm.
mycotic a. an infected aneurysm caused by fungi.
pseudoaneurysm false aneurysm.
racemose a. cirsoid aneurysm.
sacculated a. a saclike aneurysm.
varicose a. one formed by rupture of an aneurysm into a vein. See also aneurysmal **varix**.
venous a. see **venous** dilatation.

verminous a. see **strongylosis**.
aneurysmal pertaining to or arising from an aneurysm.
a. bone cyst see bone cyst.
aneurysmectomy [*an"u-riz-mek'tə-me*] excision of an aneurysm.
aneurysmoplasty [*an"u-riz'mo-plas"te*] plastic repair of an artery for aneurysm.
aneurysmorrhaphy [*an"u-riz-mor'ə-fe*] suture of an aneurysm; an intravascular graft insertion used to treat aneurysm.
anfractuous convoluted; sinuous.
Angara disease see **hydropericardium** syndrome.
angel shark see ***Squatina squatina***.
angel wings a deformity of the scapulae seen with osteodystrophia fibrosa, particularly in kittens. The pull of the scapular muscles causes an outward bowing, hence the name.
angelfish see ***Pterophyllum***.
angel's trumpet ***Datura*** *candida*, (*Brugmansia*).
angiectasis [*an"je-ek'tə-sis*] dilatation of a vessel.
angiectomy [*an"je-ek'tə-me*] excision of part of a blood or lymph vessel.
angiitis [*an"je-i'tis*] inflammation of the coats of a vessel, chiefly blood or lymph vessels. Called also vasculitis. Local or generalized, the latter e.g. in hypersensitivity states.
angi(o)- word element. [Gr.] *vessel (channel)*.
angioblast [*an'je-o-blast"*] 1. the earliest formative tissue from which blood cells and blood vessels arise. 2. an individual vessel-forming cell.
angioblastoma [*an"je-o-blas-to'mə*] a type of vascular tumor of the brain; also angioblastic meningioma.
angiocardiogram [*an"je-o-kahr'de-o-gram*] the film produced by angiocardiography.
angiocardiography [*an"je-o-kahr"de-og'rə-fe*] radiography of the heart and great vessels after introduction of an opaque contrast medium into a blood vessel or one of the cardiac chambers.
angiocardiokinetic [*an"je-o-kahr"de-o-kĭ-net'ik*] pertaining to movements of the heart and blood vessels.
angiocardiopathy disease of the heart and blood vessels.
angiocarditis [*an"je-o-kahr-di'tis*] inflammation of the heart and blood vessels.
angiocentric [*an"je-o-sen'trik*] see **perivascular**.
angiodysplasia [*an"je-o-dis-pla'zhə*] small vascular abnormalities, especially of the intestinal tract.
angioedema [*an"je-o-ə-de'mə)*] a condition characterized by the sudden and temporary appearance of large areas of painless swelling in the subcutaneous tissue or submucosa, with or without pruritus. Caused by immunological reactions, usually immediate type hypersensitivities. Sometimes referred to as angioneurotic edema.
angioendothelioma [*an"je-o-en"do-the"le-o'mə*] see **hemangioendothelioma**.
angioendotheliomatosis [*an"je-o-en"do-the"le-o-mə-to'sis*] a state marked by the development of multiple endotheliomas; the clinical syndrome which results varies with the location of the major lesions.
angiofibroma [*an"je-o-fi-bro'mə*] angioma containing fibrous tissue.
nasopharyngeal a. a relatively benign tumor of the nasopharynx composed of fibrous connective tissue with abundant endothelium-lined vascular spaces.
angiofollicular [*an"je-o-fŏ-lik'u-lər*] pertaining to a lymphoid follicle and its blood vessels.
angiogenesis [*an"je-o-jen'ə-sis*] the development of blood vessels.

A-46: Angioedema. Severe swelling of the face and periocular tissue caused by a venomous insect sting.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006

tumor a. the induction of the growth of blood vessels from surrounding tissue into a solid tumor by a diffusible chemical factor released by the tumor cells.
angioglioma a form of vascular glioma.
angiogram [*an'je-o-gram"*] a radiograph of a blood vessel.
angiograph [*an'je-o-graf"*] a radiological demonstration of a blood vessel using a contrast medium. See **angiography**.
angiography [*an"je-og'rə-fe*] radiological demonstration of certain areas of the vascular system by the injection of a radiopaque solution (arteriography, lymphangiography or phlebography).
cerebral a. radiography of the cranium after the intravenous injection of a radiopaque substance. An area of poor vascularity indicates the presence of a space-occupying lesion in the brain.
digital subtraction a. a series of images are acquired by a digital X-ray recording system. Pre-contrast agent images are subtracted from images made after contrast agent is administered. The resultant high contrast images are of only the contrast agent in blood vessels, which is displayed as dark gray to black blood vessels.
fluorescein a. intravenous fluorescein can be visualized in retinal, choroidal, optic nerve head, and sometimes iridal vasculature with the use of blue filters and direct or indirect ophthalmoscopy or photography. See also vitreous **fluorophotometry**.
nonselective a. injection of contrast material into a regional vessel or the general circulation.
orbital a. contrast study of the arteries of the orbit, particularly the malar, infraorbital, maxillary and dorsal orbital, using the infraorbital artery for injection of a suitable medium.
pulmonary a. demonstration of pulmonary veins and arteries by introduction of contrast material into the jugular or cephalic vein or via a catheter positioned in the pulmonary artery.
renal a. outlines renal blood flow, usually via a catheter introduced into the femoral artery and passed retrograde into the aorta to the vicinity of the renal arteries.
retinal a. see fluorescein angiography (above).
selective a. placement of the catheter in the vessel or heart chamber being studied in order to provide the best possible contrast study of the suspected lesion.
angiohemophilia [*an"je-o-he'mo-fil'e-ə*] see **von Willebrand disease**.
angiohyalinosis [*an"je-o-hi"ə-lĭ-no'sis*] hyaline degeneration of the muscular coat of blood vessels.
angioid [*an'je-oid*] resembling blood vessels.
angiokeratoma [*an"je-o-ker"ə-to'mə*] a benign neoplasm of endothelial origin accompanied by epithelial hyperplasia. Rare in animals.
angiokinetic [*an"je-o-kĭ-net'ik*] see **vasomotor**.
angiolipoma [*an"je-o-lĭ-po'mə*] angioma containing fatty tissue.
angiolith a calcareous deposit in the wall of a blood vessel.
angiology [*an"je-ol'ə-je*] scientific study or description of the blood and lymph vessels.
systematic a. angiology of a single body system.
angiolysis [*an"je-ol'ĭ-sis*] retrogression or obliteration of blood vessels, as in embryological development.
angioma [*an"je-o'mə*] a benign tumor made up of blood (hemangioma) or lymph vessels (lymphangioma), e.g. hemangioma, lymphangioma, glomangioma.
a. cavernosum, cavernous a. disseminated cavernous **hemangioma**.
telangiectatic a. an angioma made up of dilated blood vessels.
angiomatosis [*an"je-o-mə-to'sis*] the presence of multiple angiomas.
bovine cutaneous a. nodular vascular lesions in the skin, particularly along the back, occur in cattle. They may be inflamed and can bleed profusely.
juvenile bovine a. a condition in young calves characterized by multiple angioma in all tissues, sometimes by a single lesion.
ovine and caprine a. present as single or multiple masses in the skin that bleed with minimal trauma.
angiomegaly [*an"je-o-meg'ə-le*] enlargement of blood vessels.
angiomyolipoma [*an"je-o-mi"o-lĭ-po'mə*] a benign tumor containing vascular, adipose and muscle elements, occurring most often in the kidney with smooth muscle elements.
angiomyoma [*an"je-o-mi-o'mə*] a hamartoma composed of blood vessels and smooth muscle.
angiomyoneuroma [*an"je-o-mi-o- nŏŏ-ro'mə*] see **glomangioma**.
angiomyosarcoma [*an"je-o-mi"o-sahr-ko'mə*] angioma blended with myoma and sarcoma.
angioneurectomy [*an"je-o-n-rek'tə-me*] excision of vessels and nerves.
angioneuroma [*an"je-o- nŏŏ-ro'mə*] see **glomangioma**.

VetBooks.ir

VetBooks.ir

A

angioneuromyoma see **glomangioma**.
angioneurosis [*an'je-o nŏŏ-ro'sis*] any neurosis affecting primarily the blood vessels; a disorder of the vasomotor system, as angioparalysis, angiospasm.
angioneurotic edema [*an'je-o nŏŏ-rot'ik*] see **angioedema**.
angiopathy [*an-je-op'ə-the*] any disease of the vessels.
angioplasty [*an'je-o-plas"te*] surgical repair or dilation of blood vessels or lymphatic channels.
balloon a. see **balloon** angioplasty.
percutaneous transluminal a. (PCTA) dilatation of a blood vessel by means of a balloon catheter inserted through the skin and into the chosen vessel and then passed through the lumen of the vessel to the site of the lesion, where the balloon is inflated to widen the vessel.
angiopoiesis [*an"je-o-poi-e'sis*] the formation of blood vessels.
angiorrhaphy [*an"je-or'ə-fe*] suture of a blood vessel.
angiorrhexis rupture of a blood vessel.
angiosarcoma [*an"je-o-sahr-ko'mə*] a malignant tumor of vascular tissue. Called also hemangiosarcoma, lymphangiosarcoma.
angiosclerosis [*an"je-o-sklĕ-ro'sis*] hardening of the walls of blood vessels.
angiospasm [*an'je-o-spaz"əm*] spasmodic contraction of the walls of a blood vessel.
angiostrongyliasis [*an"je-o-stron"jī-li'ə-sis*] infection by parasitic nematodes of the genus *Angiostrongylus*.
angiostrongylosis [*an"je-o-stron"jī-lo'sis*] see **angiostrongyliasis**.
Angiostrongylus [*an"je-o-stron'jī-ləs*] a genus of worms of the family Angiostrongylidae; lungworms.
A. cantonensis the rat lungworm which may cause eosinophilic meningitis in humans and other animals including dogs.
A. costaricensis parasitizes the blood vessels of the alimentary tract of wild rodents and may infect humans causing eosinophilic granulomas in the intestine.
A. mackerrasae a rat lungworm which may also cause eosinophilic meningitis in humans.
A. vasorum the 'lungworm' of dogs; occurs in the pulmonary artery and right ventricle of canids. Pulmonary emphysema and fibrosis may be accompanied by congestive heart failure.
angiotelectasis [*an"je-o-tə-lek'tə-sis*] dilatation of blood vessels.
angiotensin [*an"je-o-ten'sin*] a vasoconstrictive principle formed in the blood when **renin** is released from the juxtaglomerular apparatus in the kidney. The enzymatic action of renin cleaves a serum α_2-globulin, angiotensinogen, forming the decapeptide angiotensin I, which is relatively inactive. It in turn is acted upon by peptidases (converting enzymes), chiefly in the lungs, to form the octapeptide angiotensin II, a powerful vasopressor and a stimulator of aldosterone secretion by the adrenal cortex. By its vasopressor action, it raises blood pressure and diminishes fluid loss in the kidney by restricting blood flow. Angiotensin II is hydrolyzed in various tissues to form heptapeptide angiotensin III, which has less vasopressor activity but more effect on the adrenal cortex.
a. amide an amide derivative of angiotensin II which is a powerful vasoconstrictor and vasopressor, and is used in the treatment of certain hypotensive states; usually administered by slow intravenous infusion, and sometimes intramuscularly or subcutaneously.
a.-converting enzyme (ACE) a peptidase which catalyzes the formation of angiotensin II from angiotensin I. See also **ACE**.
angiotensinase [*an"je-o-ten'sin-ās*] any of a group of peptidases in plasma and tissues that inactivate angiotensin.
angiotensinogen [*an"je-o-ten-sin'o-jen*] a serum α_2-globulin secreted in the liver which, on hydrolysis by renin, gives rise to angiotensin.
angiotomy [*an"je-ot'ə-me*] incision of a blood vessel or lymphatic channel.
angiotonic [*an"je-o-ton'ik*] increasing vascular tension.
angiotribe a strong forceps for crushing tissue containing an artery, for the purpose of checking hemorrhage. See also **Fergusson angiotribe**.
angiotripsy hemostasis by means of an angiotribe.
angiotrophic [*an"je-o-tro'fik*] vasotrophic.
angitis [*an-ji'tis*] see **angiitis**.
angle [*ang'gəl*] the space or figure formed by two diverging lines, measured as the number of degrees one would have to be moved to coincide with the other.
cardiodiaphragmatic a. that formed by the junction of the shadows of the heart and diaphragm in radiographs.
costovertebral a. the angle formed on either side of the vertebral column between the last rib and the lumbar vertebrae.
drainage a., filtration a. see iridocorneal angle (below).
glenoid a. the angle of the scapula at the glenoid cavity, or ventral end, of the bone. The cranial and caudal angles are at the dorsal border of the scapula.
a. of inclination see **cervicofemoral angle**.
iridocorneal a. the angle between the iris and cornea at the periphery of the anterior chamber of the eye, through which the aqueous humor exits the eye. Called also anterior chamber, drainage, or filtration angle.
a. of jaw the junction of the ventral and caudal borders of the lower jaw.
nasofrontal a. see **stop**.
oral lip a. angle of union of the oral lips. Called also commissura labiorum.
sole a. the angle formed by the inflection of the wall of the hoof to form the bars on the sole of the horse's foot. Called also angulus soleae medialis, lateralis.
angleberry see **papilloma**.
Anglo-Arab light horse produced by Arab-Thoroughbred first cross. Also later crosses and breeds derived from such crossbreeding.
Anglo-Nubian English breed of dairy goat. Mostly all black, but may be any color. Characterized by prominent Roman nose and large drooped ears. Called also Nubian (USA).
Angora the ancient name of Ankara, Turkey, which has been given to particular breeds in several animal species probably originally to a longhaired cat that was believed to originate in Turkey, and later to the other species because of their long coat.
A. cat see **Turkish Angora**.
A. goat a horned, white variety of *Capra hircus,* the domestic and wild goats. Has a long silky haircoat of great commercial value as mohair.
A. rabbit a type of rabbit, bred fir its long, silky wool with tufts on the ears and feet. The recognized breeds include English Angora, French Angora, Giant Angora and Satin Angora.
angry cat posture a description sometimes used in reference to cats suffering from **hypervitaminosis** A that crouch with low, rigid extension of the head and neck, arched back and tail sweeping the ground.
angstrom (Å) [*ang'strəm*] a non-SI unit of length equal to 10^{-10} meter or 0.1 nanometer.
Anguilla genus of farmed eels in the family Anguillidae; includes *A. anguilla* (European eel), *A. japonica* (Japanese eel).

A-47: Anglo-Arab horse. From Sambraus HH, Livestock Breeds. Mosby, 1992.

A-48: Angora goat. From Sambraus HH, Livestock Breeds. Mosby, 1992.

VetBooks.ir

Anguillicola flukes of the swim bladder of eels; cause devastating losses in eels in Europe. Includes *A. australiensis*, *A. crassus* and *A. novaezeelandiae*.

Anguina lolii a nematode that parasitizes grass seedheads and converts the seed into a gall. A toxin is produced when *Clavibacter toxicus* (*Corynebacterium raythi*) is present. The clinical effects are principally nervous ones especially incoordination, convulsions and death. The grasses susceptible to the worm are annual or Wimmera ryegrass (*Lolium rigidum*) and Chewing's fescue (*Festuca nigrescens* (*F. rubra commutata*)). Called also *Anguina agrostis*, *A. funesta*.

angular zieria [*ang'gu-lər*] ***Zieria laevigata***.

angulation [*ang"gu-la'shən*] 1. the formation of a sharp obstructive angle as in the intestine, the ureter or similar tubes. 2. in conformation, used to describe angles between long bones at joints, especially shoulder, stifle and hock.

angulus [*ang'gu-ləs*] pl. *anguli* [L.] angle; formal name used in names of anatomical structures or landmarks.

a. soleae see sole **angle**.

Angus see **Aberdeen Angus**, a breed of beef cattle.

anhidrosis [*an"hĭ-dro'sis*] absence of sweating. The disease is common in tropical climates in imported and native horses and seriously interferes with the racing calendar and other horse activities. Affected animals show respiratory distress even at rest, absence of sweating at times when all of the others in the group are sweating heavily; they are quite unable to race. Associated with failure of sweat glands to respond to epinephrine (adrenaline). Disease is akin to anhidrotic asthenia of humans. Called also puff disease, dry coat syndrome.

anhidrotic [*an"hĭ-drot'ik*] 1. checking the flow of sweat. 2. an agent that suppresses perspiration.

a. asthenia weight loss, dehydration and lassitude in animals introduced to tropical climates from a temperate area.

anhydrase [*an-hi'drās*] an enzyme that catalyzes the removal of water from a compound.

carbonic a. a zinc-containing enzyme that catalyzes the decomposition of carbonic acid into carbon dioxide and water and the reverse reaction, facilitating transfer of carbon dioxide from tissues to blood and from blood to alveolar air. See also **carbonic anhydrase**.

anhydration the condition of not being hydrated.

anhydremia [*an"hi-dre'me-ə*] diminution of the fluid content of the blood. See also **dehydration**.

anhydride [*an-hi'drid*] a compound derived from an acid by removal of a molecule of water.

anhydrosis see **anhidrosis**.

anhydrous [*an-hi'drəs*] containing no water.

Anichkov cell [*ah-nich'kof*] see **Anitschkow cell**.

anideus [*ə-nid'e-əs*] a parasitic fetus consisting of a shapeless mass of flesh.

anidrosis [*an"ĭ-dro'sis*] see **anhidrosis**.

anileridine [*an"ĭ-ler'ĭ-dēn*] an opioid used as an analgesic or sedative.

animal [*an'ĭ-məl*] 1. a living organism having sensation and the power of voluntary movement and requiring for its existence oxygen and organic food. 2. of or pertaining to such an organism.

a. act a performance of animals where these animals are trained to perform some behavior or action or are part of a show, performance, or exhibition. See also **performing animals**.

a. boarding establishments commercial places at which food and accommodation are provided for temporary animal residents at a daily or weekly tariff. In some locations, they are required to be registered by a local government authority so that the premises can be inspected to ensure that the services provided avoid misconduct in terms of animal abuse or cruelty. See also **boarding kennels**.

a. breeds see under species and names of individual breeds.

a. capture may be by physical means using trap cages or corrals, nets or other devices, or by the use of chemical restraint. Immobilizing agents are injected into the animal by the use of syringes on long poles, or fired as projectiles from guns using compressed gases or explosive devices as propellants, or from crossbows. The constant problem is the avoidance of fatal capture **myopathy** or exhaustion.

a. clinics conduct of an animal clinic per se by non-veterinarians would not be an offense under most veterinary statutes but conduct of veterinary practice in the premises by unregistered persons would be.

control a. an untreated animal otherwise identical in all respects to one that is used for purposes of experiment; used for checking results of treatment.

a. facilitated therapy the utilization of animals, usually companion pets, in the treatment or management of human problems, usually physical handicaps or psychiatric disorders. Acceptance of this form of therapy has widened in recent years and there are many examples of recent and current programs based on placement of animals in private homes or institutions such as prisons, nursing homes and hospitals. Although the benefits derived are difficult to assess, there is general agreement that morale and motivation of patients or inmates is improved as a result of these programs. Guide dogs for the blind, hearing dogs and horseback riding for the disabled are also sometimes included in this category.

a. feed food materials for animal consumption.

a. fight injuries encompass the wide variety of damage that can be done by teeth, horns, claws and hooves, usually complicated by infection.

a. food food for humans of animal origin or containing materials of animal origin. See also animal feed (above).

a. guardian a term proposed by animal rights activists to replace 'animal owner'.

a. health insurance comparable to medical insurance in humans. The owner pays a premium in return for disease prevention and health maintenance services at reduced rates. Sometimes used to provide these services to an animal population in a country or state, e.g. Israel, Quebec.

a. health technician person other than a veterinarian trained in animal health techniques and bearing accredited qualifications. See also **veterinary** technician.

a. improvement improvement in production efficiency by genetic means, principally by selection and cross-breeding, to a less extent by inbreeding, all facilitated by artificial insemination and embryo transfer.

a. insurance includes insurance against loss by death as a financial asset or against loss of function, especially with respect to reproduction in the case of a male animal. See also animal health insurance (above).

a. liberation a group of animal lovers with activist proclivities who oppose domination of animals by humans. In particular, the movement opposes animal experimentation and close confinement.

a. medicines must be labeled as being for animal use only. Their manufacture and sale is controlled by legislation in most countries. The objective is to protect the human population and the subject animals also. See also **Veterinary Medicines Act**

a. models of human disease diseases of animals which are suitable models for diseases which occur in humans; often used for experimental studies.

a. nurses training programs lasting usually for two years of full-time study are available in most countries for aspiring animal nurses. The term veterinary nurse or veterinary technician is used in some countries but avoided in others because of the confusion that it might cause in the minds of the public about who is qualified to do what. In countries where this term is used, animal nurses are qualified to assist veterinarians to perform **acts of veterinary science**. See also **veterinary** technicians.

a. nursing auxiliaries see animal nurses (above).

a. oil lard, whale oil, wool fat.

performing a. see **performing animals**.

a. pound see animal shelter (below).

a. protein protein for animal feed derived from abattoirs, meat-packing plants, fish processors, dairy product manufacturers.

a. protein factor (APF) a term previously used for an unknown factor present in feeds of animal origin and necessary for growth in swine and poultry. Now known to be vitamin B_{12}.

a. rights a commonly held view is that animals have rights in much the same way as people do. There is no legal support for that view, other than that embodied in legislation dealing with matters of abuse.

a. sanctuary an animal shelter that has the ability and funding to allow animals to live out their natural lives.

a. shelter accommodation provided for and to maintain custody of discarded and unwanted pets, usually provided by animal welfare societies or local government authorities. An unpleasant

VetBooks.ir

A

corollary of this system is the euthanizing of large numbers of dogs and cats because the re-homing rates generally fail to meet the demand and the amount of accommodation is finite. However, *no kill* shelters claim to not euthanize any animals they accept. Called also animal pound.

a. technician a person trained in the care of animals including feeding, breeding, housing, training, use, health maintenance. Oriented towards healthy animals in groups or institutions with a particular involvement with laboratory animals. See also animal nurses (above) who are oriented more towards sick animals.

a. use comparable to occupation in humans. Classifications include beef cattle, dairy cattle, dairy or milk goats, fiber goats, wool sheep, mutton or meat sheep, pleasure horse, draft horse, event horse, cattle dogs, companion dogs and so on.

a. welfare the avoidance of abuse and exploitation of animals. A definition of minimal housing requirements given in the **Brambell** report in the UK in 1965 stated that all farm animals should have the freedom to stand up, lie down, turn around, groom themselves and stretch their limbs. These became known as the Five Freedoms and have since been expanded to be: Freedom from thirst, hunger and malnutrition - by ready access to fresh water and a diet to maintain full health and vigor; Freedom from discomfort - by providing a suitable environment including shelter and a comfortable resting area; Freedom from pain, injury and disease - by prevention or rapid diagnosis and treatment; Freedom to express normal behavior - by providing sufficient space, proper facilities and company of the animal's own kind; Freedom from fear and distress - by ensuring conditions that avoid mental suffering. A code of practice, aimed at owners and custodians, is necessary for each animal species. Proper application of the principles of animal welfare includes the continuous surveillance of the environment that human beings provide for animals that are in their care, and the promotion of what are considered by the community to be adequate rewards to the animals for the contribution that they make to the physical and psychological well-being of humans. A more complex problem, which is still to be resolved, is that of infringement of animal rights in law.

a. welfare codes of practice rules for the care of animals which set out what is expected by the local community of persons who have animals in their care. Not a legal document but likely to be used as a guide by the courts. They specify feeding, housing, surgical alteration, transport and so on. See also **code** of practice/conduct.

Animal and Plant Health Inspection Service (APHIS) an agency of the US Department of Agriculture. Has the primary responsibility for protecting and promoting agricultural health, administering the Animal Welfare Act, regulating the import and export of animals, animal products, and biologicals, and carrying out wildlife damage management activities.

Animal Health Australia a non-profit organization of government and key livestock industries overseeing national animal health service programs. Previously called Australian Animal Health Council.

Animal Health Trust (AHT) a charitable organization in the UK providing specialist veterinary clinical, diagnostic and surgical services for dogs, cats and horses. One of its objectives is to contribute to the advancement of veterinary teaching and practice through research and postgraduate education in a research environment.

animal husbandry the methods employed in keeping domestic animals in such a way as to avoid their abuse but so as to provide food, fiber, entertainment and company at levels described as love, companionship, physical guidance, protection, shepherding. In many instances the overriding constraint is that the maintenance system must be cost-effective so as to provide an occupation for the owner. In other circumstances the rewards are less tangible and come within the ambit of emotional gratification or psychological dependence. In more pragmatic terms the discipline includes nutrition, genetics and breeding, housing, handling facilities and techniques, hygiene, sanitation, health maintenance and disease prevention, marketing, preparation for contests, physical and psychological training, culling, management in times of drought or other civil disaster, use of animal experiments and codes of practice for the management and transport of various classes of animals.

a. h. advisors a profession which supplies advice to animal owners on matters of husbandry.

Animal Legal Defense Fund (ALDF) a group of attorneys and supporters who pursue legal means to promote the welfare of animals.

Animal Liberation Front (ALF) an anonymous group of animal rights activists who conduct illegal and often violent acts, such as the destruction of commercial and academic laboratories, in the furtherance of their views on animal rights. Initiated in Great Britian, but ALF activists exist in many other countries. In the USA, it is an FBI-certified domestic terrorist organization.

Animal Medicinal Drug Use Clarification Act (AMDUCA) of 1994 (USA) defines the use in an animal of any approved new animal drug or approved new human drug by or on the lawful order of a licensed veterinarian within the context of a valid veterinary–client–patient relationship. Its purpose was to establish conditions for extralabel use or intended extralabel use in animals by or on the lawful order of licensed veterinarians of Food and Drug Administration approved new animal drugs and approved new human drugs. Such use is limited to treatment modalities when the health of an animal is threatened or suffering or death may result from failure to treat.

Animal Poison Control Center a 24 hour service of the SPCA in conjunction with the University of Illinois providing advice for animals exposed to veterinary poisons and drugs in the USA.

animal production the technology applied to the keeping of animals for profit. Includes feeding, breeding, housing and marketing. Of great importance is the making of the financial arrangements necessary to the successful carrying out of each enterprise in the light of the market conditions for the sale of the end products.

a. p. data includes numerous diverse factors that vary with farm enterprise, such as milk production, race times for distances, annual egg production weighted for age, clean wool yield, pig litter size, annual pigs weaned per sow. Includes raw data and analyses of indexes used as measures of performance and as targets in production systems.

a. p. systems include the categories of extensive, ranch, irrigation, dryfarming, intensive, factory farming, pastoral, feedlot, permanent housing, breeding establishments, fattening farms, flying herds.

animal starch see **glycogen**.

animal unit (AU) measure used in making comparisons of feed consumption and grazing. With dairy cattle the equivalent of one mature cow weighing approximately 1000 lb. With beef cattle most regulatory bodies assign an animal unit (AU) as one mature cow of approximately 1000 lb and a calf up to weaning, usually 6 months of age. Other types of stock are assigned based on size and consumption. For example, a mature bull is the equivalent of 1.3 AU, a yearling steer or heifer is 0.67 AU and a weaned calf is 0.5 AU, mature horse 1.25 AU, mature sheep 0.2 AU.

AU month the amount of forage needed by an 'animal unit' grazing for one month and is the area of land necessary to support an animal unit for one month grazing within the carrying capacity of the grazing under consideration. Obviously, this varies with the nature of the grazing. Used as a basis for permits and grazing fees for public lands.

Animal Welfare Information Center (AWIC) a branch of the National Agricultural Library in the US Department of Agriculture. It provides reference services related to the welfare of animals and use of animals in research.

anion [*an'i-on*] an ion carrying a negative charge. In serum and in calculation of **anion gap**, the measured major anions are Cl^- and HCO_3^-; the minor anions, (usually unmeasured) include proteins, organic ions, such as lactic acid, pyruvic acid and ketoacids, and inorganic ions, such as SO_4 and PO_4.

a.-exchange resin see **ion-exchange resin**.

a. exchanger 1 (AE1) a erythrocyte transmembrane protein, previously called band 3. See hereditary **spherocytosis**.

anion gap [*an'i-on gap*] method used to evaluate a patient's acid–base status; the calculation is based on subtracting the sum of measured major serum anions ($Cl^- + HCO_3^-$) from the sum of measured major serum cations ($Na^+ + K^+$). Anion gap = ($Na^+ + K^+$) - ($Cl^- + HCO_3^-$). The difference (gap) is equivalent to the difference between other (unmeasured) anions (proteins, organic ions,

VetBooks.ir

such as lactic acid, pyruvic acid and ketoacids, and inorganic ions, such as SO_4 and PO_4), and other (unmeasured) cations (Ca^{2+} and Mg^{2+}). Significant departure from the normal level of difference indicates acid–base disturbance. An increased anion gap occurs with metabolic acidoses, while a decreased anion gap is found with hypoalbuminemia, hypocalcemia or hypomagnesemia.

aniridia [*an"i-rid'e-ə*] congenital absence of the iris. Strictly defined, should be complete absence but often a vestigial remnant is identified. May be associated with multiple ocular anomalies and can cause visual impairment ranging to blindness. Occurs sporadically in many species.

anisakiasis [*an"i-sə-ki'ə-sis*] the disease in humans caused by infestation with one of the worms of the genus *Anisakis*. See also ***Phocanema***, ***Terranova*** and ***Contracaecum***.

Anisakidae [*an"i-sak'i-de*] a family of nematode parasites of marine mammals, fish, birds, reptiles and, by accidental infestation, humans. See ***Anisakis***, ***Phocanema***, ***Terranova*** and ***Contracaecum***.

Anisakis [*an"i-sa'kis*] a genus of nematodes that parasitize the stomachs of marine mammals; found most commonly in wild fish, rarely in cultured fish. Larval stages can cause disease in humans.

anise [*an'is*] dried seeds of the plant *Pimpinella anisum* of the family Umbelliferae. Anise oil is extracted and used as a flavoring, as a carminative and in broiler feeding as an appetizer. Has an attraction for animals and sometimes used as a decoy in traps. See also **aniseed**.

aniseed aromatic seed sometimes observed as a taint in meat. The taste is due to essential oils in the aniseed plant. See also **anise**.

anis(o)- word element. [Gr.] *unequal*.

anisochromatic [*an-i"so-kro-mat'ik*] not of the same color throughout.

anisocoria [*an-i"so-kor'e-ə*] unequal pupil size between left and right eyes (compare with **dyscoria**).

anisocytosis [*an-i"so-si-to'sis*] the presence in the blood of erythrocytes of varying size; may be due to the presence of macrocytes, microcytes or both. Occurs most commonly in regenerative responses with accelerated erythropoiesis and increased numbers of immature erythrocytes in circulation. Normal in some species, especially cattle.

anisogamy [*an"i-sog'ə-me*] sexual conjugation in which the gametes differ in structure and size.

anisognathism occlusion in which the width between maxillary teeth is wider than that between the mandibular teeth; normal in many species. See also narrow **base**.

anisokaryosis [*an-i"so-kar"e-o'sis*] variation in the size of the nuclei of cells.

anisomastia [*an-i"so-mas'te-ə*] inequality in the size of the mammary glands.

anisopiesis [*an-i"so-pi-e'sis*] difference in blood pressure recorded in corresponding arteries on the right and left sides of the body.

anisosthenic [*an-i"sos-then'ik*] not having equal power; said of muscles.

anisotonic [*an-i"so-ton'ik*] 1. varying in tonicity or tension. 2. having different osmotic pressure; not isotonic.

anisotropic [*an-i"so-tro'pik*] 1. having unlike properties in different directions. 2. doubly refracting, or having a double polarizing power.

anisotropine methylbromide [*an-i"so-tro'pēn*] a muscarinic antagonist and antispasmodic drug which produces relaxation of visceral smooth muscle, and is used as a spasmolytic in various gastrointestinal disorders. Largely superseded by other drugs. Called also octatropine (INN).

A-49: Anisocoria in a cat from granulomatous changes in the central nervous system caused by feline infectious peritonitis (FIP). From August JR, Consultations in Feline Internal Medicine, Volume 6, 6th Edition. Saunders, 2009.

anisotropy [*an"i-sot'rə-pe*] the quality of being anisotropic.

anisuria [*an"i-su're-ə*] alternating oliguria and polyuria.

Anitschkow cell large mononuclear cells with an undulating, ribbon-like formation of nuclear chromatin. These 'caterpillar cells' are found in myocardium and thought to be macrophages or attempts at myofiber regeneration. Called also Anitschkow myocytes.

ankle [*ang'kəl*] a human anatomical term often applied to dogs when referring to the hock joint.

ankyl(o)- word element. [Gr.] *bent, crooked, in the form of a loop, adhesion, fixed*.

ankyloblepharon [*ang"kə-lo-blef'ə-ron*] fusion of the eyelids to each other along the lid margins.
- **physiologic a.** normal fusion of eyelids in newborn of some species, lasting about 10 days in puppies and kittens.

ankylocheilia [*ang"kə-lo-ki'le-ə*] adhesion of the lips to each other.

ankyloglossia [*ang"kə-lo-glos'e-ə*] tongue-tie; abnormal shortness of the frenulum of the tongue, resulting in limitation of its motion.
- **a. superior** extensive adhesion of the tongue to the palate.

ankylopoietic [*ang"kə-lo-poi-et'ik*] producing ankylosis.

ankylosed [*ang'kə-lōzd*] affected with ankylosis.

ankylosing caused by or emanating from fixation of the joint.
- **a. spondylitis** see **spondylitis**.
- **a. spondylosis** see **spondylosis**.

ankylosis [*ang"kə-lo'sis*] abnormal immobility and consolidation of a joint. Ankylosis may be caused by destruction of the membranes that line the joint or by faulty bone structure. It is most often a result of chronic arthritis, in which the affected joint tends to assume the least painful position and may become more or less permanently fixed in it. Artificial ankylosis (arthrodesis), locking of a joint by surgical operation, is sometimes done in treatment of a severe joint condition.
- **bony a.** union of the bones of a joint by proliferation of bone cells, resulting in complete immobility.
- **extracapsular a.** that caused by rigidity of surrounding parts.
- **false a., fibrous a.** reduced joint mobility due to proliferation of fibrous tissue.
- **inherited multiple a.** calves are affected at birth and cause fetal dystocia. The legs are bent and fixed in flexion, and there is some deformity of the spine. In Charolais cattle there is a combination of ankylosis and cleft palate.
- **intracapsular a.** that caused by rigidity of structures within the joint.
- **spontaneous a.** occurs in the intertarsal and tarsometatarsal joints of horses. Called also bone spavin.
- **spurious a.** extracapsular ankylosis.
- **stapedial a.** fixation of the footplate of the stapes in otosclerosis, causing a conductive hearing loss.
- **surgical a.** performed to immobilize a painful joint or to correct excessive mobility, e.g. carpal ankylosis carried out on large birds as a deflighting procedure.
- **true a.** bony ankylosis.

ankylosis–cleft palate combined defect [*ang"kə-lo'sis*] an inherited defect mainly in Charolais cattle.

ankylotia closure of the external meatus of the ear.

ankyrin [*ang'kə-rin*] an erythrocyte cytoskeletal protein; deficiency is associated with spherocytosis.

anlage [*ahn-lah'gə*] pl. *anlagen* [Ger.] primordium.

annectent [*ə-nek'tənt*] connecting; joining together.

annelid [*an'ə-lid*] a member of the phylum **Annelida**.

Annelida [*ə-nel'i-də*] a phylum of metazoan invertebrates, the segmented worms, including earthworms and leeches.

annelloconidium conidia that develop from extruded end of a conidiophore as by the fungi *Scopulariopsis* spp.

annual conducted once each year.
- **a. beard grass** ***Polypogon monspeliensis***.
- **a. cumulative stress** the accumulated stresses for the year from all sources including geographic, climatic, predation, pollution and the like.
- **a. goldeneye** ***Viguiera annua***.
- **a. livestock calendar** a calendar setting out the cardinal events and tasks for the year for the relevant farming enterprise, e.g. a beef breeding calendar.

annular [*an'u-lər*] ring-shaped.
- **a. vessel of eye** a loop of the hyaloid artery which encircles the margin of the optic cup during development of the eye.

VetBooks.ir

A

annulate lamellae structures identical to cell membranes, occurring singly or stacked in groups, in the cellular cytoplasm. Their function is unknown.

annuloplasty [*an'u-lo-plas"te*] plastic repair of a cardiac valve.

annulorrhaphy [*an"u-lor'ə-fe*] suture of a hernial ring.

annulospiral endings afferent nerve endings innervating the equators of muscle fibers.

annulus [*an'u-ləs*] pl. (*annuli, anuli*) [L.] a small ring or encircling structure. The preferred anatomical spelling is **anulus**.

ansamycins a class of antimicrobials with activity against bacteria, bacteriophages and some viruses. Includes **rifamycins**, which have activity against mycobacteria.

anoa both the lowland anoa (*Bubalus depressicornis*) and the mountain anoa (*B. quarlesi*) are small, 3 ft high buffalo native to the islands of Indonesia. Called also dwarf buffalo.

Anocentor [*a"no-sen'tər*] see ***Dermacentor***.

anococcygeal [*a"no-kok-sij'e-əl*] pertaining to the anus and coccyx.

anode [*an'ōd*] the positive electrode or pole to which negative ions are attracted. The stationary anode in an X-ray tube is a solid bar of copper with an inset of tungsten on the face of the bar opposite the cathode filament. The tungsten target has a high melting point to withstand the intense heat of the X-ray beam—the copper conducts the heat away.

a.–film distance see focal-film **distance**.

rotating a. an X-ray tube in which the anode rotates when X-rays are being produced. This means that there is a larger effective target surface of the anode which can be available to generate X-rays.

stationary a. a non-rotating anode in an X-ray tube so that the target surface is comparatively small.

anodontia [*an"o-don'shə*] congenital absence of some or all of the teeth. See also **pseudoanodontia**.

partial a. hypodontia.

anodyne [*an'o-dīn*] 1. relieving pain. 2. a medicine that eases pain.

anodynia freedom from pain.

anoestrus anestrus.

anogenital [*an'o- jen'ĭ-təl*] relating to the region of the anus and the genitalia, especially the external genitalia.

a. cleft congenital anomaly in which there is a common opening for anus and genital tract, as in a cloaca.

a. distance physical distance between anus and the genitalia (base of the genital tubercle in the fetus); used to discriminate between the sexes in the neonates in some species, especially cats and guinea pigs.

a. papilloma see anogenital warts (below).

a. raphe line of union between the two halves of the perineum.

a. warts papillomas transmitted venereally. Caused by the papilloma virus. Esthetically unattractive but generally cause little inconvenience.

anomalad [*ə-nom'ə-lad*] a term proposed to designate a single, localized anomaly occurring during morphogenesis, together with the pattern of subsequent morphological defects that stem from it.

anomalous atrioventricular excitation [*ə-nom'ə-ləs*] **Wolff–Parkinson–White syndrome.**

anomaly [*ə-nom'ə-le*] marked deviation from normal. For specific anomalies see under anatomical location.

developmental a. absence, deformity or excess of body parts as the result of faulty development of the embryo.

lethal a. a defect which is incompatible with life and leads to the natural death or euthanasia on humane grounds of the neonate concerned.

sex-limited a. limited in its occurrence by the sex of the neonate, e.g. cryptorchidism.

sex-linked a. the gene responsible for the defect is located on the X or the Y chromosome, the sex determinative ones.

anomer [*an'o-mər*] one of two stereoisomers (designated α or β) of the furanose or pyranose form of a sugar, e.g. α-D-glucose. α-forms have −OH group of the anomeric carbon below the plane of the furanose or pyranose ring.

anonychia [*an"o-nik'e-ə*] absence of the nails.

anophagia see **aphagia**.

Anopheles [*ə-nof'ə-lēz*] a genus of the family Culicidae of mosquitoes which may carry microfilariae of filarioid worms.

anopheline [*ə-nof'ə-lēn*] pertaining to the genus ***Anopheles***; mosquitoes.

Anophryocephalus ochotensis a tapeworm of the Californian sea lion.

anophthalmia, anophthalmos [*an"of-thal'me-ə*] a developmental anomaly marked by complete absence of one or both eyes. Can be defined clinically or more accurately histologically, since there is often embryological evidence of ophthalmic components. Occurs most commonly in pigs and sheep.

anoplasty [*a'no-plas"te*] plastic surgical repair of the anus or anal canal.

Anoplocephala [*an"op-lo-sef'ə-lə*] a genus of the tapeworm of the family Anoplocephalidae. Includes *A. magna* and *A. perfoliata* (equids).

Anoplocephaloides a genus of the tapeworm family Anoplocephalidae. Includes *A. mammillana* found in the small intestine of the horse. Heavy infestations may cause unthriftiness.

Anoplotaenia dasyuri a metacestode found in the heart, lungs and skeletal muscles of the Australian marsupials, wallabies and pademelons; adults found in the intestine of Tasmanian devils and quolls.

Anoplura [*an"o-ploo'rə*] suborder of sucking lice; includes *Haematopinus*, *Linognathus* and *Solenoptes* spp.

anorchid [*an-or'kid*] an uncastrated male animal without testes.

unilateral a. an animal with one testis missing.

anorchidism, anorchism [*an-or'kĭ-diz"əm*] the state of being an anorchid.

anorectal [*a"no-rek'təl*] pertaining to, emanating from or affecting the **anorectum**.

a. abscess see **perianal** fistula.

a. anastomosis surgical resection of rectal neoplasms may require removal of a bowel segment and subsequent union of rectum to skin.

a. foreign body apart from objects that are maliciously inserted, mainly occur in dogs and cats as foreign material ingested and, having successfully transited the intestine, become lodged or cause pain in the rectum or at the anal sphincter.

a. neoplasia benign and malignant tumors of the perianal regiion and terminal rectum.

a. prolapse see anal **prolapse**.

a. stricture usually secondary to surgical trauma, foreign body, chronic constipation, neoplasia or inflammatory disease in the area. Causes straining, dyschezia, hematochezia, and constipation.

anorectic [*an"o-rek'tik*] 1. pertaining to anorexia. 2. an agent that diminishes the appetite for food.

anorectum [*a"no-rek'təm*] the terminal portion of the digestive tract, including the entire anal canal and the distal few centimeters of the rectum.

anorexia [*an"o-rek'se-ə*] lack or loss of appetite for food. Appetite is psychological, dependent on memory and associations, as compared with hunger, which is physiologically aroused by the body's need for food. Anorexia can be brought about by unattractive food, surroundings, or the presence of other animals. The existence of appetite in animals is assumed. For strictest accuracy the words aphagia, anophagia, etc. should be used but common usage includes anorexia, hyperorexia, etc. Called also inappetence.

anorexia–cachexia complex [*an"o-rek'se-ə kə-kek'se-ə*] seen in association with advanced neoplasia; caused by reduced caloric intake, hypermetabolism and altered metabolism of glucose and protein synthesis.

anorexic [*an"o-rek'sik*] anorectic.

anorexigenic [*an"o-rek"sĭ-jen'ik*] 1. producing anorexia. 2. an agent that diminishes or controls the appetite.

anorthosis absence of penile erectility.

anoscope [*a'nə-skōp*] a speculum or endoscope used to assist the direct visual examination of the anal canal.

anoscopy [*a-nos'kə-pe*] examination of the anal canal with an anoscope.

anosigmoidoscopy [*a"no-sig"moi-dos'kə-pe*] endoscopic examination of the anus and distal colon.

anosmatic [*an"oz-mat'ik*] anosmic.

anosmia [*an-oz'me-ə*] absence of the sense of smell; characteristic of lesions of the olfactory lobe, peduncle or mucosa. Such deficiencies are difficult to assess in animals, except perhaps in scent hounds and detector dogs.

anosmic [*an-oz'mik*] having no sense of smell.

anostosis [*an"os-to'sis*] defective formation of bone.

anotia [*an-o'shə*] congenital absence of one or both external ears.

ANOVA see analysis of **variance**.

anovaginal [*a"no-vaj'ĭ-nəl*] pertaining to or communicating with the anus and vagina.
anovarism [*an-o'vər-iz-əm*] absence of the ovaries.
anovesical [*a"no-ves'ĭ-kəl*] pertaining to the anus and bladder.
anovular [*an-ov'u-lər*] not associated with ovulation.
anovulation [*an"ov-u-la'shən*] failure to ovulate. The animal may show signs of estrus but the ovum is not shed and fertilization does not take place. This sequence of events can be observed by transrectal (per rectum) examination in large species and by peritoneoscopy in smaller species.
anovulatory [*an-ov'u-lə-tor"e*] pertaining to anovulation.
a. folicle a large follicle that fails to ovulate and continues to grow; often seen in mares and camelids. These follicles have very characteristic ultrasonographic appearance. They may bleed within their cavity, forming anovulatory hemorrhagic follicles. In mares, large anovulatory follicles are often seen during the period of transition to vernal anestrus.
a. follicular cyst see cystic **follicle**.
a. luteinized cyst the theca undergoes luteinization when the follicle fails to ovulate.
a. ovarian cysts see cystic **ovarian** disease.
anovulvar cleft see **anogenital** cleft.
anovulvitis see **ulcerative** dermatosis.
anoxemia lack of sufficient oxygen in the blood.
anoxia [*ə-nok'se-ə*] absence of oxygen in the tissues; often used interchangeably with *hypoxia* to mean a reduction of oxygen in body tissues below physiological concentrations. The condition is accompanied by deep respirations, cyanosis, increased pulse rate and impairment of coordination.
anemic a. reduction of oxygen in body tissues because of diminished oxygen-carrying capacity of the blood.
anoxic a. reduction of oxygen in body tissues due to interference with the oxygen supply.
histotoxic a. condition resulting from diminished ability of cells to utilize available oxygen.
stagnant a. condition due to interference with the flow of blood and its transport of oxygen.
ANP atrial natriuretic peptide.
Anredera cordifolia a poisonous plant of the family Basellaceae; causes diarrhea. Called also *Boussingaultia* spp., lamb's tail, Madeira vine.
Anrep phenomenon the increase in ventricular volume that results when aortic resistance is increased.
ansa [*an'sə*] pl. *ansae* [L.] a looplike structure or handle.
a. axillaris a loop between the musculocutaneous nerve and the median nerve.
a. cardiaca a loop of muscle that passes around the dorsal margin of the cardia of the stomach and which forms the margins of the reticular groove in ruminants. It is essential part in the closing mechanism of the cardia.
a. cervicalis a nerve loop attached to the hypoglossal nerve and to the first two or three cervical spinal nerves.
a. coli the loops of the colon including the distal, proximal and spiral loops.
a. distalis a loop of the colon of ruminants and pigs that succeeds the spiral colon.
a. of Henle Henle's loop.
a. hypoglossi ansa cervicalis.
a. lenticularis a loop of nerve fibers that connects the globus pallidus with parts of the thalamus and midbrain.
a. nervorum spinalium loops of spinal nerves joining the ventral spinal nerves.
a. peduncularis a complex grouping of nerve fibers connecting the amygdaloid nucleus, piriform area, and anterior hypothalamus, and various thalamic nuclei.
a. proximalis a loop of the colon of ruminants that precedes the spiral colon.
a. sigmoidea the s-shaped curve of the proximal duodenum as it passes over the visceral surface of the liver of the horse, ruminants and pig.
a. spiralis the double loop of colon made up of centripetal and centrifugal coils and a central flexure that run in a vertical plane in ruminants and in a snail-like coil in pigs.
a. subclavia the loop made by the cervical sympathetic trunk as it divides to pass on either side of the subclavian artery at the thoracic inlet.
Anser a genus of birds in the order Anseriformes.
A. anser domestic geese and wild geese.
anseriform, anserine said of birds; refers to ducks, geese, swans, members of the order Anseriformes.
Anserinae subfamily in the family Anatidae; includes geese.
anserine [*an'sər-īn*] see **anseriform**.
anserini see **anseriform**.
ant [*`ant*] ubiquitous insects, which, among other things, act as intermediate hosts for the trematode *Dicrocoelium dendriticum* and cestodes *Raillietina* spp.
a. bite conjunctivitis recorded in calves and recumbent animals attacked by fire ants (*Solenopsis invicta*).
ant bush [*ant bush*] ***Senna occidentalis***.
antacid [*ant-as'id*] 1. counteracting acidity. 2. an agent that counteracts or neutralizes acidity of the gastrointestinal tract. Substances that act as antacids include sodium bicarbonate, aluminum hydroxide gel, magnesium hydroxide, magnesium trisilicate, magnesium oxide and calcium carbonate.
antagonism [*an-tag'ə-niz"əm*] 1. opposition or contrariety between similar things, as between muscles, medicines or organisms, cf. **antibiosis**; the characteristic displayed by an **antagonist**. 2. epidemiologically speaking, the opposite of synergism. When the combined effects of two factors is smaller than the effect of any one of them.
antibiotic a. is said to occur when the antibiotic effect of a dual administration is less than the antibiotic efficiency of the most effective of the individual drugs. Chloramphenicol and tetracyclines are considered to be antagonists to penicillins and aminoglycosides but particular combinations do not necessarily have the same effect on all bacteria.
competitive a. the antagonism which blocks or reverses the effects of an agonist, provided that the antagonist is given at an appropriate dosage. The antagonism is completely reversible, and an increase in the biophasic concentration of the agonist will overcome the effect of the antagonist.
drug a. drug antagonists are drugs that compete for the available receptors. They may be noncompetitive and have no pharmacological effect of their own, or competitive in that they are capable of reversing or altering an effect already achieved.
noncompetitive a. is when the antagonist removes the receptor or its response potential from the system; this may be by preventing the agonist from producing its effect at a receptor site by irreversible change to the receptor or its capacity to respond. The antagonism is not reversible by increasing the concentration of the agonist.
antagonist [*an-tag'ə-nist*] 1. a muscle that counteracts the action of another muscle, its agonist. 2. a drug that binds to a cellular receptor for a hormone, neurotransmitter, or another drug blocking the action of that substance without producing any physiological effect itself. 3. a tooth in one jaw that articulates with one in the other jaw. See also **antagonism**.
antalgic [*ant-al'jik*] 1. counteracting or avoiding pain, as a posture or gait assumed so as to lessen pain. 2. analgesic.
Antarctophthirus a genus of the insect family Echinophthiriidae; lice which infest pinnipeds, e.g. sea lions. Includes *A. microchir*.
antarthritic [*ant"ahr-thrit'ik*] antiarthritic.
antazoline [*an-taz'o-lēn*] a histamine H_1-receptor antagonist, commonly used topically in eye and nose drops.
ante [L.] preposition, *before*.
ante- word element. [L.] *before* (in time or space).
ante cibum [*an'te si'bəm*] [L.] *before meals;* usually abbreviated a.c. in prescriptions, etc.
ante mortem [*an'te mor'təm*] [L.] *before death*. See **antemortem**.
anteater mammals in the suborder Vermilingua, native to Central and South America, whose diet consists of ants and termites. They vary in size, but all have long, tapered snouts, very long, sticky tongues and no teeth. Includes the giant anteater (*Myrmecophaga tridactyla*) silky anteater (*Cyclopes didactylus*) and tamanduas (*Tamandua* spp.). The **echidna** is often incorrectly called the spiny anteater.
antebrachial [*an'te bra'ke-əl*] pertaining to the forearm.
a. growth abnormalities premature closure of a physeal plate, usually caused by trauma, in one bone of the forearm, while growth continues in the other may result in uneven growth and often angular or rotational deformities.
antebrachiocarpal joint [*an'te bra'ke-əl-kahr'pəl joint*] see Table 11; pertaining to the joint between the forearm and carpus. Previously called proximal carpal or radiocarpal joint.

VetBooks.ir

VetBooks.ir

A

antebrachium [*an"te-bra'ke-əm*] the forearm. Although the terms arm and forearm do not have common clinical usage relating to animals they are accepted anatomical terms.

antecedent [*an"tĭ-se'dənt*] 1. a precursor. 2. in anmal behavior, a term used for conditions that influence operant behavior.

plasma thromboplastin a. (PTA) clotting factor XI; see plasma **thromboplastin** antecedent.

antechinus (*Antechinus*) very small (approximately 100 mm), carnivorous marsupials in the family Dasyuridae, native to Australia and Papua New Guinea. Males invest all their metabolic reserves into ensuring success in their first breeding season and die afterwards. Called also marsupial mouse.

antecubital [*an"te-ku'bĭ-təl*] situated in front of the cubitus, or elbow.

antecurvature a slight anteflexion.

antefebrile preceding fever.

anteflexion [*an-te-flek'shən*] the bending of an organ so that its top is thrust forward or ventrally.

antegrade [*an'tĭ-grād*] performed in the normal direction of flow.

antelope grass ***Echinochloa*** *pyramidalis*.

antemetic antiemetic.

antemortem [*an"te-mor'tem*] before death.

a. handling the management of animals about to be slaughtered for the period immediately prior to slaughter; includes transport, unloading, feeding, watering, housing. Animal welfare considerations are paramount.

a. inspection inspection of live animals prior to slaughter to ensure adherence to rules about cruelty, and to avoid putting sick or harassed animals into the meat packing plant and the slaughter chain. The objective is to avoid contamination of premises and meat by infective material.

antenatal [*an"te-na'təl*] before parturition. Called also prenatal, antepartal.

antenna [*an-ten'ə*] one of the appendages on the head of arthropods.

antepartal [*an"te-pahr'təl*] occurring before the young is born.

a. paralysis see antepartum **paralysis**.

a. recumbency inability to rise, without other signs, during the last one or two weeks of pregnancy is observed in cows and rarely other species. Thought to be due to pressure of fetus on peripheral nerve supply to hindlimbs. Cesarean section is the preferred and satisfactory treatment.

antepartum [*an"te-pahr'təm*] performed or occurring before parturition.

antephase the portion of interphase immediately preceding mitosis (or meiosis) when energy is being produced and stored for mitosis (or meiosis) and chromosome reproduction is taking place.

antepubic see **prepubic**.

antepyretic [*an"te-pi-ret'ik*] occurring before the stage of fever.

anterioposterior used to describe the view taken in X-rays where the entry of the X-ray beam is from anterior to posterior; in animals, limited to the limbs. Now referred to as **craniocaudal**. See also **dorsopalmar** and **dorsoplantar**.

anterior [*an-tēr'e-ər*] situated at or directed toward the front; opposite of posterior. In quadrupeds the use of the term is limited to parts of the head but is often used to mean cranially. In bipeds such as humans it is synonymous with ventral.

a. abdomen pain elicited pain in the anterior abdomen caused, in cattle, by reticulitis, hepatic or splenic abscess, abomasal ulcer and intestinal obstruction.

a. chamber the part of the eye between the cornea and the iris, filled with aqueous humor.

a. chamber angle see **iridocorneal** angle.

a. chamber-associated immune deviation a highly specialized, deviant systemic immune response to antigen presented directly to the anterior chamber of the eye; a primary contributor to ocular immune privilege, resulting in the emergence of CD8+ regulatory T cells that subsequently suppress Th1 and Th2-based immune inflammation.

a. cruciate ligament (ACL) see cranial (anterior) **cruciate** ligament.

a. functional stenosis achalasia of the reticulo-omasal sphincter causing ingesta to accumulate in the reticulorumen.

a. limiting membrane of the cornea is a combination of the basement membrane, a felted layer of fine collagen fibers; substantial only in primates.

a. pituitary see **adenohypophysis**.

a. pituitary hormones see **adenohypophysis**.

a. segment collective term for those parts of the eye anterior to the vitreous; consists of the lens, ciliary body, iris (and pupil), anterior chamber, cornea, anterior sclera, and conjunctiva. Compare with **posterior** segment.

a. station trypanosomes a section of the genus *Trypanosoma* in which the infectious stages accumulate in the mouthparts and salivary glands of the intermediate host so that the parasite is transmitted when the insect vector takes a blood meal. Called also section *Salivaria*. See also **posterior** station trypanosomes.

a. uveitis inflammation of the iris and ciliary body. Known also as iridocyclitis.

a. vena cava the cranial vena cava; see **vena** cava.

anterior-posterior anterioposterior. A term often used incorrectly in veterinary medicine for '*cranio-caudal*' when referring to the head or trunk, or for '*dorso-palmar*' when referring to the distal limbs.

antero- word element. [L.] *anterior, in front of*.

anterograde [*an'tər-o-grād"*] extending or moving forward.

anteroinferior [*an"tar-o-in-fēr'e-ər*] situated in front and below.

anterolateral [*an"tar-o-lat'ar-əl*] situated in front and to one side.

anteromedian [*an"tər-o-me'de-ən*] situated in front and on the midline.

anteroposterior [*an"tər-o-pos-tēr'e-ər*] see **craniocaudal**.

anterosuperior [*an"tər-o-soo-pēr'e-ər*] situated in front and above.

anteversion tipping forward of an organ or body part.

angle of a. formed by the long axis of the femoral neck and the intercondylar axis; related to the radiographic assessment of **hip** dysplasia.

anthelix [*ant'he-liks*] a low transverse ridge across the medial wall of the first part of the ear canal. The bend in the pinna of lop-eared dogs occurs distal to the anthelix.

anthelminthic [*ant"həl-min'thik*] anthelmintic.

anthelmintic [*ant"həl-min'tik*] 1. destructive to worms. 2. an agent destructive to worms. They are classified as **antinematodal** (nematicidal), **antitrematodal** (trematicidal), **anticestodal** (cesticidal).

a. poisoning see under individual anthelmintics.

a. resistance frequent dosing of animals, especially ruminants running on pasture, selectively retains worms with innate resistance to a particular anthelmintic. A population of resistant worms may result. The resistant worm population may be transmitted to other animals and farms. Side resistance to other compounds in the same chemical group may occur. This is observed in the benzimidazole group of compounds and in the levamisole-morantel group, the macrocyclic lactones and the salicylanilides (closantel).

anthelone E see **enterogastrone**.

Anthemis cotula [*an'thə-mis*] plant of the Asteraceae (Compositae) family of plants; reported to cause (1) hydrocyanic acid poisoning; (2) irritation to mucosae because of the presence of an acrid substance; (3) milk taint. Called also mayweed.

Anthericum erraticum ***Trachyandra*** *laxa*.

anthocyanins pigments associated with red, blue, and blue color of many fruits and flowers.

Anthoxanthum odoratum [*an"tho-zan'thəm*] a temperate zone grass which contains coumarin. Called also sweet vernal grass. Moldy hay made from the grass is likely to cause **dicoumarol** poisoning.

anthracene [*an'thrə-sēn*] a crystalline hydrocarbon, $C_{14}H_{10}$, from coal tar.

anthracic [*an-thras'ik*] pertaining to or resembling anthrax.

anthracoid [*an'thrə-koid*] resembling anthrax.

anthracosis [*an-thrə-ko'sis*] black deposits of carbon in the lung interstitium; most common in old dogs living in cities.

anthracycline [*an"thrə-si'klēn*] a class of antibiotics isolated from cultures of *Streptomyces peucetius*; it includes the antineoplastic agents daunomycin and doxorubicin. See also anthracycline **antibiotic**.

anthraquinone [*an"thrə-kwin'ōn*] a derivative of anthracene, a dyestuff. Its derivatives, found in aloes, cascara sagrada, senna and rhubarb, act as cathartics. See also **danthron**.

anthrax [*an'thraks*] a peracute disease of all animal species, caused by *Bacillus anthracis*, and characterized by septicemia and sudden death. The causative bacteria form long-living spores which maintain the disease on a farm for many years. Pastoral outbreaks are associated with periods of climatic extremes. Outbreaks are also associated with infected feedstuffs. Significant necropsy findings include exudation of dark, tarry blood from the body orifices, failure of the blood to clot, absence of rigor mortis and splenomegaly.

A dangerous zoonosis. Easily controlled by vaccination of livestock. A disease notifiable to the OIE (see Table 22).

alimentary a. infection resulting from the ingestion of animals dead of anthrax. Largely a human manifestation in developing countries. Called also Cumberland disease (Australia).

a. belt regions where anthrax is enzootic, where soil and climate favor persistence of the organism in soil and where routine efforts to control the disease are not sufficient. Outbreaks commonly follow climatic extremes of flood or drought.

cutaneous a. anthrax due to lodgment of the causative organisms in wounds or abrasions of the skin, producing a black crusted pustule on a broad zone of edema. A common form of the disease in humans.

inhalational a. see pulmonary anthrax (below).

intestinal a. see alimentary anthrax (above).

pulmonary a. infection of the respiratory tract resulting from inhalation of dust or animal hair containing spores of *Bacillus anthracis;* an occupational disease of humans usually affecting those who handle and sort wools and fleeces (woolsorters' disease).

anthrop(o)- word element. [Gr.] *human being*.

anthropobiology [*an"thrə-po-bi-ol'ə-je*] the biological study of humans and the anthropoid apes.

anthropocentric [*an"thrə-po-sen'trik*] with a human bias; considering humans to be the center of the universe.

anthropoid [*an'thrə-poid*] resembling humans; the anthropoid apes are tailless apes, including the chimpanzee, gibbon, gorilla and orangutan; members of the family Pongidae.

anthropomorphism [*an"thrə-po-mor'fiz-əm*] the tendency to attribute human characteristics to animals or inanimate objects.

anthroponoses diseases transmissible from human to human.

anthropophilic [*an"thrə-po-fil'ik*] preferring human beings to animals; said of certain mosquitoes, ticks and fungi.

anthropozoonosis a disease of either animals or humans that may be transmitted from one species to the other.

anthropozoophilic [*an"thrə-po-zo"o-fil'ik*] attracted to both human beings and animals; said of certain mosquitoes.

anti- word element. [Gr.] *counteracting, effective against*.

anti-invasion factor chondroplasts and chondrocytes secrete an anti-invasion factor.

antiabortifacient [*an"te-ə-bor"tĭ-fa'shənt*] an agent that prevents abortion or promotes successful gestation.

antiadrenergic [*an"te-ad"rə-nur'jik*] 1. a drug that binds to but does not activate adrenergic receptors. Includes **adrenergic** blocking agents, both alpha- and beta-blockers, and adrenergic neuron-blocking drugs and catecholamine depleting agents. 2. an antiadrenergic agent.

antiagglutinin [*an"te-ə-gloo'tĭ-nin*] a substance that opposes the action of an agglutinin.

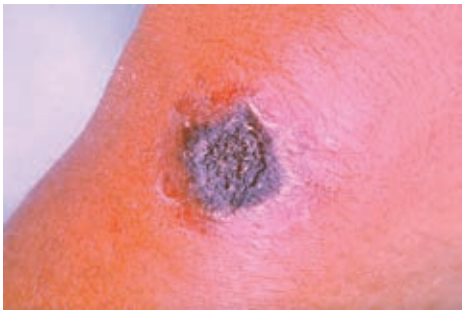
antiamebic [*an"te-ə-me'bik*] 1. destroying or suppressing the growth of amebae. 2. an agent that destroys or suppresses the growth of amebae.

antianaphylaxis [*an"te-an-ə-fə-lak'sis*] a condition in which the anaphylaxis reaction does not occur because of free antigens or an excess of circulating antibodies, particularly IgG to the sensitizing antigen in the blood; the state of desensitization to antigens.

antiandrogen [*an"te-an'drə-jən*] any substance capable of inhibiting the biological effects of androgenic hormones.

antianemic [*an"te-ə-ne'mik*] counteracting anemia.

a. drugs includes iron preparations, androgenic–anabolic steroids and vitamin–mineral mixtures.



A-50: Cutaneous anthrax in a human.
Courtesy of CDC/James H Steele.

antiantibody [*an"te-an'tĭ-bod"e*] a substance that counteracts the effect of an antibody.

antianxiety [*an"te-ang-zi'ə-te*] dispelling anxiety. The term *antianxiety agent* (called also an anxiolytic or minor tranquilizer) refers to a mild sedative, such as diazepam (Valium).

antiarrhythmic [*an"te-ə-rith'mik*] 1. preventing or alleviating cardiac arrhythmias. 2. an agent that prevents or alleviates cardiac arrhythmias.

a. drugs are classified according to their mechanism of action. *Class I* drugs (quinidine, procainamide, lidocaine/lignocaine) block sodium channels; *Class II* drugs (propranolol, atenolol) are β-adrenergic blockers; *Class III* drugs (amiodarone, bretyllium) prolong the refractory period; *Class IV* drugs (diltiazem, verapamil) block calcium channels.

antiarthritic [*an"te-ahr-thrit'ik*] 1. effective in treatment of arthritis. 2. an agent used in treatment of arthritis.

antibabesials drugs which are effective against protozoan parasites of the genus *Babesia*. Older drugs are trypan blue and quinuronium. Modern treatments are aromatic diamidines and carbanilides, such as imidocarb, amicarbalide, diminazene aceturate and phenamidine.

antibacterial [*an"te- an"ti-bak-tēr'e-əl*] 1. destroying or suppressing the growth or reproduction of bacteria. 2. an agent having such properties.

a. agents drugs that destroy or inhibit the growth of bacteria in concentrations that are safe for the host and can be used as chemotherapeutic agents to prevent or treat bacterial infections.

a. resistance the lack of susceptibility of specific bacterial strains to antibacterial agents. Can be innate or acquired.

a. sensitivity test see **antimicrobial** sensitivity test.

a. withdrawal time the period that an antibacterial agent must be withdrawn from use in an animal before the animal or its products can be marketed. Veterinarians who practice food animal medicine have a great responsibility to ensure that food of animal origin complies with pure food laws relating to their acceptable levels of drug residues. Drugs not registered for animal use should not be used and, for those that are, the legal withdrawal times must be observed.

a. withholding the period of time that an animal or its products must be withheld from human consumption after the use of an antibacterial agent in that animal has ceased.

antibechic [*an"te- an"ti-bek'ik*] 1. relieving cough. 2. an agent that relieves cough; antitussive.

antibiogram [*an"ti-bi-o-gram*] the pattern of in vitro susceptibilities of bacteria isolated to different antibiotics tested.

antibiosis [*an"te- an"ti-bi-o'sis*] an association between two populations of organisms that is detrimental to one of them, or between one organism and an antibiotic produced by another.

antibiotic [*an"te- an"ti-bi-ot'ik*] 1. destructive of life. 2. a chemical substance produced by a microorganism that has the capacity, in dilute solutions, to kill (biocidal activity) or inhibit the growth (biostatic activity) of other microorganisms. Antibiotics that are sufficiently nontoxic to the host are used as chemotherapeutic agents in the treatment of infectious diseases. See also **antimicrobial**. 3. used as feed additives to animals as growth promotants.

anthracycline a's a group of antibiotics which have a tetracycline ring structure substituted with the sugar daunosamine. Includes the antineoplastic drugs doxorubicin and daunorubicin.

antineoplastic a. see **antineoplastic**.

bactericidal a's. those that kill bacteria; includes penicillins, cephalosporins, fluoroquinolones, vancomycin.

bacteriostatic a's. those that suppress the growth or reproduction of bacteria; includes tetracyclines, sulphonamides, chloramphenicol, and macrolides.

broad-spectrum a. one that is effective against a wide range of bacteria.

a. detection on-farm and prepackaged laboratory tests available for testing farm products and animal tissues and fluids for antibiotic residues.

a. feed additives see **food** additives.

first generation a. one produced as a natural product, e.g. penicillin G. See second generation antibiotic (below).

a. food preservation is a satisfactory technique but very strictly controlled because of the problem of residues in the food. Used mostly for the preservation of fish.

VetBooks.ir

VetBooks.ir

A

a.-induced diarrhea see pseudomembranous colitis, acute idiopathic **diarrhea** of the horse.

a. residue in food in human food of animal origin is a seriously regarded pollution in public health surveillance. The residues may arise from non-compliance with label dose or label use, especially with systemic administration, or even after absorption from a local site such as the uterus, but the most serious contamination arises from milk from quarters that have been treated for mastitis. It is essential for the safety of the human population, the financial well-being of the farmer and the professional reputation of the veterinarian that label use and **antibacterial** withdrawal times are observed.

a. resistance see **antimicrobial** resistance.

second generation a. produced by manipulation of the molecular structure of a first generation antibiotic (see above) so that the metabolism and pharmacodynamics of the original compound are significantly altered.

a. sensitivity test see **antimicrobial** sensitivity test.

a. therapy influenced by toxicity, the range of bacteria against which they are effective, their capacity to stimulate resistance and whether they are bacteriostatic or bactericidal in their effects. Selection of the most suitable antibiotic to suit a particular circumstance may be guided by an **antimicrobial** sensitivity test, knowledge of the infection present and the price of the drug. In many instances, because of lack of knowledge of the infection present it is necessary to choose an agent with a broad antibacterial spectrum. Antibiotics vary in their absorption from the alimentary tract, requiring some, e.g. streptomycin, to be given parenterally for systemic effect.

a. withdrawal, a. withholding see **antibacterial** withdrawal time and **antibacterial** withholding time.

antibody [*an'tĭ-bod"e*] specialized serum proteins produced by B lymphocytes in response to an immense number of different antigenic sites (epitopes) to which an animal may be exposed. Antibody produced by a particular epitope combines with that epitope only. The exquisite specificity of Ab for the antigen that stimulated its production is the basis for all antibody–antigen reactions both in vivo and in vitro. In most species, antibodies are heterodimers composed of two light (L) and two heavy (H) chain polypeptide molecules. The amino termini of the L and H chains have a variable amino acid sequence V_L and V_H. The specificity of Ab for Ag is conferred by the V_L and V_H domains. There are five major classes of antibody in mammals, designated IgG, IgM, IgA, IgD and IgE. Abbreviated Ab or Ig. Called also **immunoglobulin** or gamma globulin. See also **immunity**.

affinity purification of a. see **immunofiltration**.

anaphylactic a. antibody, usually IgE, formed after the first injection of certain allergens and responsible for the signs of anaphylaxis following subsequent exposures to the same allergen.

a.–antigen reaction the specific combination of antigen with homologous antibody resulting in the reversible formation of antibody–antigen complexes that differ in composition according to the antibody–antigen ratio. See also **antigen**.

antinuclear a. (ANA) autoantibodies directed against components of the cell nucleus, e.g. DNA, RNA and histones; they may be detected by immunofluorescence. A positive ANA test is characteristic of systemic lupus erythematosus, Sjögren's syndrome and rheumatoid arthritis.

anti-idiotype a. antibodies against the variable region of other antibodies.

anti-immunoglobulin a. those produced against an immunoglobulin, often used as reagents to study immunoglobulin molecules.

antiplatelet a. see **antiplatelet** antibody.

antispermatozoal a. produced following entry of sperm into the bloodstream, e.g. following rupture of the epididymis as in *Brucella ovis* infections. Antisperm antibodies can form following trauma to the testicle and epididymis. The female may develop antisperm antibodies which result in infertility.

blocking a. circulating antibody (usually IgG) that reacts preferentially with an antigen, preventing it from reacting with a cell-bound antibody (IgE) and blocking the induction of anaphylaxis.

a. classes see **immunoglobulin**.

clonotypic a. clone specific antibody.

cold-reacting a. see cold **agglutinin**.

complement-fixing a. immunoglobulins of the IgG or IgM class which bind complement.

cross-reacting a. one that combines with an antigen other than, but structurally related to, the one that induced its production.

cytophilic a. cytotropic antibody (below).

cytotoxic a. that which binds antigens expressed on the cell surface, which may (1) activate the complement pathway or (2) activate killer cells, resulting in cell lysis.

cytotropic a. those that attach to tissue cells (such as IgE to mast cells and basophils) that have an Fc receptor.

a.-dependent cell-mediated cytotoxicity (ADCC) a cytotoxic reaction in which nonsensitized cells bearing Fc receptors recognize target cells that have antibody bound to antigen exposed in the cell membrane of the target cell.

fluorescent a. see fluorescence**microscopy**.

heteroclitic a. one with greater affinity for an antigen other than the one that stimulated its formation.

hormonal a. has been investigated mostly as a means of controlling fertility in animals. See also **contraception**.

humoral a. see humoral **immunity**.

immune a. one induced by immunization or by transfusion incompatibility, in contrast to natural antibodies.

incomplete a. an antibody which combines with antigen without producing an observable reaction such as agglutination; originally used to describe Rh antibodies.

maternal a's those passively transferred from dam to fetus or neonate, transplacentally or via colostrum or yolk sac. See also passive **immunity**.

a.-mediated cytotoxicity damage to cells, especially erythrocytes, caused by the reaction of antibodies (IgG, IgM or IgA) with cell surface antigens.

a.-mediated immunity humoral immunity.

monoclonal a. see **monoclonal** antibodies.

natural a's ones that react with antigens to which the individual has had no known exposure. The best examples are anti a and b antibodies present in serum of humans of blood group B and A, respectively.

neutralizing a. one that reduces, destroys or blocks infectivity of an infectious agent, particularly virus, by partial or complete destruction of the agent.

nonagglutinating a. see incomplete antibody (above).

polyclonal a. a collection of immunoglobulins that react against the same or different antigenic determinants of the one antigen molecule.

protective a. antibody capable of producing immunity to an infectious agent.

reaginic a. see **reagin** and **immunoglobulin** E.

a. repertoire all the antibody specificities that can be produced by an individual.

saline a. complete antibody.

skin-sensitizing a. see **reagin**.

univalent a. see incomplete antibody (above).

antibrachium see **antebrachium**.

anticancer drug see **antineoplastic**.

anticestodal 1. destructive to cestodes. 2. an agent destructive to tapeworms.

a. drugs include the natural organic compound arecoline and the synthetic compounds **bunamidine**, **niclosamide**, **dichlorophen**, **praziquantel**, **uredofos** and **resorantel**.

anticholagogue rarely used term for an agent that inhibits secretion of bile.

anticholelithogenic [*an"te-ko"lə-lith"o-jen'ik*] 1. preventing the formation of gallstones. 2. an agent that so acts.

anticholinergic [*an"te- an"ti-ko"lin-ur'jik*] drugs that bind to but do not activate cholinergic receptors, resulting in a blockade of acetylcholine or cholinergic receptors and inhibition of the transmission of parasympathetic nerve impulses. Called also parasympatholytic. Used most commonly in the nonspecific treatment of vomiting or diarrhea; includes **atropine**, **propantheline**, **scopolamine**, **isopropamide**.

anticholinesterase [*an"te- an"ti-ko"lin-es'tər-ās*)] a drug that inhibits the enzyme acetylcholinesterase, thereby potentiating the action of acetylcholine at postsynaptic membrane receptors in the parasympathetic nervous system.

anticipated calving list the list of dates of expected calvings in a herd provided by a herd health program.

anticipatory care health maintenance programs which check apparently healthy animals for the presence of disease, e.g. tuberculosis and brucellosis testing of cattle, hip dysplasia schemes in dogs.

anticoagulant [*an"te- an"ti-ko-ag'u-lənt*] 1. serving to prevent the coagulation of blood. 2. any substance that, in vivo or in vitro, suppresses, delays or nullifies coagulation of the blood. There is limited therapeutic use for anticoagulants in animals; their importance is in the collection of blood for testing and for transfusion and in toxicology.

a. drugs see **citric acid**, **EDTA** or **edetate** and **heparin**, all of which are used for blood collection.

a. poisoning see **brodifacoum**, **bromadiolone**, **dicoumarol**, **difenacoum**, **diphacinone**, **diphenadione**, **warfarin**.

a. rodenticide see anticoagulant poisoning (above).

snake venom a. see **Russell's viper venom**.

anticoccidials [*an"te-kok-sid'e-əl*] chemicals effective in the treatment and control of coccidiosis in birds and animals. Include **clopidol**, **quinolones**, **monensin**, **lasalocid**, **robenidine**, **amprolium**, **dinitolmide**, **nicarbazin**, **toltrazuril** and **sulfonamide**. Called also coccidiostatic drugs.

anticodon [*an"te- an"ti-ko'don*] a triplet of nucleotides in transfer RNA that is complementary to the codon in messenger RNA which specifies the amino acid.

anticodon–codon interactions [*an"te- an"ti-ko'don*] base pairing between the 3 base codon of mRNA and the complementary 3 base anticodon sequence of tRNA.

anticomplement [*an"te- an"ti-kom'plə-mənt*] a substance that counteracts complement.

anticomplementary [*an"te- an"ti-kom"plə-men'tə-re*] capable of reducing or destroying the power of complement.

anticonvulsant [*an"te- an"ti-kən-vul'sənt*] 1. inhibiting convulsions. Any drug that depresses the central nervous system may be used for its anticonvulsant effect. This includes narcotics and sedatives. They have the undesirable effect of depressing all CNS functions. 2. a specific motor depressant, such as anticonvulsant or antiepileptic, which depresses specifically the motor centers and suppresses spontaneous motor activity; examples are **phenobarbital**, **phenytoin**, **potassium** bromide, **levetiracetam**, **gabapentin**, **felbamate** and **diazepam**.

antidepressants [*an"te- an"ti-de-pres'ənt*] drug used to counteract depression in humans, but sometimes used in the treatment of compulsive behavioral disorders and psychodermatosis in dogs and cats.

tricyclic a. (TCA) used in dogs and cats for behavior modification.

antidiarrheal [*an"te- an"ti-di"ə-re'əl*] 1. counteracting diarrhea. 2. an agent that counteracts diarrhea.

a. agents medicines used as antidiarrheals in animals. Includes parasympatholytic drugs, e.g. **atropine**, which act as a **spasmolytic** or **antispasmodic**, opiates, protectants and absorbents, e.g. activated **charcoal**, **kaolin** and astringents, e.g. **catechu**, **tannic acid**. The classification does not include the treatments that are specific for the diseases that cause diarrhea, e.g. antibiotics.

antidipsetic pertaining to or causing the suppression of thirst.

antidiuresis [*an"te- an"ti-di"u-re'sis*] the suppression of secretion of urine by the kidneys.

antidiuretic [*an"te- an"ti-di"u-ret'ik*] 1. pertaining to or causing suppression of urine production. 2. an agent that causes suppression of urine production.

a. hormone (ADH) vasopressin; a polypeptide hormine from the posterior lobe of the pituitary that suppresses the production of urine; it has a specific effect on the epithelial cells of the renal tubules, stimulating the reabsorption of water independently of solids, and resulting in concentration of urine. Stored and released by the posterior lobe of the **pituitary** gland, it also has vasopressor activity.

a. hormone deficiency see **diabetes insipidus**.

a. hormone response test measures urine specific gravity or osmolality before and after the administration of vasopressin to determine whether a polyuric condition is caused by a deficiency or reduced responsiveness to antidiuretic hormone. Called also Pitressin tannate test, Pitressin concentration test.

syndrome of inappropriate secretion of a. hormone (SIADH) one in which there is abnormal production of ADH leading to hyponatremia. See also **syndrome of inappropriate secretion of antidiuretic hormone**.

antidotal [*an"tĭ-do'təl*] having the properties of an antidote.

a. therapy treatment specifically directed towards reversing the effects of a poison.

antidote [*an'tĭ-dōt*] an agent that counteracts an adverse effect.

chemical a. one that neutralizes the poison by changing its chemical nature.

mechanical a. one that prevents absorption of the poison.

physiological a. one that counteracts the effects of the poison by producing opposing effects.

universal a. a mixture formerly recommended as an antidote when the exact poison was not known. There is, in fact, no known universal antidote. Activated charcoal is now being used for many poisons.

antidromic [*an"te-drom'ik*] conducting impulses in a direction opposite to the normal.

a. vasodilator impulses produced artificially by electrical stimulation of the peripheral end of a cut dorsal nerve root.

antidysenteric [*an"te- an"ti-dis"ən-ter'ik*] counteracting dysentery.

antiemetic [*an"te-ə-met'ik*] 1. useful in the treatment of vomiting. 2. an agent that relieves vomiting.

antiendotoxic counteracting the effect of endotoxins.

antiendotoxin an antibody that counteracts the effect of endotoxin.

antienzyme agent [*an"te-en'zīm*] acting against the activity of an enzyme; see **alpha$_1$-antitrypsin**, **protease** inhibitor, *N*-**acetylcysteine**.

antiepileptic [*an"te-ep"ĭ-lep'tik*] 1. combating epilepsy. 2. a remedy for epilepsy.

a. agent see **anticonvulsant**.

antiestrogen [*an"te-es'trə-jen*] 1. blocking the action of estrogens. 2. an agent that so acts.

antifebrile [*an"te- an"ti-feb'ril*] counteracting fever; antipyretic.

antifibrinolysin [*an"te- an"ti-fi"brĭ-nol'ĭ-sin*] see **antiplasmin**.

antifibrinolytic [*an"te-, an"ti-fi"brĭ-no-lit'ik*] inhibiting fibrinolysis.

antifoaming having the capacity to reduce or prevent the formation of foam: (1) for the reduction of foam in pulmonary edema, e.g. by the inhalation of nebulized ethyl alcohol; (2) for the reduction or prevention of formation of foam in the rumen, e.g. oils, alcohol ethoxylate detergents, and poloxalenes.

antifolate [*an"tĭ-fo'lāt*] see **folic acid** antagonist.

antifoulant substances used to coat marine netting in fish cages; some may cause unacceptable chemical residues in the farmed fish.

antifreeze see **ethylene** glycol.

antifungal [*an"te-, an"ti-fung'gəl*] 1. destructive to or checking the growth of fungi. 2. an agent that destroys or checks the growth of fungi, such as amphotericin B or flucytosine (5-FC). Includes: (1) topical drugs, e.g. **undecylenic acid**, **benzoic acid**, **salicylic acid**, **tolnaftate**, **candicidin**, **haloprogin**, **iodochlorhydroxyquin**, **cuprimyxin**, **clotrimazole**, **thiabendazole** and **miconazole**; (2) systemic drugs, e.g. **griseofulvin**, **amphotericin B**, 5-**flucytosine** and **ketoconazole**.

antigalactic [*an"te-, an"ti-gə-lak'tik*] 1. diminishing the secretion of milk. 2. an agent that so acts, e.g. mibolerone.

antigen (Ag) [*an'tĭ-jən*] any substance which is capable, under appropriate conditions, of inducing a specific immune response and of reacting with the products of that response; that is, with specific **antibody** or specifically sensitized T lymphocytes, or both. Antigens may be soluble substances, such as toxins and foreign proteins, or particulate, such as bacteria and tissue cells; however, only a small portion of the protein or polysaccharide molecule known as the antigenic determinant or epitope is recognized by the specific receptor on a lymphocyte. Similarly the antibody or effector lymphocyte produced by the response combines only with the one antigenic determinant. A bacterial cell or large protein will have many hundreds of antigenic determinants, some of which are more important than others in protective immunity. See also **immunity**, **antigenic**.

allogenic a. one occurring in some but not all individuals of the same species, e.g. histocompatibility antigens and blood group antigens; formerly called isoantigen.

antibody–a. reaction see **antibody**-antigen reaction.

blood group a's present on the surface of erythrocytes which vary between individuals of the same species and are used as the basis for blood typing.

a. bridge a link between antigen-specific receptors of two antibodies.

capsular a's see K antigens (below).

carcinoembryonic a. (CEA) see oncofetal antigen (below).

VetBooks.ir

A

common a. an antigenic determinant present in two or more different antigen molecules and the basis for cross-reactions among them.
complete a. an antigen which both stimulates the immune response and reacts with the products, e.g. antibody, of that response, cf. **hapten**.
conjugated a. see **hapten**.
cross-reacting a. 1. one that combines with antibody produced in response to a different but related antigen, owing to similarity of antigenic determinants. 2. identical antigens in two bacterial strains, so that antibody produced against one strain will react with the other.
dog erythrocyte a. (DEA) the antigens found on dog erythrocytes and used to distinguish different blood groups in the species. See Table 8.
environmental a's those found in pollens, fungi, house dust, foods and animal dander.
a. epitope see antigenic **determinant**.
feline oncornavirus cell membrane a. (FOCMA) tumor-specific antigen present on the membrane of cells in cats infected with feline leukemia virus. This antigen was the basis of a serologic test formerly used in the unvalidated attempt to measure resistance to development of leukemia and lymphoma in infected cats.
flagellar a. H antigen (below).
flea a. 1. some components of flea saliva, as well as whole flea extracts, are antigenic and certain individuals may become hypersensitive to flea bites; the most common hypersensitivity in dogs. 2. extracts, usually of whole fleas, but sometimes of flea saliva, are used for intradermal skin testing and desensitization procedures.
Forssman a. heterophil antigen occurring in various unrelated species, mainly in the organs but not in the erythrocytes (guinea pig, horse), but sometimes only in the erythrocytes (sheep), and occasionally in both (chicken). Antibody to Forssman antigen is usually recognized by agglutination of sheep red blood cells.
group specific (gs) a. common to a certain group of organisms, e.g. streptococci, retroviruses.
H a. [Ger.] *Hauch* (film) the antigen that occurs in the bacterial flagella.
heterogeneic a. see xenogeneic antigen (below).
heterophil a., heterogenetic a. one capable of stimulating the production of antibodies that react with tissues from other animals or even plants.
hidden a. one not normally exposed to circulating lymphocytes, e.g. within central nervous tissue, testicular tissue and certain intracellular components, so they do not normally evoke an immune response.
histocompatibility a's see **histocompatibility** antigen.
H-Y a. a histocompatibility antigen of the cell membrane, determined by a locus on the Y chromosome; it is a mediator of testicular organization (hence, sexual differentiation) in the male.
Ia a's histocompatibility antigens governed by the I region of the major histocompatibility complex (MHC), located principally on B lymphocytes, although T lymphocytes, skin and certain macrophages may also contain Ia antigens.
isogenic a. an antigen carried by an individual, or members of the same inbred strain, which is capable of eliciting an immune response in genetically different individuals of the same species, but not in individuals bearing it.
K a's bacterial capsular antigens.
Ly a's (obsolete); antigenic cell-surface markers of subpopulations of T lymphocytes, classified as Ly 1, 2 and 3; they are associated with helper and suppressor activities of T lymphocytes.
lymphocyte-defined (LD) a's class II antigens found in lymphocytes, macrophages, epidermal cells and sperm. Important in graft rejection.
M a. a type-specific antigen that appears to be located primarily in the cell wall and is associated with virulence of *Streptococcus pyogenes*.
Marek's tumor-specific a. (MATSA) found on the surface of cells infected by Marek's disease herpesvirus.
Nègre a. an antigen prepared from dead, dried and triturated tubercle bacilli by means of acetone and methyl alcohol; used in serum tests for tuberculosis in humans.
nuclear a's the components of cell nuclei with which antinuclear antibodies react.
O a. [Ger.] *ohne Hauch* (without film) the antigen that occurs in the cell wall of bacteria.
oncofetal a. a gene product that is expressed during fetal development, but repressed in adult tissues unless produced by certain cancers. In the neoplastic transformation, the cells dedifferentiate and these genes can be derepressed so that the embryonic antigens reappear. Examples are alpha-fetoprotein and carcinoembryonic antigen.
organ-specific a. any antigen that occurs exclusively in a particular organ and serves to distinguish it from other organs. Two types of organ specificity have been proposed: (1) first-order or tissue specificity is attributed to the presence of an antigen characteristic of a particular organ in a single species; (2) second-order organ specificity is attributed to an antigen characteristic of the same organ in many, even unrelated species.
partial a. see **hapten**.
pollen a. the essential polypeptides of the pollen of plants extracted with a suitable menstruum, used in diagnosis, prophylaxis and desensitization in hay fever.
a. presentation the presentation of peptide derivatives of antigens on the surface of antigen presenting cells (APCs), which include macrophages, dendritic cells and B lymphocytes, in association with class II major histocompatibility complex (MHC) antigens as required for recognition by T lymphocytes. Also includes antigen presentation in association with MHC class I by cells that are targets for lysis by cytotoxic T lymphocytes.
a.-presenting cells cells (macrophages, Langerhans cells, dendritic cells, and B lymphocytes) that process and present antigen to T lymphocytes.
private a's antigens of the low-frequency blood groups, so-called because they are found only in members of a single kindred.
recall a. an antigen to which an individual has previously been sensitized and which is subsequently administered as a challenging dose to elicit a hypersensitivity reaction.
a. receptors immunoglobulin molecules on the cell membranes of B lymphocytes and a structurally related, but quite distinct molecule on the surface of T lymphocytes which recognize particular antigenic determinants of an antigen.
a. recognition see **recognition** (2).
sequestered a's certain antigens, e.g. the lens of the eye and thyroid proteins, that are sequestered anatomically from the immune system during embryonic development and thus thought not to be recognized as 'self'. Should such antigens be exposed to the immune system during adult life, an autoimmune response would be elicited.
serologically defined (SD) a. class I antigen of the major histocompatibility complex, identifiable by the use of specific antisera.
synthetic a. chemically synthesized or produced by recombinant DNA technology, the synthesis of polymers, based on sequences found in microbial antigens, has been used in the production of vaccines.
T-dependent a. the immune response of most antigens requires T helper (Th) lymphocytes; lymphokines produced by T lymphocytes determine the characteristics of antibodies produced, which may change during the immune response.
thymus-dependent a. an antigen that requires T lymphocyte participation before an immune response can occur. Most antigens are of this type.
thymus-independent a. an antigen that elicits an antibody response without the participation of T lymphocytes. Usually large carbohydrate molecules with repeating epitopes are of this type.
tolerogenic a. see **tolerogen**.
tumor-specific a. (TSA) antigens found only in tumor cells.
Vi a. an antigen contained in the capsule of a *Salmonella* and was thought to contribute to its virulence.
xenogeneic a. an antigen common to members of one species but not to members of other species; called also heterogeneic antigen.

antigen–antibody glomerulonephritis [*an'tĭ-jən- an'tĭ-bod"e glo-mer"u-lo-meg'ə-le*] see immune-mediated **glomerulonephritis**.
antigenemia [*an"tĭ-jə-ne'me-ə*] the presence of antigen in the blood.
antigenic [*an-tĭ-jen'ĭk*] having the properties of an antigen.
a. competition the immune response to an antigen may be reduced if an unrelated antigen is administered simultaneously or shortly before. These may be between different molecules (intermolecular) or different determinants on the same molecule (intramolecular).

VetBooks.ir

a. drift point mutations in genes resulting in antigenic change. See also ***Orthomyxoviridae***.

a. mimicry similarities between sequences found in microbial proteins and host proteins which may result in cross-reacting immune responses and autoimmune disease.

a. shift genetic reassortment between two subtypes of a viral species resulting in a new subtype with completely different antigenicity. See also ***Orthomyxoviridae***.

antigenicity [*an"tĭ-ja-nis'ĭ-te*] the capacity to stimulate the production of antibodies or cell-mediated immune responses.

antiglobulin [*an'tĭ-glob"u-lin*] an antibody to a heterologous antibody, such as goat antihorse IgG antibody, as used in the Coombs test, ELISA, immunofluorescence or other assays.

a. test see **Coombs tests**.

antiglomerular basement membrane nephritis [*an'tĭ- glo-mer'u-lər*] see immune-mediated **glomerulonephritis**.

antihelix [*an"te-he'liks*] see **anthelix**.

antihelmintic [*an"te-, an"ti-hel-min'tik*] see **anthelmintic**.

antihemophilic [*an"te-, an"ti-he"mo-fil'ik*] 1. effective against the bleeding tendency in hemophilia. 2. an agent that counteracts the bleeding tendency in hemophilia.

a. factor (AHF) A one of the clotting factors, deficiency of which causes **von Willebrand disease** and **hemophilia** A. Called also factor VIII and antihemophilic **globulin**.

a. factor B **clotting** factor IX.

a. factor C **clotting** factor XI.

antihemorrhagic [*an"te-, an"ti-hem"o-raj'ik*] 1. exerting a hemostatic effect and counteracting hemorrhage. 2. an agent that prevents or checks hemorrhage.

antihistamine [*an"te-, an"ti-his'tə-mēn*] a drug that counteracts the effects of histamine by acting on histamine receptors without activating them but preventing their accessibility to histamine. A competitive and reversible reaction. There are two types: Those that block H_1 receptors are commonly referred to as the antihistamines and are widely used to relieve the symptoms of allergic reactions, especially urticaria. Some have an antinauseant action that is useful in the prevention of motion sickness and others have a sedative and hypnotic action. H_2 receptor blocking agents inhibit the stimulation of gastric secretions. See also **histamine** antagonists, H_2-receptor **blocker**.

antihistaminic 1. counteracting the pharmacological effects of histamine. 2. an antihistamine.

antihormone [*an"te-hor'mōn*] a substance, usually antibody, that counteracts a hormone. It is produced in animals after repeated injections of a hormone or hormone-bearing protein. Further doses of the hormone may result in the neutralization of the hormone, in neutralization of the patient's own hormone, or in stimulation of an attack of allergy or anaphylaxis.

antihyperlipoproteinemic [*an"te-, an"ti-hi"pər-lip"o-pro"tēn-e'mik*] 1. promoting a reduction of lipoprotein levels in the blood. 2. an agent that so acts.

antihypertensive [*an"te-, an"ti-hi"pər-ten'siv*] acting to reduce tension; in medical terms, usually referring to elevated blood pressure. Drugs used for this purpose include diuretics, β-adrenergic antagonists, and vasodilators.

anti-immune [*an"ti- ĭ-mūn'*] preventing immunity.

anti-infective [*an"te-in-fek'tiv*] 1. counteracting infection. 2. a substance that counteracts infection. Includes **antiseptics**, **disinfectants**, **antibiotics**, and **antifungal** and virucidal agents.

anti-inflammatory [*an"te-in-flam'ə-tor"e*] 1. counteracting or suppressing inflammation. 2. an agent that so acts.

a. drugs those used to reduce the inflammatory response to infectious agents, trauma, surgical procedures or in musculoskeletal disease.

nonsteroidal a. drug see **nonsteroidal anti-inflammatory drugs**.

compensatory a. response syndrome (CARS) excessive action of anti-inflammatory mediators causes suppression of innate immunity with an increased susceptibility to secondary or opportunistic infection. See also systemic **inflammatory** response syndrome.

antiketogenesis [*an"ti- ke"to-jen'ə-sis*] inhibition of the formation of ketone bodies.

antiketogenic [*an"te-, an"ti-ke"to-jen'ik*] preventing or suppressing the development of ketones (ketone bodies) and thus preventing development of ketosis.

antilewisite [*an"tĭ-loo'ĭ-sīt*] See **dimercaprol**.

antilithic [*an"te-, an"ti-lith'ik*] 1. preventing calculus formation. 2. an agent that prevents calculus formation.

antilogarithm [*an"tĭ- log'ə-rith-əm*] the number whose logarithm is the number in question.

antilymphocyte serum (ALS) [*an"tĭ- lim'fo-sīt sēr'əm*] antiserum containing antibodies specific for lymphocyte surface antigens that may be used to suppress delayed type hypersensitivity, particularly graft rejection, responses without affecting humoral immune response. Used in organ transplantation, usually in combination with immunosuppressive drugs. Prepared by hyperimmunizing an animal, e.g. horse, with foreign, e.g. human, lymphocytes. See also antilymphocyte **globulin**.

antimere [*an'tĭ-mēr*] one of the halves of a bilaterally symmetrical part or organism.

antimetabolite [*an"te-, an"ti-mə-tab'o-līt*] a substance bearing a close structural resemblance to one required for normal physiological functioning, and exerting its effect by interfering with the utilization of the essential metabolite.

antimethemoglobinemic [*an"te-, an"ti-met-he"mo-glo"bĭ-ne'mik*] 1. promoting reduction of methemoglobin concentrations in the blood. 2. an agent that so acts.

antimetropia [*an"te-, an"ti-mə-tro'pe-ə*] a form of anisometropia with hyperopia of one eye, with myopia in the other.

antimicrobial [*an"te-, an"ti-mi-kro'be-əl*] 1. killing microorganisms, or suppressing their multiplication or growth. 2. an agent that kills microorganisms or suppresses their multiplication or growth. Antimicrobial agents are classified functionally according to the manner in which they adversely affect a microorganism. Some interfere with the synthesis of the bacterial cell wall. This results in cell lysis because the contents of the bacterial cell are hypertonic and therefore under high osmotic pressure. A weakening of the cell wall causes the cell to rupture, spill its contents, and be destroyed. The penicillins, cephalosporins and bacitracin are examples of this group of antimicrobials. A second group of antimicrobial agents interfere with the synthesis of nucleic acids. Without DNA and RNA synthesis a microorganism cannot replicate or translate genetic information. Examples of antimicrobials that exert this kind of action are griseofulvin, fluoroquinolones and rifampicin. A third group of antimicrobial agents change the permeability of the cell membrane, causing a leakage of metabolic substrates essential to the life of the microorganism. Their action can be either bacteriostatic or bactericidal. Examples include amphotericin B and polymyxin B. A fourth group of antimicrobial agents interfere with metabolic processes within the microorganism. They are structurally similar to natural metabolic substrates, but since they do not function normally, they interrupt metabolic processes. Most of these agents are bacteriostatic. Examples include the sulfonamides, aminosalicylic acid (PAS) and isoniazid (INH). A fifth group interfere with translation of proteins by the ribosome. This action may be bacteriocidal, if errors in translation are induced (aminoglycosides) or bacteriostatic, if translation is inhibited (macrolides, tetracyclines, chloramphenicol).

a. resistance ability of a microorganism to resist the effects of an antimicrobial agent. May be an intrinsic characteristic or acquired by selection for mutation or by acquisition of a resistance gene from other microorganisms.

a. sensitivity test an in vitro test of the effectiveness of selected antimicrobial agents against microorganisms recovered from a patient. Paper disks impregnated with various agents are placed on an inoculated agar plate (disk diffusion) or the agent is added to broth cultures. Inhibition of growth is interpreted as an indication of bacterial sensitivity to the antimicrobial agent.

subtherapeutic a. therapy used mainly in mass medication programs as preventive measures against unspecified infectious diseases. Carries the risks of creating resistant strains of organisms, and of resulting in unacceptable residues in human food.

a. therapy antimicrobial agents may be administered topically, orally, or injected. There are special needs for special circumstances. Aquarial fish, for example, may be treated by incorporating the agent in the feed or by injection. Immersing the fish in a tank containing a solution of the agent is satisfactory only for superficial infections because the drug is not absorbed directly through the skin and the intake is very slow.

antimony (Sb) [*an'tĭ-mo"ne*] a chemical element, atomic number 51, atomic weight 121.75. See Table 4. Trivalent and pentavalent antimony compounds are used in medicine as anti-infective agents in

VetBooks.ir

A

the treatment of tropical diseases, especially those of protozoan origin. Antimony compounds can be toxic or carcinogenic, depending on chemical form, oxidation state and dose used and must be used with caution. See also stibogluconate, **meglumine**.

a. poisoning resembles arsenic poisoning. Signs include vomiting and diarrhea. Postmortem lesions are those of gastroenteritis.

a. potassium tartrate a nauseant expectorant and ruminatoric. Also used as an antiparasitic agent in schistosomiasis, trypanosomiasis and leishmaniasis. Called also tarter emetic.

a. sodium gluconate see **sodium** stibogluconate.

antimorph a mutant allele which acts in the opposite direction to the normal allele.

antimotility drugs drugs used to inhibit peristaltic activity of the gastrointestinal tract in the treatment of diarrhea; usually parasympatholytics. Called also spasmolytics.

anti-müllerian hormone [*an"te-, an"ti-mu-ler'e-ən*] the factor secreted by the Sertoli cells of the embryonic, developing testis that causes regression of the müllerian ducts, the primordia for the accessory sex glands of the female.

antimuscarinic drugs [*an"te-, an"ti-mus'kə-rin'ik*] see **muscarinic** blocking agents.

antimycin A a respiratory inhibitor isolated from *Streptomyces*. Blocks electron transfer from cytochrome b to cytochrome c_1.

antimycotic [*an"ti-mi-kot'ik*] capable of killing or inhibiting the growth of fungi.

antinarcotic [*an"ti-nahr-kot'ik*] relieving narcotic depression.

antinematodal see **nematocide**.

a. drugs includes **piperazine**, **imidazothiazoles** and **tetrahydropyrimidines** (e.g. tetramizole, **levamisole**, **morantel**, **pyrantel**), **benzimidazoles** and pro-benzimidazoles (e.g. **thiabendazole**, **mebendazole**, **parbendazole**, **fenbendazole**, **oxfendazole**, **oxibendazole**, **cambendazole**, flubendazole, **febantel**, **thiophanate**, **netobimin**), macrocyclic lactones (**ivermectin**, **moxidectin**, **doramectin**, **eprinomectin**), **organophosphorus compounds** (**dichlorvos**, **haloxon**, **trichlorfon**), **salicylanilides** (**closantel**, **nitroscanate**).

antineoplastic [*an"te-, an"ti-ne"o-plas'tik*] 1. inhibiting the maturation and proliferation of malignant cells. 2. an agent having such properties.

a. therapy a regimen of treatment aimed at destruction of malignant cells and utilizing a variety of chemical agents that directly affect cellular growth and development. The chemicals and drugs used in the treatment of cancer may be divided into three groups. The first group, the *alkylating* agents, are capable of damaging the DNA of cells, thereby interfering with the process of replication. Among these drugs are **chlorambucil**, **cyclophosphamide**, **mechlorethamine** and triethylene thiophosphamide (**thiotepa**). The antibiotic actinomycin D (**dactinomycin**) is also included in this group. The second type of drugs used in cancer chemotherapy are the *antimetabolites*. As the name suggests, these drugs interfere with the cancer cell's metabolism. Some replace essential metabolites without performing their function, while others compete with essential components by mimicking their functions and thereby inhibiting the manufacture of protein in the cell. Included in this group are **cytosine** arabinoside, **floxuridine** (FUDR), 5-**fluorouracil** (5-FU), **mercaptopurine** (6-MP), **methotrexate** and **thioguanine**. The third group of chemicals employed in the treatment of cancer are '*natural products*' that directly affect the mechanism of cell division. The plant alkaloids, e.g. **vincristine** and **vinblastine**, stop cell division at metaphase (a subphase in cell mitosis). The enzymes, e.g. **L-asparaginase**, starve tumor cells by catabolizing substances (e.g. asparagine) which they need for survival. Hormones change cell metabolism by making the cellular environment unfavorable for growth of certain tumors.

antinephritic [*an"te-, an"ti-nə-frit'ik*] effective against inflammation of the kidney.

antineuritic [*an"te-, an"ti-n-rit'ik*] relieving neuritis.

antinidatory agent one preventing implantation of a fertilized ovum. Used in the treatment of misalliance.

antinuclear antibody [*an"te-, an"ti-noo'kle-ər*] see antinuclear **antibody**.

antiopathy in homeopathy, the use of medicines with actions opposite to the clinical signs or symptoms.

antiovulatory [*an"te-ov'u-lə-tor"e*] suppressing ovulation. In dogs and cats, pharmacological suppression of ovulation with progestins and androgens is common. See also **contraception**.

antioxidant [*an"te-ok'sĭ-dənt*] any substance that prevents or reduces damage caused by reactive oxygen species or reactive nitrogen species. Used in feeds and foods to prevent rancidification of polyunsaturated fats. In the body, antioxidants prevent oxidant damage by scavenging reactive oxygen species and facilitating the repair of damage caused by reactive oxygen species. Endogenous antioxidants include enzymatic antioxidants, such as glutathione peroxidase and superoxide dismutase; free radical scavengers, for example vitamins A, C, and E, and metal chelators. Used as dietary supplements in animals for aiding in the treatment of cancer, enhancing immune function, and reducing treatment toxicity.

antiparallel orientation [*an"te-, an"ti-par'ə-lel*] two strands of DNA arranged in opposite directions.

antiparallelism in DNA structure, the two strands are aligned in opposite directions.

antiparasitic [*an"te-, an"ti-par"ə-sit'ik*] 1. destroying parasites. 2. an agent that destroys parasites.

a. agent includes insecticides, acaricides and anthelmintics. Their suitability depends on their efficiency in reducing parasite loads, especially of the immature forms, the breadth of their therapeutic spectrum, safety, their ease of administration, cost and freedom from tissue residue problems and the development of resistance.

systemic a. the medication is administered orally or by injection and exerts its effect when the target parasite sucks blood or other body fluids or is in contact with the agent in the gut lumen.

topical a. medication applied directly to the skin.

antipediculotic 1. effective against lice and in treatment of pediculosis. 2. an agent that is effective against lice.

antipepsin [*an"ti- pep'sin*] an antienzyme that counteracts pepsin.

antiperistalsis [*an"te-, an"ti-per"ĭ-stawl'sis*] reverse **peristalsis**.

antiphlogistic [*an"te-, an"ti-flo-jis'tik*] 1. countering inflammation and fever. 2. an agent that counteracts inflammation and fever, e.g. poultice, hot pack, hot fomentation.

antiplasmin [*an"te-, an"ti-plaz'min*] a principle in the blood that inhibits plasmin.

antiplastic [*an"te-, an"ti-plas'tik*] unfavorable to healing.

antiplatelet [*an"te-, an"ti-plāt'lət*] directed against or destructive to blood platelets; inhibiting platelet function.

a. antibody autoantibody against platelets, the cause of immune-mediated **thrombocytopenia**. Detected by the **platelet** factor 3 release test.

a. drugs the prevention of thromboembolic disorders in animals is limited mainly to the treatment of cats with arterial thromboembolism and dogs with heartworms. Platelet aggregation may be impeded by treatment with aspirin, dipyrimadole, sulfinpyrazone or propranolol.

antipolycythemic [*an"te-, an"ti-pol"e-si-the'mik*] 1. effective against polycythemia. 2. an agent effective against polycythemia.

antiport [*an'tĭ-port*] a cell membrane structure that transports two molecules at once through the membrane in opposite directions.

antiprostaglandin [*an"ti-pros"tə-glan'din*] 1. acting against the formation, release or activity of prostaglandins. 2. a class of drugs with these activities; the nonsteroidal anti-inflammatory drugs. Include **aspirin**, **flunixin meglumine**, **dipyrone**, **phenylbutazone**.

alpha-1-antiprotease see **alpha$_1$-antitrypsin**.

antiprothrombin [*an"te-, an"ti-pro-throm'bin*] a substance that retards the conversion of prothrombin into thrombin.

antiprotozoal [*an"te-, an"ti-pro-tə-zo'əl*] 1. destroying protozoa, or disrupting or interfering with their growth or reproduction. 2. an agent with that effect.

a. agent see **coccidiostatic drugs**, **trypanocidal**.

antipruritic [*an"te-, an"ti-proo-rit'ik*] 1. preventing or relieving itching. 2. an agent that counteracts itching; of special importance in the treatment of animals because of the self-trauma that results from their responses to pruritus.

antipsychotic [*an"te-, an"ti-si-kot'ik*] effective in the management of manifestations of psychotic disorders; also, an agent that so acts. There are several classes of antipsychotic drugs (phenothiazines, thioxanthenes, dibenzazepines and butyrophenones), all of which may act by the same mechanism, i.e. blockade of dopaminergic receptors in the central nervous system. Called also **neuroleptic** and major tranquilizer.

antipyretic [*an"te-, an"ti-pi-ret'ik*] 1. effective against fever. 2. an agent that relieves fever. Cold packs, aspirin and quinine are all antipyretics. Antipyretic drugs dilate the blood vessels near the

surface of the skin, thereby allowing more blood to flow through the skin with increased heat loss by radiation and convection. Also, an antipyretic can increase perspiration, the evaporation of which cools the body.

antipyrine [*an"te-pi'rēn*] an analgesic and antipyretic. Poisoning is characterized by convulsions and collapse. Called also phenazone.

antipyrotic [*an"te-, an"ti-pi-rot'ik*] 1. effective in the treatment of burns. 2. an agent used in the treatment of burns.

antirachitic [*an"te-, an"ti-rə-kit'ik*] therapeutically effective against rickets.

antireflux [*an"te-, an"tĭ-re'fluks*] acting to prevent reflux. In gastroesophageal **reflux** disease antireflux surgery restores the abdominal segment of the esophagus and increases pressure at the gastric inlet.

antirickettsial [*an"te-, an"ti-rĭ-ket'se-əl*] 1. effective against rickettsiae. 2. an agent effective against rickettsiae.

antirotation wiring in the application of wires to stabilize bone fracture fragments. See also **hemicerclage**.

antiseborrheic [*an"te-, an"ti-seb"o-re'ik*] 1. effective against seborrhea. 2. an agent with that effect. This includes keratolytics and keratoplastics such as **salicylic acid**, **tar** preparations, **sulfur** and **benzoyl** peroxide.

antisecretory [*an"te-, an"ti-sə-kre'to-re*] 1. inhibiting or diminishing secretion; secretoinhibitory. 2. an agent that so acts, as certain drugs that inhibit or diminish gastric secretions.

antisense nucleic acids [*an"te-, an'ti-sens noo-kle'ik*] natural or synthetic oligonucleotides that are complementary to mRNAs and therefore capable of hybridizing to and inactivating mRNA. Proposed as a form of antiviral therapy.

antisense RNA [*an"te-, an'ti-sens*] an RNA sequence which is complementary to a functional RNA.

antisense strand [*an"te-, an'ti-sens*] one of the two strands in a DNA molecule that is not transcribed.

antisepsis [*an"tĭ-sep'sis*] prevention of sepsis by destruction of microorganisms and infective matter or by preventing their growth and multiplication in the body. Usually refers to cleansing the skin or mucous membranes of pathogenic organisms, but with resident flora remaining.

antiseptic [*an"tĭ-sep'tik*] 1. preventing sepsis. 2. any substance that inhibits the growth of bacteria, in contrast to a germicide, which kills bacteria outright. Antiseptics are not considered to include antibiotics, which are usually taken internally. The term antiseptic includes disinfectants, although most disinfectants are too strong to be applied to body tissue and are generally used to clean inanimate objects such as floors and equipment. Includes physical antiseptics, chemical antiseptics, halogens, alcohols and surfactants.

urinary a. a drug that is excreted mainly in the urine and performs its antiseptic action in the bladder. These drugs may be given before examination of or operation on the urinary tract, and they are sometimes used to treat urinary tract infections.

antiserum [*an"tĭ-se'rəm*] a serum containing antibodies. Obtained from an animal that has been exposed to antigen. Used in the prevention, treatment or diagnosis of infectious disease. See also **immunity** and **immunization**.

antishock pneumatic garment a specially designed covering used in small animals to apply external counterpressure to the pelvis, abdomen and hindlegs with inflatable balloons in the treatment of shock.

antisialagogue [*an"te-, an"ti-si-al'ə-gog*] an agent that inhibits the flow of saliva.

antisialic [*an"te-, an"ti-si-al'ik*] checking the secretion of saliva.

antispasmodic [*an"te- an"ti-spaz-mod'ik*] 1. preventing or relieving spasms. 2. an agent that prevents or relieves spasms. Said of parasympatholytic drugs used in the treatment of gastrointestinal or urinary tract disorders. Called also spasmolytics.

antisucking operation a procedure to prevent young cattle from sucking themselves or other cattle. Nose rings may be used. An antiquated procedure was surgical amputation of part of the tongue. See also **crib**-biting operation.

antitetanic [*an"te-tə-tan'ik*] counters tetanus or tetany.

a. serum see tetanus **antitoxin**.

antithrombin III (ATIII) [*an"te-throm'bin*] an alpha$_2$-globulin synthesized in the liver which is a natural inhibitor of clotting.

antithrombocytic [*an"te-throm"bo-sit'ik*] 1. preventing the aggregation of blood platelets (thrombocytes). 2. an antithrombocytic agent. See also **antiplatelet**.

antithromboplastin [*an"te-throm"bo-plas'tin*] any agent or substance that prevents or interferes with the interaction of blood clotting factors as they generate prothrombinase (thromboplastin).

antithrombotic [*an"te-throm-bot'ik*] 1. preventing or interfering with the formation of thrombi. 2. an agent that interferes with thrombus formation. See also **antiplatelet** drugs.

antithyroid [*an"te-thi'roid*] suppressing thyroid activity. Typically, drugs used to treat hyperthyroidism, which include **carbimazole**, **thiouracil**, **propylthiouracil**, **methimazole**.

antitick serum [*an"te tik se'rəm*] hyperimmune serum produced in dogs by exposing naturally resistant animals to a continuous and heavy infestation with the tick *Ixodes holocyclus*. Used in treatment and temporary protection of dogs against tick paralysis.

antitoxic [*an"te- an"ti-tok'sik*] inhibitory of the action of a poison; pertaining to **antitoxin**.

antitoxin [*an"tĭ-tok'sin*] a particular kind of antibody produced in the body in response to the presence of a toxin or toxoid. Most commonly used in the treatment of diseases caused by clostridial toxins, e.g. botulinum and tetanus. See also **immunity**.

gas gangrene a. serum containing antitoxic antibodies; prepared from the blood of healthy animals immunized against gas-producing organisms of the genus *Clostridium*.

tetanus a. preparation from the blood serum or plasma of healthy animals immunized against tetanus toxin. Used for prophylaxis after injury because of its immediate effect. Active immunization is preferred for long-term protection, particularly for many clostridial diseases such as tetanus.

antitragus [*an"te-tra'gəs*] the part of the auricular cartilage that lies caudal to the tragus and with it completes the caudal boundary of the opening into the ear canal.

antitrematodal having efficiency in the treatment of trematodes. Because of the lower susceptibility to injury of immature flukes, the measure of efficiency of antitrematodal drugs is measured by their efficiency against immature flukes. Includes **albendazole**, **bithionol** sulfoxide, **bromsalans**, **carbon tetrachloride**, **clorsulon**, **clioxanide**, **diamfenetide**, **tetrachlorodifluorethane**, **hexachloroethane**, **hexachloroparaxylene**, **hexachlorophene**, **niclofolan**, **nitroxynil**, **oxyclozanide**, **rafoxanide**, **triclabendazole**.

antitrochanter on the avian pelvic skeleton, a blunt articular facet which articulates with the femoral trochanter so as to limit abduction.

antitrope [*an'tĭ-trōp*] one of two structures that are similar but oppositely oriented, like a right and a left glove.

antituberculous [*an"te-too-bur'ku-ləs*] therapeutically effective against tuberculosis.

a. drugs agents used in the treatment of mycobacterial infections, which in animals is limited to dogs and cats, include isoniazid, rifampicin and ethambutol. Several other drugs may be used in combination therapy to increase effectiveness. In addition, dapsone is effective against *Mycobacterium leprae*. See also feline **leprosy**.

antitussive [*an"te- an"ti-tus'iv*] 1. effective against cough. 2. an agent that suppresses coughing. The narcotics codeine and hydrocodone, and several opioids or opioid-like drugs, including dextromethorphan and butorphanol, are commonly used in small animals.

a.–bronchodilator combination a common therapeutic combination used in the treatment of respiratory diseases in dogs and cats.

antiulcerative [*an"te-ul'sə-ra"tiv, an"te-ul'sər-ə-tiv*] 1. preventing the formation or promoting the healing of ulcers. 2. an agent that so acts.

antivenene [*an"te- an"ti-vĕ-nēn'*] antivenin

antivenin [*an"te- an"ti-ven'in*] a material used to neutralize the venom of a poisonous animal. Prepared by immunization of serum-producing animals, usually horses. Antivenins against the venoms of most poisonous snakes, spiders and stinging fish and other aquatic species are available, but only in those areas in which the poisonous species occurs.

antiviral [*an"te- an"ti-vi'rəl*] 1. effective against viruses. 2. an agent effective against viruses.

a. drugs may be useful in early stages of some virus infections or to prevent recurrences or reactivation in chronic infections. Most drugs exert their effects only during certain stages of viral

VetBooks.ir

VetBooks.ir

replication and many are relatively toxic for the host when used systemically. In general, chemotherapy of virus infections in veterinary medicine is uncommon with limited applications, mainly in topical treatment of ophthalmic infections. Examples are **idoxuridine**, **vidarabine**, **amantadine hydrochloride**, **acyclovir**, **ribavirin**. Antiretroviral drugs are a major component for treatment of human immunodeficiency virus infections.

antivivisection [*an"te- an"ti-viv"ĭ-sek'shən*] literally, opposition to dissection of a living animal, but now usually used in animal rights literature to indicate opposition to the use of animals in research, in any form.

antivitamin [*an"ti-vi'tə-min*] a substance that inactivates or inhibits the normal functioning of a vitamin.

antizymotic unfavorable to fermentation.

antler single-tined or branched bony outgrowths from the frontal bones of male deer. Reindeer and caribou females also bear antlers. Antlers grow and are shed each year, becoming more complicated in structure as the buck ages. At the beginning of the season the antlers are covered with velvet, a soft, hairy skin. As the antlers mature they appear to itch and the stag rubs them until the skin is shed 'in tatters' to expose the underlying bone which in turn is itself shed the next spring. See also **tine**.

a. amputation a dehorning technique requiring considerable skill and experience to avoid losing the deer and to ensure regrowth of the antler.

a. farming deer farming conducted for the sole purpose of annual harvesting of the antlers for quasi-pharmaceutical use.

velvet a. the whole of the antler, including the velvet and the supporting bony outgrowth of the frontal bone, before calcification.

Anton test [*ahn'ton*] a test used in the identification of *Listeria monocytogenes*; no longer used, it involved instillation of a culture into the conjunctival sac of a rabbit or guinea pig that caused severe keratoconjunctivitis within 24 hours.

antral [*an'trəl*] pertaining to an antrum; usually the reference is to the pyloric antrum of the stomach. See also **pylorus**.

a. peristalsis responsible for the onward movement of ingesta through the pylorus; when the pylorus is closed the movements assist in the mixing and maceration of the stomach contents.

antritis [*an-tri'tis*] inflammation of the gastric antrum, the expanded portion of the pyloric part of the stomach.

antr(o)- word element. [L.] *chamber, cavity;* often used with specific reference to the maxillary antrum or sinus.

antrum [*an'trəm*] pl. *antra* [L.] any closed or nearly closed cavity or chamber.

mastoid a. an air space in the human mastoid portion of the temporal bone communicating with the middle ear and the mastoid cells.

maxillary a., a. maxillare maxillary sinus, especially of humans.

pyloric a., a. pyloricum the lumen of the pyloric part of the stomach; sometimes regarded as the pump of the stomach, regulating the propulsion of food through the pylorus into the duodenum.

tympanic a., a. tympanicum see mastoid antrum (above).

ANTU see **α-naphthylthiourea**.

anuclear [*a-noo'kle-ər*] having no nucleus.

anulus [*an'u-ləs*] pl. *annuli, anuli* [L.] a small ring or encircling structure.

fibrocartilaginous a. the circular pad which connects the tympanic membrane to the external acoustic meatus.

annuli fibrosi [*an'u-li*] 1. four fibrous rings at the base of the heart to which the myocardium is attached, one around each A-V orifice and one each around the aorta and the pulmonary artery. 2. the peripheral fibrous rings that surround the soft central pulpy nucleus of the intervertebral disks.

a. iridis either of two rings of iris tissue (1) the outer plicated anulus iridis major that surrounds; called also *outer border of iris*; (2) the inner smooth anulus iridus minoris; called also *inner border of iris*.

a. preputialis the ring of skin marking the entrance to the cavity of the prepuce.

a. sclerae a roll of connective tissue on the inside of the sclera at the corneoscleral junction.

spermatic a. the small ring around the proximal centriole of the spermatid.

a. vaginalis the ring through which the peritoneum evaginates to form the parietal lamina of the tunica vaginalis that surrounds the spermatic cord.

anuresis [*an"u-re'sis*] 1. retention of urine in the bladder. 2. anuria.

anuria [*an-u're-ə*] complete suppression of urine formation by the kidney.

anuric failure [*an-u'rik*] renal failure in which anuria or oliguria is a prominent sign, as distinct from polyuric failure.

anury absence of the tail.

anus [*a'nəs*] the terminal opening of the alimentary canal. See also **anal**.

imperforate a. congenital absence of the normal opening of the rectum. Called also **anal** atresia, atresia ani, aproctia.

a. of Rusconi see **blastopore**.

anusitis [*a-nəs-i'tis*] anal ulceration. See also **perianal** fistula.

anvil [*an'vil*] 1. incus; the middle of the three bones of the middle ear. 2. a block of iron, 250–350 lb, with a tapering beak at one end used by farriers to make and shape shoes. There are two holes in the top of the anvil, a square one to hold cutting equipment, and a round one over which holes can be punched in the shoe.

anxiety [*ang-zi'ə-te*] a demonstration of a feeling of uneasiness, apprehension or dread. Involves activation of the autonomic nervous system with an increase in heart rate, respirtory rate and muscle tension that increases the probability of operant behavior involving escape or avoidance responses.

separation a. the display of destructive behavior, vocalization, urination and defecation by some dogs when left alone or separated from their owners.

anxiolytic [*ang"ze-o-lit'ik*] relieving anxiety. a mild sedative, such as diazepam. Called also antianxiety agent and minor tranquilizer.

anxious expression posture and facial expression suggesting apprehension. See also **anxiety**.

AO Foundation Association for the Study of Internal Fixation; a nonprofit association of surgeons doing research, development and education in the field of trauma and corrective orthopedic surgery.

aorta [*a-or'tə*] pl. *aortae, aortas* [L.] the great artery arising from the left ventricle, being the main trunk from which the systemic arterial system proceeds. See Table 9. See also **aortic**.

abdominal a. the part of the descending aorta within the abdomen.

ascending a. the first part of the aorta which passes dorsally and cranially.

descending a. the aorta after it turns caudally at the aortic arch.

overriding a. see **overriding** aorta.

supravalvular a. the portion of aorta immediately above the aortic valve. Called also aortic bulb.

terminal a. the segment of the aorta immediately before it divides into the iliac arteries.

thoracic a. the part of the descending aorta within the thorax and cranial to the aortic hiatus.

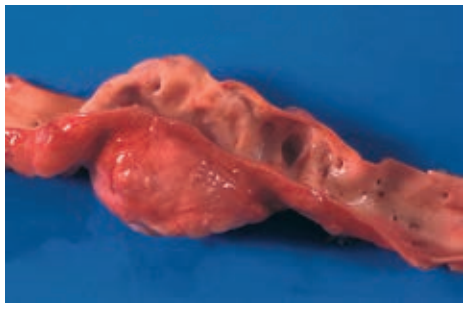
aortic [*a-or'tik*] pertaining to or emanating from the aorta. See also **aortic arch**.

a. aneurysm occurs most often in dogs, where it is caused by *Spirocerca lupi* larvae, turkeys and primates, causing dyspnea, cyanosis and coughing. May be congenital affecting the aortic trunk and the arch sometimes associated with aneurysm of an aortic sinus. See also **copper** nutritional deficiency.

a. aneurysm, inherited see inherited aortic **aneurysm**.

a. anulus fibrosus the fibrous ring in the wall of the root of the aorta. In the bovine heart the ring carries the ossa cordis (see **os**[2] cordis).

a. base rupture rupture of the vessel just above the semilunar valves.



A-51: Thoracic aorta of a dog with widespread *Spirocerca lupi*-associated aneurysms and mineralisation of the aortic wall.
From van der Merwe LL, Kirberger RM, Clift C, Williams M, Keller N, Naidoo V: *Spirocerca lupi* infection in the dog: A review. Vet J 176:294-309, 2008. Elsevier.

VetBooks.ir

a. bodies small neurovascular structures on either side of the aorta in the region of the aortic arch. The left body is located at the angle between the left subclavian artery and the aorta, and the right at the junction of the right subclavian and right common carotid arteries. They contain chemical receptors which send impulses through the afferent branches of the vagus nerve and are involved in regulating respiration so as to ensure an appropriate partial pressure of oxygen in the arterial blood.

a. body tumors single or multiple nodules within the pericardial sac near the base of the heart. Malignant tumors may invade the anterior mediastinum. Called also heart base tumor.

a. bulb the dilated part of the aorta at its origin, caused by the swellings of the aortic sinuses.

a. coarctation constriction of the aorta at the site of entry of the ductus arteriosus causing a syndrome similar to that of stenosis of the aortic valve.

a. cystic medionecrosis pools of ground substance within the elastic media of the aorta. May predispose to arterial aneurysm but this material is present in the aortas of normal horses.

a. depressor nerve pressure receptors in the aortic arch and thoracic aorta which assist in maintaining circulatory equilibrium by communicating pressure changes through the aortic depressor nerve, an afferent branch of the vagus nerve; stimulation causes heart slowing and vasodilation.

a. dextraposition the aorta receives blood from the right ventricle. There are a number of variations of the basic defect. The common one is the aorta overriding the septum, which is defective, so that the aorta receives blood from both ventricles. The clinical syndrome includes dyspnea and cyanosis from birth, usually with a loud systolic murmur. Affected animals are not viable.

a. embolism occurs in cats in association with feline **cardiomyopathy** and rarely in dogs. Acute pain with paresis to paralysis in the hindlegs, cold, cyanotic feet and no femoral pulse are signs of the condition.

a. hiatus the opening in the diaphragm between the two crura through which the aorta, thoracic duct, the right and/or left azygos veins pass.

a.–ilial embolism see **iliac** artery thrombosis.

a. mineralization is one of the early lesions in poisoning by plants that induce mineralization of tissues, e.g. *Solanum glaucophyllum (S. malacoxylon), Cestrum diurnum*. In combination with lesions in the myocardium causes a syndrome of congestive heart failure.

a. nerve see **cardiac** depressor nerve.

a. palpation the aorta is easily palpable per rectum in cattle and horses; valuable as a clinical sign only in cases of thrombosis at the bifurcation; incision at this point has been used as a means of euthanasia in an emergency.

a.–pulmonary window an anomaly of the aorta in which there is an opening between the ascending portion of the aorta and the pulmonary artery; clinical signs are similar to those of **patent** ductus arteriosus, but surgical correction is much more difficult.

quadricuspid a. valve rare congenital heart disease characterized by the presence of four aortic valve cusps instead of three equally sized ones. Usually occurs in association with other congenital cardiac defects.

a. regurgitation see valvular **regurgitation**.

a. root the part of the aorta attached to the atrioventricular fibrous rings and myocardium.

a. rupture 1. in horses is caused by weakening of the wall of the aorta by migrating strongyle larvae. In cattle the cause may be onchocerciasis, in pigs experimental diets deficient in copper. Sudden death results from cardiac tamponade or dissecting aneurysm into the ventricular muscle. 2. sudden death in growing turkeys due to dissecting aneurysmal rupture of the aorta and death due to internal hemorrhage; the cause is unknown. Copper deficiency is suspected as a cause in several animal species.

a. sac the merged ventral aortae of the embryo which supplies blood to the aortic arches.

a. septal defect see aortic-pulmonary window (above).

a. sinus any one of the three pouch-like dilations of the aortic bulb which carry the cusps of the aortic valve. The sinuses set up eddy-currents behind the cusps that facilitate rapid closure of the valve and prevent the cusps sticking to the aortic wall. The coronary arteries arise from the left caudal and the right cranial sinuses.

stenosis obstruction to the outflow of blood from the left ventricle into the aorta. May be due to an anomaly of the valves (valvular), an obstruction in the ascending aorta (supravalvular), or an obstruction in the left ventricular outflow tract (subvalvular). See also aortic subvalvular stenosis (below), aortic valvular disease (below).

a. subvalvular stenosis in dogs and pigs is possibly an inherited defect. Characterized by stenosis of the aorta just below the semilunar valves. In pigs, it may cause congestive heart failure in the newborn, but commonly is detected at slaughter. in affected dogs severity increases with age so that clinical effects may not be apparent until the patients are older.

a. thromboembolism thrombosis is the usual forerunner of embolism, pieces of the thrombus breaking off the main mass and lodging in more distal parts of the vascular system. See also aortic embolism (above), **verminous** mesenteric arteritis, **iliac** artery thrombosis.

a. valve the valve at the entrance to the aorta from the left ventricle made up of three semilunar leaflets or valvulae.

a. valve rupture rupture of the medial cusp is recorded as a cause of sudden death in horses usually as a sequel to endocarditis.

a. valvular disease stenosis is rarely an acquired disorder, but may be an inherited defect in several species. In cats and rarely dogs, restrictive **cardiomyopathy** may be a cause of subvalvular aortic obstruction. Valvular incompetence may be congenital or acquired and results in diastolic overloading of the left ventricle with a characteristic water-hammer **pulse** and diastolic murmur. Second most common valvular lesion in horses. See also aortic **stenosis**, aortic subvalvular stenosis (above).

a. vestibule the cranial part of the left ventricular cavity leading to the root of the aorta in the avian heart. It is the space between the septal cusp of the left atrioventricular valve and the interventricular septum.

aortic arch the curvature of the aorta where it turns from its cranial path to a caudal one and becomes the thoracic aorta.

a. a. anomalies include persistent right aortic arch, double aortic arch, and anomalous arch arteries, which cause compression of areas of the respiratory or digestive tracts.

a. a. branching patterns the main vessels that arise from the aorta include one or more of the left and right subclavians, the right and left common carotid arteries or the bicarotid and brachiocephalic trunks. The patterns differ between species; e.g. cat, dog, and rabbit are similar; horses and cattle are similar; pigs and humans have one pattern, chickens another.

double a. a. persistence of both right and left embryonic aortic arches creating a vascular ring anomaly that causes esophageal entrapment.

persistent right a. a. persistence of the fourth right aortic arch causes constriction of the esophagus with regurgitation, aspiration pneumonia and dysphagia, and bloat in ruminants. The signs are present at birth.

a. a.–pulmonary artery fistula recorded rarely in horses; a fistula develops after simultaneous perforations occur in the pulmonary artery and the aorta resulting in the development of a fistula and the acute onset of heart failure which is usually fatal within a few days. Possibly results from an inherited defect in the vasa vasorum of the vessels.

a. a. rupture rare occurrence in horses resulting in acute cardiac tamponade or dissecting aneurysm into the myocardium and

A-52: Aortic thromboembolism in a cat.
From Nelson RW, Couto CG, Small Animal Internal Medicine, 3rd Edition. Mosby, 2003.

VetBooks.ir

A

sudden death; is part of **Marfan's syndrome** in calves; rarely a result of onchocerciasis in cattle.

a. a. syndrome any of a group of disorders leading to occlusion of the arteries arising from the aortic arch; such occlusion may be caused by atherosclerosis, arterial embolism, etc.

a. a. transformation the change in the original pattern of aortic arches of the fetus as a result of degeneration of some vessels and differential enlargement of others (see Table 9).

aortic-iliac thrombosis [*a-or'tik- il'e-ak throm-bo'sis*] see **iliac** artery thrombosis.

aorticopulmonary septum [*a-or"ti-ko-pool'mo-nar"e*] part of the embryonic development of separating the cardiac chambers from the primordial single sac.

aortitis [*a"or-ti'tis*] inflammation of the aorta.

aortocoronary [*a-or"to-kor'ə-nar-e*] pertaining to or communicating with the aorta and coronary arteries.

aortogram [*a-or'to-gram*] the film produced by aortography.

aortography [*a"or-tog'rə-fe*] radiography of the aorta after introduction into it of a contrast material.

aortopathy [*a"or-top'ə-the*] any disease of the aorta.

aortorrhaphy [*a"or-tor'ə-fe*] suture of the aorta.

aortosclerosis [*a-or"to-sklə-ro'sis*] sclerosis of the aorta.

aortostenosis narrowing of the aorta.

aortotomy [*a"or-tot'ə-me*] incision of the aorta.

Aotiella aotophilus biting louse found on New World primates.

aoudad see **Barbary sheep**.

aoutat see ***Trombicula autumnalis***.

AP 1. anterior-posterior. 2. alkaline phosphatase.

AP component a basement membrane protein present in reactive amyloid.

AP endonuclease see **apurinic-apyrimidinic (AP) endonuclease**.

4-AP 4-aminopyridine.

APACHE system Acute Physiology and Chronic Health Evaluation system; a scoring system for assessing severity of disease, used in humans and adapted for use in dogs.

apamine one of the peptides, assumed to be toxic, in bee venom.

apancreatic [*a-pan"kre-at'ik*] due to absence of the pancreas.

aparalytic [*a-par"ə-lit'ik*] characterized by absence of paralysis.

apathic without sensation or feeling.

apathism slowness of response to stimuli.

apathy [*ap'ə-the*] failure to respond emotionally to external stimuli.

apatite [*ap'ə-tīt*] 1. calcium phosphate; one of the two mineral constituents of bones and teeth. 2. fluorapatite; a naturally occurring rock mineral containing fluorine.

a. calculi see apatite **urolith**.

APC 1. antigen-presenting cells. 2. abbreviation for the combination of aspirin, phenacetin and caffeine, which has been used as an analgesic or antipyretic. 3. atrial premature contraction.

APE anterior pituitary extract.

ape [*āp*] general name for members of the superfamily Hominoidea. The *great apes* are members of the family Hominidae, which includes orangutans (*Pongo* spp.), gorillas (*Gorilla* spp.), chimpanzees (*Pan* spp.) and humans (*Homo sapiens*); *lesser apes* are members of the family Hylobatidae, the gibbons (*Hylobates* and *Nomascus* spp.).

aperient [*ə-pēr'e-ənt*] 1. mildly cathartic. 2. a gentle purgative.

aperistalsis [*a-per-ĭ-stawl'sis*] absence of peristaltic action.

apertura [*ap"ər-too'rə*] pl. *aperturae* [L.] aperture.

aperture [*ap'ər-chər*] an opening.

nasal a. the opening on the skull bounded by the nasal and incisive bones.

nasomaxillary a. the connecting aperture between the middle nasal meatus and the maxillary sinuses.

numerical a. measure of efficiency of a microscope objective proportional to the square root of the amount of light entering the instrument.

apex [*a'peks*] pl. *apices* [L.] the pointed end of a cone-shaped part. See also **apical**.

cardiac a. lies above the last sternebra and close to the sternal part of the diaphragm.

constricted a. an apical foramen of a tooth is smaller than the adjacent root canal.

dilated a. an apical foramen of a tooth is wider than the adjacent root canal.

nasal a. the dorsal crescent of the snout of the pig.

tooth a. end of a tooth root.

apexification [*a-pek"sĭ-fĭ-ka'shən*] in endodontics, treatment to stimulate formation of a calcified barrier across the open apex in an immature tooth.

apexogenesis [*a"peks-o-jen'ĕ-sis*] the physiologic closure of the apical foramen by continuous deposition of dentin and cementum as a tooth matures.

aphagia [*ə-fa'jə*] abstention from eating. In the case of animals a suitable translation would seem to be not to take food when it was available.

aphakia [*ə-fa'ke-ə*] absence of the lens of an eye, occurring as a result of trauma or surgery, or (rarely) congenitally.

aphakic [*ə-fa'kik*] pertaining to aphakia.

a. crescent the crescent-shaped space seen between the iris margin and a subluxated lens; pathognomonic for lens dislocation.

aphalangia [*a-fə-lan'jə*] absence of digits.

Aphanizomenon flos-aquae [*ə-fan"ĭ-zo-men'on*] toxic cyanobacterium (algae) producing **anatoxin**; causes sudden death.

Aphanomyces a genus of plant and animal fungal pathogens. Includes *A. astaci*, the cause of **crayfish** plague and *A. invadans*, the cause of epizootic ulcerative syndrome of fish.

apheresis [*af-ə-re'sis*] any procedure in which blood is withdrawn from a donor, a portion (plasma, leukocytes, platelets, etc.) is separated and retained, and the remainder is retransfused into the donor. It includes leukapheresis, thrombocytapheresis, etc. Called also pheresis.

aphid an insect of the order Hemiptera. They parasitize many plants during the warm seasons. Of interest in animal health are the black aphids, *Aphis craccivora*, which can exist in very large numbers on burr trefoil, *Medicago polymorpha*, and may stimulate the production of phytoallexins in the plant which then photosensitize animals grazing the infested pasture.

APHIS Animal and Plant Health Inspection Service.

apholate a chemical sterilant for insects; causes congenital ocular defects in sheep.

aphonia [*a-fo'ne-ə*] loss of the voice; inability to produce vocal sounds.

a. clericorum loss of the voice from overuse, as in dogs barking excessively during kenneling.

aphonic [*a-fon'ik*] 1. pertaining to aphonia. 2. without audible sound.

aphosphorosis [*a-fos"fə-ro'sis*] see **phosphorus** nutritional deficiency.

aphrodisiac [*af"ro-diz'e-ak*] 1. arousing sexual desire. 2. a drug that arouses sexual instinct.

aphtha [*af'thə*] pl. *aphthae* [L.] see **foot-and-mouth disease**.

aphthosis [*af-tho'sis*] a condition marked by presence of aphthae.

aphthous [*af'thəs*] characterized by the presence of aphthae.

a. fever see **foot-and-mouth disease**.

Aphthovirus [*af'tho-vi"rəs*] a genus in the family *Picornaviridae* that includes foot and mouth disease viruses and equine rhinitis A virus.

aphylaxis [*a"fə-lak'sis*] absence of phylaxis or immunity.

API 20E a commerically available kit used for the identification of Enterobacteriaceae and some other gram-negative bacteria.

apical [*ap'ĭ-kəl*] pertaining to an **apex**.

a. delta a foramen made up of multiple fine channels found at the apex of a tooth root through which the blood supply and nerves pass.

a. ectodermal ridge an ectodermal thickening at the end of each limb bud in the developing embryo; of critical importance in the initiation of limb segments.

a. halo a radiological feature of apical abscesses in which the surrounding alveolar bone becomes radiolucent.

a. lung lobe the cranial lobe of the lung.

apicectomy [*a"pĭ-sek'tə-me*] excision of the apical portion of the root of a tooth; an endodontic procedure.

apicitis [*a"pĭ-si'tis*] inflammation of the apex of the lung or of the root of a tooth.

apicoectomy [*a"pĭ-ko-ek'tə-me*] see **apicectomy**.

apicolysis surgical collapse of the apex of the lung.

Apicomplexa [*ap"ĭ-kəm-plek'sə*] a phylum of protozoa, including the coccidia.

apitherapy [*a"pe-o-ther'ə-pe*] a form of alternative medicine that utilizes honeybee products, such as bee venom, honey, pollen, propolis, and royal jelly for medicinal purposes.

Apium graveolens celery; when infected with fungi it may produce phytoallexins including furocoumarin, and cause primary photosensitization; can also contain toxic amounts of nitrate.

aplacental [*a-plə-sen'təl*] having no placenta.

aplasia [ə-pla'zhə] defective development or complete absence of an organ or tissue due to failure of development.
a. cutis see **epitheliogenesis** imperfecta.
pure red cell a. selective depression of erythropoiesis with anemia resulting. It may be a primary, immune-mediate disease or occur secondary to feline leukemia virus infection.
segmental a. aplasia of a segment of an organ, e.g. uterus.
aplastic [a-plas'tik] pertaining to or characterized by aplasia; having no tendency to develop into new tissue.
a. anemia see aplastic **anemia**.
a. crisis temporary bone marrow failure associated with any disease causing a chronic hemolysis.
Aplopappus heterophyllus ***Haplopappus*** *heterophyllus*.
APMV-2 avian paramyxovirus-2.
apnea [ap'ne-ə] 1. temporary cessation of breathing. 2. asphyxia.
sleep a. transient attacks of failure of autonomic control of respiration, becoming more pronounced during sleep and resulting in acidosis and pulmonary arteriolar vasoconstriction and hypertension.
apneic [ap'ne-ik] pertaining or relating to apnea or affected with apnea.
a. index a measure of an anesthetic's toxicity with respect to the concentration of the anesthetic necessary to induce respiratory arrest. It compares the concentration of the anesthetic necessary to cause respiratory arrest for one minute to the potency of that particular agent.
apneumia [ap-noo'me-ə] congenital absence of the lungs.
apneusis [ap-noo'sis] sustained, gasping inspiration followed by short, inefficient expiration, which can continue to the point of asphyxia. Often associated with lesions in the respiratory center in the brain.
apneustic [ap-n s'tik] pertaining to or characterized by apneusis.
a. center a poorly understood part of the respiratory center located in the caudal part of the pons; associated with the taking of deep breaths and in controlling normal respiration.
ap(o)- word element. [Gr.] *away from, separated*.
apocrine [ap'o-krin] denoting that type of glandular mechanism in which the secretory products become concentrated at the free end of the secreting cell and are thrown off along with a portion of the cytoplasm, as in the mammary gland; cf. holocrine and merocrine.
a. cystic calcinosis see **calcinosis** circumscripta.
a. cystic dilatation a relatively common finding in dog skin; may be associated with hyperplasia of glandular epithelium or secondary to duct obstruction.
a. cystomatosis see apocrine gland cyst (below).
a. gland cyst cystic hyperplasia of apocrine sweat glands; common in dogs. Often multiple and called apocrine cystomatosis.
a. sweat gland the most abundant type of sweat gland in domestic animals and part of the hair follicle complex; found abundantly in haired skin and specialized regions such as the anal sacs; they are under sympathetic nervous control and produce sweat by a merocrine mechanism (despite the name) which, in normal quantities, contributes to a protective film on the skin. Specialized apocrine sweat glands are located in the external ear canal and eyelids. Inflammation is called **hidradenitis**.
a. tumors cystic or papillary adenomas and papillary or tubular carcinomas occur, particularly in dogs and cats. See also **anal sacs** tumor.
apocynin [ə-pos'ĭ-nin] plant toxin found in *Apocynum* spp.; causes gastroenteritis.
Apocynum [ə-pos'ĭ-nəm] a plant genus of the family Apocynaceae.
A. cannabinum, A. androsaemifolium poisoning by these plants is characterized by a syndrome of gastroenteritis with diarrhea, abdominal pain, teeth grinding with nervous signs of tremor, incoordination and convulsions. Called also dogbane.
apodia [a-po'de-ə] congenital absence of the feet.
apoenzyme [ap"o-en'zim] the protein component of an enzyme that requires the presence of the prosthetic group (cofactor) to form the functioning enzyme.
apoferritin [ap"o-fer'ĭ-tin] an apoprotein that can bind many atoms of iron per molecule to form ferritin, the form in which iron is stored in the liver and other tissues.
apogee the state of greatest severity of a disease.
apolar [a-po'lər] having neither poles nor processes; without polarity.
apolipoprotein a protein moiety occurring in plasma lipoproteins; there are five families of apolipoproteins, designated A–E.
apomorphine [ap"o-mor'fēn] an alkaloid from morphine. Used as the hydrochloride; administered parenterally it causes vomiting within 3 to 10 minutes but can also be administered orally. Stimulates receptors in the chemoreceptor trigger zone of the medulla oblongata.
aponeurectomy [ap"o-n-rek'tə-me] excision of an aponeurosis.
aponeurorrhaphy [ap"o-n-ror'ə-fe] suture of an aponeurosis.
aponeurosis [ap"o-n-ro'sis] pl. *aponeuroses* [Gr.] a broad, sheetlike tendon.
abdominal a. the broad tendinous portions of the oblique and transverse abdominal muscles that attach to the linea alba.
pharyngeal a. a fascial sheet within the pharyngeal wall, lined with mucous membrane and covered by the pharyngeal constrictor muscles.
aponeurositis [ap"o-n-ro-si'tis] inflammation of an aponeurosis.
aponeurotomy [ap"o-n-rot'ə-me] incision of an aponeurosis.
Aponomma [ap"o-nom'ə] a genus of ticks occurring almost entirely on reptiles. Resembles *Amblyomma* spp. except that *Aponomma* has no eyes. Currently considered to be a synonym of ***Amblyomma***.
Apophallus a genus of intestinal flukes (digenetic trematodes) of the family Heterophyidae. Includes *A. muhlingi* and *A. donicum* (dogs and cats).
apophyseal [ə-pof'ə-se"əl, ap"o-fiz'e-əl] pertaining to an apophysis.
apophysis [ə-pof'ə-sis] pl. *apophyses* [Gr.] a bony outgrowth or swelling such as a tuberosity or process, especially one that has no secondary ossification center.
apophysitis [ə-pof"ə-si'tis] inflammation of an apophysis.
apopilosebaceous complex the hair follicle unit consisting of the hair follicle and its associated arrector pili muscle, and apocrine and sebaceous glands. Called also the hair follicle unit.
apoprotein [ap"o-pro'tēn] the protein moiety of a molecule or complex, as of a lipoprotein.
apoptosis [ap"op-to'sis, ap"o-to'sis] death of single cells by a peculiar process of self-shrinkage, rapid fragmentation and engulfment of the fragments by neighboring cells and macrophages. It is an active process initiated in individual cells by activation of specific enzymes and can occur in mucosal as well as mesenchymal and parenchymal tissue cells. Apoptosis may be an expected part of the life-cycle, in which it can be regarded as a form of **necrobiosis**. Examples of this are cyclic involution of endometrium and shrinkage of tadpoles' tails, etc, where it can be regarded as physiological. But it is also seen in pathological states, such as malignant neoplasia, certain toxic and viral insults and as a result of cell-mediated immune injury.
apoptotic body [ap"op-tot'ic, ap"o-tot'ic] the shrunken, dense, dark-staining cell fragments produced by **apoptosis**. In dermatopathology, the term is applied to degenerate basal epidermal cells, e.g. colloid, hyaline, filamentous, Civatte bodies; round, shrunken, homogeneous, eosinophilic bodies in the stratum basale; these are features in lichenoid dermatoses.
aporepressor [ap"o-re-pres'ər] a repressor that is inactive until it combines with a corepressor.
apostasis [ə-pos'tə-sis] 1. an abscess. 2. the end or crisis of an attack or disease.
aposthia [ə-pos'the-ə] congenital absence of the prepuce.
apostome member of the order Apostomatida of ciliated protozoa.
apothecaries' weights and measures a generally superseded system used for measuring and weighing drugs and solutions. It is gradually being replaced by the metric system. In the apothecaries' system fractions are used to designate portions of a unit of measure: e.g. one-fourth grain is written gr. 1/4. The fraction 1/2 is written ss. There are two symbols in this system which are sometimes confused and must always be written clearly. These are the symbols for drams (ʒ) and ounces (℥). Small Roman numerals are used after the symbols. For example, ʒiss reads drams one and one-half; ʒiii reads ounces three. See also Tables 2.2 and 2.3.
apothecary [ə-poth'ĕ-kar"e] a pharmacist; a person who compounds and dispenses drugs.
Appaloosa a breed of small riding horses, native to the northwest of the USA, characterized by an irregularly mottled skin and hooves that are vertically striped in black and white. The color patterns vary greatly, but in general there is spotting, speckling or roaning, which can be over the entire body or confined to

VetBooks.ir

A-53: Appaloosa horse. From Sambraus HH, Livestock Breeds. Mosby, 1992.

VetBooks.ir

A

certain areas, usually the loin and hindquarters. This can be black or brown on a white background or white on a colored background. The breed is known to have a congenital stationary night **blindness**.

apparatus [*ap"ə-rā'təs*] 1. an arrangement of a number of parts acting together to perform a special function. 2. certain organ systems such as respiratory or digestive apparatus.
a. digestorius see **digestive** system.
fetlock joint suspensory a. see **suspensory** ligament.
forelimb stay a. an apparatus of ligaments and tendons that prevent the forelimb of a horse from buckling while it is standing, galloping or landing from a jump; it includes mechanisms to prevent flexion of the shoulder and elbow joints, and to prevent overextension or flexion of the carpal, fetlock and coffin joints.
hindlimb stay a. an apparatus of ligaments and tendons that prevents the hindlimb from buckling while the horse is standing for long periods of time and which also assists fast locomotion; it includes mechanisms to lock and synchronize the actions of the stifle and hock joints including the presence of a 'reciprocal apparatus', that ensures that the two joints perform in unison.
lacrimal a. the structures associated with the production, flow and drainage of tears; it includes the lacrimal and accessory glands and their excretory ducts, the lacrimal canals, the lacrimal sac and the nasolacrimal duct.
reciprocal a. a system based on two tendinous cords in the hindlimb of the horse, the peroneus tertius and the superficial digital flexor, which connect the distal end of the femur to the hock, one on the cranial face of the tibia, the other on the caudal face; they ensure that the two joints always move in unison.
Wangensteen's a. a suction apparatus connected to a tube for providing continuous drainage of gas and fluid from the stomach and intestine with constant gentle aspiration.

appendage [*ə-pen'dəj*] 1. a protuberant outgrowth, such as a tail, a limb or limblike structure. 2. a thing or part appended.

appendicitis [*ə-pen"dĭ-si'tis*] inflammation of the vermiform appendix. Occurs in humans and the great apes. The syndrome includes abdominal pain, fever and leukocytosis.

appendicular [*ap"en-dik'u-lər*] 1. pertaining to an appendix or appendage. 2. pertaining to the limbs.
a. joint a limb joint.
a. skeleton the skeleton of the limbs.

appendix [*ə-pen'diks*] pl. *appendices* [L.] 1. a slender outgrowth or appendage. 2. the vermiform appendix, a slender diverticulum present in only a few mammals such as the rabbit, humans and the great apes. A structure of doubtful function, rich in lymphoid tissue.
a. epididymis a small, piriform body attached to the head of the epididymis that is a remnant of the blind cranial segment of the mesonephric duct.
a. testis a small cyst adjacent to the head of the epididymis that is a remnant of the paramesonephric (Müllerian) duct. Called also Morgagni's hydatid.

Appenzeller a medium-sized, Swiss mountain dog used for herding goats; it has a short, smooth coat in black, tan and white. The tail is curled over the back. See also **Sennenhund**.

appestat [*ap'ə-stat*] a brain center (probably in the hypothalamus) concerned in controlling the appetite.

appetite [*ap'ə-tīt*] the desire for food. It is stimulated by the sight, smell or thought of food and accompanied by the flow of saliva in the mouth and gastric juice in the stomach. Appetite is psychological, dependent on memory and associations, as compared with hunger, which is physiologically aroused by the body's need for food. Its existence in animals can only be conjectured on the response in the form of food intake. Chronic loss of appetite is known as anorexia.
decreased a. see **anorexia**.
depraved a. see **pica**. Called also allotriophagia.
increased a. see **hyperorexia**, **polyphagia**.
perverted a. see **pica**.
salt a. the appetite for salt displayed by animals, especially ruminants, at pasture. Used in the manangement of cattle on extensive range. See also **salting**.
a. stimulants there are several methods available. Bitters such as gentian and pulv. nux. vomica exert some effect in ruminants, probably by stimulating alimentary tract mucosa. Anabolic steroids are sometimes used for this purpose in dogs and cats. A nutritional deficiency of zinc or the B vitamin complex depresses acuity of appetite and dietary supplementation with it can be effective as an appetite stimulant. Suppression of the medullary satiety center by barbiturates and benzodiazepines is also recommended. There are no well-regarded stimulants of the hunger center of the lateral hypothalamus.

applanation [*ap"lə-na'shən*] to flatten using pressure. See applanation **tonometer**.

applanometer [*ap"lə-nom'ĕ-tər*] an applanation **tonometer**; a mechanical or electronic instrument for determining intraocular pressure by the process of applanation.

apple [*ap'əl*] see ***Malus sylvestris***.
a. pulp ingestion of large amounts can cause lactic acidosis, or manganese deficiency resulting in congenital chondrodystrophy.

apple-of-peru see ***Nicandra physalodes***.

apple of Sodom ***Solanum*** *linneanum*.

applicator [*ap'lĭ-ka"tər*] a device, e.g. a flat wooden stick, used to apply medicaments to a small area of exposed tissue.

apposable capable of being apposed, e.g. edges of a wound.

apposition [*ap"ə-zish'ən*] the placement or position of adjacent structures or parts so that they can come into contact.
a. sutures the placement of sutures to appose adjacent tissues in a manner that aligns the tissue layers correctly.

apprehension [*ap"re-hen'shən*] 1. perception and understanding. 2. anticipatory fear or anxiety. See also **anxiety**.

approved veterinary schools schools recognized by the country's registering authority as having educational standards equivalent to the indigenous ones. Graduates of these schools are then accepted for registration to practice in the host country. It may be necessary for applicants to sit an examination to establish that their present proficiency status is adequate. Graduates of schools that are not approved are usually required to undertake further training.

approximal [*ə-prok'sĭ-məl*] 1. close together. 2. in dentistry the surface of a tooth which faces the adjacent tooth.

approximation [*ə-prok"sĭ-ma'shən*] 1. the act or process of bringing into proximity or apposition. 2. a numerical value of limited accuracy.
normal a. approximation of the actual distribution of a variable by a normal distribution.

apraclonidine [*ap"rə-klon'ĭ-dēn*] an alpha agonist derived from clonidine used topically to reduce intraocular pressure.

apramycin [*ap"rə-mi'sin*] an aminoglycoside antibiotic, active against gram-negative and gram-positive bacteria. It is water soluble, easily administered in drinking water and has been used largely in treating intestinal infections in pigs and calves.

apricot see ***Prunus***.

aprindine an antiarrhythmic drug that acts as a local anesthetic for the myocardial cell membrane; used in the treatment of ventricular arrhythmias.

aprinocid a nucleoside analog used as an anticoccidial agent in chickens and other animals.

aprobarbital [*ap"ro-bahr'bĭ-təl*] a crystalline powder, an intermediate-acting sedative and hypnotic.

aprobarbitone aprobarbital.

Aproctella *A. stoddardi* (syn. *Microfilaria fallisi*) a tissue nematode of turkeys, doves, quail and grouse. Lesions observed at necropsy include granulomatous pericarditis.

aproctia [*ə-prok'she-ə*] imperforate anus.

apron 1. the long hair under the neck and front of the chest in dogs, as seen in rough Collies. 2. coarser fiber and/or guard hair which may occur on the chest of an alpaca. 3. large skin folds

carried on the ventral neck of some strains of Merino sheep. 4. a piece of leather suspended under the belly of a ram in front of the prepuce to prevent mating when the ram is used as a teaser. 5. the concrete slab placed in front of feeders in feedlots to reduce muddiness. 6. outer garment made of lead rubber of a thickness of 0.25–0.5 mm lead equivalent which is worn to prevent x-irradiation of the operator.

aprosopia [*ap"ro-so'pe-ə*] a developmental anomaly with partial or complete absence of the face.

aprotinin [*ap"ro-ti'nin*] a polyvalent kallikrein-trypsin inhibitor extracted from bovine mast cells; used therapeutically to inhibit fibrinolysis and in the laboratory as a preservative in plasma samples to prevent rapid degradation of certain emzymes. Called also bovine pancreatic trypsin inhibitor. Withdrawn from the market.

apteria zones of a bird's skin carrying no feathers or down; the preferred surgical sites. See also **feather**.

Apteryx see **kiwi**.

APTT, aPTT activated partial thromboplastin time.

aptyalism [*ap-ti'ə-liz-əm*] deficiency or absence of saliva.

APUD cells (*a*mine *p*recursor *u*ptake and *d*ecarboxylation) a group of cells of common embryonic origin that secrete many hormones, with the exception of steroids. APUD cells comprise both specialized neurons and other endocrine cells. These cells synthesize structurally related polypeptides and biogenic amines. The acronym APUD derives from the fact that polypeptide production is linked to the uptake of a precursor amino acid and its decarboxylation in the cell to produce an amine. Examples of the peptide hormones are insulin, ACTH, glucagon and antidiuretic hormone. Examples of the amine hormones are dopamine, norepinephrine, serotonin and histamine. Formerly known as Argentaffin cells.

APUD tumor see **apudoma**, **carcinoid**, **argentaffinoma**.

apudoma [*a"pəd-o'mə*] a tumor derived from APUD cells, many of which secrete hormones, e.g. insulinoma and gastrinoma. See also **carcinoid**, **argentaffinoma**.

Apulian Podolian cattle gray, Italian, meat and draft cattle.

apurinic-apyrimidinic (AP) endonuclease enzyme involved in the excision repair mechanism of DNA. The enzyme nicks the phosphodiester backbone at the depurinized site and excises the sugar phosphate residue, prior to restoration of the damaged strand by the action of DNA polymerase I and ligase.

apus [*a'pəs*] see **sirenomelus**.

apyogenous not caused by pus.

apyretic [*a"pi-ret'ik*] without fever.

apyrexia [*a"pi-rek'se-ə*] absence of fever.

apyrogenic [*a-pi"ro-jen'ik*] not producing fever.

Aq. [L.] *aqua* (water).

Aq. dest. *aqua destillata* (distilled water).

aqua [*ah'kwə, ak'wə*] 1. [L.] water, H_2O. 2. a saturated solution of a volatile oil or other aromatic or volatile substance in purified water.

Aquabirnavirus [*ah"kwə-bur'nə-vi"rəs*] a genus in the family *Birnaviridae*; causes **infectious** pancreatic necrosis in salmonids.

aquaculture cultivation and harvesting of plants and animals in water. Called also mariculture.

aquaporins [*ak"wə-po'rin*] cell membrane proteins that regulate the passage of water and some solutes. Called also water channels.

aquapuncture [*ak'wə-pungk"chər*] acupuncture terminology for injection therapy; injection of sterile saline into an acupuncture site, continues to stimulate the point until it is absorbed.

Aquareovirus [*ak"wə-re'o-vi"rəs*] a genus in the family *Reoviridae*. They cause disease in fish and shellfish.

aquaresis the excretion of solute-free water.

aquaretics drugs that bind to vasopressin receptors in the renal collecting duct promoting excretion of solute-free water.

aquarist student of marine life; curator of an aquarium.

aquarium unit for storage and display of aquatic species; may be fresh water or saline for marine specimens.

aquatic snakes [*ə-kwaht'ik*] a term which includes some members of the Colubridae family, of very low or nil venomicity, and true sea-snakes of the family Hydrophiidae, which have very powerful venom but keep mostly to the open sea. They can be a hazard if blown to shore in rough weather. They have a capability of staying under water for as long as 8 hours.

aqueduct [*ak'wə-dukt"*] canal or passage.

cerebral a. a narrow channel in the midbrain connecting the third and fourth ventricles and containing cerebrospinal fluid. Called also aqueduct of Sylvius.

a. of cochlea a narrow canal that unites the perilymphatic space near the base of the cochlea with the subarachnoid space beneath the temporal bone. Called also perilymphatic duct.

a. of Cotunnius vestibular aqueduct.

a. of Fallopius the canal for the facial nerve in the temporal bone. Called also facial canal.

sylvian a., a. of Sylvius cerebral aqueduct.

ventricular a. see cerebral aqueduct (above).

vestibular a. bony canal that opens onto the medial surface of the temporal bone and passes to the vestibule of the inner ear; houses the endolymphatic duct. Called also aqueduct of Cotunnius.

aqueocentesis surgical puncture of the anterior chamber of the eye for the removal of aqueous humor. See also anterior chamber **paracentesis**.

aqueous [*a'kwe-əs*] watery; prepared with water.

a. flare turbidity of the aqueous humor caused by increased protein concentrations and cells; pathognomonic sign of anterior uveitis or other disruption of the blood-aqueous barrier.

a. humor the fluid produced by the ciliary processes in the eye and occupying the anterior and posterior chambers. It provides nourishment for the lens and cornea and helps to maintain the intraocular pressure, and hence the optical integrity of the eye. Disturbance of its drainage through the iridocorneal angle can induce glaucoma and other disorders.

a. misdirection obstruction to normal anterior flow of aqueous humor at the ciliary body and lens equator causing aqueous humor to be misdirected into the vitreous body, resulting in forward pressure on the lens, iris, and ciliary body and impairment of aqueous humor outflow. Causes a form of glaucoma seen most commonly in aged cats. See **ciliovitreolenticular** block.

a. paracentesis see **aqueocentesis**.

plasmoid a. aqueous humor with a protein concentration approaching that of plasma; pathognomonic sign of anterior uveitis or other disruption of the blood–aqueous barrier.

a. suspension a mixture of insoluble particles in water.

Aquila chrysaetos see golden **eagle**.

Aquilaria agallocha see **aloe**.

Aquilegia vulgaris a European member of the plant family Ranunculaceae; it is reputed to be poisonous because of its high content of cyanogenetic glycosides. Called also columbine, granny bonnets.

aquilide A see **ptaquiloside**, the carcinogen in ***Pteridium*** spp. (brackens).

Ar chemical symbol, *argon*.

-ar suffix meaning pertaining to.

AR5189 virus a flavivirus associated with abortion and stillbirths in cattle in Africa.

ara-A adenine arabinoside; see **vidarabine**.

ara-C cytosine arabinoside; see **cytarabine**.

Ara macao see **macaw**.

Arab the purest bred breed of horses and one of great antiquity. A small (14–15 hands high, or 55–60 inches at the withers) riding horse, usually bay, chestnut, white or fleabitten gray in color. It has been extensively used in the production of other breeds and crossbreds. It and its crossbreds are noted for the presence amongst them of cerebellar dysplasia, combined immunodeficiency and leukoderma. Called also the Arabian horse.

A-54: Arab thoroughbred. From Sambraus HH, Livestock Breeds. Mosby, 1992.

VetBooks.ir

VetBooks.ir

A

Arabi black, pied or white fat-tailed, meat or carpetwool sheep with black head. The males are horned, the females polled. See also **Near East fat-tailed**.

Arabian having some relationship to Arabia, most conspicuously Arabian horses.

Darley A. the original Arab sire, the founder of the thoroughbred breed, imported into England in 1704.

A. fading syndrome see Arabian **fading** syndrome.

A. foal pneumonia see **pneumonia**.

arabinosyl cytosine see **cytarabine**.

Araceae the plant family of aroids (arums) which can be highly irritant when chewed because of a high content of calcium oxalate as raphide crystals. Genera include *Arum*, *Dieffenbachia*, *Philodendron*, *Monstera*, *Zantedeschia*, *Arisaema*, *Xanthosma*, *Lysichiton*.

arachidonic acid [*ə-rak"i-don'ik*] twenty carbon fatty acid containing four double bonds of the n-6 family essential fatty acids from which prostaglandins, thromboxane and leukotrienes are derived. Deficiency, which is characterized by hair loss, fatty liver degeneration, anemia and reduced fertility, occurs most commonly in cats because of their inability to synthesize arachidonic acid from linoleic acid. See also **cascade**.

Arachis hypogaea [*ar'ə-kis*] see **peanut**.

arachnid [*ə-rak'nid*] a member of the class Arachnida of animals.

Arachnida a class of animals of the phylum Arthropoda, including 12 orders, comprising such forms as spiders, scorpions, ticks and mites.

arachnidism [*ə-rak'ni-diz-əm*] poisoning from a spider bite.

arachnitis [*ar"ak-ni'tis*] see **arachnoiditis**.

arachnoid [*ə-rak'noid*] 1. resembling a spider's web. 2. the delicate membrane interposed between the dura mater and the pia mater, and with them constituting the meninges. Called also arachnoidea.

cerebral a., arachnoidea cerebri the arachnoid investing the brain.

a. cyst cysts of the pia and arachnoid containing cerebrospinal fluid; may cause gradually increasing pressure on nervous tissue, especially spinal cord, causing ataxia, paresis. Called also intra-arachnoid cyst.

a. fibroblastoma see **meningioma**.

a. granulations villous enlargements of the arachnoid that protrude into dural sinuses or diploic veins and serve to drain cerebrospinal fluid. They are conspicuous in the dorsal sagittal sinus of the horse.

a. mater arachnoid; middle layer of the meninges.

spinal a. the arachnoid investing the spinal cord.

arachnoidea [*ar"ak-noi'de-ə*] see **arachnoid**.

arachnoiditis [*ə-rak"noid-i'tis*] inflammation of the arachnoid.

arachnomelia [*ə-rak"no-me'le-ə*] a congenital anomaly in which the distal extremities of the limbs are excessively long and thin, giving the animal a spidery look.

inherited a. the bones of the elongated limbs are very fragile and there are additional skeletal and cardiovascular defects in affected calves. Inherited congenital autosomal recessive inheritance in Brown Swiss and Simmental cattle. A similar condition, called bovine brachyspina syndrome, inherited autosomal recessively, occurs in Holsteins. In lambs, a semi-lethal inherited congenital chondroplasia of Suffolk and Hampshire sheep with deformities of the limbs and spinal column and muscular atrophy which results in long-legged, deformed limbs. Called spider lambs.

aradicular see aradicular **teeth**.

aran ***Trifolium*** *repens*.

Aranaeomorpha a large suborder of spiders with fangs that point diagonally towards each other. Includes many common spiders such as daddy long-legs, orb-weavers, and jumping spiders,

Araneae [*ə-rān'e-e*] an order of the class Arachnida that contains the spiders.

araphia [*ə-ra'fe-ə*] see **dysraphism**.

ARAS ascending reticular activating system. See **reticular**[1] activating system.

arasan a cause of poisoning in poultry due to its content of **tetramethylthiuram disulfide** (thiram) which causes lameness and leg deformity in chickens and poults and soft-shelled egg layers. It is also teratogenic.

Araujia sericifera a vine in the family Asclepiadaceae. Its seeds are poisonous to fowl. Probably contains cardiac glycosides. Called also white moth plant, cruel vine, *A. hortorum*.

arbocell purified cellulose; used as a fiber supplement.

arbor [*ahr'bər*] pl. *arbores* [L.] a tree.

a. vitae treelike outlines of white substance seen on median section of the cerebellum.

a. vitae cerebelli see arbor vitae (above).

arboreal [*ahr-bo're-əl*] pertaining to trees, treelike, tree-dwelling.

arborescent [*ahr"bo-res'ənt*] branching like a tree.

arborization [*ahr"bə-rĭ-za'shən*] a collection of branches, as the branching terminal processes of a nerve cell.

a. diagnosis method see **decision** tree, **algorithm**.

arbovirus [*ahr'bor-vi"rəs*] (*ar*thropod-*bo*rne) one that replicates in an arthropod, which acts as a vector in transmission of the virus to a susceptible vertebrate host in which replication also occurs. See also ***Togaviridae***, ***Bunyaviridae***, ***Reoviridae***, ***Rhabdoviridae***, ***Arenaviridae***.

ARC Agricultural Research Council.

arcade [*ahr-kād'*] a structure or structures arranged in a series of arches.

Arcanobacterium [*ahr-ka"no-bak-tēr'e-əm*] a genus of pleomorphic gram-positive actinomycete bacteria previously grouped in the genus *Corynebacterium*.

A. bernardiae isolated frm the prepuce of European bison (*Bison bonasus*) with balanoposthitis.

A. bonasi isolated frm the prepuce of European bison (*Bison bonasus*) with balanoposthitis.

A. hippocoleae isolated from vaginitis in horses.

A. phocae isolated from a variety of body systems in seals, but the pathogenic significance is uncertain.

A. pluranimalium isolated from lung abscesses in deer and liver abscesses, mastitis, endometritis, abortions and endocarditis in cattle.

A. pyogenes capable of producing suppurative lesions in any organ or tissue in animals. In farm animals, especially ruminants, it is the most common bacterial species found in infected wounds and abscesses. An important cause of **mastitis** in cattle. Previously called *Actinomyces pyogenes* and *Corynebacterium pyogenes*.

arcate [*ahr'kāt*] arcuate.

ArcGIS see **Environmental Systems Research Institute**.

arch [*ahrch*] a structure of bowlike or curved outline.

a. of aorta see **aortic arch**.

aortic a's paired vessels that run from the ventral to the dorsal aortae through the branchial arches of fishes and amniote embryos. In mammalian development, arches 1 and 2 disappear; 3 joins the common to become the internal carotid artery; 4 becomes the arch of the aorta and joins the aorta and subclavian artery; 5 disappears; 6 forms the pulmonary arteries and, until birth, the ductus arteriosus.

arterial a. one or more arteries that form an anastomotic connection between two more or less parallel tributaries; found commonly around joints and other moveable parts.

a. arteriosus, arcus arteriosus a large communicating branch between two arteries.

branchial a's four pairs of mesenchymal and later cartilaginous columns in the pharyngeal wall which in fish develop into gills and in mammals become modified into structures of the ear and neck.

branchial a. derivatives derivatives of the arches are first arch (mandible, ossicles), second arch (hyoid apparatus, ear ossicles), third arch (hyoid apparatus), fourth arch (laryngeal cartilages).

costal a. the caudal rim of the bony thorax formed by the conjoined asternal ribs and their connecting tissue.

cricoid a. the slender ventral half of the cricoid cartilage of the larynx. The most caudal of the palpable landmarks of the larynx.

dental a. the curving structure formed by the crowns of the teeth in their normal position, or by the residual ridge after loss of the teeth.

hemal a. the v- or y-shaped bone borne on the ventral surface of the tail vertebrae of some animals such as kangaroos and whales and which protects blood vessels. Called also chevron bone.

hyoid a. the second branchial arch.

ischial a., ischiatic a. the caudal rim of the pelvis formed by the conjunction of the two ischiae. Called also sciatic arch.

lumbocostal a. of the diaphragm the dorsal part of the diaphragm where it crosses the ventral surface of the psoas muscles. Here it is without any attachment and only serous membranes separate the thoracic and peritoneal cavities.

mandibular a. the first branchial arch, being the rudiment of the maxillary and mandibular regions.
neural a. the dorsal vertebral arch.
palatal a. the arch formed by the roof of the mouth from the teeth on one side to those on the other.
palatoglossal a. the thick fold of tissue passing from the soft palate to the lateral border of the tongue.
palatopharyngeal a. a horizontal fold of pharyngeal mucosa that passes from the soft palate and joins with its contralateral fold over the entrance to the esophagus at the intrapharyngeal ostium; it marks the division between the nasopharynx above and the oropharynx below.
palmar a. a superficial and a deep vascular arch behind the carpus formed by the conjunction of several arteries of the forearm.
pulmonary a's the most caudal of the embryonic aortic arches, which become the pulmonary arteries.
sciatic a. ischial arch.
tendinous a. a linear arched thickening of fascia that provides attachment for some muscles or protection for vessels and nerves that run between it and bone.
terminal a. the union between the medial and lateral palmar digital arteries, which in horses runs through the solar canal within the distal phalanx.
vertebral a. the dorsal bony arch of a vertebra, composed of paired laminae and pedicles; see hemal arch, neural arch (above).
zygomatic a. the arch formed by the processes of the zygomatic and temporal bones that is the principal origin of the masseter muscle and is particularly broad and prominent in carnivores.
archaebacteria [*ahr-ke'ə bak-tēr'e-ə*] prokaryotic organisms, distinct from eubacteria, which are found in association with high temperatures or salinity, or are methanogenic. None are pathogens.
archencephalon [*ahrk"ən-sef'ə-lon*] the embryonic primitive brain from which the midbrain and forebrain develop.
archenteron [*ahrk-en'tər-on*] the central cavity that is the provisional gut in the gastrula; the primitive digestive cavity of the embryo.
archeokinetic [*ahr"ke-o ki-net'ik*] relating to the primitive type of motor nerve mechanism as seen in the peripheral nervous system.
arch(i)- word element. [Gr.] *ancient, beginning, first, original*.
archicerebellum [*ahr"ki-ser"ə-bel'əm*] the phylogenetically older part of the cerebellum that includes the flocculonodular lobe. Called also vestibular cerebellum.
archicortex [*ahr"ki-kor'teks*] see **archipallium**.
archinephron [*ahr"ki-nef'ron*] the pronephros.
arching back postural abnormality usually accompanied by stiff gait, anxious expression; caused by pain in peritoneum, caused usually by peritonitis.
a. b. downward fleeting postural abnormality occurring during spasms of pain; the back is depressed, often accompanied by crouching.
archipallium [*ahr"ki-pal'e-əm*] that portion of the pallium, or cerebral cortex, which phylogenetically is older and composed of the hippocampus and dentate gyrus.
archistome [*ahr'ki-stōm*] blastopore.
arciform [*ahr'si-form*] see **arcuate**.
Arcobacter [*ahr'ko-bak"tər*] a genus of gram-negative, aerotolerant, spiral-shaped bacteria, associated with abortion in pigs and horses.
arctation [*ahrk-ta'shən*] narrowing of an opening or canal.
Arctic husky see **Siberian husky**.
Arctium lappa a temperate zone plant with burrs which causes granular stomatitis in the dog. Called also burdock.
Arctotheca calendula a plant of the family Asteracea (Compositae). Good forage plant but may contain toxic amounts of nitrate when it grows profusely after the breaking of a long drought. See also **nitrite** poisoning. Called also *Cryptostemma calendula*, capeweed.
Arctotis glutinosa ***Osteospermum*** *cuneata*.
arcuate [*ahr'ku-āt*] bent like a bow.
a. line part of the terminal line that marks the boundary of the pelvic inlet and which extends from the sacrum to the pubic brim.
a. line of Vogt translucent, approximately circular line on the posterior lens capsule surrounding Mittendorf's dot and representing the anterior termination of Cloquet's canal; a normal finding. More evident in some individuals than others. See also **Bergmeister's papilla**, **Cloquet's canal**, **Mittendorf's dot**.
a. vessels the radicles of the interlobar arteries of the kidney found at the corticomedullary junction that give off the interlobular arteries.
arcuation [*ahr-ku-a'shən*] a bending or curvature.
Arcyophora a genus of moth in the order Lepidoptera.
A. longivalvis, A. patricula nocturnal moths that feed on the secretions of cows' eyes and physically transmit infections of the conjunctival sac between cattle.
ARDS acute respiratory distress syndrome.
area [*ār'e-ə*] pl. *areae, areas* [L.] a limited space or plane surface.
association a's areas of the cerebral cortex (excluding primary areas) connected with each other and with the neothalamus; they are responsible for higher mental and emotional processes, including memory, learning, etc.
Brodmann's a's specific occipital and preoccipital areas of the cerebral cortex, distinguished by differences in the arrangement of their six cellular layers, and identified by numbering each area.
cardiogenic a. in the embryo includes heart and pericardial rudiments.
a. centralis region of high visual acuity within the feline retina dorsolateral to the optic papilla where retinal vessels are reduced in number and size and cones and ganglion cells are present in increased density. In cattle the area is poorly defined as two areas; a rounded area concerned with binocular vision and a horizontal strip concerned with monocular vision.
a. cerebrovasculosa in anencephaly the cerebral hemispheres are replaced by a sheet of tissue composed largely of blood vessels called the area cerebrovasculosa.
a. cribrosa that part of the renal crest or renal papilla at which the papillary ducts open into the pelvis.
germinal a., a. germinativa embryonic disc.
a. medullovasculosa the central part of a spinal meningomyelocele. It is a raised, reddish protuberance devoid of skin and consists of spinal cord with a surrounding vascular network.
motor a. that area of the cerebral cortex which, on brief electrical stimulation, shows the lowest threshold and shortest latency for the production of muscle movement.
a. nuda an area on the surface of a viscus that has no serosal covering.
olfactory a. 1. the part of the piriform lobe of the brain associated with olfaction. 2. a more general area including the olfactory bulb, tract and trigone.
a. opaca the opaque area of the embryonic disc of the fertilized avian egg surrounding the area pellucida; it forms some extraembryonic structures.
a. pellucida the clear central part of the developing embryonic disc in a fertilized avian egg. Produces the embryo's tissues.
a. piriformis temporalis the cortical area of the piriform lobe of the brain.
primary a. areas of the cerebral cortex comprising the motor and sensory regions.
psychomotor a. the part of the brain associated with voluntary movement.
silent a. an area of the brain in which pathological conditions may occur without producing clinical signs.
vocal a. the part of the glottis between the vocal folds.
areca nut [*ar'ə-kə*] the fruit of the betel nut tree (*Areca catechu*). Originally used as a cathartic and vermifuge. Its principal ingredient is **arecoline**.
arecoline [*ə-rek'o-lēn*] an alkaloid obtained from the nut of the tree *Areca catechu*. Previously, a treatment for cestodes in dogs. The acetarsol, hydrobromide and carboxyphenylstilbonate salts have been used for this purpose. Oral administration causes paralysis of the worms and catharsis, so the worms are expelled alive and intact. Lower doses are used as a laxative.
a. challenge test used in the diagnosis of narcolepsy in dogs; pretreatment with atropine reduces the number of cataleptic attacks with exposure to food.
areflexia [*a"re-flek'se-ə*] absence of the reflexes.
detrusor a. a cause of automatic **urinary bladder**.
Arenaria serpyllifolia a temperate zone plant plant genus of the family Caryophyllaceae. Ingestion causes profuse salivation in horses. Called also thyme-leaved sandwort.
Arenaviridae [*ə-re"nə-vir'i-de*] a family of spherical or pleomorphic, enveloped, single-stranded RNA viruses containing host cell-

VetBooks.ir

derived ribosomes, e.g. Lassa fever virus, lymphocytic choriomeningitis (LCM) virus and Tacaribe viruses. The natural hosts are rodents.

arenavirus [ə-re'nə-vi"rəs] a virus in the family ***Arenaviridae***.

areola [ə-re'o-lə] pl. *areolae* [L.] 1. a narrow zone surrounding a central area, e.g. the darkened area surrounding the **nipple** of the human mammary gland. 2. any minute space or interstice in a tissue.

placental a. in the epitheliochorial placenta of the sow areolae develop in the placentation zone. They are shallow cups in the chorion opposite the openings of the endometrial glands in the uterine wall.

areolar [ə-re'o-lər] 1. containing minute spaces. 2. pertaining to an areola.

a. connective tissue loose, spongy connective tissue.

ARF see **A–R–F sequence**.

Arg 1. arginase. 2. arginine.

argali a wild sheep *Ovis ammon*.

Argas [ahr'gəs] a genus of ticks (family Argasidae) parasitic on poultry and other birds and sometimes humans.

A. miniatus, A. radiatus, A. robertsi, A. sanchezi similar to *A. persicus* and originally classified with that species.

A. persicus causes tick worry of birds and paralysis of poultry; transmits *Aegyptianella pullorum* and *Borrelia anserina*.

A. reflexus infests pigeons and may transmit *Borrelia anserina* to poultry.

argasid [ahr'gə-sid] tick belonging to the family Argasidae.

Argasidae [ahr-gas'ĭ-de] a family of arthropods comprising the soft-bodied ticks.

Arge pullata larvae of this Scandinavian birch **sawfly** cause severe liver necrosis in sheep that eat them. Contains **lophyrotomin**.

Argemone [ahr-jem'ə-ne] a genus of the plant family Papaveraceae, the poppy family. Includes *A. mexicana*, *A. ochroleuca*, *A. subfusiformis*; contains isoquinoline alkaloids including sanguinarine, which causes mucosal irritation and also interference with pyruvate oxidation in brain tissue. The sanguinarine is excreted in cows' milk and may be linked to the occurrence of endemic primary glaucoma of humans. The seeds of *A. mexicana* and *A. ochroleuca* are frequent contaminants of grain fed to chicken, causing low egg production, edema, ataxia, comb cyanosis and gastroenteritis. Dried plants in hay may cause chronic heart failure in cattle. Called also Mexican poppy.

argentaffin [ahr-jen'tə-fin] staining readily with silver salts; see also argentaffin **cell**, **APUD cells**.

a. tumor see **carcinoid**, **apudoma**.

argentaffinoma [ahr"jən-taf"ĭ-no'mə] a tumor arising from argentaffin cells, most frequently in the duodenum, colon and rectum of dogs. Called also carcinoid. Such tumors produce **carcinoid** syndrome. See also **apudoma**.

Argenté large, silver-colored, fur rabbits, in several color varieties with different tonings in the fur. Recognized breeds include Champagne d'Argent and Creme d'Argent.

Argentine dogo a large, very muscular dog with an all-white, short coat, powerful head with ears that may be cropped and a short tail. Bred in Argentina to hunt boar and puma. The breed is predisposed to congential deafness. Called also Argentinian mastiff, Dogo Argentino.

Argentine tick ***Margaropus*** *winthemi*.

Argentipallium blandowskianum Australian plant in the family Asteraceae; an unidentified toxin causes hepatic necrosis. Called also ***Helichrysum*** *blandowskianum*, woolly everlasting daisy.

argentum [L.] *silver* (symbol Ag).

arginase (Arg) [ahr'jĭ-nās] an enzyme of the urea cycle in the liver that splits arginine into urea and ornithine. Significant amounts occur only in ureotelic organisms, including most mammals. Increased blood concentrations are associated with acute hepatic necrosis and determination of arginase concentrations in plasma or serum is a good liver-specific test in dogs, cats, sheep, pigs and humans. Called also arginine amidinase, canavanase.

arginine (Arg) [ahr'jĭ-nēn] a basic amino acid occurring in proteins and essential for many species, particularly the cat.

a. amidinase see **arginase**.

a. deaminase test see arginine dihydrolase test (below).

a. dihydrolase test a test for the identification of bacteria, based on the conversion of L-arginine to putrescine. In a positive result, the alkaline product is indicated by bromocresol purple. Called also arginine deaminase test.

a. esterase an androgen-dependent enzyme derived from the prostate which occurs in high concentrations in seminal plasma.

a. nutritional deficiency results in elevated blood ammonia concentration. Cats are particularly sensitive and within hours of eating an arginine-free diet, severe neurological signs develop, leading to death. In other species, cataracts have been reported in dogs and feather abnormalities occur in chickens on deficient diets.

a. vasopressin a potent vasoconstrictor in mammals. See **vasopressin**.

a. vasotocin the normal antidiuretic hormone in birds; released from the avian posterior pituitary.

L-arginine–nitric oxide pathway a metabolic pathway in which nitric oxide (NO) is liberated from arginine by such factors as acetylcholine or shear stress; NO is a multifunctional signaling molecule which causes vasodilation. inhibits aggregation of platelets and the development of adhesions and has other functions related to host defense and neuronal communication.

argininosuccinic acid [ahr"jĭ-ne"no-suk-sin'ik] a compound normally formed as an intermediate in urea synthesis in the liver, but not normally present in urine.

arginosuccinate synthetase [ahr"jĭ-ne"no-suk'sĭ-nāt sin'thə-tās] a urea cycle enzyme in the liver. A deficiency of the enzyme results in very high blood concentrations of ammonia. See also **citrullinemia**.

argon (Ar) [ahr'gon] a chemical element, atomic number 18, atomic weight 39.948. See Table 4.

ARGT annual ryegrass toxicity.

Argulus a genus in the class Crustacea. Freshwater fish lice which cause cutaneous ulceration leading to secondary infection. *Argulus* can also transmit spring viremia of carp. Heavy infestations cause poor growth and erratic swimming. Includes *A. brachiura*.

argyria [ahr-jir'e-ə] poisoning by silver or its salts; chronic argyria is marked by a permanent ashen-gray discoloration of the skin, conjunctiva and internal organs.

argyric [ahr-jir'ik] pertaining to silver.

argyrism [ahr'jə-riz-əm] see **argyria**.

argyrophil [ahr'jə-ro-fil, ahr-ji'ro-fil] easily impregnated with silver.

argyrophilia affinity for silver stains.

argyrosis [ahr"jə-ro'sis] see **argyria**.

arhinencephaly [a"rin-en"sə-fa'le-ə] congenital absence of the olfactory bulbs, tract or nerves. May be accompanied by prolonged pregnancy. Recorded in Guernsey, Simmental and Aberdeen Angus cattle.

arhinia [ə-rin'e-ə] arrhinia.

ariboflavinosis [a-ri"bo-fla"vĭ-no'sis] deficiency of **riboflavin** (vitamin B_2) in the diet, a condition marked by lesions in the corners of the mouth, on the lips, and around the nose and eyes, malaise, weakness, weight loss and, in severe cases, corneal or other eye changes and seborrheic dermatitis.

Arisaema toxic plant genus in family Araceae. Contains raphide calcium oxalate crystals; causes oral mucosal erosions and stomatitis if ingested. Called also Indian turnip, jack-in-the-pulpit.

Aristida member of grass family Poaceae; awned seeds cause subcutaneous abscesses. Includes *A. arenaria* (*A. contorta*), *A. ciliata*, *A. obtusa* (*Stipagrostis* spp.).

Aristolochia [ə-ris"to-lo'ke-ə] a plant genus of the family Aristolochiaceae. Contains a toxic alkaloid aristolochine which causes purgation; effect resembles that of aloin. More importantly, it can contain aristolochic acid that causes kidney damage and neoplasia. Balkan endemic nephropathy is linked to *A. clematitis* seeds contaminating cereal grain. Some species contaminate some Chinese herbal remedies and are linked with Chinese herbal nephropathy. Includes *A. bracteata (bracteolata)*, *A. clematitis* (birthwort), *A. densivenia*, *A. elegans* (Dutchman's pipe). *A. fangchi (guang-gang-ji)*, *A. mollissima*, *A. pistolochia*.

aristolochine [ə-ris-tol'o-chēn] a toxic alkaloid in the plants ***Aristolochia*** spp.

arithmetic mean see **mean**.

Arizona [ar"ĭ-zo'nə] a subgroup of the genus *Salmonella* bacteria, now classified as *Salmonella enterica* subspecies *enterica*. See avian **arizonosis**.

arizonosis infection with *Salmonella enterica* subspecies *enterica*.

avian a. an acute septicemic disease of birds caused by infection with *Salmonella enterica* subspecies *enterica*. Manifested by diarrhea, leg paralysis, twisted neck, pasted vent, and reduced egg production and hatchability. Affected birds squat on their hocks and huddle together.

Arles Merino sheep French finewool sheep originated from local breed plus Spanish Merino, horned or polled.

Arlt technique [*ahrlt*] surgical technique for **symblepharon** repair.

arm [*ahrm*] 1. the limb segment between the shoulder and elbow joints; sometimes referred to as the upper forelimb as distinct from the lower forelimb or forearm which is the section from elbow to carpus. Called also **brachium**. 2. loosely, the free part of the thoracic limb, especially of bipeds.

armadillo [*ahr"mə-dil'o*] placental mammals in the family Dasypodidae, characterized by a covering of bony plates or a leathery carapace. It is a plantigrade, insectivorous, burrowing animal with the remarkable characteristic of always bearing four monozygous offspring, and a low body temperature that makes it particularly valued as an experimental host in studies of leprosy. There are a number of other species in Central and South America, but only the nine-banded armadillo (*Dasypus novemcinctus*) is native to the USA.

a. Westie syndrome see **epidermal** dysplasia.

armamentarium [*ahr"mə-men-tar'e-əm*] the entire equipment of a practitioner, such as medicines, instruments, books.

Armed Forces Institute of Pathology (AFIP) an agency of the US Department of Defence specializing in pathology consultation, education and research. There is a subspecialty Department of Veterinary Pathology. It offers consultation and diagnostic services, training courses and programs, including residency and externship programs. See also **Registry of Comparative Pathology**.

Armigeres [*ahr-mij'ər-ēz*] mosquito species thought to be capable of carrying Japanese encephalitis virus.

Armillifer [*ahr-mil'ī-fər*] a genus of the class Pentastomida consisting of organisms of uncertain taxonomy. Usually considered to be aberrant crustaceans.

A. armillatus occupies respiratory tract of snakes.

Armoracia rusticans [*ahr"mo-ra'shə*] toxic plant in family Brassicaceae. Causes stomatitis, diarrhea and sudden death. Called also *A. lapathifolia*, *Cochlearia armoracia*, horseradish.

army a group of hippopotami; for full appreciation of this irregular collective noun a lyrical pronunciation of *hippopotarmy* is needed.

Army-Navy retractors a handheld retractor with broad blades used for large muscles.

Arndt–Schulz law the pharmacologic principle of homeopathy, discovered by 19th century scientists, Hugo Schulz and Rudolf Arndt. It says that weak stimuli accelerate physiologic activity, medium stimuli inhibit physiologic activity, and strong stimuli halt physiologic activity.

Arnebia hispidissima poisonous plant in the family Boraginaceae containing the pyrrolizidine alkaloids monocrotaline and echimidine.

arni see **Barbary sheep**.

Arnoczky procedure an 'over-the-top' technique for intra-articular reconstruction of the cranial cruciate ligament, using a medial patellar tendon graft.

Arnold–Chiari malformation [*ahr'nəld ke-ah're*] a congenital anomaly in which the cerebellum and medulla oblongata protrude down into the cervical spinal canal through the foramen magnum; it is almost always associated with meningomyelocele, spina bifida and hydrocephalus. Recorded in calves, sheep and dogs. See also **Chiari-like malformation**.

aromatherapy [*ə-ro'mə-ther"ə-pe*] a complementary therapeutic modality in which volatile (essential) oils extracted from aromatic plant material are used to promote health and well-being.

aromatic [*ar"o-mat'ik*] 1. having a spicy fragrance. 2. a stimulant, spicy medicine. 3. denoting a compound containing a resonance-stabilized ring, e.g. benzene or naphthalene.

a. diamidines some are useful babesicides, e.g. imidocarb, amicarbalide, phenamidine.

a. organic arsenicals includes thiacetarsamide, arsphencomplexamine, arsanilic acid, roxarsone, nitarsone.

arousal [*ə-rou'zəl*] a readiness response; a state of readiness to make behavioral responses.

arprinocid a nucleoside analog used as a coccidiostat.

Arrabidaea toxic South American plant genus in family Bignoniaceae; contains unidentified toxins capable of causing sudden death in cattle. Includes *A. bilabiata* (gibata), *A. elegans*, *A. japurensis*.

arrector [*ə-rek'tər*] pl. *arrectores* [L.] raising, or that which raises; an erector muscle.

a. pili muscle smooth muscle that extends from the papillary zone of the dermis to the base of a hair follicle. Involuntary contraction causes hair erection which, in some species, is most noticeable on the neck and along the back (see **hackles**).

arrest [*ə-rest'*] sudden cessation or stoppage.

cardiac a. sudden and often unexpected stoppage of effective heart action. Either the periodic impulses which trigger the coordinated heart muscle contractions cease or ventricular fibrillation or flutter occurs in which the individual muscle fibers have a rapid irregular twitching.

epiphyseal a. premature arrest of the longitudinal growth of bone due to fusion of the epiphysis and diaphysis.

maturation a. interruption of the process of development, as of blood cells, before the final stage is reached.

sinoatrial a. a disturbance in cardiac conduction in which the sinoatrial node intermittently fails to generate an impulse. There are no P waves or QRS-T complexes for at least twice the normal R-R interval. If the pauses are long enough, junctional or ventricular escape complexes may occur. Occurs most commonly in brachycephalic dogs, causing only minor clinical signs. Very common in trained horses at resting heart rates and considered the result of strong vagal tone.

arrested larval development [*ə-rest'əd*] see **hypobiosis**.

arrestins [*ə-res'tin*] a family of proteins that bind to the phosphorylated carboxyl-terminal region of serpentine receptors, preventing them from interaction with G proteins and thereby terminating the signal through those receptors.

Arrhenatherum elatius hardy, perennial bunchgrass suitable for hay or pasture. Called also tall oatgrass.

Arrhenius' plot [*ə-re'ne-əs*] a graph which displays calculations from Arrhenius' equation which deals with the temperature dependence of a reaction rate constant. Used in studies of biological effects of heat.

arrhenoblastoma [*ə-re"no-blas-to'mə*] a rare ovarian stromal tumor that sometimes causes virilization.

arrhinia [*ə-rin'e-ə*] congenital absence of the nose.

arrhythmia [*ə-rith'me-ə*] variation from the normal rhythm, especially of the heartbeat. See also **bradycardia**, **tachycardia**.

atrial a. see atrial **flutter**, atrial **fibrillation**.

bradycardic a. see **bradyarrhythmia**.

benign a. one which is clinically insignificant.

cardiac a. irregularity of the normal heart rhythm, either in frequency or amplitude, or almost always both.

drug-associated a. some drugs, for example xylazine, detomidine, or halogenated anesthetics, cause a sinus node depression, while enhancing the effects of catecholamines on fibers in the area of the atrioventricular node and can result in arrhythmias.

exercise-induced a. a cause of poor racing performance or sudden death while racing; detectable only by telemetered electrocardiography.

sinus a. the physiological cyclic variation in heart rate related to vagal impulses to the sinoatrial node.

supraventricular a's see sinoatrial **arrest**, atrial **tachycardia**, supraventricular **tachycardia**, atrial **fibrillation**.

ventricular a's can be indicative of a primary cardiac disease or associated with systemic disorders, such as sepsis, electrolyte imbalance, acidosis, hypoxia, toxemia, anesthetic drugs. See **premature** heartbeats, **ventricular** tachycardia, ventricular **fibrillation**.

arrhythmogenic [*ə-rith"mo-jen'ik*] producing or promoting arrhythmia.

arrow poisons include curare and its active component *d*-tubocurarine.

arrowgrass see ***Triglochin***. Called also seaside or marsh arrowgrass.

arsanilic acid [*ahr"sə-nil'ik*] Called also para-aminophenylarsonic acid. See also organic **arsenic** poisoning.

arsenate an uncommon pesticide (e.g. lead arsenate) or an antifungal spray on fruit trees or cattle tick dip (e.g. sodium arsenate).

VetBooks.ir

VetBooks.ir

Relatively insoluble but will cause arsenic poisoning; less toxic than arsenite. Use is now illegal in most countries, but it is persistent in the environment and there is a risk of poisoning from past applications.

arseniasis [ahr"sə-ni'ə-sis] arsenical poisoning.

arsenic (As) [ahr'sə-nik] a chemical element, atomic number 33, atomic weight 74.92. See Table 4. Arsenic compounds have been widely used in veterinary medicine, but they have been replaced by other drugs, which are less toxic and equally effective. Still used in homeopathy. Some of the arsenicals are used for infectious diseases, especially those caused by protozoa, and some skin disorders and blood dyscrasias also are still treated with arsenic compounds. Since arsenic is highly toxic it must be administered with caution. Antidotes for arsenic poisoning are dimercaprol (BAL) and dimercaptosuccinic acid (DMSA). See also **arsenical**.

a. bush ***Senna*** *floribunda, S. occidentalis*.

copper–chrome–a. wood preservative see **wood preservative**.

inorganic a. poisoning can occur after ingestion or cutaneous absorption. Acute poisoning is manifested by abdominal pain, diarrhea and dehydration. Chronic poisoning shows a syndrome of emaciation, chronic diarrhea, poor haircoat and greatly reduced productivity.

organic a. poisoning arsanilate poisoning in pigs is characterized by blindness, paralysis and incoordination with a high recovery rate; poisoning by 4-hydroxyphenyl arsenic acid also in pigs causes a syndrome of tremor and incoordination but only if the affected animals are exercising at the time. Organic arsenicals were used for treatment and control of swine dysentery and also for a growth promotion.

a. poisoning see inorganic arsenic poisoning, organic arsenic poisoning (above).

a. trioxide As_2O_3, pollutant on pasture from roasting of arsenical and some iron ores.

arsenical [ahr-sen'ĭ-kəl] 1. pertaining to arsenic. 2. a compound containing arsenic.

a. herbicide includes monosodium or disodium methanearsonates. See also organic arsenical (below).

organic a. includes **aliphatic** organic arsenicals, e.g. the pharmaceuticals cacodylic and phenarsonic acids, the herbicides monosodium and disodium methanearsonates, **aromatic** organic arsenicals, e.g. trivalent phenylorganic arsenicals like thiacetarsamide, arsphencomplexamine and pentavalent **phenylorganic** arsenicals like arsanilic acid, roxarsone, nitarsone. Poisoning by organic arsenicals causes blindness, incoordination, restlessness, paralysis, convulsions, incoordination, and screaming. Recovery is spontaneous if the toxin is discontinued but some piglets may remain blind.

a. pyrites an arsenic-rich ore.

a. sheep dip, cattle dip usually contains arsenic and sulfur with 20% soluble arsenic and 3% insoluble arsenious sulfide. Use is now illegal in most countries.

a. smoke factory smoke effluent from processes using arsenic-rich ores may pollute local pasture with arsenic trioxide.

a. weedkiller contains sodium or potassium arsenite or thioarsenites. They may contain up to 40% arsenic trioxide. Use is now illegal in most countries.

arsenites [ahr'sə-nīt] soluble arsenic compounds, e.g. sodium arsenite. The most toxic of forms of arsenic. Once used as insecticides, herbicides. See also inorganic and organic **arsenic** poisoning.

arsenoblast the male element of a zygote; a male pronucleus.

artefact [ahr'tə-fakt] artifact

Artemia shrimp grown and used extensively as a food source for ornamental and food fish culture. Called also brine shrimp.

Artemisia a genus of the plant family Asteraceae. Includes *A. filifolia*, *A. canescens*, *A. spinescens*, *A. tridentata* (big sagebrush), *A. vulgaris* (mugwort) and more than 200 other plants comprising a large part of the sagebrush of the western range of the USA. Under exceptional circumstances and with very heavy grazing they may cause unspecified poisonings. *A. canescens* causes selenium poisoning of sheep.

A. absinthium contains oil of absinthe and may be irritant. Called also wormwood.

artemisinin [ahr"tə-mis'ĭ-nin] a compound (sesquiterpene lactone) from the plant *Artemisia annua* effective against *Plasmodium falciparum* (the causative agent of malignant malaria), including drug resistant strains. This chemical is also being explored as an anticancer treatment.

arteria [ahr-tēr'e-ə] pl. *arteriae* [L.] artery.

a. lusoria an aberrant right subclavian artery arising from the descending aorta that passes dorsal to the esophagus and which may cause compression of the esophagus or trachea with associated dysphagia.

arterial [ahr-tēr'e-əl] pertaining to an artery or to the arteries.

a. anomaly see **arteriovenous** fistula, portacaval shunt.

cerebral a. circle arterial circle created by the conjunction of the caudal communicating artery and the rostral cerebral artery. It encircles the optic chiasma and the hypophysis. Called also the circle of Willis.

a. degeneration includes **arteriosclerosis**, **atherosclerosis**.

a. hypertrophy hypertrophy of any or all layers of the arterial wall. Usually a response to an increased work load, e.g. in collateral arteries after occlusion of a main supply artery; may be associated with regional, e.g. pulmonary, hypertension.

a. inflammation see **arteritis**.

a. mineralization see **mineralization**, **intimal** bodies.

a. rupture traumatic rupture is more common than spontaneous rupture; the latter occurs in uterine arteries of hypocuprotic old mares at parturition, in dogs infested with *Spirocerca lupi*, in internal or maxillary arteries ulcerated by fungal infection in horses causing fatal hemorrhage into the guttural pouch.

a. thromboembolism see **embolism**, **thrombosis**, **verminous** mesenteric arteritis, saddle **thrombus**.

a. thrombosis the presence of a thrombus in an artery. See also **thrombosis**.

arterialization [ahr-te"re-əl-ĭ-za'shən] the conversion of venous into arterial blood by the absorption of oxygen.

arteriectasis [ahr-tēr"e-ek'tə-sis] dilatation of an artery.

arteriectomy [ahr-tēr"e-ek'tə-me] excision of an artery.

arteri(o)- word element. [L., Gr.] *artery*.

arterio-ureteral fistula [ahr-tēr'e-o- u-re'tər-əl fis'tu-lə] aneurysm of the terminal aorta which establishes a fistula into a ureter recorded in horses.

arteriogram [ahr-tēr'e-o-gram] a radiograph of an artery.

arteriography [ahr"tēr-e-og'rə-fe] radiography of an artery or arterial system after injection of a contrast medium in the bloodstream. See also **angiography**.

cerebral a. a radiographic procedure designed to visualize the blood supply to the brain.

arteriola [ahr-tēr"e-o'lə] pl. *arteriolae* [L.] arteriole.

a. rectae renis branches of the efferent juxtamedullary glomerular arterioles of the kidney that supply the renal medulla. Called also straight arterioles.

arteriolar [ahr-tēr"e-o'lər] emanating from or pertaining to arteriole.

arteriole [ahr-tēr'e-ōl] a minute arterial branch.

afferent a. the tiny kidney vessel that enters the glomerulus at the vascular pole and divides into capillaries which subsequently merge to form efferent arterioles.

efferent a. the kidney vessels derived from the glomerular capillaries in the renal glomeruli, that exit from the glomerulus at its vascular pole.

straight a. see **arteriola** rectae renis.

arteriolith [ahr-tēr'e-o-lith"] a chalky concretion in an artery.

arteriolitis [ahr-tēr"e-o-li'tis] inflammation of arterioles.

arteriol(o)- word element. [L.] *arteriole*.

arteriology [ahr-tēr"e-ol'ə-je] sum of knowledge regarding the arteries.

arteriolonecrosis [ahr-tēr"e-o"lo-nə-kro'sis] necrosis or destruction of arterioles.

arteriolosclerosis [ahr-tēr"e-o"lo-sklə-ro'sis] sclerosis and thickening of the walls of arterioles. The hyaline form may be associated with nephrosclerosis, the hyperplastic with malignant hypertension, nephrosclerosis and scleroderma.

arteriomotor [ahr-tēr"e-o-mo'tər] involving or causing dilatation or constriction of arteries.

arteriomyomatosis [ahr-tēr"e-o mi"o-mə-to'sis] irregular growth of muscular fibers in the walls of an artery, causing irregular thickening.

arterionecrosis [ahr-tēr"e-o-nə-kro'sis] necrosis of arteries.

arteriopathy [ahr-tēr"e-op'ə-the] any disease of an artery.

arterioplasty [ahr-tēr'e-o-plas"te] plastic repair of an artery.

VetBooks.ir

arteriopressor [*ahr-tēr"e-o-pres'ər*] increasing arterial blood pressure.
arteriorrhaphy [*ahr-tēr"e-or'ə-fe*] suture of an artery.
arteriorrhexis [*ahr-tēr"e-o-rek'sis*] rupture of an artery.
arteriosclerosis [*ahr-tēr"e-o-sklə-ro'sis*] a group of diseases of humans characterized by thickening and loss of elasticity of the arterial walls. Of no importance in animals.
Monckeberg's a. medial calcific sclerosis of humans.
arteriospasm [*ahr-tēr'e-o-spaz"əm*] spasm of an artery.
arteriostenosis [*ahr-tēr"e-o-stə-no'sis*] constriction of an artery.
arteriosympathectomy [*ahr-tēr"e-o sim"pə-thek'tə-me*] periarterial sympathectomy.
arteriotomy [*ahr-tēr"e-ot'ə-me*] incision of an artery.
pulmonary a. a surgical approach used in the correction of pulmonary valve stenosis.
arteriotony [*ahr-tēr"e-ot'ə-ne*] see **blood pressure**.
arteriovenous [*ahr-tēr"e-o-ve'nəs*] pertaining to both artery and vein.
a. anastomosis a direct connection between an artery and a vein that acts as a shunt to bypass the capillary bed. These occur in areas where a high volume blood supply is needed only intermittently, e.g. the intestine.
a. fistula an abnormal communication between an artery and a vein. Peripheral fistulae, especially in the extremities, may be localized, usually acquired and the result of trauma, while congenital defects tend to be more diffuse, involving a network of anastomosing vessels. The effects of arteriovenous fistulae are variable, depending on their location and the amount of blood carried. Within the liver they usually connect the hepatic artery and portal vein, causing portal hypertension and ascites. Small peripheral fistulae may be noticeable only as warm, reducible swellings, often with an audible thrill, or give rise to edema distal to the site. More severe effects are also possible.
pulmonary a. fistula a congenital anomalous communication between the pulmonary arterial and venous systems, allowing unoxygenated blood to enter the systemic circulation.
arteritis [*ahr"tə-ri'tis*] inflammation of an artery. See also **endarteritis**, **periarteritis nodosa**.
elaeophoral a. see ***Elaeophora***.
equine viral a. see **equine** viral arteritis.
giant cell a. temporal arteritis.
mycotic a. usually results from extension of an infection by *Mucor* spp. which produce a necrotizing, thrombotic arteritis.
a. obliterans endarteritis obliterans.
proliferative a. of the nasal philtrum a rare vascular disease of the nasal philtrum in Saint Bernard dogs. There are linear ulcers, crusting and arterial hemorrhaging, which can be severe. The cause is unknown.
uremic a. occurs in acute renal failure in the dog. Often accompanied by an endocarditis.
verminous a. see **verminous** mesenteric arteritis.
Arterivirus [*ahr-tēr'i-vi"rəs*] a genus in the family *Arteriviridae*, in the order *Nidovirales*, which also includes *Coronaviridae*. Includes equine arteritis virus.
artery [*ahr'tə-re*] a thick-walled blood vessel through which the blood passes away from the heart at high pressure to the various parts of the body. The wall of an artery consists typically of an outer coat (tunica adventitia), a middle coat (tunica media), and an inner coat (tunica intima). For named arteries of the body, see Table 9. See also **arterial**.
collateral a. see collateral **vessel**.
end a. an artery that supplies a defined territory of tissue without any contribution from collateral vessells; should the flow in such a vessel be interrupted, then the area of tissue supplied is likely to die from ischemia producing an infarct.
vitelline a. artery to the yolk sac or the ovum of the hen egg.
arthralgia [*ahr-thral'jə*] pain in a joint.
arthrectomy [*ahr-threk'tə-me*] excision of a joint.
arthritis [*ahr-thri'tis*] inflammation of a joint. See also **arthropathy**, **polyarthritis**.
bacterial a. see septic arthritis (below).
corynebacterial a. suppurative arthritis and bursitis of lambs caused by *Corynebacterium pseudotuberculosis*.
crystal-induced a. see **gout**, **pseudogout**.
deforming a. see erosive arthritis (below).
degenerative a. see **osteoarthritis**.
drug-induced a. a number of antibiotics, particularly sulfonamide-trimethoprin, may cause an immune-mediated arthritis and other clinical signs, including glomerulonephritis, polymyositis and thrombocytopenia.
enteropathic a. arthritis of unknown etiology, but associated with bowel disease such as ulcerative colitis and regional enteritis in humans. A similar condition has been recognized in dogs.
erosive a. characterized by the erosion of articular cartilage and destruction of subchondral bone which is dramatically demonstrated radiographically. Generally these are the immune-mediated joint diseases and include canine rheumatoid arthritis (below), **polyarthritis** in Greyhounds, feline chronic progressive **polyarthritis**. Called also deforming arthritis.
erysipelas a. occurs sporadically in calves, more commonly in lambs and as a major disease in pigs. In all species it is an acute or chronic, nonsuppurative arthritis.
fibrinous a. the acute inflammatory stage of most infectious arthritides. The joint fluid is increased in volume and is turbid and mucinous, the fibrin appearing as a particulate deposit on the serous surface.
idiopathic nondeforming a. occurs in dogs and uncommonly in cats in the absence of systemic lupus erythematosus or chronic infectious systemic disease. It may involve one or several joints with fever, lameness and muscle atrophy. The disease may be chronic and cyclic with spontaneous remissions and recurrences. Presumed to be immune-mediated.
immune-mediated a. noninfectious joint disease involving immune mechanisms. Seen mainly in dogs and cats. See also nonerosive arthritis (below).
infectious a. may be caused by bacteria, mycoplasma, virus, fungus, rickettsiae, or protozoa in the joint only or as part of systemic infection.
lymphocytic–plasmacytic a. see lymphocytic–plasmacytic **synovitis**.
mycoplasma a. *Mycoplasma hyosynoviae* and *M. hyorhinis* cause arthritis in pigs, the former with an accompanying polyserositis. *M. bovis* causes arthritis in cattle, and *M. capricolum* causes polyarthritis in kids.
neonatal a. localization from a systemic infection in the joints causing septic arthritis, often in several joints, and infection in other vulnerable organs. Neonatal susceptibility is due to availability of the umbilical vessels as a port of entry and an inadequate defense until maternal antibodies provide passive immunity. Called also navel ill, **omphalitis**.
nonerosive a. includes those without significant radiographic changes. Includes the arthritis that occurs in association with canine systemic lupus erythematosus and chronic systemic infections, enteropathic arthritis and idiopathic nondeforming arthritis.
persistent proliferative a. see periosteal proliferative **polyarthritis**.
retroviral a. the arthritis of goats caused by a retrovirus. The syndrome also includes encephalitis and pneumonia. Called also big-knee. See also **caprine** arthritis–encephalitis.
rheumatoid a. (RA) a chronic, autoimmune disease of dogs that causes swelling and lameness in joints, often accompanied by systemic signs of fever, malaise and lymphadenopathy. The erosive, destructive changes in joints can be demonstrated on X-rays. The disease is similar to that described in humans and the diagnosis is usually based on satisfying criteria used for humans.
septic a. acute arthritis due to infection of a joint due either to contaminated penetrating injury or hematogenously during bacteremia. See also traumatic arthritis (below).
traumatic a. may be caused by trauma that penetrates the joint capsule, introducing infectious agents and resulting in an

A-55: Arthritis. Synovitis and purulent exudate in a joint cavity at postmortem examination.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

VetBooks.ir

infectious arthritis, or injures articular cartilage or soft tissues supporting the joint.

arthritis–encephalitis see **caprine** arthritis–encephalitis.

arthr(o)- word element. [Gr.] *joint, articulation*.

arthrocele [*ahr'thro-sēl*] a joint swelling.

arthrocentesis [*ahr"thro-sen-te'sis*] surgical puncture of a joint cavity for aspiration of fluid, usually for diagnostic purposes.

arthrochondritis [*ahr"thro-kon-dri'tis*] inflammation of the cartilage of a joint.

arthroclasia [*ahr"thro-kla'zhə*] surgical breaking down of an ankylosis to permit a joint to move freely.

arthroconidium [*ahr"thro-kə-nid'e-əm*] an asexual spore which is the product of separation and fragmentation of true fungal hyphae. Seen in *Geotrichum* spp.

Arthroderma [*ahr"thro-dur'mə*] the genus of fungi that contains the sexual forms of the species, *Microsporum* and *Trichophyton*, which cause dermatophytosis. Includes species previously in the genus *Nannizza*.

arthrodesis [*ahr"thro-de'sis*] surgical fusion of a joint.

pancarpal a. fusion of all carpal joints.

arthrodia [*ahr-thro'de-ə*] a type of synovial joint in which the joint surfaces are flat and allow only a gliding motion; called also gliding joint, articulatio plana.

arthrodynia [*ahr"thro-din'e-ə*] see **arthralgia**.

arthrodysplasia [*ahr"thro-dis-pla'zhə*] any abnormality of joint development.

arthroempyesis [*ahr"thro-em"pi-e'sis*] suppuration within a joint.

arthroendoscopy [*ahr"thro-en-dos'ko-pe*] inspection of the interior of a joint with an endoscope. See **arthroscopy**.

arthrography [*ahr-throg'rə-fe*] contrast radiography of a joint.

air a. pneumoarthrography.

arthrogryposis [*ahr"thro-grə-po'sis*] 1. persistent flexion of a joint. 2. tetanoid spasm.

congenital a. with dysraphism arthrogryposis with delayed or arrested closure of the neural tube. Called also arthrogryposis multiplex congenita. See also complex **vertebral** malformation.

a. and hydranencephaly see **Akabane virus** disease, **Menangle virus** disease.

inherited a. occurs in catle, pigs and sheep. In cattle it is commonly associated with cleft palate, sometimes with other skeletal defects and also prolonged gestation.

lupine-induced a. occurs in calves whose dams have ingested *Lupinus* spp. that contain the teratogenic alkaloids anagyrine and/or ammodendrine between 35 and 100 days gestation. These alkaloids impair the natural active movement of the developing fetus so that it grows in a static state resulting in deformities of the limbs. Many western lupine species, bitter lupines, contain these teratogenic alkaloids but they are usually not palatable and not eaten. The alkaloid conine in *Conium maculatum* can also produce this syndrome.

a. multiplex name given to a recessive lethal defect in the Angus breed. Affected calves are born dead and have arthrogryposis, usually with the hind limbs fixed in extension. The calves are small and there is limited muscle mass. Colloquially known as curly calf syndrome.

A-56: Arthrogram of the shoulder joint of a dog. From Lamb CR, Diagnostic Imaging of the Dog and Cat. Mosby, 1993.

A-57: Heifer with lupine-induced arthrogryposis. Most affected calves would not survive, or would not be kept, to this age.

wraparound a. the limb joints are rigid but in addition the limbs are held close to the body and appear to be wrapped around it.

arthrolith [*ahr'thro-lith*] a calculous deposit within a joint.

arthrology [*ahr-throl'ə-je*] scientific study or description of the joints.

arthrolysis [*ahr-throl'ə-sis*] operative loosening of adhesions in an ankylosed joint.

arthrometer [*ahr-throm'ə-tər*] an instrument for measuring the angles of movements of joints.

arthropathy [*ahr-throp'ə-the*] any joint disease.

Charcot's a., neuropathic a. chronic progressive degeneration of the stress-bearing portion of a joint, with hypertrophic changes at the periphery; it is associated with neurological disorders involving loss of sensation in the joint.

degenerative a. a degenerative disease of the joints, e.g. **coxofemoral** arthropathy in cattle.

degenerative coxofemoral a. see degenerative arthropathy (above).

developmental a. results from abnormalities in development or growth that cause structural injury or abnormal function in a joint, e.g. conformational abnormalities, **chondrodystrophy**, **osteochondrosis**, **growth** disorders, **Legg–Calvé–Perthes disease** and **patellar** luxation.

dietary a. caused by **hypervitaminosis** A in cats and secondary **hyperparathyroidism**.

metabolic a. is secondary to some systemic diseases such as **hemophilia** A and **mucopolysaccharidosis**.

neoplastic a. primary neoplasms of the joint, e.g. synovioma or synovial sarcoma, or metastatic tumors, may cause an arthropathy.

neuropathic a. joint disease secondary to diminished pain and proprioceptive reflexes that cause loss of sensation in the joint, loss of support and instability. Usually the result of trauma. See also Charcot's arthropathy (above).

osteopulmonary a. clubbing of digits and enlargement of ends of the long bones, in cardiac or pulmonary disease. See also hypertrophic **osteopathy**.

arthrophyma [*ahr"thro-fi'mə*] a joint swelling.

arthroplasty [*ahr'thro-plas"te*] plastic repair of a joint.

excision a. one that involves removal of some component of the joint, e.g. femoral head or patella.

abrasion a. the use of a curette or similar instrument to remove articular cartilage and subchondral bone in the treatment of osteochondrosis dissecans.

total hip a. total **hip** replacement.

arthropod [*ahr'thro-pod*] an individual of the phylum **Arthropoda**.

Arthropoda [*ahr-throp'ə-də*] a phylum of the animal kingdom including bilaterally symmetrical animals with an exoskeleton segmented bodies bearing jointed appendages; embracing the largest number of known animals, with at least 740 000 species, divided into 12 classes. It includes the arachnids, crustaceans and insects.

arthropodal pertaining to or emanating from arthropods.

a. allergy see **allergy**.

a. ectoparasites insects that parasitize the skin of animals.

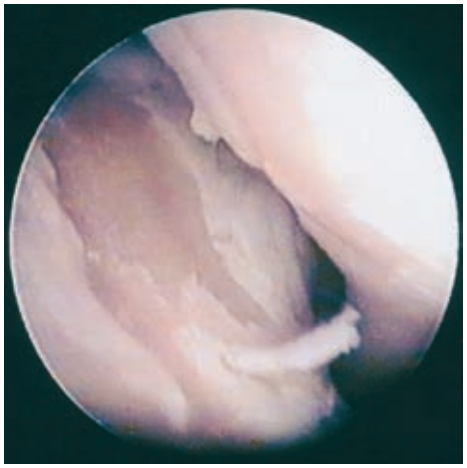
arthropodic disease [*ahr"thro-po'dic*] disease caused by infestation with arthropod parasites, e.g. tick worry, tick paralysis, lousy.

arthropump a fluid pump dedicated to providing pressurized fluid to distend and aid visualization of a joint during arthroscopy.

arthroscintigram [*ahr'thro sin'ti-gram*] a scintigram of a joint.

VetBooks.ir

arthroscintigraphy [*ahr'thro sin-tig'rə-fe*] scintigraphy of a joint.
arthrosclerosis [*ahr"thro-sklə-ro'sis*] stiffening or hardening of the joints.
arthroscope [*ahr'thro-skōp*] an endoscope, usually a fiberoptiscope, for examining the interior of a joint.
arthroscopic surgery a minimally invasive surgical procedure carried out with the aid of an arthroscope using specialized arthroscopic instruments.
arthroscopy [*ahr-thros'kə-pe*] examination of the interior of a joint with an arthroscope, usually for diagnostic purposes.
second-look a. repeated arthroscopic examination of a joint.
arthrosis [*ahr-thro'sis*] a joint or articulation.
Arthrosolon polycephalus ***Gnidia*** *polycephala*.
arthrospore [*ahr'thro-spor*] see **arthroconidium**.
arthrostomy [*ahr-thros'tə-me*] surgical creation of an opening in a joint, as for drainage.
arthrosynovitis [*ahr"thro-sin"o-vi'tis*] inflammation of the synovial membrane of a joint.
arthrotomy [*ahr-throt'ə-me*] incision of a joint.
arthroxesis [*ahr-throk'sə-sis*] scraping of an articular surface.
Arthus reaction [*ahr-tūs'*] a local antibody-mediated hypersensitivity reaction in which complement fixing antibody–antigen complexes are deposited in the walls of small vessels causing acute inflammation with an infiltration of neutrophils. Characteristic of type III hypersensitivity reactions. See also **serum** sickness.
passive cutaneous A. r. antiserum is injected intravenously and the corresponding antigen is injected into the skin.
reverse passive A. r. antiserum is injected into the skin and the antigen is injected into the same site or intravenously.
articular [*ahr-tik'u-lər*] pertaining to a **joint**.
a. capsule see articular **capsule**.
a. cartilage see arthrodial **cartilage**.
a. cartilage disease see **arthritis**, **osteoarthritis**.
congenital a. rigidity caused by inherited defects, intrauterine viral infections, ingestion of poisons including plants and anthelmintics. See also **contracted**, contracted **foal**, ***Lupinus***.
a. disk a pad of fibrocartilage found within a joint that usually subdivides the joint into two compartments and typically allows a different form of motion within each compartment. See also articular meniscus (below).
a. meniscus the particular type of articular disk found in the stifle joint that is located between the femoral and tibial condyles and which is semicircular or C-shaped; the paired menisci of the stifle allow hinge-motion in the femoro-meniscal compartment, and sliding in the menisco-femoral joint.
a. rigidity fixation of a joint, including **arthrogryposis** and **ankylosis**. May be caused by contracture of tendons, ligaments or muscles, by deformity of joint surfaces or by fusion of them.
articulare [*ahr-tik"u-lar'e*] the cephalometric point of intersection of the dorsal contours of the articular process of the mandible and the temporal bone.
articulate [*ahr-tik'u-lāt*] 1. to unite by joints; to join. 2. united by joints.
articulatio [*ahr-tik"u-la'she-o*] pl. *articulationes* [L.] an articulation or joint.
a. plana see **arthrodia**.



A-58: Erosion of the humeral articular cartilage in a dog viewed by arthroscopy.
From Tams T, Small Animal Endoscopy, 2nd Edition. Mosby, 1999.

A-59: Congenital articular rigidity in a piglet.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

A

articulation [*ahr-tik"u-la'shən*] a joint; the place of union or junction between two or more bones of the skeleton.
articulator [*ahr-tik'u-la"tər*] a device for effecting a jointlike union.
articulo mortis [*ahr-tik'u-lo*] at the point or moment of death.
artifact [*ahr'tĭ-fakt"*] a structure or appearance that is not natural, but is due to manipulation (man-made).
dermatohistopathological a. may be due to sampling errors (selection, preparation or technique) or processing of specimens.
radiological a. defects in the X-ray film image due to faults in the cassette (screen artifact) or in the film (film artifact).
specimen a. changes in tissues or other samples for laboratory examination, caused by the collection, transport, fixing, section cutting, staining or other procedural manipulations.
static a. a mark on X-ray film caused by discharge of static electricity.
ultrasound a. irregularities produced in the image display. See **acoustic** shadowing, **acoustic** enhancement, **comet-tail**, **reverberation**.
artificial [*ahr"tĭ-fish'əl*] made by art; not natural or pathological.
a. bone see skeletal **prosthesis**.
a. breeding includes diagnosis of estrus, semen collection and handling, and **artificial insemination**. A larger definition includes the use of technologies such as embryo transfer, oocyte transfer and other gamete manipulations and techniques.
a. breeding organization a proprietary or cooperative organization dealing in the selection, purchase and maintenance of selected sires, mass collection, storage and sale of semen, employment of artificial inseminators, and often veterinarians skilled in the diseases of the reproductive tract, and the provision of artificial insemination services to individual cows and to herds, flocks or bands of animals. The responsibility is usually assumed for the keeping of complete records and the provision of these to clients and in the form of a periodic report. It is inherent in the animal industries that artificial breeding has as its objectives the genetic improvement and the prevention of sexually transmitted diseases of the species that it serves. Embryo transplantation and its attendant technologies could become part of an artificial breeding service.
a. drying drying or dehydrating of feed by other than natural means of sun and air movement; usually by fossil fuel.
a. limb a replacement for a natural limb. See also **prosthesis**.
a. organ a mechanical device that can substitute temporarily or permanently for a body organ. Not usually used in veterinary medicine.
a. parturition induction see **parturition** induction.
artificial insemination (AI) [*ahr"tĭ-fish'əl in-sem"ĭ-na'shən*] the implanting of live spermatozoa into the genital tract of the female. The diluted or otherwise treated semen is usually deposited in the body of the uterus because of the higher fertility rate obtained, but insemination into the uterine cervix or even the vagina may be practiced. Although insemination is usually carried out via the vagina, transperitoneal, endoscopic and laparoscopic insemination may be the technique used in animals whose anatomy precludes a satisfactory vaginal approach. See also **AI**.
appointment-time AI performed at a predetermined time without heat detection. The technique is used in ruminants and equine following synchronization of ovulation. Called also fixed-time AI.
avian AI is practiced extensively; it is used in turkeys where selection for heavy breast muscle has bred male turkeys unable to impregnate large numbers of females. The procedure is approximately the same as in other species with the exception that the

VetBooks.ir

semen must be fresh; a technique for prolonged freezing is not available.

fixed-time AI see appointment-time AI (above).

Artiodactyla [*ahr"te-o-dak'tə-lə*] the animal order of even-toed ungulates. Contains the families Antilocapridae (pronghorn antelope), Bovidae (antelope, wild cattle, bison, buffalo, wild goats, wild sheep), Camelidae (camels, guanacos, llamas, alpacas, vicuñas), Cervidae (deer, moose, elk), Giraffidae (giraffe, okapi), Hippopotamidae (hippopotamuses), Suidae (pigs) and Tragulidae (chevrotain).

artiodactylid a member of the order **Artiodactyla** of animals.

Artionema see ***Setaria*[1]**.

Arum a genus of the family Araceae which contains many ornamental plants. Includes *A. italicum*, *A. maculatum*. Causes intense irritation to the oral mucosa, thought to be due to calcium oxalate raphide crystals in the plant. Called also arum lily, cuckoopint, lords-and-ladies.

arum plants in the genus *Arum*.

Italian a. *Arum italicum*.

a. lily common name given to plants in the genera *Arum* and **Zantedeschia**.

wild a. *Arum maculatum*.

-ary suffix meaning pertaining to.

aryepiglottic fold [*ar"e-ep"ĭ-glot'ik*] the mucosal fold connecting the lateral border of the epiglottic cartilage to the mucosa covering the arytenoid and corniculate cartilages.

aryl- in organic chemistry, a prefix denoting any radical having the free valence on a carbon atom in an aromatic ring.

aryl phosphates [*ar'əl*] see **triaryl phosphates**.

arylamine [*ar"əl-ə-mēn'*] any of a group of amines in which one or more of the hydrogen atoms are replaced by aromatic groups.

a. acetyltransferase see metachromatic **leukodystrophy**.

arylsulfatase [*ar"əl-sul'fə-tās*] a group of enzymes active in the hydrolysis of sulfates and the metabolism of mucopolysaccharides; found in liver, pancreas, kidneys and immature monocytes. Several species of molluscs and *Aerobacter* spp. serve as commercial sources of the enzyme which is used in analytic endocrinology.

a. A deficiency see metachromatic **leukodystrophy**.

a. B deficiency is the cause of mucopolysaccharidosis VI which occurs in humans and cats. Called also Maroteaux–Lamy syndrome.

arytenoepiglottic [*ar-it"ə-no-ep"ĭ-glot'ik*] of or pertaining to the arytenoid and epiglottic cartilages.

arytenoid [*ar"ə-te'noid*] shaped like a jug or pitcher, as the arytenoid cartilage.

a. abscess see **laryngeal** chondritis.

a. cartilage one of the paired laryngeal cartilages in the dorsal part of the larynx that provides attachment for the muscles that adduct and abduct the vocal folds. The cartilages form the dorsal boundary of the rima glottidis, the vocal folds the ventral boundary.

a. chondritis inflammation of the arytenoid cartilage that causes a syndrome similar to that caused by recurrent laryngeal nerve paralysis.

a. lateralization a surgical technique used to treat laryngeal paralysis in dogs. One or both arytenoid cartilages are fixed in a lateral position with sutures, thereby enlarging the diameter of the laryngeal lumen.

arytenoidectomy [*ar"ə-te"noid-ek'tə-me*] excision of an arytenoid cartilage; treatment for laryngeal paralysis in dogs.

arytenoiditis [*ar-ə-te"noi-di'tis*] inflammation of the arytenoid muscle or cartilage.

arytenoidopexy [*ar"ə-te-noi'do-pek"se*] surgical fixation of arytenoid cartilage or muscle.

As chemical symbol, *arsenic*.

as fed describes animal feed in the state it is fed, which includes moisture.

ASA acetylsalicylic acid (aspirin).

Asaemia axillaris see ***Athanasia***.

asafetida [*as"ə-fet'ĭ-də*] gum-resin from the rhizome of the plant *Ferula asafoetida*. Has an atrocious smell. Used as a carminative and expectorant and to prevent bandage chewing and as a repellent to dogs and cats.

asbestos [*as-bes'təs*] a naturally occurring amphibole mineral in fibrous form with the fibers lying in parallel in plates; causes asbestosis in humans. Called also horneblende.

asbestosis [*as"bes-to'sis*] a disease of humans consistently exposed to asbestos fibers in the environment. Minimal pneumoconiosis found in ponies in coal mines. The human disease is marked by pulmonary fibrosis, pleural mesothelioma and pneumoconiosis.

asbos, asbosvygie see ***Psilocaulon***.

ascariasis [*as"kə-rī'ə-sis*] infection with *Ascaris* spp., *Ascaris suum* in pigs, *Parascaris equorum* in horses and *Toxocara vitulorum* in buffalo and cattle. The disease has most importance in pigs, principally the young. Transmission is by ingestion of highly resistant and long-lived larvated eggs. Signs include poor growth, poor coat and diarrhea due to enteritis. Migration by the larvae results in the development of hepatitis and pneumonia. Other less common sequelae include biliary duct obstruction and a severe interstitial pneumonia when atypical larvae, e.g. *Ascaris suum*, infect cattle. See also **toxocariasis** in dogs and cats.

ascaricide [*as-kar'ĭ-sīd"*] an agent destructive to ascarids.

ascarid [*as'kə-rid*] any of the nematodes of the Ascaridoidea, which includes the genera *Ascaris*, *Parascaris*, *Toxocara* and *Toxascaris*.

a. infection see **ascariasis**.

ascaridata ascarids.

Ascaridia [*as"kə-rid'e-ə*] a genus of nematode in the family Heterakidae. Includes *A. columbae*, *A. dissimilis*, *A. compar*, *A. numidae* and *A. razia*.

A. galli a parasite of domesticated and wild birds that causes enteritis with diarrhea and unthriftiness with poor feed conversion, especially in birds of up to 3 months of age.

ascaridol a terpene, the active principle of oil of the plant *Chenopodium* spp. Poisoning with the oil is manifested by enteritis and nervous signs including convulsions, paralysis, coma and death.

Ascaris [*as'kə-ris*] a parasitic nematode found in the intestine of some animals. The genus is a member of the family Ascarididae. Includes *A. columnaris* (wild animals—see ***Baylisascaris columnaris***), *A. lumbricoides* (humans), *A. suum* (pigs) and *A. schroederi*.

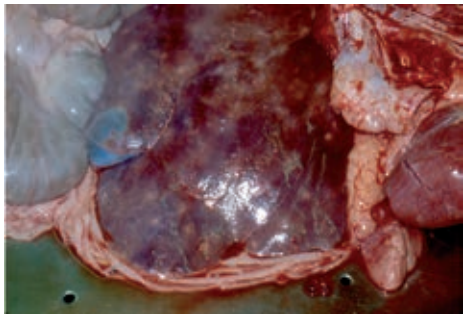
Ascarops [*as'kə-rops*] a genus of nematodes of the family Spirocercidae. Includes *A. strongylina* and *A. dentata* (pig's stomach).

ascending [*ə-send'ing*] progressing to higher levels, usually used in reference to the nervous system.

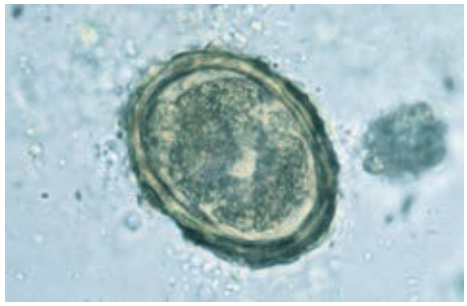
a. colon dilation dilation of the spiral or coiled colon in cattle, usually a part of torsion of the mesentery of the colon; characterized by acute abdominal pain and distended loops of intestine in the right flank.

a.-descending myelomalacia see ascending-descending **myelomalacia**.

a. hemorrhagic myelomalacia see ascending-descending **myelomalacia**.



A-60: Ascariasis. Liver damage caused by migrating *Ascaris suis* larvae.



A-61: *Ascaris suum* egg. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

VetBooks.ir

a. hematomyelia see ascending-descending **myelomalacia**.
a. reticular activating system see **reticular activating** system.
a. syndrome see **myelomalacia**.
ascensus medullae the shortening of the spinal cord relative to the vertebral column caused by the precocious growth of the cord followed by the delayed growth of the vertebrae.
Aschheim–Zondek test an outdated test which used to be used to diagnose pregnancy in mares. Serum from the mare was injected into the peritoneum of rats. A positive result was edema and enlargement of the rats' uteri. Accurate if performed in the 50 to 80 day period of pregnancy.
ascites [*ə-si'tēz*] 1. abnormal accumulation of serous fluid within the peritoneal cavity. Characterized by distention of the abdomen, a fluid thrill on percussion, a typical ground glass appearance on radiography and a positive result on paracentesis. 2. a disease of poultry with pulmonary arterial vasoconstriction associated with poor ventilation and oxygen concentrations, predisposed by high altitude and respiratory disease. There may be a genetic predisposition.
bilious a. see bile **peritonitis**.
cardiogenic a. that caused by cardiac insufficiency.
chylous a. see **chylous** ascites.
fetal a. affected fetuses are usually dropsical and cause dystocia, even the aborting ones; usually accompanies another defect, e.g. achondroplasia. See also fetal **anasarca**.
Asclepiadora decumbens ***Asclepias asperula***.
Asclepias [*as-kle'pe-əs*] widespread genus of the plant family Asclepiadaceae which contains many poisonous plants, most of them with copious white sap. Contain cardiac glycosides. Cause diarrhea and heart failure syndrome. Includes *A. asperula* (spider antelopehorn), *A. brachystephana* (shortcrown milkweed), *A. curassavica* (red cotton bush), *A. eriocarpa* (woolly-pod milkweed), *A. hirtella*, *A. incarnata* (silkweed), *A. labriformis*, *A. latifolia* (broadleaf milkweed), *A. mexicana*, *A. pumila* (whorled milkweed), *A. physocarpus* (*Gomphrena physocarpus*), *A. speciosa* (show milkweed), *A. subverticillata* (*A. galioides*), *A. syriaca* (summer milkweed), *A. tuberosa* (butterfly milkweed), *A. verticillata* (dwarf milkweed), *A. viridis* (green milkweed).
Ascoli test an agar gel precipitation test used for the detection of anthrax infected hides.
Ascomycetes [*as"ko-mi-se'tēz*] a class of fungi which contains *Neurospora*, *Penicillium*, *Aspergillus*, true yeasts and the dermatophytes.
Ascomycota [*as"ko-mi-ko'tə*] a phylum of the fungi kingdom characterized by septate hyphae, asexual reproduction by conidia and sexual reproduction in an ascus containing eight ascospores. Genera of veterinary importance in the phylum are *Aspergillus, Penicillium*, *Sporothrix*, *Microsporum* and *Trichophyton*.

A-62: Dog with ascites. From Kittleson MD, Kienle RD, Small Animal Cardiovascular Medicine. Mosby, 1998.

ascorbate [*ə-skor'bāt*] a compound or derivative of ascorbic acid. See also **sodium** ascorbate.
ascorbic acid, L-ascorbic acid [*ə-skor'bik*] vitamin C; called also cevitamic acid. A substance found in many fruits and vegetables, especially citrus fruits, such as oranges and lemons, and tomatoes. It is synthesized by most animal species, except primates, guinea pigs, fruit bats and some birds and fish, and so is not a dietary requirement in ordinary circumstances except for the species named.
a. a. nutritional deficiency occurs in primates and guinea pigs with inadequate dietary intake. Affected animals are weak, depressed, anorectic and have enlarged joints. In farm animals the only example of a possible secondary deficiency is a dermatosis of young calves which occurs at a time when ascorbic acid levels might be expected to be at their lowest. The syndrome includes heavy dandruff, alopecia and a waxy crust on the skin. In farmed shrimp, it is the cause of **black death disease**.
ascospore [*as'ko-spor*] the sexual spore of Ascomycetes.
ascus [*as'kəs*] pl. *asci*; the spore case of Ascomycetes.
-ase suffix used in forming the name of enzymes, affixed to a stem indicating the substrate (luciferase), the general nature of the substrate (proteinase) or the type of reaction effected (hydrolase).
asepsis [*a-sep'sis*] absence of septic matter; freedom from infection or infectious material.
surgical a. refers to destruction of organisms before they enter the body. It is used in caring for open wounds and in surgical procedures.
aseptic [*a-sep'tik*] free from infection or septic material; sterile.
a. fever fever in the absence of infection, e.g. due to trauma, surgical manipulation of tissue, tissue necrosis, injection of certain chemicals, e.g. dinitrophenols.
a. necrosis of the femoral head see **Legg–Calvé–Perthes disease**.
a. technique a set of techniques and practices designed to prevent or minimize microbiological contamination of the surgery wound. Includes a dust-free environment, complete immobilization of the patient, intensive skin preparation, capping, gowning, masking and gloving of the surgeon and assistants, draping and packing of the patient, the use of sterile equipment and surgical materials and avoidance of the introduction of nonsterile items into the sterile field.
asexual [*a-sek'shoo-əl*] without sex; not pertaining to or involving sex.
asexualization sterilization, as by surgical or chemical means.
ASF African swine fever.
Asfivirus a genus in the family *Asfaviridae* which includes African swine fever virus.
ash [*ash*] the incombustible, inorganic residue remaining after any process of incineration. See also **bone** ash.
dietary a. generally the mineral content.
ash tree see ***Fraxinus excelsior***.
asialia [*a"si-a'le-ə*] aptyalism.
asiderosis [*a"sid-ər-o'sis*] deficiency of iron reserve of the body.
ASIF Association for the Study of Internal Fixation.
ASIF system a complete set of instruments for compression bone plating. Includes hand or power drills with detachable bits for boring holes in the bone, bit directors to ensure accurate placement of holes, a tapping instrument to create the thread in the bored hole, screws and plates of various shapes and weights with round holes or slots, a screwdriver and many other ancillary items.
-asis suffix meaning process or condition.
ASIT allergen-specific immunotherapy.
ASLO *Actinobacillus suis* like organism.
Asn asparagine.
***Asn*-X-thr/ser sequence** sequence of amino acids in a polypeptide chain associated with position of attachment of *N*-linked oligosaccharides through the asparagine moiety to form glycoproteins.
Asp aspartate.
ASPCA American Society for the Prevention of Cruelty to Animals.
L-asparaginase [*as-par'ə-jin-ās"*)] an enzyme that catalyzes the deamination of asparagine; used as an antineoplastic agent against cancers, e.g. acute lymphocytic leukemia, in which the malignant cells require exogenous asparagine for protein synthesis. Used in the treatment of mast cell tumors and lymphomas in dogs and cats.
asparagine (Asn) [*as-par'ə-jēn*] the β-amide of aspartic acid, a nonessential amino acid occurring in proteins.
aspartame [*ə-spahr'tām, as'pahr-tām"*] a synthetic compound of two amino acids (L-aspartyl-L-phenylalanine *o*-methyl ester) used as

VetBooks.ir

A

sweetener in low-calorie drinks. It is 180 times as sweet as sucrose (table sugar); the amount equal in sweetness to a teaspoon of sugar contains 0.1 calorie.

aspartate [*ə-spahr'tāt*] Asp; any salt of aspartic acid; aspartic acid in dissociated form.

a. carbamoyl transferase enzyme catalyzing the condensation of carbamoyl phosphate and L-aspartate to *N*-carbamoyl-L-aspartate. A regulatory, allosteric enzyme in the synthesis of pyrimidine nucleotides.

a. transaminase see **aspartate aminotransferase**.

aspartate aminotransferase (AST) [*ə-spahr'tāt ə-me"no-trans'fər-ās*] an enzyme that catalyzes the reversible transfer of an amino group from glutamate to oxaloacetate forming aspartate and α-ketoglutarate:

aspartic acid + α-ketoglutaric acid

$\leftrightharpoons$ oxaloacetic acid + glutamic acid

requiring the coenzyme pyridoxal phosphate. It is present in many tissues and body fluids. The serum concentration is elevated when damage to tissue cells, especially of the heart and liver, causes a release of the enzyme. AST values are also increased in some muscle diseases, such as enzootic muscular dystrophy. The test has limitations because of its lack of organ specificity. Formerly known as (serum) glutamic–oxaloacetic aminotransferase (GOT or SGOT).

aspartic acid [*ə-spahr'tik*] a nonessential dicarboxylic amino acid, widely distributed in proteins.

aspecific [*a"spə-sif'ik*] not specific; not caused by a specific organism.

aspect [*as'pekt*] 1. that part of a surface viewed from a particular direction. 2. the look or appearance.

dorsal a. a view from the back (bipeds), or from above (quadrupeds).

ventral a. a view from the front (bipeds) or from below (quadrupeds).

aspergilloma [*as"pər-jil-o'mə*] a tumorlike granulomatous mass formed by colonization of *Aspergillus* in a bronchus, pulmonary spaces, or pulmonary cavity; the organism may disseminate through the bloodstream to the brain, heart and kidneys.

aspergillosis [*as"pər-jil-o'sis*] a disease caused by species of *Aspergillus*, marked by inflammatory granulomatous lesions in the skin, ear, orbit, nasal sinuses, lungs, and sometimes bones and meninges. Abortion due to fungal placentitis is common in cows and occurs also in mares and sows. Subacute pulmonary involvement may be accompanied by lesions at all levels in the respiratory tract. Congenital infection of the fetus, especially manifested by dermatitis, is a rare accompaniment. A gastroenteritis with ulceration in the esophagus and forestomachs occurs in calves. Rarely osteomyelitis, intestinal and central nervous system involvement have been recorded in dogs, the most frequent site of infection being the nasal cavity. See also **brooder** pneumonia.

avian a. an opportunist infection, generally requiring predisposing factors such as poor environmental conditions, including poor ventilation and sanitation, malnutrition, prolonged antibiotic treatment and stress; principal manifestation is as pneumonia but systemic invasion, dermatitis, osteomyelitis, ophthalmitis, encephalitis also occur. Species involved are *A. fumigatus*, *A. flavus*, *A. niger*.

disseminated a. in dogs, a disseminated disease characterized by signs of generalized infection, lymphadenopathy, diskospondylitis, and lameness, paresis or paraplegia. *A. terreus* is the most common etiologic agent and German shepherd dogs are predisposed. Cats with disseminated aspergillosis usually have concurrent immunosuppressive disease.

nasal a. a localized form of aspergillosis, involving the nose, ears and paranasal sinuses. In dogs, there is usually a unilateral or bilateral serosanguinous nasal discharge and a characteristic depigmentation and ulceration of skin adjacent to the external nares. There is potential for the infection to spread across the cribiform plate or to disseminate more widely.

aspergillotoxicosis [*as"pər-jil"o-tok"si-ko'sis*] poisoning caused by *Aspergillus* spp. growing in animal feed. A variety of poisonings may be caused including those due to **aflatoxin**, **ochratoxin**, **citrinin**, **oxalate**, **fumitoxin**, **sterigmatocystin**. There are still other poisonings in which the effective agent has not been identified.

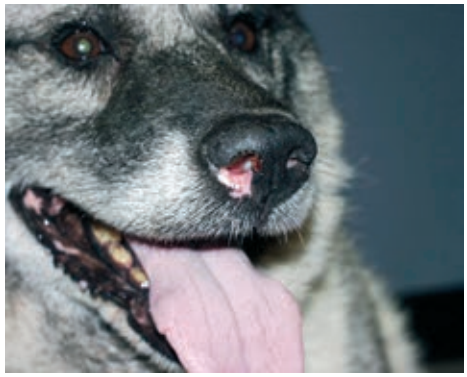
Aspergillus [*as"pər-jil'əs*] a genus of fungi (molds), several species of which are parasitic and opportunistic pathogens. Others produce toxins and when they contaminate animal feeds they can cause heavy losses. Includes *A. amstelodami*, *A. chevalieri*, *A. clavatus*, *A. flavus oryzae*, *A. fumigatus*, *A. maydis*, *A. niger*, *A. ochraceus*, *A. parasiticus*, *A. taumanii*, *A. wentii*.

A. clavatus a cause of **tremorgenic** neurotoxicosis in cattle.

A. fumigatus a cause of respiratory tract disease in many species. See **airsacculitis**, **aspergillosis**.

A. nidulans, A. versicolor produce known carcinogenic toxin, sterigmatocystin.

A. terreus a cause of **fescue** foot and the most common cause of canine disseminated **aspergillosis**.



A-63: Depigmentation of the nares of a dog with nasal aspergillosis. From Benitah N: Canine nasal aspergillosis. Clin Tech Sm Anim Pract 21:82-88, 2006. Elsevier.

aspermatogenesis [*a-spur"mə-to-jen'ə-sis*] failure to produce spermatozoa.

autoallergic a. caused by an immune response to the animal's own spermatozoa when they are introduced into its tissues experimentally or naturally by trauma, causing the formation of antisperm antibodies. Causes include some infectious diseases and direct trauma to the testis or epididymis. This term is not used in veterinary medicine.

aspermia [*ə-spur'me-ə*] failure of formation or emission of semen.

asphyxia [*as-fik'se-ə*] a condition due to lack of oxygen in inspired air, resulting in actual or impending cessation of apparent life. It includes lack of air to respire. See also **suffocation**.

neonatal a. the fetus is deprived of air while on the birth canal and appears to have died during birth. Stimulation of respiratory movements and artificial respiration may cause respiration to resume.

asphyxial [*as-fik'se-əl*] pertaining to or emanating from asphyxia.

a. respiratory failure respiratory failure manifested by dyspnea with alternating apnea and gasping respiration before death.

asphyxiant [*as-fik'se-ənt*] any substance capable of producing asphyxia.

asphyxiate [*as-fik'se-āt*] to suffocate; to deprive of oxygen for utilization by the tissues.

Aspiculuris a nematode genus of the oxyurid family *Heteroxynematidae*. Includes *A. tetraptera* (rodents).

Aspidium [*as-pid'e-əm*] ***Dryopteris filix-mas***.

aspidium [*as-pid'e-əm*] the dried products of a genus of plants known as male fern (*Dryopteris filix-mas*). Contains an oleoresin capable of causing liver damage. Used at one time as an anthelmintic.

Aspidogastrea a subclass of trematodes that parasitize fish, turtles, Mollusca and Crustacea.

aspirate [*as'pi-rāt*] 1. to withdraw fluid by negative pressure, or suction. 2. the fluid obtained by aspiration.

aspiration [*as"pi-ra'shən*] 1. the act of inhaling. Pathological aspiration of vomitus or mucus into the respiratory tract may occur when a patient is unconscious or under the effects of a general anesthetic. 2. removal of fluids or gases from a cavity by the aid of suction.

a. biopsy see **biopsy**.

fine needle a. (FNA) collection (aspiration) of fluid and cells from a solid mass or organ by suction through a small gauge needle from which the contents are spread onto a glass slide for cytological examination.

a. pneumonia is the result of inhalation or aspiration of infected solid or liquid material into the lungs. Large volumes of aspirate cause asphyxia, smaller amounts cause a necrotic or gangrenous pneumonia, in dependent parts of the lung. There is profound

toxemia, cough, gurgling or squeaky rales, and usually an attendant pleuritis producing a friction rub. Called also inhalation pneumonia.

tracheal a. see **transtracheal aspiration**.

aspirator [*as'pĭ-ra'tər*] an instrument for evacuating fluid or tissue by suction.

ultrasonic a. see **phacoemulsification**.

aspirin [*as'pĭ-rin*] acetylsalicylic acid, a common drug generally used to relieve pain and reduce fever.

a. poisoning occurs in dogs and cats, either from accidental ingestion or inappropriate therapeutic doses. The cat is particularly susceptible because of its limited ability to form glucaronide conjugates. Clinical signs are of a hemorrhagic gastritis, hyperexcitability and metabolic acidosis.

asplenia [*a-sple'ne-ə*] absence of the spleen.

Asplenium flabellifolium fern in the family Aspleniaceae; can cause cyanide poisoning. Called also necklace fern.

asporogenic [*as"po-ro-jen'ik*] not producing spores; not reproduced by spores.

asporous [*ə-spor'əs*] having no true spores.

ass see **donkey**.

assassin bug see ***Triatoma***.

assay [*as'a*] determination of the purity of a substance or the amount or activity of any particular constituent of a mixture.

biological a. bioassay; determination of the potency of a drug or other substance by comparing the effects it has in a biological system with those of a reference standard.

assessment [*ə-ses'mənt*] the critical analysis and evaluation or judgment of the status or quality of a particular condition, situation, or other subject of appraisal. For example—clinical assessment of a patient's condition as a prerequisite to making a prognosis.

linear a. a method of expressing an assessment result as a score out of a possible perfect score of 10, or some other number. Used in body condition scoring, showing, and judging of conformation.

assimilation [*ə-sim"ĭ-la'shən*] conversion of nutritive material into living tissue; anabolism.

assist list a list setting out cow identities and the various things that would happen to them; supplied as part of the service by good herd health programs.

assistant [*ə-sis'tənt*] one who aids or helps another; an auxiliary; e.g. nursing assistant, technical assistant, laboratory assistant.

association [*ə-so"se-a'shən*] 1. close relation in time or space. In neurology, correlation involving a high degree of modifiability and also consciousness. In genetics, the occurrence together of two characteristics at a frequency greater than would be predicted on the basis of chance. 2. in statistics an association is present if the probability of an event, or the quantity of a variable, depends on the occurrence of other events or the quantity of other variables. If the weight of evidence suggests that the changes in one of the variables causes the alteration in the other the association is said to be causal. A correlation coefficient can quantify association. With a **positive association** the magnitude of two variables move in the same direction and the correlation coefficient is positive. With a **negative association** the magnitude of the two variables move in opposite directions and the correlation coefficient is negative.

a. areas areas of the cerebral cortex (excluding primary areas) connected with each other and with the neothalamus; they are responsible for higher mental and emotional processes, including memory, learning, etc.

epidemiological a. the association between a disease and a cause.

a. fibers see association **fibers**[1].

a. points in acupuncture terms all are located on the bladder meridian, along the back 1–1.5 inches from the midline. Called also *shu* points.

a. strength (degree) the strength of association between a disease and a cause. Is usually indicated by the relative risk.

Association of American Veterinary Medical Colleges (AAVMC) coordinates the activities of all veterinary medical colleges in the USA and Canada, and various departments of veterinary science, comparative medicine, animal medical centers and six international colleges of veterinary medicine. It fosters the teaching, research and service activities of members and gathers statistics on student enrollments. It also administers the Veterinary Medical College Application Service (VMCAS) and publishes the Journal of Veterinary Medical Education.

association of practices a loose association of practices in which there is a sharing of common resources such as accommodation, equipment and staff.

AST aspartate aminotransferase.

Astacus astacus European crayfish.

astasia [*as-ta'zhə*] motor incoordination with inability to stand.

a.–abasia inability or refusal to stand or walk although the legs are otherwise under control.

astatine (At) [*as'tə-tēn*] a chemical element, atomic number 85, atomic weight 210. See Table 4.

asteatosis [*as"te-ə-to'sis*] any disease in which persistent dry scaling of the skin suggests scantiness or absence of sebum.

astemizole [*ə-stem'ĭ-zōl*] a long-acting, non-sedating H_1-blocking antihistamine used in the treatment of pruritus in dogs and cats.

Aster genus of selenium indicator plants in the family Asteraceae; preferentially accumulates selenium from the soil. Includes *A. adscendens*, *A. coerulescens*, *A. commutatus*, *A. ericoides*, *A. glaucoides*, *A. laevis* var. *geyeri*. See also ***Xylorrhiza***.

aster [*as'tər*] a structure occurring in dividing cells, composed of microtubules radiating from a centrosome. The two asters are the poles of the mitotic **spindle**.

asternal [*a-stur'nəl*] 1. not joined to the sternum. 2. pertaining to asternia.

asternia [*a-stur'ne-ə*] congenital absence of the sternum.

asteroid [*as'tər-oid*] star-shaped.

a. body 1. found in fungal pulmonary lesions. Small remnants of hyphae are surrounded by radiating acidophilic clubs similar to those of the granules of actinomycosis. See also **Splendore-Hoeppli material**. 2. an irregularly star-shaped inclusion body found in the giant cells in sarcoidosis and other diseases.

a. hyalosis fixed opacities composed of a calcium-lipid complex and occurring in an otherwise normal vitreous body. Relatively common in older animals. Compare with **syneresis** and **synchysis** scintillans.

asthenia [*as-the'ne-ə*] debility; loss of strength and energy; weakness.

anhidrotic a. see **anhidrotic** asthenia.

cutaneous a. a group of inherited disorders of collagen synthesis that result in fragility and hyperextensibility of skin, and in some forms, hypermobility of joints. There are many clinical similarities to the group of human conditions known as **Ehlers–Danlos syndrome**. This disorder has been reported in cattle, sheep, horses, dogs, cats, pigs and mink; within and between species there are clinical, biochemical and ultrastructural variations. Examples of diseases that include cutaneous asthenia as a lesion include hereditary collagen dysplasia, **dermatosparaxis** in cattle and sheep, **hereditary** equine regional dermal asthenia (HERDA), rubber-puppy syndrome in dogs, cutis hyperelastica in pigs.

hereditary equine regional dermal a. see **hereditary** equine regional dermal asthenia (HERDA).

asthenic [*as-then'ik*] pertaining to asthenia.

asthen(o)- word element. [Gr.] *weak, weakness*.

asthenocoria [*as-the"no-kor'e-ə*] sluggishness of the pupillary light reflex.

asthenometer a device used in measuring the degree of muscular asthenia or of asthenopia.

asthenospermia [*as"thə-no-spur'me-ə*] asthenozoospermia.

asthenozoospermia reduction in the vitality of spermatozoa; a high percentage of spermatozoa in the sample have less than normal motility.

asthma [*az'mə*] a condition marked by lower airway inflammation and hyperreactivity with spontaneous bronchoconstriction causing recurrent attacks of dyspnea, wheezing and coughing. Called also **bronchial** asthma.

acute equine a. sudden attacks of respiratory distress in horses at pasture; the dyspnea responds dramatically to treatment with corticosteroids combined with antihistamines. See also summer pasture-associated obstructive **pulmonary** disease.

allergic a. extrinsic asthma; bronchial asthma due to allergy. Called also atopic asthma.

cardiac a. a term applied to breathing difficulties due to pulmonary edema in heart disease, such as left ventricular failure.

feline a. see feline **bronchial** asthma.

astigmatism [*ə-stig'mə-tiz-əm*] an error of refraction in which a ray of light is not sharply focused on the retina due to differences in curvature in various meridians of the refractive surfaces (cornea and lens) of the eye.

VetBooks.ir

VetBooks.ir

A

astigmometer [ə-stig"mə-tom'ə-tər] an apparatus used in measuring astigmatism.

astomia [ə-sto'me-ə] congenital absence of the mouth.

astragalectomy [as"trag-ə-lek'tə-me] excision of the astragalus.

Astragalus [as-trag'ə-ləs] a genus of the legume family Fabaceae in the Americas, Europe and Asia. Many of the *Astragalus* spp. are poisonous with several forms of poisoning. Commonly called locoweeds in the USA, a name also used for *Oxytropis* spp. A number of species of the genus grow preferentially in selenium-rich soils and accumulate much more selenium than other plants, enhancing the probability of producing selenium poisoning. Included are *A. albulus*, *A. beathii*, *A. bisulcatus*, *A. crotalariae*, *A. eastwoodiae*, *A. grayi*, *A. moencoppensis*, *A. oocalycis*, *A. osterhouti*, *A. pattersonii*, *A. pectinatus*, *A. praelongus*, *A. preussi*, *A. racemosus*, *A. sabulosus*, *A. toanus*. Many species of the genus contain toxic aliphatic nitro compounds. Poisoned animals show acute respiratory distress or chronic incoordination, blindness and respiratory stertor. Includes *A. arequipensis*, *A. atropubescens*, *A. bergii*, *A. campestris*, *A. canadensis*, *A. chamissonis*, *A. convallarius*, *A. cryptobotrys*, *A. distinens*, *A. emoryanus* var. *emoryanus*, *A. falcatus*, *A. garbancillo*, *A. hamosus*, *A. hylophylus*, *A. miser*, *A. miser* var. *hylophilus*, *A. miser* var. *oblongifolus*, *A. miser* var. *serotinus*, *A. palenae*, *A. pehuenches*, *A. praelongus*, *A. pterocarpus*, *A. serotinus*, *A. tetrapterus*, *A. toanus*, *A. vesiculosus*, *A. whitneyi*. Long-term ingestion of any one of a series of species of the plant causes 'loco' or locoweed poisoning, an acquired lysosomal storage disease caused by swainsonine, which is manifest with incoordination, extreme hypersensitivity and excitability. Includes *A. allochrous*, *A. argillophilus*, *A. bisulcatus*, *A. didymocarpus*, *A. diphysus*, *A. earlei*, *A. emoryanus*, *A. flavus*, *A. humistratus*, *A. lentiginosus*, *A. lonchocarpus*, *A. lusitanicus* (*Erophaca baetica*), *A. missouriensis*, *A. mollisimus*, *A. nothoxys*, *A. nuttallianus*, *A. oxyphysus*, *A. praelongus*, *A. pubentissimus*, *A. pycnostachyus*, *A. strictus*, *A. symmetricus*, *A. tephrodes*, *A. thurberi*, *A. variabilis*, *A. wootonii*. Swainssonine production is associated with the presence of *Embellisia* spp. endophyte fungi in the locoweed. Chronic heart failure due to swainsonine is caused by *A. lentiginosus* at high altitudes. Abortion is a common manifestation and is accompanied by a great variety of skeletal defects including arthrogryposis and hypermobility. Called also locoweed, milk vetch.

astragalus see **talus**.

Astrebla Mitchell grasses, Australian members of the family Poaceae (Graminae), host a fungus (*Corallocytostroma ornicopreoides*) in the form of 'coral' sclerotia (galls) which produce an unidentified toxin causing fatal blindness, ruminoreticulitis, liver and kidney damage (**black soil blindness** syndrome) in cattle in north-western Australia.

astringent [ə-strin'jənt] 1. causing contraction or arresting discharges. 2. an agent that causes contraction or arrests discharges. Astringents act as protein precipitants; they arrest discharge by causing shrinkage of tissue. Some astringents, such as tannic acid, have been used in treating diarrhea; others, such as boric acid and sodium borate, help relieve the symptoms of inflammation of the mucous membranes of the throat or conjunctiva of the eye. Skin lotions often contain astringents such as aluminum acetate that help to reduce oiliness and excessive perspiration. Witch hazel is a common household astringent used to reduce swelling. Styptic pencils, used to stop bleeding from small cuts, contain astringents. Zinc oxide and calamine are astringents used in lotions, powders and ointments to relieve itching and chafing in various forms of dermatitis. Astringents have some bacteriostatic properties, though they are not generally used as antiseptics.

astroblast [as'tro-blast] a cell that develops into an astrocyte.

astroblastoma [as"tro-blas-to'mə] an astrocytoma, composed of primitive, often multinucleate cells with abundant cytoplasm.

astrocyte [as'tro-sīt] a neuroglial cell of neurectodermal origin, characterized by fibrous or protoplasmic processes; collectively called astroglia or macroglia.

gemistocytic a. a plump astrocyte which results from injury to nervous tissue. Usually an extensive area is involved.

astrocytin an antigen present on the cell membrane of astrocytes, found in the serum of patients with malignant glial tumors.

astrocytoma [as"tro-si-to'mə] a common tumor of the brain or spinal cord, arising from astrocytes; classified in order of malignancy as differentiated or undifferentiated groups.

gemistocytic a. comprises gemistocytic astrocytes, plump or swollen astrocytes or gemistocytes.

astroglia [as-trog'le-ə] the astrocytes considered as tissue; neuroglial tissue made up of astrocytes.

astrogliosis [as-trog"le-o'sis] inflammation of the astroglia; proliferation of astrocytes and their processes. See also **gliosis**.

astrosphere 1. the central mass of an aster, excluding the rays. 2. aster.

Astroviridae [as"tro-vir'ĭ-de] a family of viruses with two genera, *Mamastrovirus* and *Avastrovirus*.

Astrovirus [as'tro-vi"rəs] a genus in the family *Astroviridae;* small, nonenveloped, single-stranded RNA virus associated with enteric infections in several species including cattle, sheep, dogs, cats and birds, notably turkeys. In negatively stained electron micrographs virions have a characterisitic starlike staining pattern that gives the name to the genus.

Asturian cattle red with pale extremities, dual-purpose, Spanish cattle.

asymmetric hind quarter syndrome [a-sĭ-met'rik] a condition of pigs in which there is a unilateral suboptimal growth of muscle, particularly the semitendinosis, semimembranosis and biceps femoris muscles, conditioned by an inherited factor. There is no defect of gait. See also **iron** poisoning.

asymmetry [a-sim'ə-tre] 1. lack or absence of symmetry; dissimilarity in corresponding parts or organs on opposite sides of the body which are normally alike. 2. in chemistry, lack of symmetry in the special arrangements of the atoms and radicals within the molecule or crystal.

asymphytous [ə-sim'fə-təs] separate or distinct; not grown together.

asymptomatic [a"simp-to-mat'ik] showing no symptoms.

asymptote a mathematical term used for the straight line which is a tangent to a curve at infinity.

asynchronism [a-sing'krə-niz-əm] occurrence at different times; disturbance of coordination.

asynechia [a"sin-ek'e-ə] absence of continuity of structure.

asynergy [a-sin'ər-je] lack of coordination among parts or organs normally acting in unison.

asynovia [as"ə-no've-ə] absence or insufficiency of synovial secretion.

asyntaxia [a"sin-tak'se-ə] lack of proper and orderly embryonic development.

asystole [a-sis'to-le] cardiac standstill or arrest; absence of heartbeat.

At chemical symbol, *astatine.*

at. atomic.

at. no. atomic number.

at. wt. atomic weight.

atactic [ə-tak'tik] pertaining to or characterized by ataxia; marked by incoordination or irregularity.

Atadenovirus a genus in the family *Adenoviridae* which includes viruses that infect various ruminant, avian, reptilian and marsupial hosts.

Atalaya hemiglauca a small Australian tree in the family Sapindaceae; it contains an unidentified toxin causing heart failure in horses. Erroneously blamed for Kimberley horse disease. Called also whitewood.

ataractic [at"ə-rak'tik] 1. pertaining to or characterized by ataraxia. 2. an agent that induces ataraxia; a tranquilizer.

ataraxia [at"ə-rak'se-ə] a state of detached serenity without depression of mental faculties or impairment of consciousness. Undoubtedly difficult to determine in animals.

atavism [at'ə-viz-əm] apparent inheritance of characters from remote ancestors, caused by recessive genes. Called also 'throwback'.

ataxia [ə-tak'se-ə] failure of muscular coordination; irregularity of muscular action.

cerebellar a. ataxia characterized by abnormalities in rate, range, force and direction of movement of limbs. There is a broad based stance, inability to maintain the head in the proper position so that it oscillates, hypermetria, swaying of the trunk, direction cannot be maintained and the animal falls easily, often in an exaggerated way.

congenital a. cerebellar ataxia due to viral infection of the fetus, e.g. bovine virus diarrhea and feline panleukopenia, or to inheritance, e.g. in cattle. See also **cerebellar** atrophy.

copper-related a. see **copper** nutritional deficiency.

enzootic a. see **enzootic** ataxia.

equine sensory a. see **enzootic** equine incoordination.

familial convulsions and a. of cattle see **familial** convulsions and ataxia of cattle.
feline a. see **feline** panleukopenia.
foal a. see **enzootic** equine incoordination.
frontal a. disturbance of equilibrium occurring in cases of tumor of the frontal lobe.
hereditary a. a condition affecting Jack Russell terriers, resulting in signs of spinal cord and cerebellar disease. Signs generally appear from 12–18 months of age and involve ataxia, hypermetric gait and seizures.
hound a. a degenerative myelopathy of Foxhounds, Harrier hounds and Beagles. Affected dogs show increasing hindleg incoordination. A dietary cause is suspected.
locomotor a. tabes dorsalis.
otarid a. a syndrome in pinnipeds caused by nutritional deficiency of thiamine or enterotoxemia or hypoglycemia. Signs include heelwalking (elevation and curling of the rear toes) followed by running staggers, ataxia and violent falling.
progressive a. an inherited disease of cattle in which hind limb ataxia commences at 6 months to 3 years of age and worsens over 1 to 2 more years to the point of recumbency. It is a myelin disorder with eosinophilic plaques in the cerebellar medula and peduncles. Called also progressive sensory ataxia of Charolais cattle.
sensorimotor a. caused by moderate spinal cord lesions, manifested by weakness of movement, scuffing of toes, incomplete limb extension, knuckling, wobbly gait, easy falling, difficult rising.
sensory a. ataxia due to loss of proprioception (joint position sense), resulting in poorly judged movements and becoming aggravated when the eyes are blindfolded.
spinal a. see equine protozoal **myeloencephalitis**.
vestibular a. a loss of balance with preservation of strength. If unilateral, the abnormality is asymmetrical; if bilateral, it is symmetrical.
atelectasis a collapsed or airless state of the lung, which may be acute or chronic, and may involve all or part of the lung. There are four basic types, classified according to cause: *congenital*, *compression*, *post-pneumonic* and *post-obstructive*.
compression a. caused either by an intra- or extrapulmonary mass (inflammatory or neoplastic), or by excess intrathoracic fluid, causing compression of pulmonary alveoli.
congenital a. that present at birth as a result of insufficient alveolar surfactant, or due to inadequate respiratory excursions (perinatal weakness).
post-obstructive a. caused by airtight obstruction of a pulmonary airway, followed by eventual resorption of air trapped behind the obstruction.
post-pneumonic a. caused by resorption of inflammatory exudates during the healing phase of consolidating pneumonia. Reinflation may follow if there is replacement of surfactant and fibrosis is not too severe.
Ateleia glazioviana poisonous South American plant in the order Fabaceae; causes abortion in cattle. The toxin has not been identified. Called also timbo de Palmeira.
atelia [*ə-te'le-ə*] imperfect or incomplete development.
atelocephaly [*at"ə-lo-sef'ə-le*] imperfect development of the skull.
atel(o)(io)- word element. [Gr.] *incomplete, imperfectly developed*.
atelocardia [*at"ə-lo-kahr'de-ə*] imperfect development of the heart.
atelomyelia [*at"ə-lo-mi-e'le-ə*] incomplete development of the spinal cord.
ateloprosopia [*at"ə-lo-pro-so'pe-ə*] congenitally incomplete development of the face.
atenolol [*ə-ten'ə-lol*] a cardioselective **beta**-blocker having a greater effect on β_1-adrenergic receptors of the heart than on the β_2-adrenergic receptors of the bronchi and blood vessels.
Athanasia a genus of South African plants in the family Asteraceae (Compositae); an unidentified toxin causes hepatogenous photosensitization. Includes *A. minuta (Asaemia axillaris* vuursiektebossie), *A. trifurcata*.
athelia [*ə-the'le-ə*] congenital absence of the teats.
athermic [*a-thur'mik*] without rise of temperature; afebrile.
athermosystaltic [*ə-thur"mə-sis-tal'tik*] not contracting under the action of cold or heat.
atheroembolism [*ath"ər-o-em'bo-liz-əm*] embolism due to blockage of a blood vessel by an atheroembolus.
atheroembolus [*ath"ər-o-em'bo-ləs*] pl. *atheroemboli*; an embolus composed of cholesterol or its esters (typically lodging in small arteries) or of fragments of atheromatous plaques.
atherogenesis [*ath"ər-o-jen'ə-sis*] formation of atheromas in arterial walls.
atheroma [*ath"ər-o'mə*] an abnormal mass of fatty or lipid material with a fibrous covering, existing as a discrete, raised plaque within the intima of an artery.
atheromatosis [*ath"ər-o"mə-to'sis*] the presence of multiple atheromas.
atherosclerosis [*ath"ər-o-sklə-ro'sis*] a common form of **arteriosclerosis** in humans in which deposits of yellowing plaques (atheromas) containing cholesterol, other lipoid material, and lipophages are formed within the intima of large and medium-sized arteries. It is a common finding in cetaceans and sirenians and also in aoudads.
atherosclerotic [*ath"ər-o-sklə-rot'ik*] pertaining to **atherosclerosis**.
Athesmia a genus of trematode parasites of the family Dicrocoeliidae. Includes *A. foxi* (South American monkeys).
athetoid [*ath'ə-toid*] 1. resembling athetosis. 2. affected with athetosis.
athetosis [*ath"ə-to'sis*] repetitive involuntary, slow, sinuous, writhing movements. Seen in primates, but not a feature of neurological disorders in domestic animals.
athletic animals domestic animals selectively bred and trained for athletic prowess including sprint and distance running, jumping, agility, steeplechase, weight-pulling, rodeo wrestling, bull fighting, cock fighting, coursing, dog fighting. There is a developing groundswell of antipathy to the use of animals in many of these activities.
athrepsia [*ə-threp'se-ə*] see **marasmus**.
athymia [*ə-thīm'e-ə*] absence of functioning thymus tissue. See also **nude mouse**.
athymism [*ə-thīm'iz-əm*] the condition induced by removal of the thymus.
athyreosis [*ə-thi"re-o'sis*] hypothyroidism.
athyria [*ə-thi're-ə*] 1. absence of functioning thyroid tissue. 2. hypothyroidism.
ATIII antithrombin III.
atipamezole an α_2 antagonist used to reverse the action of the α_2 adrenoceptor agonists medetomidine, xylazine and detomidine.
atlantal [*at-lan'təl*] pertaining to the atlas.
atlantoaxial [*at-lan"to-ak'se-əl*] pertaining to the atlas and axis.
a. joint the articulation between the first two cervical vertebrae.
a. membrane the fibrous sheet which closes the interarcual space between the atlas and the axis.
a. subluxation, instability occurs as a congenital malformation of the dens or lack of ligamentous support, mainly in toy breeds of dogs, predisposing to displacement of the axis. Fracture of the dens can occur in any animal. Compression of the cervical cord is a common sequel that causes neck pain and varying degrees of spastic tetraparesis; respiratory arrest and death is possible. Treatment is surgical stabilization. Also reported in Holstein cattle.
atlanto-occipital pertaining to the atlas and occiput, e.g. atlanto-occipital joint.
a. fusion a congenital defect observed in calves; causes tetraplegia at birth or by two months of age.
a. malformation includes hypoplasia of the odontoid process, atlanto-occipital fusion.
a. malformation of Arab horses includes occipitalization of the atlas and atlantalization of the axis. It causes incoordination with a characterisitic extension of the head at birth or soon afterwards.
a. membrane there are two, the dorsal and ventral, each of which connects the cranial edge of the atlas to the margin of the foramen magnum.
atlas [*at'ləs*] the first cervical vertebra, the uppermost segment of the backbone which supports the skull, characterized by the absence of a body and a wide vertebral canal.
atm atmosphere.
atmospheric [*at"məs-fer'ik*] of or pertaining to the atmosphere.
a. pressure see atmospheric **pressure**.
atocia [*a-to'shə*] sterility in the female.
atom [*at'əm*] the smallest particle of an element that has all the properties of the element. There are two main parts of an atom: the nucleus and the electron cloud. The nucleus is made up of

VetBooks.ir

VetBooks.ir

A

protons, which carry a positive electrical charge, and (except in hydrogen) neutrons, which contain one proton and one electron and carry no electrical charge. The electron cloud is made up of particles called electrons, which carry a negative electrical charge and move in orbits or 'shells' around the nucleus. Different atoms have different numbers of protons, neutrons and electrons in their makeup. The atomic number of an element is the number of free protons (those not in neutrons) in the nucleus; it is equal to the net positive charge of the nucleus. The atomic weight is the weight of an atom of a substance as compared with the weight of an atom of carbon-12, which is taken as 12.

atomization [*at"əm-ĭ-za'shən*] the act or process of breaking up a liquid into a fine spray.

atomizer [*at'əm-i"zər*] an instrument for dispensing liquid in a fine spray.

atonia, atony [*ə-to'ne-ə*] absence or lack of normal tone.

atonic [*ə-ton'ik*] lacking in tone.

a. constipation constipation caused by atony of the colon.

atony [*ə-ton'ik*] see **atonia**.

atopen [*at'ə-pen*] the antigen responsible for atopy.

atopic [*a-top'ik, ə-top'ik*] 1. displaced; ectopic. 2. pertaining to atopy.

a. dermatitis called also atopic disease, allergic inhalant dermatitis. See canine **atopy**.

a. disease see atopic dermatitis (above).

a. rhinitis see **enzootic** nasal granuloma, **atopy**.

atopy [*at'ə-pe*] a clinical syndrome involving type I hypersensitivity (allergy) with a hereditary predisposition. Immunoglobulin E (IgE) is involved.

canine a. characterized by pruritus, often seasonal, mainly of feet, face and ventral body, with self-trauma. Secondary pyoderma, hyperhidrosis and otitis externa are often present. Rhinitis, conjunctivitis or gastrointestinal disorders may also occur.

A_{TOT} total concentration of plasma nonvolatile buffers; a variable in acid-base balance.

atoxic [*a-tok'sik*] not poisonous; not due to a poison.

atovaquone [*ə-to'və-kwōn"*] a hydroxynaphthoquinone effective against some protozoa; has been evaluated against *Pneumocystis* and *Toxoplasma gondii*.

ATP see **adenosine** triphosphate.

ATPase see **adenosine** triphosphatase.

ATPS ambient temperature and pressure, saturated; denoting a volume of gas saturated with water vapor at ambient temperature and barometric pressure.

Atractylis gummifera European poisonous plant in the family Asteraceae containing atractyloside, a potent hepatoxin.

atracurium besylate [*at"rə-kūr'e-əm*] a short-acting, nondepolarizing neuromuscular blocking agent.

atraumatic [*a"traw-mat'ik*] not producing injury or damage.

Atrax robustus [*a'traks*] the highly venomous Sydney funnel-web **spider**.

atrazine a triazine herbicide; it is not poisonous at levels of intake likely to be encountered in agriculture.

atresia [*ə-tre'zhə*] congenital absence or closure of a normal body opening or tubular structure.

anal a., a. ani see **anal** atresia.

aortic a. absence of the opening from the left ventricle of the heart into the aorta.

aural a. absence of closure of the auditory canal.

A-64: Atopy in a West Highland white terrier.

biliary a. congenital obliteration or hypoplasia of one or more components of the bile ducts, resulting in persistent jaundice and liver damage.

choanal a. see imperforate **buccopharyngeal** membrane.

a. coli see **colonic** atresia.

follicular a., a. folliculi premature degeneration and resorption of a graafian follicle of the ovary. It may be postovulatory or preovulatory atresia. It is a normal occurrence when several ova mature together. Abnormal atresia may be a cause of anestrus.

ileal a., a. ilei the congenital obstruction in calves may cause sufficient abdominal distention to result in dystocia.

inherited alimentary tract segmental a. occurs in cattle and horses. A variety of segments are involved, including ileum, colon, rectum and anus.

jejunal a., a. jejuni resembles ileal atresia clinically.

lacrimal punctal a. atresia of the lacrimal puncta causing tearing from birth.

mesonephric duct a. causes stenosis or aplasia of epididymis or ductus deferens.

nasolacrimal duct a. atresia of the nasolacrimal duct causing tearing from birth.

paramesonephric duct a. causes uterus unicornis or duplex uterus or segmental aplasia of a uterine horn or tube.

rectal a., a. recti congenital absence of luminal development leading to abdominal distention after birth. There is obvious absence of feces and staining and inability to pass a sound.

salivary duct a. congenital atresia causes distention of the gland followed by atrophy.

tracheal a. common in English bulldogs; may be segmental or affect the entire length of the tube.

tricuspid a. absence of the opening between the right atrium and right ventricle, circulation being made possible by an atrial septal defect with the right outflow tract and pulmonary circulation through a ventricular septal defect or a patent ductus arteriosus. Rare congenital defect recorded in horses and camelids.

atretic [*ə-tret'ik*] being in a state of atresia; without an opening.

a. follicle an ovarian follicle in an undeveloped state due to immaturity, poor nutrition or systemic disease; manifested by prolonged anestrus.

atria [*a'tre-ə*] [L.] plural of *atrium*.

silent a. see **atrial** standstill.

atrial [*a'tre-əl*] pertaining to an atrium.

a. contraction contraction of the atrial muscle; plays a part in ventricular filling and opening and closing of the A-V valves.

a. fibrillation see atrial **fibrillation**.

a. filling return of blood via the venae cavae and the pulmonary veins to the atria. Too slow a return means inadequate cardiac output, too slow emptying means an increase in central venous pressure and possibly the development of congestive heart failure. The rate varies normally with the cardiac cycle, being fastest during atrial diastole and slowest during atrial systole.

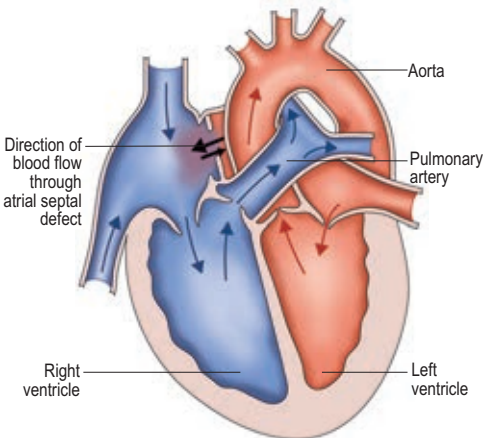
a. natriuretic peptide (ANP) a peptide hormone found in myocytes of the right and left atria and released in response primarily to increases in myocardial wall stress. It acts to counter effects of the renin-angiotensin system by promoting natriuresis, renal blood flow, diuresis and vasodilation. Closely related to B-type (brain) natriuretic peptide (BNP), which is secreted by myocytes of atria and ventricles and which has similar effects. Plasma or serum concentrations have been found to be useful in the diagnosis and management of congestive heart failure in dogs. Called also atriopeptin.

a. rupture most often is a complication of chronic valvular heart disease (endocardiosis) in dogs. The resulting acute pericardial hemorrhage may cause death from cardiac **tamponade**.

a. septal defect a congenital heart defect in which there is persistent patency of the atrial septum, owing to failure of closure of the ostium primum or ostium secundum. Relatively uncommon, but a genetic predisposition has been noted in Boxers, Doberman pinschers, Samoyeds and Standard Poodles. Clinical effects of small defects may be minor, but large defects can results in left-to-right shunting and eventually right-sided congestive heart failure.

a. standstill complete lack of atrial contraction; ventricular function remains normal. Caused by hyperkalemia, extreme sinus bradycardia, digitalis toxicity and a congenital muscle disorder of dogs and cats.

VetBooks.ir



A-65: Schematic representation of an atrial septal defect. From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

a. systole see atrial contraction (above).

atrichia [ə-trik'e-ə] absence of hair or of flagella or cilia.

atrichial gland tumor benign and malignant eccrine sweat gland neoplasms that occur rarely in cats and dogs.

atrichous [ə-trik'əs] 1. having no hair. 2. having no flagella.

atriomegaly [a"tre-o-meg'ə-le] abnormal enlargement of an atrium of the heart.

atriopeptin [a"tre-o-pep'tin] see **atrial** natriuretic peptide.

atrioseptopexy [a"tre-o-sep'to-pek"se] surgical correction of a defect in the interatrial septum.

atrioseptoplasty [a"tre-o-sep'to-plas"te] plastic repair of the interatrial septum.

Atriotaenia a genus of tapeworms of the family Linstowiidae. Includes *Atriotaenia megastoma*, *A. procyonis* (mustelids and procyonids, e.g. skunk, badger, marten, ermine and mink).

atrioventricular [a"tre-o-ven-trik'u-lər] pertaining to an atrium and ventricle of the heart.

accessory tract a. conduction see accessory tract atrioventricular **conduction**.

a. block see atrioventricular **heart block**.

a. bundle **bundle** of His.

common a. canal a congenital cardiac defect in which both sides of the heart share the same atrioventricular orifice. Called also persistent atrioventricular canal, **atrioventricularis communis**.

a. node a mass of cardiac muscle fibers (Purkinje fibers) lying on the right lower part of the interatrial septum of the heart. Its function is the transmission of the cardiac impulse from the sinoatrial node to the muscular walls of the ventricles. The conductive system is organized so that transmission is slightly delayed at the atrioventricular node, thus allowing time for the atria to empty their contents into the ventricles before the ventricles begin to contract.

partitioning a. canal during embryological development partitioning of the cardiac chambers and their orifices may be incomplete, leading to fatal cardiac defects, e.g. persistent atrioventricular chamber.

persistent common a. canal see **atrioventricularis communis**.

a. stenosis left and right atrioventricular stenosis are recorded; the former is an acyanotic defect, the latter is more serious and a cyanotic defect.

a. trunk see **bundle** of His.

a. valvular disease may be identifiable on finding of systolic murmur (incompetent valve) or diastolic murmur (stenotic valve) over the apex of the heart with maximum audibility over the left or right sides, depending on the side involved.

Wenckebach a. block see Mobitz atrioventricular **heart block**.

atrioventricularis communis a congenital cardiac anomaly in which the endocardial cushions fail to fuse, the ostium primum persists, the atrioventricular canal is undivided, a single atrioventricular valve has anterior and posterior cusps, and there is a defect of the membranous interventricular septum. Most commonly seen in pigs and cats. Called also persistent common atrioventricular canal.

Atriplex [ə-trip'leks] 1. a genus of the plant family Chenopodiaceae; saltbushes. They are an excellent source of feed but are facultative indicator plants and may lead to selenium poisoning when growing on selenium-rich soils. Includes North American species *A. canescens*, *A. nuttalii*, *A. patula*, *A. rosea*. 2. Australian species may be toxic by virtue of a high nitrate or oxalate content, e.g. *A. muelleri*, *A. semibaccata*.

atrium [a'tre-əm] pl. *atria* [L.] a chamber affording entrance, especially the chamber (atrium cordis) on either side of the heart, transmitting to the ventricle of the same side blood received (left atrium) from the pulmonary veins and (right atrium) from the venae cavae. See also **atrial**.

parabronchi a. extensions from the parabronchial lumen into the parabronchial wall of the avian lung that gives rise to the air capillaries.

a. partitioning partitioning of the atrium by the septum primum during embryological development may be defective leading to a congenital malformation, e.g. patent foramen ovale.

ruminal a. the first part of the rumen, and the cranial chamber of its dorsal sac, lying between the ruminoreticular fold and the cranial pillar. Called also *atrium ruminis*.

Atropa belladonna [at'ro-pə] a European plant in the Solanaceae family. Contains L-hyoscyamine and causes tremor, excitement, tachycardia, pupillary dilatation and recumbency. Poisoning is rare and most such diagnoses are based on incorrect identification of the plant; it is confused with the *Solanum nigrum* species complex (black-berried nightshades) among others. Called also deadly nightshade.

atrophia [ə-tro'fe-ə] [L.] see **atrophy**.

a. bulbi a shrunken end-stage eye that contains recognizable ocular structures. See also **phthisis** bulbi.

atrophic [a-tro'fik] characterized by atrophy.

a. dermatosis characterized by epithelial and connective tissue atrophy; a common accompaniment of endocrine disorders and nutritional deficiencies.

a. ovarian cyst anovulatory cystic follicles of long standing associated with failure of estrus in most cases; a common cause of infertility in cows.

a. rhinitis a disease primarily of young pigs causing deformities of the facial and turbinate bones which persist for life. Clinically there is an initial attack of acute rhinitis manifested by sneezing and snout rubbing, followed by shortening or distortion of the snout, sometmes with a distortion to one side. Accompanied by reduced growth rates in severe cases. Results from infection with toxigenic *Pasteurella multocida* (capsular serotype D and A strains).

atrophoderma [at"ro-fo-dur'mə] atrophy of the skin.

atrophy [at'rə-fe] 1. decrease in size of a normally developed organ or tissue; wasting. 2. to undergo or cause atrophy.

disuse a. atrophy of local musculature due to failure to use a part of the body, due usually to pain. Is separate from neurogenic atrophy where damage to lower motor neurons causes causes atrophy from both disuse and apoptosis of denervatedmotor fibers.

iris a. occurs with aging, particularly in Siamese cats and miniature schnauzers and poodles. May also occur secondary recurrent uveitis and chronic glaucoma.

mammary a. the terminal stage of chronic mastitis; palpation establishes that little mammary tissue remains and inflammatory fibrous tissue has subsided.

neurogenic a. severe atrophy of muscles as a result of damage to lower motor neurons which results in apoptosis of those muscle fibers innervated by the affected neurons.

optic nerve a. atrophy of the optic nerve; may occur following prolonged optic neuritis, chronic glaucoma or retinal degeneration.

A-66: Atrophic rhinitis of a pig resulting in shortening of the snout. Courtesy of JT Done.

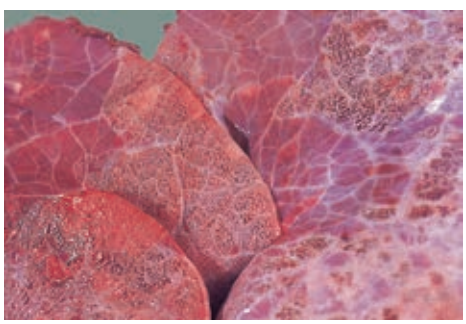
VetBooks.ir

A

retinal a. see progressive **retinal** atrophy.
serous a. mobilization of depot fat in cachexia so that lipid vacuoles are progressively replaced by proteinaceous fluid which gives the fat depots a semigelatinous texture.
villous a. a common finding in a wide range of subacute to chronic intestinal diseases. Small intestinal villi are shortened and thickened and their enterocytes may be attenuated. Malabsorption and diarrhea result.

atropine [*at'ro-pēn*] an anticholinergic alkaloid occurring in belladonna, hyoscyamus and stramonium. It acts as a competitive antagonist of acetylcholine at muscarinic receptors, blocking stimulation of muscles and glands by parasympathetic and cholinergic sympathetic nerves; used as a smooth muscle relaxant, as a preanesthetic to reduce secretions, and as an antidote to organophosphate poisoning. Has been used as a spasmolytic in many cases of gut hypermotility, e.g. equine spasmodic colic. Has the disadvantage of causing prolonged pupillary dilatation.
a. challenge test used in the diagnosis of narcolepsy in dogs; pretreatment with atropine reduces the number of cataleptic attacks with exposure to food.
a. methybromide see **methylatropine**.
a. poisoning severe toxic reaction due to overdosage of atropine. Signs include dilated pupils, absent pupillary light reflex, dry mouth, high heart rate, excitement, muscle tremor. In animals usually results from atropine overdose.
a. sulfate the pharmaceutical preparation in common use.

atropinic [*at"ro-pin'ik*] muscarinic.
ATS antitetanus equine serum.
ATT ammonia tolerance test.
attachment [*ə-tach'mənt*] 1. state of being attached. 2. a connection which achieves attachment.
a. plaque an electron-dense coating of cell membranes in which intermediate filaments are embedded participating in the mechanism of holding cells together.
attack [*ə-tak'*] an episode or onset of illness.
a. rate the proportion of a population affected by the disease during a prescribed, usually short, period of time.
attenuated having undergone a process of **attenuation**.
a. breath sounds normal breath sounds audible via a stethoscope over the lungs.
attenuation [*ə-ten"u-a'shən*] 1. the act of thinning or weakening. 2. reduction in the virulence of a pathogenic microorganism. Some attenuated strains of microorganisms may occur naturally, others may be selected by growth in an atypical environment or host, and others may be generated by random or targeted mutagenesis. Attenuated organisms are used as live vaccines. See also attenuated **vaccine**. 3. the change in a beam of radiation or sound beam as it passes through matter. The intensity of the electromagnetic radiation decreases as its depth of penetration increases. A sound beam becomes weaker as it travels through tissue.
attic [*at'ik*] a small space in the roof of the middle ear, containing the head of the malleus and the body of the incus. Called also epitympanic recess.
atticotomy [*at"i-kot'ə-me*] incision into the attic or epitympanic recess, the dorsal part of the tympanic cavity which contains the upper half of the malleus and most of the incus.
attitude [*at'i-t d*] 1. a posture or position of the body; in obstetrics, the relation of the various parts of the fetal body to one another. See also **posture**. 2. predispostion to behave in a certain way.
attitudinal pertaining to or arising from an attitude or posture.
a. reflexes see **postural** reflexes.
atto- (a) [Danish] *eighteen*; a prefix used in the metric system of naming units of measurement to indicate one-million-million-millionth (10^{-18}) of the unit designated by the root with which it is combined.
attributable emanating from or pertaining to attribute.
a. proportion see attributable risk (below).
a. risk a measure of the proportion of the total risk which can be attributed to the risk factor which is under consideration. Called also attributable proportion.
attribute 1. in statistics a qualitative variable which cannot be expressed in numerical terms, e.g. insectivorous as a behavioral attribute. 2. nonspatial information about a geographic feature in a GIS, usually stored in a database table and linked to the feature by a unique identifier.
attrition [*ə-trish'ən*] the physiological wearing away of a substance or structure in the course of normal use.
dental a. occlusal wear of a tooth, as a result of tooth to tooth contact as in mastication; physiological rather than pathological. Under normal circumstances, it occurs as a rate that permits deposition of secondary dentin. Commonly seen in the incisor teeth of older dogs. Compare with dental **abrasion**. Called also occlusal wear.
atypia [*a-tip'e-ə*] deviation from the normal or typical state.
atypical [*a-tip'i-kəl*] irregular; not conformable to the type.
a. mycobacterial granuloma see opportunist **mycobacterial** granuloma.
atypical interstitial pneumonia the name given to a number of diseases which are closely related clinically but whose etiology is incompletely understood. Clinically there is acute or chronic respiratory distress, gross abnormality of lung sounds, and a complete absence of toxemia and other systemic signs that are characteristic of most other pneumonias of adult cattle. All forms of the disease are unresponsive to treatment. The disease appears to have a number of causes. See also **tryptophan**, **3-methylindole**. Called also acute respiratory distress syndrome, bovine pulmonary emphysema, enzootic bovine adenomatosis, pulmonary adenomatosis, mold hypersensitivity, fog fever, panters.
AU animal unit.
Au chemical symbol, *gold* (L. *aurum*).
aubergine ***Solanum melongena***.
aubin [Fr.] an irregular trot; galloping with the front legs while trotting with the rear legs; a cause for disqualification in racing.
Aubrac a moderate-framed, old French breed of beef cattle noted for foraging ability; increasing in popularity with the increasing interest in grass-fed beef.
AUC area under curve
Auchmeromyia [*awk"mər-o-mi'yə*] a genus of flies of the family Calliphoridae.
A. luteola the larva of this African fly is a blood-sucker and parasitizes pigs and humans. Called also Congo floor maggot.
audibility what can be heard.
range of a. the range between the extreme frequencies of sound waves beyond which the ear of each species perceives no sound.
audi(o)- word element. [L.] *hearing*.
audiogenic [*aw"de-o-jen'ik*] produced by sound.
audiometer [*aw"de-om'ə-tər*] instrument used to measure the quality of a patient's hearing.
audiometry [*aw"de-om'ə-tre*] measurement of the acuity of hearing for the various frequencies of sound waves. Not widely used in animals except under laboratory conditions. See also brainstem auditory **evoked response**, **deafness**.
audiosurgery [*aw"de-o sur'jər-e*] surgery of the ear.
audit systematic review and evaluation of records and other data to determine the quality of the services or products provided in a given situation.
retrospective a. conducted after the patient's discharge. Methods include the study of closed patients' charts and nursing care plans, questionnaires, interviews, and surveys of patients and other animals in the household.
audition [*aw-dish'ən*] perception of sound; hearing.
auditory [*aw'di-tor"e*] pertaining to the **ear** or the sense of hearing.
a. apparatus comprises the tympanic membrane, the auditory ossicles that connect the membrane to the oval window of the internal ear, the membranous labyrinth and its contained endolymph, the labyrinth's cochlear duct, the organ of Corti, a



A-67: Lung of cow with atypical interstitial pneumonia (fog fever). From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

specialized sensory epithelium lining the duct, the sensory hair cells of the organ of Corti and the sensory receptors of the auditory nerve that terminate at the base of the hair cells.
a. bulb the membranous labyrinth and cochlea.
a. conditioning signals sounds used to condition animals to certain procedures or events, such as gathering at the sound of a bell or trumpet, milking to the sound of a radio, whistle signals to a sheep dog.
a. brainstem response (ABR) see brainstem auditory **evoked response**.
external a. meatus the tubular extension of the auricle leading to the eardrum. It is air-filled in most mammals, but wax-filled in Cetacea.
internal a. meatus the short canal in the petrous temporal bone that accommodates the VIIth and VIIIth cranial nerves; they rapidly part, the VIIth nerve coursing in the facial canal, the VIIIth nerve dividing into vestibular and cochlear components.
a. nerve the eighth cranial nerve; called also **vestibulocochlear** nerve and acoustic nerve. See Table 14.
a. ossicles the malleus, incus and stapes, the three small bones of the tympanic cavity of the ear. They form a connecting bony system from the tympanic membrane to the oval window that is the opening to the internal ear.
a. tube the narrow channel connecting the nasopharynx to the middle ear. Called also *tuba auditiva*. Formerly called eustachian tube.
Auer reaction [*ou'ər*] type III hypersensitivity-induced inflammation.
Auerbach plexus [*ou'ər-bahk*] a peripheral plexus of an abundance of fine autonomic nerve fibers lying between the muscle layers of the intestine. Called also myenteric plexus.
AUG codon codon for methionine; usually, but not always the first AUG sequence encountered as the mRNA is read 5′→3′ is the translational start signal; the methionine encoded is cleaved from the polypeptide.
augnathus [*awg-na'thəs*] dignathus.
Aujeszky's disease [*ou-yes'ke*] a disease primarily of pigs but can occur in other secondary host species; caused by porcine herpesvirus 1 and characterized by respiratory, reproductive and nervous signs. In piglets there is incoordination followed by recumbency and convulsions and most piglets die. In older pigs the predominant signs are dyspnea, coughing, sneezing and nasal discharge. Nervous signs follow in some pigs. The mortality rate is low. Infection of sows in late pregnancy causes abortion and stillbirths or mummified fetuses. In secondary hosts infection is acquired from pigs and nervous signs predominate. In cattle the disease is characterized by frenzied scratching, intense excitement, paralysis, convulsions and death of all affected animals. Called also pseudorabies, 'mad itch'. A disease notifiable to the OIE (see Table 22).
Aulonocephalus lindquisti a cecal and colonic nematode of uncertain pathogenicity in quail.
AUMC area under the moment curve
aunt a mare that develops maternal behavior and cares for foals belonging to other mares in a herd.
aura [*aw'rə*] a peculiar sensation preceding the appearance of more definite symptoms. It is a well-known phenomenon in humans and, on good clinical grounds, assumed to occur in animals, appearing as behavioral abnormalities.
aural [*aw'rəl*] pertaining to the ear.
a. hematoma see **auricular** hematoma.
a. plaque see **auricular** plaque.
auramine [*aw'rə-mēn*] a fluorescent dye used in staining tisues for fluorescence microscopy.
auranofin a compound containing 29% gold; used orally in **chrysotherapy** in dogs and cats.
Aureobasidium pullulans [*aw"re-o-bə-sid'e-əm*] a cause of chromomycosis in animals.
aur(i)- prefix meaning ear.
auric [*aw'rik*] pertaining to gold.
auricle [*aw'ri-kəl*] 1. the flap of the ear in the form of a funnel-like organ that collects the sound waves. The most salient part of the external ear. Called also pinna. 2. the ear-shaped appendage of either atrium of the heart; formerly used to designate the entire atrium.
auricula [*aw-rik'u-lə*] pl. *auriculae* [L.] auricle.
auricular [*aw-rik'u-lər*] pertaining to or emanating from the ear.
a. cartilages the three cartilages of the external ear: the auricular, the main funnel-shaped cartilage; the annular cartilage, a C-shaped cartilage surrounding the external meatus, and the scutiform cartilage that lies on the surface of the temporal muscle.
a. chondritis see relapsing **polychondritis**.
a. hematoma bleeding of branches of the great auricular artery, usually caused by head shaking or trauma, result in hematoma formation between the skin on the inner side of the ear and auricular cartilage or in a cleavage within the cartilage. Common in dogs with otitis externa and foreign bodies of the ear canal, and in pigs with sarcoptic mange. Surgical drainage and fixation of tissues is the usual treatment.
a. hillocks small swellings on the embryonic visceral arches; the beginnings of the external ears.
a. mange infestation with ear mites. See **otodectic mange**.
a. muscles see Table 13.1G.
a. plaque hyperkeratotic, depigmented plaques of tissue on the inner aspect of the pinna of a horse's ears. They are verrucae plana or flat warts.
a. points in acupuncture, specific points on the ear, said to correspond with different parts of the body. Called also ear points. See also ear **acupuncture**.
a. veins see Table 15.
auricularis [*aw-rik"u-lar'is*] [L.] pertaining to the ear.
auriculin see **atrial** natriuretic peptide.
auriculodiagnosis based on the sensitivity of auricular points to palpation. See also ear **acupuncture**.
auriculopalpebral pertaining to the ear and eyelid.
a. nerve block see auriculopalpebral **block**.
auriculotemporal [*aw-rik"u-lo-tem'pŏ-rəl*] pertaining to the ear and the temporal region.
auriculotherapy [*aw-rik"u-lo-ther'ə-pe*] a regional acupuncture therapy, used in dogs and horses. See ear **acupuncture**.
auripuncture myringotomy; surgical puncture of the tympanic membrane.
auris [*aw'ris*] pl. *aures* [L.] ear.
auriscope [*aw'rĭ-skōp*] otoscope; an instrument for examining the ear.
auro- prefix meaning gold or golden.
aurothioglucose [*aw"ro-thi"o-gloo'kōs*] a gold preparation used in treating immune-mediated diseases such as pemphigus complex and rheumatoid arthritis. See also **chrysotherapy**.
aurothiomalate [*aw"ro-thi"o ma'lāt*] an injectable form of gold salts; used mainly in dogs for treatment of autoimmune disorders. See also **chrysotherapy**.
aurotrichia gold coloring of the hair; gilding. A syndrome seen in young adult Miniature schnauzers in which there is patchy or diffuse distribution of the color change, particularly along the back with a decrease in numbers of secondary hairs.
aurum [L.] *gold* (symbol Au).
auscultate [*aws'kəl-tāt*] to examine by auscultation.
auscultation [*aws"kəl-ta'shən*] listening for sounds produced within the body, chiefly to ascertain the condition of the thoracic or abdominal viscera; it may be performed with the unaided ear (direct or immediate auscultation) or with a stethoscope (mediate auscultation).
abdominal a. for the purpose of listening to the sounds created by the movement of gas and fluid in the intestines, and in the forestomachs in ruminants. The presence or absence of sounds is valuable in assessing the motility of the gut.
cardiac a. auscultation of the cardiac area with special attention to location and size of the heart, the rhythm and intensity of the

A-68: Aural hematoma. Swollen 'ballooning' of the pinna is apparent. From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

VetBooks.ir

VetBooks.ir

heart sounds, the presence of abnormal sounds and the relationship of the heart sounds to the occurrence of the pulse waves.

a. with percussion auscultation of one part of the region while percussing elsewhere. Used in examining the chest for areas of consolidation, or the bovine abdomen when searching for the displaced abomasum or the distended colon or duodenum.

pulmonary a. auscultation of both sides of the chest with the objective of ascertaining the state of the lungs and air passages. Points observed are the rhythm and depth of breathing, quality of the breath sounds and the size and disposition of the area over which they can be heard.

thoracic a. includes auscultation of the lungs and air passages, the pleural cavity including the presence of extraneous organs such as intestines, and the heart and pericardial sac. The principal rule in the examination is the absolute necessity of auscultating both sides of the chest.

tuning fork a. the tip of a tuning fork is placed over the area to be auscultated and the stethoscope applied nearby. Consolidated lung transmits the sound, normal lung muffles it. See also **coin test**.

auscultatory [*aws-kul'tə-tor"e*] pertaining to auscultation.

Aussiedown a composite, Australian breed of sheep derived from Southdown and Texel breeds.

Australian pertaining to or originating in Australia.

A. bat lyssavirus disease see Australian **bat** lyssavirus disease.

A. cattle dog a medium-sized, compact working dog used for control of cattle. The coat is medium length and dense, but longer and thicker on the neck. It is a characteristic blue or red speckled color with erect ears and a bushy tail. The breed is affected by congenital deafness and a hereditary **polioencephalomyelopathy**. Called also Australian heeler, Blue heeler, Queensland heeler.

A. feedlots are designed to fit Australian grain farming conditions in which grain is available for cattle fattening in only a limited number of years. This restricts expenditure on capital improvements to post and wire fences of limited restraining power. Called also backup feedlots.

A. heeler see Australian cattle dog (above).

A. Illawarra cattle see **Illawarra cattle**.

A. itch see ***Psorergates ovis***.

A. kelpie a medium-sized, moderately short-coated, active dog used for working sheep. It is very alert, active and intelligent. Comes in black (sometimes called a **Barb**), blue or red.

A. Merino sheep finewool, horned or polled, originated from Spanish Merino; comes in superfine, finewool, medium and strongwool strains. See also **Booroola merino**.

A. milking shorthorn see **Illawarra cattle**.

A. milking zebu a zeboid breed of dairy cattle produced in Australia by crossbreeding Jersey, Red Sindhi and Sahiwal cattle with later infusions of Guernsey, AIS and Holstein–Friesian breeding. Resembles a Jersey, with drooped ears and dewlap of zebu. Called also AMZ.

A. native dog see **dingo**.

A. Pony bred in Australia by crossing Arab with ponies of various breeds, usually Welsh. Used as riding ponies for children. Known to carry the inherited cerebellar defect of the Arab. Assorted colors, mostly grays, no broken colors; 12–14 hands high.

A. shepherd a working sheep dog developed in the USA; it is little known in Australia. A medium-size, tailless dog with a medium-length, thick coat in, black, red, red merle, or blue merle with or without white markings. Despite the name, the breed has no direct connection with Australia. It suffers from an inherited **retinal** dysplasia, ocular colobomas, and epilepsy.

A. Shorthorn a horned red or red roan with white patches breed of dairy cattle, bred in Australia from Shorthorn and other dairy breeds. Called also AIS, Australian Illawarra Shorthorn.

A. silky terrier see **Silky terrier**.

A. stock horse a class of horses rather than a breed. See **Cutting horse**, **polo pony**.

A. terrier a small (11–12 inch), lively dog with a straight, harsh coat of medium length, relatively short legs, erect ears, and a docked tail (where practised) which is carried erect.

A. umbrella tree see ***Schefflera actinophylla***.

A. Waler see **Waler**.

A. white see **White Holland**.

Australian Animal Health Council see **Animal Health Australia**.

Australian and New Zealand College of Veterinary Scientists (ANCVSc) has the objective of encouraging veterinarians, principally those in practice, to undertake postgraduate study in professional subjects. Awards Membership and Fellowship qualifications, in part to establish credentials as specialists.

Australian Veterinary Association (AVA) a voluntary professional organization with the objective of maintaining the highest possible status of the Australian veterinary profession.

Australorp black, dual-purpose poultry breed, descended from Black Orpington. Wattles, comb and earlobes are red, legs and beak black, and body and wing plumage have a characteristic green sheen.

Austrian brown cattle brown, dual purpose, mountain type, Austrian cattle.

Austrian yellow see **Gelbvieh**.

Austrobilharzia a genus of digenetic trematodes of the family Schistosomatidae with complex life cycles.

A. variglandis principally a parasite of waterfowl but can also cause dermatitis in mammals that frequent shallow aquatic environments.

Austrosimulium includes *A. ornatum*; see **black fly**.

autacoid [*aw'tə-koid*] a term once proposed to replace the term *hormone* and recently suggested as a general term for various physiologically active, endogenous substances (histamine, serotonin, angiotensin, prostaglandins, etc.) that do not yet fit into existing functional classifications.

aut(o)- word element. [Gr.] *self*.

autoagglutination [*aw"to-ə-gloo"tĭ-na'shən*] 1. clumping or agglutination of an individual's cells by its own serum, usually because of the presence of autoantibodies, as in autohemagglutination. Autoagglutination occurring at low temperatures is called *cold agglutination*. 2. agglutination of particulate antigens, e.g. bacteria, in the absence of specific antibodies.

autoagglutinin [*aw"to-ə-gloo'tĭ-nin*] a factor, usually antibody, in serum capable of causing clumping of the subject's own cells.

autoamputation [*aw"to-am"pu-ta'shən*] see **autotomy**.

autoantibody [*aw"to-an'tĭ-bod"e*] an antibody formed in response to, and reacting against, an antigenic constituent of the animal's own cells or tissues.

autoantigen [*aw"to-an'tĭ-jen*] a tissue constituent that stimulates production of autoantibodies or self-reactive T lymphocytes in the animal in which it occurs.

autocatalysis [*aw"to-kə-tal'ə-sis*] catalysis in which a product of the reaction hastens or intensifies the catalysis.

A-69: Australian kelpie (barb).

A-70: Australian terrier.

autochthonous [*aw-tok'thə-nəs*] 1. originating in the same area in which it is found. 2. denoting a tissue graft to a new site on the same individual.

autoclasis [*aw-tok'lə-sis*] destruction of a tissue by an autoimmune response. See **autoimmune** disease.

autoclave [*aw'to-klāv*] a self-locking apparatus for the sterilization of materials by steam under pressure. The autoclave allows steam to flow around each article placed in the chamber. The vapor penetrates cloth or paper used to package the articles being sterilized. Autoclaving is one of the most effective methods for destruction of all types of microorganisms. The amount of time and degree of temperature necessary for sterilization depend on the articles to be sterilized and whether they are wrapped or left directly exposed to the steam.

a. tape special adhesive tape used to close packages of surgical materials to be autoclaved. Includes a heat sensitive dye in diagonal stripes. The appearance of the dye can be misunderstood; it does not indicate that the package has been sterilized only that it has been exposed to some heat.

autocoid [*aw'to-koid*] see **autacoid**.

autocrines [*aw'to-krin*] chemicals that affect the function of the cells that secrete them, as compared with **endocrine** and **paracrine**.

autocytolysin [*aw"to-si-tol'ĭ-sin*] see **autolysin**.

autocytolysis [*aw"to-si-tol'ĭ-sis*] see **autolysis**.

autodigestion [*aw"to-di-jes'chən*] dissolution of tissue by its own secretions.

autoeczematization [*aw"to-ek-zem"ə-tĭ-za'shən*] the spread, at first locally and later more generally, of lesions from an originally circumscribed focus of eczema.

autogeneic [*aw"to-jen-e'ik*] arising from self; pertaining to an autograft.

autogenesis [*aw"to-jen'ə-sis*] autologous.

autogenous [*aw-toj'ə-nəs*] self-generated, originating within the patient's own body.

a. tissue graft a graft comprising tissue from the patient's own body.

a. vaccine see autogenous **vaccine**.

autograft [*aw'to-graft*] a graft transferred from one part of the patient's own body to another part. For example, cancellous bone autografts used to stimulate healing of bone.

autohemagglutination [*aw"to-he"mə-gloo"tĭ-na'shən*] agglutination of erythrocytes by an autoantibody.

autohemagglutinin [*aw"to-he"mə-gloo'tĭ-nin*] a substance, usually antibody, produced in an animal's body that causes agglutination of its own erythrocytes.

autohemolysin [*aw"to-he-mol'ĭ-sin*] a hemolytic antibody produced in the body of an animal which causes destruction of its own erythrocytes.

autohemolysis [*aw"to-he-mol'ĭ-sis*] hemolysis of the blood cells of an animal by its own autoantibody.

a. test determination of spontaneous hemolysis in a blood specimen maintained under certain conditions, to detect the presence of certain hemolytic states.

autohemotherapy [*aw"to-he"mo-ther'ə-pe*] treatment by reinjection of the animal's own blood.

autohistory one completed in written form by an owner in response to a series of questions on a history sheet.

autoimmune [*aw"to-ĭ-mūn'*] the state conferred by **autoimmunity**.

a. disease a disease state characterized by a specific antibody or cell-mediated immune response against the body's own tissues (autoantigens). The immunological mechanism of the body is dependent on two major factors: (1) the inactivation and rejection of foreign substances and (2) the ability to differentiate between the body's own antigens ('self') and foreign ('nonself'). It is not yet known exactly what causes the body to fail to recognize proteins as its own and to react to them as if they were foreign. Autoimmune reactions are rare in large animal diseases. **Thrombocytopenia**, milk **allergy** and **spermatic** granuloma are known examples. In dogs and cats there are a number of autoimmune diseases recognized and they occur with some frequency. These include **immune-mediated** hemolytic anemia and **thrombocytopenia**, systemic **lupus erythematosus** , rheumatoid **arthritis**, **glomerulonephritis**, **lymphocyticthyroiditis** and a variety of dermatological disorders in the **pemphigus** group of diseases.

a. reaction includes, most importantly, the acute syndromes of anaphylaxis and pulmonary and cutaneous diseases.

autoimmunity [*aw"to-ĭ-mu'nĭ-te*] a condition which may result in **autoimmune** disease.

autoimmunization [*aw"to-im"u-nĭ-za'shən*] immunization of an animal with its own tissues.

autoinfection [*aw"to-in-fek'shən*] spread of an infection from part of the body to another.

autoinoculation [*aw"to-in-ok'u-la"shən*] inoculation of one's own body.

autointoxication [*aw"to in-tok"sĭ-ka'shən*] an old term denoting poisoning by toxins formed within the body. In dogs it was associated with changes and indiscretion in diet.

autoisolysin [*aw"to-i-sol'ĭ-sin*] a substance that lyses cells (e.g. blood cells) of the individual in which it is formed and also those of other individuals of the same species.

autokeratoplasty [*aw"to-ker'ə-to-plas"te*] grafting of corneal tissue from one eye to the other.

autokinesis [*aw"to-kĭ-ne'sis*] voluntary motion.

autolesion [*aw"to-le'zhən*] a self-inflicted injury.

autologous [*aw-tol'ə-gəs*] related to self; belonging to the same organism.

autolysate [*aw-tol'ĭ-sāt*] a substance produced by autolysis.

autolysin [*aw-tol'ĭ-sin*] a lysin originating in an organism and capable of destroying its own cells and tissues.

autolysis [*aw-tol'ĭ-sis*] the disintegration of cells or tissues by endogenous enzymes following death of that cell or tissue. See also **postmortem** decomposition, **putrefaction**, **necrosis**.

autolysosome [*aw"to-li'so-sōm*] a vacuolar element of the lysosome system of cells to which hydrolases have been added by fusion with lysosomes.

hepatocellular a's participate in the formation of **cytosegresome formations** in the liver when damaged hepatocytes are surrounded by an isolating membrane.

automated cell counting systems mechanized procedures for carrying out the various cell counting procedures performed in a clinical pathology laboratory, particularly red and white blood cells, platelets and cytological assessment of fluids. They have revolutionized the diagnosis of subclinical bovine mastitis because of the speed and automaticity with which they perform individual cow **somatic** cell counts.

automatic takeoff a device for sensing the end of milk flow in the milking machine which then shuts off the milking vacuum and takes the milking unit from the cow's udder.

automaticity [*aw"to-mə-tis'ĭ-te*] the ability of cells, after activity, to depolarize spontaneously, and then initiate a propagated, transmembranous, action potential; in healthy hearts only the sinus node cells reach threshold potential without an external stimulus.

automatism [*aw-tom'ə-tiz-əm*] mechanical, often repetitive motor behavior performed without conscious control.

autonomic [*aw"tə-nom'ik*] not subject to voluntary control.

a. blocking agent nicotine and some synthetic compounds such as hexamethonium, pentamethonium and others specifically paralyze the nerve cells in autonomic ganglia thus neutralizing the sympathetic and parasympathic postganglionic fibers that emanate from that particular ganglion.

a. craniosacral outflow the parasympathetic nervous system that includes nerve fibers in the oculomotor, facial, glossopharyngeal and vagal cranial nerves. The sacral outflow includes autonomic fibers in the ventral nerve roots of the sacral nerves.

a. drug drugs that have effects similar to those of the effector agents in the two systems are called **sympathomimetic** and **parasympathomimetic** drugs.

a. nervous system see autonomic **nervous** system.

a. parasympathetic effects include constriction of the pupil and the bronchioles, increased secretory activity of glands, increased tone and motility of the gut, relaxation of the sphincters.

a. reflex arc comprises the afferent fibers from sensory end organs which pass into the spinal cord via the dorsal roots, ascend through the sensory columns in the spinal cord to the hypothalamus. Efferent fibers pass from there to subhypothalamic motor levels.

a. sympathetic effects include the fight-or-flight reactions of dilatation of blood vessels to muscles, constriction of others, dilatation of pupils and bronchioles, and inhibition of glandular and plain muscle activity.

a. thoracolumbar outflow the sympathetic nervous system consists of neurons in the intermediolateral gray column of the

VetBooks.ir

thoracic and lumbar segments of the spinal cord which leave the cord in the ventral branches of thoracic and lumbar nerves. Once outside the vertebral column the neurons leave the spinal nerve and join the paravertebral sympathetic trunk to enter ganglia from which postganglionic fibers go their separate ways to effector organs.

autonomotropic [*aw"to-nom-o-tro'pik*] having an affinity for the autonomic nervous system.

autonomous skin zones [*aw-ton'ə-məs*] skin zones used for testing the integrity of individual nerves.

auto-oxidation [*aw"to-ok"sĭ-da'shən*] see **autoxidation**.

autopathy idiopathic disease; one without apparent external causation.

autophagic vacuoles [*aw"to-fa'jik*] cytoplasmic degenerative debris engulfed by primary lysozymes; on completion of digestion form residual bodies later extruded from the cell. Called also cytolysosomes.

autophagocytosis a process similar to but not identical with phagocytosis. Foci of cytoplasmic degeneration within cells are engulfed by primary lysosomes to form cytolysosomes.

autophagosome [*aw"to-fag'ə-sōm*] a secondary lysosome in which elements of a cell's own cytoplasm are digested.

autophagy [*aw-tof'ə-je*] 1. lysosomal digestion of a cell's own cytoplasmic material. 2. autophagia.

autopharmacological [*aw"to- fahr"mə-kə-loj'ik*] pertaining to substances (e.g. hormones) produced in the body that have pharmacological activities.

autoplasty [*aw'to-plas"te*] replacement or reconstruction of diseased or injured parts with tissues taken from another region of the patient's own body.

autopodium [*aw"to-po'de-əm*] distal segment of a limb, comprising the hand or foot.

autopolyploidy [*aw"to- pol'e-ploi"de*] the state of having more than two chromosome sets as a result of redoubling of the chromosomes of a haploid individual or cell.

autoprothrombin II [*aw"to- pro-throm'bin*] see plasma **thromboplastin** component.

autopsy [*aw'top-se*] examination of a body after death to determine the actual cause of death; called also postmortem examination and necropsy. A valuable but neglected source of medical knowledge.

a. data data from autopsies used to illustrate the natural history of diseases and changes in their frequency are often flawed by the non-random way in which cases are selected for autopsy.

a. record includes data identifying the carcass including name, address of owner, species of subject, age, sex, breed, use, tattoos and other identifying marks, plus observations on the gross postmortem examination, the histopathological or other examinations conducted and finally an opinion about the cause of death. Useful additional documents are permission from the owner to conduct the autopsy and details of any insurance or legal interest in the examination.

autoradiograph [*aw"to-ra'de-o-graf*] the film produced by autoradiography.

autoradiography [*aw"to-ra"de-og'rə-fe*] the making of a radiograph of an object or tissue by recording on an X-ray plate the radiation emitted by radioactive material within the object. An immunologic technique used to visualize radioactive molecules in tissue sections or electrophoretic gels. Called also radioautography.

autoreactive pertaining to an immune response directed against the body's own tissues.

autoregulation [*aw"to-reg"u-la'shən*] control of certain phenomena by factors inherent in a situation; specifically, (1) maintenance by an organ or tissue of a constant blood flow despite changes in arterial pressure, and (2) adjustment of blood flow through an organ in accordance with its metabolic needs.

heterometric a. those intrinsic mechanisms controlling the strength of ventricular contractions that depend on the length of myocardial fibers at the end of diastole.

homeometric a. those intrinsic mechanisms controlling the strength of ventricular contractions that are independent of the length of myocardial fibers at the end of diastole.

auto-sanguis therapy a form of autohemotherapy in which a very small volume of the patient's blood is combined with antihomotoxic medicines and injected back into the patient, usually at acupuncture points.

autosensitization [*aw"to-sen"sĭ-tĭ-za'shən*] development of sensitivity to one's own serum or tissues.

autosepticemia [*aw"to-sep"tĭ-se'me-ə*] septicemia from poisons developed within the body.

autoserum [*aw"to-sēr'əm*] serum administered to the patient from whom it was derived.

autosexing [*aw"to-seks'ing*] see automatic **sexing**.

autosite [*aw'to-sīt*] the larger, more normal member of asymmetrical conjoined twin fetuses, to which the other twin (the parasite) is attached.

autosomal gene [*aw-to-so'məl*] a gene located on a chromosome other than the sex chromosomes. Categories are autosomal dominant and autosomal recessive.

autosome [*aw'to-sōm*] any chromosome other than the sex chromosomes.

autosplenectomy [*aw"to-sple-nek'tə-me*] almost complete disappearance of the spleen due to progressive fibrosis and shrinkage.

autotomography [*aw"to-to-mog'rə-fe*] a method of body-section radiography involving movement of the patient instead of the X-ray tube.

autotomize to release a body part, particularly as a defense mechanism; the self-amputated part usually regenerates. Seen in reptiles and invertebrates.

autotomy [*aw-tot'ə-me*] the severance, shedding or autoamputation of an appendage with regeneration following, as seen in some reptiles and invertebrates. Examples are the tail of some lizards, the claw of a lobster, and tentacle of an octopus.

autotopagnosia [*aw"to-top"ag-no'zhə*] inability to orient correctly different parts of the body.

autotoxin [*aw"to- tok'sin*] a toxin developed within the body.

autotransformer a supplementary transformer with insulated primary and secondary windings on one core in a radiographical unit. It corrects fluctuations in the mains input voltage.

autotransfusion [*aw"to-trans-fu'zhən*] reinfusion of a patient's own blood. Free blood in the thorax or abdomen as a result of trauma can be reinfused.

autotransplantation [*aw"to-trans"plan-ta'shən*] transfer of tissue from one part of the body to another part.

renal a. surgical repositioning of a kidney in the same animal, usually to the iliac fossa.

autotroph [*aw'to-trōf*] an autotrophic organism.

autotrophic [*aw"to-tro'fik*] capable of synthesizing necessary nutrients if water, carbon dioxide, inorganic salts and a source of energy are available.

autovaccination [*aw"to-vak"sĭ-na'shən*] treatment with autovaccine.

autovaccine [*aw"to-vak'sēn*] a vaccine prepared from cultures of organisms from the patient's own tissues or secretions.

autoxidation, auto-oxidation [*aw"tok-sĭ-da'shən*] the spontaneous reaction of a compound with molecular oxygen at room temperature.

autumn crocus see ***Colchicum autumnale***. Called also meadow saffron.

autumn saving of pasture. See deferred **grazing**.

autumnal fever leptospirosis.

auxesis [*awk-se'sis*] increase in size of an organism, especially that due to growth of its individual cells rather than increase in their number.

auxin plant hormone.

auxochrome [*awk'so-krōm*] a chemical group which added to a chromogen converts it into a dye.

auxotroph [*awk'so-trōf*] an auxotrophic organism.

auxotrophic [*awk"so-tro'fik*] 1. requiring a growth factor not required by the parental or prototype strain; said of microbial mutants. 2. requiring specific organic growth factors in addition to the carbon source present in a minimal medium.

A-V, AV 1. arteriovenous. 2. atrioventricular.

av avoirdupois.

AVA Australian Veterinary Association.

availability the proportion of a specific nutrient or chemical in soil or in animal feed that is available for absorption by plants or by animals that eat the plants. The overall availability of each chemical may vary from time to time in a plant depending on its chemical composition. Represented most simply as the amount of the ingested material not recoverable in the feces. In soil it is the proportion of the content that is eluted by a weak acid.

AVAR Association of Veterinarians for Animal Rights.

avascular [*a-vas'ku-lər*] not vascular; bloodless.
a. necrosis of the femoral head see **Legg–Calvé–Perthes disease**.
avascularization [*a-vas"ku-lər-ĭ-za'shən*] diversion of blood from tissues, as by bandaging.
Avelina-black Iberian cattle black, meat and draft Spanish cattle.
Avena a genus of cereal plants of the grass family Poaceae (Graminae).
A. pubescens **oatgrass** may cause ergotism (see rye **ergot**[1]) when infested with *Claviceps purpurea*.
A. sativa cereal oats, a major feed for animals as grain hay or grazing crop. May cause poisoning by **nitrite**, a nutritional deficiency of magnesium leading to **hypomagnesemia**, or **mycotoxicosis** when the crop is infested with unspecified fungi. See also **oat** grain.
average the sum of the values divided by the number of values. Called also arithmetic **mean**.
a. daily gain average daily increase in liveweight of an animal or group of animals. Measured by weighing on two dates and dividing the difference by the number of days between.
moving a. a series of averages over time, based on a constant number of values, by including the next installment of data, and excluding the oldest data. Used to reduce the variability of a series by calculating a new series based on the average of a constant number of values of the original series. The time period of inclusion of data may be indicated, for example 3-month moving average. Called also rolling average.
avermectins a group of chemically related anthelmintics belonging to the macrocyclic lactones, and produced by fermenting *Streptomyces avermitilis*. A number of compounds with anthelmintic activity are produced by this process. The combination of two dehydrogenated avermectins is called **ivermectin**. See also **doramectin**, **selamectin**, **milbemycin**.
aversion experience or stimulus that leads to behavior that results in future avoidance of the experience. Seen in an animal that will not enter a room or yards associated with pain or discomfort.
feed a. when a particular feed is rejected, e.g. feed contaminated by fungal toxin. See also **conditioned** food aversion.
Aves a class comprising all of the birds. Any vertebrate, in fact any living organism, that has feathers is a bird. All birds have feathers. Besides the diseases that afflict them as birds, they are also of importance as vectors of disease for other species; known ones include West Nile fever, avian influenza, erysipelas, salmonellosis, listeriosis, equine encephalomyelitis.
Aveyron disease French ovine leukopenic enterocolitis caused by pestivirus.
Aviadenovirus [*a"ve-ad'ə-no-vi"rəs*] a genus in the family ***Adenoviridae***, the members of which infect avian species. See also ***Adenovirus***.
avian [*a've-ən*] pertaining to or emanating from members of the class Aves. See also **bird**.
a. air sacs see **air sacs**.
a. diseases diseases affecting birds. For individual diseases see under etiological or pathoanatomic keyword, e.g. avian **arizonosis**, **myeloblastosis** (2).
a. hepatitis B-like virus see **Avihepadnavirus**.
a. incubation periods quail hatch in 16–18 days, chickens in 21 days, ducks in 28 days (Muscovies are an exception (33–35 days)) and turkeys in 28 days. In some wild species hatching is synchronized by communication between the eggs.
infectious a. nephrosis see infectious avian **nephrosis**.
a. influenza a highly contagious disease caused by influenza A virus, affecting fowl, turkeys, pheasants, ducks and many wild species, but rarely waterbirds or pigeons. Clinically there is a short course and very heavy mortality; birds that survive have a nasal discharge, white necrotic spots on the comb and wattles, and edema of the head and neck. Called also fowl plague. Some strains, notably H5N1 and H7N7, have emerged as the cause of fatal, but relatively rare, human infections. Infections from highly pathogenic strains and some of low pathogenicity are notifiable to the OIE (see Table 22). See also **OFFLU**.
a. leukosis see avian **leukosis**.
a. lymphoid leukosis see **lymphoid** leukosis.
a. malaria a disease affecting most species of birds and caused by *Plasmodium* spp. transmitted by mosquitoes. More than 60 different species of avian *Plasmodium* are described with some restricted to one host species and others infecting birds from multiple families. In poultry infection with *P. gallinaceum* in fowl, *P. juxtanucleare* in fowl and turkeys, *P. durae* and *P. griffithsi* in turkeys appears the most common and severe. *P. relictum* is most important in wild birds and caused severe mortality in some bird species when introduced into Hawaii some years ago. Infection and severe mortality is being seen in wild birds in previously- free temperate countries because of the increase in mosquito numbers with global warming. Manifest with anorexia and weakness, dyspnea, swollen eyelids and hemolytic anemia that may be fatal. See also ***Plasmodium***.
a. molt see **molting**.
a. nesting a strong biological urge to prepare a nest and lay eggs in it occurs in only some domestic birds. The building of a nest is stimulated by the previous laying of an egg.
a. oogenesis the process from the time that the oocyte leaves the ovary until it is produced with the typical avian flourish as a finished egg takes 25–26 hours. The yolk is added to the oocyte in the ovary and over a period of 60–70 days before the ovum is released. The oocyte is enveloped with albumen in the albumen-secreting section or magnum of the oviduct. The two shell membranes are added to the egg as it passes through the isthmus of the oviduct. The shell is added during a stay of about 15–20 hours in the shell gland, the last stop before the vagina. See also **egg** (4).
a. pox see **fowlpox**.
a. reticuloendotheliosis virus pathogenic avian retroviruses that are antigenically and genetically unrelated to avian leukosis/sarcoma retroviruses.
a. tuberculosis see *Mycobacterium avium* **tuberculosis**.
a. type C retroviruses includes avian leukosis viruses and avian sarcoma viruses.
a. vibrionic hepatitis see avian vibrionic **hepatitis**.
avianized said of an infective agent, usually a virus, which has been attenuated by serial passage through hen eggs, e.g. avianized Flury vaccine for rabies, canine distemper and bluetongue vaccines.
aviary an enclosure for the keeping of birds.
Avibacterium a genus of gram-negative, facultatively anaerobic, rod shaped bacteria in the family *Pasteurellaceae* that are found predominantly in birds. Previously members of the genera *Pasteurella* and *Haemophilus*.
A. avium commensal in birds. Can cause sinusitis in chickens. Previously classified as *Pasteurella avium* and *Haemophilus avium*.
A. endocarditidis isolated from cases of valvular endocarditis in chickens.
A. gallinarum commensal in birds, but an occasional cause of low grade disease.
A. paragallinarum the cause of infectious coryza in chickens.
A. volantium commensal in birds; not known to be pathogenic. Previously classified within *Haemophilus paragallinarum*.
Avibirnavirus [*a"vĭ-bur'nə-vi"rəs*] a genus in the family *Birnaviridae*. They are viruses of birds, including infectious bursal disease virus.
avicide agents, e.g. avitrol (4-aminopyridine), used to poison bird pests.
aviculture the rearing of birds, usually caged birds.
avidin [*av'ĭ-din*] a constituent of normal eggs which inhibits the absorption of biotin. The feeding of large quantities of raw egg whites causes dermatitis, alopecia and cracked hooves in pigs and heavy mortality in mink.
avidity [*ə-vid'ĭ-te*] in immunology, the strength of antibody–antigen binding taking into account the multiple Fabs on the molecule. IgM antibodies have generally higher avidity than IgG due to their pentameric structure.
Avihepadnavirus [*a"vĭ-hep-ad'nə-vi"rəs*] a genus in the family *Hepadnaviridae*. They cause a persistent infection which leads to primary hepatocellular carcinoma in Pekin duck. Called also avian hepatitis B-like viruses.
avilamycin an antimicrobial used as a feed additive, growth promotant and for enteric bacterial infections in poultry, pigs and rabbits.
Avioserpens a genus of nematodes of the family Dracunculidae. Includes *A. taiwana* and *A. mosgovoyi* (ducks, other waterfowl).
Avipoxvirus [*a'vĭ-poks"vi-rəs*] a genus in the order *Poxvirales*, family *Poxviridae* that includes the viruses of fowlpox, pigeonpox, turkeypox and others; all poxviruses of birds are related.
avirulent [*a-vir'u-lənt*] not virulent; lack of capacity of an infectious agent to produce pathological effects.

VetBooks.ir

VetBooks.ir

A

avitaminosis [*a-vi"tə-mĭ-no'sis*] disease due to deficiency of vitamins in the diet. See also nutritional deficiency under each vitamin.

Avitellina a non-pathogenic tapeworm genus of the family Thysanosomatidae. Includes *A. centripunctata* (sheep, goats).

avitrol poisoning an avicide; leads to disorientation and vocalization in pigeons which may then be molested by normal birds. Chemical needs to be differentiated from Avitrol, a proprietary name for the anthelmintic levamisole hydrochloride and Avitrol plus (levamisole plus praziquantel).

AVMA see **American Veterinary Medical Association**.

avocado ***Persea americana***.

Avogadro [*ah-vo-gahd'rō*] named after Amedeo Avogadro, an Italian physicist (1776–1856).

A's law equal volumes of perfect gases at the same temperature and pressure contain the same number of molecules.

A's number, A's constant the number of particles of the type specified by the chemical formula of a certain substance in 1 gram-molecule (mole) of the substance.

avoidance [*ə-void'əns*] a conscious or unconscious defensive reaction intended to escape anxiety, conflict, danger, fear or pain.

avoirdupois [*av"ər-də-poiz'*)] a system of weight used in English-speaking countries for all commodities except drugs, precious stones and precious metals. See also Table 2.1. Now largely superseded by the metric system.

avoparcin a glycopeptide antibiotic, produced by *Streptomyces candidus*, used as a feed additive.

AVP arginine vasopressin.

AVT avian arginine vasotocin.

Avulavirus a genus in the subfamily *Paramyxovirinae*; includes Newcastle disease virus.

avulsion [*ə-vul'shən*] the tearing away of a structure or part.

brachial plexus a. a common injury in dogs and less often cats, usually resulting from trauma that causes extreme abduction of the forelimb and avulsion of some or all nerve roots from C6 to T1. Depending on the extent of injury, the leg may be completely paralyzed with extensive loss of sensation, or if less severe may be carried with only signs of a radial paralysis.

labial a. stripping of the lip from its underlying attachments. Lower lip avulsion from the mandible is particularly common in cats. Called also stripped chin.

phrenic a. see **phrenicoexeresis**.

tooth a. a tooth totally displaced from its alveolus.

Awassi Near East fat-tailed type of sheep, used for milk, mutton and carpetwool. Mostly white, with brown head and legs. Sometimes black, white, gray or spotted face; males are horned, females polled. Used extensively in the Middle East.

AWIC Animal Welfare Information Center.

awn a long, sharp spine projecting from the coverings about a seed. They assist the seedhead in penetration of the skin and then migration through very large distances into all tissues, including even the canine intervertebral disk. They are common subcutaneous foreign bodies in sheep, where they appear to do no harm, and dogs where they commonly cause abscesses and some chronic, discharging fistulae. They are particularly troublesome in the nasal cavity, ears and eyes of dogs.

axenic [*a-zen'ik*] [Gr.] *xenos* (stranger); totally free of infection with microorganisms. Axenic mammals are usually produced in the first generation following cesarean section under absolutely sterile conditions and the young are delivered into plastic, sterile isolators where they remain under germ-free conditions; axenic avian species are produced by placing fertile eggs into plastic isolators after carefully sterilizing the egg shell. Called also germ-free animals. See also **gnotobiotic** and **specific pathogen free**.

axes [*ak'sēz*] [L., Gr.] plural of *axis*. The straight lines which intersect at right angles and on which graphs are drawn. Usually the horizontal axis is the x-axis and the vertical one the y-axis. Called also axes of reference.

axial [*ak'se-əl*] 1. pertaining to or deriving from an axis. 2. pertaining to or deriving from the axis bone of the vertebral column. See also **axis**.

a. rotation in chiropractic terms, the rotation of the vertebral column around the horizontal axis (Z-axis).

a. skeleton the skeleton of the head and trunk.

axilla [*ak-sil'ə*] pl. *axillae* [L.] the armpit, the space bounded by the latissimus dorsi and deep pectoral muscles.

axillary [*ak'sĭ-lar"e*] of or pertaining to the armpit.

a. lymph node buried deeply between the shoulder muscles and the chest wall; palpable in the living animal only when significantly enlarged and hard.

a. nerve see Table 14.

a. nerve lesion characterized by atrophy of the deltoid muscle.

a. nodular necrosis small, round, hard nodules at the girth or near the axilla in horses.

axi(o)- [*ak'sis*] word element. [L., Gr.] denoting relation to an axis; in dentistry, used in special reference to the long axis of a tooth.

axis pl. *axes* [L., Gr.] 1. a line through a center of a body, or about which a structure revolves. 2. the second cervical vertebra.

a. cylinder axon.

dorsoventral a. one passing from the back to the belly surface of the body.

electrical a. of heart the resultant of the action potentials within the heart at any instant as measured by the limb leads in the frontal plane. See also **mean** electrical axis.

a. of heart. a line passing through the center of the base of the heart and the apex.

optical a. imaginary straight line connecting the anterior and posterior poles of the eye.

orbital a. a line passing through the apex of the bony orbit and the center of the opening of the orbit.

axis deer see chital **deer**.

axoaxonic [*ak"so-ak-son'ik*] referring to a synapse between the axon of one neuron and the axon of another.

axodentritic [*ak"so-den-drit'ik*] referring to a synapse between the axon of one neuron and dentrites of another.

axolemma [*ak-so-lem'ə*] the surface membrane of an axon.

axolotl [*ak'so-lot-əl*] a four-legged, gilled amphibian (*Ambystoma mexicanum*), a neotenous newt that breeds in the larval stage. Is related to the salamanders but unlike them rarely metamorphoses to the adult stage. Called Mexican axolotl, Mexican walking fish.

axolysis [*ak-sol'ĭ-sis*] degeneration of an axon.

axon [*ak'son*] the process of a nerve cell along which impulses travel away from the cell body. Axonal fibers can be very long with branches at its termination, forming synapses at other nerve cells or effector organs. So-called 'anatomical axons' behave like physiologic dendrites and conduct impulses towards the cell body as, for example, the sensory nerves from the limbs. Many axons are covered by a myelin sheath formed from the cell membrane of a glial or Schwann cell.

a. hillock the elevation on the perikaryon from which the axon emerges.

a. reflex a nerve impulse conducted through nerve pathways limited to the single axon, without the participation of a nerve cell or synapse. Not a true reflex.

a. telodendrion extensive terminal branches of the axon before terminating on the effector organ.

a. terminals the axonal structure capable of forming a synapse with another axon.

axonal [*ak'so-nəl*] pertaining to or arising from an axon.

a. degeneration an axon dies and cannot be replaced if its cell body is destroyed. A damaged axon in the central nervous system similarly cannot undergo regeneration, but a peripheral nerve with an intact nerve cell can regenerate. See also **Wallerian degeneration**.

a. dystrophy specific diseases characterized by nutritional abnormalities of axons include in **sheep**, Suffolk, Coopworth, Merino axonal dystrophies, in **dogs**, Rottweiler, Chiahuahua dystrophies, in **horses** Haflinger, Morgan, in **cats** a dystrophy in lilac coat color domestic shorthaired.

giant a. neuropathy see giant axonal **neuropathy**.

a. migration the movement of axoplasm from the proximal segment of a severed nerve fiber to the distal portion, following Schwann cell extensions, in the process of peripheral nerve regeneration.

a. reaction central chromatolysis of the axon characterized by eccentric relocation of the nucleus, greater prominence of the nucleolus and a basophilic cap of RNA on its cytoplasmic aspect, dispersal of the Nissl substance to the periphery of the cell, and an increase in the number of neurofilaments.

axonapraxia [*ak"son-ə-prak'shə*] see **neurapraxia**.

axoneme [*ak'so-nēm*] 1. the central core of a cilium or flagellum, consisting of two central microtubules surrounded by nine

peripheral microtubule pairs. 2. the gene-string or filament forming the basis of a chromosome.

axonopathy [*ak"sə-nop'ə-the*] a disease of axons.

Boxer progressive a. an inherited, degenerative disorder of the peripheral and central nervous system in Boxer dogs. By 6 months of age, dogs homozygous for the trait show ataxia and weakness in the hindlimbs and an absence of the patellar reflex.

congenital a. Holstein–Friesian calves are recumbent from birth; the necropsy lesion is degeneration in spinal cord and midbrain nerve tracts; considered to be inherited as an autosomal recessive trait.

inherited ovine degenerative a. inherited in several forms in some sheep breeds (Suffolk, Merino, Coopworth); may be congenital or develop at up to 6 months old; signs include ataxia, recumbency, invariable death. Probably the same disease as that called Murrurrundi disease.

peripheral and central distal a. of Birman cats a noninflammatory, diffuse loss of myelinated fibers in the distal portions of the central and peripheral nervous systems, resulting in progressive hindlimb ataxia and hypermetria in young Birman kittens. Believed to be inherited as an autosomal recessive trait.

segmental a. axonopathy affecting a segment of the axons.

axonotmesis [*ak"son-ot-me'sis*] nerve injury characterized by disruption of the axon and myelin sheath but with preservation of the connective tissue fragments, resulting in degeneration of the axon distal to the injury site; regeneration of the axon is spontaneous and of good quality. See also **neuronotmesis**.

axoplasm [*ak'so-plaz-əm*] the cytoplasm of an axon; called also hyaloplasm.

axoplasmic [*ak"so-plas'mik*] pertaining to or emanating from axoplasm.

a. flow the flow of proteins, hormones, enzymes and neurotransmitters along nerve fibers.

a. transport the mechanism by which viruses make their way along the axons.

axosomatic [*ak"so-so-mat'ik*] referring to a synapse between the axon of one neuron and the cell body of another.

aye-aye (*Daubentonia madagascariensis*) a nocturnal, prosimian native to Madagascar; related to lemurs. Notable characteristics are opposable thumbs, long, thin forefingers and a very long, thin middle forefinger that is used to extract grubs through holes it chews in a tree.

Aylesbury an English meat duck, with white plumage and bright yellow legs.

Ayre's T-piece see T-piece **circuit**.

Ayrshire a hardy breed of Scottish dairy cattle with a white haircoat splashed with large patches of bay (red-brown) to brown coloring, and long, upward pointing (lyre) horns. Their temperament is inclined to be irascible. Known to carry an inherited predisposition to congenital **lymphatic** vessel obstruction. See also **Finnish Ayrshire.**

Ayurvedic medicine [*i"yər-va'dik*] a natural healing system developed in India that aims to prevent and treat illness through lifestyle interventions and natural therapiies. Equal emphasis is placed on the body, mind and spirit and the system strives to restore the innate harmony of the individual through diet, exercise, meditation, herbs, massage, exposure to sunlight and controlled breathing. In the treatment of animals, attention is given to natural diets, feeding habits and a daily routine that most closely resembles their natural life, including exposure to fresh and sunlight, exercise and emotional needs.

Azadirachta indica [*az"ə-dĭ-rak'tə*] toxic Indian plant, known for its insecticidal properties, in the family Meliaceae; an unidentified toxin causes stomatitis, diarrhea, nephrosis; called also neem.

azalea [*ə-za'le-ə*] shrubs in the genus ***Rhododendron***.

mock a. see ***Menziesia ferruginea***.

western a. *Rhododendron occidentale*.

azaperone [*a"zə-per'ōn*] a butyrophenone tranquilizer widely used as a tranquilizer or as a premedication for pigs.

azaspirodecanediones a class of compounds with anxiolytic properties. See also **buspirone**.

azathioprine [*az"ə-thi'o-prēn*] a mercaptopurine derivative used as a cytotoxic and immunosuppressive agent in the treatment of leukemia and autoimmune diseases and in transplantation therapy.

Azawakh a medum-sized sight hound originating in North Africa; tall and very lean with long legs, a short, sparse coat and long tail.

azeotrope [*a'ze-o-trōp")*] a mixture of two substances that has a constant boiling point and cannot be separated by fractional distillation.

2-azetidinecarboxylic acid toxin found in ***Convallaria majalis*** — lily-of-the-valley.

azide [*az'īd*] the anion N_3^-; a poison which inhibits cytochrome *c* oxidase (or complex IV) of the respiratory electron-transfer chain.

azidothymidine (AZT) [*az"ī-do-thi'mĭ-dēn*] see **zidovudine**.

azinphos-methyl an organophosphorus, non-systemic insecticide and acaricide. Poisoning with the compound causes typical signs for organophosphates.

azithromycin [*az-ith"ro-mi'sin*] a semi-synthetic macrolide antibiotic, similar to erythromycin, used in the treatment of papillomatosis in dogs and toxoplasmosis .

azlocillin [*az"lo-sil'in*] a ureidopenicillin with a broad spectrum of activity, but inactivated by β-lactamase.

azo dyes a group of synthetic dyes with weak antimicrobial properties. Examples are phenazopyridine and scarlet red.

azocarmine [*az"o-kahr'min*] a red basic dye.

azole antifungals [*az'ōl*] imidazoles and triazoles which are broad-spectrum antifungal agents and are active against gram-positive bacteria. Includes miconazole, ketoconazole, itraconazole, fluconazole and enilconazole.

azoospermia [*a-zo"ə-spur'me-ə*] absence of spermatozoa in the semen due to lack of emission, or failure of formation of spermatozoa (lack of spermatogenesis).

azot- prefix meaning nitrogen.

azote [*az'ōt*] nitrogen.

azotemia [*az"o-te'me-ə*] an excess of nitrogen-containing compounds in the blood. See also **uremia**.

postrenal a. is caused by reduced renal blood flow caused by increased pressure within the renal collecting system, e.g. hydronephrosis and urine retention from a variety of causes, including leakage of urine into body cavities.

prerenal a. is due to extrarenal causes that reduce renal blood flow and glomerular filtration, e.g. dehydration, shock, reduced cardiac output, decreased plasma albumin osmotic pressure.

primary renal a. results from loss of renal functional parenchyma.

azotemic [*az"o-te'mik*] pertaining to or emanating from azotemia.

a. pseudodiabetes the glucose intolerance that occurs with primary renal failure, probably due to peripheral resistance to glucose utilization.

azotenesis any disease due to excess nitrogen in system.

azotorrhea [*az"o-tə-re'ə*] discharge of excessive quantities of nitrogenous matter in the stools.

azoturia [*az"o-tu're-ə*] see exertional **rhabdomyolysis**.

azovan blue see **Evans blue**.

AZT azidothymidine.

aztreonam [*az'tre-o-nam"*] a monobactam, β-lactam antibiotic, very resistant to β-lactamase, but with a narrow range of activity. It is used parenterally against infections with gram-negative organisms, particularly *Pseudomonas aeruginosa.*

azure [*azh'ər*] one of three metachromatic basic dyes (azures A, B and C).

azuresin a complex combination of azure A dye and carbacrylic cation-exchange resin used as a diagnostic aid in detection of gastric secretion.

azurophil [*azh-u'ro-fil*] a tissue constituent staining with azure or a similar metachromatic thiazine dye.

azurophilia [*azh"u-ro-fil'e-ə*] a condition in which the blood contains cells having azurophilic granules.

azurophilic [*azh"u-ro-fil'ik*] staining with azure or similar metachromatic thiazine dyes; pertaining to azurophilia.

a. granules the large, homogeneous, dense, peroxidase-positive granules of progranulocytes and early myelocytes that stain blue with Romanowsky stains because of their acid mucopolysaccharide content. Called also primary granules.

azygography [*az"ĭ-gog'rə-fe*] radiography of the azygous venous system.

azygos [*az'ĭ-gəs*] 1. any unpaired part, as the azygos vein. 2. unpaired. Called also azygous.

a. vein a vein beginning in the abdomen and coursing in the dorsal mediastinum which returns blood from the thorax to the heart. The right azygos is found in most domestic animals (rarely the pig) while the left azygos is found in pigs and ruminants.

azygous [*az'ĭ-gəs*] see **azygos**.

azymic not giving rise to fermentation.

VetBooks.ir

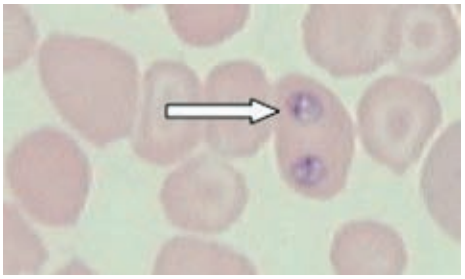
B

B chemical symbol, *boron*; boils at; buccal.
β beta; small letter; second letter in the Greek alphabet.
B blood group system the major histocompatibility complex first identified in chicken red cells; responsible for most of the variation in graft survival time in that species.
B cell see B **lymphocyte**.
B fibers preganglionic, autonomic efferent nerve fibers with much slower conduction speeds than A cells.
B immunoblasts B cells which have become activated following exposure to antigen; may differentiate to memory cells or plasma cells.
B lymphocyte see B **lymphocyte**.
B-mode brightness mode. See B-mode **ultrasonography**.
B-virus a herpesvirus of monkeys that shares a common antigen with the pseudorabies and herpes simplex viruses. The infection is common in Old World monkeys especially in rhesus, cynomolgus and vervet monkeys. Clinical signs in the monkeys include fever blisters on the lips, and ulcerative and papillary lesions on the anterior dorsum of the tongue. The infection is transmissible to humans causing a highly fatal ascending encephalitis.
Ba chemical symbol, *barium*.
Baastrup's disease [*bah'stroop*] a bony proliferation between the dorsal spinous processes in the lumbar spine of humans. A similar condition has been noted radiographically in dogs, particularly large breeds and especially in Boxers. The clinical significance is unknown.
BAB born after the ban; refers to cattle born in the UK after the 1988 ban on feeding meat and bone meal to ruminants that developed bovine spongiform encephalopathy (BSE). BAB cattle occurred because of a lack of enforcement of the ban, illegal use, and because of cross contamination of cattle fed with infected meat and bone meal in feed mills that prepared feed for all animal species. As a result, the subsequent ban was on the feeding of any ruminant protein to any animals in the UK.
Babcock tissue forceps forceps of variable length, similar to Allis tissue forceps but with fine longitudinal grooves on the jaws designed to minimize compressing the vascular supply of the tissues to which they are applied. Frequently used to stabilize and retract delicate tissues such as the intestine.
Babcock's test a test for determination of the fat content of milk. Based on the centrifugation of a heated sample of milk which has been treated with strong acid to carbonize the milk protein.
Babès–Ernst granules metachromatic granules, characteristic of corynebacteria.
Babès' nodules [*bah'besh*] very small glial nodules found in the brain of animals, especially ruminants, which have died of rabies.
Babesia [*bə-be'ze-ə*] a genus of round to pyriform protozoa of the family Babesiidae. Includes piroplasms. These protozoa pass part of their life cycle in erythrocytes. Transmission between animals is by ticks.
B. bigemina causes **babesiosis** of cattle and some wild ruminants.
B. bovis causes **babesiosis** of cattle and some wild ruminants. Includes *B. argentina*, *B. berberi*, *B. colchica*.
B. caballi causes a mild form of **babesiosis** in horses.
B. canis causes **babesiosis** in dogs; particularly associated with Greyhounds.
B. cati found in cats.
B. colchica see *B. bovis* (above).
B. divergens causes a mild form of **babesiosis** of cattle and some wild ruminants; can also infect humans.
B. equi causes **babesiosis** in horses.
B. felis causes **babesiosis** of cats.
B. gibsoni causes **babesiosis** in dogs; particularly associated with pitbulls and American Staffordshire terriers.
B. herpaiuri found in cats.
B. hylomysci found in red deer.
B. major causes a mild form of **babesiosis** of cattle.
B. motasi causes acute **babesiosis** in sheep and goats.
B. ovis causes a mild form of **babesiosis** in sheep and goats.
B. pantherae found in some felids.
B. rodhaini found in mice.
B. vogeli found in dogs.
babesiasis [*bă"be-zi'ə-sis*] babesiosis.
babesicide destructive to babesia.
babesiosis [*bə-be"ze-o'sis*] a group of diseases caused by the protozoan *Babesia* spp. and transmitted by blood-sucking ticks. Clinically they are all characterized by fever and intravascular hemolysis manifested by a syndrome of anemia, hemoglobinuria and jaundice. Called also tick fever, Texas fever, redwater fever, and Nantucket fever in humans. Bovine and equine babesiosis are diseases notifiable to OIE (see Table 22).
canine b. hemolytic disease of dogs caused by *Babesia canis* or *B. gibsoni*, transmitted by a tick, and characterized by an acute to subclinical anemia and hemoglobinuria. Called also tick fever, malignant jaundice.
cerebral b. cases of babesiosis in which cerebral capillaries become engorged with parasitized erythrocytes, causing nervous signs. Seen in *Babesia bovis* and *B. canis* infections.
equine b. see equine **piroplasmosis**.
Babinski reflex [*bə-bin'ske*] a reflex action of the toes, indicative of abnormalities in the motor control pathways leading from the cerebral cortex. It is elicited in dogs and cats by an upward stroking of the metacarpal or metatarsal bones. A normal reaction is slight flexion of the toes. In a positive sign, the toes extend; seen with upper motor neuron lesions. Called also Babinski sign.
babirusa (*Babyrousa babyrussa*) a species in the pig family Suidae, native to Indonesia. It has the rounded body and long snout of a pig; the males have long, upward curving tusks.
baboon (*Papio* spp.) Old World monkeys in the family Cercopithecidae. They are big, with a strong facial resemblance to dogs. They are omnivorous, terrestrial, walk on all fours, and show a great variety of coloring in their distinctive ischial callosities and anogenital skin. Called also *Papio*. They are used in biomedical research.
baby pig disease [*ba'be*] see **neonatal** hypoglycemia.
bacampicillin [*bə-kam"pĭ-sil'in*] an ester of ampicillin that in vivo becomes ampicillin and has the actions and uses of the parent drug.
Baccharis a genus of plants from the Americas in the Asteraceae (Compositae) family. Macrocyclic trichothecenes have been identified in some species, the toxin originating from *Myrothecium* spp., fungi associated with the roots. Signs include stiffness, trembling, convulsions; lesions include rumenitis, enteritis. Toxic species include *B. cordifolia*, *B. dranunculifolia*, *B. glomeruliflora*, *B. halimifolia*, *B. megapotamica*, *B. pteronioides*, *B. ramulosa*.
Bach flower therapy [*bahk*] see **flower essence therapy**.
bacillary [*bas'ĭ-lar"e*] pertaining to bacilli or to rod-like structures.
b. hemoglobinuria an acute, highly fatal toxemia of cattle and sheep caused by *Clostridium haemolyticum* (*Cl. novyi* type D), a soil-borne anaerobe. The disease occurs in summer and autumn in endemic areas which are usually irrigated or sub-irrigated



B-1: Trophozoites of *Babesia canis* within canine red blood cells. From Hendrix CM, Robinson E, Diagnostic Parasitology for Veterinary Technicians, 3rd Edition. Mosby, 2006.

fields. It is characterized by fever, hemoglobinuria and jaundice, and at postmortem examination by the presence of necrotic infarcts in the liver.

b. necrosis see **necrobacillosis**.

b. pyelonephritis see **contagious** bovine pyelonephritis.

b. typhlitis see **Tyzzer's disease**.

b. white diarrhea see **pullorum disease**.

bacille Calmette–Guérin [bah-sēl'] see **BCG**.

bacillemia [bas"i-le'me-ə] the presence of bacilli in the blood.

bacilli [bə-sil'i] see ***Bacillus***.

bacilliform [bə-sil'i-form] having the appearance of a bacillus; rod-shaped.

bacillin [bə-sil'in] an antibiotic substance isolated from strains of *Bacillus subtilis*, highly active on both gram-positive and gram-negative bacteria.

bacillosis infection with bacilli.

bacilluria [bas"i-lu're-ə] bacilli in the urine.

Bacillus [bə-sil'əs] a genus of bacteria that are gram-positive, aerobic, spore-forming rods. With the exception of *B. anthracis* and the occasional wound contamination and bovine mastitis caused by *B. cereus*, the organisms are largely saprophytic and do not cause disease. However, they may invade devitalized tissue. They do have importance in the area of food preservation.

B. actinoides ***Streptobacillus*** *moniliformis*.

B. aneurinolyticus, B. thiaminolyticus are thiaminase-producing bacteria which may proliferate in the rumen and contribute to the cerebral lesions in carbohydrate engorgement and polioencephalomalacia in cattle.

B. anthracis characterized by its capacity to form spores when exposed to the air that survive for long periods in soil and other inert materials. Has a characteristic appearance and the capsule is detectable with McFadyean's stain. Causes **anthrax** in all species.

B. brevis the source of **tyrothricin**.

B. cereus a species causing food poisoning, occasional cases of septicemia and bovine mastitis and abortion.

B. circulans, B. coagulans, B. stearothermophilus very heat-resistant bacteria which cause fermentation of cereals in canned meat foods. They cause souring but no gas production so that the can does not bulge. Called also flat sour. *B. stearothermophilus* spores are used to test efficacy of autoclaves.

B. larvae see ***Paenibacillus larvae*** **subspecies** ***larvae***.

B. licheniformis reported as a cause of abortion in cattle, sheep and pigs, and also isolated from suppurative lesions of horses and cattle.

B. piliformis the former name of ***Clostridium*** *piliforme*, the cause of **Tyzzer's disease**.

***B. polymyxa* (*B. aerosporus*)** strains of this organism are the source of the antibiotic **polymyxin**.

B. subtilis a common saprophyte in soil and water form, often occurring as a laboratory contaminant, and rarely, in apparently causal relation to pathological processes, such as conjunctivitis.

bacillus [bə-sil'us] pl. *bacilli* [L.] 1. an organism of the genus *Bacillus*. 2. any rod-shaped bacterium.

Battey b. ***Mycobacterium*** *intracellulare*.

Calmette–Guérin b. ***Mycobacterium*** *bovis*, rendered completely avirulent by cultivation over a long period on bile–glycerol–potato medium. See also **BCG** vaccine.

Friedländer's b. ***Klebsiella*** *pneumoniae*.

glanders b. ***Burkholderia*** *mallei* (previously *Pseudomonas mallei*).

Hansen's b. ***Mycobacterium*** *leprae*.

tubercle b. ***Mycobacterium*** *tuberculosis*.

typhoid b. ***Salmonella*** *enterica* serovar *Typhi*.

Bacteria the domain, or empire, within the Kingdom Prokaryota that contains all the pathogenic bacteria. Divided into 28 phyla, or divisions. This domain is also called *Eubacteria*. The remaining prokaryotic microorganisms lie in the domain Archaea (or *Archaeobacteria*).

bacitracin [bas"i-tra'sin] an antibacterial substance elaborated by the licheniformis group of *Bacillus subtilis*, found in a contaminated wound, and named after the patient, Margaret Tracy; useful in a wide range of infections and usually applied topically, but also used against necrotic entertis in poultry.

back [bak] see also **dorsum**.

b. arched upwards humped back posture as in subacute abdominal pain.

cold b. horse resents the saddle being placed in position and the girth tightened. May be due to pain in back or to disinclination to wear the saddle.

hollow b. the natural concave line of the backbone is exaggerated.

b. muscle necrosis is characterized by pain and swelling over the backs of pigs. The pigs are reluctant to move and there is arching or lateral flexion of the spine. Subsequently there is atrophy of the muscles. See also **porcine** stress syndrome.

b. pain pain expressed when pressure is applied to the back. Spondylosis, injury to dorsal spinous processes and muscle sprain are amongst the common causes. A special area of interest in the horse, because of its importance in restricting movement and causing abnormalities of gait.

b. raking manual removal of the feces from the rectum. Performed often in the preliminaries to pregnancy diagnosis in mares and cows. Carried out cosmetically in horses and especially elephants just before a circus or other performing act.

back bleeding [bak blēd'ing] a slaughtering error in which the pleural sac is punctured during bleeding-out. Blood is aspirated into the sac causing staining. Called also over-sticking.

back-fence the fence used to prevent cattle grazing back over already eaten out pasture which is being strip-grazed. As the front fence is moved forwards the back-fence is also moved up.

back-swept said of horns which sweep out, usually horizontally, from the patient's head and point backwards towards the tail.

backband [bak'band] an essential part of most horse harnesses. A strap that goes over the back, sometimes through a backpad, and supports the shafts or the traces.

backbone [bak'bōn] the vertebral column.

backcross [bak'kros] mating of a two-breed crossbred offspring back to one of the parent breeds.

backfat [bak'fat] a segment of the well-developed panniculus adiposus along the back of pigs, cattle and sheep; at this location the fat is especially well-formed and firm. The thickness of the layer, as determined by ultrasound measurement at the 10th rib area in pigs and the 12th rib area in beef and lambs, is used as an index of the fatness of the entire carcass.

b. probe a sharp instrument used to measure backfat thickness without incising the carcass. Electronic probes are available for use in the live pig and ruminant animals.

backflow [bak'flo] abnormal backward flow of fluids; regurgitation. See also **reflux**.

pyelovenous b. drainage from the renal pelvis into the venous system occurring under certain conditions of back pressure.

background rate the rate, often low, at which some event or agent occurs, at a particular time or in a particular place, in the absence of a specific hazard.

backgrounding a management system where recently weaned calves or yearling cattle are grazed or fed a high fiber ration for a period of time until they reach a desired size for placement in a feedyard. This usually includes a **preconditioning** program.

Backhaus towel clamp a clamp used for fixing drapes to the skin of anesthetized patients. A scissor action with ratchet fixation at the finger loops and sharp, incurving, needle-like blades.

backline [bak'līn] the upper outline of the body's silhouette viewed from the side.

backs [baks] wool taken from the back section of a fleece of wool.

backscatter [bak'skat-ər] in radiology, radiation deflected by scattering processes at angles greater than 90 degrees to the original direction of the beam of radiation. Important in radiotherapy when estimating surface exposure dose.

backstrap [bak'strap] see **backband**.

B-2: Backhaus towel clamp.
From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide. 2nd Edition. Mosby, 2011.

VetBooks.ir

VetBooks.ir

B

backtag [bak'tag] a tag of special tough paper, bearing identification codes relating to origin of animals, which are stuck to the back of animals with a very strong glue. Designed for easy reading in saleyards, short life and to help with traceback during investigation of the origin of disease outbreaks. See also **tail** tag.

backtrace [bak'trās] see **traceback**.

backward tone see **opisthotonos**.

baclofen [bak'lo-fen"] an analog of γ-aminobutyric acid (GABA) used as a muscle relaxant.

bacon curing preserving of pig meat by dry pickling with salt and saltpetre or by immersion in a brine tank, followed by a period of maturation in a cool place to allow an even distribution of the pickle. Injection of pickling brine into large muscle masses is much used to hasten the curing process.

bacon weight the desirable weight for a pig that is to be used for bacon production—200–220 lb liveweight.

bacteraemia [bak"tər-e'me-ə] bacteremia.

bacteremia the temporary presence of bacteria in the blood. The condition is not manifested by any clinical signs but is commonly followed by the development of embolic infections such as arthritis, meningitis, endocarditis, and liver and lung abscesses.

bacteria [bak-tēr'e-ə] plural of **bacterium**.

anaerobic b. derive energy from fermentative processes in the absence of oxygen. Are often found in necrotic or abscessed tissues.

cell-wall deficient b. see L-form bacteria (below).

facultatively anaerobic b. are able to derive energy from aerobic or anaerobic metabolism.

glucose-non-fermenting, gram-negative b. includes *Bordetella*, *Moraxella* and *Pseudomonas* species.

L-form b. abnormal growth forms that can replicate as small filterable elements with defective or absent cell walls. Spontaneously formed by some bacteria, e.g. *Streptococcus* spp., *Bacterioides* spp., and by others when cell wall synthesis is impaired. L-forms have been associated with infections in dogs and cats.

marker b. those added to provide a means of identifying the presence of viable bacteria in a sample. See ***Serratia*** *rubidaea*.

obligately aerobic b. require oxygen as a source of energy and therefore for growth.

putrefactive b. see **decomposition**.

resistant b. see **antimicrobial** resistance.

ruminal b. the ruminal fluid of the normal cow contains 10–50 million million organisms per gram. Bacteria outnumber the protozoan population many times over. The genera and species of bacteria present vary with time in the same cow. The function of the ruminal bacteria is to digest the food taken in and thus allow its absorption. This includes the lysis of cellulose, xylanol, starch, dextrin, pectin, protein, lipids, the utilization of glycerol and lactate, and the fermentation of soluble sugars. The end products of the digestive process include methane, formate, acetate, ethanol, propionate, lactate, butyrate, succinate, valerate, caproate, hydrogen and carbon dioxide.

spoilage b. see **decomposition**.

bacterial [bak-tēr'e-əl] pertaining to or caused by bacteria.

b. adhesiveness see **adhesins**.

b. allergy see bacterial **hypersensitivity**.

cutaneous b. granuloma see **botryomycosis**.

b. diseases diseases in which bacteria play a significant but not necessarily exclusive role.

b. fermentation fermentation by bacteria, e.g. those in the rumen. See also **fermentation**.

b. gill disease see **gill** disease.

b. kidney disease of salmonids a serious disease of salmonid fish caused by the gram-positive coccobacillus *Renibacterium salmoninarum* and characterized by granuloma in the kidney and spleen, and extensive caseation of muscles. The disease is chronic and causes heavy losses.

b. overgrowth a syndrome of malabsorption causing chronic or recurrent diarrhea in dogs, particularly German shepherds, Basenjiis and Sharpeis. There is chronic watery diarrhea with steatorrhea. Believed to be due to the presence in the small intestine of an abnormally large population of *Clostridium* spp. and other enteric bacteria normally found in the colon.

bactericidal [bak-tēr"i-si'dəl] able to kill bacteria.

minimal b. concentration (MBC) see minimal lethal **concentration**.

bactericide [bak-tēr'i-sīd] an agent that destroys bacteria.

bacterid [bak'tər-id] a skin eruption due to bacterial infection elsewhere in the body.

bacterin [bak'tər-in] vaccine consisting of killed bacterial cells.

oral b. prepared from killed cultures of *Aeromonas* spp. Has been used successfully in fish in which individual parenteral prophylaxis is prohibitively expensive.

bacter(io)- word element. [Gr.] *bacteria*.

bacteriocidin [bak-tēr"e-o-si'din] a bactericidal antibody.

bacteriocin [bak-tēr'e-o"sin] peptides produced by some strains of bacteria which inhibits the growth of, or kill, other bacteria. Examples are staphylococcin, produced by *Staphylococcus aureus*, and colicins, produced by *Escherichia coli*.

bacteriologist [bak-tēr"e-ol'ə-jist] an expert in the study of bacteria and the diseases they cause.

bacteriology [bak-tēr"e-ol'ə-je] the scientific study of bacteria and the diseases they cause.

bacteriolysin [bak-tēr"e-ol'ī-sin] an antibody that lyses bacterial cells.

bacteriolysis [bak-tēr"e-ol'ī-sis] destruction or dissolution of bacteria.

bacteriophage [bak-tēr'e-o-fāj"] or simply phage; a virus that infects bacteria often killing them by lysis; many varieties exist, and usually each attacks only one kind of bacteria. Some bacteriophages are widely used as cloning vectors and for determining DNA sequence. Virulent DNA bacteriophages in the T series adsorb to specific receptor sites on the bacterial cell wall and inject their DNA content into the bacterium. The viral DNA usurps the machinery of the cell for the replication of viral DNA and proteins which are assembled into a crop of progeny phage which are released by lysis from the cell. Called also bacterial virus. See also temperate bacteriophage (below).

M13 b. small rod-shaped, nonlytic, single-stranded DNA phage; used as a template in the Sangar dideoxy method for DNA sequence determination.

phiX174 b. prototype of a class of phage that are small, icosahedral single-stranded DNA viruses that code for only 10–12 proteins and are highly dependent on the host cell for their replication.

RNA b. the genome is RNA instead of DNA; smallest known viruses, encode for only four proteins; they have contributed to basic studies of RNA.

temperate b's typified by λ bacteriophage; have a similar lytic life cycle but in addition have an alternate life cycle whereby the injected DNA becomes integrated into the cell DNA where it remains stable, behaving as a cell gene. The integrated DNA is called prophage and the bacterial cell is said to be lysogenic. The phage DNA may be induced whereby it becomes disassociated from the cell DNA and enters the lytic life cycle. Temperate phage may transfer bacterial cell DNA from one cell to another to produce a recombinant.

bacteriopsonin [bak-tēr"e-op'so-nin] an opsonin that acts on bacteria.

bacteriosis [bak-tēr"e-o'sis] a bacterial disease.

bacteriospermia [bak-tēr"e-o-spur'me-ə] the presence of bacteria in the semen.

bacteriostasis [bak-tēr"e-o-sta'sis]a state in which the growth or multiplication of bacteria is inhibited without the bacteria being killed.

bacteriostatic [bak-tēr"e-o-stat'ik] arresting the growth or multiplication of bacteria; also, an agent that so acts.

bacterium [bak-tēr'e-əm] pl. *bacteria* [L.] any prokaryotic microorganism. Bacteria are single-celled microorganisms that differ from all other organisms (the eukaryotes) in lacking a true nucleus and organelles such as mitochondria, chloroplasts and lysosomes. Most have a single double-stranded DNA chromosome in contrast to eukaryotes, which have multiple chromosomes, which are complex structures of DNA and protein. Bacteria reproduce by binary fission and generally have a very high rate of population growth and mutation. Genetic material can be transferred between bacteria by three processes: *transformation* (absorption of naked DNA), *transduction* (transfer by a temperate bacteriophage), and *conjugation* (transfer by independently replicating DNA molecules, called *plasmids*). Some bacteria can form *spores*, dehydrated forms that are resistant to heat, cold, lack of water, toxic chemicals and radiation. Most bacteria have a rigid cell wall outside of the cell membrane primarily composed of a dense layer of peptidoglycan, a network of polysaccharide chains with polypeptide cross-links. Some antimicrobial agents, the penicillins and cephalosporins, act by interfering with peptidoglycan synthesis. Bacteria can have any of three types of extracellular structures: *flagella*, which are rotating locomotor organelles; *pili* or fimbriae, which are filamentous appendages; and a *capsule*,

which is a layer of gelatinous material around the cell. Pili may be involved in conjugation, secretion, motility, and/or adherence of bacteria to epithelial cells. The capsule can protect the bacterium from phagocytosis. See also **bacteria**.

acid-fast b. one that, because of the wax-like composition of the cell wall, is not readily decolorized by acids after staining, especially *Mycobacterium* spp.

coliform b. similar to *Escherichia coli*. Particularly found in the gut of animals. Members of the *Enterobacteriaceae*.

hemophilic b. bacteria in the genera *Actinobacillus, Avibacterium, Bibersteinia, Haemophilus, Manheimia and Pasteurella,* which have a nutritional requirement for fresh blood or whose growth is significantly stimulated on blood-containing media.

lactic acid b. bacteria that, in suitable media, ferment carbohydrates to form lactic acid.

lysogenised b. any bacterial cell harboring in its genome the genome of a temperate **bacteriophage** and thus reproducing the bacteriophage genome during each cell division; occasionally the prophage is induced (free of the bacterial genome), replicates, lyses the bacterial cell, and is free to infect other cells.

Bacterium viscosum-equi [bak-tēr'e-əm] see ***Actinobacillus equuli***.

bacteriuria [bak-tēr"e-u're-ə] bacteria in the urine.

bacteroid [bak'tar-oid] 1. resembling a bacterium. 2. a structurally modified bacterium.

Bacteroidaceae [bak"tər-oi-da'se-e] a family of obligately anaerobic, gram-negative, rod-shaped bacteria containing the genus *Bacteroides*.

Bacteroides [bak"tər-oi'dēz] a genus of the family *Bacteroidaceae,* a family of gram-negative, non-spore-forming, obligate anaerobes. Common inhabitants of the alimentary tract and often found in necrotic tissue and abscesses.

B. amylophilus see ***Ruminobacter amylophilus***.

B. asaccharolyticus see ***Porphyromonas asaccharolytica***.

B. fragilis occasionally infects foals, pigs, lambs and calves, causing diarrhea, mastitis and abscesses.

B. gingivalis see ***Porphyromonas gingivalis***.

B. heparinolyticus see ***Prevotella heparinolytica***.

B. levii see ***Porphyromonas levii***.

B. melaninogenicus see ***Prevotella melaninogenica***.

B. nodosus see ***Dichelobacter nodosus***.

B. ruminicola see ***Prevotella ruminicola***.

B. salivosus see ***Porphyromonas salivosus***.

B. succinogenes see ***Fibrobacter succinogenes***.

B. ureolyticus gram-negative, microaerophilic bacterial species isolated from the genital tract of mares with endometritis.

bacteruria [bak"tēr-u're-ə] bacteriuria.

baculoviral midgut gland necrosis virus baculovirus causing heavy mortalities in larval and postlarval *Penaeus japonicus* and *P. monodon* prawns. Called also midgut gland cloudy disease, white turbid liver disease, white turbidity disease.

baculovirus group of rod-shaped, double-stranded, DNA viruses which infect and kill a large number of different invertebrate species especially insects, including Lepidoptera, Hymenoptera, Diptera, Neuroplera, Trichoptera, Coleoptera and Homoptera, and also prawns; used as biocontrol agents, sometimes following genetic engineering of the virus. Some used experimentally for high level expression of foreign proteins.

Baculovirus pennaei a virus which causes infection with high mortality in larval, postlarval and juvenile prawns, especially *Penaeus vannamei* and other American species of prawns.

baculum [bak'u-ləm] see **os**^{2} penis.

badger 1. a burrowing carnivore in the family Mustelidae, they are typically short and stocky with a short tail and a fierce disposition. 2. a coat color in dogs that consists of a mixture of white, gray, brown and black; may occur in patches. Seen in a variety of hound breeds and the Great Pyrenees dog.

American b. (*Taxidea taxus*) found in western North America. Called also New World badger, taxel.

b. dog literal translation of Dachshund.

European b., Eurasian b. (*Meles meles*) small but sturdy, burrowing mammals in the family Mustelidae; grayish in color with two distinctive black stripes starting on the face and running over the top of the head to the back. They are widely distributed and historically have been hunted and subjected to badger baiting. In the UK, where they are protected, they have a particular following. Badgers are considered important in the transmission of tuberculosis to cattle and they can be a source of **baylisascariasis** infections for humans.

hog b. (*Arctonyx collaris*) found in Southeast Asia; called also hog-nosed badger, sand badger.

honey b. (*Mellivora capensis*) small with a black body and a wide, white stripe covering the upper part of the body; widely distributed through Africa and South Asia. Although carnivorous, their appetite for feeding on beehives is the reason for their common name. Called also ratel.

stink b. (*Mydaus* spp.) Southeast Asian badgers known for the foul-smell from their anal glands.

BAER brainstem auditory **evoked response**. Not to be confused with ursine mammals.

Baermann technique a laboratory method for separating parasite larvae from feces, soil, tissues or herbage for counting or identification.

baffle boards large pieces of rigid material, usually plywood, carried vertically by an attendant between him/her and a large pig or other uncontrollable animal. They are used to shepherd the animal from place to place without the use of force. A useful device in zoos, but no protection against an aggressive animal.

bag [bag] 1. a sac or pouch. 2. a farmer's term for udder.

b.-in-a-bottle a basic form of ventilator used in gaseous anesthesia in which an expandable bag is enclosed in a bottle. Injection or extraction of air in the bottle causes expansion and contraction of the bag and controls ventilation.

Douglas b. a receptacle for the collection of expired air, permitting measurement of respiratory gases.

fecal b. strapped to an animal in such a way as to catch the fecal output. Used in experimental work or clinical investigation in ambulatory animals especially sheep.

hard b. a name given to the udder induration seen with some cases of **maedi**. The udder appears full but has little or no milk.

sterilizing b. any of several types of paper or plastic bags used to package individual instruments in the autoclaving process.

urine b. a bag strapped to the animal, usually an ambulatory sheep, in such a way as to collect the total urinary output.

b. of waters the membranes enclosing the amniotic fluid and the developing fetus in utero.

bagasse the fibrous residue of sugar cane after the extraction of the sugar juice. Used as a fibrous diluent for heavy grain and molasses diets.

bagassosis [bag"ə-so'sis] a hypersensitivity pneumonitis of humans caused by inhalation of thermophilic actinomycetes in moldy bagasse.

bagging [bag'ing] rhythmical, manual squeezing of a reservoir bag in an anesthetic system to provide artificial ventilation to an animal; manual intermittent positive pressure breathing.

bagging nostrils [bag'ing nos'trilz] enclosing muzzle in a plastic bag to promote deep breathing in a patient for better auscultation result over lung fields.

bagging up [bag'ing up] a term which refers to an increase in the size of the udder due to physiological causes. Said of a cow coming close to parturition. It is also not unusual to stop milking a cow for 24 hours before sale or show in order to give the cow a better appearance.

Baghdad boil [bag'dad boil] leishmaniasis.

bagpod [bag'pod] ***Sesbania vesicaria***.

Bagshaw hoist used as an aid in managing downer cows. Consists of a pair of heavy curved iron pipes which fit around and under a cow's hook bones (tuber coxae) and are connected by a heavy metal sliding bar and a heavy metal worm that can be screwed to draw the pipes closer together and further under the hips.

B-3: Baermann apparatus is used to recover larvae of roundworms from feces, soil, or animal tissues. From Hendrix CM, Robinson E, Diagnostic Parasitology for Veterinary Technicians, 3rd Edition. Mosby, 2006.

VetBooks.ir

VetBooks.ir

Using this clamp and a block and tackle, a downer cow can be lifted to a standing position. There must be judgement with its use as repeated or prolonged use results in severe pressure myonecrosis at the site of appliction. Called also Bagshaw's hip clamps.

Bahia grass ***Paspalum*** *notatum*.

Bahia oppositifolia a North American plant in the family Asteraceae; contains cyanogenetic glycosides and can cause poisoning.

bail a head catch for cattle. See **headstock**.

bail-up to catch.

Bailey rib contractor two inward-facing, curved, clawed hands mounted on a ratcheted bar designed for bringing ribs closer together during thoracic surgery.

Baileya multiradiata flowers and fruit of this plant cause nephrosis and hepatitis when eaten.

Bain system [*bān sis'təm*] see Bain coaxial **circuit**.

Bainbridge clamp [*bān'brij*] an instrument similar to intestinal forceps. Used to clamp large blood vessels.

Bainbridge forceps [*bān'brij*] standard intestinal forceps.

Bainbridge reflex [*bān'brij*] a reflex of uncertain validity that states that the intravenous injection of fluid or blood, or the experimental dilatation of the right atrium, causes tachycardia. An alternative statement says that these manipulations cause bradycardia. Called also McDowall reflex.

bait [*bāt*] a preparation containing a palatable food substance such as raw meat, carrot or bran and a pharmaceutical or poisonous substance. The purpose is to introduce the medicament or poison into the unsuspecting animal.

baiting [*bāt'ing*] the laying of a **bait**. May be done for purposes of medication or control, or for malicious reasons. In urban areas baiting is controlled by law which forbids baiting except, in some countries, on one's own property. Most of the poisonous substances used are controlled by legislation so that the identity of the baiter is recorded.

bajra ***Pennisetum*** *glaucum*.

bakery waste may be overflow bread or dough or be moldy, or contain substances other than farinaceous ones. Normal dough or bread or flour can cause **carbohydrate engorgement** in horses and ruminants. If the fungi on moldy bread are toxic, poisoning may also result. Bread or pastry containing meat may cause the spread of diseases carried in meat scraps, e.g. foot-and-mouth disease, swine fever.

BAL British AntiLewisite. See **dimercaprol**.

Balamuthia mandrillaris [*bal"ə-moo'the-ə*] a species of freeliving leptomyxid ameba that can cause amebic meningoencephalitis in animals, including dogs, sheep and horses, and humans.

balance [*bal'əns*] 1. an instrument for weighing. 2. harmonious adjustment of different elements or parts; harmonious performance of functions. Used to describe symmetry and proportion of conformation.

analytical b. a laboratory balance sensitive to very small variations of the order of 0.001 mg.

fluid b. a state in which the volume of body water and its solutes (electrolytes and nonelectrolytes) are within normal limits and there is normal distribution of fluids within the intracellular and extracellular compartments. The total volume of body fluids should be about 60% of the body weight, and it should be distributed so that one-third is extracellular fluid and two-thirds intracellular fluid. Although this distribution remains constant in a healthy animal, there is continuous movement of fluid into and out of the various compartments. See also **dehydration**, **water** intoxication.

nitrogen b. the state of the body when ingestion and excretion of nitrogen are equal. In negative nitrogen balance the amount of nitrogen excreted is greater than the quantity ingested. In positive nitrogen balance the amount excreted is smaller than the amount ingested. See also **nitrogen** balance.

posture b. disturbances of balance, including falling to one side, rotation of the head, walking in circles. These are usually indications of disturbances of the organs of balance in the semicircular canals.

water b. **fluid** balance.

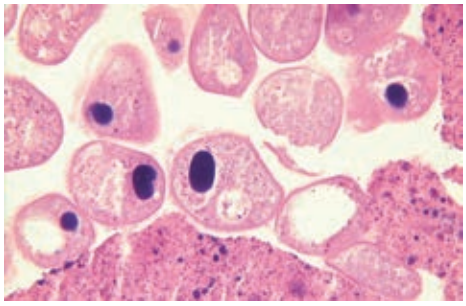
balanced ration [*bal'ənst*] see balanced **ration**.

balanic [*bə-lan'ik*] pertaining to the glans penis or glans clitoridis.

Balanites aegyptica [*bal"ə-ni'tis*] African member of plant family Zygophyllaceae; fruits may contain steroidal saponins; cause nephrosis, hepatitis, muscle wasting in ruminants.

balanitis [*bal"ə-ni'tis*] inflammation of the glans penis.

balanoposthectomy [*bal"ə-no-pos-thek'tə-me*] surgical removal of the penis and prepuce.



B-4: Motile trophozoite stage of *Balantidium coli*. From Hendrix CM, Robinson E, Diagnostic Parasitology for Veterinary Technicians, 3rd Edition. Mosby, 2006.

balanoposthitis [*bal"ə-no-pos-thi'tis*] inflammation of penis and prepuce.

enzootic b. see **enzootic** balanoposthitis.

infectious b. see **enzootic** balanoposthitis.

infectious pustular b. the male manifestation of infectious pustular **vulvovaginitis** caused by bovine herpesvirus 1. It is manifested by the development of pustules and inflammation of the skin of the penis and prepuce, a mucopurulent preputial discharge, and pain of the organ causing the bull to refuse to serve.

balanopreputial [*bal"ə-no-pre-poo'shəl*] pertaining to the glans penis and prepuce.

balanorrhagia [*bal"ə-no-ra'jə*] balanitis with free discharge of pus.

Balansia epichloe fungal pathogen of pasture plant seedheads; contains ergot alkaloids and causes gangrene of extremities.

balantidiasis [*bal"an-tĭ-di'ə-sis*] infection by protozoa of the genus *Balantidium*. **Swine** dysentery was thought at one time to be a form of balantidiasis caused by *B. coli*. The infection can cause enteritis in pigs and dogs and can be associated with other pathogens. A zoonosis and the infection in humans causes colitis.

Balantidium [*bal"an-tid'e-əm*] a genus of ciliated protozoa, including many species found in the intestine of vertebrates and invertebrates, predominantly in primates, pigs and humans. See also **balantidiasis**.

B. coli see **balantidiasis**.

bald [*bawld*] 1. loss of hair, see **alopecia**. 2. in cattle and horses used to describe an animal with a white face. Called also **baldy**.

b. faced a horse with a blaze and a snip into a nostril conjoined.

b. thighs syndrome a condition of unknown cause occurring in racing Greyhounds about four weeks after commencing a training program. There is complete alopecia with no other abnormality of the skin on the caudolateral aspects of the thighs and sometimes also in the axilla and on the ventrolateral aspects of the chest.

baldness [*bawld'nis*] absence of hair; alopecia.

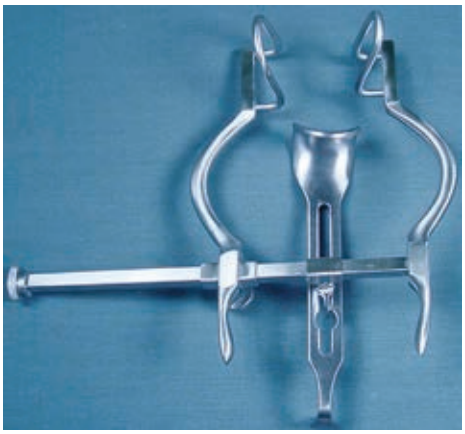
pattern b. occurs in dogs as hair loss of the ears, most commonly in Dachshunds and predominantly males; hair loss on the ventral neck, caudomedial thighs and tail in American water spaniels and Portuguese water dogs; and hair loss on the postauricular areas, ventral and neck and ventral body in dogs of several small breeds.

baldy, baldy-faced [*bawl'de*] said of cattle to mean a white face and usually indicating a Hereford influence in the animal's breeding. See also **black baldy**.

baldy calves [*bawl'de*] see inherited **epidermal** dysplasia of calves.

bale 1. a package of wool in a wool pack weighing 150–250 lb depending largely on whether it is greasy or scoured. 2. a compressed bundle of hay, either about 80 lb tied with wire or twine, or large, round bales, weighing 500–800 lb or square bales, 800–1200 lb, the latter two referred to as 'big bales'. Small bales are easily handled

B-5: Idiopathic bald thigh syndrome of Greyhounds. From Medleau L, Hnilica KA, Small Animal Dermatology. 2nd Edition. Saunders, 2006.



B-6: Balfour retractor.
From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide, 2nd Edition. Mosby, 2011.

by one person whereas round bales need mechanical transport but can be fed in round bale-feeders decreasing the amount of time associated with feeding-out hay. Large square bales are more used to transport hay in commerce.

Balfour retractor a self-retaining retractor constructed of three individually operable, outward-looking curved loops mounted on a slide bar. By inserting the blades into an incision and spreading them, the incision is opened to give maximum access to tissues below. Available in standard and pediatric sizes and most frequently used to assist retraction of the body wall during a ventral midline laparotomy.

Bali cattle red to red-black meat cattle from Indonesia, originated from Banteng cattle.

Balinese a breed of cat with the body build, temperament and light-colored body and darker ears, face, tail and legs seen in Siamese, but with semi-long hair. The name is derived from the graceful tail movements that are compared to the sinuous movements of Balinese dancers. See also **Javanese**.

balk [*bawlk*] the action of a horse when it refuses to obey a command to which it usually responds. See also **jibbing**.

Balkan grippe [*bawl'kən*] see **Q fever**.

Balkan endemic nephropathy [*bawl'kən*] an endemic disease of humans in south-western Europe. It has a strong resemblance to ochratoxin A induced porcine nephropathy caused by intoxication by ***Fusarium***.

balking, baulking [*bawl'king*] see **jibbing**.

ball [*bawl*] a more or less spherical mass. See also **bolus**.

fungus b. aspergilloma.

balling [*bawl'ing*] the act of administering a bolus or a ball to horses, swine and ruminants for medicinal purposes and to ruminants for identification. See intraruminal **identification** bolus.

b. gun a device for administering a **bolus** to an animal. Consists of a short cylinder sufficiently large to contain the average bolus, a hollow stem containing the rod that connects the handle with the plunger in the cylinder, and the handle. The handle needs to be long enough to position the cylinder in the pharynx before the bolus is discharged by pushing the handle. Sophisticated models have a spring-loaded handle. Suitable for use in horses, cattle, sheep, goats and pigs but a mouth speculum is essential in many uncooperative animals, especially pigs.

b. gun injury laceration of the oral mucosa or fauces or pharynx with the nozzle of the gun, due usually to over-vigorous insertion or banging the plunger with the hand to expel the bolus. The bolus may penetrate the wall of the pharynx to produce retropharyngeal cellulitis. In feedlots, can appear as an outbreak in association with an untrained operator.

B-7: Method of oral administration of a bolus to a cow using a ballling gun.
From Sheldon CC, et al, Animal Restraint for Veterinary Professionals. Mosby, 2006.

ballismus, ballism [*bə-liz'məs*] violent flinging movements of the limbs, sometimes affecting only one side of the body (hemiballismus).

ballistiVet see **biobullet**.

balloon [*bə- lōōn'*] an inflatable balloon catheter device used to surgically dilate or expand tissues.

b. angioplasty used to increase the diameter of the lumen blood vessel.

b. dilatation used to increase the diameter of the lumen of a structure such as the urethra or a heart valve. See balloon **valvuloplasty**.

b. angioplasty used to increase the diameter of the lumen blood vessel.

b. pericardiotomy used to develop a hole in the pericardium to remove pericardial fluid in the management of pericardial effusion.

b. valvuloplasty used to increase the diameter of a heart valve, for example to treat pulmonary valve stenosis.

balloon kidneys [*bə- ' kid'ne*] an abattoir expression meaning normal kidneys surrounded by an excessive amount of fat.

ballottement [*bə-lot'mənt*] [Fr.] a palpatory maneuver to test for a floating object, especially for detecting pregnancy by pushing the fist, in the case of cows, the fingertips in the case of ewes, into the abdominal wall, causing the fetus to move from and quickly return to the fist or fingers.

balm [*bahm*] 1. a balsam. 2. a soothing or healing medicine.

balneotherapy [*bal"ne-o-ther'ə-pe*] use of baths in the treatment of disease.

balsa a very lightweight timber, easy to carve to fit limbs, used for making individual splints.

balsam [*bawl'səm*] a semifluid, fragrant, resinous, vegetable juice. Balsams are resins combined with oils, used in various preparations to treat irritated or denuded areas of the skin and mucous membranes. Stains from these preparations are extremely difficult to remove. Friar's balsam, called also compound benzoin **tincture**, is used as a topical protectant. Balsam of Peru, or Peruvian balsam, is used as a local protectant and rubefacient. Tolu balsam is used as an ingredient in compound benzoin and as an expectorant.

b. traumatic Friar's balsam.

BALT bronchus-associated lymphoid tissue.

Bamberger–Marie disease [*bahm'bər-gər mah-re'*] hypertrophic osteopathy.

bambermycin [*bam"bər-mi'sin*] an antibiotic feed additive for poultry, pigs and calves.

Bambusa vulgaris a plant in the grass family Poaceae; an unidentified toxin, not a cyanogenic glycoside, causes incoordination and tongue paresis in horses if eaten in quantity. Called also bamboo.

BAN British Approved Name.

ban [*ban*] ***Quercus incana***.

banana disease see **back** muscle necrosis.

band [*band*] 1. a part, structure or appliance that binds. 2. in histology, a zone of a myofibril of striated muscle. 3. in cytogenetics, a segment of a chromosome stained brighter or darker than the adjacent bands; used in identifying the chromosomes and in determining the exact extent of chromosomal abnormalities. Called *Q-bands*, *G-bands*, *C-bands*, *T-bands*, etc., according to the staining method used. 4. an American term for a group of range sheep, usually about 1000, that is ranged by a single herder. 5. refering to castration when it done using a ring or band elastrator.

b. 3 see **anion** exchanger 1.

b. 4.1 an erythrocyte membrane protein; see hereditary **elliptocytosis**.

b. form see band **cell**.

bandage [*ban'dəj*] 1. a strip or roll of gauze or other material for wrapping or binding any part of the body. See also **sling**. 2. to cover by wrapping with such material. Bandages may be used to stop the flow of blood, to provide a safeguard against contamination, or to hold a medicated dressing in place. They may also be used to hold a splint in position or otherwise immobilize an injured part of the body to prevent further injury and to facilitate healing. In horses it is standard practice to bandage the cannons while the horse is being transported, and in some animals while they are exercising or working. The objective is to prevent fluid accumulation and to protect against injury while making rapid foot movements.

absorbent b. uses layers of absorbent material on open or contaminated wounds to debride; must be changed frequently.

acrylic b. useful for their strength and in some cases slight flexibility.

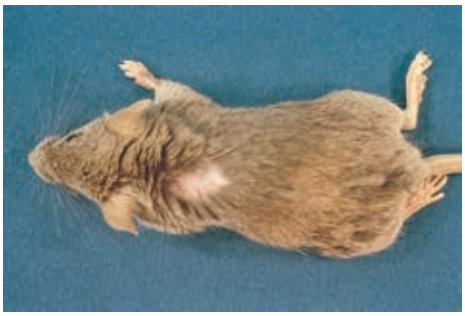
VetBooks.ir

VetBooks.ir

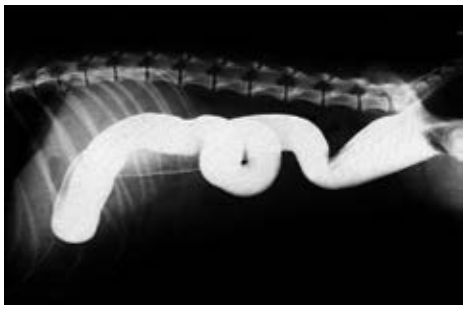
carpal flexion b. used in dogs to maintain the carpus in flexion, thereby relaxing flexor tendons, while permitting use of the elbow and shoulder.
compression b. one used to apply pressure, usually to control hemorrhage.
dry-wet b. a moist layer over the wound assists in debridement; as it dries, exudate is pulled into the material and away from the wound.
figure-of-8 b. one in which the turns cross each other like the figure 8.
flannel b. used to give warmth, support and protection of the lower limbs of horses; should be 4 in × 10ft.
many-tailed b. see tailed bandage (below).
occlusive b. see occlusive **dressing**.
plaster b. a bandage stiffened with a paste of plaster of Paris.
pressure b. one for applying pressure, for the purpose of arresting hemorrhage; pressure is applied directly over the wound.
pressure relief b. provides protection from pressure over an area, commonly a bony prominence, by redirecting pressure to surrounding areas. Often designed as a ring or doughnut.
rigid b. used for local immobilization, usually for purposes of allowing soft tissue healing.
Robert–Jones b. a heavily padded bandage consisting of cotton batting or cotton wool in a wrapping material, sometimes with added stiffening devices such as plastic piping or parallel strips of thin metal. It is applied as a pressure bandage to provide temporary support for a fractured limb prior to plaster immobilization or immediately afterwards.
roller b. a tightly rolled, circular bandage of varying widths and materials, often prepared commercially. In an emergency, strips may be torn from a sheet or piece of yard goods and rolled. When more than a few inches of length is needed, rolling is essential for quick and clean bandaging.
soft padded b. consists of cotton padding, gauze and tape. Provides support and protection of soft tissues.
spider b. see tailed bandage (below).
tailed b. a square piece of cloth cut or torn into strips from the ends toward the center, with as large a center left as necessary. The bandage is centered over a compress on the wound and the ends are then tied separately. Called also many-tailed or spider bandage.
tie-over b. a dressing held in place by suture material anchored in surrounding skin and tied over the dressing. Used for postoperative care of skin grafts.
wet-wet b. material covering the wound is kept moist, sometimes by injection of fluid into the bandage through a fenestrated drain built into the bandage.
bandicoot [ban'dĭ-] small, nocturnal and omnivorous marsupials in the Families Peramelidae and Chaeropodidae, found in Australia, New Guinea and nearby island. They form a small chorioallantoic placenta, unlike other marsupials.
banding [band'ing] 1. the act of encircling and binding with a thin strip of material. 2. in genetics, any of several techniques of staining chromosomes so that a characteristic pattern of transverse dark and light bands becomes visible, permitting identification of individual chromosome pairs.
bandjibos [Af.] ***Tylecodon*** *wallichii*.
Bandl's rings [bahn'dəl] tonic, cuff-like contractions of the uterus about the fetus.
bandy knees, legs outward bowing of the forelimbs; bowed legs. See also **valgus**.

B-8: Robert–Jones bandage.
From Sirois M, Principles and Practice of Veterinary Technology, 3rd Edition. Mosby, 2011.

baneberry see ***Actaea*** *spicata*.
Bang's bacillus [bahng] see ***Brucella*** *abortus*.
Bang's disease [bahng] brucellosis caused by *Brucella abortus*.
bangtail [bang' tāl] the name given to a horse or cow in which the long hairs on the tail are sheared off horizontally, in the horse level with the hocks. Done partly for show, in cattle mainly as a mark that the cattle have been handled and the usual operations of castration or spaying have been performed. Called also banged tail.
bank [bangk] a stored supply of animal material or tissues for future use by other individuals, as blood bank, serum bank, bone bank, skin bank, eye bank, etc.
bankrupt worm *Trichostrongylus* spp.
banok see ***Sarcolobus globosus***.
bantam a group of miniature poultry breeds, some of them true bantams which have developed naturally, others have been developed from standard breeds. Includes Cochin-China, Silkies, Ancona and Andalusian.
Banteng see ***Bos*** *banteng*.
Banzai virus a flavivirus associated with abortion and stillbirths in cattle in Africa.
BAP biofilm associated proteins
BAPN β-aminopropionitrile. See **aminonitrile**.
Baptisia leucantha [bap-tiz'e-ə] toxic North American plant in the Fabaceae family; may contain quinolizidine alkaloids; causes diarrhea. Called also wild indigo.
baquiloprim a 4-diaminopyrimidine used as a sulphonamide potentiator in veterinary medicine.
BAR abbreviation for bright, alert, responsive; used in medical records.
bar [bahr] 1. a cgs unit of pressure, being the pressure exerted by 105 Newtons/cm^2 (106 dynes/cm^2). 2. a metal strip that is attached to the metal arch on each side of a saddle and constitutes its skeleton. The attachments for the stirrup leathers are anchored to the bars.
hoof b. the reflection of the wall of the horse's hoof at the heel, with one bar on each side of the frog. Each bar contributes to the ability of the heels to spread apart while continuing to give protection against excessive contact with the ground surface. They may be erroneously cut back by an overzealous blacksmith.
b. pad a pad, usually of leather, fitted between the shoe and the hoof of a horse so as to protect the sole and bars of the foot.
walking b. a reinforcement placed at the bottom of a cast which allows weight to be transferred from the foot to the upper part of the cast. Used most often in casts for large animals.
baralime, baralyme [bar'ə-līm''] calcium hydroxide and barium hydroxide mixture in granules, used to absorb carbon dioxide from exhaled air in a closed circuit anesthetic system. See also **soda** lime.
Barb [bahrb] 1. originally a distinct line of black Australian kelpies, but now the term is generally applied to any black kelpie. 2. a riding horse of great antiquity native to North Africa; bay, brown, chestnut, black, gray and 14–15 hands high. The foundation of the **Andalusian** breed.
barba [bahr'bə] [L.] *beard*.
Barbados Blackbelly sheep tan with black belly, polled, haired meat sheep with mane in rams.
Barbados nut ***Jatropha*** *curcas*.
barban [bahr'ban] an organic substance used as a weedkiller. Poisoning manifested in cattle by ruminal stasis, recumbency, salivation and tachycardia. In pigs the syndrome comprises incoordination, vomiting and diarrhea.
Barbarea vulgaris toxic North American plant in family Brassicaceae; contains irritant oil, causing enteritis and diarrhea; called also bitter water cress, winter cress, yellow rocket.
Barbary sheep [bahr'bər-e] (*Ammotragus lervia*) a goat-antelope of North Africa, but successfully introduced into the southwestern USA for recreational hunting.
barbering hair-chewing; observed in dogs, cats, rodents, rabbits and ferrets. While it may be the result of the animal's response to pruritus of any cause, it can also be associated with stress, overcrowding and poor husbandry. See also **alopecia**.
barberry see ***Berberis***.
barber's pole worm see ***Haemonchus***.
Barbet a medium-sized (35–60 lb) dog with a long, woolly and curly coat, most commonly black or brown, that covers the body and face. A rare breed, it is related to the Poodle, which it resembles. Called also French water dog.



B-9: Trauma (cage mate–inflicted hair loss) on a mouse. This is commonly referred to as barbering. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.



B-10: Barium enema. From Ettinger SJ, Feldman E, Textbook of Veterinary Internal Medicine, 6th Edition. Saunders, 2004.

VetBooks.ir

barbicel the hooks borne on the barbules of a bird's contour **feather** that serve to interlock adjacent barbs to make a stable vane.

barbital a long-acting barbiturate, used as a hypnotic and sedative. Largely replaced by **phenobarbital**.

barbitine see **diterpenoid alkaloid**.

barbitone barbital.

barbiturate [*bahr-bich'ər-ət*] any of a group of organic compounds derived from barbituric acid. There are a number of barbiturates. They all depress the nervous system and are used to induce apathy and sleep, and in high doses, as anesthetics. They vary in their sedative effects, in the duration of their effectiveness and in their toxicity. Those that are used in veterinary medicine are: (1) pentobarbital sodium, largely superseded as an anesthetic, but still used as an euthanasia agent; (2) thiopental sodium, which has a short period of effectiveness, an advantage in many veterinary situations, e.g. examination of a pharynx; (3) thialbarbital sodium, a medium length compound; (4) thiamylal sodium, a compound with ultrashort action.

b. slough skin slough over a vein where a solution of barbiturate intended for injection into the vein leaks into subcutaneous tissue.

barbituric acid [*bahr-bĭ-tūr'ik*] a compound, $C_4H_4N_2O_3$, the parent substance of **barbiturate**.

barbone [Fr.] see **hemorrhagic** septicemia.

barbotage [*bahr"bo-tahzh'*] [Fr.] repeated alternate injection and withdrawal of fluid with a syringe, as in gastric lavage or administration of an anesthetic agent into the subarachnoid space by alternate injection of part of the anesthetic and withdrawal of cerebrospinal fluid into the syringe.

barbs [*bahrbs*] the primary, delicate filaments that are given off from the shaft (rachis) of a bird's contour **feather**. They project from the rachis and bear the barbules.

barbules the hooked processes that fringe adjacent barbs of a bird's **feather**.

Bard–Parker a proprietary group of surgical equipment.

B.–P. instrument tray Pyrex dish with a rubber-gasketed metal cover, designed to contain a chemical sterilant with instruments permanently in situ in a metal tray that can be raised and locked into a position above the liquid. Suitable for minor procedures in the practice office.

B.–P. scalpel a metal or disposable plastic handle with a patent form of attachment for blades that are available in a wide range of sizes and shapes with specific tasks in view.

B.–P. transfer forceps multipurpose, springloaded tongs for picking up sterilized surgical materials. They are permanently housed in a glass or stainless steel canister of instrument disinfectant with the handles protruding so that they can be picked up without opening the container.

Barden sign a means of demonstrating hip laxity in the diagnosis of hip dysplasia. With the dog in dorsal recumbency, the femur is perpendicular to the surface and the stifle is adducted.

bariatrics [*bar"e-at'riks*] a field of medicine encompassing the study of obesity, its causes, prevention and treatment.

barilla see ***Halogeton glomeratus***.

barium (Ba) [*bar'e-əm*] a chemical element, atomic number 56, atomic weight 137.34. See Table 4. Soluble salts, e.g. the chloride and the carbonate, are toxic.

b. burger, barium meal a mixture of barium and solid food, used as a contrast medium in radiographic studies of the esophagus, instead of liquid barium mixtures.

b. chloride used as a rodenticide. The baits are attractive to dogs. Clinical signs include salivation, convulsions and paralysis.

b. deficiency preliminary experiments showing that diets deficient in barium fed to rats and guinea pigs depressed growth (studies have not been invalidated or confirmed).

b. enema a dilute (5–20%) suspension of barium is introduced into a colon that has been emptied by starvation and previous enema.

b.-impregnated polyethylene spheres (BIPS) radio-opaque markers used to demonstrate intestinal obstruction and motility disorders; the spheres are given orally and their movement can be tracked radiographically.

b. meal a strong (usually 100%) suspension of barium sulfate is administered to an animal which has been starved for at least 12 hours.

b. study X-ray examination using a barium mixture to help locate disorders in the esophagus, stomach, duodenum, and the small and large intestines. Called also barium test.

b. sulfate a water-insoluble salt used as an opaque contrast medium for X-ray examination of the digestive tract.

b. swallow a small amount of barium paste or liquid administered orally and observed radiographically or by fluoroscopy for examination of swallowing and esophageal function.

b. test barium study.

b. toxicity rare, but has been documented in livestock. The more soluble forms of barium (e.g. carbonate, chloride) are more of a risk. Signs can include muscle twitching, ataxia, convulsions and death (due to hypokalemia).

bark [*bahrk*] 1. the voice of the dog. 2. the outer covering of a tree.

bitter b. (2) see ***Alstonia constricta***.

cinchona b. (2) dried bark of the stem or root of various South American trees of the genus *Cinchona*. It is the source of quinine, cinchonine and cinchonidine. Used as a bitter and antipyretic.

b. eating (2) a form of pica often indicative of boredom, nutritional deficiency of fiber or behavioral problem.

red paper b. (2) ***Albizia tanganyicensis***.

sassy b. (2) bark of the African tree *Erythrophleum guineense* which contains cassaine; used as an arrow poison.

b. suppression (1) see **debarking, devocalization**.

Bark lion sentinel dog [*bahrk*] see **Lhasa apso**.

barker [*bahr'kər*] a term for an animal that does not usually bark which makes a violent respiratory effort, often during a convulsion, accompanied by a sound which roughly resembles a dog's bark.

b. foals see **neonatal** maladjustment syndrome.

b. pig see barker syndrome (below).

b. syndrome inherited condition in newborn piglets characterized by several abnormalities including immaturity of distal airways and of alveoli, severe alveolar epithelial hyperplasia and hypothyroidism. Piglets show respiratory distress, and 'bark' and walk aimlessly. They appear to be blind. Death follows in 24 hours.

b. and wanderer see **neonatal** maladjustment syndrome.

barley [*bahr'le*] a genus of cereals and grasses. See ***Hordeum***. Includes barley grass (*H. jubatum*), wild barley (*H. spontaneum*).

b. beef a British system of introducing calves into pens at 3 months of age, feeding them intensively on high grain diets and marketing them before 12 months of age.

b. scab fungus ***Fusarium roseum***.

Barlow's disease [*bahr'lo*] see hypertrophic **osteodystrophy**.

barn [*bahrn*] a building usually intended to house animals for long periods during the winter season. Marked by an infinite variety of designs and internal fittings, they usually contain a feed storage area, often as a haymow or loft in a top storey, and animal stalls and handling facilities such as a milking parlor on the ground floor. The expansion of animal numbers on a farm and the

VetBooks.ir

increased specialization of farming has made this type of barn a quaint relic on most farms in most countries.

flat b. in winter climate areas where, during the winter period, dairy cows are kept in stalls or areas restrained by stanchions or tie-chains and can only move in and out of the stalls when they are released to the outside for exercise. Typically, this is done after the morning milking and during the time when the barn is being cleaned. The barn is on one level and cows are milked where they stand. A variation is that they may be released for milking through a separate milking parlor. In most countries this housing system for dairy cows has been largely superseded by free stall housing (barns).

free stall b. typically have concrete walkways, dunging and exercise areas with raised stalls that have metal or wood dividing bars. The floor of the stalls may be bedded with various materials (e.g. sand, straw, sawdust, wood-shavings; see also **bedding**). Cows may enter and leave the stalls at choice and can lie down in comfort in clean bedding as they defecate in the walkways/dunging areas rather than on the bedding in the raised stall. Manure in the walkways is scraped or flushed with water. Access to feed is through head gates into feed in a feed alley or to a feed trough. Water is available from automatic waterers. Milking is through a separate milking parlor. This type of housing may be occupied by several hundred dairy cows on a farm.

b. itch a term applied to **sarcoptic mange** in cattle and humans and also to ringworm acquired from cattle.

pole b. structure with three sides and a roof with the open side used for access and feeding. Commonly used to house groups of animals. Has good natural ventilation and has less risk for respiratory disease than totally enclosed structures. This type of structure is also used to store feed, equpment, etc.

b. rat a horse that shows eagerness or determination to return to the stable. See also **agoraphobia**.

b. sheet a sketchy method of recording events, especially reproductive ones, in the lives of the farm animals of the barn. Fixed to the barn wall it does provide an opportunity to record events as they happen, but suffers the obvious disadvantage of exposure to disfiguring and obscuring materials, especially fly droppings and cow manure. Its design, aimed at encouraging maximum data storage in minimal space, is a test for farmer ingenuity. Called also **shed** sheet.

barnyard fowl [*bahrn'yard*] those avian species commonly kept on general purpose farms, e.g. ducks, geese, chickens.

barnyard grass [*bahrn'yard*] ***Echinochloa crus-galli***.

barophilic [*bar"o-fil'ik*] growing best under high atmospheric pressure; said of bacteria.

baroreceptor [*bar"o-re-sep'tər*] a sensory nerve terminal that is stimulated by changes in pressure, as those in blood vessel walls.

arterial b. pressure-sensitive receptors in the blood vessels which initiate changes in blood volume; include low-pressure receptors in great veins and high-pressure receptors in carotid and aortic bodies.

b. reflex reflexes triggered by changes in pressure, usually refers to blood pressure, e.g. carotid sinus reflex.

baroreflex [*bar'o-re"fleks*] see **baroreceptor**.

barosinusitis [*bar"o-si"nəs-i'tis*] a symptom complex in humans caused by differences in environmental atmospheric pressure and the air pressure in the paranasal sinuses.

barostat [*bar'o-stat"*] an instrument for recording intraluminal pressure; used to investigate gastrointestinal motility.

barotaxis [*bar"o-tak'sis*] stimulation of living matter by change of atmospheric pressure.

Barr body [*bahr*] a small mass of densely staining chromatin seen during interphase of female cells produced by condensation of one of the two X chromosomes. See also **drumstick**.

barramundi a large fish of the Southwestern Pacific region, popular for angling, as a table fish, in aquaria and in aquaculture. Called also ***Lates calcarifer***, giant perch and Australian seabass.

barrel a horseman's expression for the horse's trunk; determined largely by the capacity of the chest.

b. chest enlarged, round cross-section of chest with the ribs appearing to be permanently in an inflated position.

b. hocks turned out causing the feet to turn inward.

barren [*bar'ən*] see **infertility**.

barrenness see **infertility**.

barrier [*bar'e-ər*] an obstruction; a partition between two fluid compartments in the body.

blood–air b. alveolocapillary membrane.

blood–aqueous b. physiologic and anatomical barrier composed of the iris vascular endothelium and non-pigmented ciliary body epithelium that together regulate the exchange of materials between the anterior chamber of the eye and the blood. See also blood-retinal and blood-ocular barriers (below).

blood–brain b. (BBB) the barrier separating the blood from the brain parenchyma. See also **blood–brain barrier**.

blood–CSF b. differs from the blood–brain barrier anatomically, in that it consists of the epithelium of the choroid plexuses, but has similar permeabilities.

blood–gas b. alveolocapillary membrane.

blood–nerve b. capillary endothelium in the endoneurium and perineurium regulates movement from the blood to the endoneurium.

blood–ocular b. physiological and anatomical mechanisms by which blood and intraocular fluids/tissues are separated and exchange of constituents between them is regulated. Composed of the blood-aqueous barrier anteriorly and the blood-retinal barrier posteriorly within the globe.

blood–retinal b. endothelium of the retinal capillaries and cells of the retinal pigment epithelium form a non-fenestrated barrier between blood and retinal tissue fluid.

blood–synovial b. suggested by the presence of plasma proteins of small molecular size and catabolic products of articular cartilage in synovial fluid.

blood–testis b. a barrier separating the blood from the seminiferous tubules, consisting of special junctional complexes between adjacent Sertoli cells near the base of the seminiferous epithelium. It provides an extravascular environment which is also adluminal and permits selective nourishment of spermatozoa.

b. boot a rubber boot worn by horses to protect the hoof against trauma.

b. cream a non-wettable cream used on the skin of the hands and arms to protect against staining and odor absorption when handling offensive materials, e.g. delivery of an emphysematous fetus.

gastric mucosal b. the poorly defined mechanism that prevents back diffusion of hydrochloric acid from the stomach into the tissues of the stomach wall.

skin b. the protective properties of skin and its relative impenetrability by noxious substances as well as medicaments; usually considered a function of keratinized epithelial cells aided by surface lipids.

b. teat dip material which leaves a physical protective coat on the teat between milkings, used mostly to protect against infection for long periods, e.g. during the dry period. Most contain acrylic, latex or collodion.

Barron ligation [*bar'ən*] see **rubber-band ligation**.

barrow a castrated male pig.

bartholinitis [*bahr"to-lin-i'tis*] inflammation of the Bartholin glands.

Bartholin's duct [*bahr'to-lin*] the major sublingual duct. It drains the monostomatic sublingual gland which opens on the sublingual caruncle adjacent to the submandibular duct. It is absent in the horse. Called also *ductus sublingualis major*.

Bartholin's glands [*bahr'to-lin*] the major vestibular glands; two small, lobulated glands, one in each wall of the vaginal vestibule of the cow, cat and occasionally the sheep, cranial to the vestibular constrictor muscle that secrete mucus; and whose ducts open on the lateral wall of the vestibule on either side of the urethral orifice. They secrete mucus, providing lubrication for coitus and for the passage of the fetus at birth. When cystic in the cow they are visible through the mucosa and are about 1 inch long and 0.5 inch wide. They are homologs of the bulbourethral glands of the male. Called also Tiedmann's or Duverney's gland, vulvovaginal gland, *glandula vestibularis major*.

Barton tether [*bahr'tən*] a leather harness used to tether pigs at pasture. One strap around the neck and one around the chest behind the elbows are tied together at the withers by a third strap, and a fourth one ties them together between the front limbs. A tethering chain is attached at any point.

Bartonella [*bahr"tə-nel'ə*] a genus of gram-negative, coccoid or rod-shaped bacteria in the family *Bartonellaceae*. Many of the species in this genus were previously classified in the genus *Rochalimaea*.

B. bacilliformis the cause of Oroya fever or Carrión's disease in humans and occasionally dogs in South America.

B. henselae causes cat-scratch disease, bacillary angiomatosis, and endocarditis in humans.

B. quintana the etiological agent of trench fever of humans and voles; is transmitted by the body louse *Pediculus humanus*.

Bartonellaceae [*bahr"tə-nel-a'se-e*] a family of the order *Rickettsiales*, occurring as pathogenic parasites in or on the erythrocytes of humans and other animals. It includes the genera *Bartonella, Grahamella* and *Rochalimaea*.

bartonellemia the presence in the blood of organisms of the genus *Bartonella*.

bartonellosis [*bahr-tə-nel-o'sis*] infection by organisms in the genus *Bartonella*.

canine b. infection by a bartonella species, most commonly *B. henselae* (transmitted by fleas) or *B. vinsonii* subsp. *berkhoffii* (transmitted by ticks), causes persistent bacteremia and immunosuppression, which may be associated with other diseases.

feline b. see **cat-scratch disease**.

Bartter's syndrome [*bahr'tər*] chronic potassium depletion leading to hypokalemia; caused by renal potassium wasting, elevated plasma renin activity and aldosterone secretion.

baruria [*bar-u're-ə*] having highly concentrated urine. See **hypersthenuria**.

Barychelidae a family of spiders in the Myagalomorph suborder which includes the trapdoor spider. They are characterized by having vertical rather than horizontal fangs.

Bas rouge see **Beuceron**.

basal [*ba'səl*] pertaining to or situated near a base; in physiology, pertaining to the lowest possible level.

b. body the structure that acts as a template for the characteristic 9 + 2 arrangement of the microtubules of eukaryotic cilia and flagella.

b. cell tumors neoplasms arising from multipotential cells within the stratum germinativum and stratum basale of the skin and hair follicles. They are common in dogs and cats, are locally expansive and do not metastasize.

b. energy requirements (BER) see **energy** requirements.

b. ganglia a collection of masses of gray matter at the base of the cerebral hemispheres, subthalamus and midbrain which are responsible for much of the organization of the activity of somatic muscles. The individual nuclei are the caudate nucleus, putamen, globus pallidus, endopeduncular nucleus, subthalamic nucleus and the substantia nigra. Other nuclei which have a similar function but are usually not included in the group are the amygdaloid nuclei and the red nucleus.

b. layer see **stratum** basale.

b. membrane the deepest layer of the epidermis in the avian skin locataed at the dermoepidermal junction.

b. metabolic rate see **metabolic** rate.

b. metabolism the minimal energy expended for the maintenance of respiration, circulation, peristalsis, muscle tonus, body temperature, glandular activity and the other vegetative functions of the body. See also **metabolic** rate.

b. metabolism test a method of measuring the body's expenditure of energy by recording its rate of oxygen intake and consumption. Once a major test of **thyroid** gland function, it is being replaced by diagnostic tests requiring less extensive preparation and capable of producing more accurate test results, e.g. the determination of the concentrations of thyroid hormones in the blood and the **radioiodine** uptake test.

b. nuclei see basal **ganglion**.

b. plate the ventral plate of the developing neural tube of the embryo; the origin of the ventral gray columns of the spinal cord and motor areas of the brain. Called also lamina basilis.

b. tone degree of contractile tension remaining in blood vessels after complete elimination of all external excitatory influences.

B-11: Basal cell tumor. From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

base [*bās*] 1. the lowest part or foundation of anything. See also **basis**. 2. the main ingredient of a compound. 3. a molecule or ion with a tendency to take up a proton according to Bronsted and Lowry theory; a substance that combines with acids to form salts. In the chemical processes of the body, bases are essential to the maintenance of a normal **acid–base balance**. Excessive concentration of bases in the body fluids leads to **alkalosis**. See also **basal**. 4. the primary entity against which all other entities are compared. 5. the non-sugar components of nucleotides in DNA and RNA.

acid–b. pairs the two molecules forming the matching acid and conjugate base.

b. composition refers to the relative components of a nucleic acid.

conjugate b. the anion or uncharged molecule of an acid once it has given up its proton, e.g. Cl^- is the conjugate base of the acid, HCl.

b. deficit see base excess (below).

b. excess the amount of acid or base required to titrate a sample of whole arterial blood to the normal pH of 7.4. The base excess is determined mathematically by calculations that include measurement of the blood Pco_2 and pH and take into account the hemoglobin concentration. It is negative (base deficit) in acidosis and positive in alkalosis.

heart b. the wide dorsal part of the heart carrying the atria and the large blood vessels and the attachment to the pericardial sac.

horn b. the widest part of the horn, at its attachment to the skin. In the adult horned animal the horn is hollow at this point, encloses the horn process of the frontal bone and merges with the skin. Where the horn meets the skin, it is covered with a thin layer of soft horn similar to the periople of the hoof, called the epiceras.

b. narrow a mandible which is narrow relative to the maxilla seen in dogs and cats; often causes the lower canine teeth to strike the hard palate, injuring palatal mucosa and potentially formation of an oronasal fistula. See also **anisognathism**.

nitrogenous b. an aromatic, nitrogen-containing molecule that serves as a proton acceptor, e.g. purine or pyrimidine.

omasal b. the part of the omasum that faces cranially and to the left where it is attached to the reticulum and the abomasum at the reticulo-omasal and omasoabomasal orifices.

b. pair two hydrogen bonded nucleotides in a DNA or RNA molecule.

purine b's a group of compounds of which purine is the base, including uric acid, adenine, guanine, xanthine and theobromine.

pyrimidine b's a group of chemical compounds of which pyrimidine is the base, including uracil, thymine and cytosine, which are common constituents of nucleic acids.

stapedal b. the footplate of the stapes in the middle ear from which the two legs (*crus rostrale* and *crus caudale*) originate. The stapes lies horizontally with the base facing medially and attached to the vestibular window by the annular ligament.

b. wide a dental malocclusion in dogs and cats in which the tips of the mandibular canines are displaced buccally or laterally.

baseline [*bās'līn*] a known value or quantity used to measure or assess an unknown, as a baseline urine sample.

b. data a set of data collected at the beginning of a study or before intervention has occurred.

basement membrane the delicate extracellular supporting layer of mucopolysaccharides and proteins underlying all epithelia.

b. m. dystrophy see refractory **ulcer**.

b. m. zone the zone of epithelium abutting against the dermoepithelial junction, which stains with periodic acid–Schiff. It consists of the basal cell plasma membrane, the lamina lucida, the basal lamina and the sub-basal lamina fibrous components.

Basenji a small (20–25 lb) chestnut red, black or brindle, with white feet, chest and tail tip, shorthaired dog, with prick ears, a furrowed, wrinkled forehead and a tail that coils over its back. Although known as the 'barkless' dog, it does have a characteristic vocal sound. The breed originated in North Africa as a hunting dog. Called also Congo dog. Some inherited and congenital disorders that occur in the breed are familial nonspherocytic **anemia**, **cystinuria**, **Fanconi's syndrome**, giant hypertrophic **gastritis** and persistent **pupillary** membrane.

basic [*ba'sik*] 1. pertaining to or having properties of a base. 2. capable of neutralizing acids.

B-12: Basenji.

VetBooks.ir

b. multicell unit the packet of cells involved in remodeling of bone at a remodeling site.

Basic and Clinical Sciences Examination (BCSE) developed by the American Veterinary Medical Association (AVMA) Educational Commission for Foreign Veterinary Graduates (ECFVG) as the third of four steps in assessing educational equivalency for purposes of ECFVG certification.

basicity [*bə-sis'ĭ-te*] 1. the quality of being a base, or basic. 2. the combining power of an acid.

basidiobolomycosis [*bə-sid"e-ob"ə-lo-mi-ko'sis*] infection by fungi in the genus *Basidiobolus*.

Basidiobolus [*bə-sid"e-ob'ə-ləs*] a genus of fungi of the group Phycomycetes. All pathogenic species are now regarded as belonging to the one species, *B. ranarum*. Previously these were classified as *B. haptosporus*, *B. heterosporus* and *B. ranarum*.

B. haptosporus, B. ranarum see **swamp cancer**.

basidiomycetes [*bə-sid"e-o-mi-se'tēz*] fungi within the phylum *Basidiomycota*.

basidiospore [*bə-sid'e-o-spor*] the sexual spore of basidiomycetes.

basidium [*bə-sid'e-əm*] pl. *basidia* [L.] the club-like fungal organ bearing basidiospores.

basihyoid [*ba"sĭ-hi'oid*] the body of the hyoid bone.

basil finished dressed leather made from sheepskin.

basilad [*bas'ĭ-ləd*] toward the base.

basilar [*bas'ĭ-lər*] pertaining to a base or basal part.

b. artery one of the three main blood supplies to the brain. It originates from the union of the two vertebral arteries, runs in a median groove, beneath the medulla and pons, and terminates rostrally at the cerebral circle (of Willis). See Table 9.

b. fracture at the base of the skull, usually involving the occipital and **basisphenoid** bones.

b. impression see **platybasia**.

basilateral [*ba"sĭ-lat'ər-əl*] both basilar and lateral.

basilemma [*ba"sĭ-lem'ə*] basement membrane.

basiloma a **basal** cell neoplasm.

basioccipital bone [*ba"se-ok-sip'ĭ-təl*] see Table 10.

basion [*ba'se-on*] the midpoint of the ventral border of the foramen magnum.

basipetal [*bə-sip'ə-təl*] descending toward the base; developing in the direction of the base, as a spore.

basipodium carpus or tarsus; equivalent of wrist or ankle in the human limbs.

basis [*ba'sis*] the lower, basic or fundamental part of an object, organ or substance, or the part opposite to or distinguished from the apex. See also **base**.

basisphenoid [*ba"sĭ-sfe'noid*] one of the bones of the floor of the skull which, with the presphenoid, constitutes the sphenoid bone.

b. fracture occurs in horses that rear over backwards. Characterized by unilateral facial paralysis, circling gait. Called also occipital fracture.

baso- prefix meaning blue or basic.

basocytophilia [*ba"so-si-to-fil'e-ə*] basophilia.

basophil [*ba'so-fil*] 1. any structure, cell or histological element staining readily with basic dyes. 2. a granular leukocyte with an irregularly shaped, relatively pale-staining nucleus that is partially constricted into two lobes, and with cytoplasm containing coarse bluish-black granules of variable size. Very low numbers are seen in white blood cell counts, except in rabbits where they are more common. 3. a beta cell of the adenohypophysis which produces luteinizing and follicle stimulating hormones. 4. **basophilic**.

b. degranulation test (2) an in vitro cellular test for immediate hypersensitivity; it detects degranulation of basophils, by their loss of affinity for staining, when blood from a hypersensitive dog is incubated with allergen extracts.

basophilia [*ba"so-fil'e-ə*] 1. the reaction of relatively immature erythrocytes to basic dyes whereby the stained cells appear blue, gray or grayish-blue, or bluish granules appear. 2. abnormal increase of basophilic leukocytes in the blood. 3. basophilic leukocytosis.

basophilic [*ba-so-fil'ik*] staining readily with basic dyes.

b. bone matrix vitamin D poisoning causes the appearance of intensely basophilic bone matrix of a distinctive pattern.

b. cell see **basophil**.

b. enterocolitis one of the several types of enterocolitis causing chronic diarrhea in horses characterized by fibrinous and ulcerative typhlocolitis and basophilic infiltrates in the regional mucosa and submucosa.

b. leukemia see **leukemia**.

b. stippling distinct or diffuse, fine to coarse, dark granular pattern in erythrocytes, representing aggregated ribosomes and caused by ineffective heme formation. Associated with the accelerated erythropoiesis of regenerative anemia, especially in cattle, but also dogs and cats. In the absence of anemias, seen in lead poisoning, mainly in dogs.

basophilism [*ba-sof'ĭ-liz-əm*] abnormal increase of basophilic cells.

basoplasm [*ba'so-plaz"əm*] cytoplasm that stains with basic dyes.

bass [*bas*] common name given to many different species of fish in the order Perciformes.

largemouth b. *Micropterus salmoides*.

smallmouth b. *Micropterus dolomieu*.

striped b. *Morone saxatilis*.

white b. *Morone chrysops*.

Basset Bleu de Gascogne a dog similar in appearance to the Basset hound, with a long body, very short legs and a long head with very large and long ears. The short coat is predominantly white with ticking and brown spots. Called also Blue Gascony basset.

Basset Fauve de Bretagne a rough-coated hunting dog, similar to the **Basset hound**, but with a shorter body. Called also Brittany bassett.

Basset hound a medium-sized, shorthaired dog with a heavy body, very short, bowed legs, and long ears. The head is large with loose skin and large, pendulous lips. One of the achondroplastic breeds. It is subject to an hereditary **thrombopathia** and primary glaucoma.

Bassia a plant genus in the Chenopodiaceae family; can cause oxalate poisoning. Includes *B. anisacanthoides*, *B. calcarata*, *B. hyssopifolia* (red burr), *B. quinquecuspis*. Called also *Sclerolaena* spp.

basso macello an Italian system of treating meat which is unsuitable for unconditional release for sale for human consumption. The meat is treated by boiling or by other means of decontamination.

bastard atypical, or unusual form of, a disease or plant.

b. lentil ***Vicia ervilia***.

b. strangles see **strangles**.

b. wing see **alula**.

bat [*bat*] mammals with forelimbs adapted for true flying; in the order Chiroptera with two suborders: Megachiroptera (fruit bats, flying foxes) and the more numerous Microchiroptera, which are usually insectivorous and have poor vision, relying on echolocation.

Australian b. lyssavirus disease a disease identified in 1996 in Australian fruit-eating flying foxes (*Pteropus* spp.) in which it is presumed endemic and in which it may cause encephalitis; the virus, of the genus *Lyssavirus* in the family *Rhabdoviridae*, has also caused fatal rabies-like illness in a few persons working closely with infected bats.

fruit b. tropical and sub-tropical bats in the genus *Pteropus*, family Pteropodidae (Old World fruit bats). They feed on fruit and flowers and are commonly persecuted because of the damage caused. Incriminated in the transmission of **Hendra,** Manangle and Nipah viruses.

b. rabies caused by rabies-like viruses which are antigenically similar to the classical rabies rhabdovirus. Bats also are common carriers of rabies virus transmitting it to other species and between themselves both by bite and by aerosol inhalation probably of urine and birthing fluids. See also **Lagos** and **Mokola** viruses.

vampire b. in the subfamily Desmodontinae, they feed on blood from vertebrates; incriminated in the transmission of rabies and related bat viruses.

bath [*bath*] 1. a medium, e.g. water, vapor, sand or mud, with which the body is washed or in which the body is wholly or partially immersed for therapeutic or cleansing purposes; application of such a medium to the body. 2. the equipment or apparatus in which a body or object may be immersed.

contrast b. alternate immersion of a part in hot water and cold water.

emollient b. a bath in a soothing and softening liquid, used in various skin disorders.

b. oil a dispersible surfactant oil used in the treatment of dry skin disease, particularly seborrhea sicca.

whirlpool b. one in which the water is kept in constant motion by mechanical means. It has a gentle massaging action that promotes relaxation and is used in the treatment of skin diseases.

bath medication [*bath med"ĭ-ka'shən*] most often used as a means of treating bacterial, fungal or parasitic infections of the skin or gills. The treatment may be just a dip in water containing the chemical, or for a longer periods of an hour or more, or indefinite when the chemical is left in the water, permanently. Used also for hormone administration under research conditions. Agents are also used in bath water or a dip to anesthetise fish.

Bathmostomum a genus of the family Ancylostomatidae blood-sucking nematodes. Includes *B. sangeri* (Indian elephant, cecum).

bathmotropy any influence on excitability or irritability (i.e. the stimulation threshold) of heart muscle.

bathy- word element. [Gr.] *deep*.

bathyanesthesia [*bath"e-an"es-the'zhə*] loss of deep sensibility.

bathypnea [*bath"ip-ne'ə*] deep breathing.

Batrachochytrium dendrobatidis causes **chytridiomycosis**, a disease of keratinized skin in amphibians.

Batten disease [*bat'ən*] ceroid lipofuscinosis.

battery housing the housing of animals or birds in confined spaces, either singly or in twos or threes, with the compartments packed very closely together and often stacked a number of layers deep. Has economic advantages in the provision of automatic feeding, watering, egg-collecting and dung-removal services. The same system has been used for dairy cattle with the cows in mobile cubicles which travel past a milking point at the appointed times. The system is a point of contention between farmers and animal liberationists.

battlement blood smears a method of counting blood cells in which the edge of the smear, where the counting is done, is traversed in a track similar to the silhouette of a castle battlement. It is thought to avoid a biased count due to the greater adhesiveness of some leukocytes and their preponderance at the very edge of the smear.

Bavarian mountain hound a medium sized (45–55 lb), muscular German scent hound from with a short, thick red, fawn or brindle coat with a black mask.

bay [*ba*] 1. a tan or red-brown coat color of horses. Light bay is light tan; mealy bay is a redder but lighter, rust color; blood bay is a much deeper, redder color; golden bay has a tinge of yellow in a deep red-brown color. 2. prolonged bark or howl of a hunting hound.

Bayer gag used in the examination of a cow's mouth. A metal block with opposite faces shaped as grooves into which molar teeth slide, on a long steel rod. The block is pushed up between the molar teeth on the opposite side. The retaining rod has a loop and is tied to the headstall to prevent the block from moving. The Swale and Young gags are similar. See also mouth **wedge**.

Bayes theorem [*bāz*] a statistical means of including local general information, intuitive judgment, clinical skill as learned over a long period, and similar subjective influences, in the assessment of probability, e.g. in making a diagnosis. The formula relates, for example, the **conditional probability** P(D/S), of a disease (D) being present when a particular sign (S) is observed, to three other probabilities: the prevalence of the disease P(D), the frequency of the sign P(S), and the probability of the sign occurring for the disease P(SD).

$$\Pr(D|S) = \frac{\Pr(S|D) \times \Pr(D)}{\Pr(S)}$$

baylisascariasis [*ba"lis-as'kə-ris*] visceral larva migrans, often severe in humans, caused by *Baylisascaris procyonis*, the roundworm of raccoons, badgers and less often dogs.

Baylisascaris a genus in the family Ascarididae of nematodes, the larval stages of which cause cerebrospinal nematodiasis. Adult stages of *B. columnaris* in mustelids, *B. transfuga* in captive and zoo bears, and *B. procyonis* in raccoons. See also **baylisascariasis**.

Bayliss mechanism the myogenic response to stretch in blood vessels.

BBB blood–brain barrier.

BBSRC Biotechnology and Biological Sciences Research Council (UK).

BCAA:AAA ratio of branched chain amino acids to aromatic amino acids; used in the assessment of abnormalities in nitrogen metabolism, particularly those associated with hepatic insufficiency, hepatic encephalopathy and chronic renal failure. Low concentrations of branched chain amino acids are found and supplementation to restore a normal ratio has been used in treatment.

BCG bacille Calmette–Guérin, an avirulent strain of *Mycobacterium bovis*.

BCG test is sometimes used in the diagnosis of tuberculosis in dogs as being more reliable and sensitive than tuberculin testing.

BCG vaccination has been used in the control of tuberculosis in cattle but has many disadvantages, especially interference with tuberculin testing, and is not recommended for use unless the prevalence of the disease is very high.

BCG vaccine contains living BCG organisms. It was developed for use in the control of tuberculosis in humans. Used as a non-specific stimulant of antibody production in chronic diseases, e.g. equine sarcoid and neoplasia in dogs.

BCM blood cross match

BCNU carmustine.

BCS body condition score.

BCSE Basic and Clinical Sciences Examination.

b.d. [L.] *bis die* (twice a day). Called also b.i.d.

Bdellonyssus see ***Ornithonyssus***.

BDV border disease virus.

Be chemical symbol, *beryllium*.

be-still tree *Cascabela thevetia* (*Thevetia peruviana*).

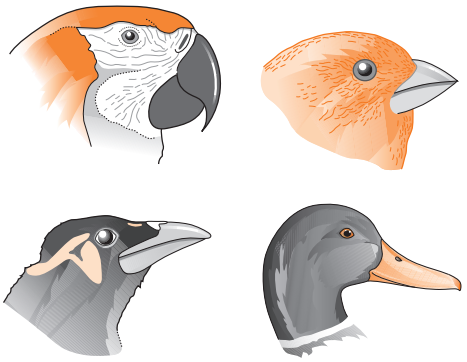
Beagle a small to medium sized, shorthaired scent hound, bred originally for hunting but much used now as a genetically stable experimental animal. The general appearance is of a Foxhound in miniature, but two varieties are recognized, the smaller being up to 13 inches in height and the larger from 13–15 inches in height, which is slightly shorter than the UK breed standard. Some congenital and inherited disorders seen in the breed are epilepsy, factor VII deficiency, hemophilia A, lymphocytic thyroiditis, and a number of ophthalmic abnormalities.

B. pain syndrome see steroid-responsive **meningitis**-arteritis.

Chinese B. syndrome a multi-systemic disease of connective tissue, inherited as a recessive trait with variable severity of

B-13: Beagle.

VetBooks.ir



B-14: Different shape of beak between species. From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.

VetBooks.ir

clinical signs. From an early age, affected Beagles develop stiffness in their legs, eventually walking on their central toes. The skull is broad and the eyes are slanted. A DNA test is available for detection of the mutant gene. Called also Musladin-Lueke syndrome.

beak [bēk] the hard keratinized sleeve of tissue that provides the horny covering of the beak bones of birds. The dorsal ridge of the upper beak is the culmen, the similar keel of the lower beak is the gonys. The cutting edges of the beak are the tomia. Called also bill.

b. avulsion avulsion of the distal third may allow regrowth, but traumatic separation of the upper and lower beak at the base requires hand feeding for survival of the bird. Some attempts at devising an artificial beak have been made, but attachment is a major problem.

b. fracture occurs with trauma and requires immobilization, often with innovative procedures (see **acrylic glue**), without restricting food intake by the bird during recovery. Severe trauma may result in avulsion of upper or lower beak.

b. necrosis a condition of chickens and turkeys caused by excessively fine mashed feeds.

b. overgrowth can result from malocclusion, liver disease, lack of wear, aging, nutritional deficiency, and most commonly infestation by the mite, *Cnemidocoptes pilae*.

psittacine b. and feather disease see **psittacine** beak and feather disease.

scissors b. lateral deviation of the maxilla; seen in caged birds caused by repetitive bar chewing.

b. sign the radiographic feature of contrast material extending through an elongated, concentrically narrowed pylorus indicative of hypertrophy of the sphincter.

b. trimming in most modern poultry houses the chances of cannibalism developing are so high that beak trimming is almost a necessity, especially if the birds are to be reared in full light. Light-restricted accommodation greatly reduces the prevalence of this vice. A temporary trim is done at a few days of age but a permanent trim is necessary later. Special instruments, utilizing a hot, cutting blade cautery, are used and the operation must be done by an expert or badly deformed beaks result and the birds are unable to feed properly. Alternatives to trimming include the fitting of spectacles or pick guards but these are expensive, time-consuming to put on and not feasible for birds in cages.

beaker a round laboratory vessel of various materials, usually with parallel sides and often with a pouring spout.

beam [bēm] a unidirectional emission of electromagnetic radiation. See also **X-ray**.

external b. therapy radiotherapy in which the source is at a distance from the patient, e.g. orthovoltage, cesium-137, cobalt-60 or linear accelerator.

horizontal b. positioning of a subject so that the X-ray beam needs to be directed horizontally. Used because of difficulty in positioning the animal for a dorsoventral shot, or because of interest in the position of fluid or gas.

b. limitation restriction of the divergent beam as it appears from the tube window by a lead plate or cone or a light beam diaphragm located at the window.

primary b. the radiation beam as it passes through the window of the X-ray tube and before it is modified by extra-tube devices.

bean[1] [bēn] 1. a raised, hard bean shaped protruberance on the tip of the upper mandible of waterfowl. 2. see **egg** tooth.

bean[2] the seed or seed pod (legume) of many plants in the family Fabaceae; most are in the genus ***Phaseolus***, but included in the common names of many others.

black b. ***Castanospermum australe***.

butter b., Java b., lima b., navy b. *Phaseolus lunatus*.

castor b. ***Ricinus communis***.

curcas b. ***Jatropha*** *curcas*.

green b., string b., snap b., French b. (UK) *Phaseolus vulgaris*.

jack b. ***Canavalia*** *ensiformis*.

jequirity b., love b., lucky b., Paternoster b., precatory b. ***Abrus*** *precatorius*.

kiawe b., kiowa b. ***Prosopis***.

kidney b. *Phaseolus vulgaris*.

mescal b. ***Sophora secundiflora***.

poison b. ***Sesbania*** spp., ***Thermopsis***.

senna b. ***Senna occidentalis***.

yellow b. ***Thermopsis***.

bear [bār] large, robust mammals in the family Ursidae, which includes the giant **panda**, sun bear, sloth bear, and black, brown and polar bears (*Ursus* spp.). Species of less legitimate lineage include Pooh, Paddington and Brideshead bears (see **Brunus edwardii**).

black b. (*Ursus americanus* with numerous subspecies) black to various shades of beige; native to most of North America. A large bear, but smaller than the brown bears. They are subject to illegal poaching for body parts, used for reputed medicinal properties. Called also American black bear.

brown b. (*Ursus arctos*) large, powerful bears, widely distributed through North America and Eurasia; they have a shaggy coat in varying shades of brown and are characterized by a large hump over the shoulders. There are numerous subspecies, including the Kodiak bear of Alaska (*U. a. middendorffi*), grizzly bear (*U. a. horribilis*) and the extinct, but still symbolic, California golden bear (*U. a. californicus*).

polar b. (*Ursus maritimus*) a large, powerful white to yellow Actic bear. A threatened species due to global warming.

sloth b. (*Melursus ursinus*) native to South Asia, its diet includes ants and termites, and is attracted to beehives. A very aggressive animal that is responsible for many human injuries and deaths in its native habitat. Although it is banned, they are captured and trained to perform as 'dancing' bears.

sun b. (*Helarctos malayanus*) a member of the bear family Ursidae, it is native to China and Southeast Asia. Their bile has a following in Chinese traditional medicine and methods used to extract this from live, captive bears has attracted the attention of animal welfare organizations around the world. Called also honey bear.

bear foot ***Helleborus*** *viridis*.

bear grass see ***Nolina***.

bearcat see **binturong**.

beard [bērd] 1. in goats and dogs, beards are conventional collections of chin hairs; seen only in certain dog breeds such as Afghan hounds and Bearded collies. 2. in turkeys, beards are an agglomeration of modified feathers, or hair/feathers, consisting of individual filaments that arise from individual beard papillae. Called also barba.

beard tongue see ***Penstemon***.

Bearded collie a medium-sized, gray, fawn, blue, brown or black dog with harsh, strong medium to long hair, particularly around the face and under the chin, giving the name. The body is longer than it is high, in a ratio of 5:4. Called also the Highland collie, the Mountain collie, Hairy Mou'ed collie or simply Beardie.

bearded dragon an Australian, desert-dwelling lizard (*Pogona* spp.) whose neck collar of scales bristles when it opens its mouth. Popular for private collections and as pets.

bearing [bār'ing] 1. the female genital tract. 2. a piece of harness.

lose the b. uterine **prolapse**.

b. retainer device for retaining a replaced uterine or vaginal **prolapse**.

b. trouble see vaginal **prolapse**.

beat [bēt] a throb or pulsation, as of the heart or of an artery.

B-15: Bearded collie.

apex b. the palpable shock caused by the apex of the heart beating against the chest wall with each systole and felt over the apex of the heart, normally in the fifth left intercostal space. May be replaced by a thrill.
capture b's occasional ventricular responses to a sinus impulse that reaches the atrioventricular node in a nonrefractory phase.
ectopic b. a heartbeat originating at some point other than the sinus node.
escaped b's heartbeats that follow an abnormally long pause.
forced b. an extrasystole produced by artificial stimulation of the heart.
fusion b. in electrocardiography, the complex resulting when an ectopic ventricular beat coincides with normal conduction to the ventricle.
premature b. an extrasystole.

Beauceron a medium-large French sheepdog, related to the Briard; recently recognized as a breed in the USA. It has a short coat of black with tan markings, or a gray, black and tan harlequin pattern. The ears are usually cropped. Double dewclaws are required on the rear legs. Called also Berger de Beauce, French shorthaired shepherd, Bas rouge.

beaver (*Castor* spp.) a large aquatic rodent with webbed feet, a broad flat tail and large, powerful incisors. It lives in lodges with underwater entrances, constructed of timber and mud in ponds it creates by damming streams with logs and branches. It was once hunted for its prized fur. Includes the North American beaver (*C. canadensis*) and the Eurasian beaver (*C. fiber*).
b. fever giardiasis.
swamp b. see **nutria**.

Beaver scalpel scalpel handle and detachable blades in various shapes designed for use in ophthalmic surgery.

bechic pertaining to cough.

Bechtol screw a bone screw with a buttress thread used in compression plating of bones. See also **screw**.

Becker's suture a multilayer pattern for closure of the linear alba in horses.

Beck's triad [*bek*] rising venous pressure, falling arterial pressure, and small quiet heart; characteristic of cardiac compression.

beclomethasone [*bek"lo-meth'ə-sōn*] a synthetic glucocorticoid, used topically and as an inhalant.

becquerel (Bq) [*bek"ə-rel'*] the SI unit of radioactivity, defined as the quantity of a radionuclide that undergoes one decay per second (s^{-1}). One becquerel equals 3.7 10^{-11} Ci. Supersedes the **curie**.

B-16: Palpation of the apex beat.
From Hinchcliff KW, Kaneps AJ, Geor RJ, Equine Sports Medicine and Surgery. Saunders, 2004.

bed [*bed*] 1. a supporting structure or tissue. 2. lay term for uterus - calving bed.
b. bugs see ***Cimex lectularius***.
capillary b. the capillary network of a tissue, area or organ considered collectively, and their volume capacity.
nail b. the area of modified epidermis beneath the claw or nail.

bedding [*bed'ing*] materials used to provide comfort, conservation of body heat, protection of bony prominences and ease of cleaning. The materials vary widely, each having advantages. The need is for cost-effectiveness, softness with durability, freedom from dust or poisonous components, and springiness and avoidance of compaction. Things to avoid are palatability, e.g. salty sand, good oatstraw containing a lot of grain, shavings and sawdust from timber treated with wood preservatives or irritant resins, e.g. black walnut shavings. Some of the materials used are cereal straws, ferns or bracken harvested for the purpose, peat moss, sawdust and shavings, shredded paper, especially newsprint, sand, mats made from reconstituted rubber and indoor–outdoor carpet. The latter is a practicable solution for animals that have difficulty rising either because of infirmity or because of slipperiness of the flooring. Dairy cattle spend 40–65% of their time lying down and the quality and management of bedding and housing for dairy cattle has a major influence on udder health.
b. deprivation stress factor in farm animals housed in winter, also late pregnant companion animals.
b. down for a horse means removal of any manure from the stall, teasing out and topping up the bedding with fresh straw where necessary, and filling the water pail and the hay rack.
eating b. results from boredom, perversion of appetite or hunger. The latter is important in horses immediately after a general anesthetic for which they have been prestarved. The animals are only part-conscious but are hungry. They may eat a lot of indigestible roughage and develop colic due to impaction of the colon. Eating of salty sand may cause sand colic.

Bedlington terrier a small, soft-coated terrier, distinguished by its Roman nose and roached back which are accentuated by trimming and grooming for purposes of showing. Originally used for hunting small game, dog fighting and racing. The breed is subject to inherited retinal dysplasia and copper-associated hepatopathy. Called also Rothbury's terrier.
B. t. copper-associated hepatopathy an inherited copper storage disease in which Bedlington terriers homozygous for the trait accumulate copper in their liver and suffer a slowly progressive hepatopathy. Clinical signs referable to liver disease develop in young to older adult dogs. The disease is incurable, but may be managed with D-penicillamine or other decoppering agents. DNA tests exist for diagnosis and detection of carrier animals. Called also Bedlington terrier liver disease.

Bedsonia an obsolete name for ***Chlamydia*** and *Chlamydophila* spp.

bedsore [*bed'sor*] see **decubital ulcer**.

bee sting [*be*] injury caused by the venom of a honey bee (*Apis mellifera*). Multiple stings cause local swelling, pain and excitement, and may cause dyspnea if the head and neck areas are affected. A systemic effect, including diarrhea, hemoglobinuria, jaundice, tachycardia and prostration, may be observed in horses. NOTE: a singular **sting** in a horse has quite a different meaning.

beech trees in the genus ***Fagus***.
European b. *Fagus sylvaticus*.
Indian b. ***Pongamia glabra***.

B-17: Bedlington terrier.

VetBooks.ir

B-18: Jaundice in a Bedlington terrier with copper-associated hepatopathy.

VetBooks.ir

beechmast poisoning see ***Fagus***.

beef [bēf] 1. the meat of cattle other than the young calf. It may be bullock, yearling, bull, cow beef or beef treated in various ways including corned, biltong, jerked or its origin may be specified, e.g. grass-fed, lot-fed. See also **meat**. 2. pertaining to cattle used for the production of beef.

baby b. slaughter cattle weighing 700–1000 lb at 9–15 months of age and grading good or better for quality.

black b. see dark cutting beef (below). Called also DFB.

block b. beef suitable for sale as blocks for conversion at the retail site into consumer cuts.

boning b. beef suited for manufacturing and processing.

boxed b. the alternative to carcass meat. Major cuts, often deboned, are packed in sealed plastic bags and packed in strong cardboard boxes.

branded b. a label informing the consumer that a retail beef cut is a certain breed and USDA Grade and that it has been raised and fed in a certain manner that will provide some consistency in taste, flavor, marbling and quality. Branded beef programs required cooperation between cow-calf producers, cattle feeders, meat packers and retailers and are becoming a significant component of the retail outlets for beef, fueled by consumer demand. The Certified Angus Beef label in grocery stores and restaurants is an example. In addition to breed-specific branding programs there is company-specific and store branding.

b. breeds include **Aberdeen Angus**, **Africander**, **Beevbilde**, **Belgian** blue, **Belted Galloway**, **Blonde D'Aquitaine**, **Bonsmara**, **Boran**, **Braford**, **Brahman**, **Brangus**, **Braunvieh**, **Charbray**, **Charolais**, **Chiana**, **Chiangus**, **Devon**, **Drakensberger**, **Droughtmaster**, **Fulani**, **Galloway**, **Gelbvieh**, **Hariana**, **Hereford**, **Japanese black**, **Limousin**, **Maine-Anjou**, **Meuse-Rhine-Yssel**, **Murray Grey**, **N'Dama**, **Pinzgau**, **Romagna**, **Santa Gertrudis**, **Salers**, **Shorthorn**, **Simmental**, **South Devon**, **Texas longhorn**, **Waygu**, **West Highland** and many other less well known indigenous breeds.

certified b. certified, sometimes by an independent third party, as to method of rearing (for example organic beef), source (usually breed, for example Certified Angus, Certified Hereford, but also country of origin), or preparation method (such as Halal beef or Kosher beef).

dark cutting b. the meat is much darker than normal on its cut surface; caused by preslaughter stress. Called also dark, firm dry muscle, DFD.

b. grading grading of carcass beef according to quality for the information of the consumer and to provide the trade with a basis for pricing. The grade allotted depends on local requirements for consumers but usually takes into account marbling with fat, absence of excess fat, age and cutability.

grass fed b. raised on forage and not on grain in a feedlot; grass and forage shall be the feed consumed for the lifetime of the ruminant animal, with the exception of milk consumed prior to weaning.

ground b. prepared from cull cows, reject bulls and less expensive cuts; can contain up to 30% fat. Called also manufacturing beef.

Halal b. beef processed in accordance with Muslim dietary law; see also **Muslim slaughter**.

heated b. deterioration in quality of sides of meat or game which are hung too close together so that they do not cool down quickly after slaughter. Called also sour side, green struck.

b. herd non-American term for a herd of beef cattle that comprises the bulls, the mature cows, the heifers yet to calve for the first time, the yearlings including bred heifers and calves not yet weaned. Where calves are not sold off for fattening elsewhere there will also be a bullock group. See also **cow**-calf operation.

b. industry includes the beef production, breeding, fattening, marketing, slaughtering and processing and sale of the end product.

Kobe b. a Japanese gourmet beef that comes from the Wagyu breed. During the fattening period, animals are hand-fed, using high-energy feed, including beer and beer mash, and hand-massaged for tenderness and high fat content.

kosher b. processed in accordance with Jewish dietary laws.

licked b. diffuse, often hemorrhagic, jelly-like edema along the back of a beef carcass, caused by warble fly larvae.

manufacturing b. see hamburger beef (above).

b. measles see ***Taenia saginata***.

b. primal cuts the larger sections of a carcass (for example chuck, sirloin) from which retail cuts are made. The sectioning and naming vary between countries and with animal species.

b. production systems include extensive grazing, intensive grazing, feedlot, cow–calf operations or suckler herds, breeding herds.

b. production targets see performance **target**.

Beef Shorthorn the beef variety of the **Shorthorn** breed of cattle.

beefy, beefyness 1. in dog conformation, used to describe overdevelopment of musculature, especially in the hindquarters. 2. in cattle, used to designate the desirable physical conformation of a beef animal, but an undesirable character in dairy cattle.

beefalo a cattle–buffalo hybrid of 37% buffalo, 37% Charolais and 25% Hereford which has achieved only passing fame.

beefling a fat young cattle beast weighing about 500 kg at 1.5–2 years of age.

beeper a mobile or static device which emits an auditory warning signal, usually one stimulated by a telemetered signal.

beesbossie [Af.] see ***Chrysocoma ciliata***.

beeskaroo [Af.] see ***Chrysocoma ciliata***.

beesmelkbos [Af.] ***Euphorbia mauritanica***.

beestings, biestings, beastings colostrum, usually of a cow.

beet [bēt] see ***Beta vulgaris***.

b. pulp the residue of the roots when the juice is extracted. Highly regarded as a feed supplement for extra energy in high producing cows. Called also beets.

b. tops the foliage of the beet plant, used as green feed but has a high oxalate content.

beetles [be'təlz] members of the insect order Coleoptera. They are common intermediate hosts for tapeworms and nematodes.

darkling b. this and other mealworms are common inhabitants of poultry houses and are suspected of aiding in the transmission of Marek's disease and other virus diseases and of attacking the skin of all types of birds. Their other importance is as a food source for captive reptiles and the like.

beetroot see ***Beta vulgaris***.

Beevbilde an African crossbred type of beef cattle. Includes Red Lincoln, Shorthorn and Aberdeen Angus blood.

beggar tick see ***Bidens frondosa***.

behavior [be-hāv'yər] the activity or pattern of activity of the patient; can be modified by training and medication; used clinically as a measure of cerebral activity.

abnormal b. includes any activity judged to be outside the normal behavior pattern for animals of that particular class and age, including the vices, the fixed patterns of abnormality.

adjunctive b. evoked by, and reliably accompanies, some other response produced by a stimulus.

aggressive b. is common in animals as part of the establishment of territorial rights by males, as competition for sexual favors, because of fear of the unknown, and as maternal protection of

young. In companion animals, aggression and dominance directed against humans can also be learned. See also **aggression**.
allelomimetic b. group activity behavior; those behavioral traits used to interact with others, particularly developed during the early socialization period. Behavior which influences another to do the same. Particularly manifest by dogs, examples of which are neighborhood barking and running after children.
animal b. any movement made by an animal, as a result of neurological reflexes, inherited traits, conditioned responses, physiological influences such as hormone concentrations, and psychological state. It is also influenced by the physical status of the animal.
appeasement b. is not hostile and controlling; exhibited when the conditions of social relations lead one animal to anticipate aggression from others. Called also submissive behavior or deference behavior.
auditory b. the use of the voice to communicate is poorly developed in domestic animals but is used for example in the various voices used by cattle including mooing, lowing, bellowing. Is used most extensively by animals in communicating between mother and young and in courtship.
automatistic b. see stereotypic behavior (below).
b. change program where antecedents and consequences are manipulated in order to change the behavior.
communicative b. the behavioral patterns that result in communication between animals. Includes auditory, visual and chemical patterns.
consumptive b. includes inappropriate sucking and **wool** sucking, particularly in cats. May be the result of early weaning.
deference b. see appeasement behavior (above).
destructive b. involves digging or the destruction of items, such as furniture, doors, or toys, by chewing. Causes include separation anxiety, fear-induced aggression and play aggression.
discriminatory b. ability to distinguish between two stimuli.
elimination b. the ritual and method of passing urine and feces, particularly as seen in dogs and cats. This includes searching for the site, pre-elimination behavior of sniffing, scratching, etc., posture and post-elimination action such as scratching the ground or covering feces with dirt. Housetraining involves modification of this behavior.
epimeletic b. maternal behavior; that demonstrated by a dam caring for her young in the early stages.
et-epimeletic b. care-seeking behavior; young responding to the dam's care giving. In puppies, this includes tail-wagging, licking the dam's face, and following the dam closely.
hallucinatory b. behavior which suggests dementia. This may be inherent or acquired, e.g. shying at nonexistent objects in cows with nervous ketosis, biting at imaginary flies by dogs.
ingestive b. includes overeating, inadequate intake of food, predation, wool sucking, pica, coprophagia, garbage eating and food-related aggression.
instinctive b. performed without prior learning and is inherited, for example teat seeking and sucking by the newborn animal.
investigative b. important in the selection of dogs for narcotic detection; characterized by the desire to sniff and examine objects closely. Pigs investigate their surrounding by rooting, sniffing, biting and chewing on digestible and also indigestible items.
b. modification the use of learning techniques to alter behavior.
mounting b. the placement of the forequarters over the hindquarters of another animal, as occurs in mating. Seen particularly in pet dogs that mount other dogs, male or female, humans or sometimes objects. Usually considered unacceptable behavior by owners. May be a displacement activity, in response to conflict or excitement.
predatory b. the hunting of birds, mice and small reptiles by cats and the hunting and herding behavior of dogs, often facilitated in a pack. Wild predators kill mostly for prey, only one victim at a time. Urban dogs kill a lot of sheep in a flock, many more than they could eat.
sexual b. includes courtship and the mating act. Much of the behavior is visual including posture, feather fluffing, tail carriage; some of it is auditory, especially in cats, but chemical communication via **pheromones** is the clincher.
social b. behavior relative to others in the group. Includes establishment of the peck order, bulling by steers in feedlots, crowd pressure in the feeding of large groups of pigs, cannibalism in overcrowded communities, even self-immolation in lemming communities. The social stress that may follow abnormal group behavior may result in lowered production, reduction in disease resistance, or the expression of actual disease, e.g. esophagogastric ulcer of pigs.
species-specific b. characterisitic of a particular animal species. Called also species-typical behavior.
stereotypic b. constant and repetitive actions, such as vocalization, grooming, walking or weaving, which would otherwise be seen normally in the species. See also **obsessive–compulsive behavior**.
submissive b. see appeasement behavior (above).
thermoregulatory b. actions such as seeking cool places, lapping water, huddling are self-explanatory examples.
visual b. body language for animals. Posture, gait, other body movements all convey information about the animal.
behavioral pertaining to behavior.
b. disorders see **vice**.
b. seizure see psychomotor **seizure**.
b. therapy aims to modify patterns of behavior so that they are acceptable to the owner.
bejuco marrullero *Pentalinon luteum*.
bel [*bel*] a unit used to express the ratio of two powers, usually electric or acoustic powers; an increase of 1 bel in intensity approximately doubles loudness of most sounds. See also **decibel**.
belching [*belch'ing*] see **eructation**.
belemnoid 1. dart-shaped. 2. the styloid process.
belge in dogs, a black and reddish brown coat color. Described in Brussels Griffon dogs.
Belgian having some relationship to Belgium.
B. barge dog see **Schipperke**.
B. black pied cattle black, Belgian dairy cattle.
B. blue dual-purpose cattle; blue, white or blue roan. Bred by crossing Dutch Friesian with British Shorthorn. Calves are large and dystocia common.
B. canary one of the oldest breeds of canaries, popular in the Victorian era. Characterized by a straight, upright back, but lowered head and neck so the shoulders are the highest point.
B. cattle dog see **Bouvier des Flandres**.
B. fancy long, slim canaries with flat chests, long necks and tail feathers, with an unusual posture of the head drooping down and a semicircular silhouette. Called also Slims, Scottish Fancy.
B. hare not a hare at all, but a breed of rabbit. It has a long, fine body and a deep red, tan or chestnut agouti coat.
B. horse heavy draft horse, mostly red-roan or chestnut but may be bay, brown, dun or gray; 16.1–17 hands high. A basic breed for many draft breeds. Called also Brabant. Full name is Belgian Heavy Draft. Affected by congenital cataracts and aniridia, which are inherited as dominant traits.
B. Laekenois a variety of the Belgian shepherd dog (see below), recognized as a separate breed in some countries. It is distinguished by its short, wiry reddish-fawn coat with black shading.
B. Malinois a variety of the Belgian sheepdog (see below), recognized in the USA and many other countries as a separate breed. It is characterized by the short, red, fawn or gray coat with black mask and frosting on the muzzle.
B. red cattle red, dual-purpose cattle from Belgium.
B. red pied cattle red and white, dual-purpose Belgian cattle.
B. shepherd dog in Belgium, the United Kingdom and South Africa, this is a breed with four varieties, Groenendael, Laekenois, Tervuren and Malinois, differentiated by their coat type. In Australia and New Zealand, all four varieties are recognized as separate breeds. All are medium-sized with erect ears and are used as sheepdogs, guard dogs and for police work. The *Groenendael*, the most common variety, has a long, straight, smooth black coat. In the USA it is recognized as a separate breed and called the Belgian sheepdog (see below). See also Belgian Laekenois (above), Belgian Malinois (above) and Belgian Tervuren (below).
B. sheepdog a medium sized, alert dog with erect ears and a long, smooth black coat, sometimes with white or gray hairs ('frosting') around the chin and muzzle. Elsewhere known as the Groenendael variety of the Belgian shepherd (see above) or as a separate breed by that name. Called also Chien de Berger Belge.
B. Tervuren a variety of the Belgian sheepdog (see above) recognized as a separate breed in the USA and other countries.

VetBooks.ir

It is characterized by a long, red, fawn or gray coat. Called also Chien de Berger Belge and simply 'Terv'.

Bell–Magendie law the commonly accepted principle that the dorsal roots of spinal nerves contain only afferent or sensory fibers and that the ventral roots carry only efferent or motor ones.

bell-mare a quiet old horse used to carry a bell at night so that horses can be located easily in scrub, in the dark or in a big paddock.

bell stage [*bel*] the period when the cap of enamel organ on the developing tooth is converted to a bell shape in cross section.

bell vine [*bel*] ***Ipomoea*** *plebeia*.

purple-flowered b. v. ***Ipomoea*** *purpurea*.

bell-wether a tame wether which will lead a flock to a desired destination. Found usually at abattoirs and sale yards.

bella sombra ***Phytolacca*** *dioica*.

belladonna [*bel"ə-don'ə*] *Atropa belladonna* (deadly nightshade), a plant that is the source of various alkaloids, e.g. atropine, hyoscyamine, etc.

b. leaf the dried leaves and fruiting tops of *Atropa belladonna*, used as an anticholinergic in the management of gastrointestinal disorders.

b. poisoning a severe toxic condition due to overdosage of belladonna or accidental ingestion of large amounts of the drug. Signs include dryness of the mouth, thirst, dilated pupils, tachycardia, fever and stupor.

bellies wool from the belly of the sheep.

p. bellies boneless cut of meat from the belly of the pig, used to make bacon. Once a popular commodity in futures markets on the stock exchange. Now delisted.

bellow one of the voices of cattle. Usually refers to the arrogant call of the bull used to announce territorial rights. Abnormalities of the voice include hoarseness as in rabies, or continuous repetition as in nervous ketosis. See also **low**, **moo**.

bellowing see **bellow**.

b. continuously in bovine rabies, continues until pharyngeal paralysis supervenes.

b. soundlessly cattle affected by rabies in its late stages may make all movements as though bellowing but no sound happens, usually accompanied by inability to swallow and later by drooling of saliva.

bellows a term used to refer to the action produced by an intact thorax and diaphragm in inspiration and expiration.

b. disruption injury, usually by trauma, that disrupts the effectiveness of the thorax and diaphragm in moving air, e.g. puncture wounds of the thorax, flail chest and rupture of the diaphragm.

belly [*bel'e*] 1. the softer, ventral part of the abdomen. 2. the fleshy, contractile part of a muscle.

b. board a board attached to a cable or wire fence to ensure that cattle see the fence and do not injure themselves charging into it.

bellyache bush [*bel'e-āk"*] ***Jatropha*** *gossypifolia*.

bellyband [*bel'e-band"*] a part of the cart harness which is continuous with the backband and keeps the shafts from lifting the backband off.

Belted Galloway a breed of beef cattle, a variant of the Galloway breed. It is polled and black except for a genetically dominant wide band of white completely encircling its trunk behind the elbow.

Beltex a Belgium breed of sheep that has double-muscled hindquarters and fine bones, characteristics believed to result in a superior dressing-out percentage of the finished lamb. Used as a terminal sire.

belton a coat color pattern seen in the English setter dog consisting of ticking or roan in any one of several colors.

B-19: Belted Galloway dual-purpose cattle. From Sambraus HH, Livestock Breeds. Mosby, 1992.

Beltsville pigs name used in reference to the first transgenic farm animals, produced at the USDA research station in Beltsville, Maryland in the mid-1980s; genetically modified to have growth hormone genes to improve growth rate. They had considerable and severe health problems.

Beltsville No. 1 commercial, two breed crossbred, black-and-white pig with moderately lop ears.

Beltsville No. 2 commercial, four breed crossbred, red pig with white underline, and short, erect ears.

beluga whale the white whale (*Delphinapterus leucas*), an endangered species found in arctic and subarctic waters. It has a distinctive, bulbous forehead; called also sea canary.

bemegride a respiratory analeptic and non-specific barbiturate antagonist.

benanomicins broad spectrum antifungal drugs.

benazepril [*ben-a'zə-pril*] an angiotensin converting enzyme inhibitor, similar to enalapril, used in the treatment of heart failure and hypertension.

Bence Jones proteins [*bens' jōnz'*] immunoglobulin light chain dimers found in the serum and urine of patients and animals with gammopathies, usually myelomas.

benchmark a point of reference about which comparisons can be made.

bendiocarb a carbamate pesticide.

Bendixen's key a hematological key once used in the diagnosis of bovine viral leukosis. It is based on absolute lymphocyte counts in relation to age and classifies animals as normal, suspect or positive for the disease. It is not used widely as persistent lymphocytosis is not universally accepted as a preclinical sign of bovine viral leukosis nor is it restricted to that disease.

bendrofluazide [*ben"dro-floo'ə-zīd*] bendroflumethiazide.

bendroflumethiazide [*ben"dro-floo"mə-thi'ə-zīd*] a thiazide diuretic and antihypertensive; it enhances the excretion of sodium and chloride.

Benedenia a genus of flukes in the class Monogenea in the family Capsalidae; it is an important oral and cutaneous parasite of aquarium, cultured and marine fish.

Benedict's solution, Benedict's reagent a chemical solution used to determine the presence of glucose and other reducing substances in the urine.

Bengal a breed of cats developed from crossing Asian leopard cats with domestic cats. It has a long, muscular body, small rounded ears, large oval eyes and a short coat with large tabby-like markings. The breed is affected by entropion.

Bengal goat small to dwarf milk and meat goat, usually black, also gray, brown or white; prolific, bearded, short coat and ears. Called also Black Bengal.

benign [*bə-nīn'*] not malignant; not recurrent; favorable for recovery.

b. enzootic paresis see porcine viral **encephalomyelitis**.

b. fibrillators horses with a history of poor performance in races who suffer an attack of atrial fibrillation during or immediately after a race but where the arrhythmia reverts spontaneously so that the abnormality often goes undetected.

benthos [*ben'thos*] bottom of the sea or other body of water; said of cyanobacteria which grow on submerged rocks in alpine lakes and cause sudden death in cattle at pasture during summer months.

bentiromide [*ben-tēr'o-mīd*] a synthetic peptide (*N*-benzoyl-L-tyrosyl-*p*-aminobenzoic acid) used in the **BT-PABA test** to assess chymotrypsin activity in the small intestine.

b. test see **BT-PABA test**.

b./xylose test a test to assess digestion and absorption; indirectly measures exocrine pancreatic function (bentiromide; called also BT-PABA) and the absorptive surface (xylose) of the small intestine. See also **para-aminobenzoic acid**.

bentleg see **bowie**.

bentonite [*ben'ton-īt*] a naturally occurring pure clay capable of absorbing much moisture and swelling considerably. Used as a compacting and dispersing agent in the manufacture of fodder pellets and cat litter. Also used with pasture foliar dressings to improve the stickiness and hence the persistence of the applied chemical on plant surfaces. An example is its use with magnesium foliar dressings for the prevention of grass tetany. Chemically and nutritionally inert.

b. flocculation test an agglutination test in which the antigen is absorbed onto bentonite particles which clump in a positive

response; largely superseded for serodiagnosis of a variety of diseases.

sodium b. used as a binder in pellet manufacture. A refined form of clay.

benzalkonium chloride [*ben″zal-ko′ne-əm*] a quaternary ammonium compound used as a surface disinfectant and detergent and as a topical antiseptic and antimicrobial preservative.

benzathine an ammonium base which when combined with penicillin compounds prolongs their sojourn in tissues. The most common combinations are benzathine cloxacillin, used in the treatment of bovine mastitis, and benzathine penicillin.

benzcoumarins [*benz″ koo′mə-rin*] see clover **urolith**.

benzene [*ben′zēn*] a liquid hydrocarbon, C_6H_6, from coal tar; used as a solvent.

b. hexachloride a chlorinated hydrocarbon. The gamma isomer was used extensively as an insecticide. Called also Gammexane, **lindane**.

b. hexachloride poisoning see **chlorinated hydrocarbons**.

b. ring the simplest aromatic hydrocarbon consisting of a closed hexagon of carbon atoms with alternating single and double bonds (benzene), from which the different benzene compounds are derived by replacement of the hydrogen atoms.

benzestrol a synthetic estrogen, derived from diethylstilbestrol.

benzethonium chloride [*ben″zə-tho′ne-əm*] a synthetic quaternary ammonium compound used as a local anti-infective and as a detergent and disinfectant.

benzidine [*ben′zĭ-dēn*] a compound once used as a test for traces of blood (benzidine test).

benzimidazole [*ben″zĭ-mid′ə-zōl*] a group of compounds with anthelmintic properties. They all have the same central chemical structure—1,2-diaminobenzene. Some of the better known pharmaceutical compounds are **thiabendazole**, **albendazole**, **cambendazole**, **fenbendazole**, **mebendazole**, **oxfendazole**, **oxibendazole** and **parbendazole**.

benzoates [*ben′zo-āts*] salts and esters of benzoic acid; they have antibacterial and antifungal properties..

benzocaine [*ben′zo-kān*] a local anesthetic for topical use; has been associated with production of methemoglobinemia when used in small dogs and cats.

benzodiazepine [*ben″zo-di-az′ə-pēn*] any of a group of drugs having similar molecular structure; includes diazepam (Valium), which has significant use in veterinary medicine, clorazepate, clonazepam, and midazolam.

benzodioxane [*ben″zo-di-ok′sān*] a class of synthetic α-receptor blocking agents used to lower blood pressure.

benzoic acid [*ben-zo′ik*] an acid from benzoin and other resins and from coal tar, used as an antifungal agent in pharmaceutical preparations and as a germicide. The sodium salt of benzoic acid, sodium benzoate, is used as an antifungal agent in pharmaceutical preparations, and may be used as a test for liver function. It was at one time used as a food preservative although now replaced in pet foods because of its toxicity in cats.

benzoin resin [*ben′zo-in*] found in the bark of *Styrax benzoin* and other *Styrax* species, used chiefly as a topical protectant and antiseptic. Benzoin acts as an expectorant and thus is sometimes used in steam inhalations in treating respiratory disorders. See also benzoin **tincture**.

benzonatate [*ben-zo′nə-tāt*] a non-narcotic antitussive drug that depresses cough without affecting respiration.

benzothiadiazines [*ben″zo-thi″ə-dī′ə-zēnz*] see **thiazide**.

benzoylphenyl urea (BPU) [*ben″zo-əl-fen′əl*] an insect development inhibitor acting by interference with development of the insect's exoskeleton.

benzoyl [*ben′zo-əl*] the acyl radical formed from benzoic acid, C_6H_5CO-.

b. peroxide dibenzoyl peroxide, a topical keratolytic with antibacterial and antipruritic properties, used in the treatment of skin diseases.

benzthiazide [*benz-thi′ə-zīd*] a thiazide diuretic. Called also benzothiadiazide. See also **thiazide**.

benzydroflumethiazide see **bendroflumethiazide**.

benzyl [*ben′zəl*] the hydrocarbon radical, C_7H_7.

b. alcohol a colorless liquid used as a bacteriostatic in solutions for injection, and also topically as a local anesthetic.

b. benzoate a clear, oily liquid used as a topical scabicide and with dimercaprol as an antidote in metal poisoning. Toxic in cats.

benzylpenicillin [*ben″zəl-pen″ĭ-sil′in*] see **penicillin** G.

bephenium an anthelmintic used as the embonate and hydroxynaphthoate.

BER basal energy requirement.

Berber sheep Moroccan carpetwool sheep, white, black or white with black head.

berberine [*bur′bər-ēn*] a poisonous pyridine alkaloid found in the plants *Argemone*, *Berberis*, *Mahonia* spp.

Berberis [*bur′bər-is*] genus in the plant family Berberidaceae; contains berberine, a pyridine alkaloid; causes cardiomyopathy and congestive heart failure. Called also barberries.

Bergamasco a medium- to large-sized (70–84 lb), heavy boned Italian sheepdog with a distinctive long black or gray coat of harsh texture which forms into mats or flocks.

Bergamo basic lop-eared Alpine type of sheep; polled, used for meat and carpetwool. Origin of many other breeds of this type, found in the Alpine region of Central Europe.

Berger de Beauce see **Beauceron**.

Berger de Brie see **Briard**.

Bergmann's glia a specialized form of astrocytes in the Purkinje cell layer of the cerebellum.

Berger Picard a working sheep-herding dog from the Picardie region of France. It is medium sized (23–25 inches tall), well muscled with a distinctive shaggy, rough coat in fawn or gray, large erect ears and tail that hangs to the hock with a J-curve at the tip. Called also Picardy shepherd.

Bergmeister's papilla a tuft of glial (and sometimes vascular) tissue originating from the center of the optic nerve head; vestigial remnant of the hyaloid arter. Normally present in some species such as cattle. See also **Mittendorf's dot**, **Cloquet's canal**, and **arcuate** line of Vogt.

bergslankop ***Urginea*** *capitata*.

beriberi [*ber″e-ber′e*] the name given to thiamine deficiency in humans. See **thiamine** nutritional deficiency.

Berkefeld's filter a filter composed of diatomaceous earth, impermeable to ordinary bacteria.

berkelium (Bk) [*bərk′le-əm*] a chemical element, atomic number 97, atomic weight 247. See Table 4.

Berkshire a sometime breed of pigs bred chiefly for pork. Characterized by a dished face and a black coat with white points. A variant with a longer body than the British breed is the Canadian Berkshire.

Berkson's bias a type of selection bias which may occur in case-control studies which are based entirely on hospital studies.

Bermuda grass ***Cynodon*** *dactylon*.

Bermuda oxalis ***Oxalis*** *pres-caprae*.

Berne virus see ***Torovirus***.

Bernese canary an uncommon breed; it is yellow or variegated, with smooth plumage.

Bernese mountain dog a large, sturdy, longhaired black dog with white feet, tail tip and chest markings, and brown or tan markings. The coat is thick and slightly wavy. It is a Swiss breed originally used as a cart dog. Called also Swiss mountain dog, although it is only one of four varieties. The breed is affected by malignant histiocytosis, hip dysplasia, elbow dysplasia and hypomyelinogenesis. Called also Berner sennenhund or just Berner.

Bernese sennenhund see **Bernese mountain dog**.

Bernoulli principle [*bər-noo′le*] a principle which relates to the flow of fluids through tubes: the total hydraulic energy of fluid moving along a tube is constant so that if the tube dilates and causes the velocity to decrease, the kinetic energy involved in moving the fluid is reduced resulting in an increase in the lateral pressure on the vessel wall. This accounts for the tendency for aneurysms to enlarge and for vessels to dilate below a constriction.

Berrichon du cher a French breed of milking sheep.

berrigan ***Eremophila*** *longifolia*.

berry cottonbush [*bār′e*] see ***Enchylaena tomentosa***.

Berry–Dedrick phenomenon the occurrence of typical myxoma in rabbits when injected with a mixture of myxomatosis virus that has been inactivated by heat and viable fibroma virus. The explanation is that the nucleic acid of the inactivated myxomavirus is incorporated into the protein coat of the fibromavirus. The hybrid particles which result retain the coding of the myxomavirus and cause myxomatosis.

VetBooks.ir

berry poison [bār'e] ***Gastrolobium*** *parvifolium*.

Bersama abyssinica a small African tree of the plant family Melicanthaceae; ingestion of the leaves causes salivation, profuse diarrhea, collapse and death; may contain cardiac glycosides.

berserk male syndrome aggressive behavior towards humans exhibited by adult male llamas that were either bottle fed or closely handled as crias and, as a result, show no fear of humans as adults.

Berteroa incana toxic plant in Brassicacae family; suspected of containing SMCO; causes laminitis and abortion in horses. Called also hoary alyssum.

Bertiella [bur"te-el'ə] a genus of nonpathogenic tapeworms of the family Anoplocephalidae. Includes *B. mucronata, B. studeri* (primates) and *B. obesa* (koala).

bertielliasis [bur"te-ə-li'ə-sis] infestation with *Bertiella* spp. tapeworms. Occurs in primates, possums, koalas and occasionally in humans.

Berula erecta toxic plant, a member of the Apiaceae family. Causes diarrhea, enteritis, milk taint. Called also water parsnip.

beryllium (Be) [bə-ril'e-əm] a chemical element, atomic number 4, atomic weight 9.012. See Table 4.

b. sulfate used as a vaccine adjuvant. Causes local granuloma formation which is believed to enhance antibody formation by stimulating T lymphocytes.

besembos [Af.] ***Crotalaria*** *spartioides*.

Besnier–Boeck disease [bə-nya' bek'] see **sarcoid (1)**.

Besnoitia [bes-noi'te-ə] a genus of apicomplexan parasites in the family Sarcocystidae; they are relatively host specific. There are a number of species that are found only in wild animals. Horses and cattle are affected by disease in their role as intermediate hosts. For many species of *Besnoitia*, the definitive host is the cat. For the others the definitive host has not been identified.

B. bennetti causes **besnoitiosis** of horses and donkeys.

B. besnoiti causes **besnoitiosis** of cattle.

B. caprae found in goats.

B. darlingi found in opossums, possibly lizards.

B. wallacei found in cats.

besnoitiosis [bes-noi"te-o'sis] is endemic in tropical and sub-tropical regions with high infection rate but low mortality; rare elsewhere. The cutaneous form of besnoitiosis in horses and burros, caused by *Besnoitia bennetti*; characterized by a widespread, serious dermatitis. The disease in cattle, caused by *B. besnoiti*, is a systemic one manifested by swelling of the lymph nodes, subcutaneous swellings, diarrhea, abortion and infertility.

Besser–Lowry–Brock unit a unit formerly used in the measurement of enzyme activity for acid or alkaline phosphatase.

best fit when making a diagnosis, the technique of finding amongst the diseases on the shortlist the one that is the best fit to the syndrome observed.

best linear unbiased prediction (BLUP) acronym for a statistical method of predicting the breeding values of animals. Fixed effects of environment and genetics on observed phenotypic values are estimated simultaneously and, therefore, genetic differences between herds are accounted for. BLUP animal models are now used in many countries for a number of species, including dairy and beef cattle, swine, sheep and fish.

Beta [be'tə] a plant genus in the Polygonaceae family.

B. vulgaris this species includes the large fodder roots. They provide a massive source of feed energy but they can cause poisoning if used unintelligently, e.g. (1) carbohydrate engorgement and lactic acidosis if too many are fed; (2) partly cooked mangels grown on high nitrate soils may cause nitrite poisoning; (3) the tops may contain toxic amounts of oxalate; (4) a sole diet of beet pulp is thought to cause a nutritional deficiency of vitamin A in cattle leading to blindness and encephalopathy; alternatively a high sulfur concentration in sugar beet by-products is associated with polioencephalomalacia. Called also fodder beet, sugar beet, mangels, mangolds, mangel-wurzel, beetroot.

B-20: Sclerodermatitis in a cow with besnoitiosis. From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

beta [be'tə] the second letter of the Greek alphabet, B or β; used to denote the second position in a chemical classification system. Often used in names of chemical compounds to distinguish one of two or more isomers or to indicate the position of substituent atoms or groups in certain compounds. Also used to distinguish types of radioactive decay; brain rhythms or waves; adrenergic receptors; secretory cells of the various organs of the body that stain with basic dyes, such as the beta cells of the pancreas; and the type of hemolysis induced by bacteria that results in a zone of complete hemolysis when grown on blood agar.

b. agonists see **adrenergic**.

b. animal subordinate or second animal in a social group. See also **alpha** animal.

b. barrel a form of secondary structure of a polypeptide in which a large β sheet is coiled into a closed super secondary structure via hydrogen bonding. Common in cell membrane-spanning proteins.

b.-blocker a drug that blocks the action of epinephrine at beta-adrenergic receptors on cells of effector organs. There are two types of these receptors: β_1-receptors in the myocardium and β_2-receptors in the bronchial and vascular smooth muscles. The principal effects of beta-adrenergic stimulation are increased heart rate and contractility, vasodilation of the arterioles that supply the skeletal muscles, and relaxation of bronchial muscles.

b. brain waves those having a frequency of more than 10 hertz (pulsations per second); seen during wakefulness. See also **electroencephalography**.

b. carbon carbon-3 of a molecule or the carbon atom two on from the function group of a molecule, the carbon(s) of which are not included in the lettering.

b.-endorphin hormone secreted by central nervous system, hypothalamus, gastrointestinal tract. See also **endorphin**.

b. fibrillosis see **amyloidosis**.

b.-folded domains compact, locally folded region of protein tertiary structure containing the β-sheets or β-turns.

b.-hydroxy-beta-methylglutaryl coenzyme A 1. intermediate in the formation of ketones. 2. substrate for the first committed step in the synthesis of cholesterol. Called also 3-hydroxy-3-methylglutaryl coenzyme A.

b.-hydroxybutyrate salt of one of the major circulating ketone bodies in animals. See **β-hydroxybutyrate**.

b.-ketobutyric acid **acetoacetic acid**.

b. particle see **radiation**.

b. radiation see **radiation** injury, **radiotherapy**.

b. sheet (β-sheet) a common structural feature of many proteins in which the single polypeptide chain is folded back and forth upon itself with each folded section running in an opposite direction to its nearest neighbors. The folded sections are held together by hydrogen bonds and the arrangement which occurs confers great stability on the molecule.

b. subunit second-named chain (or subunit) occurring in the functional organization of macromolecules, usually proteins, containing two or more chains.

beta-carotene [ba"tə-kar'ə-tēn] see **carotene**.

Betadine [ba'tə-dīn] a proprietary name for povidone-iodine.

Betaherpesvirinae [ba"tə-hur"pēz-vir-i'ne] one of three subfamilies in the family *Herpesviridae*. Called also **cytomegalovirus**.

betaine [be'tə-ēn] trimethylglycine, the carboxylic acid derived by oxidation of choline; it acts as a transmethylating metabolic intermediate.

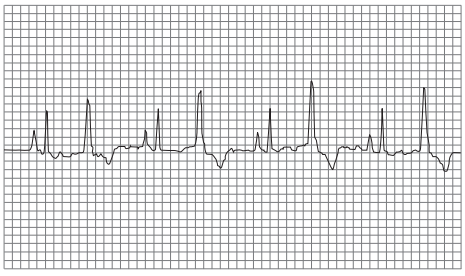
betamethasone [ba"tə-meth'ə-sōn] a long-acting synthetic glucocorticoid, used as an anti-inflammatory.

Betaretrovirus [ba"tə-ret'ro-vi"rəs] a genus of the family *Retroviridae*. Members have type B or type C morphology. The type B is common for a few exogenous, vertically transmitted and endogenous viruses of mice; some primate and sheep viruses are type D. An example is the mouse mammary tumor virus.

betatron [*ba'tə-tron*] an cyclotron for accelerating electrons to millions of electron volts by magnetic induction.
betaxolol [*ba-tak'sə-lol*] a topical sympatholytic ('beta-blocker') agent used to reduce intraocular pressure in the treatment of glaucoma.
betazole a histamine analog used in gastric function tests to stimulate gastric secretion. Called also ametazole, gastramine.
bethanechol [*bə-than'ə-kol*] a choline ester with parasympathomimetic effects similar to acetylcholine; primarily a muscarinic agonist with little effect on nicotinic receptors. The chloride salt is used for urinary retention.
Betta splendens brightly colored tropical freshwater fish of the family Osphronemidae; adult males have to be kept in separate tanks because of their aggressive behavior. Called also Siamese fighting fish.
Betz cells [*bets*] large pyramidal cells forming a layer in restricted parts of the cerebral cortex.
Beuceron see **Berger de Beauce**.
beukesbossie [Af.] see ***Lippia rehmannii***.
Beveren a large Belgian breed of fur rabbits, blue, black, brown or white with a dense, silky coat of short (1 to 1.5 in) fur, a pronounced Roman nose, big ears and a broad muzzle.
bevy a flock of birds.
bezoar [*be'zor*] a mass formed in the stomach by compaction of repeatedly ingested material that does not pass into the intestine. See also **phytobezoar**, **trichobezoar**.
Bezold–Jarisch reflex [*bāt'sōlt yah'rish*] reflex cardiac slowing, hypotension and apnea caused by intravenous injection of veratrine, nicotine and some antihistamines.
BFU-E burst forming unit-**erythroid**.
BGP bone gamma carboxyglutamate protein; **osteocalcin**.
Bh chemical symbol, *bohrium*.
Bhalfilaria ladamii the only species in the genus *Bhalfilaria* which is in the family Filariidae. Found in the heart of chickens in some parts of India.
BHC, γ-BHC see **benzene** hexachloride.
Bhotia pony Indian mountain riding and pack pony, white or bay; similar to Tibetan pony.
BHP blood hydrostatic pressure; the pressure exerted by the blood cells and plasma in the capillaries.
BHS beta-hemolytic streptococci.
Bibersteinia a genus of gram-negative rod-shaped bacteria related to the genera *Pasteurella* and *Mannheimia*, in which members of this genus were previously classified.
B. trehalosi cause of septicemia and pneumonia in older lambs and goats. Previously classified as *Mannheimia haemolytica* biotype T and *Pasteurella trehalosi*.
BHV2 bovine herpesvirus-2.
Bi chemical symbol, *bismuth.*
bi- word element. [L.] *two*.
***bi* syndrome** *bi* in acupuncture terminology means obstruction; it may be wandering, painful, fixed, febrile. Most musculoskeletal disorders are grouped into one of the several *bi* syndromes as a guide to selection of acupuncture points.
biangled tube an X-ray tube with a rotating anode in which the surface of the anode disk has two target surfaces which are at different angles to the electron beam.
biarticular [*bi"ahr-tik'u-lər*] affecting two joints, especially with reference to a muscle acting over two joints.
biarticulate [*bi"ahr-tik'u-lāt*] having two joints.
bias [*bi'əs*] any systematic error in the design, conduct or analysis of a study which results in estimates which depart from true values. An unbiased study is free from systematic error. Many types of bias have been named, but three general types can be identified, selection bias, information bias and **confounding**. **Selection bias** is a systematic error in a study caused by the individuals selected into the study being different from the entire target population in an important way. See also **Berkson's bias**. Similar to **sampling bias** where a non-random sample of a population does not allow all members of the population to have an equal chance of being selected. **Information bias** is a systematic error in a study caused by errors in the data which are collected in the study, or in the analysis of the data.
bib [*bib*] the ruff or longer hair around the chest area in some breeds of cats.
bible meatworkers' name for omasum.
bicameral [*bi-kam'ər-əl*] having two chambers or cavities.
bicapsular [*bi-kap'su-lər*] having two capsules.
bicarbonate [*bi-kahr'bə-nāt*] any salt containing the HCO_3^- anion.
blood b. the bicarbonate of the blood plasma, an important parameter of acid–base balance measured in **blood gas analysis**. Called also plasma bicarbonate.
b. buffering major body buffering system in **acid–base balance**.
plasma b. see blood bicarbonate (above).
b. of soda sodium bicarbonate.
standard b. in blood gas analysis this is the plasma concentration of bicarbonate, under specified conditions, which eliminates the influence of respiration on the values obtained.
bicarotid trunk rupture a rare cause of sudden death in horses.
bicaudal, bicaudate [*bi-kaw'dəl*] having two tails.
Bicaulus [*bi-sef'ə-ləs*] a genus of nematode worms in the family Protostrongylidae. Now included in the genus *Varestrongylus*. Includes *B. sagitattus and B. schulzi* (sheep, goat and deer; lungs).
bicellular [*bi-sel'u-lər*] made up of two cells.
bicephalus dicephalus.
biceps [*bi'seps*] a muscle having two heads. There is a biceps muscle in both fore- and hindlimbs. See Table 13. See also **bicipital**.
b. brachii a large biarticular fusiform muscle lying on the cranial surface of the humerus. Its function is to flex the elbow and integrate the actions of the shoulder and elbow joints. A medial displacement of the tendon of origin has been reported in dogs, causing a weight-bearing lameness. See Table 13.
b. femoris a large polyarticuclar muscle of the caudolateral part of the thigh. Its function is to extend the hindlimb when propelling the body, during rearing or kicking. All of the joints are affected except those of the digit. See Table 13. Rupture of the muscle causes acute hindlimb lameness in cattle. Resembles an intermittent upward fixation of the patella, with extension of the stifle and hock.
b. reflex is elicited in dogs by striking a finger placed on the biceps tendon on the craniomedial aspect of the elbow. An active reflex indicates intact spinal cord segments and nerve roots C6–8 and musculocutaneous nerve. It becomes exaggerated in disease of the upper motor neuron and reduced in disease of the lower motor neurons originating in these spinal cord segments.
b. tendon ossification causes lameness in the horse. Is radiographically apparent.
b. tendonitis causes lameness in dogs. See **bicipital** tenosynovitis.
bichloride [*bi-klor'īd*] a chloride containing two equivalents of chlorine.
Bichon frise a small lively dog with a fine, silky, white coat that forms soft corkscrew curls, giving a fluffy appearance. The plumed tail is carried over the back and the topknot gives a rounded appearance to the head. The overall powder puff appearance is enhanced by trimming.
bicipital [*bi-sip'i-təl*] having two heads; pertaining to a **biceps** muscle.
b. bursa the bursa between the tendon of the biceps brachii muscle and the bicipital groove of the humerus. See also intertuberal **bursa**.
b. bursitis inflammation of the bicipital bursa over the point of the shoulder where the tendon of the biceps bends over the humerus. Usually follows trauma and is characterized by a reduced stride, circumduction and dropped elbow. Forced extension of the limb and deep palpation of the joint causes pain.
b. tendon tendon of the biceps muscle.
b. tenosynovitis inflammation of the bicipital tendon and its sheath; characterized by shoulder lameness and sometimes calcification of the tendon and osteophytes in the intertubercular groove are observed on X-rays.
bicolor [*bi'kul"ər*] a coat color of two colors. In dogs, usually black with tan markings but may be other combinations such as ticking on a white background. In cats, more than two spots of color on the body, either white and one basic color, or white with one tabby color.
biconcave [*bi"kon-kāv'*] having two concave surfaces.
biconvex [*bi"kon-veks'*] having two convex surfaces.
bicornate, bicornuate, bicornual [*bi-kor'nāt, bi-kor'nu-āt*] having two horns or cornua, e.g. bicornuate uterus.

VetBooks.ir

bicorporate [bi-kor'pə-rət] having two bodies.
bicozamycin an antibacterial used to treat enteric and respirtory diseases in cattle and septicemia in fish. Called also bicyclomycin.
bicuspid [bi-kus'pid] 1. having two cusps. 2. bicuspid (mitral) valve. 3. in humans, a premolar tooth.
b.i.d. [L.] *bis in die* (twice a day). Called also bid.
Bidder's organ a vestigial ovary found in male toads.
Bidens frondosa a North American plant in the Asteraceae family; may cause nitrite poisoning in ruminants because of a high content of nitrate. Called also beggar tick.
biduous lasting 2 days.
Biebrich scarlet see **scarlet red**.
Bier technique [byār] intravenous injection of a local anesthetic into a portion of the body isolated by a tourniquet, e.g. a distal limb, to anesthetize sensory motor nerves to the whole area. Called also intravenous regional analgesia.
bietou plants capable of causing cyanide poisoning in livestock. See ***Osteospermum***.
karoo b. *Dimorphotheca cuneata*. See also ***Osteospermum***.
large b. *Dimorphotheca acuneata*. See also ***Osteospermum***.
Transvaal b. see ***Castalis spectabilis***.
bifid [bi'fid] cleft into two parts or branches.
Bifidobacterium [bi"fid-o-bak-tēr'e-əm] a genus of gram-positive obligately anaerobic lactobacilli commonly occurring in the feces.
biforate [bi-for'āt] having two perforations or foramina.
bifunctional enzyme [bi-funk'shən-əl] an enzyme containing two distinct catalytic capacities in the same polypeptide chain, e.g. phosphofructokinase II and fructose-2,6-bisphosphatase, which controls the concentration of fructose-2,6-bisP, the major allosteric regulator of glycolysis (+ve) and gluconeogenesis (−ve).
bifurcate [bi-fur'kāt] divided into two branches.
bifurcation [bi"fər-ka'shən] 1. a division into two branches. 2. the point at which division into two branches occurs.
tracheal b. termination of the trachea, where it divides into two principal bronchi.
big-dog little-dog syndrome injuries of the cervical region incurred by small dogs when attacked by large dogs that pick them up by the neck and shake them violently.
big kidney, little kidney syndrome a form of chronic kidney disease in cats in which there are clinical findings of both acute and chronic disease. A chronic process in which one ureter becomes obstructed, due to fibrosis or pyelonephritis, resulting in a shrunken, non-functional kidney, is followed by a similar process in the other ureter. When the second, hypertrophied kidney fails, the cat is presented with clinical signs of acute renal failure. Palpation detects one large (hypertrophied) kidney and one shrunken kidney.
big-knee see **caprine** arthritis–encephalitis.
big liver and spleen disease affected chickens have anemia, premature moulting and a drop in egg production. An enlarged spleen and liver are found at postmortem examination. Caused by a virus related to avian hepatitis E virus.
Bigelowia rusbeyi ***Haplopappus*** *heterophyllus*.
bigeminy [bi-jem'i-ne] the condition of occurring in twos, especially the occurrence of two pulse beats in rapid succession.
ventricular b. an electrocardiographic tracing showing the pairing of sinus beat and a ventricular premature contraction.
bighead [big'hed] a general swelling of the head.
equine b. see **osteodystrophia fibrosa**.
ovine b. a form of malignant edema due to *Clostridium novyi* in rams, usually the result of fighting. Called also swelled head.
yellow b. a syndrome of photosensitive dermatitis, causing edema of the ears and face, and a concurrent jaundice in sheep. Usually found in association with poisoning with millet or other *Panicum* spp. grasses, or *Tribulus terrestris*; called also geeldikkop, dikoor.
Bighorn sheep (*Ovis canadensis*) a tall, heavy, wild sheep that lives in inaccessible mountain country of North America and Siberia where it exercises its principal achievement of prodigious leaping and climbing. They have very large horns and specialized anatomical structures to support the head and neck during the horn-to-horn combat of males in the rutting season. There are several subspecies.
bigleg see sporadic **lymphangitis**.
biglycan [bi-gli'kan] a small chondroitin sulfate proteoglycan found in mineralized bone.
biguanides [bi-gwah'nīdz] a class of disinfectants, the most common one being chlorhexidine.
bike see **sulky**.
Bikukulla see ***Dicentra***.
bilateral [bi-lat'ər-əl] having two sides; pertaining to both sides.
bilayer [bi'la-ər] a membrane layer two molecules thick.
phospholipid b. a structure containing two layers of phospholipid molecules which is the basic structural unit of all biological membranes. See also **phospholipid** bilayer.
bilby a small, nocturnal and omnivorous marsupial (*Macrotis* spp.) in the Family Thylacomydae, found only in some desert areas of Australia. They are strong diggers, forming extensive burrow systems. Unlike other marsupials, they form a small chorioallantoic placenta. Closely related to the **bandicoot**. In local culture, adopted in chocolate form as an indigenous substitute for the Easter bunny.
bile [bīl] a clear yellow, orange or green fluid produced by the liver. It is concentrated and stored in the gallbladder, and is poured into the small intestine via the bile ducts when needed for digestion. Bile helps in alkalinizing the intestinal contents and plays a role in the digestion and absorption of fat; its chief constitutents are conjugated bile salts, cholesterol, phospholipid, bilirubin and electrolytes. See also **bile duct**, **biliary**.
b. acids steroid acids derived from cholesterol; classified as primary (those synthesized in the liver, e.g. cholic and chenodeoxycholic acid) and secondary (those produced from primary bile acids by intestinal bacteria and returned to the liver by enterohepatic circulation, e.g. deoxycholic and lithocholic acid).
b. acid assay measurement of bile acids assesses biliary excretion, portal circulation and hepatic function. Paired serum samples, before and 2 hours after feeding, is a test used in dogs and cats in the diagnosis of portacaval shunts, which are detected by an exaggerated increase in the concentration of bile acids in postprandial serum (bile acid challenge test).
b. canaliculi formed between adjacent hepatocytes, these are the smallest components of the biliary system; they open into bile ductules (canals of Hering).
b. lake microscopically visible accumulations of bile in canaliculi between hepatocytes. May be seen in obstructive or hemolytic jauncie.
b. passages bile canaliculi drain into bile ductules and interlobular ducts. These unite to form a series of hepatic ducts which carry the bile to the porta where they unite to form the common hepatic duct. This duct receives a cystic duct from the gallbladder (absent in the horse) and thence becomes the **bile duct**.
b. reflux usually refers to movement of bile from the duodenum into the stomach where it may alter the gastric mucosal barrier causing gastritis and ulceration.
b. salts salts of bile acids. See **taurocholate**, **chenodeoxycholic acid**, **glycocholic acid**.
white b. 1. pale bile which contains less bile pigment as a result of intrahepatic cholestasis, e.g. *Lantana* poisoning in ruminants. 2. bile trapped in obstructed system for a long period and from which pigments have been resorbed. It may contain a higher than usual proportion of mucin.
white b. syndrome fluid and mucus, lacking bile pigments, found in the gallbladder of cats with cholangiohepatitis and severe intrahepatic bile sludging.
bile duct [bīl] 1. generally, any of the biliary passages. 2. specifically the terminal segment of the biliary tree extending from the union of the common hepatic duct and cystic duct to the major duodenal papilla. See also **bile** passages.



B-21: Ventricular bigeminy (cat). Note that normal complexes (the odd numbered complexes) alternate with ventricular premature complexes. From Thomas JA, Lerche P, Anesthesia and Analgesia for Veterinary Technicians, 4th Edition. Mosby, 2011.

VetBooks.ir

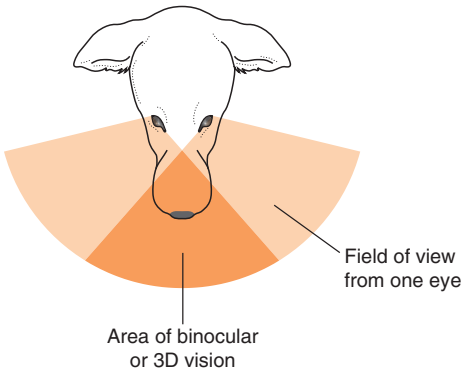
b. d. atresia congenital discontinuity of bile ducts, causing biliary cysts if localized, and icterus and fat malabsorption if common ducts are involved. Occurs rarely in kittens and puppies.
b. d. calculi see **cholelithiasis**.
b. d. carcinoma see **cholangiocellular** carcinoma.
b. d. cysts occur in all species and are probably derived from occluded or atretic embryonic bile ducts.
b. d. ductules small linking vessels connecting bile canaliculi with bile ducts. See also **canals** of Hering.
b. d. fibrosis proliferation of fibroblasts with collagen deposition about bile ducts in hepatic portal triads as a result of chronic cholangitis and cholangiohepatitis. See also **portal** fibrosis.
b. d. hyperplasia proliferation of bile ducts and ductules in hepatic portal triads a a result of chronic cholangitis and cholangiohepatitis. Of infectious or chemical origin; usually accompanied by some degree of portal fibrosis.
b. d. inflammation see **cholangiohepatitis**.
b. d. obstruction see **biliary** obstruction.
b. d. proliferation see bile duct hyperplasia (above).
b. d. radiology see **cholangiography**.
b. d. rupture/perforation most ruptures are traumatic and result in leakage of bile into the peritoneal cavity. See also biliary **peritonitis**.
b. d. tumors see **cholangiocellular**.
bilharziasis [*bil"hahr-zi'ə-sis*] see **schistosomiasis**.
Bilharziella a genus of the family Schistosomatidae.
B. polonica a trematode parasite found in the abdominal blood vessels of ducks.
bilharziosis [*bil-hahr"ze-o'sis*] see **schistosomiasis**.
bili- word element. [L.] *bile*.
biliary [*bil'e-ar-e*] pertaining to the bile, to the bile ducts, or to the gallbladder. See also **bile duct**.
b. excretion removal in the bile of substances including drugs, toxins, hormones or pigments, or their breakdown products. These are delivered to the duodenum and removed in the feces.
b. fever see **babesiosis**.
b. fibrosis one of the three forms of hepatic fibrosis; largely confined to the portal triads; see also **bile duct** fibrosis, **portal** fibrosis.
b. infarct areas of segmental hepatic fibrosis that is subtended by obstructed bile ducts.
interlobular b. duct see **bile** passages.
b. obstruction obstruction of bile ducts may be intra- or extrahepatic, by intraluminal blockage (calculi) or by external compression by tumor mass or cicatricial contraction. Jaundice (icterus) is the outstanding clinical sign of the condition. See also **cholestasis**.
b. salts see bile **salt**.
b. stones see **cholelithiasis**.
b. tract the organs, ducts, etc., participating in secretion (the liver), storage (the gallbladder, if present), and delivery (hepatic and bile ducts) of bile into the duodenum. See also **bile** passages.
biligenesis [*bil"ĭ-jen'ə-sis*] production of bile.
biligenic [*bil"ĭ-jen'ik*] producing bile.
bililith gallstone.
bililithiasis see **cholelithiasis**.
bilious vomiting syndrome [*bil'yəs*] duodenogastric reflux of bile; early morning vomiting in dogs, believed to be due to a mild gastritis caused by reflux of bile during sleep.
biliousness [*bil'yəs-nis*] a symptom complex in humans comprising nausea, abdominal discomfort, headache and constipation, formerly attributed to excessive bile secretion.
biliprotein [*bil"ĭ-pro'tēn*] the conjugated bilirubin-protein complex. Called also delta-bilirubin.
bilirachia [*bil"ĭ-ra'ke-ə*] the presence of bile pigments in the spinal fluid.
bilirubin [*bil"ĭ-roo'bin*] an orange bile pigment produced by the breakdown of heme and reduction of biliverdin; it normally circulates in plasma and is taken up by liver cells and conjugated to form bilirubin diglucuronide, the water-soluble pigment excreted in the bile. Failure of the liver cells to excrete bile, or obstruction of the **bile ducts**, can cause an increased amount of bilirubin in the body fluids and thus lead to obstructive or regurgitation jaundice. Another type of jaundice results from excessive destruction of erythrocytes (hemolytic or retention jaundice). The more rapid the destruction of red blood cells and the degradation of hemoglobin, the greater the amount of bilirubin in the body fluids. Most bilirubin is excreted in the feces. A small amount is excreted in the urine as urobilinogen.
conjugated b. bilirubin that has been conjugated, mainly to glucuronic acid, in the liver. High blood concentrations indicate obstructive cholestasis or hepatocellular dysfunction. Called also direct reading bilirubin.
delta b. see **biliprotein**.
direct b. conjugated b.
free b. see unconjugated bilirubin (below).
indirect b. unconjugated bilirubin.
total b. the sum of all three forms of bilirubin in the blood: unconjugated, conjugated and delta (biliprotein).
b. toxicity see **kernicterus**.
unconjugated b. bilirubin that has not been conjugated in the liver. A high concentration of it in the blood is indicative of hemolysis or a lack of bilirubin clearance by the liver. Called also free bilirubin, indirect reading bilirubin.
urine b. see **bilirubinuria**.
bilirubinemia [*bil"ĭ-roo"bĭ-ne'me-ə*] the presence of bilirubin in the blood.
bilirubinuria [*bil"ĭ-roo"bĭ-nu're-ə*] the presence of bilirubin in the urine. In most species this is in the conjugated form. Not normally found in the horse, sheep, pig and cat, but the tubular resorptive capacity in dogs is low, so traces of bilirubin are commonly found. Increased amounts are usually indicative of hepatic disease, intra- or extrahepatic biliary obstruction.
biliuria [*bil"ĭ-u're-ə*] choluria.
biliverdin [*bil"ĭ-vur'din*] a green bile pigment formed by catabolism of the heme moiety of hemoglobin and converted to bilirubin in the liver.
bill [*bil*] see **beak**.
Billroth anastomosis [*bil'rōt*] see **gastroduodenal** anastomosis.
billy adult male goat.
bilobate [*bi-lo'bāt*] having two lobes.
bilobed having two lobes.
bilobular [*bi-lob'u-lər*] having two lobules.
bilocular [*bi-lok'u-lər*] having two compartments.
biloma [*bi-lo'-mə*] an encapsulated collection of bile in the peritoneal cavity.
bimastoid [*bi-mas'toid*] pertaining to two or both mastoid processes.
bimodal distribution [*bi-mo'dəl*] a distribution with two peaks separated by a region of low frequency of observations.
binaural [*bi-naw'rəl*] pertaining to both ears.
binauricular [*bi"naw-rik'u-lər*] pertaining to both auricles of the ears.
binder [*bīnd'ər*] 1. a girdle or large bandage for support of the abdomen. 2. fibers in a wool fleece which bind the staples together; absence of them produces a locky fleece.

B-22: Bilirubinuria in a foal with Tyzzer's disease. From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

VetBooks.ir

B

binding [bīnd'ing] 1. holding separate units together. 2. in meat hygiene terms, the capacity to absorb and retain water.
b. element a specific sequence in DNA, usually less than 10 nucleotides, to which a particular protein binds; the tertiary structure of the sequence also influences the binding.
b. quality a measurement of the binding capacity of a sample, e.g. of meat.
b. test is used to measure amounts of antigen or antibody by measuring the amount to which it is bound in an immune complex either directly (primary), after separation by precipitation, agglutination or complement fixation (secondary) or the in vivo effects (tertiary).
binding out [bīnd'ing] in contracts between partners or between principals and assistants in practices these are clauses which bind one or other of the parties to refrain from practicing in the practice area for a specified time if they should opt out of the partnership. Seldom enforceable.
Bingley terrier an early name for the Airedale terrier; taken from the name of a town in Yorkshire, England.
binocular [bī-nok'u-lər] 1. pertaining to both eyes. 2. having two eyepieces, as in a microscope.
b. field the field of vision, simultaneously received by both eyes. Varies among animal species, depending on the placement of the eyes in the skull (cat 140°, dog and horse 60–70°)
binomial [bi-no'me-əl] composed of two terms, e.g. names of organisms formed by combination of genus and species names.
b. distribution categorization of a group into two mutually exclusive subgroups, e.g. sick and not sick.
b. population a population which can be divided into a binomial distribution.
binotic [bin-ot'ik] see **binaural**.
binovular [bin-ov'u-lər] pertaining to or derived from two distinct ova.
binturong (*Arctictis binturong*) slow-moving, arboreal animal in the family Viverridae, native to Southeast Asia. It is small-medium sized with thick, black hair and a prehensile tail. It is sometimes kept as a pet. Called also bearcat.
binuclear [bi-noo'kle-ər] having two nuclei.
binucleation [bi"noo-kle-a'shən] formation of two nuclei within a cell through division of the nucleus without division of the cytoplasm.
binucleolate [bi-noo-kle'o-lāt] having two nucleoli.
bio- word element. [Gr.] *life, living*.
bioaccumulation [bi"o-ə-ku"mu-la'shən] process producing an increase in the concentration of chemicals (usually toxins) in the tissues of organisms with each increase in the trophic level in the food chain. Examples include chlorinated hydrocarbons which reach their greatest concentrations in predatory birds and pelicans, and ciguatera in which the toxins are concentrated in large predatory fish such as gropers, barracudas and mackerel.
bioacoustics [bi"o-ə-koo'stiks] the science dealing with the communicating sounds made by animals.
bioactive [bi"o-ak'tiv] having an effect on or eliciting a response from living tissue.
b. food components constituents in foods or dietary supplements, other than those needed to meet basic nutritional needs, that are responsible for changes in health status.
bioaeration [bi"o-ār-a'shən] a modification of the activated sludge method of purifying sewage.
bioamine [bi'o-ə-mēn"] biogenic amine.

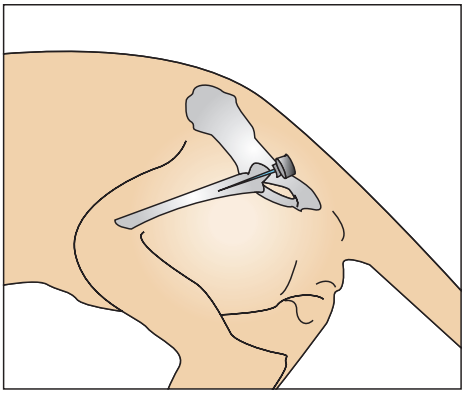


B-23: Field of vision of predatory animals.
From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.

bioaminergic [bi"o-am"in-ur'jik] of or pertaining to neurons that secrete biogenic amines.
bioassay [bi"o-as'a] determination of the active power of a drug sample by comparing its effects on a live animal or an isolated organ preparation with those of a reference standard.
bioavailability [bi"o-ə-vāl"ə-bil'ĭ-te] the degree to which a drug or other substance becomes available to the target tissue after administration.
biobullet a technique and equipment for vaccinating and treating wild animals without catching them. Consists of hollow bullets made of hydroxypropylcellulose which melts in the warmth of living tissue. Bullet discharged from a 'gun' has low impact velocity and poor penetration. The payload of each bullet is about 250 mg.
biochanin A the 4-methyl ether of genistein, an estrogenic substance found in rye grasses and clovers.
biochemical oxygen demand (BOD) [bi"o-kem'ĭ-kəl] the amount of oxygen required in a specified period to decompose organic matter at a temperature of 68°F (20°C). Used to assess sewage effluent.
biochemistry [bi"o-kem'is-tre] the chemistry of living organisms and of their chemical constituents and vital processes.
biocidal [bi"o-sī'dəl] destructive to living organisms.
biocide [bi'o-sīd] destructive to organisms including bacteria (bactericide), fungi (fungicide), amebae (amebicide), viruses (viricide).
bioclimatogram a graph representing the sum of two climatic variables, e.g. temperature, rainfall for a particular geographical locality for a specified period, with measurements taken at regular intervals, usually monthly. The common usage is to superimpose biological data, such as fungal spore counts on pasture, on the graph.
bioclimatology [bi"o-kli"mə-tol'ə-je] the science devoted to the study of the effects on living organisms of conditions of the natural environment (rainfall, daylight, temperature, air movement) prevailing in specific regions of the earth. See also **biometeorology**.
biocompatibility [bi"o-kom-pat"ĭ-bil'ĭ-te] the quality of not having toxic or injurious effects on biological systems.
biodegradable [bi"o-de-grād'ə-bəl] susceptible to degradation by biological processes, as by bacterial or other enzymatic action.
biodegradation [bi"o-deg"rə-da'shən] the series of processes by which living systems render chemicals less noxious to the environment.
biodynamics [bi"o-di-nam'iks] the scientific study of the nature and determinants of the behavior of all organisms, including humans.
bioelectricity [bi"o-e"lek-tris'ĭ-te] the electrical phenomena that appear in living tissues, as that generated by muscle and nerve.
bioenergetics [bi"o-en"ər-jet'iks] section of biochemistry concerned with the mechanisms whereby the energy released from the oxidation of substrates or the absorption of light can be used to drive thermodynamically unfavorable reactions such as the synthesis of ATP from ADP and Pi, or the accumulation of ions across membranes.
bioenergetic medicine [bi"o-en"ər-jet'ik] an alternative medicine system which uses energetic frequencies for the diagnosis, prevention and treatment of disease. It includes acupuncture, homeopathy, lasers and magnetic field therapy.
bioequivalence [bi"o-e-kwiv'ə-ləns] the relationship between two preparations of the same drug in the same dosage form that have a similar bioavailability.
biofilm [bi'o-film"] a structured community of bacterial cells enclosed in a self-produced polymeric matrix and adherent to an inert or living surface, such as slime and dental plaque. Allows survival in a hostile environment and results in greater resistance to antibiotics, disinfectants and clearance by host defense mechanisms. Because of their aggregate size, biofilms are not susceptible to macrophage phagocytosis. Important in the persistence of organisms such as *Listeria monocytogenes* in dairy plant equipment and in the genesis of persistent infections such as chronic mastitis.
b. associated proteins (BAP) a novel family of proteins which are important for biofilm formation by both gram-positive and gram-negative bacteria.
biogenesis [bi"o-jən'ə-sis] 1. origin of life, or of living organisms. 2. the theory that living organisms originate only from other living organisms.
biogenic [bi"o-jen'ik] having the property of originating in a biological process.

VetBooks.ir

b. amine an amine neurotransmitter, such as epinephrine, norepinephrine, serotonin or dopamine.
endogenous b. amines occur naturally in the body, e.g. epinephrine, norepinephrine.
biogeography [*bi"o-je-og'rə-fe*] scientific study of the geographic distribution of living organisms.
bioglass [*bi'o-glas*] a glass-ceramic biomaterial used for implants.
bioimplant [*bi"o-im'plant*] denoting a prosthesis made of biosynthetic material.
bioinformatics [*bi"o-in"for-mat'iks*] a scientific discipline in which information technology is applied to molecular biology in order to characterize living organisms at the molecular level.
biokinematics [*bi"o-kin"ə-mat'iks*] the study of the movements of the animal body. See also **biokinetics**.
biokinetics [*bi"o-kĭ-net'iks*] 1. the study of the forces involved in movements of the body; the motions caused by the operation of an unbalanced system of forces. 2. the science of the movement of tissue and related phenomena that occur during the development of organisms.
biolistics the use of DNA-coated pellets, fired at high speed, to place DNA into plant and animal cells.
biologic, biological [*bi-o-loj'ik, bi-o-loj'ĭ-kəl*] 1. pertaining to biology. 2. a medicinal preparation made from living organisms and their products; these include serums, vaccines, etc.
b. clock the physiological mechanisms which govern the rhythmic occurrence of certain biochemical, physiological and behavioral phenomena in living organisms. See also biological **rhythm**.
b. control control of a parasite by making use of its natural enemies, especially other pests. The target may also be a vector or a reservoir for infection.
b. data usually comprise a list of vital statistics about an animal or plant species, recording such things as preferred growth medium, temperature and humidity and details of the internal milieu including blood pH, normal blood electrolytes and the like.
b. environment includes the influence of all biological factors such as warmth, moisture and humidity, but also the plant ecosystem in which the animal lives and the associated populations of vertebrates and invertebrates that may compete for food and space, and may also act as reservoirs for infectious diseases.
b. filters are used for the treatment of sewage effluent. They comprise a column of stones or plastic pieces which become covered with bacteria which degrade the organic matter in the effluent.
b. response modifiers therapeutic agents used to increase or optimize immune responses. Includes immunomodulators, immunoaugmentators, immunoadjuvants, immunostimulators and immunopotentiators.
b. significance is an estimate of the biological importance of a statistical or apparent causal association between two variables, e.g. feed supply and the occurrence of bovine ketosis. The estimation takes into account the possible biological relationship between the two; an estimate of statistical significance would take only the mathematical relationship into account.
b. value (BV) relationship between the amount of nutrient absorbed and the amount utilized by the body. Expressed as a percentage.
biologist [*bi-ol'ə-jist*] a specialist in biology.
biology [*bi-ol'ə-je*] scientific study of living organisms. See also **biologic**.
radiation b. scientific study of the effects of ionizing radiation on living organisms.
bioluminescence [*bi"o-loo"mĭ-nes'əns*] chemoluminescence occurring in living cells.
biomarker [*bi'o-mahr"kər*] a biological substance or property used as an indirect indicator of normal or abnormal processes in the body, which includes the diagnosis or progression of disease and response to treatment.
biomass [*bi'o-mas*] the amount or entire assemblage of living organisms of a particular region, considered collectively.
biomaterial [*bi"o-mə-tēr-e-əl*] a non-viable material used in a medical device intended to interact with biological systems. Includes both fixed tissues and synthetic materials, including metals, ceramics and polymers. See also biological **implant**.
biome [*bi'ōm*] a large, distinct, easily differentiated community of organisms in a major ecological region.
biomechanical therapy [*bi"o-mə-kan'ĭ-kəl*] includes massage and spinal manipulation.
biomechanics [*bi"o-mə-kan'iks*] the application of mechanical laws to living structures.
biomedicine [*bi"o-med'ĭ-sin*] clinical medicine based on the principles of the natural sciences (e.g. biology, biochemistry).
biomembrane [*bi"o-mem'brān*] any membrane, e.g. the cell membrane, of an organism.
biometeorology [*bi"o-me"te-or-ol'ə-je*] that branch of epidemiology that deals with the effects of physical environmental factors such as rate of air exchange, barometric pressure, rainfall and humidity on living organisms.
biometrics, biometry [*bi"o-met'riks, bi-om'ə-tre*] the application of statistical methods to biological data.
biomicroscope [*bi"o-mi'krə-skōp*] a microscope for examining living tissue in the body. See also slit **lamp**.
biomicroscopy [*bi"o-mi-kros'kə-pe*] microscopic examination of living tissue in the body.
biomolecule [*bi"o-mol'ə-kūl*] a molecule produced by living cells, e.g. a protein, carbohydrate, lipid or nucleic acid.
bionecrosis [*bi"o-nə-kro'sis*] see **necrobiosis**.
bionics [*bi-on'iks*] scientific study of functions, characteristics and phenomena observed in the living world, and application of knowledge gained to nonliving systems.
biophase the period during which an effective concentration of a drug is maintained in the vicinity of its site of action.
biophasic pertaining to the biophase of a drug.
b. availability the characteristic of a drug which determines its biophase.
b. concentration the concentration of a drug at the site at which it exerts its effect, that is in the immediate vicinity of its receptor site.
biophysics [*bi-o-fiz'iks*] the science dealing with the application of physical methods and theories to biological problems.
biophysiology [*bi"o-fiz-e-ol'ə-je*] that portion of biology including organogenesis, morphology and physiology.
bioplasm [*bi'o-plaz"əm*] see **plasmogen**.
biopolymer [*bi"o-pol'ĭ-mər*] any protein or nucleic acid produced by a living organism.
biopsy [*bi'op-se*] removal for examination, usually microscopic, of tissue from the living body. Biopsies are usually taken to determine whether a tumor is malignant or benign; however, a biopsy may be a useful diagnostic aid in other disease processes such as infections.
aspiration b. biopsy in which tissue, or fluid containing cells, is obtained by application of suction through a needle attached to a syringe. The aspirate is usually smeared onto a microscope slide for cytological examination, but tissue fragments may be histologically processed. See also bone marrow biopsy (below).
bite b. instrumental removal of a fragment of tissue. See endoscopic biopsy (below).
bone marrow b. obtaining a sample of bone marrow, usually by needle aspiration, from a long bone, rib or sternum, for cytological or histological examination. See aspiration biopsy (above) and sternal biopsy (below).
brush b. removal of cells and tissue fragments using a brush with stiff bristles (introduced through an endoscope). Effective in obtaining tissue samples from inaccessible places such as the renal pelvis.



B-24: Needle aspiration of bone marrow.
From Taylor SM, Small Animal Clinical Techniques. Saunders, 2010.

VetBooks.ir

closed b. one carried out without access through an open incision such as a laparotomy. An example is a percutaneous, fine needle aspirate.
cone b. biopsy in which an inverted cone of tissue is excised, as from the uterine cervix.
cytological b. obtaining specimens of cells by various methods including irrigation of a tubular organ.
b. dart an alternative to immobilization of large and wild animals; a dart which cuts a skin biopsy, then falls out. Useful for DNA sampling.
endoscopic b. removal of tissue by appropriate instruments with the visual aid of an endoscope.
excisional b. biopsy of tissue removed from the body by surgical cutting or resection of the entire lesion.
exploratory b. a combination of exploratory surgery to determine size and location of a lesion and the taking of a biopsy.
fine needle b. see needle biopsy (below).
hepatic b. biospy taken of the liver which may be by transperitoneal incision, more commonly by percutaneous needle or trocar and cannula technique.
incisional b. biopsy of a selected portion of a lesion.
needle b. biopsy in which the tissue sample is obtained by passing a fairly large bore, thin-walled needle into the tissue and detaching the sample by a combination of suction and rotation. A special needle is usually used (see **Tru-Cut biopsy needle**).
punch b. see **punch** biopsy, **trephine**.
Robson–Heggers b. a procedure for the collection of a piece of tissue from an infected wound in order to determine the extent and the nature of the infection.
sternal b. biopsy of bone marrow of the sternum removed by puncture or trephining (see also **sternal** puncture). Used in horses.
surface b. sample of cells scraped from the surface of a lesion or obtained by impression smears.
surgical b. one obtained by surgical excision.
synovial b. by a needle biopsy technique or through an arthrotomy incision using special forceps for a bite biopsy.
total b. see excisional biopsy (above).
ultrasound-guided b. use of ultrasonography to guide the passage of a needle or biopsy instrument into an internal organ or lesion.
wedge b. one obtained during a surgical procedure in which a wedge-shaped piece of tissue is removed from the lesion, usually with the aid of a scalpel.

bioptome [bi'op-tōm"] a cutting instrument for taking biopsy specimens.

bioreactor a container in which living organisms carry out a biological reaction.

bioreversible [bi"o-re-vur'sĭ-bəl] capable of being changed back to the original biologically active chemical form by processes within the organism; said of drugs.

biorhythm [bi'o-rith-əm] see biological **rhythm**.

biosafety [bi"o-sāf'te] the safe handling of biological materials, particularly infectious agents which are classified on the basis of degree of risk to humans working with them and includes definition of biosafety levels for handling such agents. Level 1: standard microbiological practices; Level 2: Level 1 plus laboratory coats, decontamination of waste, restricted access, gloves, biohazard warning signs; Level 3: Level 2 practices plus special clothing and controlled access; Level 4: Level 3 practices plus change room access where all street clothing and accessories are removed and replaced with laboratory clothing or special half or full suits with independent air supply; all waste is decontaminated and personnel shower on exit.

bioscience [bi"o-si'ens] the study of biology wherein all the applicable sciences (physics, chemistry, etc.) are applied.

biosecurity security from transmission of infectious diseases, parasites and pests.

biosphere [bi'o-sfēr] 1. that part of the universe in which living organisms are known to exist, comprising the atmosphere, hydrosphere and lithosphere. 2. the sphere of action between an organism and its environment.

biostatics [bi"o-stat'iks] the science of the structure of organisms in relation to their function.

biostatistics [bi"o-stə-tis'tiks] **vital** statistics.

biosynthesis [bi"o-sin'thə-sis] creation of a compound by physiological processes in a living organism.

Biot's respirations [byo] a type of respiration associated with spinal meningitis and other central nervous system disorders; respirations are faster and deeper than normal, interspersed with abrupt pauses in breathing.

biota [bi-o'tə] all the living organisms of a particular area; the combined flora and fauna of a region.

biotechnology [bi"o-tek-nol'ə-je] the application for industrial purposes of scientific, biological principles. The most modern examples are the use of recombinant DNA technology and genetic engineering to manufacture a wide variety of biologically useful substances such as vaccines and hormones by expression of cloned genes in various host cell systems including bacteria, yeast and insect cells.

Biotechnology and Biological Sciences Research Council (BBSRC) provides government funding for basic and strategic research in the UK. Formed in 1994 by incorporation of the former Agricultural and Food Research Council with the biotechnology and biological sciences programs of the former Science and Engineering Research Council.

biotelemetry [bi"o-tə-lem'ə-tre] the recording and measuring of certain vital phenomena occurring in living organisms that are at a distance from the recording device.

biotic [bi-ot'ik] 1. pertaining to life or living organisms. 2. pertaining to the biota.
b. community the assemblage of living things, including animals, plants and bacteria, which inhabit a specific biotope.
b. potential the theoretical reproductive potential of a population when unimpeded by the environment.

biotin [bi'o-tin] a member of the vitamin B complex, required by or occurring in all forms of life tested; prosthetic group of carboxylase enzymes acetyl-CoA carboxylase I and II, pyruvate carboxylase, methylcrotonyl-CoA carboxylase, propionyl-CoA carboxylase. Called also vitamin H, coenzyme R.
b. nutritional deficiency natural animal diets are unlikely to be deficient in biotin. Experimental deficiency causes paralysis in calves. In pigs the syndrome includes alopecia, dermatitis and cracking of the hooves. The vitamin may be an important factor in the maintenance of pig, cattle and horse hoof health. See also porcine **footrot**. Deficiency in dogs and cats is associated with dry scurfy skin, alopecia, especially around the eyes, and a papulocrustaceous dermatitis. It can be caused by a diet with a very high content of uncooked egg whites. See also **avidin**.

biotinylation [bi"o-tin"ə-la'shən] attachment of biotin to another molecule such as a protein.

biotope an area of land surface that provides uniform conditions over its entire surface for animal and plant life.

biotoxicology [bi"o-tok"sĭ-kol'ə-je] scientific study of poisons produced by living organisms, their cause, detection and effects, and treatment of conditions produced by them.

biotoxin [bi'o-tok"sin] a poisonous substance produced by a living organism.

biotransformation [bi"o-trans"for-ma'shən] the series of chemical alterations of a compound (e.g. a drug) occurring within the body, as by enzymatic activity. The metabolism of a drug may produce products that have different effects to those of the parent drug. This biotransformation may differ markedly between animal species and affect the dose rate to be used, or the usefulness of the drug.
neonatal b. is marked by a deficiency of some enzymes necessary for the biotransformation of drugs.
toxic b. enzymatic changes of nontoxic to toxic substances, usually in the liver.

biotype [bi'o-tīp] a group of individuals having the same genotype. Breeds of animals are obvious biotypes. See also **biovar**.

biovar [bi'o-vahr] a group of strains of a species of microorganisms having differentiable biochemical or physiological characteristics.

biovular [bi-ov'u-lər] binovular.

biparental [bi"pə-ren'təl] derived from two parents, male and female.

biparous [bip'ə-rəs] producing two ova or offspring at one time.

biped [bi'ped] having two feet, two-footed, as in humans, most hominids, most birds and dinosaurs. See also **quadruped**, **tetrapod**.

bipenniform [bi-pen'ĭ-form] doubly feather-shaped; said of muscles whose fibers are arranged on each side of a tendon like barbs on a feather shaft.

biphenyl [*bi-fen'əl*] polybrominated and polychlorinated biphenyls are widely used industrial chemicals, as flame retardants, heat transfer agents and electrical insulators.
b. poisoning these chemicals are not known to produce illness in the average environment, but they accumulate in fat and have a very slow rate of excretion and biodegradability. Experimental poisoning causes diarrhea, poor weight gain, growth retardation and abortion.
bipolar [*bi-po'lər*] 1. having two poles. 2. pertaining to both poles.
b. cell cell within the inner nuclear layer of the neurosensory retina.
Bipolaris [*bi-po-lar'is*] 1. a fungus which elaborates a toxin (sterigmatocystin) capable of producing hepatic carcinoma; includes *B. spicifera*. 2. a fungal cause of cutaneous chromomycosis in animals; the asexual form of *Cochliobolus* spp. Previously known as *Drechslera*, *Curvularia* and *Helminthosporium* spp.
bipotentiality [*bi"po-ten"she-al'ĭ-te*] ability to develop or act in either of two different ways.
biproduct [*bi'prod'əkt*] by-product.
BIPS barium impregnated polyethylene sphere.
bipyridyl herbicides see **paraquat**, **diquat**.
bipyridines inhibit phosphodiesterase causing an increase in myocardial contractility and to some extent arteriolar dilation. Used in treatment of heart failure in dogs and cats. See also **amrinone**, **milrinone**, **pimobendan**.
biramous [*bi-ra'məs*] having two branches.
Birbeck granule a 'tennis-racquet' organelle characteristic of human Langerhans cells; in animals occur only in Langerhans cells in cattle.
birchwood a wood whose shavings are favored in Europe for the smoking of meats.
bird any feathered vertebrate. See also **feather**, **avian** and under specific groupings such as **companion animal**, **game**, **raptor**, **ratite** birds and **waterfowl**.
b. bug a number of bugs in the family Cimicidae (order Hemiptera) which infest birds. See ***Haematosiphon***, ***Oeciacus vicarius***.
b. dog a dog trained to hunt birds.
domesticated b. includes groups of birds brought under close control by humans, for purposes of communication (e.g. pigeons), clothing and furnishing (e.g. duck, peacock), sport (e.g. hawks), garden ornaments (e.g. peacock), companionship (e.g. canary) and food (e.g. commercial poultry, turkey, duck, goose used for meat and eggs).
b.-fancier's lung a pulmonary disease in humans caused by an acquired inhalant hypersensitivity to birds usually kept as pets or commercially so that large numbers and high exposure is likely. The antigen is believed to be in the dander or droppings of pigeons, budgerigars, chickens and turkey. Called also bird-breeder's lung, pigeon-breeder's lung. See also **farmer's lung**.
b. malaria see ***Plasmodium***.
b. of prey see **raptor**.
b. repellent materials used to repel birds and avoid losses to crops. Usually refers to chemicals which are mixed with grain. If mammals ingest the baits accidentally they may be poisoned. See also **4-aminopyridine**.
bird-flower *Crotalaria laburnifolia*.
bird of paradise disease see ***Caesalpinia***.
bird-tongue see **microglossia**.
Bird ventilator a brand of automatic or patient-triggered machine used in veterinary anesthesia by interposing a bag-in-bottle; primarily of historical interest.
Birdsville horse disease see ***Indigofera*** *linnaei*.
birefractive [*bi"re-frak'tiv*] doubly refractive.
birefringence [*bi"re-frin'jəns*] the quality of transmitting light unequally in different directions.
Birman a longhaired breed of cat with blue eyes and a light body with darker points (ears, face, legs and tail) in colors similar to the Siamese. The paws are white ('gloves'). Called also Sacred Cat of Burma. The breed is affected by an inherited **axonopathy**.
Birnaviridae [*bur'nə-vir"ĭ-de*] a family of nonenveloped, icosahedral viruses, containing a genome of two segments of double-stranded RNA. There are three genera, *Aquabirnavirus*, which causes **infectious** pancreatic necrosis in trout, *Avibirnavirus*, which causes infectious bursal disease in chickens, and *Entomobirnavirus*, which infects flies.
birnavirus [*bur'nə-vi"rəs*] a member of the family ***Birnaviridae***.
birth [*bərth*] a coming into being; the act or process of being born. See also **parturition**.
b. cohort see **cohort**.
b. control a term rarely used in dealing with animals. Instead see population **control**, **contraception**.
b. defects see **congenital** defects.
b. difficulties dystocia.
b. injury occurs to the fetus during birth. Includes rib fracture and meningeal hemorrhage.
b. interval the interval between succeeding parturitions. See also **calving** interval.
multiple b. the birth of two or more offspring produced in the same gestation period.
b. order the chronological order of births in a multiple birth. May have significance in causing stillbirths if the intervals between births are prolonged because of inertia.
premature b. expulsion of the fetus from the uterus before termination of the normal gestation period, but after independent existence has become a possibility.
b. process comprises maturation of the fetus, relaxation of the bony pelvis and associated ligaments, softening and relaxation of the cervix, vagina, vulva and perineum, correct disposition of the fetus, contractions of the uterine myometrium and finally the only component under voluntary control, contraction of the abdominal muscles.
b. rate the number of births during one year for the total population (crude birth rate), for the female population (refined birth rate), or for the female population of reproductive age (true birth rate). Not a term much used with reference to animals. See **calving**, **lambing** rate.
b. size stature, including height at withers, crown to tail head length at birth.
b. weight the weight at birth. A significant determinant of survival in any species and of the occurrence of dystocia. See also **prolonged gestation**.
birth-injured fetus includes peroneal nerve paralysis, sciatic nerve injury, hip or other joint traumatic dislocation, vertebral or rib fracture, intracranial or other internal hemorrhage, liver rupture, subcutaneous edema.
birthwort ***Aristolochia*** *clematitis*.
Bis-GMA a dental composite resin material.
bis in die [L.] *twice a day;* abbreviated b.i.d.
bisacodyl [*bis-ak'ə-dəl, bis"ə-ko'dəl*] a diphenylmethane stimulant cathartic.
bisacromial [*bis-ə-kro'me-əl*] pertaining to the two acromial processes.
biscuit [*bis'kət*] in dogs, a grayish-yellow coat color.
biscuit of hay [*bis'kət*] see **hayflake**.
bisection [*bi-sek'shən*] division into two parts by cutting.
bisexual [*bi-sek'shoo-əl*] 1. having gonads of both sexes. 2. hermaphrodite. 3. having both active and passive sexual interests or characteristics. 4. capable of the function of both sexes. 5. both heterosexual and homosexual. 6. a patient which is both heterosexual and homosexual. 7. of, relating to, or involving both sexes, as bisexual reproduction.
bisexuality [*bi-sek"shoo-al'ĭ-te*] 1. the condition of being bisexual or of being a bisexual. 2. hermaphroditism.
bisferious [*bis-fe're-əs*] dicrotic; having two beats.
bishoping altering the table of the incisor teeth in a horse so that the horse appears younger. A hollow is gouged and the lining burned with a hot iron or stained with silver nitrate to give the appearance of an infundibulum.
bishop's weed see ***Ammi*** *majus*.
bishydroxycoumarin [*bis"hi-drok"se-koo'mə-rin*] dicoumarol.
***N*-bis(2-hydroxypropyl)nitrosamine** a chemical capable of increasing the rate of occurrence of thyroidal neoplasms.
bisiliac [*bis-il'e-ak*] pertaining to the two iliac bones or to any two corresponding points on them.
bismuth (Bi) [*biz'məth*] a chemical element, atomic number 83, atomic weight 208.980. See Table 4. Several insoluble salts, including the subcarbonate and subnitrate, have been used in the management of inflammatory diseases of the stomach and intestines. Toxic doses cause kidney damage.
b. glycollylarsanilate see **glycobiarsol**.
b. subgallate used topically in wound powders and in the treatment of metritis.

VetBooks.ir

VetBooks.ir

b. subsalicylate, b. salicylate an insoluble salt, used orally in the treatment of diarrhea and as an antacid. There is liberation of salicylic acid which acts against prostaglandin synthetase.

bismuthosis [*biz"mə-tho'sis*] chronic bismuth poisoning, with anuria, stomatitis, dermatitis and diarrhea.

bison bovids in the genus *Bison* with shaggy brown hair and characterized by massive development of forequarters with a large hump on the shoulders, and short, curved horns. The American bison (*B. bison*), is more often, but incorrectly, called a buffalo or the plains buffalo. Bison are susceptible to tuberculosis and brucellosis and are potentially important in the epidemiology of those diseases in contact cattle populations.

European b. *Bison bonasus* similar to the North American bison, but smaller and with other, minor anatomical differences. Only small numbers exist in eastern Europe; an endangered species. Called also wisent.

wood b. a subspecies of *Bison bison* (*B. b. athabascae*) native to the northern areas of Canada; larger than *B. bison*, it is an endangered species.

bison-cattle hybrid see **beefalo**.

2,3-bisphosphoglycerate, diphosphoglycerate [*bis-fos"fo-glis'ər-āt*] a product of glucose metabolism; binds strongly to deoxyhemoglobin. High concentrations are found in erythrocytes. Regulates oxygen-carrying capacity of hemoglobin.

b. mutase an enzyme in the Embden–Meyerhof pathway of glycolysis in eyrthrocytes which converts 1,3-bisphosphoglycerate, an intermediate in glycolysis, to 2,3-bisphosphoglycerate. Inherited deficiency results in a hemolytic anemia. Called also diphosphoglycerate mutase.

b. pathway the sequence of reactions for the breakdown of glucose in erythrocytes in which the reaction catalyzed by phosphoglycerate kinase (the first ATP-generating step in glycolysis) is bypassed. Provides 2,3-bisphosphoglycerate for regulation of oxygen transport by hemoglobin, but there is no net yield of ATP. Called also Rapoport–Luebering cycle.

bisphosphonates [*bis-fos'fə-nāts*] calcium-regulating drugs which inhibit bone resorption; used in the treatment of hypercalcemia in dogs and cats. Previously called diphosphonates and biphosphonates.

bistoury [*bis'tŏŏ-re*] a long, narrow, straight or curved surgical knife used in opening sinuses and fistulae, incising abscesses, etc.

Udall's teat b. designed for opening stenosed teat sphincters. The point is blunt and rounded, the cutting edge is inset from the true edge of the blade and is about 0.5 inches long. The bistoury is inserted into the canal and withdrawn sharply so as to incise the scar tissue vertically. Three or four incisions are made in this way.

bisulfate [*bi-sul'fāt*] an acid sulfate.

bit 1. the detachable piercing piece of a drill. 2. the metal part of the bridle that goes into the horse's mouth and over the tongue; used to restrain and direct the horse by exerting pressure on the attached reins. There are many patented designs, each with its devotees. The simplest is a plain bar but the common ones are jointed in the middle. The variations include side bars and curb chains which allow greater pressure to be put on the animal's jaw

circular b. encircles the lower jaw and is connected by a standing martingale to the girth. It prevents the horse throwing up its head and rearing. Used also in a head harness for leading an active stallion.

snaffle b. any bit jointed in the middle.

bitch female dog. See also **dog**.

brood b. any female dog used for breeding; called also breeding bitch.

puppy b. a female dog from 6–12 months of age; used to define a group for competition within the showring.

bite [*bīt*] 1. seizure with the teeth. 2. a wound or puncture made by a living organism. 3. the position of upper and lower teeth in relation to each other when the mouth is closed. See also **crossbite**, **overbite**, **biting**.

animal b. (2) trauma caused by teeth and usually heavily contaminated with microorganisms. In countries where rabies is present the additional consideration is to ensure that the biter is not rabid, or if there is uncertainty to decide on whether postbite treatment or vaccination would be desirable. See also **cat**-bite abscess, **cat-scratch disease**, **fighting**.

insect b. (2) depending on the nature of the insect and the site, the tissue response may be minimal to extensive, particularly when a hypersensitivity reaction is involved. Pruritus is also variable.

level b. (3) the upper and lower incisors meet edge-to-edge.

open b. (3) upper and lower incisors fail to meet when the mouth is closed.

overshot b. (3) see **brachygnathism**.

pincer b. (3) upper and lower incisors make contact on their edges rather than overlapping when the mouth is closed.

reverse scissor b. (3) the labial surface of the lower incisors makes contact with the lingual surface of the upper incisors when the mouth is closed. Called also anterior crossbite.

scissor b. (3) the lingual surface of the upper incisors contacts the labial surface of the lower incisors when the mouth is closed. Generally, a normal bite in carnivores.

b. wound (2) it is often necessary to diagnose that a wound has in fact been caused by a bite. This may be aided by observation of typical puncture wounds, perhaps with extravasations of blood in the subcutaneous tissues, by parallel rake marks, by a matching pair of wounds made by the upper and lower jaws of the biter.

bitemporal [*bi-tem'pə-rəl*] pertaining to both temples or temporal bones.

bithionol a bacteriostatic agent especially effective against gram-positive cocci; formerly used in the formulation of surgical soaps. Also has anthelmintic and fungicidal properties.

b. sulfoxide an effective cestocide. Also used as a fasciolicide, usually in combination with other compounds because of its poor efficiency against immature flukes. It is now superseded as an anthelmintic.

Bithynia [*bĭ-thin'e-ə*] a genus of snails that act as intermediate hosts for the miracidia of *Opisthorchis* spp., the bile duct flukes.

biting [*bī'ting*] pertaining to the characteristic behavior of performing a bite.

b. pattern the pattern of distribution of bites, or of diseases transmitted by insect bites, which may suggest the identity of the biter.

Bitis arietans [*bi'tis*] see puff **adder**.

bitrochanteric [*bi"tro-kan-ter'ik*] pertaining to both greater trochanters.

bitter [*bit'ər*] 1. an austere and unpalatable taste like that of quinine. 2. a medicinal and culinary agent used as a tonic, alterative or appetizer.

bitter damsoe [*bit'ər*] *Simarouba amara*.

bitterappel ***Solanum*** *incanum*, *S. kwebense*.

bitterbush, bitterbos, bitterkaroo [Af.] see ***Chrysocoma ciliata***.

bitters [*bit'ərz*] reflex sialogogues. Included in the group are gentian, quassia, nux vomica and quinine.

bittersweet [*bit'ər-swēt*] ***Solanum*** *dulcamara*. Called also woody nightshade.

bitterweed [*bit'ər-wēd*] see ***Hymenoxys*** *odorata*, ***Helenium***.

bitumen a series of natural and artificial dry petroleum products. When combined with pitch and used as a flooring it may contain sufficient phenol to cause poisoning in pigs fed on the floors.

biuret [*bi'u-rət*] a urea derivative; its presence is detected after addition of sodium hydroxide and copper sulfate solutions by a pinkish-violet color (protein test) or a pink and finally a bluish color (urea test).

bivalent [*bi-va'lənt*)] 1. having a valence of two. 2. denoting homologous chromosomes associated in pairs during the first meiotic prophase.

bivalve [*bi'valv*] shellfish members of the Class Bivalvia. Molluscs enclosed between two shells which are hinged together. Includes oysters, clams, arkshells, mussels. Called also lamellibranch.

bivariate statistic a numerical value which indicates the relationship between two individual variables, e.g. correlation between fiber intake and butterfat content of milk.

biventral [*bi-ven'trəl*] 1. having two bellies. 2. digastric muscle.

biventricular [*bi"ven-trik'u-lər*] pertaining to or affecting both ventricles of the heart.

Bivitellobilharzia a genus of the family Schistosomatidae of blood flukes. Includes *B. loxodontae* and *B. nairi* (elephant; portal vein).

bizygomatic [*bi"zi-go-mat'ik*] pertaining to the two most prominent points of the two zygomatic arches.

Bk chemical symbol, *berkelium*.

VetBooks.ir

black [*blak*] 1. without color, at the opposite end of the spectrum to white; the color of soot. 2. a universally accepted coat color. In horses, solid black with no pattern in it, the muzzle is black, and there may be white markings on the lower limbs and the head.

Black and tan coonhound a medium to large shorthaired, scent hunting dog developed in the USA. It has a black coat and tan markings on the face, legs, chest and toes; the ears are exceptionally large and pendulous and the tail is long. The breed is affected by hip dysplasia, polyradiculoneuritis (coonhound paralysis) and hemophilia B.

Black and tan terrier see **English toy terrier**.

black baldy cattle with black body and a white face that results from breeding Hereford cows with Angus bulls. Considered to have excellent growth and carcass characteristics.

Black Bengal see **Bengal goat**.

black bindweed see ***Fallopia convolvulus***.

black blowfly see ***Phormia***.

black box warning prominent warning labels on packages for certain presciption medications in the USA. These are typically the result of serious adverse reactions reported post-marketing or post-approval.

black cohosh see ***Actaea*** *spicata*.

black death see **plague**.

black death disease high mortality disease in farmed shrimp caused by ascorbic acid deficiency. Juvenile shrimp develop large, black, necrotic foci in the gills, subcutis, walls of the stomach and hindgut.

black disease see **infectious** necrotic hepatitis.

black-eyed Susan ***Rudbeckia***.

black fell terrier see **Patterdale terrier**.

black fever see **leishmaniasis**.

black gill disease nonspecific term for dark gills in shrimp; causes include fouling of the water with sediments, *Fusarium solani* infection, cadmium poisoning and ciliate (apostome) infection.

black henbane see ***Hyoscyamus niger***.

black-legged tick see ***Ixodes***.

black livers see acquired **melanosis**.

black locust see ***Robinia pseudoacacia***.

black mastitis see black **mastitis**.

Blackmouth cur an early American mountain breed of dogs, noted as a silent hunter. The coat is usually short and dense but can vary between individuals.

black patch disease a fungus disease of legumes caused by *Rhizoctonia leguminicola*.

black patch necrosis darkening of skin between caudal and marginal fin rays in farmed Dover Sole infected with *Flexibacter columnare*-like bacteria. Affected skin swells then sloughs, followed by deep ulceration and death.

black pith a butcher's term for melanosis of the meninges.

black pox see **black spot**.

black pudding a steamed or boiled food preparation with a farinaceous base and containing whole blood.

black puff-ball ***Scleroderma*** *citrinum*.

black quarter see **blackleg**.

black roly-poly ***Sclerolaena*** *muricata*.

Black Russian terrier a large, powerful dog developed by the Russian military and used as guard dogs. The coarse, tousled coat is always black. In the UK, called the Russian black terrier.

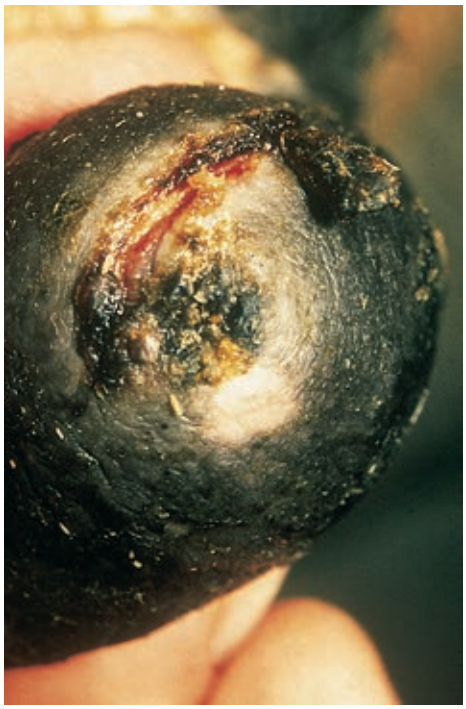
black scour worm see ***Trichostrongylus***.

black scours see **winter dysentery**, **swine** dysentery.

black soil blindness mycotoxicosis of cattle in northwestern Australia caused by grazing *Astrebla* spp. (Mitchell grasses) pasture in which the seed heads and other parts of the plants are parasitized by coral-like fungal bodies produced by *Corallocytostroma ornicopreoides*. Characterized by blindness, ruminoreticulitis, and liver and kidney damage and its restriction to high rainfall periods on the black soil plains on which the grass dominates the pasture.

black soil itch see ***Eutrombicula*** *sarcina*.

black spot 1. lesions on the teats of cows and almost always confined to the tip and including the orifice of the teat sinus. They are deep ulcers containing granulation tissue and usually a black spot. Milk flow is impeded and the lesion is very painful. They are caused by excessive suction during milking although *Staphylococcus aureus* is usually recoverable from the lesions. Called also black pox. 2. a fungal infection of chilled beef caused by *Cladosporium herbarum* and characterized by black spots on the surface of the meat.



B-25: Black spot lesion on the teat of a cow. From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

black spot disease see ***Posthodiplostomum*** *cuticula*.

black thorn + Molopo spp. moth cocoon fiber see ***Acacia*** *mellifera*.

black vomit see **hematemesis**.

black walnut see ***Juglans nigra***.

black water see **azoturia**.

blackboy see ***Xanthorrhoea***.

blackbuck (*Antilope cervicapra*) black antelope, native to India and Pakistan, with long, spiral horns, white eyepatch and white underparts. Called also Indian antelope.

Blackfaced mountain sheep carpetwool English and Scottish sheep; black or mottled face and legs. The Perth type is large framed with medium to heavy wool and the Lanark type is of medium size with shorter wool. The Blackface is the most numerous sheep breed in Britain and utilizes hill and mountain grazing areas. Ewe lambs and old ewes hill grazing areas are moved to lower land farms and bred to a Bluefaced Leicester to produce the Scotch mule ewe, or a Border Leicester to produce the Greyface ewe.

blackhead[1] [*blak'hed*] comedo; a plug of keratin and sebum within the dilated orifice of a hair follicle. The color of blackheads is caused not by dirt but by the discoloring effect of air on the sebum in the clogged pore. Infection may cause the comedo to develop into a pustule or boil.

blackhead[2] [*blak'hed*] a disease of birds especially turkeys caused by the protozoan parasite ***Histomonas*** *meleagridis* and characterized by necrotic lesions in the liver and inflammation and distention of the cecum. Earth worms are important vectors in the life cycle of the parasite.

Blackhead Persian South African, hairy (woolless), fat-rumped, polled mutton sheep; origin of several other similar breeds.

blackleaf 40 a commercially available concentrate of nicotine sulfate used as a parasiticide in horticulture and containing 40% of alkaloidal nicotine.

blackleg [*blak'leg*] an acute, infectious myositis principally of cattle, caused by *Clostridium chauvoei*. With cattle, disease occurs between 6 months to 2 years of age in rapidly growing animals on a high plane of nutrition and the lesion arises without the need for any external injury. Occurs in all ages of sheep with outbreaks predisposed by wounds from shearing, docking, castration, or dystocia. The animal is profoundly toxemic with a high fever and usually a very swollen painful thigh. The skin is gangrenous,

and emphysema can be palpated in the subcutis. Death occurs in 12–36 hours.

false b., pseudo-b. cellulitis and myositis caused by *Clostridium septicum* and *C. novyi*. More commonly called **malignant edema**. Characterized by high fever, severe toxemia and local swelling around a wound with subsequent local gangrene and a high mortality rate.

stable b. see **malignant edema**. Called also gas gangrene.

blacktail condition a disease of fish caused by a protozoan parasite, *Myxosoma* spp., which destroys cartilage in the vertebral column, causing abnormal activity of caudal pigment cells and black discoloration of the tail.

blacktongue [*blak'tung"*] a prominent feature of the severe stomatitis that occurs in dogs from **niacin** nutritional deficiency. Recognition that this condition was responsive to niacin led to identification of the cause of the human disease pellagra.

blackwater fever [*blak'wah"tər*] see **babesiosis**.

blackwood see ***Acacia melanoxylon***.

BLAD bovine leukocyte adhesion deficiency.

bladder [*blad'ər*] a membranous sac serving as a receptacle. See also **gallbladder**, **urinary bladder**.

bladder worm see ***Cysticercus tenuicollis***. Called also long-necked bladder worm.

bladderpod ***Sesbania vesicaria***.

blade [*blād*] scalpel or knife-like instrument used for cutting tissues.

b. method a method of castrating very young pigs in which the skin and fascia in the inguinal area are incised with a scalpel blade to gain access to the spermatic cord.

Blakistonia one of the genera of trapdoor **spiders**.

Blalock [*bla'lok*] Alfred Blalock, an American surgeon.

B. anastomosis a technique for repair of tetralogy of Fallot in which there is an end-to-side anastomosis of the subclavian and pulmonary arteries.

B. ligation a technique for placement of a ligature around the aorta to isolate the ductus arteriosus in the surgical repair of patent ductus arteriosus.

Blanc de Hotot a French breed of large, white rabbits distinguished by black rings around the eyes.

blanch to become pale.

blanket 1. a large area of color, usually over the back, neck and sides, in the coat of dogs. 2. area on an alpaca that begins at the shoulder and runs the full length of the back and down each side and contains the highest quality fleece. It excludes the fiber on the neck, legs, belly and breech.

blanket dry-period treatment treatment of all quarters in all cows in the herd; compare with selective dry period treatment. See also **dry period** treatment.

Blaschenausschlag [Ger.] *blister rash;* see infectious pustular **vulvovaginitis**.

blast [*blast*] 1. an immature stage in cellular development before appearance of the definitive characteristics of the cell; used also as a word termination, as in ameloblast, etc. 2. the wave of air pressure produced by the detonation of high-explosive bombs or shells or by other explosions; it causes pulmonary damage and hemorrhage (lung blast, blast chest), laceration of other thoracic and abdominal viscera, ruptured eardrums, and effects in the central nervous system.

b. cells the precursor cells of bone marrow. See also **myeloblast**, **monoblast**, **rubriblast**, **megakaryoblast**.

blast freezing [*blast*] a method of freezing poultry in which the carcasses are subjected to temperatures of −40°F in a blast tunnel for 2 to 3 hours.

blast(o)- word element. [Gr.] *a bud, budding.*

blastema [*blas-te'mə*] 1. the primitive substance from which cells are formed. 2. a group of cells that will give rise to a new individual, in asexual reproduction, or to an organ or part, in either normal development or in regeneration.

blastocele [*blas'to-sēl*] blastocoele.

blastocoele [*blas'to-sēl*] the fluid-filled central cavity of the blastula.

blastoconidia [*blas"to-ko-nid'e-ə*] the unit of asexual reproduction produced by budding; seen in yeasts such as *Candida* and *Cryptococcus* spp. Called also blastospore.

blastocyst [*blas'to-sist*] the mammalian conceptus in the post-morula stage, consisting of the trophoblast, an inner cell mass, and a central, fluid-filled cavity.

Blastocystis hominis [*blas"to-sis'tis*] a cause of diarrhea in the great apes.

blastocyte [*blas'to-sīt*] an undifferentiated embryonic cell.

blastocytoma blastoma.

blastoderm [*blas'to-dərm*] the layer of cells forming the wall of the blastula.

blastodisc [*blas'to-disk*] the convex structure formed by the blastomeres at the animal pole of an ovum undergoing incomplete cleavage.

blastogenesis [*blas"to-jen'ə-sis*] 1. development of an individual from a blastema, i.e. by asexual reproduction. 2. transmission of inherited characters by the germ plasm. 3. morphological transformation of small lymphocytes into larger cells resembling blast cells on exposure to specific antigens or to non-specific activators such as phytohemagglutin.

blastoid transformation mitosis.

blastoma [*blas-to'mə*] a neoplasm composed of embryonic cells derived from the blastema of an organ or tissue.

blastomatosis [*blas"to-mə-to'sis*] the formation of blastomas; tumor formation.

blastomere [*blas'to-mēr*] one of the cells produced by cleavage of a fertilized ovum.

Blastomyces [*blas"to-mi'sēz*] a genus of pathogenic fungi growing as mycelial forms at room temperature and as yeastlike forms at body temperature; applied to the yeasts pathogenic for humans and animals.

B. brasiliensis former name for ***Paracoccidioides brasiliensis***.

B. coccidioides former name for *Coccidioides immitis*.

B. dermatitidis the species causing North American **blastomycosis**. the sexual stage is *Ajellomyces dermatitidis*.

blastomycete [*blas"to-mi'sēt*] an organism in the genus *Blastomyces*; also, any yeast-like organism.

blastomycin [*blas"to-mi'sin*] a sterile broth filtrate from cultures of *Blastomyces dermatitidis,* used intradermally as a diagnostic test for blastomycosis, but results in dogs are unreliable as the test may be negative in advanced cases and there can be cross-reaction with *Histoplasma* spp.

blastomycosis [*blas"to-mi-ko'sis*] 1. a disseminated or localized infection with *Blastomyces* spp. 2. infection with any yeast-like organism.

cutaneous b. the skin form of North American blastomycosis.

disseminated b. North American blastomycosis in which lesions are present in most internal parenchymatous organs.

equine b. see **epizootic** lymphangitis.

European b. see **cryptococcosis**.

keloidal b. a disease of bottlenosed dolphins and humans. Characterized by the presence of red, hard, smooth cutaneous nodules. Caused by infection with a fungus, *Lacazia loboi*. See also **lobomycosis**.

North American b. infection by *Blastomyces dermatitidis* which causes primary granulomatous or pyogranulomatous lesions in the lungs. Secondarily, lesions may occur in the skin, eyes, bone and elsewhere. A disease of dogs, cats and humans. Food animals in the same environment are not reported to be affected. Although the disease was originally recorded in North America and is endemic in some areas of the USA, it is now known to occur in Central and South America.

South American b. see **paracoccidioidomycosis**.

blastopore [*blas'to-por*] the opening of the archenteron to the exterior of the embryo at the gastrula stage. Called also archistome, anus of Rusconi.

blastospore [*blas'to-spor*] a spore formed by budding, as in yeast. Called also blastoconidia.

blastula [*blas'tu-lə*] the usually spherical body produced by cleavage of a fertilized ovum, consisting of a single layer of cells (blastoderm) surrounding a fluid-filled cavity (blastocoele); it follows the morula stage and precedes the gastrula stage.

blastulation [*blas"tu-la'shən*] conversion of the morula to the blastula by development of a blastocoele.

blaze [*blāz*] a broad white stripe down the face, wider than the nasal bones and including the forehead and all or part of the muzzle. Used in the description of horses.

bleach [*blēch*] common household bleach, often used for its antimicrobial properties, is usually a 3–6% solution of **sodium** hypochlorite.

bleaching powder [*blēch'ing*] calcium hypochlorite used as a bleaching and disinfectant agent. Called also chlorinated lime

(chloride of lime) and used in error in whitewash. Causes skin and eye irritation and enteritis if ingested.

bleb [*bleb*] a large flaccid vesicle, usually at least 0.5 inch in diameter, on a cutaneous, serosal or mucosal surface.

pulmonary b. small pocket of air under the visceral pleura; may be congenital or acquired.

Blechnum a genus of toxic ferns in family Blechaceae; contains an unidentified toxin; causes diarrhea. Called also bungwall fern.

bleed [*blēd*] see **bleeding**.

bleeder [*blēd'ər*] 1. the popular term for an animal who bleeds freely, especially one suffering from a condition in which the blood fails to clot properly such as in **hemophilia**. In horses the term means one which bleeds from the nostrils during a race. Such horses are not allowed to participate in races. See exercise-induced **pulmonary** hemorrhage, **epistaxis**. 2. any large blood vessel cut during surgery.

bleeding [*blēd'ing*] 1. the escape of blood, as from an injured vessel. See also **hemorrhage**. 2. the purposeful withdrawal of blood from a vessel of the body; venesection; phlebotomy. See also **blood sampling**.

buccal mucosal b. time an instrument is used to produce a standardized shallow incision in buccal mucosa of the upper lip. The duration of bleeding that follows is measured as a screening test of primary hemostatsis.

b. disorders see **hemorrhagic** disease, **coagulopathy**.

incomplete b. the carcass of an animal slaughtered for meat which is incompletely bled out has a darker meat and more blood in vessels and the heart cavities than a properly slaughtered animal. This gives it an appearance resembling a fevered carcass.

occult b. escape of blood in such small quantity that it can be detected only by chemical tests or by microscopic or spectroscopic examination.

summer b. see ***Parafilaria*** *multipapillosa*.

b. time the time required for a small pinpoint wound to cease bleeding. If done properly, the test can be helpful in determining the functional capacity of platelets and of vasoconstriction.

bleeding heart [*blēd'ing*] ***Dicentra*** *spectabilis*.

western b.h. *Dicentra formosa*.

wild b.h,. *Dicentra eximia*.

bleeding-out an abattoir practice to confer pale color and good preservation of meat; the jugular vein of the already dead animal is severed and the carcass hung to give maximum opportunity for the venous system to be evacuated.

blend price the price paid producers for market milk when classified pricing is used. An average of class prices weighted by the quantity of milk used in each class.

blended rations all of the components of the ration, including roughage, concentrates and mineral and vitamin mix, are mixed together. Called also total mixed rations.

Blenheim spaniel see **English toy spaniel**.

blennadenitis [*blen"ad-ə-ni'ti*] inflammation of mucous glands.

blenn(o)- word element. [Gr.] *mucus*.

blennogenic [*blen-o-jen'ik*] producing mucus.

blennoid [*blen'oid*] resembling mucus.

blennorrhagia [*blen"o-ra'jə*] any excessive discharge of mucus; blenorrhea.

blennorrhea [*blen"o-re'ə*] any free discharge of mucus.

blennostasis [*blen"o -sta'sis*] suppression of an abnormal mucous discharge, or correction of an excessive one.

blennothorax [*blen"o-thor'aks*] an accumulation of mucus in the chest.

blennuria [*blen-u're-ə*] mucus in the urine.

bleomycin [*ble"o-mi'sin*] a polypeptide antibiotic mixture having **antineoplastic** properties, obtained from cultures of *Streptomyces verticillus*. Has been used in dogs and cats in the treatment of squamous cell carcinoma. Adverse effects include pulmonary toxicity.

blepharadenitis [*blef"ə-rad"ə-ni'tis*] inflammation of the meibomian glands. See also **meibomitis**, **chalazion**, internal **hordeolum**.

blepharectomy [*blef"ə-rek'tə-me*] partial or complete excision of an eyelid.

blepharitis [*blef"ə-ri'tis*] inflammation of the eyelids. May be an extension of skin disease elsewhere on the face or body producing a blepharitis with similar characteristics, e.g. seborrheic, ulcerative, mycotic, etc.

B-26: Staphylococcal blepharitis in a Weimaraner.

marginal b. inflammation involving the margin of the eyelids.

blephar(o)- word element. [Gr.] *eyelid, eyelash*.

blepharoadenitis [*blef"ə-ro-ad"ə-ni'tis*] see **blepharadenitis**.

blepharoatheroma [*blef"ə-ro-ath"ər-o'mə*] an encysted tumor or sebaceous cyst of an eyelid.

blepharoconjunctivitis [*blef"ə-ro-kən-junk"tī-vi'tis*] inflammation of the eyelids and conjunctiva.

blepharodermatomycosis [*blef"ə-ro-dur"mə-to-mi-ko'sis*] fungal infection of the eyelids; mycotic blepharitis.

blepharoedema [*blef"ə-ro-ə-de'mə*] edema of the eyelids.

blepharophimosis [*blef"ə-ro-fī-mo'sis*] contraction of the palpebral fissures. May be acquired or congenital, as in some dog breeds where it may be associated with microphthalmia. Entropion can result.

blepharoplasty [*blef'ə-ro-plas"te*] plastic surgery of an eyelid. Most often done to correct entropion or ectropion or for eyelid tumor removal.

Wharton–Jones b. a V to Y technique for the correction of broad-based cicatricial ectropion.

V to Y b. see Wharton-Jones blepharoplasty (above).

Y to V b. a technique for correction of mild central entropion.

blepharoplegia [*blef"ə-ro-ple'jə*] paralysis of an eyelid.

blepharoptosis [*blef"ə-rop-to'sis*] ptosis.

blepharorrhaphy [*blef"ə-ror'ə-fe*] 1. suture of an eyelid. 2. tarsorrhaphy.

blepharospasm [*blef'ə-ro-spaz"əm*] spasm of the orbicularis oculi muscle causing eyelid closure. considered a sign of ocular pain.

blepharostat [*blef'ə-ro-stat"*] an ophthalmic **speculum**.

blepharostenosis [*blef"ə-ro-stə-no'sis*] see **blepharophimosis**.

blepharosynechia [*blef"ə-ro-sĭ-nek'e-ə*] see **ankyloblepharon**.

blepharotomy [*blef"ə-rot'ə-me*] surgical incision of an eyelid; tarsotomy.

Bleue du Nord **Central and Upper Belgian** breed of cattle.

blight [*blīt*] see **infectious** bovine keratoconjunctivitis.

blind [*blīnd*] not having the sense of sight. See also **blindness**.

b. spot the area of the ocular fundus occupied by the optic nerve head and therefore without retinal photoreceptors; it is not sensitive to light.

b. side in flatfish, the side of the body without eyes; the other is the ocular side.

b. staggers see **dummy**.

b. study see **blinding**.

b. teat see blind **teat**.

blind fouls [*blīnd*] footrot in cattle in which the infected tissue is fully contained without discharge to the exterior; causes severe pain. See also bovine **footrot**.

blind grass see ***Stypandra glauca***. Called also candyup poison.

blind loop syndrome a profound toxemia caused by the proliferation of gram-negative bacteria in a bowel segment in which there is local stasis and recirculation of bowel contents. Called also stagnant loop syndrome.

blind quarter a quarter of an udder that produces no milk whilst the other quarters are lactating, or one that has an obstruction in the teat preventing the removal of milk. A nonfunctional mammary gland. See also blind **teat**.

blindfolding [*blīnd'fōld-ing*] covering a horse's eyes with a blindfold as a means of restraint. Most horses when blindfolded can be persuaded to load onto trailers which they refuse to do without the blindfold. Of some but more limited use in other species. A

comparable device used in pigs, a bucket placed over the head, causes the pig to walk backwards. Provided the rear of the pig is pointed in the correct direction this is a worthwhile last try in getting a large pig to go where you want it to go.

blinding [*blīnd'ing*] a condition imposed on a study which is intended to keep knowledge of the treatment assignment of individual patients from a specified set of observers. Used to reduce information bias. *Single blind*: the owner of the patient is unaware of the treatment assignment but the veterinarian is aware. *Double blind*: both the owner of the patient and the veterinarian are unaware of the treatment assignments of the patients. *Triple blind*: the owners of the patients, the veterinarian and the person analyzing the results of the study are all unaware of the treatment assignments. Called also masking.

blindness [*blīnd'nis*] lack or loss of ability to see. Diagnosed in an animal on the absence of a menace response or better, using behavioral testing such as failure to indicate awareness of a soundless and odorless moving object in the animal's visual field, e.g. a falling cotton ball or feather, or a moving laser pointer.

Appaloosa night b. see congenital stationary night blindness (below).

bright b. toxic retinal and optic nerve degeneration in sheep chronically grazing bracken fern (*Pteridium aquilinum*); characterized by blindness, dilated pupils, poor pupillary light reflex, retinal vascular attenuation and tapetal hyper-reflectivity. See also **ptaquiloside**.

central b. caused by lesions in the prosencephalon. In animals, most consistently diagnosed by demonstrating a lack of menace response or inability to negotiate obstacles in the face of intact pupillary light reflexes. Called also cortical blindness.

clear-eyed b. see bright blindness (above).

congenital stationary night b. an inherited retinopathy present at birth, but non-progressive and producing nyctalopia. Described in Appaloosa and other breeds of horses. A form described in Briard dogs has been reclassified due to evidence that it is progressive and not stationary.

cortical b. see central blindness (above).

day b. defective vision in bright light. See also **hemeralopia**.

functional b. blindness in the absence of an ocular lesion, e.g. in nervous ketosis, pregnancy toxemia.

heather b. contagious **ophthalmia** of sheep.

moon b. a previous name for equine recurrent **uveitis**.

night b. nyctalopia; see **night blindness**.

peripheral b. blindness due to a lesion in the visual system peripheral to the optical cortex, including lesions in the optic chiasm, optic nerve or globe.

blink the involuntary movement of one or both eyelids of both eyes simultaneously. The frequency varies between species. Cats blink the least, with the possible exception of owls. In birds and most reptiles, the lower eyelid moves up to meet the upper lid. In mammals the upper eyelid moves down to meet the lower lid. The blink is the observed result of the palpebral, corneal, conjunctival and dazzle reflexes, as well as the menace response.

blinkers 1. rigid pieces of leather fitted to a head harness at a point where they will obstruct the horse's lateral vision. 2. a more sophisticated piece of harness worn by expensive horses consisting of a canvas head-covering with holes for the ears to protrude and two apertures for the eyes. These have saucer-shaped flaps which prevent the horse from seeing sideways. Called also winkers.

blinking a normal function having the effect of physically protecting the globe, maintaining the tear film over the cornea, clearing debris and promoting clearance of tears into and through the nasolacrimal apparatus. Excessive blinking may be due to ocular irritation.

blister [*blis'tər*] 1. a vesicle, especially a bulla, a lesion of the skin. 2. a paste containing an irritant such as cantharides used to plaster onto a horse's leg to produce counterirritation and encourage healing of a strained tendon or ligament.

b. beetle see *Epicauta vittata*.

blood b. a vesicle having bloody contents, as may be caused by a pinch or bruise.

b. cell see **prekeratocyte**.

internal b. see **sclerosing agents**.

blisterweed [*blis'tər-wēd*] ***Thamnosma texana***.

bloat [*blōt*] 1. tympany of the rumen, abomasum, stomach or cecum. See also **ruminal** tympany. 2. enteritis in young rabbits accompanied by distention of the abdomen.

pasture b. primary ruminal tympany characterized by frothing of the ruminal contents; occurs in cattle on legume-rich pastures.

feedlot b. frothy bloat caused by the ingestion of large amounts of rapidly fermented cereal grain with production of excessive quantities of fermentation acids and bacterial mucopolysaccharides or slime which lower rumen pH and motility and increase the viscosity of rumen fluid. Influenced by the amount of roughage in the diet, the type of grain, feed change adaptive periods and ionophores in the diet. Controlling feedlot bloat is a major concern in raising cattle in feedlots.

free gas b. see **ruminal** tympany.

frothy b. see **ruminal** tympany.

gastric b. see gastric dilatation **colic**, **gastric** dilatation–volvulus.

b. line a postmortem finding in animals that have died of bloat and of value in establishing that the ruminal distention occurred before death. It is present at the point at which the cervical esophagus becomes the thoracic esophagus. At this line the engorged esophageal mucosa of the neck becomes the pallid mucosa of the thorax.

primary b. ruminal tympany caused by frothiness of the ruminal contents.

secondary b. ruminal tympany secondary to physical or functional obstruction of the esophagus.

b. whistle a device for temporarily relieving a cow with chronic bloat from dangerous overdistention. The bottom half of the device shaped as a flanged cannula is slipped into the rumen through a slit incision in the left flank. The small end of the cannula protrudes through the abdominal wall and is secured into place by slipping the top half of the device over it and screwing it tight.

block [*blok*] 1. an obstruction or stoppage. 2. regional anesthesia. See also **anesthesia**.

alcohol nerve b. permanent anesthesia to a part can be produced by blocking the relevant nerve with isopropyl alcohol. Adverse effects are likely due to continued loss of sensation and motor power.

Arthur b. see segmental dorsolumbar epidural block (below).

auriculopalpebral b. block anesthesia of the auriculopalpebral nerve as it proceeds from the base of the ear over the zygomatic arch. Used to immobilize the eyelids (it does not anesthetize them) for examination of the conjunctival sac. Needs to be complemented with topical anesthetic for removal of foreign bodies.

Berge nerve b. a technique for retrobulbar anesthesia of the eye in the horse.

brachial b. regional anesthesia applied to the brachial plexus for the purpose of anesthetizing the forelimb.

bundle-branch b. a form of **heart block** involving obstruction in one of the branches in the bundle of His.

circle b. see ring block (below).

cornual b. regional anesthesia applied to the base of the bovine frontal horn core for the purpose of performing a painless cornuectomy.

digital nerve b. local anesthesia of a digit, effected by a ring block in which a transverse plane is infiltrated, a local intravenous injection, or by a local block of individual nerves. The latter is more prone to failure if the anatomy of the part is not well established.

epidural b. see epidural **anesthesia**.

field b. regional anesthesia obtained by blocking conduction in nerves with chemical or physical agents.

heart b. see **heart block**.

incisional b. infiltration with local anaesthetic into the site before an incision is made or into the edges of a wound before closure.

inferior alveolar nerve b. infiltration of the inferior alveolar nerve prior to its entry into the mandibular foramen; produces anesthesia of all lower teeth and adjacent bone and soft tissue on that side. Called also caudal mandibular block.

infraorbital b. can be used for surgery about the upper lip, the nostrils, upper incisors, canine and premolars. It requires locating the nerve where it emerges from the infraorbital foramen. Called also rostral maxillary block.

B-27: Location for blocking the infraorbital foramen in the dog. The infraorbital foramina are the sites for injection to provide nerve block to the entire maxilla. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

intravenous digital nerve b. local anesthesia procured by ligaturing the digit and injecting the local anesthetic. The anesthetic is left confined to the digit for the duration of the ligaturing. A preferred technique for cattle digital surgery.
inverted L-b. a pattern of local filtration anesthesia used in flank laparotomy in cattle and sheep. A horizontal line of infiltration is made just ventral to the transverse processes of the lumbar vertebrae, a vertical one just caudal to the costal arch.
Lichtenstern b. a technique for a block anesthesia of the orbit of the horse.
mandibular b. an anesthetic agent is injected around the mandibular alveolar nerve where it enters the mandibular foramen. Used for dental procedures on the lower jaw.
maxillary b. infiltration around the infraorbital and pterygopalatine nerves, branches of the maxillary nerve; anesthetizes the upper lip, upper teeth and surrounding tissues, as well as the palatine mucosa and bone. Called also caudal maxillary block.
median b. the anesthetic agent is injected on the medial aspect of the forelimb, just distal to the elbow. An area encircling most of the fetlock and pastern is desensitized.
mental b. infiltration of the inferior alveolar nerve just before it exits the middle mental foramen; produces anesthesia of the incisors, the canine tooth and premolars, with adjacent bone and soft tissue. Called also rostral mandibular block.
metabolic b. the blocking of a biosynthetic pathway due to a genetic enzyme defect or to inhibition of an enzyme by a drug or other substance.
line b. a nerve block of local anesthesia produced by infiltrating the anesthetic along a line that the incision is to take.
nerve b. regional anesthesia secured by injection of an anesthetic in close proximity to the appropriate nerve.
paracervical b. anesthesia of the inferior hypogastric plexus and ganglia produced by injection of the local anesthetic into the lateral fornices of the vagina.
parasacral b. regional anesthesia produced by injection of a local anesthetic around the sacral nerves as they emerge from the sacral foramina.
paravertebral b. a local anesthetic agent is injected close to emerging spinal nerves between the transverse lumbar processes to produce regional analgesia of the flank for the purpose of conducting a laparotomy. The approach to the nerves may be dorsal, the Cambridge or Farquharson method, or lateral, the Magda method. Called also the Cakala or Cornell technique.
perineural b. regional anesthesia produced by injection of the anesthetic agent close to the nerve.
peroneal b. achieved by injection of a local anesthetic into the groove between the tendons of long and lateral digital extensors on the hindlimb, usually in a horse. Anesthesia is obtained mainly over the craniolateral surface of the limb distal to this site and over the medial fetlock.
Peterson b. a regional nerve block of the orbit to facilitate optic surgery, especially ablation, in cows.
plantar b. nerve block of the medial and lateral plantar nerves to desensitize the digit in the horse. May be done at a high or low site. Called also palmar nerve block.
presacral b. anesthesia produced by injection of the local anesthetic into the sacral nerves on the anterior aspect of the sacrum.
internal pudendal b. local nerve block used mostly for exteriorizing the bull's penis for examination or treatment. The hypodermic needle is introduced through the ischiorectal fossa and directed to the nerve by a hand in the rectum.
retrobulbar b. regional anesthesia of the eye by blocking the nerve supply as it emerges from the orbital fissure. There are two techniques, a four-point injection and the Peterson technique, used in cattle for enucleation of the eye.
ring b. regional anesthesia by the injection of local anesthetic in a complete circle around a limb of a horse, or the teat of a cow.
Rubin nerve b. a technique for regional anesthesia of the equine orbital cavity.
sacral b. anesthesia produced by injection of the local anesthetic into the extradural space of the spinal canal.
saddle b. the production of anesthesia in a region corresponding roughly with the areas of the buttocks, perineum and inner aspects of the thighs, by introducing the anesthetic agent low in the dural sac.
saphenous nerve b. achieved by injection of a local anesthetic onto the saphenous vein, proximal to the hock. Anesthesia is obtained mainly over the medial thigh and metatarsal region. Usually performed in the horse.
segmental dorsolumbar epidural b. injection of local anesthetic into the epidural space between the first two lumbar vertebrae produces anesthesia of both flanks. Used for standing abdominal surgery in horses or cattle.
sinus b. sinus arrest.
subarachnoid b. anesthesia produced by the injection of a local anesthetic into the subarachnoid space around the spinal cord. See also spinal **anesthesia**.
supraorbital b. the anesthetic agent is injected into the supraorbital foramen. Sensory anesthesia is obtained in the middle of the upper eyelid.
tibial b. injection of an anesthetic agent above the tarsus, in the groove between the gastrocnemius tendon and the deep digital flexor tendon, produces anesthesia of the caudal, lateral and medial surfaces of the tarsus and metatarsus.
ulnar b. injection of a local anesthetic in the caudal aspect of the forelimb, proximal to the carpus, produces anesthesia on the anterolateral aspect of the metacarpus.
vagal b., vagus nerve b. blocking of vagal impulses by injection of a solution of local anesthetic into the vagus nerve at its exit from the skull.

blockade [*blok-ād'*] 1. in pharmacology, the blocking of the effect of a neurotransmitter or hormone by a drug. 2. in histochemistry, a chemical reaction that modifies certain chemical groups and blocks a specific staining method.
adrenergic b. see **adrenergic** blockade.
cholinergic b. see **cholinergic** blockade.
narcotic b. inhibition of the euphoric effects of narcotic drugs by the use of other drugs, such as methadone, in the treatment of addiction.
sympathetic b. block of nerve impulse transmission between a preganglionic sympathetic fiber and the ganglion cell.

blockage [*blok'ăj*] of intestine, urethra, etc. See obstruction under anatomical location, e.g. intestinal, urethral.

blocker [*blok'ər*] something that blocks or obstructs passage, activity, etc.
α-b., alpha-b. a drug that induces adrenergic blockade at α-adrenergic receptors. Called also α-antagonist. See **adrenergic** blockade.
β-b., beta-b. a drug that induces adrenergic blockade at either β_1- or β_2-adrenergic receptors, or both. Called also β-adrenergic antagonist. See also **beta**-blocker.
calcium channel b. a drug that selectively inhibits the influx of calcium ions through a specific ion channel of cardiac muscle and smooth muscle cells. See also **calcium channel blocker**.
H_2-receptor b. a drug, such as cimetidine that inhibits the secretion of gastric acid stimulated by histamine, pentagastrin, food and insulin, and also basal secretion; used in the treatment of peptic ulcer.

blocking [*blok'ing*] 1. interruption of an afferent nerve pathway (see **block**). 2. inhibition of an intracellular biosynthetic process; metabolic block.
b. agents see under **alpha**, **adrenergic**, **blockade**, **blocker**, **ganglionic**, **muscarinic**.

Blonde D'Aquitaine a yellow or yellow-brown breed of meat and draft cattle bred in southern France and Spain.

blood [*blud*] the red fluid that circulates through the heart, arteries, capillaries and veins carrying nutrients and oxygen to the body tissues and metabolites away from them. It consists of a yellow, protein-rich fluid, the plasma, and the cellular elements including leukocytes, erythrocytes and platelets. It has a high viscosity and osmotic tension and clots on exposure to air and to damaged

B-28: Blonde D'Aquitaine beef bull.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

VetBooks.ir

tissue. It has an essential role in the maintenance of fluid balance. In an emergency, blood cells and antibodies carried in the blood are brought to a point of infection, or blood-clotting substances are carried to a break in a blood vessel. The blood carries hormones from the endocrine glands to the organs they influence. And it helps in the regulation of body temperature by carrying excess heat from the interior of the body to the surface layers of the skin, where the heat is dissipated to the surrounding air. See also **bloody**.

arterial b. oxygenated blood in the arterial side of the circulation between the cardiac ventricles and the capillaries.

b. bank a place of storage for donated blood and blood products, available for distribution. Blood banks for veterinary purposes are often central locations, either laboratoriesor specialist practices, where blood donations are collected, blood products are prepared, and practices are able to purchase their requirements.

b. blister intracutaneous hematoma.

b. buffers substances which enable the blood to absorb much acidity without significant change in pH. The principal ones are the bicarbonate and hemoglobin buffers.

b. cells see **erythrocyte**, **leukocyte**, **platelet**.

central b. blood from the pulmonary venous system; sometimes applied to splanchnic blood, or blood obtained from chambers of the heart or from bone marrow.

central venous b. unoxygenated blood collected centrally from the right atrium or venae cavae.

citrated b. blood treated with sodium citrate to prevent its coagulation.

b. clotting cascade see **coagulation** cascade.

cord b. that contained in the umbilical vessels at the time of delivery of the fetus.

b. culture the collection of blood, using sterile equipment and technique, into a suitable culture medium, usually a broth, and its incubation prior to an appropriate bacteriological examination. Because the bacteremia in many cases is intermittent it is necessary to take a number of samples at intervals of several hours.

defibrinated b. whole blood from which fibrin has been separated during the clotting process.

b. donor the donor animal from which blood is collected for transfusion purposes or for extraction of blood products.

b. dyscrasia see **dyscrasia**.

extracorporeal b. flow see **extracorporeal** circulation.

b. in feces see **melena**.

b. film a thin layer of whole blood on a slide prepared for microscopic examination for assessment of red cell morphology and identification and counting of leukocytes and other cellular elements, such as tumor cells. Called also blood smear.

b. islet aggregates of splanchnic mesoderm on the surface of the yolk sac and allantois; the first blood cells in the embryo.

b. in milk appears as clots or as diffuse red tint. Common only in recently calved cows or after trauma. Of no disease significance but renders the milk unsuitable for sale.

occult b. that present in such small amounts as to be detectable only by chemical tests or by spectroscopic or microscopic examination. See also **occult** blood test.

b. osmolality see serum **osmolality**.

peripheral b. that obtained from the circulation remote from the heart; the blood in the systemic circulation.

selective b. agar see blood **agar**.

shunted b. blood which is not oxygenated in the lung because it passes through unaerated tissue.

sludged b. blood in which the red cells have become aggregated into clumps and is most marked where the flow rate is slowest, i.e. in the capillaries.

b. solutes see individual elements, metabolic products, hormones and the like.

stiff b. agar see blood **agar**.

b. substitutes synthetic substances that may be used in place of blood or its components include dextran, hydroxyethyl starch, polyvinylpyrrolidone, gelatin and perfluorocarbon.

b. urea see blood **urea** nitrogen.

b. urea nitrogen (BUN) see **urea** nitrogen.

b. in urine see **hematuria**.

venous b. blood which has passed through the capillaries and discharged its oxygen load to tissues and relieved the tissue load of carbon dioxide by absorbing it, and is on its way to the lungs to reverse these processes; is dark red in color due to the high concentration of reduced hemoglobin.

b. volume expanders are used in the treatment of shock to restore tissue perfusion. Various fluids including whole blood, plasma, crystalloids and colloids may be used.

b. in vomitus see **hematemesis**.

whole b. that from which none of the elements has been removed, especially that drawn from a selected donor under aseptic conditions, containing citrate ion or heparin, and used as a blood replenisher.

blood barriers [*blud*] see **barrier**, **blood–brain barrier**.

blood–brain barrier (BBB) [*blud brān*] the barrier separating the blood from the brain parenchyma everywhere except in the hypothalamus. It is permeable to water, oxygen, carbon dioxide and nonionic solutes, such as glucose, alcohol and general anesthetics, and is only slightly permeable to electrolytes and other ionic substances. Some small molecules, e.g. amino acids, are taken up across the barrier by specific transport mechanisms.

blood–cerebrospinal fluid barrier [*blud ser"ə-bro-spi'nəl*] see blood–CSF **barrier**.

blood clot [*blud klot*] see **clot**.

blood clotting [*blud klot'ing*] see **clotting**.

blood collection tubes containers used to transport blood samples collected for laboratory analysis. These may contain various additives appropriate to the requirements of the test(s) being requested. There is general uniformity between commercial laboratories in color coding of tube markings and stoppers, indicating which ones are suitable for what tests. *Red* topped tubes have no anticoagulant and are for tests done on serum, which includes blood chemistry, serologic testing and drug monitoring; some may be marked differently to indicate they have an added gel that facilitates separation of serum from cells; *lavender* topped tubes contain EDTA anticoagulant and are used for general hematology; *green* topped tubes contain lithium or sodium heparin anticoagulant and are used for avian and reptile samples, for some blood chemistry, and blood gas analysis; *blue* topped contain sodium citrate anticoagulant and are used for coagulation studies ; *gray* topped tubes contain sodium fluoride oxalate, which inhibits the glycolytic pathway, and thereby extends the time for blood glucose determinations.

blood count [*blud kount*] the number of blood cells in a given sample of blood, usually expressed as the number of cells per liter of blood (RBCs 10^{12}/L, WBCs and platelets 10^{9}/L). A differential white cell count determines the number of various types of leukocytes in a sampling of blood. The cell count is useful in the diagnosis of various blood dyscrasias, infections or other abnormal conditions of the body and is one of the most common tests done on the blood.

quantitative b.c. (QBC) in automated analysis of blood, density-gradient centrifugation separates granulocytes, agranulocytes and platelets and fluorescence is used to differentiate cell layers on the basis of lipoprotein, RNA and DNA contents.

blood cysts [*blud sists*] an abattoir term describing freely bleeding cavernous hemangiomas in the skin of poultry carcasses.

blood flow [*blud flo*] the movement of blood through the vessels. It is pulsatile in the large arteries, diminishing in amplitude as it approaches the capillaries. In the veins it is nonpulsatile. The flow in arteries is the result of ventricular ejection; in the veins it is a result of a number of factors including respiratory movement, muscle compression and the small residuum of arterial pressure.

laminar b. f. blood flowing through a large blood vessel moves forward in a series of concentric laminae that slide over each other like a telescoping radio aerial. The central lamina moves fastest; the outer layer may be stationary.

turbulent b. f. created when blood flows through a small caliber orifice. Is the cause of murmurs in the heart and large arteries.

blood-forming organs see **bone marrow**, **lymphoid** tissue.

blood gas analysis laboratory study of arterial and venous blood for the purpose of measuring oxygen and carbon dioxide concentrations and pressure or tension, and hydrogen ion concentration (pH). Analyses of blood gases provide the following information: $P_a o_2$—partial pressure (*P*) of oxygen (O_2) in the arterial blood (a); Sao_2—percentage of available hemoglobin that is saturated (Sa) with oxygen (O_2); $P_a co_2$—partial pressure (*P*) of carbon dioxide (CO_2) in the arterial blood (a); pH—an expression of the extent to which the blood is alkaline or acidic; HCO_3^-—the concentration of plasma bicarbonate, TCO_2, base excess, base deficit. These parameters are important tools for assessment of a patient's **acid–base balance** They reflect the ability of the lungs to exchange oxygen and carbon dioxide, the ability of the kidneys to control the retention or elimination of bicarbonate, and the effectiveness of the heart as a pump. Because the lungs and kidneys act as important regulators of the respiratory and metabolic acid–base balance, assessment of the status of a patient with any disorder of respiration and metabolism includes periodic blood gas measurements.

blood group [*blud*] the phenotype of erythrocytes defined by one or more cellular antigenic structural groupings under the control of allelic genes. The identification of specific blood groups is little used in veterinary medicine, except for the identification of parents, usually in horses and farm animals, and for purposes of selecting blood donors. For blood transfusions the usual practice is to carry out direct matching tests to avoid problems created by incompatibility. For blood group systems, see Table 8.

blood-horse see **Thoroughbred**.

blood meal [*blud mēl*] 1. an epidemiological term meaning the stomach contents of a blood-sucking insect which can be used to study the spread of specific infections. 2. the dried and powdered blood of animals, used in animal feeds and as a nitrogen-rich fertilizer for plants. In animal feeds, it is used as a protein supplement containing 80–85% of protein. Is too unpalatable to constitute a large proportion of the diet.

blood nodule [*blud nod'ūl*] the cutaneous nodule produced by infestation with *Parafilaria* spp. in cattle and horses. In the warmer part of the year the nodules enlarge, burst and bleed and the eggs are released by the resident female, the microfilariae hatch and are picked up by a fly feeding on the blood.

blood parasites [*blud par'ə-sīts*] a term of little meaning. Includes those parasites which pass part of their life in the vascular system, e.g. ***Babesia***, ***Dirofilaria***, ***Theileria***, ***Trypanosoma*** and others.

blood Pco_2 see **blood gas analysis**.

blood pH see **blood gas analysis**.

blood poisoning [*blud poi'zən-ing*] the term used by lay persons to refer to the presence of infective agents (bacteria) or their toxins in the bloodstream, i.e. septic shock or septicemia. The condition is characterized by elevated body temperature, chills and weakness. Small abscesses may form on the surface of the body and red and blue streaks become apparent along the pathway of surface blood vessels leading to and from the site of the primary infection. A blood culture confirms the diagnosis and helps identify the most effective anti-infective drug for therapy. Blood poisoning is a serious disease that must be treated promptly. Otherwise, the process of infection leads to circulatory collapse, profound shock and death.

blood pressure [*blud presh'ər*] the pressure of the blood in the blood vessels. The term usually refers to the pressure of the blood within the arteries, or arterial blood pressure. This pressure is determined by several interrelated factors, including the pumping action of the heart, the resistance to the flow of blood in the arterioles, the elasticity of the walls of the main arteries, the blood volume and extracellular fluid volume, and the blood's viscosity, or thickness. Blood pressure in animals can be measured directly by intra-arterial needle puncture or, more commonly in veternary medicine, indirectly with devices that use a compressive cuff and oscillometry, Doppler ultrasonography or oscillometric. There are numerous variables for determining normal values for the arterial systolic blood pressure, particularly the method of measurement. In dogs it is approximately 135–145±20 mmHg; in cats it is 140 mmHg. There are subtantial breed differences with sighthounds (e.g. Greyhounds) being higher by approximately 10–20 mm Hg. Thoroughbred horses have been shown to be 112/77 mmHg. Indwelling catheters can also be used to monitor central venous pressure. See also **hypertension**.

arterial b. p. the common measure of blood pressure. The measurement in animal patients must be by a method that does not require entrance to an artery, i.e. noninvasive. Standard methods use an inflatable cuff around a limb, around the tail in the horse, and measurement of the air pressure required to obliterate the pulse wave—the systolic blood pressure, and permit the re-entry of the pulse wave—the diastolic blood pressure.

b. p. homeostasis the maintenance of a steady state of blood pressure. The mechanisms involved include the baroreceptor mechanism, the chemoreceptor mechanism, the ischemic response of the central nervous system (the Cushing response), the renin–angiotensin vasoconstrictor and the renin–angiotensin–aldosterone system, the capillary fluid-shift mechanism, the regulation of body fluid level by the kidney and the stress–relaxation mechanism of the arterial wall.

b. p. impedance the resistance to pulsatile flow, as in arteries.

pulmonary wedge b. p. see wedge **pressure**.

b. p. regulation the complex regulatory system which controls arterial blood pressure is dependent on sensory inputs related to cardiac output, peripheral resistance to blood flow at the arterioles, the viscosity of the blood, the volume of blood in the arterial system, the elasticity of the arterial walls. Changes in blood pressure are brought about by the control exerted on the same physiological mechanisms.

venous b. p. see **central** venous pressure.

blood products [*blud prod'əkts*] by-products of the meat industry consisting largely of blood or its derivatives.

edible b. p. used as blood in a preparation of blood or black pudding. Or separated by centrifugation of citrated blood into plasma and cells. The cells are used in blood sausage and the dried plasma as a binding agent in sausages.

inedible b. p. usually contains extraneous water or fat, making it unsuitable for freeze drying for human consumption because of hemolysis. Used in the manufacture of meat and blood meals for animal feed.

blood sampling [*blud sam'pling*] laboratory examination of samples of blood. These are usually collected from an appropriate vein, but arterial samples are required for some special techniques. Collection is by a closed method, either a hypodermic syringe or a vacuumized container. The site of collection varies with the species and the circumstances. The sample may be clotted, for serum estimations, or collected with an anticoagulant for examinations on plasma or whole blood. See also **blood collection tubes**.

blood serum [*blud sēr'əm*] the residual fluid of blood after clotting has occurred. It is plasma after the fibrinogen has been removed. It contains solutes of proteins, electrolytes, waste products, dissolved gases, hormones, enzymes, antibodies and water.

blood sinus [*blud si'nəs*] 1. any endothelial-lined, blood-filled cavity. 2. a cavity lying between the external sheath and the outer connective tissue capsule of the hair follicles associated with tactile hairs such as whiskers and vibrissae which are found on the muzzle, chin and above the eyes in many species. See also tactile **hair**.

blood splashes an abattoir term meaning large hemorrhages in muscles usually due to poor slaughtering technique.

blood spots [*blud spots*] spots of blood in hen eggs; an esthetic problem to the breakfast eater. They are of no disease significance and can be prevented by increasing the content of vitamin A in the diet. This is an effective preventive even in those families of birds which appear to have an inherited susceptibility to the defect.

blood-stained milk see **blood** in milk.

blood-stock horses bred and kept for racing. Includes Standardbreds, Thoroughbreds, Trotters.

blood supply the volume of blood supplied to an organ or part during a particular time period. Usually a subjective estimate by a surgeon in determining whether the blood supply is adequate to maintain viability. A retrospective assessment is a common exercise in pathology.

blood transfusion [*blud trans-fu'zhən*] see **transfusion**.

b. transfusion reaction see **transfusion** reaction.

blood type [*blud tīp*] 1. blood group. 2. the phenotype of an individual with respect to a blood group system.

blood vessel [*blud ves'əl*] any of the vessels conveying the blood; an artery, arteriole, vein, venule, sinusoid or capillary.

VetBooks.ir

VetBooks.ir

B

b. v. calcification in animals usually part of a generalized calcification syndrome; see **calcification**, **calcinosis**.
b. v. congenital defect see arteriovenous **aneurysm**, **portacaval** anastomosis, **patent** ductus arteriosus, **aortic** coarctation.
coronary b. v. see **coronary** arteries.
b. v. disease includes **arteritis**, **phlebitis**, **lymphangitis**.
pulmonary b. v's see Table 9 (arteries), Table 15 (veins).
shunt b. v. include naturally-occurring arteriovenous anastomoses and those caused by accidental injury or by congenital defect.
b. v. stenosis narrowing of the lumen caused by fibrous tissue contraction in the walls, or compression by other adjoining tissues, or congenital defect.

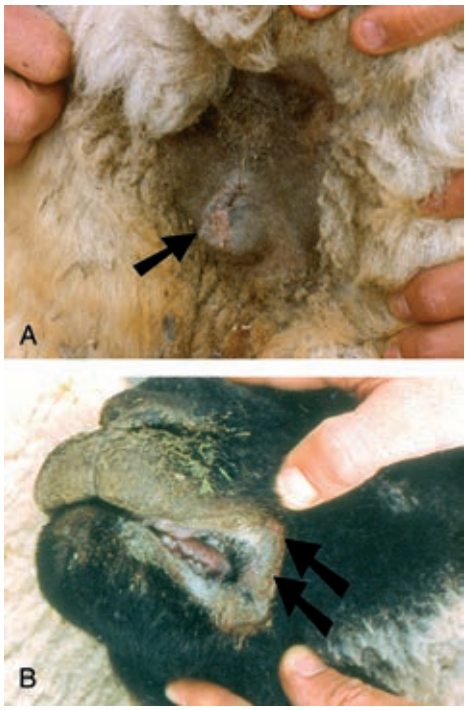
blood volume [*blud vol'ūm*] the total quantity of blood in the body. The regulation of blood volume in the circulatory system is affected by the intrinsic mechanism for fluid exchange at the capillary membranes and by hormonal influences and nervous reflexes that affect the excretion of fluids by the kidneys. A rapid decrease in the blood volume, as in hemorrhage, greatly reduces the cardiac output and creates a condition called shock or circulatory shock. Conversely, an increase in blood volume, as when there is retention of water and salt in the body because of renal failure, results in an increase in cardiac output. The eventual outcome of this situation is increased arterial blood pressure. Measurement of blood volume is accomplished by using substances that combine with red blood cells, for example, iron, chromium and phosphate, or substances that combine with plasma proteins. In either case the measurement of the blood volume is based on the 'dilution' principle. That is, the volume of any fluid compartment can be measured if a given amount of a substance is dispersed evenly in the fluid within the compartment, and then the extent of dilution of the substance is measured.
decreased b. v. caused by uncompensated blood loss, dehydration, water deprivation.

blood warts [*blud worts*] see congenital **melanoma** of pigs.
blood worms [*blud werms*] the large strongyles of horses. See ***Strongylus*** *vulgaris*, *S. edentatus*, *S. equinus*.
Bloodhound a large, heavy bodied dog with loose skin folds around the face and head, and very long, pendulous ears. The coat is short and usually black and tan or red. The breed has a reputation as a scent hunter and is often used in the search for lost persons. Ectropion and entropion are common in the breed. Called also St. Hubert hound.
bloodstream [*blud'strēm*] the blood flowing through the **circulatory** system in the living body.
b. cooling part of cardipulmonary bypass procedures.

bloodworm [*blud'werm*] a parasitic worm of cyprinid fish. Called also ***Philometra*** *abdominalis*.
bloody, blood in pertaining to or deriving from blood.
b. feces see **dysentery**, **melena**.
b. guts see **proliferative** hemorrhagic enteropathy.
b. milk see **hemolactia**.
b. urine see **hematuria**.
b. vomit see **hematemesis**.

bloomkoolbossie [Af.] see ***Salsola*** tuberculatiformis.
blot analysis [*blot*] see **blotting**.
blotting [*blot'ing*] a technique used for the detection of DNA, RNA or protein. See **Northern blot**, **Southern blot**, **Western blot**. Called also blot analysis.
Blount staple [*blunt*] a vitallium braced surgical staple for epiphyseal fixation. See also epiphyseal **staples**.
blow dart a syringe-like implement with dart overtones delivered from a gun and propelled by compressed air, or carbon dioxide or an explosive charge, or from a mouth operated blowgun. The dart-like tail helps to maintain direction in what is a very low velocity flight. When the needle of the dart is driven into the skin of the target animal the piston is driven forward by the deceleration and discharges the contents of the syringe into the target's tissues. Used primarily to immobilize wild fauna.
blow-in a client who attends the veterinary clinic without an appointment when an appointment system is specified as the method of operation.
blowaway grass ***Lachnagrostis*** *filiformis*.
blower can in the meat trade a term meaning a can of preserved food which has undergone sufficient bacterial contamination to distend the can.
blowfly [*blo'fli*] a member of the family Calliphoridae of insects.
b. strike invasion of skin or exposed mucosae by blowfly larvae. See also cutaneous **myiasis**.
blowgun [*blo'gun*] **blow dart**.
blowhole [*blo'hōl*] the anterior nares of whales and other cetaceans.
blowing [*blo'ing*] 1. infestation of dead or living material with blowfly maggots. 2. subcutaneous inflation of a carcass of meat with compressed air in an attempt to facilitate skinning with least damage. Forbidden in most countries.
blowing check [*blo'ing*] blowing down a stomach tube which has been passed into the cervical esophagus of a horse and checking that the tube is in the correct place by observing the passage of a large bubble of air. In cattle the check is to auscultate the rumen in order to hear a loud bubbling sound as an indication that the tube is in the esophagus.
blown grass ***Lachnagrostis*** *filiformis*.
blowout with reference to hens, prolapse of the oviduct through the vent.
blowpipe [*blo'pīp*] 1. a tube through which a current of air is forced upon a flame to concentrate and intensify the heat. 2. a long tube through which blow darts are launched in wildlife capture.
b. dart see **blow dart**.
blows [*blōz*] 1. distention of the cecum in rabbits. 2. the successive strips of wool removed by the shearing blades, e.g. 'beaten by a blow'.
blue [*bloo*] a silver-gray coat color. A description often used in dogs and cats, and some breeds of cattle. Generally due to the effects of a dilution gene, in dogs shown to be the melanophilin gene, on a black coat color.
Blue Andalusian a breed of chickens in which the typical blue color of the feathers occurs only in the heterozygotes; an example of co-dominant gene action.
blue bitou see ***Castalis spectabilis***.
blue-black a color mid-way between blue and black.
b.-b. ink used to stain fungal elements in diagnostic specimens.
blue breast(s) severe mastitis of rabbit with obvious cyanosis of the skin of the mammae. Called also caked udder.
blue Doberman syndrome see color dilution **alopecia**.
blue dog disease see color cilutation **alopecia**.
blue ear disease see **porcine** reproductive and respiratory syndrome.
blue-eared pheasant *Crossoptilon auritum*. See **pheasant**.
blue-eared pig disease see **porcine** reproductive and respiratory syndrome.
blue eye the common name given to corneal edema. Occasionally used more specifically in reference to the reaction that may occur in dogs convalescing from infectious canine hepatitis or that have recently been immunized with a modified live infectious hepatitis virus vaccine.
porcine b. e. disease a disease endemic in pigs in Mexico, caused by a *Rubulavirus* in the family Paramyxoviridae. It is characterized by encephalitis and respiratory disease in piglets, reproductive failure in adult pigs, and occasional corneal opacity in all ages but mainly suckling and stillborn piglets. Called porcine paramyxovirus encephalitis, blue eye disease, Mexican bue eye.
blue ferret syndrome a bluish discoloration of the abdominal skin which sometimes appears after clipping; the condition resolves as hair regrowth occurs.
blue fur disease moist dermatitis infected with *Pseudomonas aeruginosa*; causes blue-green pigmentation of the fur in rabbits and rodents.
Blue-gray cattle a cross between a beef Shorthorn and either an Aberdeen Angus or a Galloway.
blue-green algae name used to describe the photosynthetic cyanobacteria responsible for toxic water blooms; see **algal** poisoning.
blue meat meat discolored by superficial contamination by *Pseudomonas cyanogenus*.
Blue Picardy spaniel a French bird-hunting dog with a flat or slightly wavy, coat with feathering on the legs and tail. The coat is flecked gray or black, creating a bluish cast.
blue pig root ***Sisyrinchium***.
blue pimpernel ***Anagallis*** *arvensis* var. *caerulea*.
blue-point see **points**.
Blue Rex see **Rex**.
blue-roan see **roan**.
blue rod see ***Stemodia*** *florulenta*.

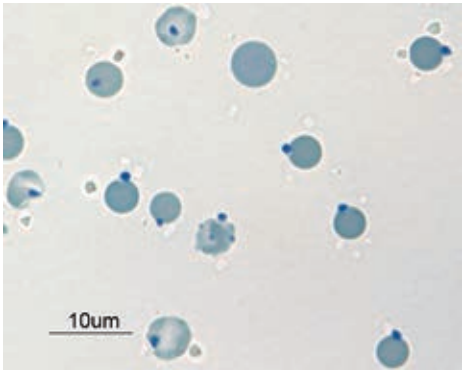
blue sac disease a disease of young trout and other salmonid species characterized by accumulation of clear blue liquid surrounding the yolk sac; thought to be caused by unsuitable hatchery water.
blue shell syndrome a disorder of farmed panaeid shrimp, which develop a pale blue coloration on particular diets but respond to supplementation with carotene or vitamin A.
blue slime disease a disease manifested by a bluish film of tenacious mucus over the entire body of farmed brown trout and other salmonids; caused by a dietary deficiency of biotin and accompanied by hyperplastic goblet cells in the epidermis.
blue spot disease a herpesvirus infection of northern pike causing blue-white, flat, granular, epidermal lesions up to 10 mm diameter on dorsal skin and fins.
blue tick see ***Rhipicephalus*** *(Boophilus) decoloratus*.
blue tulp ***Moraea***.
Blue V dye a blue dye used to color reject wheat which is unsuitable for human food consumption. If fed to chickens it causes green gizzard syndrome—the color changes at the low pH.
blue vitriol copper sulfate.
blue wing disease gangrenous dermatitis of turkeys caused by *Clostridium septicum, C. perfringens* type A and *Staphylococcus aureus*, in combination or singly. Infection occurs subsequent to injury, trauma during mating, vaccination, blood sampling or artificial insemination. Signs include a short course of about 24 hours, severe toxemia and heavy mortality in birds with moist areas of skin gangrene.
bluebag [*bloo'bag*] gangrenous mastitis of ewes caused by ***Pasteurella*** *multocida*.
bluebell [*bloo'bel*] ***Hyacinthoides non-scripta***.
bluebonnet or lupin; see ***Lupinus***.
bluebottle [*bloo'bot"əl*] 1. the stinging Portuguese man-of-war jellyfish (***Physalia physalis***). 2. bluebottle or blowfly. See ***Calliphoridae***.
bluebush [*bloo'bush*] *Maireana brevifolia*.
bluecomb disease see **turkey** coronaviral enteritis.
bluegrass [*bloo'gras*] see ***Poa***.
bluenose [*bloo'nōz*] a name used in the UK for a photosensitive dermatitis of the horse's face marked by a cyanotic appearance in the early stages of skin which later sloughs. The disease occurs in the spring and may be accompanied by such a severe edema that it resembles purpura hemorrhagica.
bluesedge see **Andropogon**.
bluestem [*bloo'stem*] see **Andropogon**.
bluestone [*bloo'stōn*] copper sulfate.
Bluetick coonhound [*bloo'tik*] a large (45–80 lb) hound-type dog with large ears and a short, dense dark blue coat, spotted or mottled with black and some tan markings.
bluetongue [*bloo'tung"*] an infectious, non-contagious disease of sheep and occasionally cattle, transmitted by *Culicoides* spp. Caused by an *Orbivirus* with at least 24 serotypes worldwide. Wild ruminant species and cattle are the reservoir and amplification hosts. Severe disease is restricted to fine wool and mutton breeds of sheep. Infection, but not disease, is endemic in tropical and subtropical regions. Disease occurs in epidemic and incursive areas when climatic conditions allow the expansion of vector occurrence. Currently, this is occurring in Europe and England associated with global warming. Manifest with fever, catarrhal stomatitis, rhinitis, enteritis and lameness due to a coronitis and myositis. High case fatality can occur in sheep, but there are differences between strains in virulence and clinical presentation. Congenital infections with wild or vaccine virus may result in defects in the nervous system, the type and severity depending on the stage of gestation. A disease notifiable to the OIE (see Table 22).
b. virus (BTV) a member of the family *Reoviridae*, genus *Orbivirus*. Causes bluetongue in sheep and other ruminants. Within the BTV serogroup there at least 24 serotypes of BTV and considerable genetic and antigenic variability
blunt end [*blunt*] the end of a double-stranded DNA molecule in which both strands are paired to the end of the strand.
b. e. ligation the joining of two blunt end DNA molecules.
BLUP best linear unbiased prediction.
blur [*blər*] lack of clarity in the radiograph caused by movement of the X-ray tube, subject or film during exposure.
BLV bovine leukemia virus.



B-29: (A) Erosive lesions of bluetongue with hyperemia and ulceration on the vulva of a ewe. (B) Erosive lesions on the tongue and lips in bluetongue.

BM abbreviation for bowel movement; used in medical records.
BMBT buccal mucosal **bleeding** time.
BMC bovine malignant catarrh; see **malignant catarrhal fever**.
BMCC bulk milk cell counts. See **bulk tank** somatic cell count.
BMI body mass index.
BMR basal metabolic rate.
BNP B-type natriuretic peptide; called also brain natriuretic peptide. See **atrial** natriuretic peptide.
boa constrictor both the common name and the scientific binomial name (*Boa constrictor*) of several subspeices of large, non-venomous snakes in the family Boidae. Found in Mexico, Central and South America., they can inflict a painful bite, but kill their prey by constriction.
boar a male pig more than 6 months old and destined for use as a sire.
b. effect boar exposure to gilts causes an earlier onset of puberty with some synchronization.
b. shield a strong, oval layer of cartilage which develops over the shoulders of adult boars. Is a protective mechanism in boar fights. When cooked it becomes gelatinous.
b.–sow ratio the number of boars required to maintain a sow herd at full piglet-producing performance.
b. taint an odor specific to fresh boar meat, especially from adult boars, and said to resemble stale urine, is strongest immediately after slaughter, fades during storage but returns on frying or boiling. Some diners prefer the redolent rashers.
wild b. (*Sus scrofa*) the commonest wild pig; ancestor of the domestic pig. Shaped like a domestic pig but lean, long-legged and mean. They can move very quickly and have formidable tusks in their bottom jaws. Their long, pointed snout enables the pigs to get through undergrowth better than any other animal.
board spleen a meat inspection term for an enlarged firm spleen caused by chronic infection.
boarding kennels a commercial establishment which provides accommodation, feeding and general care for dogs and cats on a short term, usually weekly, basis. Well-run institutions cater only for healthy animals with a good vaccination record.
bob [*bob*] see **bonnet**.
bob veal calf calf 1–3 weeks old, sold for baby veal, often the male calves from dairy farms; ideal stated average weight 150 lb (68 kg) but this weight is unlikely in a calf of this age and commonly weigh much less.
bobbejaantou see ***Cynanchum***.
bobby calf a calf slaughtered while only a few days old.
bobcat [*bob'kat*] (*Lynx rufus*) a medium-sized North American mammal in the family Felidae. They have a gray to brown coat

B-30: Bobcat (*Lynx rufus*). Courtesy of CDC.



B-31: New methylene blue–stained blood from a cat showing Heinz bodies projecting from red blood cells. From August JR, Consultations in Feline Internal Medicine, Volume 5, 5th Edition. Saunders, 2006.

VetBooks.ir

with black spots and stripes, and tufts of black hair on the ears. Can be a source of plague infection for humans.

Bobgunnia madagascariensis African plant in the legume family fabaceae; an unidentified toxin in ripe pods causes red urine in cattle. Called also snake bean, *Swartzia madagascariensis*.

bobtail [*bob'tāl*] a short tail, either natural or docked. Seen naturally in some species, e.g. bobcat, and some dog breeds, e.g. Schipperke and Old English sheepdog.

b. disease loss of the long hairs of the mane and tail in chronic selenium poisoning in horses. Other signs are emaciation, poor haircoat and defects of hoof growth.

Bocavirus a genus in the family *Parvoviridae*, subfamily *Parvovirinae* members of which may cause human respiratory disease; the name is derived from bovine and canine because of similarities to parvoviruses of these two species.

BOD see **biochemical oxygen demand**.

Bodansky unit [*bo-dan'ske*] a unit of measurement for alkaline phosphatase activity in the blood; no longer used.

bodian classification a system of classification of neurons based on where the nerve cell is in relation to the axon proper and the dendritic and telodendritic zones of the typical axons.

body [*bod'e*] 1. the trunk, or animal frame, with its organs. 2. the largest and most important part of any organ. 3. any mass or collection of material.

acetone b's see **ketone** bodies.

b. cavity see **cavity**.

elementary b. 1. the constituent parts of inclusion bodies. Considered to be virus particles. See also **inclusion body**. 2. basic extracellular infectious unit of chlamydia.

ellipsoid b. formed in degenerating myelin sheaths. Each contains a fragment of myelin apparently undergoing enzymatic digestion around a fragment of degenerating axon.

fimbriate b. see **corpus** fimbriatum.

b. fluids see body **fluids**.

gelatinous b. a 3–5 mm glycogen-rich body in the dorsal surface of the lumbosacral enlargement of the spinal cord of birds.

geniculate b's (lateral) two metathalamic eminences, one on each side just lateral to the medial geniculate bodies, marking the termination of the optic tract.

geniculate b's (medial) two metathalamic eminences, one on each side, just lateral to the superior colliculi, concerned with hearing.

Heinz b., Heinz-Ehrlich b. a dark staining refractile body of erythrocytes, consisting of denatured hemoglobin. See also Heinz body **anemia**.

Howell's b's see **Howell-Jolly bodies**.

malpighian b. lymphoid follicles in the spleen.

mamillary b., mammilary b. either of the pair of small spherical masses in the interpeduncular fossa of the midbrain, forming part of the hypothalamus.

b. mass see body **weight**.

multilamellar b. any of the osmiophilic, lipid-rich, layered bodies found in the type II alveolar cells of the lung.

Negri b's eosinophilic inclusion bodies in the cytoplasm of neurones of animals dead of rabies.

Nissl b's. see **Nissl** bodies.

olivary b. see **olive** (2).

Pappenheimer b. dark, basophilic, iron-containing granules seen in erythrocytes (siderocytes). Occur in hemolytic anemia.

para-aortic b's enclaves of chromaffin cells near the sympathetic ganglia along the abdominal aorta, which secrete catecholamines during prenatal and early postnatal life, aiding the adrenal medulla. Tumors of these structures produce clinical signs similar to those of **pheochromocytoma**. Called also organ of Zuckerkandl.

paracloacal vascular b. a small patch of vascular tissue in the wall of the urodeum in birds.

phallic b. pair of bodies flanking the phallus of the male bird; participate in the insemination of the hen.

pituitary b. pituitary gland.

polar b's. 1. the small cells consisting of a tiny bit of cytoplasm and a nucleus that result from unequal division of the primary oocyte (*first polar body*) and, if fertilization occurs, of the secondary oocyte (*second polar body*). 2. metachromatic granules located at the ends of bacteria.

quadrigeminal b's see **corpora** quadrigemina.

striate b. see **corpus** striatum.

b. surface area (BSA) the total surface area of the body. Used to calculate drug dosages, particularly in the use of toxic drugs such as those used in cancer chemotherapy. This minimizes errors introduced by variations in distribution, metabolism and excretion of the drug. Several equations can be used to express the area, based on body weight, but conversion tables are usually used. See Table 20.

trapezoid b. a ridge of transverse fibers crossing the ventral surface of the medulla oblongata, immediately caudal to the pons.

vitreous b. see **vitreous** body.

wolffian b. see **mesonephros**.

body-brush [*bod'e brush*] a wide, flat grooming brush with a strap across the back and short vegetable fibers.

body condition score (BCS) a semi-quantitative method of assessing an animal's body composition. In livestock, it considers the animal's weight for age and weight for height ratios, and its relative proportions of muscle and fat. The assessment is made by eye, on the basis of amount of tissue cover between the points of the hip, over the transverse processes of the lumbar vertebrae, the cover over the ribs and the pin bones below the tail. Each animal is graded by comparison with animals pictured on the chart. The grading may be in a score of 5 or a score of 8. In dairy cows, the range is from 1 (thin) to 5 (fat). The optimal condition score is 3.5 with less than 1 condition score loss during early lactation. In dogs and cats, palpation of skeletal structure to assess overlying fat or muscle mass, and visible alterations to the body profile, both from the side and overhead, are used for the assessment. Various scoring systems, using 5, 7 or 9 point scales, are used with 1 equivalent to emaciation and higher numbers ranging up through ideal to oveweight to the highest, which is obesity.

body-fold dermatitis [*bod'e fold*] see fold **dermatitis, intertrigo**.

body language the expression of feelings by means of postures or gestures. Flamboyant body language is characteristic of primates but most animal species use gestures to demonstrate their attitudes to other animals and to the environment generally.

body mass index (BMI) used in humans to assess body condition and nutritional status. Calculated as weight (kg) divided by height^2, or weight (lb) x 703, divided by height^2 (in^2). Not directly applicable to animals, but similar formulae have been advanced.

feline BMI formula based on body measurements to determine body fat content of a cat. The percentage body fat is calculated

B-32: Boer dual-purpose goat.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

by measuring the rib cage circumference (cm) at the level of the 9th cranial rib and the distance between the patella and the calcaneus (leg index measurement in cm). These are used in the formula: % fat = 1.5 (ribcage measurement minus leg length) divided by 9.

body-section technique see **tomography**.

Boer a dual-purpose South African goat, the common goat of that country, with lop ears, of many colors.

Boerboel a large mastiff-type dog from South Africa with a short fawn coat and black mask. the head is large, muzzle short, ears small and flat and the tail may be docked. Called also South African mastiff.

bog asphodel ***Narthecium*** *ossifragum*.

bog-crook, bog-lame see **phosphorus** nutritional deficiency.

bog spavin see bog **spavin**.

boggabri *Amaranthus mitchellii, Chenopodium carinatum*.

Bohemian terrier see **Cesky terrier**.

Bohr effect displacement of the oxyhemoglobin dissociation curve by a change in carbon dioxide tension.

Bohr equation used to estimate the dead-space volume of the lungs.

bohrium (Bh) a chemical element, atomic number 107, atomic weight 262. See Table 4.

Boidae a family of non-venomous, constrictor snakes, the boas and pythons.

boids snakes in the Boidae family.

Boiga a genus of snakes in the Colubridae family; the tree snakes, mangrove snakes and cat snakes.

boil [*boil*] a painful nodule formed in the skin by circumscribed inflammation of the corium and subcutaneous tissue, enclosing a central slough or 'core'. Called also furuncle.

saddle b's deep-seated subcutaneous abscesses under the saddle place. Associated usually with poor grooming technique.

shoe b. see elbow **hygroma**.

boiling [*boil'ing*] bringing to the boil.

b. fowl a mature hen of about 2 years of age, suitable for eating but requires prolonged cooking.

b. test meat that has a taint or which is beginning to decompose can have its bad odor intensified, for the purpose of convincing the doubters, by boiling a sample of it. An antiquated test.

boksuring ***Rumex*** *acetosella*.

Bollinger bodies [*bol'in-gər*] inclusion bodies in epithelial cells infected with the fowlpox virus.

bologna bull said of a mature entire bull sold for meat. The market for such animals is good because of the high proportion of the carcass that is lean meat suitable for conversion into mince or bologna.

Bolognese a small (9–11 lb) bichon-type dog with a distinctive coat that is long and flocked without curls. Called also Bichon Bolognese.

bolometer [*bo-lom'ə-tər*] an instrument for measuring minute degrees of radiant heat.

bolting 1. of a horse, escaping from restraint at full gallop. 2. of a horse, eating its food greedily and rapidly.

bolus [*bo'ləs*] 1. a rounded mass of food or pharmaceutical preparation ready to be swallowed, or such a mass passing through the gastrointestinal tract. In previous times most medication for horses was given by bolus. Called also ball. 2. a concentrated mass of pharmaceutical preparation, e.g. an opaque contrast medium, given intravenously. 3. a mass of scattering material, such as wax or paraffin, placed between the radiation source and the skin to achieve a precalculated isodose pattern in the tissue irradiated.

alimentary b. the mass of food, made ready by mastication, that enters the esophagus at one swallow.

controlled release b. see slow release bolus (below).

physic b. see **physic** (2).

purging b. an oldtime treatment for equine colic. Usually contained aloes or istin.

slow release b. formulation of drugs in a bolus, administered by balling gun, designed to slowly release the drug so as to provide a continuous intake of the medication over a period varying from days to months, depending on the product. Passive release systems use a dense matrix, such as iron oxide, silicate glass, or slowly biodegradable cellulose materials and small size formulations are called intraruminal pellets. Active release systems release the drug mechanically by a flexible membrane or plunger driven by osmotic force of a spring. Called also controlled release bolus or sustained release bolus.

Bolz technique conservative technique for surgical retraction of an equine penis affected by paraphimosis.

boma confinement confinement of the flock or herd, including captive wild animals being held for transport to zoos, to the boma (enclosure, corral), traditionally constructed of thorn bushes; contemporary facilities are made of conventional yard posts and rails.

bomb calorimeter [*bom*] see **calorimeter**.

Bombay [*bom-ba'*] an uncommon breed of cat which is the result of crossing Burmese and black American Shorthairs. It has a short muzzle, short black hair and deep copper-colored eyes. Differs from the British Bombay cat which is essentially a Burmese in black and has copper to greenish eyes.

bombesin [*bom'bə-sin*] a tetradecapeptide found in the brain and gut.

bona fide client a client to whom service has been provided during the previous 2 years.

Bonamia a genus of protists of the phylum Haplosporidia that cause lethal infection of the haemocytes of certain oysters. Infections with *B. ostreae* and *B. exitiosa* are notifiable to the OIE (see Table 22). See also **bonamiasis**.

bonamiasis important protozoan disease affecting hemocytes of flat oysters worldwide caused by *Bonamia ostreae* and *B. exitiosa*. A disease notifiable to the OIE (see Table 22).

Bonasa umbellus see **ruffed grouse**.

bond [*bond*] the linkage between atoms or radicals of a chemical compound, or the symbol representing this linkage and indicating the number and attachment of the valencies of an atom in constitutional formulas, e.g. H–O–H, H–C= C–H and can be represented by a pair of dots between atoms, e.g. H:O:H, H:C:::C:H.

coordinate covalent b. a covalent bond in which one of the bonded atoms furnishes both of the shared electrons.

covalent b. a chemical bond between two atoms or radicals formed by the sharing of a pair (single bond), two pairs (double bond) or three pairs of electrons (triple bond).

disulfide b. a strong covalent bond, –S–S–, important in linking polypeptide chains in proteins, the linkage arising as a result of the oxidation of the sulfhydryl (SH) groups of two molecules of cysteine.

high-energy phosphate b. an energy-rich phosphate linkage present in adenosine triphosphate (ATP), phosphocreatine and certain other biological molecules. On hydrolysis at pH 7 it yields about 8000 calories per mole, in contrast to the 3000 calories yielded by phosphate esters. The bond stores energy that is used to drive biochemical processes, such as the synthesis of macromolecules, contraction of muscles, and the production of the electrical potentials for nerve conduction.

high-energy sulfur b. an energy-rich sulfur linkage, the most important of which occurs when an acetyl or acyl group is linked to a CoA molecule or an acyl carrier protein causing the activation of fatty acids which enables them to be broken down by the β-oxidation pathway or synthesized by the fatty acid synthase complex.

human–animal b. the psychological interdependence between humans and companion animals.

hydrogen b. a weak, primarily electrostatic, bond between a hydrogen atom bound to a highly electronegative element (such as oxygen or nitrogen) in a given molecule, or part of a molecule,

VetBooks.ir

and a second highly electronegative atom in another molecule or in a different part of the same molecule.

ionic b. a chemical bond in which electrons are transferred from one atom to another so that one bears a positive and the other a negative charge, the attraction between these opposite charges forming the bond.

peptide b. the −CO−NH− linkage formed between the carboxyl group of one amino acid and the amino group of another; it is an amide linkage joining amino acids to form peptides.

phosphoanhydride b. a high energy bond present in ATP.

phosphodiester b. covalent bond in which a phosphorus atom in a phosphate group is esterified with two other molecules. Phosphodiester bonds form the links between nucleotides in nucleic acids.

polar b. a covalent bond in which the electron pair is held unequally by two bonded atoms.

bonding [*bond'ing*] 1. the development of a close emotional tie to a mate, offspring or parent, or between human and animal. See also human–animal bond. 2. structural uniting between physical materials.

dental b. in restorative dentistry, the important process of adhering material to the tooth surface.

mother–young b. established by the pair staying in close proximity to each other, by intuitive vocal calls, by physical licking by the dam, and sucking by the neonate.

bone [*bōn*] 1. the hard, rigid form of connective tissue constituting most of the skeleton of most vertebrates, composed chiefly of an organic component of collagenous matrix and cells and a mineral component of calcium phosphate and other salts. 2. any distinct piece of the skeleton of the body. For a list of named bones see Table 10.3. describes conformation, substance, thickness and quality of bone structure in an animal, e.g. an animal with good bone. See also **osseous**.

b. ash analysis of the degree of mineralization of bone is done by an ash analysis in which the bone is heated at 600°C until there is no further weight loss.

b. atrophy see **osteoporosis**.

brittle b's see **osteogenesis** imperfecta.

b. callus see **callus** (2).

cancellated b., cancellous b. bone composed of thin intersecting spicules or trabeculae, usually found internal to compact bone. Called also spongy bone.

cartilage b. bone that develops within a cartilage model by a process called endochondral ossification.

b. cells see **osteocyte**, **osteoclast**, **osteoblast**.

cheek b. see **zygomatic** bone.

chevron b. the V-shaped **hemal** arches, such as occur ventral to the cranial few coccygeal vertebrae of the dog.

chondroid b. has histological characteristics of both cartilage and bone; may develop in response to tensions from frequently changing directions.

b. clamp strongly built, handheld, tong-like instrument with outcurving blades making a circle when closed for grasping a piece of bone shaft. The handles are ratcheted to give a firm grasp, and the faces of the blades have deep, crossways grooves.

compact b. bone substance that is dense and noncancellous.

cortical b. the compact bone of the shaft of a bone that surrounds the marrow cavity; it tends to be thicker near the middle of the shaft of a long bone, tapering towards the extremities where more cancellous bone is found.

b. cyst a discrete, grossly visible cavity, filled with fluid and often lined by a membrane. It may be located under cartilage (subchondral), be a single cavity (unicameral), filled with blood (aneurysmal) or contain epidermal cells (epidermoid).

decalcified b. a material for bone grafting. Prepared by treatment with hydrochloric acid, bone morphogenic protein is retained.

b. density the degree of mineralization, usually demonstrable in radiographs.

b. discoloration continuous intake of tetracycline colors bone of growing animals yellow; inherited or acquired porphyria discolors bone red-brown.

ectopic b. bone which develops in abnormal sites. Needs to be differentiated from ectopic ossification and ectopic mineralization.

endochondral b. bone formed by ossification within cartilage. The means of lengthening of long bones. See also enchondral **ossification**.

B-33: Aneurysmal bone cyst.
From Slatter D, Textbook of Small Animal Surgery, 3rd Edition. Saunders, 2002.

entoglossal b. the bone in a bird's tongue.

b. file, b. rasp see bone **rasp**.

flat b. a bone whose thickness is slight, sometimes consisting of only a thin layer of compact bone, or of two layers with a limited intervening layer of cancellated bone and marrow; usually curved rather than flat as, for example, the scapula, the ilium and the ribs.

b. flour finely ground bone used as a mineral supplement in animal feed to supply additional calcium and phosphorus. Needs to be properly sterilized.

b. fragility the ease with which bone fractures depends to a large extent on the density of its compact bone, that is its degree of mineralization, which in turn depends on a number of factors including age, nutritional adequacy, state of pregnancy and lactation and exposure to weight bearing.

b. Gla protein see **osteocalcin**.

b. infection see **osteitis**, **osteomyelitis**, **osteoarthritis**.

intramembranous b. bone formed within membrane or under the deeper layer of the periosteum. Called also membrane bone.

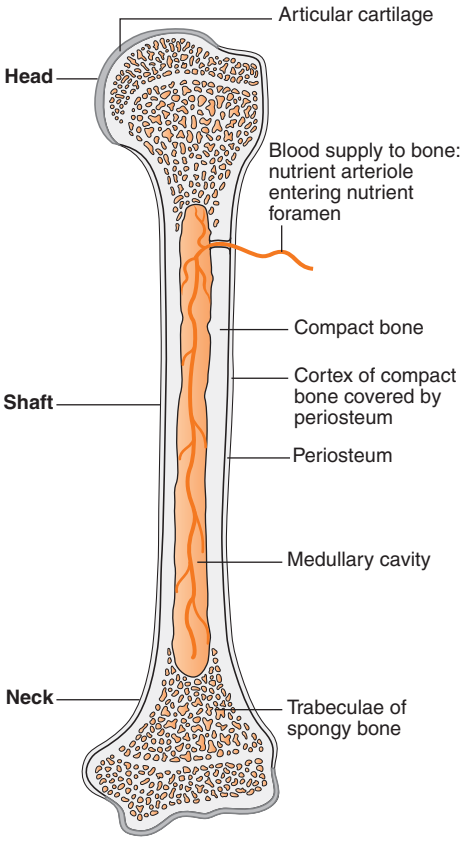
jugal b. see **zygomatic** bone.

lamellar b. successive layers of calcified bone matrix, each some 2–8 μm thick formed by osteoblasts housed in lacunae between each lamina that result in successive waves of appositional growth (1) either within or just beneath the periosteum (outer circumferential laminae); (2) by the endosteum around the meduallary cavity (inner circumferential laminae); or (3) successively around the central canal of each osteon. Remodelling of bone often leaves many irreguarly shaped groups of interstitial lamellae. Bones mainly grow in girth by the formatiion of successive layers of outer circumferential laminae.

laminar b. the formation of bone in layers within the periosteum, sometimes more than one layer at a time; the process is the main way that the diaphyseal part of the bone grows in girth. Is marked in farm animals and large dogs, and serves to accommodate the skeleton to the very rapid growth of the musculature.

lingual b. see **hyoid** bone.

long b. one whose length usually exceeds its breadth and thickness and which usually bears epiphyses at each extremity during growth.



B-34: Structure of typical long bone.
From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.

malar b. see **zygomatic** bone.
marble b's see **osteopetrosis**.
mastoid b. the posterior part of the petrous temporal bone; the mastoid process.
b. matrix the intercellular component of bone. It includes collagen and amorphous ground substance consisting mostly of mucopolysaccharides (chondroitin sulfate).
b. meal a product made from meatless bones which are crushed and sterilized. The bones are derived from boning plants and retail outlets. The bone meal is used as stock feed, fertilizer and in a number of industries. Care is needed in its preparation and in the selection of the bones because of the high risk of transmitting diseases including anthrax, salmonellosis, tuberculosis. A coarse grade of bone flour (see above). Prohibited from being used as a feed in many countries as part of programs to control or prevent bovine spongiform encephalopathy.
membranous b. see intramembranous bone (above).
metaplastic b. bone formed by connective tissue by redifferentiation of mesenchymal cells.
b. mineral principally calcium and phosphorus but includes also magnesium and, to a lesser extent, potassium and fluorine. Consisting mainly of hydrated calcium phosphate (apatite) and calcium carbonate.
b. modeling the sum of the activities of the endosteum and periosteum of bone to fashion bone in a new form.
b. neoplasm includes fibroma, fibrosarcoma, chondroma, osteochondroma, chondrosarcoma, osteoma, osteosarcoma.
pelvic b. hip bone.
perilacunar b. low density bone around the lacunae of bone which contains much amorphous mineral. In this form the mineral is labile and therefore important in the maintenance of calcium homeostasis.
periosteal b. bone deposition by the periosteum in successive laminae; the bone formation in new bone and in a callus, beginning as fibrocellular tissue forming from the endosteum and periosteum, followed by calcification and bone formation.
b. pinning see **pinning**.
b. plate see **plating**.
pneumatic b. bone that contains air-filled spaces; normal in birds.
premaxillary b. see **premaxilla**.
pterygoid b. a small skull bone that articulates with the sphenoid.
b. remodeling unit osteoclasts, osteoblasts and their progenitors, the basal metabolic unit of bone.
b. sand remnants of bone trabeculae destroyed in osteomyelitis and sequestered in pus.
b. screws see **screw**.
b. sealant a composition of beeswax and isopropylpalmitate used to seal the cut end of bone and stop the oozing of blood.
shin b. a colloquial term for either the **tibia** of primates and carnivores or the **cannon bone** of ungulates.
short b. one of approximately equal length, width and thickness, usually without epiphyses, such as most carpal and tarsal bones.
solid b. compact bone without marrow.
spongy b. cancellous bone.
sutural b's variable and irregularly shaped bones within the sutures between the bones of the skull. Called also wormian bones.
b. tumor includes cartilage-forming tumors (chondroma, osteochondroma, chondrosarcoma, multilobular tumor) and bone-forming tumors (osteoma, osteosarcoma).
tympanic b. the part of the temporal bone surrounding the middle ear.
b. wax see bone sealant (above).
wormian b's sutural bones.
woven b. primitive bone with coarse collagen bundles arranged in a disorderly fashion and replaced subsequently by lamellar bone.

bone marrow [bōn mar'o] the soft, organic material in the cavities of bones, a network of blood vessels and special connective tissue fibers that hold together a composite of fat and blood-producing cells. Marrow also functions to strengthen bone by reducing the potential for buckling failure. The chief function of *red* bone marrow is to manufacture erythrocytes, leukocytes and platelets. These blood cells normally do not enter the bloodstream until they are fully developed, so that the bone marrow contains cells in all stages of development. If the body's demand for white cells is increased because of infection, the bone marrow responds immediately by increasing production (**myeloid** metaplasia). The same is true if more red blood cells are needed (erythroid metaplasia), as in hemorrhage or hemolytic anemia. This type of marrow is most abundant in growing animals, especially the epiphyses, and also ribs, vertebral bodies and flat bones. *Yellow* bone marrow is mainly composed of fat cells and normally has no blood-cell producing function. It gradually replaces the red marrow of maturing animals.
b. m. aplasia any of the three cell lines may be singularly aplastic but a pancytopenic abnormality is most common. See also aplastic **anemia**.
b. m. aspiration see bone marrow **biopsy**.
congenital b. m. hypoplasia see **osteopetrosis**.
b. m. displacement see **myelophthisis**.
b. m. dyscrasia abnormal cell production by the bone marrow. Occurs in some dog breeds, especially miniature Poodles, in which there are maturation abnormalities of erythrocytes with macrocytosis and hypersegmented neutrophils.
b. m.-derived lymphocytes see B **lymphocyte**.
b. m. spaces the cavities in cancellous bone that are usually filled with bone marrow.
b. m. suppression some drugs and infectious agents can cause reduced erythropoiesis, myelopoiesis and megakaryocytopoiesis. See also **anemia**, **pancytopenia**.
toxic b. m. arrest see resurgence **granulopoiesis**.
b. m. transplantation the transfer of bone marrow from a normal, antigenically matched individual to another, usually for treatment of aplastic anemia, immunodeficiency or metabolic disorders.
bonelet [bōn'lət] an ossicle or small bone.
Boneliota fungillae an obsolete term; see ***Avipoxvirus***.
bong dok pu see ***Ligularia amplexicaullis***.
bongo (*Tragelaphus eurycerus*) a large reddish-brown African antelope with prominent white to yellow, transverse stripes on the body; both males and females have long, spiral horns.
boning [bōn'ing] the preparation of meat for human consumption by removing the bones from the carcass.
hot b. the boning process is carried out immediately, before the carcass has had time to cool and the meat to set.

VetBooks.ir

VetBooks.ir

bonnet fleece on the head of an alpaca. Called also bob.

bonobo (*Pan paniscus*) a primate in the subfamily Homininae; called also the pygmy chimpanzee, although they're not particularly small. An endangered species. See also **chimpanzee**.

Bonomiella columbae a species of pigeon louse.

Bonsmara a red breed of beef cattle bred in South Africa from Africander, Shorthorn and Hereford breeds.

bont tick see ***Amblyomma*** *hebraeum* and *A. variegatum* (tropical bont tick).

bony pelvis the ring of bone formed by the sacrum and the first few coccygeal vertebrae as the roof, the pubis and ischia as the floor and the ilia and the acetabular part of the ischia as the walls.

bony spiral lamina bony projection of the modiolus which supports the membranous subdivisions of the cochlea in the internal ear.

boobialla see ***Myoporum***.

booklice soft-bodied insects in the order Psocoptera, which live on vegetable matter of various sorts, including the paste in book bindings, hence the name, and have no veterinary importance other than their ubiquity so that they are constantly suspected of causing disease.

boonaree, boonery ***Alectryon*** *oleifolius*.

Boophane disticha African plant in the family Liliaceae (Amaryllidaceae); contains isoquinoline alkaloids which have been used as an arrow poison. Human poisoning is well known. Its risk as a poison plant for grazing animals is unknown. Called also candelabra flower, Cape poison bulb, gifbol.

Boophilus [bo-of'ī-ləs] previously a genus of ticks in the family Ixodidae, but considered to be a subgenus of ***Rhipicephalus***; designated *Rhipicephalus (Boophilus)* .

Booponus [bo-op'ə-nəs] a genus of flies of the family Calliphoridae.

B. intonsus the maggots of this fly cause myiasis and skin damage on the lower parts of the legs of ruminants. Called also foot maggot.

Booroola Merino prolific strain of Merino sheep selected for high ovulation rate and prolificacy also with the outstanding characteristic of freedom from pigmented wool; developed in Australia from a mutant strain.

booster dose ['ər] see booster **dose**.

boot [bōōt] 1. an encasement for the foot; a protective casing or sheath. 2. stage of growth of grain when the head is fully developed and can be easily seen and felt in the swollen section of the leaf sheath below the flag leaf. Stage at which cereal grains should be harvested for hay.

bell b. see brush boot (below).

brush b., brushing b. a rubber cover worn over the hoof by pacing and trotting horses to prevent damage to the inside of the opposite cannon bone. Called also bell boot.

bootstrap ['strap] a method for estimating parameters by repeatedly drawing random samples, with replacement, from the collected observations.

bopple nut tree see ***Macadamia***.

boracic acid boric acid.

Boraginaceae a plant family that contains the poisonous plant genera *Amsinckia, Borago, Buglossoides, Cynoglossum, Echium, Heliotropum, Symphytum* and *Trichodesma.* Common source of pyrrolizidine alkaloids.

Boran a variety of *Bos indicus* milking cattle bred in central and northern Africa. Horned, white or gray, sometimes pied or red.

borate [bor'āt] any salt or ester of boric acid. See also **astringent** (2), **borax**.

borax [bor'aks] sodium borate. Poisoning occurs only in animals that eat relatively large amounts. Signs include diarrhea, prostration and convulsions.

B-35: Boran dairy cattle. From Sambraus HH, Livestock Breeds. Mosby, 1992.

borborygmus [bor"bə-rig'məs] a rumbling noise caused by propulsion of gas through the intestines. See also **bowel** sounds.

Bordeaux mixture a fungicide used on grape vines consisting of copper sulfate, calcium hydroxide and water. It has also been used in the treatment of ringworm in cattle. It can cause copper poisoning.

border [bor'dər] a boundary line, edge or surface.

basal b. of the lung the tapered caudal border of the lung that encroaches on and invades the costodiaphragmatic pleural recess during normal breathing.

brush b. a specialization of the free surface of a cell, consisting of minute cylindrical processes (microvilli) that greatly increase the surface area.

Border collie [bor'dər] a medium sized (30–45 lb), working sheepdog with a moderately long, usually black and white coat. There is a smooth-coated variety. Used extensively in the United Kingdom and Australia. The breed is subject to central progressive retinal atrophy and ceroid lipofuscinosis.

border disease [bor'dər dĭ-zēz'] an infectious disease of sheep originally described in the Anglo-Scottish border area of the United Kingdom, but subsequently reported from most of the major sheep-producing countries. Caused by a pestivirus (border disease virus) and manifest with abortion, stillbirths, barren ewes and the birth of small weak lambs some of which have an abnormally hairy birth coat, gross tremor of skeletal muscles, inferior growth and a variable degree of skeletal deformity. The disease results from congenital infection and affected sheep are persistently infected. Called also hairy shaker disease.

b. d. virus (BDV) a pestivirus in the family *Flaviviridae*.

Border fancy [bor'dər] a popular breed of canaries, originating from the Anglo-Scottish border area. They are semi-erect and close feathered.

Border Leicester [bor'dər] a British breed of meat sheep with long, coarse wool, no horns, a prominent Roman nose and a head which is completely free of wool. Much favored as a part of a crossbreeding program to produce fat lamb mothers.

Border terrier [bor'dər] a small (11–15 lb) terrier with a short, harsh red or tan, weather resistant coat; the small v-shaped ears are dropped and the tail is moderately short. Bred for hunting foxes. Congenital ventricular septal defects are found in the breed.

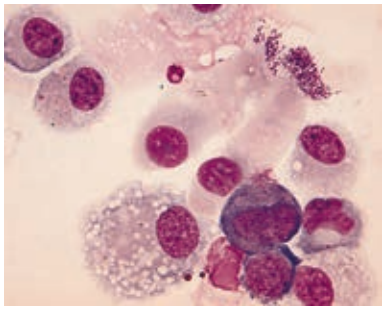
Bordet–Gengou phenomenon [bor-da' zhahn-goo'] see **complement** fixation tests.

Bordetella [bor"də-tel'ə] a genus of gram-negative bacteria that cause respiratory disease in a number of species.

B. avium the cause of turkey coryza. Previously called *Alcaligenes fecalis*.

B. bronchiseptica a small, gram-negative, motile bacillus. A normal inhabitant of the respiratory tract in humans, dogs and pigs,

B-36: Polypay lambs with border disease showing phenotypic abnormality for the breed, abnormal hair coat and one with abnormal coloring.



B-37: Columnar epithelium with dark-staining bacterial rods of *Bordetella bronchiseptica* tightly adhered to cilia. From Raskin RE, Meyer D, Canine and Feline Cytology, 2nd Edition. Saunders 2010.

but also causes pneumonia, stillbirths, abortions, canine infectious tracheobronchitis (see **kennel cough**) and **atrophic** rhinitis in pigs.

B. parapertussis implicated in pneumonia in sheep, in association with *Mannheimia haemolytica*.

B. pertussis the cause of whooping cough in humans.

bordetellosis an inclusive name for diseases caused by *Bordetella bronchiseptica*. It includes chronic bronchitis and some case of suppurative bronchopneumonia associated with distemper in dogs, canine infectious tracheobronchitis, respiratory disease in cats, atrophic rhinitis, septicemia and suppurative bronchopneumonia in pigs.

bore water water accumulated in aquifers below the earth's surface but available for farm use by sinking a bore pipe into the aquifer. May discharge to the surface (artesian bore) or need to be pumped to the surface (subartesian bore).

boredom state of mind caused by a lack of space in animal accommodation because there is insufficient room for young animals to play. If severe, animals may develop vices. See also **tail** biting, **ear** sucking, **crib-**biting and **pica**.

b. barking an unsatisfactory habit of some dogs, usually those left alone while their owners are at work. Unnoticed by the owner, but very annoying to neighbors.

boree see ***Acacia*** *cana*.

Borgia's bouquet ***Pimelea*** *trichostachya*.

boric acid [bor'ik] has weak bacteriostatic, fungistatic and astringent activity, used topically and commonly as a buffer in eye-drops. Also used as an insecticide.

boring [bor'ing] 1. a gait in a horse in which the horse leans heavily on the bit. 2. in racing, movement of a horse to put lateral pressure on another horse racing beside it.

borism poisoning by a boron compound.

born [born] brought into existence by birth.

b. after the ban see **BAB**.

Borna disease [bor'nə] a geographically restricted virus disease of horses and occasionally sheep, characterized by a uniformly fatal encephalomyelitis. Fatal infection also occurs rarely in dogs and cats. Clinically it is characterized by ataxia, pharyngeal paralysis, muscle tremor, lethargy and flaccid paralysis. The causative virus is a non-segmented, negative-stranded RNA virus with a nuclear site of replication and transcription of its genome and is the prototype of the family *Bornaviridae,* in the order *Mononegavirales.* It is neurotropic and establishes non-cytolytic persistent infection in the central nervous system of some animals. Depending on the host species, the virus may provoke a T cell-mediated immunopathological reaction with high case fatality. Animals become infected by direct contact with infected nasal secretions of carrier animals or by exposure to contaminated food or water. Serologic evidence indicates that the host range of Borna disease virus or an antigenically related virus is wide and that its geographic distribution is world-wide. The virus has been linked to psychiatric illnesses in humans. Called also Near eastern equine encephalomyelitis.

borogluconate a substance whose calcium salt is used in the treatment of bovine parturient hypocalcemia (milk fever) in cows, hypocalcemia in ewes and eclampsia in the bitch. It has the virtue of being nonirritant and can be administered subcutaneously as well as intravenously.

boron (B) [bor'on] a chemical element, atomic number 5, atomic weight 10.811. See Table 4.

Borrel bodies [bo-rel'] individual fowlpox virus particles visible under the light microscope.

Borrelia [bə-rel'e-ə] a genus of spiral, gram-negative bacteria. The spirals have a long amplitude and are irregular.

B. anserina causes fowl **spirochetosis**.

B. burgdorferi causes **Lyme disease** in humans and animals.

B. recurrentis causes relapsing fever in humans, and a subclinical disease in Virginia opossum, one of the major reservoirs of the disease.

B. suilla not an accredited species. Originally identified as a cause of **ulcerative** granuloma of swine.

B. theileri cause of cattle borreliosis.

borreliosis [bə-rel"e-o'sis] infection with *Borrelia* spp.; see also **Lyme disease**.

Borzoi a tall (28–31 inches), thin hound with a long, silky flat coat of any color but usually predominantly white. A coursing sight hound, it is also known as the Russian wolfhound.

Bos [bos] a genus of cattle of the family Bovidae which includes buffalo, bison and many other wild ruminants.

B. banteng **(*B. javanicus, B. sondaicus*)** a member of the wild cattle group of the family Bovidae. Brown or black with white stockings and rump patch.

B. gaurus a long-horned, dark-colored with light belly and stockings, wild cattle. Tall, 6 ft at shoulder, and unsuited to domestication.

B. indicus the zebu species. Called also Brahman (USA), Afrikaner (Africa). They are much prized for their hardiness in hot climates and because of their resistance to tick infestation. They have been crossbred extensively to produce new breeds including Santa Gertrudis, Brangus, Droughtmaster, Braford.

B. mutus see **yak**.

B. taurindicus crossbred zebu and British breed cattle, usually as more or less fixed breeds with an official studbook.

B. taurus the common domestic cattle of Europe. Docile and productive they represent man's most effective symbiosis with animals. They provide draft, meat, milk products, leather and many by-products.

BOSCC bovine ocular squamous cell carcinoma.

bosganna see ***Salsola*** *tuberculatiformis*.

bosluisbessie [Af.] see ***Fadogia homblei***.

boss 1. a rounded eminence as at the base of a horn. 2. the dominant cow in a herd.

bosselated [bos'ə-lāt-əd] marked or covered with bosses.

bossy [bos'ē] 1. in dog conformation, used to describe overdevelopment of the shoulder muscles. 2. vernacular pet name for a cow.

Boston terrier [bos'tən] a small, shorthaired lively dog with a short nose, prominent eyes, erect ears and a naturally short tapered or screw tail. It has a very short, smooth coat in brindle, seal or black, with white markings. The breed originated in the USA late in the 19th century. Predisposed to hyperadrenocorticism, mast cell tumors, heart base tumors, persistent right aortic arch, hemivertebrae, cataracts and sebaceous gland tumors.

botanical medicine see **herbal medicine**.

bot fly [bot'fli] the flies that produce the maggots known as **bots** and the diseases referred to as **gasterophilosis** and **nasal** bot fly infestation. Belong to the family Oestridae.

b. f. infestation see **gasterophilosis**.

bothria two longitudinal grooves or sucker-like expansions on the scolex of members of the cestode orders Bothriocephalidea, Diphyllidea, Diphyllobothriidea and Trypanorhyncha. Species of veterinary significance include *Diphyllobothrium* and *Spirometra* spp.

Bothriocephalus [both"re-o-sef'ə-ləs] a genus of tapeworms in the order Bothriocephalidea. Occur, but appear to have little pathogenicity, in many wild fish. Includes *B. acheilognathi* (carp, goldfish).

botryoid [bot're-oid] shaped like a bunch of grapes.

b. rhabdomyosarcoma see **urinary bladder** tumors.

botryomycosis [bot"re-o-mi-ko'sis] chronic, deep staphylococcal infection in which the bacterial colonies become coated with dense eosinophilic radiating club-shaped deposits of degraded antigen-antibody complexes, the **Splendore–Hoeppli** phenomenon.

Botrytis [bo-tri'tis] a common fungal cause of spoilage in stored meat.

bots [bots] maggots (larval stages) of flies which infest animals, especially horses (*Gasterophilus*) and sheep (*Oestrus*). The term bot is also loosely used to include the invasive maggots, such as those of *Cuterebra* and *Wohlfahrtia* spp.

sheep nasal b. see ***Oestrus*** *ovis*.

BoTV bovine torovirus.

B-38: Horse bots (*Gasterophilus* spp.) cemented to hair on the forelimb of a horse. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

VetBooks.ir

VetBooks.ir

B

bottle jaw [bot'əl] the accumulation of edema fluid in the intermandibular space. Occurs more readily in animals grazing at pasture than in those feeding from mangers because of the effect of gravity in producing dependent edema.

bottle rearing [bot'əl] the rearing of newborn animals by feeding natural milk or a prepared formula from a bottle equipped with a rubber nipple.

bottle tree [bot'əl] see ***Brachychiton rupestris***.

botuliform [boch'u-lĭ-form] sausage-shaped.

botulin see **botulinum toxin**.

botulinal [boch"u-lī'nəl] pertaining to *Clostridium botulinum* or to its toxin.

botulinum toxin [boch'ə-lin-əm] a neurotoxin produced by *Clostridium botulinum*; causes botulism. Eight antigenically distinct types are recognized: A, B, C, C2, D, E, F and G.

botulism [boch'ə-liz-əm] a highly fatal toxemia caused by the ingestion of toxin produced during vegetative growth of *Clostridium botulinum* in decomposing animal matter. *C. botulinum* types B, C and D are associated with disease in animals but the type prevalence varies geographically. In agricultural animals, ingestion of preformed toxin most commonly results when contamination during feed preparation or storage allows multiplication of the organism in the feed or allows contamination of feed with carrion containing toxin. In companion animals it occurs as the result of feeding on carrion. Rare cases occur from toxin production from organisms in the intestine or wounds. The clinical picture includes the development of flaccid paralysis over a period of 1–3 days, the animal becoming recumbent and being unable to eat or drink, but being fully conscious. Death is caused by respiratory paralysis. Called also western duck disease, limberneck. See also **grass** sickness.

wound b. a form resulting from infection of a wound with *Clostridium botulinum*. Called also toxicoinfectious botulism.

toxicoinfectious b. growth and toxin production of the organism in the alimentary tract.

bougie [boo-zhe'] a slender, flexible, hollow or solid, cylindrical instrument for introduction into the urethra or other tubular organ, usually for calibrating or dilating constricted areas.

filiform b. a bougie of very slender caliber.

soluble b. a bougie composed of a substance that becomes fluid in situ.

bougienage [boo"zhe-nahzh'] passage of a bougie.

bouhite see **maedi**. Called also *la bouhite*.

Bouin's fixative [boo-ă'] a tissue preservative composed of saturated picric acid, formaldehyde and glacial acetic acid. Particularly suitable for trichrome connective tissue stains.

bouncing bet see ***Saponaria***.

bound [bound] said of electrolytes and hormones circulating in the blood, i.e. bound to protein molecules and not immediately available functionally. See also **unbound**.

bounding [bound'ing] a gait in which the animal progresses in a series of bounds instead of a normal walking or running gait.

bouquet [boo-ka'] a structure resembling a cluster of flowers.

Bourdon pressure gauge see Bourdon **flowmeter**.

Bourgelatia a genus of the family Chabertiidae of nematodes. Includes *B. diducta* (pig intestine).

Boussingaultia baselloides see ***Anredera cordifolia***. Called also *B. gracilis* var. *pseudobaselloides*.

bouton [boo-tahn'] [Fr.] *button*.

b. terminal the swollen end of an axon that contributes to a synapse.

boutonneuse fever a tick-borne rickettsial disease of humans, endemic in the Mediterranean area caused by *Rickettsia conorii*. Dogs are sometimes infected and may be a reservoir for the disease.

Bouvier des Flandres a medium to large dog of compact build, with a coarse, fawn or gray coat, and a docked or naturally short tail. The coat forms a characteristic beard and mustache. The breed is affected by a hereditary laryngeal paralysis. Called also Belgian cattle dog.

B-39: Bouvier des Flandres with uncropped ears.

Bovicola a genus of lice of the superfamily Ischnocera. Also called ***Damalinia***. Includes *B. limbatus* (syn. *B. painei*) and *B. caprae* (goat), *B. ovis* (sheep) and *B. bovis* (cattle).

Bovidae a family of ruminants including cattle, buffalo and bison.

Bovimyces pleuropneumoniae see ***Mycoplasma mycoides*** subsp. *mycoides* (small colony type).

bovine [bo'vīn] pertaining to, characteristic of, or derived from the ox or cattle, members of the family Bovidae. See also **cattle**.

b. atypical interstitial pneumonia see **atypical interstitial pneumonia**.

b. bonkers see **ammoniated forage poisoning**.

epidemic b. abortion see epizootic bovine **abortion**.

b. epizootic fever see **ephemeral fever**.

b. herpesviruses bovine herpesviruses 1, 2, 4 and 5. See ***Herpesviridae***.

b. immunodeficiency virus a lentivirus which causes leukopenia followed by persistent leukocytosis when inoculated into calves. The prevalence and significance of natural infection are unknown.

b. leukosis see bovine viral leukosis (below).

b. lymphomatosis see bovine viral leukosis (below).

b. lymphosarcoma see bovine viral leukosis (below).

b. malignant catarrh see **malignant catarrhal fever**.

b. mucosal disease see bovine virus diarrhea (below).

b. petechial fever is caused by *Ehrlichia ondiri* and occurs in Kenya and possibly Tanzania in cattle grazing thick scrub land or indigenous forest areas to 1500–3000 m altitudes. It is manifest by fever and submucosal and serosal hemorrhages. There may be epistaxis and other evidence of a bleeding tendency. Pregnant animals may abort and anemia may result in death 3–4 weeks after infection. The disease has a strong similarity to **tickborne fever**. The method of transmission is unknown. Called also Ondiri disease.

b. polyomavirus a virus not known to be pathogenic; up to 60% of cattle sera have antibody to the virus.

b. protozoal abortion see **neosporosis**.

b. pulmonary emphysema see **atypical interstitial pneumonia**.

b. respiratory disease a group of undifferentiated diseases of young cattle characterized by dyspnea, coughing, nasal discharge, evidence of pneumonia on auscultation of the lungs, and nonspecific signs as a result of the toxemia of infection and tissue destruction. Because of the complexity of the differential diagnosis of these diseases, it has become common practice to devise treatments and control programs which will deal satisfactorily with them as a group. Called also shipping fever.

b. respiratory syncytial virus a member of the family *Paramyxoviridae*, genus *Pneumovirus* which causes one of the more virulent forms of enzootic calf pneumonia. Many calves in the group are affected; there is severe dyspnea and extensive involvement of the lungs. Outbreaks of disease also occur in adult cattle. The mortality rate in all ages can be high.

b. viral leukosis a highly fatal, systemic, malignant neoplasm of the reticuloendothelial system of cattle caused by an exogenous C-type oncovirus in the *Retroviridae* family. Infected animals are the only source of virus which is transmitted horizontally at parturition, by blood-sucking insects, contaminated surgical instruments, per-rectal palpation and by congenital infection in 4–8% of calves born to infected cows. Genetic makeup of the animal determines if it becomes infected and develops disease. Persistent infection is most common, followed by persistent lymphocytosis in 30% of infected animals, and less than 5% of infected animals develop lymphosarcoma. Clinical disease is most common in mature cattle and is characterized by tumors composed of aggregations of neoplastic lymphocytes in almost any

VetBooks.ir

organ with a great variety of clinical syndromes resulting. These include abomasal obstruction and ulcer, congestive heart failure, posterior paralysis, pharyngeal obstruction, protrusion of the eye, and a cutaneous form with multiple nodes and plaques in the skin. Economic loss is from decrease in milk production and early culling. It is not a zoonosis. There is also a sporadic occurrence in young cattle of a juvenile form in calves less than 6 months old and a thymic form in yearlings, but these diseases are not associated with the bovine leukosis virus. A disease notifiable to the OIE (see Table 22). Called also bovine lymphosarcoma, enzootic bovine leukosis.

b. virus diarrhea (BVD) of worldwide and major economic importance and associated with bovine virus diarrhea virus (BVDV), a pestivirus with type 1 and type 2 genotypes, and cytopathic and non-cytopathic biotypes with mutation between both. Infection occurs after maternal immunity is lost and usually is manifest by fever and mild diarrhea and is clinically unapparent. The virus is immunosuppressive and may predispose to secondary disease such as respiratory disease. A disease notifiable to the OIE (see Table 22). The primary source of virus is the persistently infected cattle which occur when non-cytopathic virus infects the pregnant cow and its fetus in early gestation prior to the development of immune capacity in the calf. The calf is born persistently infected and immunotolerant to the infecting virus and remains so for life, excreting virus from mucosal surfaces. In addition, infection of susceptible cattle at the time of insemination through the mid fetal period can also result in conception failure, increased embryonic mortality, fetal mummification, abortion, premature births, stillbirths, congenital malformations and the birth of stunted, weak calves. Some strains, particularly of non-cytopathic type 2 BVDV, when introduced into susceptible herds, can produce peracute disease in cattle of all ages with high morbidity and case fatality resulting from severe diarrhea, fever, agalactia, thrombocytopenia and hemorrhagic disease. Bovine virus diarrhea is the subject of national eradication programs in some European countries. Called also bovine viral diarrhea. *Mucosal disease* occurs only in persistently infected cattle and is precipitated by a superinfection with a cytopathic strain of the virus occurring usually at 6–24 months of age or older. It is manifest with fever, diarrhea, oral erosioins and very high case-fatality rate, and at postmortem examination, erosive stomatitis and gastroenteritis with widespread hemorrhage and depletion of Peyer's patches. See also **ear** notch test.

bovine leukemia virus see **bovine** viral leukosis.

bovine spongiform encephalopathy (BSE) [*bo'vīn spun'jī-form en-sef"ə-lop'ə-the*] a prion disease of cattle, also known, but mis-named, as mad cow disease. The disease has a long incubation period and occurs at a modal age of approximately 5 years with a clinical course of several weeks. Principal clinical signs are changes in sensorium and temperament and behavior, posture and movement especially manifest by ataxia, and in dairy cattle, a fall in milk production. There is no antemortem diagnostic test. Most affected cattle are culled because of behavioral abnormalities before major clinical disease. The disease emerged in the mid 1980s in the United Kingdom and epidemiological studies showed it was associated with the feeding of meat and bone meal to affected animals when they were calves. It is assumed that the meat and bone meal were contaminated by a scrapie strain capable of transmitting to cattle, possibly as a result of a change in the method of processing meat and bone meal that preceded the outbreak, but the origin of the BSE prion is not clear. Other animal species, including exotic zoo ungulates fed infected meat and bone meal and zoo cats fed culled cattle and domestic cats (but not dogs) fed canned food containing infected meat products developed a transmissible spongiform encephalopathy (TSE). A small proportion of humans, relative to those that must have been exposed by consumption of infected material developed a TSE called variant Creutzfeldt–Jakob disease (vCJD). The outbreak of BSE in the UK peaked in the early 1990s following the ban of feeding meat and bone meal. International movement of cattle and meat and bone meal prior to the recognition of the disease in the UK, and illegal movement subsequently, resulted in the spread of this infection to many countries— mostly recognized in Europe and it has been reported in North America, but remains mainly unknown in Asia. The disease in cattle can be eliminated by a strict ban and control on the feeding of ruminant animal products to ruminants. The risk of disease in humans eventually can be obviated by imposing and enforcing the feeding ban to cattle (above) but also by avoiding consumption by humans of meat from cattle over 30 months of age. Several countries, for reasons of consumer confidence, test all cattle for BSE before releasing the carcass for consumption. The disease is notifiable to the OIE (see Table 22). See also **scrapie**.

atypical BSE forms of the disease that differ from classical BSE in their biochemical properties and pattern of PrP^{Sc} deposition as determined by immunohistochemistry. At least two are identified; occur at very low incidence and in aged cattle.

B-40: Acute stomatitis in bovine virus diarrhea/mucosal disease.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

bovovaccine a vaccine consisting of live, virulent human tubercle bacilli used to protect cattle against bovine tuberculosis. It was effective but was discontinued because it caused the excretion of live organisms in the milk.

bowel [*bou'əl*] the **intestine**.

b. edema see **edema** disease.

b. entrapment see **intestinal** strangulation.

hemorrhagic b. syndrome occurs in well nourished 3–6-month-old pigs, commonly being fed whey, and manifest by severe pain and abdominal distention preceding death and with a gas-filled intestine with intraluminal hemorrhage at postmortem. The proximal duodenum and stomach are not affected and most cases appear due to torsion at the mesenteric root occluding the mesenteric veins.

b. sounds relatively high-pitched abdominal sounds caused by the propulsion of the intestinal contents through the lower alimentary tract. Auscultation of bowel sounds is best accomplished by using a diaphragm-type stethoscope rather than a bell-shaped one. Normal bowel sounds are characterized by bubbling and gurgling noises that vary in frequency, intensity and pitch. In the presence of distention from flatus, the sounds are hyperresonant and can be heard over the entire abdomen.

b. training see **housetraining**.

Bowenia a genus of Australian cycads in the plant family Stangeriaceae; contain cycad glycoside causing a staggers syndrome and liver damage in cattle. Includes *B. serrulata* (Byfield 'fern'), *B. spectabilis* (zamia 'fern'); these are gymnosperms, not ferns.

Bowen's disease single to multiple cutaneous squamous cell carcinomas in situ; uncommon cats and rare in dogs. There are hyperkeratotic, often pigmented, plaques.

bowie [*bo'e*] a disease of young lambs characterized by lateral curvature of the long bones of the front limbs. The lambs become so lame that they lose condition and are markedly deformed by the age of 8 weeks. The cause is unknown.

bowleg [*bo'leg*] an outward curvature of one or both legs near the knee; genu varum.

Bowman–Heidenhain theory the early theory of renal function which incorporated both glomerular and tubular secretory functions, as well as glomerular filtration and tubular reabsorption.

Bowman's capsule [*bo'mən*] a two-layered cellular envelope enclosing the tuft of capillaries constituting the glomerulus of the kidney; called also glomerular capsule, Malpighian capsule.

Bowman's disk [*bo'mən*] one of the flat, disklike plates making up a striated muscle fiber.

Bowman's glands [*bo'mən*] small mucous glands in the olfactory mucosa; called also olfactory glands.

Bowman's membrane [*bo'mən*] see **corneal** laminae.

Bowman's space [*bo'mən*] the cavity within the glomerular capsule in which glomerular filtrate collects.

box [*boks*] 1. an ornamental shrub. See ***Buxus sempervirens***. 2. accommodation for a single horse averaging 10 × 12 ft in

VetBooks.ir

dimensions. Called also loose box. 3. to mix groups of sheep (box them up). 4. a repeating sequence of nucleotides that forms a transcription or a regulatory signal.

CAT b. a sequence associated with transcription initiation, typically found about 100 bases upstream from a TATA box; abbreviated from CCAAT or CAAT.

Hogness b. see Pribnow box (below).

Pribnow b. the sequence of 5–10 bases in the promotor region of *Escherichia coli* genes. It is a variant of a basic sequence TATAATG. See also TATA box (below).

TATA b. a eukaryotic DNA sequence usually TATAAATA, similar to the Pribnow box of *Escherichia coli*, occurring in the promotor region 25–30 bases upstream from the transcriptional start site and required for mRNA chain initiation.

box and whisker plot, boxplot [*boks*] a graphical method of displaying the distribution of a variable.

box restraint [*boks*] see squeeze **cage**.

boxed horse colic a disorder of horses which come off pasture into boxes or stalls and on a diet in which roughage is lacking, encouraging them to eat bedding, causing impaction colic.

Boxer a medium-sized, short-nosed dog with a short, fawn or brindle coat and white and black markings around the face, chest and legs. It has a tail docked to a short length and, where practiced, the ears are cropped. The breed is predisposed to aortic and carotid body tumors, congenital heart defects, **cardiomyopathy**, gingival hyperplasia, skin tumors (particularly mastocytomas, melanomas and histiocytomas), brain tumors, corneal ulceration, histiocytic ulcerative colitis and an inherited **axonopathy**.

B. ulcer see refractory **ulcer**.

boxwood [*boks'wood*] see ***Buxus sempervirens***.

Boyden chamber an instrument for assessing the in vitro chemotactic activity of neutrophils.

Boykin spaniel an American breed, originating in South Carolina as a turkey and waterfowl hunting dog. Medium-sized (30–38 lb), it has a wavy or curly, liver or chocolate colored coat with feathering on the ears, chest, legs and belly. Called also swamp poodle.

Boyle's law [*boil*] at a constant temperature and mass the volume of a perfect gas varies inversely with pressure; that is, as increasing pressure is applied, the volume decreases. Conversely, as pressure is reduced, volume is increased.

Boynton tissue vaccine an obsolete term for an inactivated tissue vaccine used in pigs to prevent classical swine fever (hog cholera).

boys and girls ***Mercurialis annua***.

BP 1. blood pressure. 2. boiling point. 3. British Pharmacopoeia.

BP-6 a mixture of polybrominated biphenyls used as a flame retardant.

B-41: Boxer.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

bp base pair, boiling point.

BPU benzoylphenyl urea.

Bq becquerel.

Br chemical symbol, *bromine*.

Brabancon see **Brussels griffon**.

Brabant disease trichlorethylene-extracted soybean meal poisoning.

Brabant mastitis test an early version of the California mastitis test based on the development of a gel in the sample as an indicator of the number of tissue cells present.

Bracco Italiano a powerful, muscular, medium to large-sized (55–88 lb) gun dog with pendulous upper lips and a fine, short coat in orange or chestnut with patches. Called also Italian pointer.

brace [*brās*] 1. an orthopedic appliance or apparatus (orthosis), usually made of metal or leather, applied to the body, particularly the trunk and lower extremities. Has limitations in animals as compared to humans. Used mainly for support for the lower limbs of horses. 2. the stance from which a polo shot is played. 3. a pair of animals.

bracelets [*brās'lets*] the rings of hair on the hind legs of Poodles.

brachial [*bra'ke-əl*] pertaining to the arm or, sometimes, the whole forelimb.

b. avulsion see brachial plexus **avulsion**.

b. block see brachial **block**.

b. paralysis injury to the brachial plexus causes paralysis and atrophy in the front limbs. See also brachial plexus **avulsion**.

b. plexus a nerve plexus originating from the ventral branches of the last four cervical and the first two thoracic spinal nerves. It gives off the principal nerves to the shoulder and forelimb.

b. plexus neuritis occurs rarely in dogs. Characterized by an acute onset of pain and weakness in the forelimbs. There is hyporeflexia, neurogenic atrophy and loss of sensation.

brachialgia [*bra"ke-al'jə*] pain in the forelimb.

brachialis tendon [*bra"ke-al'lis*] the tendon of insertion of the brachialis muscle. A surgical procedure transposes this or the biceps tendon to the olecranon as a treatment for paralysis from brachial avulsion, but only if the musculocutaneous nerve function is still present.

Brachiaria a genus of the grass family Poaceae; contain steroidal saponins; manifested clinically by photosensitization. Includes *B. brizantha* (signal grass, St. Lucia grass), *B. decumbens* (signal grass), *B. humidicola* (Koronivia grass), *B. radicans* (tanner grass), *B. ruziziensis*. Unidentified species (called also Brazilian tanner grass) may cause nitrite poisoning.

B. mutica the grass is not normally poisonous but may contain enough calcium oxalate crystals to cause nutritional secondary hyperparathyroidism in horses grazing dense swards. Called also para grass.

brachi(o)- word element. [L., Gr.] *arm*. In veterinary terms, taken to mean the forelimb.

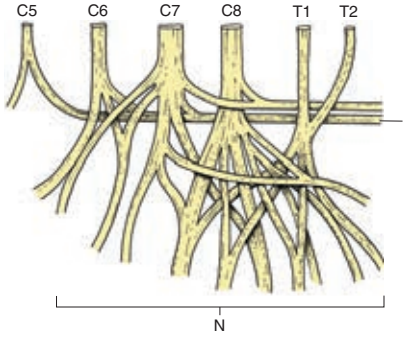
brachiocephalic [*brak"e-o-sə-fal'ik*] pertaining to the forelimb and head.

brachiocrural [*brak"e-o-kroo'rəl*] pertaining to the forelimb and hindlimb.

brachiocubital [*brak"e-o-ku'bĭ-təl*] pertaining to the forelimb and elbow.

Brachionus plicatilis euryhaline zooplanktonic species, 125–300 µm in size, used as live food for larval marine fish. Called also rotifer.

brachium [*bra'ke-əm*] pl. *brachia* [L.] 1. the forelimb; specifically from the shoulder to elbow. 2. any armlike process or structure.



B-42: The brachial plexus. The ventral divisions of the spinal nerves (C6–T2) contributing to the plexus are at the top of the schema, the peripheral branches (N) supplying the forelimb at the bottom.
From Dyce KM, Textbook of Veterinary Anatomy, 4th Edition. Saunders, 2010.

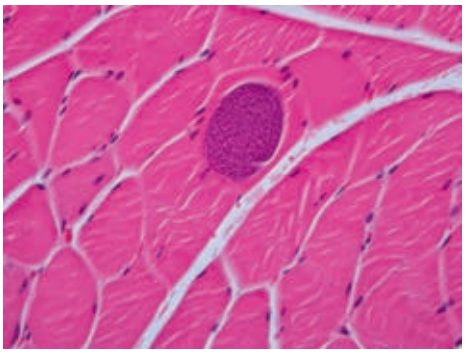
b. colliculi caudalis fibers from the caudal colliculus which enter the medial geniculate body and form part of the auditory pathway.
b. colliculi caudalis et rostralis the bridging fibers between the colliculi and the geniculate bodies.
b. conjunctivum the rostral cerebellar peduncle. A fibrous band extending upwards to each hemisphere of the cerebellum over the pons, the two joining to form the sides and part of the roof of the fourth ventricle.
b. pontis the brachium of the pons, the middle cerebellar peduncle.
brachy- word element. [Gr.] *short*.
Brachyachne genus of Australian grasses, members of the family Poaceae. Cause cyanide poisoning. Includes *B. convergens* (Gulf star or spider grass), *B. tenella* (slender native couch grass).
brachybasia [brak"e-ba'zhə] a slow, shuffling, short-stepped gait.
brachycardia [brak"e-kahr'de-ə] see **bradycardia**.
brachycephalic [brak"e-sə-fal'ik] having a short wide head.
b. breeds those dog breeds with very short faces, e.g. Boxer, Bulldog, King Charles spaniel, Pekingese, Pug. Associated with this type of head, these breeds suffer from anomalies of the upper respiratory tract such as stenotic nares, elongated soft palate, and everted laryngeal saccules, and associated disorders, e.g. facial fold dermatitis. They are also predisposed to neoplasms of chemoreceptor tissue.
b. obstructive syndrome any of several upper airway disorders, prevalent in brachycephalic dogs, may lead to elongation and thickening of the soft palate, chronic pharyngitis and tonsillitis, inflammation and decreased diameter of the larynx and trachea. Conditions which predispose are everted laryngeal saccules, laryngeal collapse, stenotic nares, tracheal hypoplasia. Characterised by stertor, snoring and exercise intolerance.
brachycephaly [brak"e-sef'ə-le] the state of being brachycephalic.
Brachycera a suborder of large flies of the order Diptera. Includes ***Tabanus*** spp. flies (family Tabanidae or tabanids).
brachyceros European cattle type derived from *Bos taurus brachyceros*; small, red, brown or black with short horns and deep forehead. Called also Celtic Red.
brachycheilia [brak"e-ki'le-ə] abnormal shortness of the lip.
Brachychiton Australian tree genus, members of the family Sterculiaceae. Valuable fodder trees in drought time but can poison sheep and cattle, the seeds being most poisonous. Toxin unidentified. Includes *B. populneum* (kurrajong tree).
B. rupestris the pulp of the trunk used as drought feed may rarely cause nitrate–nitrite poisoning. Called also bottle tree.
Brachycladium spiciferum an obsolete name for ***Bipolaris spicifera***.
brachydactyly [brak"e-dak'tə-le] abnormal shortness of the digits.
Brachyglottis repanda [brak"e-glot'is] New Zealand shrub member of the plant family Asteraceae (Compositae).
brachygnathia [brak"ig-na'the-ə] brachygnathism.
brachygnathism abnormal shortness of the mandible resulting in a maxilla that is longer. Called also overshot, parrot mouth, sow mouth.
Brachylaemidae a family of trematodes that infest birds and mammals.
brachymetacarpia [brak"e-met"ə-kahr'pe-ə] abnormal shortness of the metacarpal bones.
brachymetatarsia [brak"e-met"ə-tahr'se-ə] abnormal shortness of the metatarsal bones.
brachyodont see brachyodont **teeth**.
brachyphalangia [brak"e-fə-lan'jə] abnormal shortness of one of the phalanges.

B-43: Dorsolateral aspect of the skull of a brachycephalic breed of dog, demonstrating the foreshortened facial region and the malocclusion of the dental arcade.
From Boyd JS, Colour Atlas of Clinical Anatomy of the Dog and Cat, 2nd Edition. Mosby, 2001.

brachyspina shortening of the spine.
bovine b. syndrome an autosomal recessively inherited skeletal malformation in Holstein cattle. There is growth retardation with significant shortening of the spine and shortening of the limbs.
Brachyspira [brak"e-spi'rə] a genus of anaerobic intestinal bacteria in the order *Spirochaetaceae*. Formerly *Serpulina*. Some species were previously in the genus *Treponema*.
B. aalborgi infects primates, but its pathogenic significance is uncertain.
B. alvinipulli a cause of diarrhea in adult chickens.
B. hyodysenteriae the cause of swine dysentery. Previously called *Serpulina hyodysenteriae* and *Treponema hyodysenteriae*.
B. intermedia a cause of diarrhea in adult chickens.
B. pilosicoli causes intestinal or colonic spirochetosis, a mild colitis and diarrhea in weaner and grower pigs and of wet litter and reduced egg production in adult chickens.
brachytherapy [brak"e-ther'ə-pe] a form of radiotherapy in which the source of radiation is applied in or on the patient in one prolonged dose, using surface applicators, needles, seeds or suspensions for use in serous cavities.
interstitial b. the radioactive source is implanted directly into the tissues. Called also curietherapy.
surface b. the radioactive source is applied to the surface of the tumor. Called also plesiotherapy.
brachyury shortness of the tail, as in some Manx cats.
bracken [brak'ən] see ***Pteridium***.
brackets [brak'ats] in orthodontics, metal devices bonded onto teeth for attachment of elastic bands to reposition teeth.
Bradford Count, Bradford System see **wool** quality.
bradsot [brad'sot] see **braxy**.
brady- word element. [Gr.] *slow*.
bradyacusia [brad"e-ə-ku'zhə] dullness of hearing.
bradyarrhythmia [brad"e-ə-rith'me-ə] bradycardia associated with arrhythmia. Includes **sinoatrial** block, **atrial** standstill and atrioventricular **heart block**.
Bradybaena [brad"e-be'nə] terrestrial snail, the intermediate host for the pancreatic flukes *Eurytrema* spp.
bradycardia [brad"e-kahr'dē-ə] slowness of the heartbeat, in dogs and cats to less than 60 beats per minute.
sinus b. a slow sinus rhythm, characterized by normal electrocardiographic complexes in a normal rhythm or a sinus arrhythmia. A normal finding, most commonly seen in large breeds of dogs or athletic animals.
b.–tachycardia syndrome see **sick** sinus syndrome.
bradykinesia [brad"e-ki-ne'zhə] abnormal slowness of movement; sluggishness of physical and mental responses.
bradykinin [brad"e-ki'nin] a nonapeptide kinin formed from a plasma protein, high-molecular-weight (HMW) kininogen, by the action of kallikrein; it is a very powerful vasodilator that increases capillary permeability and, in addition, constricts smooth muscle and stimulates pain receptors.
bradyphagia [brad"i-fa'jə] abnormal slowness of eating.
bradypnea [brad"e-ne'ə, brad-ip'ne-ə] respirations that are regular in rhythm but slower than normal in rate. This is normal during sleep; otherwise it is associated with disturbance in the brain's respiratory control center, as when the center is affected by opiate narcotics, a tumor, a metabolic disorder or a respiratory decompensation mechanism.
bradyspermatism [brad"e-spur'mə-tiz-əm] abnormally slow ejaculation of semen.
bradysphygmia [brad"e-sfig'me-ə] abnormal slowness of the pulse.
bradystalsis [brad"e-stawl'sis] abnormal slowness of peristalsis.
bradytachycardia [brad"e-tak"i-kahr'de-ə] alternating attacks of bradycardia and tachycardia.
bradytocia [brad"e-to'se-ə] slow parturition.
bradyuria [brad"e-u're-ə] slow discharge of urine.
bradyzoite [brad"e-zo'it] small comma-shaped form of *Toxoplasma gondii* and other apicomplexan parasites found in tissues enclosed in a pseudocyst; a stage which replicates slowly.

B-44: Sinus bradycardia in a dog.
From Ettinger SJ, Feldman E, Textbook of Veterinary Internal Medicine, 6th Edition. Saunders, 2004.

VetBooks.ir



B-45: Transverse section of feline skeletal muscle showing bradyzoite of *Toxoplasma gondii*. From August JR, Consultations in Feline Internal Medicine, Volume 6. Saunders, 2009.

VetBooks.ir

Braford a white-faced breed of red beef cattle produced by crossbreeding between Hereford and Brahman breeds.

Brahma heavy Asiatic breed of poultry with black or white body plumage, silver-gray head and neck, beak and legs yellow, heavy leg feather.

Brahman silver-gray, humped cattle created as a breed in the southern USA from cattle imported from India at the beginning of the 20th century. As a breed they may have had minor infusions of blood from the British breeds. Called also Brahma.

brailing a technique for temporarily preventing flight in game birds by the use of leather straps.

brain [*brān*] encephalon; that part of the central nervous system contained within the cranium, comprising the forebrain, midbrain and hindbrain, and developed from the embryonic neural tube. It is connected at its base with the spinal cord. The brain is a mass of soft, pinkish gray nerve tissue. For specific brain diseases see headings relating to etiology and lesion.

b. abscess common signs caused by an abscess in the brain are circling, rotation of the head, abnormal reflexes in one eye. The CSF may show evidence of infection. Brrain abscesses are usually not encapsulated by fibrous tissue.

b. aneurysm see berry **aneurysm**.

b. anoxia acute or chronic insufficiency of the blood supply to the brain causes anoxia which causes clinical signs that vary with the severity of the deprivation. Acute anoxia causes muscle tremor, recumbency, convulsions and death or recovery if the anoxia is relieved soon enough. Chronic anoxia causes lethargy, weakness, blindness and sometimes convulsions. In either case there may be permanent damage.

b. case the cranium.

b. cestodal cyst see **coenurosis**.

b. coup lesion a derivation from **contrecoup**.

b. dead irreversible coma with apnea, loss of all brainstem reflexes and absence of activity on an electroencephalogram.

b. decompression relieving the pressure within the cranial vault. This may be done surgically by opening the cranium, or medically by administering hypertonic solutions of slowly metabolized materials, such as mannitol, intravenously.

b. edema an important part of a number of acute diseases, e.g. lead poisoning, encephalitis, salt poisoning in swine, polioencephalomalacia of ruminants and hypoxia due to any cause. Clinically manifested by blindness, opisthotonos, nystagmus, recumbency and tonic convulsions. Inherited in polled and horned Herefords; calves are recumbent at birth and are never able to stand but consciousness is normal. See also **neuraxial edema**.

b. hematoma may occur with trauma, in extradural, subdural or intraparenchymal locations. They can cause progressive increase in intracranial pressure and eventually death.

b. hemorrhage intracranial hemorrhage affecting the brain usually follows traumatic injury but spontaneous hemorrhage may result from an intrinsic vascular lesion. Can occur following ingestion of toxic amounts of anticoagulant rodenticides. Loss of consciousness is a common sign followed by residual signs depending on the locality and size of the hemorrhage. Ataxia and convulsions are common sequelae.

b. herniation displacement of brain tissue from one compartment within the skull to another. Types of herniation include transfalcine (under the falx cerebri), transtentorial (under the tentorium cerebelli) and cerebellar herniation (through the foramen nagnum). The usual causes are brain edema or hemorrhage with resulting differential increases in intracranial pressure in one or more compartments within the cranial vault.

b. hypoxia see brain anoxia (above).

b. infarction see **cerebrovascular** accident.

b. inflammation see **encephalitis**, **encephalomyelitis**, **meningoencephalitis**.

b. ischemia see brain anoxia (above).

b. laceration occurs in cranial trauma that fractures the skull, causes severe acceleration or deceleration, or penetrates the skull and brain tissue.

b. necrosis see **encephalomalacia**.

b. pigmentation occurs in *Phalaris* spp. poisoning; a characteristic greenish brown color grossly of the gray matter in brainstem nuclei and spinal cord, caused by a suspected lysosomal storage of granules of pigment material; usually associated with some degree of Wallerian degeneration within spinal cord tracts.

b. sand see **acervuli**.

b. scanning a radiographic, magnetic or nuclear medical procedure for the detection of brain tumors, abscesses, hematomas and other intracranial lesions.

b. spongy degeneration see **bovine spongiform encephalopathy (BSE)**.

b. staggers see **dummy**.

b. trauma traumatic injury to the brain resulting from a combination of shear forces, tissue laceration and vascular events such as hemorrhage and infarction. These primary events, which cannot be altered, may also set up a complicated sequence of metabolic and biochemical secondary events which further compromise the brain function, but which may be influenced by intervention on the part of the clinician.

b. tumors cause signs suggestive of local space-occupying lesion in the cranial cavity, including the increased intracranial pressure syndrome, blindness with disturbance of ocular reflexes, head rotation, circling and jacksonian seizures.

b. ventricles see third, fourth and lateral **ventricles**.

brain–allergy axis the observation that stress and conditioned reflexes can affect immune responsiveness and histamine release; postulated as a factor in allergic disease.

brain–blood–cerebrospinal fluid barrier see blood–CSF **barrier**.

brainstem [*brān'stem*] the stemlike portion of the brain connecting the cerebral hemispheres with the spinal cord, and comprising the pons, medulla oblongata and midbrain; considered by some to include the diencephalon. See also **reticular**[1] activating system, **thalamus**.

auditory b. response (ABR) see brainstem auditory **evoked response**.

b. auditory evoked response (BAER) see brainstem auditory **evoked response**.

b. hemorrhage results from cranial trauma and characteristically causes unconsciousness with varying types and degrees of motor paralysis and irregularities of respiration, depending on the site.

b. reticular formation see **reticular**[1] activating system.

Brambell Committee a technical committee set up by HM Government in the UK to *Inquire into the Welfare of Animals Kept Under Intensive Livestock Husbandry Systems*. The common usage name of the committee derived from its chairman Professor F.W.R. Brambell. Its report was published in 1965 and was the formal beginning of the age of animal welfare.

bran [*bran*] the outer layers of cereal grain seeds plus the inner, protein-rich aleurone layer. A bulky, slightly laxative food, highly prized as a supplementary feed for horses and cattle, and a basic feed for poultry. It has a high concentration of phosphorus but is low in calcium.

b. disease see **osteodystrophia fibrosa**, **hyperparathyroidism**.

b. mash an important item in the traditional mystique of nursing sick horses. Two double handfuls of bran and a tablespoon of salt are quickly mixed with sufficient boiling water to make a crumbly mash. This is covered with a sack for 15 minutes and then fed. The aroma is delicious.

bran-like epithelial scales, resembling flakes of bran, dusted over the surface of the skin.

branch [*branch*] 1. ramus; a division or offshoot from a main stem, especially of blood vessels, nerves or lymphatics. 2. the bearing surface of the horseshoe that supports the wall of the hoof. There is a lateral and a medial branch.

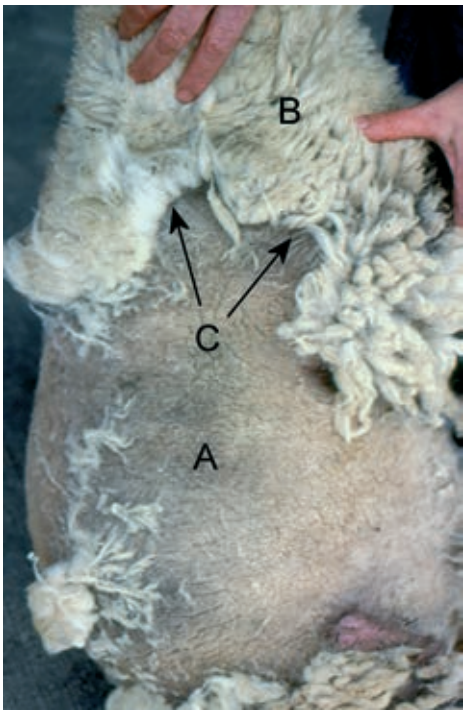
bundle b. a branch of the atrioventricular bundle of His.
communicating gray b. postganglionic nerve fibers coursing between the sympathetic ganglia and the spinal nerves; destined for skin glands and blood vessels.
communicating white b. preganglionic fibers of the sympathetic system that originate in the lateral columns of the spinal cord and after passing first to the spinal nerves then proceed, via communicating white fibers, to the ganglia of the sympathetic trunk.
branched-chain ketoaciduria [*brancht chān*] see **maple syrup urine disease**.
branchia [*brang'ke-ə*] gills of fish and their homologs in other vertebrate embryos.
branchial [*brang'ke-əl*] pertaining to, or resembling, gills of a fish or derivatives of homologous parts in higher forms.
b. arches paired arched columns that bear the gills in lower aquatic vertebrates and which, in embryos of higher vertebrates, become modified into structures of the face, mandible, ear and neck.
b. clefts the clefts between the branchial arches of the embryo, formed by rupture of the membrane separating corresponding entodermal pouch and ectodermal groove.
b. cyst a cyst formed deep within the neck from an incompletely closed branchial cleft, usually located between the second and third branchial arches. The branchial arches develop during early embryonic life and are separated by four clefts. As the fetus develops, these arches grow to form structures within the head and neck. Two of the arches grow together and enclose the cervical sinus, a cavity in the neck. A branchial cyst may develop within the cervical sinus. Called also branchiogenic or branchiogenous cyst. Seen rarely in dogs as a slowly developing swelling in the pharyngeal area, filled with saliva.
b. groove an external furrow lined with ectoderm, occurring in the embryo between two branchial arches.
branchiogenic [*brang"ke-o-jen'ik*] forming a gill or branchial arch.
branchiogenous [*brang"ke-oj'ə-nəs*] formed from a branchial arch or cleft.
branchiomerism [*brang"ke-om'ər-iz-əm*] the segmental arrangement of the branchial arches.
Branchiomyces a fungus which causes necrosis of gill tissue in warm water fish.
brand [*brand*] a mark put on the skin of animals as a means of identification. In livestock several methods are used. Fire-branding with a hot iron is the traditional method for horses and cattle but is being supplanted by the much superior **freeze branding**. For sheep the branding of the surface of the fleece with tar or paint has been used for a long time but may have very damaging effects on the fleece and has been replaced by special branding formulations. See also **tattooing**.
b. cancer a mass of granulation tissue at the site of a fire-brand. Is usually chronic inflammatory tissue.
b. register a list of brands and owners maintained by a statutory authority to facilitate legal identification of animals.
Brangus a polled, black breed of beef cattle produced by crossbreeding of Brahman and Angus cattle. The breed retains many of the characteristics of its parents, including persistent frenulum and a resulting difficulty in mating.
Branhamella [*bran"hə-mel'ə*] a genus of aerobic, nonmotile, non-spore-forming cocci. Several species are found in the upper respiratory tract and conjunctiva of humans and many animal species.

B-46: Freeze branding. The number 99 on the rump of the cow is the result of freeze branding which results in the depigmentation of pigmented skin.

Branham's sign, Branham test, Branham reflex bradycardia produced by digital closure of an artery proximal to an arteriovenous fistula.
Brassica [*bras'ĭ-kə*] a genus of plants of the Brassicaceae (Cruciferae) family containing a large number of cultivated plants eaten by humans and food animals. Poisoning with them is rare but under particular growing conditions and if the diet consists almost entirely of the one plant some massive outbreaks of poisoning can occur. Poisoning syndromes attributed to *Brassica* spp. include hemolytic anemia (kale anemia) caused by SMCO, goiter from glucosinolates, nitrate/nitrite, photosensitization, blindness (polioencephalomalacia), respiratory distress and rumen stasis. Includes *B. hirta* (*Sinapis alba*), *B. juncea* (Indian or leaf mustard), *B. kaber* (*S. arvensis*), *B. sinapistrum* (*S. arvensis*).
B. alba annual weed; the seed is used, together with that of *B. nigra*, to make commercial mustard. The seed, stubble or plant in pod can cause gastroenteritis with signs of abdominal pain, salivation and diarrhea. The toxin is a mixture of isothiocyanates called mustard oil. The enzyme myrosinase is needed to activate the oil and produce irritant effect. Oil cake containing the oil may be nontoxic because myrosinase is inactivated but can become toxic if animal has access to alternative source of the enzyme simultaneously.
B. campestris wild turnip; *B. campestris* subsp. *chinensis* (pakchoi).
B. napobrassica swede turnip, rutabaga.
B. napus rape, oilseed rape, cole, coleseed, canola.
B. nigra seeds are used in mixtures with *B. alba* in the manufacture of commercial mustard powder. Can cause poisoning as for *B. alba* (see above).
B. oleracea the commercial vegetables and cultivated fodder plants. Includes *B. o.* var. *acephala* (kale, chou moellier), *B. o.* var. *botrytis* (cauliflower), *B. o.* var. *capitata* (cabbage), *B. o.* var. *gemmifera* (Brussel sprouts), *B. o.* var. *italica* (broccoli, calabrese).
B. pekinensis Chinese cabbage.
B. rapa turnip.
B. tournefourtil wild turnip.
Braunvieh group of gray-brown, dual-purpose cattle breeds including Brown Swiss, Austrian brown, German brown, etc. Called also Brown mountain.
braxy [*brak'se*] an infectious disease of sheep caused by *Clostridium septicum* and characterized by a profound toxemia resulting from invasion of the abomasal wall by the clostridia. The lesion in the wall of the abomasum is thought to derive from damage by frosted grass, the disease being restricted in its occurrence to times of heavy frost.
Brazilian groundnut poisoning see **aflatoxicosis**.
Brazilian pepper tree see ***Schinus terabinthifolius***.
Brazilian tanner grass see ***Brachiaria***.
BRD bovine respiratory disease.
bread and butter pericarditis a pericarditis lesion in which the visceral and parietal epicardia are adherent and when drawn apart leave a felted, shaggy appearance on both surfaces. Common with traumatic pericarditis in cattle. Called also cor villosum, shaggy heart.
break [*brāk*] 1. a discontinuity, e.g. the change in coat color from puppies to adults. 2. in wool, horizontal bands of weakness in wool or haircoats may result in a 'break' in the wool and loss of the fleece, or a significant downgrading of its value. The weakness is usually the result of a period of disturbed metabolism, e.g. a severe attack of disease, or of poor nutrition.
breakdown [*brāk'doun*] 1. sudden appearance of disease in an individual or herd/flock in which immunity had previously appeared adequate. The term is used especially in relation to breakdowns after vaccination, e.g. classical swine fever (hog cholera), infectious avian laryngotracheitis, erysipelas. Also in individual animals which harbor inactive lesions which suddenly break down or metastasize and cause widespread lesions, e.g. in tuberculosis, contagious bovine pleuropneumonia. 2. acute onset of lameness in a racing horse.
breaking-in the training of a horse to be bridled, saddled, ridden and, in some horses, to be harnessed to vehicles and draw loads. Called also schooling.
breast [*brest*] in horses and birds used only in the singular and refers to the anterior parts of the pectoral region. Used synonymously with brisket in ruminants. See also **mammary gland**, **udder**.

VetBooks.ir

VetBooks.ir



B-47: Wool break. Fever and illness caused by bluetongue in the recent past caused weakness of fiber produced at that time. Subsequent wool growth after recovery is normal (A) but the wool produced (B) before the illness is falling off because of the weakness in fiber (C).

b. blisters a disease of commercial, housed poultry and turkeys comprising abscesses in the area of the carina of the sternum. They may contain pus or clear to blood-stained fluid. Usually relatable to environmental trauma.
blue b. mastitis in domestic rabbits caused by *Streptococcus*, *Staphylococcus* or *Pasteurella* spp. The mammary glands are hot, hard and swollen and there is a severe systemic illness. The glands develop a blue color due to local cyanosis.
b. boil deep abscesses in the anterior parts of the pectoral muscles in the horse. See also pectoral **abscess**. Called also equine sternal granuloma.
b. buttons see focal ulcerative **dermatitis**.
b. muscles well-developed muscles for wing movement of birds composed mostly of the pectoral (for depression of the wing) and supracoracoid (for elevation) muscles.
breastplate [*brest'plāt*] 1. for use with a saddle, a strap attached to the girth at its lowest point, which then passes between the forelimbs, passes upwards and divides to pass on either side of the neck and to meet at the withers after attaching to the front edge of the saddle. Designed to prevent the girth of saddle slipping backwards especially in a herring-gutted horse. 2. in harness, a broad strap, usually padded, which runs horizontally across the chest just below the neck. Behind the shoulders it is attached to the backstrap, which prevents it from falling down, and to the breeching which goes around the thighs of the horse. The breastplate keeps the harness from sliding back along the horse.
breath [*breth*] the air taken in and expelled by the expansion and contraction of the thorax.
bad b. see breath odor (below).
b. odor characteristic for a species, reflecting their diet. Abnormal or unpleasant odors may be caused by diseased or necrotic tissue in the respiratory or upper gastrointestinal tracts, including mouth and nasal cavity. Diseased teeth are a common cause in dogs and cats. In addition, certain metabolic diseases may produce distinctive breath odor, e.g. ketoacidosis, uremia.
hydrogen b. test detects the concentration of hydrogen in expired air as an indication of intestinal bacterial fermentation of carbohydrates. It is used in the diagnosis of inflammatory bowel disease and carbohydrate malabsorption.
b. sounds can be heard with a stethoscope on the chest and trachea. The normal sounds are the normally very faint vesicular murmur and the louder, tubular sounding bronchial tones. They are made by the air passing through the tubes of the bronchi. Adventitious (abnormal) sounds are the **rale**, **rhonchus**, grunt, **friction** rub, laryngeal stertor, **wheeze** and peristaltic sounds. Bronchovesicular sounds are intermediate between the two in character and site of origin. The vesicular sounds and the bronchial tones may be increased to the point of being an abnormality. Abnormal sounds are caused by narrowing of the tubes, collection of exudate in them or inflammation of the pleural surfaces.
b. stacking in artificial respiration, incomplete expiration can result in residual air adding to the volume of the next inspiration with eventual over inflation of the lungs.
b. volume may be assessed by observation of degree of chest movement and volume of expired air as felt by the hand. A respirometer is more accurate but is not available nor satisfactory for clinical use with animals unless the subject is trained to use one.
breathing [*brēth'ing*] the alternate inspiration and expiration of air into and out of the lungs (see also **respiration**).
costal b. see costal **respiration**.
intermittent positive-pressure b. (IPPB) the active inflation of the lungs during inspiration under positive pressure from a cycling valve.
periodic b. alternating periods of apnea and hyperventilation. See also **Biot's respirations**, **Cheyne–Stokes respiration**.
rescue b. artificial ventilation.
breathlessness see **dyspnea**, **hyperpnea**, **tachypnea**.
Breda virus see ***Torovirus***.
breech, britch [*brēch*] the buttocks of an animal; the backs of the thighs.
b. presentation during parturition, posterior presentation of buttocks of the fetus with bilateral hip flexion. See also **presentation**.
breeching [*brēch'ing*] 1. part of a set of cart harness. A broad strap running horizontally across the backs of the thighs and attached in front to the shafts. Essential in the backing of the vehicle. 2. the longer hair at the caudal thighs of dogs.
breed [*brēd*] a group of related animals which are genotypically and phenotypically sufficiently similar to produce physically similar offspring when they are mated with each other. In most countries each breed is managed by a breed society which maintains a register of the animals that are members of the breed, and which animals shall be admitted to the register. The breed society also sets the standards for physical appearance that must be attained. See specific breed name for further descriptions and under species for list of breeds.
b. class averages the average production performance for all animals in the breed, arranged in groups according to age and sex.
commercial b. the breed is at the level where commercial herds are breeding them for the sale market as egg-layers or wool producers rather than as foundation stock to produce the sale article.
b. comparisons comparisons of productivity between populations each of which consists entirely of members of one breed.
b. complementation the practice of combining breeds in a breeding program so as to maximize the genetic merit of offspring for total productivity; implies use of breeds which tend to cancel out the undesirable elements in their genetic makeup.
b. multiplier second echelon in the breeding industry; the stud breeder producing usually sires and, to a lesser extent, dams of superior merit for commercial flocks or herds.
b. nucleus a stud producing its own male and female herd replacements, without the introduction of outside blood; supplies the multiplier.
b. preservation when superior breeds appear the superseded breeds are often in danger of extinction; preservation of genes which may be desirable at a later time dictates that the superseded breed be maintained in its pure state.
b. structure see traditional **breed** pyramid.
traditional b. pyramid the supply structure of three echelons, each larger than the one before, within each breed; shape like a pyramid with the breed nucleus at the top, supplying to the second echelon, the multiplier, in turn supplying sires to commercial herds.
b. true to produce offspring that are very similar to the parent(s); refers to homozygotes.
breeder 1. a person with an animal enterprise involving the multiplication of the herd, flock or group. 2. a female animal used basically for the production of saleable young.

b. bull a bull sold specifically as a sire with an implied guarantee of fertility. Such bulls are usually replaced free of charge with a comparable animal by the vendor if the bull is not a fertile calf getter.
b. flock a flock of hens producing fertile eggs for hatching purposes.
seedstock b. producer of breeding stock for purebred and commercial breeders.
breeding [*brēd'ing*] 1. pedigree. 2. the physical act of **mating**. 3. capable of being used for reproduction. 4. controlled propagation of animals or plants.
artificial b. see **artificial insemination**.
b. bulls bulls used for paddock mating.
close b. see **inbreeding**.
controlled b. 1. the animals are mated in such a way that the offspring can be guaranteed to be the progeny of the animals concerned, the number of matings can be counted and the use of the animals for breeding is tightly controlled. See also hand **mating**. 2. controlled mating in that the occurrence of the estrus cycle, the probability of ovulation and fertilization and the termination are controlled by manipulation of the dam's internal hormonal environment.
b. display behavior likely to attract an animal of the opposite sex to mate. Used almost exclusively in relation to birds.
early b. 1. in seasonal breeding management systems it is customary to commence mating on a specific day in the expectation that the offspring will be born at a time to take most advantage of a seasonal peak of pasture. Early mating, before the recommended day, may be because of an expected poor level of fertility or similar overriding factor. Beef heifers may be mated early to allow concentration of observation at the time of calving for possible dystocia. 2. mating before the recommended age for that particular class or breed of stock; usually to maximize the productive life of the individual animal.
b. examination postpartum examination of cow to ascertain readiness for next mating; includes transrectal examination of the uterus and ovaries, vaginoscopic examination, possibly sample of cervical mucus for laboratory examination; in bulls the examination is for **breeding** soundness.
b. herds herds used for breeding in contrast to fattening herds.
b. history lifetime history of all events in a female's reproductive history, including postpartum and pre-mating examinations.
b. injuries incurred during mating and as a result of it. Examples are penile hematoma and vaginal rupture.
line b. breeding of animals with the same blood lines but not closely related. Used in an attempt to concentrate the inheritance of an ancestor or a line of ancestors. There is a risk of concentrating the risk for genetic disease.
optimal b. time the time during the estral period when a mating is most likely to be fertile.
b. organizations bodies which advise on and assist in breeding programs, e.g. artificial insemination and embryo transfer centers, cow evaluation and mating advisory services, breed society classification programs, dairy herd improvement programs and the like.
outcross b. mating individuals that are less closely related than the average of the breed.
pasture b. the males are turned into the pasture with a group of females. Called also paddock mating.
b. problems see **abortion**, **mummification**, **stillbirth**, no visible **estrus**, **failure** to conceive.
b. programs arrangement of matings on a farm to produce the desired effect in terms of cows in milk at a particular season, lambs being born when the weather is most clement, lowering the micron count of the wool by mating ewes with a low micron ram and so on.
pyramid b. system see **pyramid** breed structure.
b. record see **breeding** history.
b. season those parts of the year in which animals mate. This may be artificially arranged by humans. In animals that are not controlled there are periods of the year when they are more sexually active.
b. soundness the ability of the animal to mate and to initiate reproduction. In agricultural animals where the objective is to limit the number of sires, breeding soundness also embraces the ability to mate effectively on a large number of occasions over a brief period of time.
b. soundness examination conducted on behalf of intending vendors and purchasers, or before a limited breeding season in which high reproductive efficiency is desired. Should include perusal of results of previous reproductive performance, physical examination of the animal, especially of the genitalia, collection and examination of samples where these are an integral part of an examination for specific diseases of reproduction, e.g. blood test for brucellosis, preputial or vaginal swab examination for campylobacteriosis, and in the male a collection and examination of semen and a serving capacity test. The latter has not received universal acceptance, at least not in the form in which it is presently performed.
b. stock livestock used for breeding.
b. wheel a system of recording reproductive events on a disk which rotates once each year. The relationship between the expected calvings, the number of infertile matings and the required milk flow and feed need is readily understood from the overall pattern on the disk.
breeding value [*brēd'ing*] the sum of gene effects of a breeding animal as measured by the performance of its progeny.
aggregate b. v. see true breeding value (below).
estimated b. v. an estimate of the ability of an individual to produce superior offspring; based on one or more measurements of performance, using phenotypic values, taken on the animal itself or, more commonly, on a number of its relatives.
true b. v. genetic merit of an individual which can be conceptually defined as twice the average deviation of its offspring from the population mean when mated randomly to an infinite population.
true overall b. v. the true, overall breeding value arrived at by the addition of the true breeding values for each selection objective with each true breeding value multiplied by the relevant net economic value.
Breed's direct smear method a method of counting the total bacterial population of a sample, most commonly milk.
breelya ***Gastrolobium*** *laytonii*.
bremsstrahlung [*brem'strah-loong*] braking radiation; produced by the electrons being decelerated in the target of the X-ray tube. These rays of mixed wavelengths form the heterogeneous part of the X-ray beam.
Breton horse heavy French draft or meat horse.
bretylium [*brə-til'e-əm*] a Class III antiarrhythmic drug; an adrenergic neuronal-blocking agent used as a ventricular antiarrhythmic and a chemical defibrillator in cardiopulmonary resuscitation.
brevicollis [*brev"i-kol'is*] shortness of the neck.
brewer's grains [*broo'ər*] the residue of the cereal grains after most of the starch has been fermented away. It is a highly palatable and nutritious feed much sought after for dairy cows because of its high protein content. It may be fed dried or wet, but wet grains must be fed fresh. If allowed to ferment it may develop sufficient lactic acid to cause lactic acidosis. Clinical signs are dehydration, rumen stasis, smelly diarrhea.
brewer's yeast [*broo'ər*] a by-product of brewing. The yeast bodies of *Saccharomyces cerevisiae* are harvested and dried. It is an excellent source of vitamin B_1 (thiamine) and protein. Often fed as a supplement to dogs and cats.
Breynia oblongifolia member of plant family Euphorbiaceae; can cause cyanide poisoning. Called also coffee bush.
Briard a large (75 lb), muscular dog with medium-length, slightly wavy, black, fawn or gray coat which covers the face and forms a beard and mustache. Where practised, the ears may be cropped. There are supposed to be double dewclaws on the hindfeet. The breed is predisposed to a progressive retinal atrophy. Called also Berger de Brie.
brick [*brik*] feed compacted into a solid mass weighing up to 2 lb. Bricks provide an alternative to pellets and have the advantage that they have to be eaten slowly.
brickworks a possible source of fluorine emitted in smoke and a health hazard for animals grazing local pastures.
Bridelia trees in a genus of the family Euphorbiaceae. Can cause cyanide poisoning. Includes *B. leichhardtii* (scrub ironbark), *B. ovata* (*B. exalta*).
bridge [*brij*] 1. pons. 2. a protoplasmic structure uniting adjacent elements of a cell, similar in plants and animals. 3. dental prosthesis for the replacement of missing teeth.

VetBooks.ir

disulfide b. covalent bond formed by the linking of two thiol groups. Called also a disulfide bridge or S-S bond.

β-γ bridging one of the dysproteinemias in which there is no clear separation electrophoretically between the β_2 and γ_1 globulins. The cause is an increase in IgA or IgM, or both; almost pathognomonic for chronic active hepatitis.

bridle injury [*brī'dəl*] chafing caused by a too tight or badly made bridle.

bright [*brīt*] term used to describe wool which is free from discoloration.

bright-blindness see bright **blindness**.

brightness said of a fleece of wool, a desirable characteristic found in superior fleeces. Consists of a white color and good light reflection.

brilliant green an antiseptic dye used topically.

brim [*brim*] the anterior edge of the pubic bones, notable for the attachment of the linea alba, as the prepubic tendon, and the ventral abdominal muscles. Called also pecten pubis, pelvic brim.

brindle a pattern of coat pigmentation in which darker hairs form bands on a lighter background. A common coat color in Great Danes and Boston terriers.

brine a salt solution used in the curing of meat. Standard ingredients are sodium chloride (15–30%) and sodium nitrate (0.15–1.50%) but many other ingredients may be added for special effects.

b. shrimp see ***Artemia***.

b. staining caused by leaky pipes carrying coolant in meat storage cold rooms. The coolant is usually calcium chloride and the stain is a pale green.

brisement [*brēz-maw'*] [Fr.] *a crushing*, especially the breaking up of an ankylosis.

brisket [*bris'kət*] the mass of connective tissue, muscle and fat that covers the anterior part of the chest in ruminants. Lies at the most ventral part of the neck, between the front legs and covering the anterior end of the sternum.

b. disease see **altitude sickness**.

b. edema an important indication of generalized edema due to congestive heart failure or hypoproteinemia. Also caused by local venous obstruction, e.g. due to thymic lymphosarcoma or injury due to sharp edges or too high fronts on feed troughs.

bristle 1. the thick strong animal fibers collected at commercial abattoirs for use in brushes. 2. the sharp serrated awns of grass and some cereal seeds that confer a capacity to penetrate normal skin and mucosa and to cause ulcerative stomatitis, grass seed abscess and the like.

bristle grass ***Setaria***^{2} *lutescens*.

bristling see **hackles**.

Britannia petite a breed of small rabbits, popular as pets. Known in the UK as **Polish**.

britch vernacular for **breech**.

British Alpine British milking goat, black with white facial stripes and light points. May be horned or polled.

British AntiLewisite BAL; see **dimercaprol**.

British Approved Name (BAN) the official non-proprietary name given to pharmaceuticals listed in the British Pharmacopoeia (BP), as determined by the British Pharmacopoeia Commission. Harmonization within the European Union has required that many of these names are replaced by those recognized as International Nonproprietary Names (INN).

British black see **Large black**.

British bulldog see **Bulldog** (2).

British dog tick see ***Ixodes*** *canisuga*.

British Friesian cattle similar to and originating from Dutch Friesians.

British longwool see **English longwool**.

British mandrake *Bryonia dioica*.

British Pharmacopoeia (BP) a publication of the General Medical Council (UK) describing and establishing standards for medicines, preparations, materials and articles used in the practice of medicine, surgery and midwifery.

British saddleback pig black meat pig with white belt behind the shoulders; produced by crossing Essex and Wessex saddleback.

British shorthair a type of shorthaired cat with a large, round head and stocky body; includes many different varieties based on color of haircoat. It is contrasted with the 'foreign' shorthair type, with a slim body and almond-shaped, slanted eyes, that includes the Russian blue, Abyssinian and Somali breeds. The breed is affected by neonatal erythrolysis and hemophilia B.

British thermal unit (BTU) a unit of heat being the amount necessary to raise the temperature of 1 pound of water from 39–40°F, generally considered the equivalent of 252 calories.

British Veterinary Association (BVA) a voluntary professional organization which has the objective of maintaining the highest possible status of the British veterinary profession.

British Veterinary Codex pharmaceutical guide book for veterinarians published by the Council of the Pharmaceutical Society of Great Britain; contains information relating to substances and preparations of veterinary importance contained in the British Pharmacopoeia.

British white a dairy and beef breed of cattle, polled, white with black points, produced in the UK by crossing Wild white and Swedish mountain breeds.

Brittany bassett see **Basset Fauve de Bretagne**.

Brittany a medium-sized (35–40 lb) dog with a flat or wavy, usually orange or liver and white coat, pendulous ears and may have a docked or naturally short tail or be tailless. Although a spaniel, it points game like a setter. The breed suffers from an inherited complement deficiency and a spinal muscular atrophy. Called also Brittany Spaniel, Épagneul Breton.

brivudine a halogenated thymidine, similar to acyclovir but with lower toxicity and increased activity against herpesvirus infections. Called also bromovinyl deosyuridine.

broad said of wool in a fleece which is coarser than normal for the class of sheep.

broad beans see ***Vicia*** *faba*.

broad ligament see broad **ligament**.

broccoli ***Brassica*** *oleracea* var. *italica*.

Brock procedure a surgical technique for correction of pulmonic stenosis in which there is excision of the fibromuscular obstruction in the right ventricle using a rongeur inserted through the wall of the right ventricle.

brodifacoum [*bro'dĭ-fə-*] a second generation derivative of dicoumarol, used as an anticoagulant rodenticide. It is more potent, with longer lasting effects, than warfarin. Poisoning in dogs requires treatment with vitamin K_1 for at least 3 weeks.

Brodmann's areas [*brod'mahn*] specific occipital and preoccipital areas of the human cerebral cortex, distinguished by differences in the arrangement of their six cellular layers, and identified by number. They are considered to be the seat of specific functions of the brain.

broiler a young (about 6 weeks old) male or female chicken weighing 4–5 lb. processed.

broken back a focal alopecia located in the center of the back of guinea pigs; associated with stress or pregnancy.

broken colored coat color in a horse, usually piebald or skewbald but includes any other mixture of large patches of contrasting colors.

broken head see ***Hydrotoea*** *irritans*.

broken hock in racing Greyhounds, fracture of the scaphoid.

broken mouth the dentition in a sheep when some of the incisors have been lost or badly worn and irregular so that they are unlikely to be able to graze effectively. Caused usually by old age and hard grazing conditions.

broken-up face in dog conformation, a very short nose, deep stop with wrinkle, and an undershot jaw; seen in Pekingese and Bulldogs.

broken wind see pulmonary **emphysema**, chronic obstructive **pulmonary** disease.

bromacil a methyluracil herbicide with moderate toxicity for sheep. Signs include bloat, incoordination, depression and anorexia.

bromadiolone a second generation derivative of dicoumarol, with greater potency and longer activity, used as an anticoagulant rodenticide; a common cause of poisoning in dog.

bromegrass ***Bromus*** *inermis*.

bromelains [*bro'mə-lānz*] a group of proteolytic and milk-clotting enzymes derived from the pineapple plant, *Ananas sativus*. They are used as anti-inflammatory agents.

bromethalin a non-anticoagulant rodenticide that acts by uncoupling oxidative phosphorylation, resulting in cerebral and spinal cord edema. It is very toxic to nontarget species such as dogs and cats.

bromhexine [*brom-hek'sēn*] an expectorant and mucolytic.

bromhidrosis [*bro"mĭ-dro'sis*] the secretion of foul-smelling perspiration.
bromide [*bro'mīd*] any binary compound of bromine. Bromides produce depression of the central nervous system, and were once widely used for their sedative effect. Potassium and sodium bromide are commonly used anticonvulsants in the treatment of epilepsy in dogs. See also **brominism**.
bromidrosis [*bro"mĭ-dro'sis*] bromhidrosis.
bromine (Br) [*bro'mēn*] a chemical element, atomic number 35, atomic weight 79.909. See Table 4.
brominism [*bro'min-iz-əm*] poisoning by excessive use of bromine or its compounds. This condition occurs when the bromine concentration in the body fluids is high enough to have a toxic and depressant action on the central nervous system.
bromism [*bro'miz-əm*] see **brominism**.
bromocresol green used as an indicator in the dye test for determination of serum albumin.
bromocriptine [*bro"mo-krip'tēn*] a dopamine agonist; as a derivative of ergot alkaloids it is a luteolytic and arbortifacient which suppresses prolactin secretion and lowers plasma ACTH concentrations. Used as an abortifacient and in the treatment of pituitary-dependent hyperadrenocorticism.
bromocyclen, bromociclen a halogenated hydrocarbon used as an acaricide. Causes vomiting and convulsions if taken orally.
bromoethane see **methyl** bromide.
bromophenophos, bromofenofos an organophosphorus compound used to treat ***Fasciola*** *hepatica* infections in cattle.
bromophos-ethyl an organophosphate insecticide used principally as an acaricide.
bromosulfothalein see **sulfobromophthalein**.
bromovinyl deosyuridine see **brivudine**.
brompheniramine [*brōm"fən-ir'ə-mēn*] a histamine H_1-receptor antagonist used in the treatment of hypersensitivity reactions and allergic skin diseases.
bromsalans biphenolic compounds used as fasciolicides; includes **dibromsalan** and tribromsalan. They are very effective against juvenile flukes.
Bromus a genus of valuable fodder grasses in the family Poaceae, including *B. inermis* (smooth bromegrass), *B. riparius* (meadow brome), but also weedy, invasive and undesirable species such as *B. alopecuros* (weedy brome), *B. diandrus* (ripgut brome), *B. tectorum* (cheat grass).
bronchadenitis [*brongk"ad-ə-ni'tis*] inflammation of the bronchial glands.
bronchi [*brong'ki*] plural of *bronchus*.
bronchial [*brong'ke-əl*] pertaining to or affecting one or more bronchi.
b. calculus a hard concretion formed in a bronchus by accretion about an inorganic nucleus or from calcified portions of lung tissue or adjacent lymph nodes.
b. edema mucosal edema occurs in response to irritation and inflammation of tracheobronchial epithelium. Contributes to increased airway resistance.
feline b. asthma a syndrome in cats characterized by acute episodes of coughing and dyspnea with wheezing. Usually recurrent and believed to be due to allergic reaction. Similar to allergic asthma in humans.
b. hypoplasia swollen spongy tissue or cystic, lobulated tissue replaces lobes of normal lung tissue because of the impediment to air flow caused by dilated or collapsed hypoplastic bronchi; probably the basic defect in adenomatoid hamartoma or congenital adenomatoid malformation.
b. pattern bronchi become more prominent in X-rays when they become more dense than surrounding air-filled lung tissue. Caused by peribronchial infiltration, fluid within the bronchus and calcification of the bronchial cartilage. Seen in chronic bronchitis and bronchiectasis.
b. spasm bronchospasm.
b. tones are the sounds made by the respired air as it passes through the larger air passages of normal lungs. They are best heard over the bifurcation of the trachea. They are harsher and louder than the vesicular murmur, the normal sounds produced in the parenchyma of the lung.
b. tree the trachea, bronchi and their successive branching subdivisions.
b. tumors see **pulmonary** neoplasm.
bronchiarctia bronchostenosis.
bronchidesmus ligaments that attach the pessulus of the avian syrinx to the esophagus and pericardium.
bronchiectasis [*brong"ke-ek'tə-sis*] irreversible, chronic dilatation of the large cartilagenous airways, often with secondary infection and accumulation of secretions, usually involving the dependent parts of the lung. The condition may occur as a congenital malformation of the alveoli with resultant dilatation of the terminal bronchi. Most often it is an acquired disease secondary to partial obstruction of the bronchi with necrotizing infection. Primary diseases leading to bronchiectasis include chronic bronchitis, primary ciliary dyskinesia, neoplasia or aspirated foreign body.
bronchiloquy [*brong-kil'ə-kwe*] high-pitched pectoriloquy due to lung consolidation.
bronchi(o)- prefix meaning bronchus.
bronchiocele [*brong'ke-o-sēl*] dilatation or swelling of a bronchiole.
bronchiogenic [*brong"ke-o-jen'ik*] bronchogenic.
bronchiolar pertaining to or emanating from the bronchioles.
b. microlithiasis see **microlithiasis**.
b. tumors see **pulmonary** neoplasm.
bronchiole [*brong'ke-ōl*] one of the successively smaller channels (1 mm or less) into which the bronchi divide; usually distinguished from bronchi by an absence of cartilage support and the absence of mucous glands.
respiratory b. the final branch of a bronchiole, communicating directly with the alveolar ducts; a subdivision of a terminal bronchiole, it has alveolar outcroppings and itself divides into several alveolar ducts.
bronchiolectasis [*brong"ke-o-lek'tə-sis*] dilatation of the bronchioles. See also **bronchiectasis**.
bronchiolitis [*brong"ke-o-li'tis*] inflammation of the bronchioles; bronchopneumonia. See also chronic obstructive **pulmonary** disease.
catarrhal b. acute, mild irritation of the mucosa with excess mucus production, necrosis of epithelial cells, and transient exudation of leukocytes into the lumen.
chronic b.–emphysema complex, horses see chronic obstructive **pulmonary** disease.
b. fibrosa obliterans see obliterative bronchiolitis (below).
obliterative b. response to necrosis of the lining epithelium at the bronchiolar–alveolar junction and subsequent fibroblastic organization of the fibrin exudation, obliterating the bronchiolar lumen.
purulent b. more severe than catarrhal; a viscid exudate characterized by a predominance of neutrophils, with mucus and sloughed epithelial cells.
ulcerative b. inflammation characterized by the loss of large areas of epithelium with exposure of the underlying tissue and the development of ulcers.
vesicular b. bronchopneumonia.
bronchioloalveolar portals points which mark the transition from cuboidal bronchiolar epithelium to squamous alveolar lining cells in the respiratory bronchioles.
bronchiolus [*brong-ki'o-ləs*] pl. *bronchioli* [L.] bronchiole.
bronchiospasm [*brong'ke-o-spaz"əm*] bronchospasm.
bronchiostenosis [*brong"ke-o-stə-no'sis*] bronchostenosis.
bronchitis [*brong-ki'tis*] inflammation of one or more bronchi. Signs of acute bronchitis include fever and an irritating cough. Bronchitis may be either an acute or chronic disorder and frequently involves the trachea as well as the bronchi (tracheobronchitis). The acute stage of the disease often is an extension of an upper

B-48: Severe bronchiectasis with chronic bronchopneumonia in the right lung of a calf. The lumens of affected bronchi are filled with purulent exudate.
From McGavin MD, Zachary J, Pathologic Basis of Veterinary Disease, 4th Edition. Mosby, 2007.

VetBooks.ir

respiratory infection which is usually viral in origin. Causes other than infectious agents are physical and chemical irritants that are inhaled in air polluted by dust, industrial fumes and powdered feeds. The important clinical signs indicative of bronchitis are cough and the ease of stimulating a cough by compression of the trachea, and bronchial tones on auscultation of the base of the lungs. At necropsy the case may be classified as catarrhal, eosinophilic, fibronecrotic, purulent or ulcerative.

avian infectious b. caused by coronavirus. There are many serotypes. Causes gasping and rales, heavy mortality and rapid spread in young birds up to 4 weeks of age. A disease notifiable to the OIE (see Table 22). Called also gasping disease.

infectious equine b. see **equine** influenza.

parasitic b. see **lungworm**.

bronch(o)- prefix meaning bronchus.

bronchoalveolar [*brong"ko-al-ve'ə-lər*] pertaining to alveoli and bronchi.

bronchocandidiasis [*brong"ko-kan"dĭ-di'ə-sis*] candidiasis of the respiratory tree.

bronchocavernous [*brong"ko-kav'ər-nəs*] both bronchial and cavitary.

bronchocele [*brong'ko-sēl*] localized dilatation of a bronchus.

bronchoconstriction [*bron"ko-kən-strik'shən*] bronchostenosis.

bronchoconstrictor [*brong"ko-kən-strik'tər*] 1. narrowing the lumina of the air passages of the lungs. 2. an agent that causes such constriction.

bronchodilatation [*brong"ko-di-lə-ta'shən*] a dilated state of a bronchus, or the site at which a bronchus is dilated.

bronchodilator [*brong"ko-di'la-tər*] 1. expanding the lumina of the air passages of the lungs. 2. an agent that causes dilatation of the bronchi. Epinephrine is one of the most powerful bronchodilators and can be administered by injection or by aerosol. Some drugs used to enlarge the lumen of the bronchi and thereby facilitate breathing and removal of secretions are albuterol, ipratropium and aminophylline.

b.–antitussive combination see **antitussive**–bronchodilator combination.

bronchoesophageal [*brong"ko-ə-sof"ə-je'əl*] pertaining to or communicating with a bronchus and the esophagus.

bronchoesophagology [*brong"ko-ə-sof"ə-gol'ə-je*] the branch of medicine concerned with the air passages (bronchi) and esophagus.

bronchoesophagoscope [*brong"ko-ə-sof'ə-go-skōp*] an instrument, usually an endoscope, used in the examination of the bronchi and esophagus.

bronchoesophagoscopy [*brong"ko-ə-sof"ə-gos'kə-pe*] instrumental examination of the bronchi and esophagus.

bronchofiberoscopy examination of the bronchi through a bronchofiberscope.

bronchofiberscope [*brong"ko-fi'bər-skōp*] a flexible bronchoscope utilizing fiberoptics.

bronchogenic, bronchogenous [*brong-ko-jen'ik*] originating in the bronchi.

b. abscess occasional cases in most species, many caused by *Arcanobacterium pyogenes*; clinical cases show chronic cough, wasting, rarely cause erosion of blood vessel and fatal intrapulmonary hemorrhage and nasal bleeding.

b. tumors see **pulmonary** neoplasm.

bronchogram [*brong'ko-gram*] the film obtained by bronchography.

air b. air-filled bronchi seen as radiolucent, branching bands within pulmonary densities. Indicates involvement of lung parenchyma.

bronchography [*brong-kog'rə-fe*] radiography of the lungs after instillation of an opaque medium in the bronchi.

broncholith [*brong'ko-lith*] a bronchial calculus.

broncholithiasis [*brong"ko-lĭ-thi'ə-sis*] a condition in which calculi are present within the lumen of the tracheobronchial tree.

bronchology [*brong-kol'ə-je*] the study and treatment of diseases of the tracheobronchial tree.

bronchomalacia [*brong"ko-mə-la'shə*] a deficiency in the cartilaginous wall of the trachea or a bronchus that may lead to atelectasis or obstructive emphysema.

bronchomoniliasis [*brong"ko-mon-ĭ-li'ə-sis*] see **bronchocandidiasis**.

bronchomotor [*brong"ko-mo'tər*] affecting the caliber of the bronchi.

b. tone tone of the bronchial muscles as in **bronchospasm**.

bronchomucotropic [*brong"ko-mu"ko-tro'pik*] augmenting secretion by the respiratory mucosa.

bronchopathy [*brong-kop'ə-the*] any disease of the bronchi.

bronchoplasty [*brong'ko-plas"te*] plastic surgery of a bronchus; surgical closure of a bronchial fistula.

bronchoplegia [*brong"ko-ple'jə*] paralysis of the muscles of the walls of the bronchial tubes.

bronchopleural [*brong"ko-ploor'əl*] pertaining to a bronchus and the pleura, or communicating with a bronchus and the pleural cavity, e.g. by a bronchopleural fistula.

bronchopneumonia [*brong"ko-nŏŏ-mo'ne-ə*] inflammation of the bronchi and lungs, usually beginning in the terminal bronchioles. Predominantly the result of aerogenous infection. Marked by a patchy and variegated appearance of gross lesions and involvement of the ventral parts of anterior lobes of the lungs. Called also lobular pneumonia. See also **pneumonia**.

bronchopneumopathy [*brong"ko-nŏŏ-mop'ə-the*] disease of the bronchi and lung tissue.

eosinophilic b. see **PIE syndrome**.

bronchopulmonary [*brong"ko-pool'mə-nar"e*] pertaining to the bronchi and lungs.

congenital b. foregut malformation accessory lungs which communicate with the intestine.

b. segment one of the smaller divisions of the lobe of a lung, separated from others by a connective tissue septum and supplied by its own branch of the bronchus leading to the particular lobule.

bronchorrhagia [*brong"ko-ra'jə*] hemorrhage from the bronchi.

bronchorrhaphy [*brong-kor'ə-fe*] suture of a bronchus.

bronchorrhea [*brong-ko-re'ə*] excessive discharge of mucus from the bronchi.

bronchoscope [*brong'ko-skōp*] an endoscope especially designed for passage through the trachea to permit inspection of the interior of the tracheobronchial tree and carrying out of endobronchial diagnostic and therapeutic maneuvers, such as taking specimens for culture and biopsy and removing foreign bodies.

fiberoptic b. bronchofiberscope.

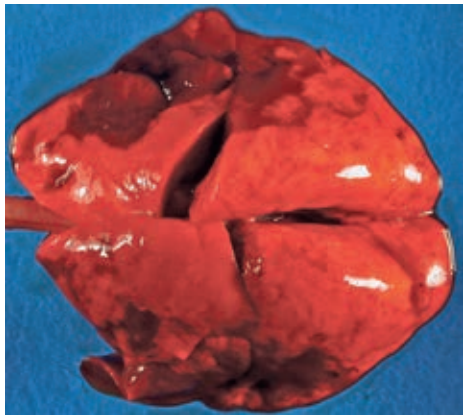
bronchoscopy [*brong-kos'kə-pe*] inspection of the interior of the tracheobronchial tree through a bronchoscope. Bronchoscopy is used as a diagnostic aid and therapeutically. As an aid to diagnosis the bronchoscope allows for visualization of the bronchial mucosa and removal of tissue for biopsy. Bronchial washings and collection of secretions are done at the time of bronchoscopy to obtain samples for culture and cytological examination. Therapeutically, the bronchoscope permits removal of foreign bodies that have been aspirated into the bronchial tree.

fiberoptic b. bronchofiberoscopy.

bronchospasm [*brong'ko-spaz"əm*] bronchial spasm; spasmodic contraction of the muscular coat of the smaller divisions of the bronchi, such as occurs in asthma.

bronchospirography [*brong"ko-spi-rog'rə-fe*] the recording of bronchospirometry results.

bronchospirometry [*brong"ko-spi-rom'ə-tre*] determination of vital capacity, oxygen intake and carbon dioxide excretion of a single lung, or simultaneous measurements of the function of each lung separately.



B-49: Severe subacute bronchopneumonia in a puppy.
From Peterson M, Small Animal Pediatrics: The First 12 Months of Life. Saunders 2011.

differential b. measurement of the function of each lung separately.
bronchostaxis [*brong"ko-stak'sis*] bleeding from the bronchial wall.
bronchostenosis [*brong"ko-stə-no'sis*] stricture or cicatricial diminution of the caliber of a bronchial tube.
spasmodic b. a spasmodic contraction of the walls of the bronchi.
bronchostomy [*brong-kos'tə-me*] surgical creation of an opening through the thoracic wall into the bronchus.
Bronchostrongylus [*brong"ko-stron'jə-ləs*] see ***Troglostrongylus***.
bronchotomy [*brong-kot'ə-me*] incision of a bronchus.
bronchotracheal [*brong"ko-tra'ke-əl*] pertaining to the bronchi and trachea.
bronchovesicular [*brong"ko-vĕ-sik'u-lər*] pertaining to the bronchi and alveoli.
b. breath sounds see **breath** sounds.
bronchus [*brong'kəs*] pl. *bronchi* [L.] any of the larger passages conveying air to the lungs, beginning with the right or left principal bronchi followed by lobar bronchi within the lungs and then successively smaller subdivisions from segmental bronchi. See also **respiration**, **bronchial**.
b. clamp like a bowel clamp but with solid straight blades. Has ratcheted handles.
tracheal b. a lobar bronchus originating directly from the trachea in pigs and cattle, and which aerates the cranial lobe of the right lung.
bronchus-associated lymphoid tissue (BALT) see bronchus-associated **lymphoid** tissue.
bronopol a preservative used in milk samples intended for butter fat estimation; the reject milk fed to calves causes erosive abomasitis and death due to peritonitis.
Bronzewing standard domestic turkey; black with bronzing on neck and back, and bronze barring on tail, which has a wide, white end-stripe. The female has white end-stripes on breast, back and wing bows, and secondary bows. Shanks are blackish-pink. Called also Australian bronze, American bronze.
bronzing syndrome a dermatosis seen in Dalmation dogs and believed to be associated with the peculiarities of uric acid metabolism in that breed. There is discoloration of the coat and secondary bacterial infection in the skin.
brood offspring or pertaining to offspring.
b. mare a mare dedicated to the production of foals.
brood capsule 1. a capsule containing a number of protoscoleces which float freely in fluid within an *Echinococcus granulosus* cyst. 2. clusters of chondrocytes which are undergoing proliferation in cartilage.
brooder stage two of the usual bird rearing sequence. After hatching the baby birds are put into a brooder house, usually with a heat source attached, for rearing. Also used as a management strategy for baby pigs which are weaned early, at 3 weeks.
b. pneumonia respiratory tract infection of young birds with the fungus *Aspergillus fumigatus*. Called also aspergillosis.
broodfish mature fish used for the production of eggs or sperm. Called also spawners.
broodiness the desire to sit on eggs and hatch them is very strong in birds after they have laid a few eggs at the beginning of a new egg laying season. The procedure is a disaster for the commercial egg producer because egg laying ceases. Temporary measures are available to discourage hens from going broody but the long-term practice has been to select against it so that modern egg laying strains of birds do not show broodiness.
brooding patches, brood patches patches of the skin on the undersurface of the body of hen birds which become highly vascular during brooding; this facilitates the transfer of heat from the hen to the eggs.
broody see **broodiness**.
Brooklynella an ectoparasitic ciliated protozoan that causes severe lesions on the gills of marine fish kept in aquaria.
brooklynellosis disease of marine fish caused by infestation with *Brooklynella* spp., a unicellular ciliate. Characterized by hyperplasia of the gill epithelium and clinically by respiratory embarrassment.
broom [*brōōm*] common names for bushy plants with long stiff stems. Includes *Cytisus scoparius* (common broom), *Spartium junceum* (Spanish broom), *Senecio spartioides* (broom groundsel), *Sorghum bicolor* (broom millet), *Gutierrezia microcephala* (broom snakeweed).
Spanish b. *Spartium junceum*.
broom bush ***Pimelea*** *trichostachya*.
broomweed ***Gutierrezia*** *microcephala*.
broth [*broth*] liquid **media** for culturing microorganisms.
cooked meat b. a medium useful for culturing anaerobic bacteria.
enrichment b. one modified to permit growth by specific bacteria. An example is selenite broth, which is selective for salmonellae.
brother-brother ***Gastrolobium*** *tetragonophyllum*.
brow [*brou*] the forehead, or either lateral half of it.
b. suspension a surgical procedure to correct the redundant facial skin folds with ptosis and entropion of the upper eyelid which occurs in some dog breeds, especially the Shar-pei and Bloodhound.
b. tine the first tine or branch of an antler that projects over and protects the eye during rutting duels. In reindeer only one side of the antler pair bears a well developed brow tine. Sometimes calle the shovel.
brown [*broun*] a coat color in many species; in horses a brown coat with a tan muzzle; a few hairs of another color may be scattered through the coat creating a brown roan (white admixture), brown chestnut (admixture of chestnut), etc. A brown-ticked gray is a gray horse with wheat grain sized patches of brown hairs scattered through the coat; in cattle a rich creamy brown as in Brown Swiss and many other indigenous breeds.
Brown–Adson forceps [*broun' ad'sən*] standard tissue forceps with the opposing blade surfaces covered with long, needle-like teeth.
Brown Atlas cattle [*broun*] brown, brachyceros type, multipurpose cattle from North Africa.
brown atrophy see **xanthosis**.
brown blood disease brown discoloration of normally red gill tissues due to the formation of methemoglobin in nitrite poisoning in cultured fish. See also **nitrite** poisoning.
brown dog gut see intestinal **lipofuscinosis**.
brown dog tick see ***Rhipicephalus*** *sanguineus*.
brown ear tick see ***Rhipicephalus*** *appendiculatus*.
brown fat see brown **adipose** tissue.
Brown forceps long-handled tissue forceps with the opposing blade surfaces in the form of two longitudinal rows of fine teeth. Similar to Adson–Brown forceps. Designed for handling thoracic tissues.
brown hypertrophy of the cere a condition in birds especially budgerigars, less commonly other psittacines, characterized by hyperplasia, cornification and keratinization of the cere. It may occlude the nares and cause beak breathing.
brown lick stain seen on the upper lip of dogs, caused by continuous licking, often of preputial or vulvar discharge.
Brown mountain cattle see **Braunvieh**.
brown nose a form of photosensitive dermatitis in cattle, with the most obvious lesion on the muzzle.
brown pigmentation of all tissues. See **xanthosis**.
Brown–Séquard's syndrome [*'-sa-kahr'*] paralysis and loss of discriminatory and joint sensation on one side of the body and of pain and temperature sensation on the other, due to a lesion involving one side of the spinal cord. Seen in primates but not so evident in domestic animals because of bilateral spinal sensory afferent pathways.
brown stomach worm ***Ostertagia*** *ostertagi* and ***Teladorsagia*** *circumcincta*.
Brown Swiss cattle a café-au-lait colored, heavy boned, heavyweight and heavy milking breed of dairy cattle. The breed is affected by inherited neurological conditions: epilepsy, progressive degenerative **myeloencephalopathy** (called also 'weaver syndrome'), a syndrome of **arachnomelia** and arthrogryposis (called also 'spiderleg'), and spinal dysmyelination. A derived breed is the American brown Swiss.
brown winter tick see ***Dermacentor*** *nigrolineatus*.
browse 1. bushes and shrubs that goats and many wild herbivores eat in preference to grass and clover; they are said to browse instead of graze. 2. the bushy plants that goats eat; the counterpart of pasture.
browser animal species which eat browse rather than grass and herbs.

VetBooks.ir

B-50: Brown Swiss dual-purpose bull.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

VetBooks.ir

BRSV bovine respiratory syncytial virus.

Bruce County Project a Canadian developmental project which shipped feeder calves from the west to small farm feedlots in eastern Canada for fattening and sale in the eastern market. There was only one throughput of calves per year. A successful feeding and disease prevention program was developed.

Bruce effect the manipulation of pregnancy by pheromones. For example the termination of pregnancy in a recently bred mouse by placing it in a cage with a strange male.

Brucella [*broo-sel'ə*] a genus of gram-negative rods in seven species and several biotypes. The cause of many serious diseases in animals, including **brucellosis**.

B. abortus a short rod or coccobacillus which causes **brucellosis** in cattle and horses, and is a serious zoonosis. Two strains of reduced virulence and used for vaccination in cattle are Strain 19 and Strain 45/20.

B. canis a similar organism to the other brucellae except that it is inhibited in growth by a 10% concentration of CO_2, a cultural enhancement for the other species. Causes **brucellosis** in dogs.

B. melitensis a rod so short that it is easily mistaken for a coccus with the same characteristics as the other brucellae. Causes **brucellosis** in goats and Malta fever in humans, a serious zoonosis. Rev1 strains are used for vaccination but have zoonotic risk.

B. neotomae found only in the desert wood rat in the USA.

B. ovis has staining and cultural characteristics similar to the other brucellae. Causes **brucellosis** in rams.

B. suis a typical brucella in morphology and cultural and staining characteristics. Causes **brucellosis** in pigs and is a significant zoonosis.

Brucellergen trademark for a solution of nucleoproteins derived from *Brucella;* used in a skin test for brucella infection.

brucellosis [*broo"sə-lo'sis*] infection by *Brucella* spp. It causes different syndromes in each animal species. (1) Bovine brucellosis, caused by *B. abortus*, is characterized by abortion in late pregnancy and subsequent infertility. (2) Ovine brucellosis, caused by *B. ovis*, is characterized by epididymitis in rams and resulting infertility. (3) Brucellosis in pigs, caused by *B. suis*, is a chronic disease manifested by infertility and abortion in sows, orchitis in boars and heavy piglet mortality. It is a disease notifiable to the OIE (see Table 22). (4) Caprine brucellosis, caused by *B. melitensis*, is manifested principally by abortion although other signs including loss of weight, mastitis, lameness and orchitis are also reported. (5) There is no specific brucella organism in horses but *B. abortus* occurs not infrequently as a bursitis in **fistulous** withers and **poll** evil. (6) In dogs, *B. canis* causes late abortions in bitches, and infertility and scrotal dermatitis in males. Infections caused by *B. abortus, B. melitensis, and B. suis* are notifiable to OIE (see Table 22).

b. testing the eradication of bovine and porcine brucellosis has been a target for human public health and veterinary authorities for 50 years and has reached a stage of virtual eradication in most developed countries. During that time the veterinary profession has been involved in testing many millions of individual animals so that a test and slaughter eradication program could be implemented. The standard test has been the tube agglutination test with some assistance from screening tests such as the ABR or milk ring test and the card agglutination test.

Bruch's membrane [*brook*] a pentalaminar (in nontapetal animals) or trilaminar (in tapetal animals) junctional region between the choriocapillaris endothelium and the retinal pigment epithelium.

brucine [*broo'sēn*] an indole alkaloid contained in nux vomica and ***Strychnos*** spp. plants; has similar effects to strychnine.

Brücke's muscle [*bre'kə*] posteriormost of the striated ciliary body muscles of birds. Acts to deform lens and effect accommodation. Very well developed in many raptors where it is sometimes divided into Brücke's and Müller's muscles. See also **muscle of Crampton**.

Brugia [*broo'je-ə*] a genus of the family Onchocercidae of nematodes. Includes *B. celonensis*, *B. malayi*, *B. pahangi*, *B. patei*, *B. timori* and others. In tropical countries *Brugia* spp. are parasitic in the lymphatics of primates, carnivores and insectivores; parasitized animals may act as reservoirs for human infection. Transmission is *via* mosquitoes.

Brugmansia South American plant genus in the family Solanaceae, included in *Datura* by some authorities. Includes shrubby species *B. arborea*, *B. x candida*, *B. sanguinea*, and *B. suaveolens* in garden cultivation. Contain tropane alkaloids, neurotoxic hallucinogens. Called also angel's trumpet.

bruise superficial discoloration due to hemorrhage into the tissues from ruptured blood vessels beneath the skin surface, without the skin itself being broken; called also **contusion**.

bruised sole injury to the laminae of the horse's foot, caused by stepping on a sharp object. The lesion is usually at the edge of the sole and is discolored and painful. Lameness varies in keeping with the extent and duration of the lesion.

bruising [*'ing*] discoloration and actual hemorrhage at the site of injury, and a serious disadvantage in the meat trade. In the first 12 hours after injury the bruise is bright red, at 24 hours it is dark red, at 24–36 hours it loses its firm consistency and becomes watery and at 3 or more days it is an orange-red color and has a soapy feel.

bruit [*brwe,*] [Fr.] a sound or murmur heard in auscultation, especially an abnormal one.

aneurysmal b. a blowing sound heard over an aneurysm.

cardiac b. see heart **murmur**.

brumation a period of dormancy in reptiles in which they are less active and have reduced food intake; similar to hibernation but the reptiles are not asleep.

brumby Australian feral horse, usually of poor quality physically and in temperament. Any color, up to 15 hands high. Descendants of escaped domestic horses.

Brumptia bicanda intestinal trematode in the rhinoceros.

Brun bone curette the standard equipment for curetting bone. Shaped like a miniature ice cream scoop it has very sharp and durable edges and a hand-filling, bulbous handle.

Brunner's glands glands in the submucosa of the duodenum, opening into the small intestine; called also duodenal glands.

Brunn's nest [*broon*] groups of proliferating epithelial cells in the submucosa of the urinary tract. They are a reaction to injury and may lead to the development of cystic ureteritis, pyelitis or cystitis.

Brunsfelsia South American plant genus in the family Solanaceae; contain an unidentified toxin, possibly the pyrrole alkaloid brunfelsamidine (pyrrole-3-carbamidine); cause a syndrome of tremor, convulsions and gastroenteritis in dogs eating the plant's fruits or cattle eating leaves. Includes *B. australis* (*B. bonodora, B. hopeana*), *B. boliviana, B. grandiflora, B. latifolia (B.maritima), B. pauciflora (B. calycina, B. exima*). Called also francisia, yesterday-today-and-tomorrow, morning-noon-night.

Brunus edwardii the urban, companion animal bear, much admired for its low food requirements and excellent house training, a high emotional output and complete freedom from disease. Called also *Ursus theodorus* (USA) and Pooh, Paddington or Brideshead bear (UK).

brush [*brush*] a bushy tail in dogs.

brush border [*brush*] a specialization of the free surface of a cell, consisting of minute cylindrical processes (microvilli) that greatly increase the surface area.

b. b. enzymes include maltase, lactase, α-dextrinase and peptidases. Deficiencies of these enzymes may be primary or, more often, secondary to other intestinal disease.

brushing [brush'ing] striking of the medial aspect of the fetlock and coronet of the horse by the hoof of the opposite limb of a pair. See also **cutting**.
b. boot see brush **boot**.
Brussels griffon a small (8–10 lb) dog with a large head, very short nose, prominent chin and erect, folded-over ears or they may be cropped. The haircoat is short, usually wiry, and red, black or black and tan. A smooth coated variety is called the Petite Brabancon.
Brussels sprouts ***Brassica*** *oleracea* var. *gemmifera*.
Bruton's agammaglobulinemia [broo'tən] see Bruton's **agammaglobulinemia**.
bruxism [bruk'siz-əm] gnashing, grinding or clenching the teeth. Repeated and continuous grinding of the teeth over a long period of time can wear down and loosen teeth and cause bone loss. It is a sign of subacute abdominal pain and encephalopathy, including hepatic encephalopathy. Also occurs as a vice in horses.
brydiofin toxic protein isolated from ripe fruits of *Bryonia dioica*.
bryonetin a glycoside in *Bryonia dioica* which may be the cause of the plant's drastic purgative action.
Bryonia dioica [bri-o'ne-ə] a plant of the family Cucurbitaceae. Contains toxic cucurbitacins as the glycosides bryonoside, bryoside, bryodulcoside, bryoamaride and brydiosides. Causes diarrhea in cattle and purgation or constipation, sweating, diuresis and convulsions in horses. Called also *B. cretica* subsp. *dioica*, white bryony.
bryonidin, bryonin [bri-o'nĭ-din] one of the glycosides in *Bryonia dioica* and possibly the cause of the plant's purgative effect.
Bryonopsis laciniosa see ***Diplocyclos palmatus***.
bryony common name for plants in the genus *Bryonia* for the the plant *Tamus communis* (black bryony).
Bryophyllum genus of African and Madagascan plants in the family Crassulaceae; naturalized in Australia. Contain bufadienolide cardiac glycosides; cause dyspnea, diarrhea, cardiomyopathy, usually in ruminants. Includes *B. daigremontium*, *B. fedtschenkoi*, *B. proliferum*. Called also *Kalanchoe*.
B. delagoense *B. tubiflorum, Kalanchoe delagoensis*. Called also mother-of-millions.
B. x houghtonii *B. daigremontium* x *B. delagoense*. Called also hybrid mother-of-millions.
B. pinnatum *B. calycinum, Kalanchoe pinnata, Cotyledon pinnata*. Called also live-leaf, resurrection plant.
BSA body surface area; see Table 20.
BS, BSc Bachelor of Science.
BSE 1. bovine spongiform encephalopathy. 2. breeding soundness examination.
BSP Bromsulphalein, a dye used in the study of liver function. See also **sulfobromophthalein** clearance test.
BST bovine somatotropin
BT-PABA test a test which assesses chymotrypsin activity in the small intestine. Oral administration of the synthetic peptide **bentiromide** is followed by measurement of free *p*-aminobenzoic acid in the urine or blood. Infrequently used as other, easier to perform and more reliable, tests are available for diagnosing exocrine pancreatic insufficiency.
BTU British thermal unit.
BTV bluetongue virus.
bubble form region of a double-strand DNA that separates earlier than others, to form 'bubbles' when the heat is increased, because of lower G and C content.
bubble vaporizer see bubble **vaporizer**.
bubo [bu'bo] an enlarged and inflamed lymph node, particularly in the axilla or groin, resulting from absorption of infective material and occurring in various diseases, e.g. tuberculosis.
indolent b. a hard, nearly painless bubo that shows no tendency to break.
bubonalgia pain in the groin.
bubonic [bu-bon'ik] characterized by or pertaining to buboes.
b. plague a highly contagious and severe disease caused by the bacillus *Yersinia pestis* carried in infected rats and transmitted to humans by fleas. See also **plague**.
bubonocele [bu-bon'o-sēl] inguinal or femoral hernia forming a swelling in the groin.
bucardia [bu-kahr'de-ə] extreme enlargement of the heart as in cor bovinum.
bucca [buk'ə] [L.] *the cheek* pl. *buccae*.
buccal [buk'əl] pertaining to or directed toward the cheek.
b. administration drugs may be absorbed across buccal mucosa, directly into the venous circulation. Called also sublingual administration.
b. cavity strictly, the space bounded by the cheeks, but usually regarded as synonymous with the **mouth**.
b. horsepox see **horsepox**.
b. mucosa bleeding time (BMBT) see **bleeding** time.
b. vestibule the space between the cheeks and the cheek teeth.
bucc(o)- word element. [L.] *cheek*.
buccopharyngeal [buk"o-fə-rin'je-əl] pertaining to or emanating from the mouth and pharynx. Called also oropharyngeal.
imperforate b. membrane a congenital defect of imperforation of the buccopharyngeal membrane. It prevents the animal from breathing through the nostrils and is incompatible with life. Seen in birds, particularly African grey parrots. Called also choanal atresia.
b. membrane a membrane present in fetal life which separates the nasal cavities from the pharynx.
buccostomy [buk-os'tə-me] surgical creation of fistulae from the buccal cavity as a prophylactic against crib-biting. Unlikely to be acceptable to today's public because of mutilatory overtones.
buccotomy a surgical incision through the cheek to gain access to an intraoral procedure. Usually performed in herbivores.
Bucephalus [bu-sef'ə-ləs] trematode parasite of fish; the larval stages cause parasitic castration of clams and scallops.
buchu dried leaves of several *Barosma* spp. plants; contains disophenol, diosmin. A weak diuretic and urinary antiseptic.
buck [buk] 1. adult male goat. Unlikely to be kept for any purpose other than an active breeding life, and then only at a distance. 2. breeding male of most small, wild ruminant species, including roe, fallow, muntjac and Chinese water deer. In larger deer species is called bull. 3. the violent actions performed by a horse attempting to dislodge a rider. In rodeo contests steers and bulls may also be engaged in riding-bucking contests with human riders.
buck knees [buk] a condition in which the carpus appears to be not fully extended when viewed from the side.
buckbean [buk'bēn] see *Thermopsis*.
buckbush [buk'bush] ***Gyrostemon*** *australasicus*, ***Salsola*** *kali*.
false b. *Gyrostemon australasicus*.
bucked shins a front limb lameness in 2- or 3-year-old Thoroughbred and racing Quarter horses. The metacarpal bone is painful on manual compression and the lameness is thought to be due to microfractures in the bone as a result of compression of the bone during exercise at high speed. There is a local periostitis.
bucket-fed see **pail-fed**.
bucket handle a term used to describe a form of injury, e.g. meniscal tears, or surgical technique that creates and utilizes a band of tissue, e.g. repair of eyelid defects and covering of corneal lesions.
b. h. flap see cross-lid **flap**.
buckeye [buk'i] common name for several tree species in the genus ***Aesculus***. Includes California buckeye (*A. californica*), Ohio buckeye (*A. glabra*), red buckeye (*A. pavia*), sweet buckeye (*A. octandra*). Also a nickname associated with the state of Ohio, including athletic teams and a local breed of chickens.
buckjump riding contests at rodeos in which riders attempt to sit out bucks by horses or cattle.
buckling [buk'ling] the process or an instance of becoming crumpled or warped.
scleral b. a technique for repair of detachment of the retina, in which indentations or infoldings of the sclera are made over the tears in the retina so as to promote adherence of the retina to the choroid.
buckskin body coat color in horses, varies from yellow to almost brown; the points, including mane, tail, lower limbs are brown to black.
buckthorn [buk'thorn] see ***Karwinskia humboldtiana***, ***Rhamnus***.
buckwheat [buk'hwēt] see ***Fagopyrum esculentum***.
Bucky band a compression band strapped across the animal's abdomen and tightened to reduce the thickness of tissue and to check respiratory movement during a radiographic procedure.

VetBooks.ir

VetBooks.ir

Bucky grid a grid used in radiography to prevent the scattered rays reaching the film, thus aiding clarity and definition of the picture. Called also Potter–Bucky grid.

Bucky tray a sliding metal tray under the radiographic table which holds the grid and the cassette. Called also Potter–Bucky tray.

bud [*bud*] a structure resembling the bud of a plant, especially a protuberance in the embryo from which an organ or part develops.

end b. the remnant of the embryonic primitive knot, from which arises the tail and caudal part of the trunk.

horn b. bilateral cranial protuberances, destined to develop to a fighting horn or antler stage.

limb b. one of the four lateral swellings appearing in vertebrate embryos, which develop into the two pairs of limbs.

tail b. 1. the primordium of the caudal appendage. 2. end bud.

taste b's end organs of the gustatory nerve containing the receptor surfaces for the sense of **taste**.

ureteric b. an outgrowth of the mesonephric duct giving rise to all but the nephrons of the permanent kidney.

b. of urethra bulb of urethra.

Budd–Chiari-like syndrome [*bud' ke-ah're*] obstruction of hepatic venous outflow, caused by mechanical obstruction between the hepatic sinusoids and the heart. In dogs, causes include obstructive lesions in the caudal right atrium, caudal vena cava and the hepatic veins.

budding [*bud'ing*] gemmation; asexual reproduction in which a portion of the cell body is thrust out and then becomes separated, forming a new individual.

b. virions viruses that acquire their envelope by budding through modified regions of host cell membranes.

budesonide [*bu-des'ə-nid*] a potent. locally active glucocorticosteroid; has been used orally in the treatment of inflammatory bowel disease and as an inhalant in inflammatory airway disease in dogs and cats.

budgee grass ***Cynodon*** *nlemfuensis*, *C. plectostachyus*.

budgerigar, budgie [*buj'ər-ĭ-gahr"*] see ***Melopsittacus undulatus***.

b. fledgling disease a polyomavirus infection of young psittacines that causes failure of feather growth (**French molt**), hepatic and renal necrosis, and sometimes death. Can cause heavy losses in large aviaries; a vaccine is available.

Budyonny horse chestnut or bay Russian light horse.

bufadienolide group of toxic cardiac glycosides found mainly in members of the plant family Crassulaceae, e.g. *Bryophyllum, Cotyledon, Kalanchoe, Tylecodon* spp. Found also in skin and skin glands of toads, e.g. *Bufo marinus*. Those in *Cotyledon*, *Tylecodon* and some *Kalanchoe* are cumulative and produce krimpsiekte (**cotyledonosis**).

buffalo a common name given to a number of different species and subspecies of bovids, many of which are domesticated breeds; most are variations of *Bubalus bubalis*. An exception is the animal known in the USA as a buffalo, which is really a **bison** (*Bison bison*). See also **Anoa**

African b. (*Syncerus caffer*) a very large member of the subfamily Bovinae, that travels in large herds; they have few natural predators. Their large horns that spread outward and downward, joined by a prominent boss in the males, subject them to trophy hunters. They are susceptible to many of the diseases and parasites affecting cattle and may be carriers or involved in transmission to domestic animals, particularly foot and mouth disease. Called also Cape buffalo.

American b. see **bison**.

B-51: Budyonny horse. From Sambraus HH, Livestock Breeds. Mosby, 1992.

Anatolian b. dairy and draft Turkish buffalo, dark gray to black often with white on head and tail, sickle or crescentic horns.

Egyptian b. an Indian buffalo breed, gray-black in color, used for milk and draft. Has short curved horns.

European b. includes many breeds and varieties of *Bubalus bubalus* used for milk, meat and draft. Called also Asiatic water buffalo.

water b. (*Bubalus bubalis*) a large member of the subfamily Bovinae, native to South and Southeast Asia where it is largely domesticated; important as a draft animal as well as a source of meat and milk. A large feral population is found in Northern Australia. They have very large horns, similar to those of the African buffalo, but without the connecting boss. See also **carabao**.

buffalo bunchgrass ***Paspalum*** *conjugatum*.

buffalo gnat see **black fly**.

buffalopox a disease caused by a virus which is antigenically identical to **cowpox** virus; it is clinically the same as cowpox.

buffel grass see ***Pennisetum*** *ciliare* (*Cenchrus ciliaris*).

buffer[1] [*buf'ər*] a substance that, by its presence in solution, increases the amount of acid or alkali necessary to produce a unit change in pH.

isohydric b. systems all of the buffer systems in the extracellular fluid act in unison so that when e.g. extra acid is added all of the buffer systems will buffer some of the additional hydrogen ions. This is the isohydric principle and the buffer systems involved are the isohydric buffers.

b. pairs the pairs of compounds which, in themselves, serve as a buffer system. There are a number of such pairs in the blood and the sum of the blood's buffering capacity is the sum of these individual pairs.

radiology b. a chemical constituent of developer and fixer to keep the pH constant.

b. salt see buffer **salt**.

b. systems a system consists of a weak acid and a conjugate base, e.g. a mixture of carbonic acid and bicarbonate ions. When one is present the addition of more acid or base will raise or lower the pH much less than if no buffer were present. The principal buffer systems are the bicarbonate, plasma protein, phosphate and hemoglobin buffers. See also **Henderson–Hasselbalch equation**.

b. titration curve mathematical calculations used to predict buffering capacity and bicarbonate concentration under various values of carbon dioxide tension.

buffer[2] a double-ended horse shoeing implement designed to be hit with a shoeing hammer. At one end is a broad-bladed chisel face for opening clinches. At the other end is a pointed punch for driving through the shoe nailholes.

buffering [*buf'ər-ing*] the action produced by a buffer.

b. agents amongst other uses these substances play a part in dairy cattle nutrition by helping to prevent damaging ruminal acidity on high grain rations. Sodium bicarbonate and magnesium oxide are the preparations most commonly used. See also **acid-base balance**.

buffing [*buf'ing*] striking the posteromedial aspect of a front hoof with the opposite hoof of the pair. A perfect situation for applying a buffing boot.

b. boot see brush **boot**.

buffy coat [*buf'e*] a pale layer consisting mainly of white blood cells overlayed by an indisguishable, thin layer of platelets, observed on top of the column of packed red cells in centrifuged blood. The thickness of this layer provides a rough estimate of the white cell count.

Bufo [*bu'fo*] a genus of toads of the family Bufonidae; these amphibians carry toxins in parotid glands in their skin. Dogs or cats which mouth them are poisoned. There are a number of toxins including the cardiotoxic bufogenins, bufotoxin, bufotenins, catecholamines and serotonin. The toxicity of each species depends on the mix and concentration of toxins. Species include *B. exsul* (black toad), *B. marinus* (**cane toad**), *B. regularis* (African toad), *B. bufo* (common toad).

bufodienolide a toad toxin. Called also bufogenin.

bufogenin a toad toxin. Called also bufadeniolide.

bufotalin [*bu"fo-tal'in*] a toxin causing vomiting and cardiac arrest. Present in the skin and saliva of ***Bufo*** *vulgaris*.

bufotenine a toad toxin. A specific basic pressor principle used as a hallucinogen in experimental medicine.

B-52: *Bufo* spp. toad. From Mader DR, Reptile Medicine and Surgery, 2nd Edition. Saunders , 2006.

bufotoxin [*bu'fo-tok"sin*] any toxin isolated from the skin of a toad.
bug [*bug*] a member of the family Cimicidae in the order Hemiptera and includes the blood-sucking bugs. See ***Haematosiphon*** and ***Oeciacus vicarius***.
Buglosoides arvensis see ***Lithospermum arvense***.
Buhner method a method for retaining a prolapsed vagina. A circumferential suture is placed deeply down each side of the vulva commencing at an incision dorsal to the vulva and exiting below it. This is repeated on the other side and the suture is then drawn tight and tied. Requires a special needle with the eye in the point, and a special braided tubular suture.
buiatrics [*bu"e-at'riks*] the study of cattle and their diseases.
bulb [*bulb*] 1. a rounded mass or enlargement. 2. medulla oblongata.
aortic b. the enlargement of the aorta at its point of origin from the heart. See also **aortic** sinuses.
auditory b. the membranous labyrinth and cochlea.
eye b. the eye.
gustatory b's taste buds.
hair b. the bulbous expansion at the proximal end of a hair embedded within the dermis, in which the hair shaft is generated.
heel b. the swollen part of the hoof wall and adjacent soft tissue at the back (posterior) of the hoof characterized by an expansion of the periople which is wider here than at any other part of the hoof.
Krause's b's see **bulboid corpuscle**.
olfactory b. the most rostral part of the rhinencephalon that largely occupies the rostral cranial fossa and which gives off a tuft of olfactory nerves that escape through the cribriform plate.
penile b. see **penile** bulb.
taste b's taste buds.
urethral b. the enlarged proximal part of the corpus spongiosum found near the root of the penis.
vestibular b., vestibulovaginal b. paired masses of erectile tissue, situated one on either side of the vaginal orifice.
bulbar [*bul'bər*] pertaining to a bulb; pertaining to or involving the medulla oblongata, as bulbar paralysis.
infectious b. necrosis one of the several forms taken by foot abscess in sheep. See also **foot** abscess.
infectious b. paralysis see **Aujeszky's disease**.
b. paralysis originates from the medulla oblongata. The pyramidal and extrapyramidal tracts pass from the midbrain through the medulla and are susceptible to damage by agents that operate in the area. Paralysis of this type has the characteristics of an upper motor lesion with muscle tone and local tendon reflexes retained. Cranial nerve deficits involving cranial nerves IV, V, VI, VII, VIII, IX, X, XI and XII may also be seen.
bulbiform [*bul'bĭ-form*] bulb-shaped.
Bulbine plant genus in the Liliaceae family; some contain an unidentified toxin; causes vomiting, diarrhea, abdominal pain. Includes *B. bulbosa* (native leek), *B. semibarbata*.
Bulbinella ornithogaloides ***Ornithogalum*** *ornithogaloides*.
bulbitis [*bul-bi'tis*] inflammation of the bulb of the urethra.
bulbocapnine [*bul"bo-kap'nin*] isoquinoline alkaloid found in *Corydalis flavula*, *Dicentra spectabilis*. Causes a transient syndrome of frenzy, convulsions, tremor, opisthotonos, salivation, vomiting.
bulbocavernous glands [*bul"bo-kav'ər-nəs*] relating to the bulb of the penis.
b. glands see **bulbourethral** glands.
b. muscle see Table 13.
bulbogastrone [*bul"bo-gas'trōn*] a gastrointestinal hormone.
bulboid corpuscle [*bul'boid*] small encapsulated nerve endings occurring in the mucous membrane and skin. Called also Krause's bulbs.
bulbospongiosus reflex [*bul"bo-spon"je-o'səs*] see **bulbourethral** reflex.
bulbourethral [*bul"bo-u-re'thrəl*] pertaining to the bulb of the urethra.
b. glands two glands on either side of the male pelvic urethra. Absent from the dog, and large in the boar. Called also bulbocavernous glands and Cowper's glands.
b. reflex mild pressure on the glans penis in a male dog causes contraction of the external anal sphincter. It tests function of the pudendal nerve and the S1 to S3 spinal cord segments. Called also bulbospongiosus reflex.
bulbous [*bul'bəs*] having the form or nature of a bulb; bearing or arising from a bulb.
bulboventricle [*bul"bo-ven'trĭ-kəl*] middle region of the embryonic tubular heart between the aorta and the atrium.
bulbus [*bul'bəs*] pl. *bulbi* [L.] bulb.
b. aortae the swollen, first part of the aorta, between the atria; swollen because of the sinuses above each of the three cusps of the aortic valves.
b. cordis the outflow tract of the embryonic heart between the primitive ventricle and the aorta. Called also bulbus arteriosus.
b. glandis the bulb of the dog's penis; the proximal portion which enlarges greatly during erection and is the part responsible for preventing withdrawal during ejaculation.
b. oculi the **eye**.
b. pili see hair **bulb**.
b. rectricum a well-organized fibroadipose mass in a muscular envelope into which the rectrices (tail feathers of birds) are embedded. It occupies a trough-shaped socket bounded by the caudal vertebrae and the intrinsic tail muscles.
Bulgarian brown cattle brown, dual-purpose, Bulgarian cattle.
bulging eye disease see **uitpeuloog**.
bulimia [*bŏŏ-le'me-ə*] abnormal increase in the sensation of hunger. Because of its subjectivity the diagnosis could only be assumed in an animal, where the more common, objective clinical observation would be ravenous appetite.
Bulinus [*bu-li'nəs*] water snail, intermediate host for paramphistomes and other trematodes.
bulk forming agents [*bulk*] see bulk **laxative**.
bulk laxative [*bulk*] see **laxative**.
bulk tank [*bulk*] a refrigerated storage tank for milk collection from a farm.
b. t. somatic cell counts herd somatic cell counts (SCC); used to monitor the herd prevalence of subclinical mastitis. Milk processing plants use automatic electronic somatic cell counters. Counts of over 300 000 cells/mL suggest a level of infection that warrants examination of individual cows. There is a maximal allowable somatic cell count for milk to be sold as Grade A milk in most countries, from 400 000 cells/mL or higher depending on the country. Bulk tank somatic cell counts also influence the price paid to the dairyman and premium or penalty payments are usually calculated on the basis of a 3-month geometric mean of weekly bulk milk tank SCC measurements. See also **somatic** cell count.
rolling b. t. somatic cell counts monthly data averaged for the preceding 3 months.
bull 1. a male bovine animal of breeding age, usually over one year of age. Until recent times the use classification for such an animal would be breeding. The present acceptance of bull beef by consumers adds this use to what was previously a limited range of life styles. See also **breeder** bull. See Table 16. 2. adult male of most wild ruminants except for small deer in which the male is called buck. Includes wapiti, moose, elk, reindeer. 3. adult male cetaceans and pinnipeds. See Table 16.
b. battery rarely used term for the total serving capacity of the bulls in a herd. Is the number of bulls multiplied by the length of the breeding season.
b. beef from entire males instead of the fatter steer or bullock.
b. calf male young entire bovine animal up to stage of yearling.
catch-up b. in dairy herds that use artificial insemination (AI), one that is run with cows in mid-lactation to breed those cattle that have not held to AI or that have early embryonic death.

VetBooks.ir

VetBooks.ir

b.–cow ratio usually refers to paddock mating of beef cattle and reflects the desire of the farmer to achieve high fertility and over what period the breeding program can be allowed to continue. The proportion of bulls needed will also depend on their age, testicular size and serving capacity.

b. leader a pole about 6 ft (2 m) long with a spring clip on the end to snare the bull's nose ring. Enables the handler to keep the bull moving forward without any risk that the bull can come too close.

proven b. one whose progeny have achieved the production target set as desirable by the registering breed authority.

b. rotation changing the bull out of a group of cows and replacing him with a different bull at short intervals. The objective is to ensure a high mating rate or to mark the calves by using a bull of a different breed.

b. test station an establishment run by government or cooperative farmer organization which houses young bulls and measures rate of body weight gain under standard conditions of feeding and housing. A good rate of gain under these conditions does not guarantee a similar performance at pasture.

Bull and terrier dog an early name for the Staffordshire terrier.

bull-bred herd a herd in which the cows are mated to bulls; compare with artificially bred. Called also naturally bred.

bull-dogging the rodeo sport of jumping from the back of a running horse and catching a running calf or steer around the neck and wrestling it to the ground by grasping the horns and twisting the head.

bull's-eye lesion see **target** lesion.

Bull terrier a medium-sized (50–60 lb), very solidly built dog with narrow, deeply sunken triangular eyes, thick neck; the face has a distinctive flat profile without a stop ('egg-shaped'). The dog was originally bred for pit fighting. There are two varieties, all-white or colored, which is any other, including spotted, than white. In some countries, the **Miniature bull terrier** is recognized as a separate breed. The breed is subject to an inherited renal disease, lethal acrodermatitis, and the white variety may be affected by congenital deafnesss.

B. t. hereditary nephritis an autosomal dominant trait, manifested by proteinuria and ultrastructural abnormalities in the glomerular basement membrane leading to renal failure and death at a variable age. An animal model of Alport's syndrome of humans.

bulla [*bul'ə*] pl. *bullae* [L.] a blister; a circumscribed, fluid-containing, elevated lesion of the skin, usually more than 5 mm in diameter.

emphysematous b. spherical air-filled cavities in the interlobular spaces and under the pleura, often in large numbers, as part of a general state of pulmonary emphysema.

lacrimal b. a large extension of the thin bony wall of the maxillary sinus in the ox, which bulges into the ventral part of the orbit. There is a small lacrimal bulla also in the pig.

osseous b. see tympanic bulla (below).

tympanic b. a thin-walled bony capsule which houses an extension of the cavity of the middle ear, the tympanic cavity.

Bulldog a medium-sized (40–55 lb), thickset dog with very characteristic build and appearance. The head, with a very short face, neck and forequarters, are massive in proportion to the rest of the body and the legs are relatively short. The tail is naturally short. The breed is predisposed to cleft lip and palate, hemivertebra, hydrocephalus, congenital heart defects, spina bifida and upper respiratory structural abnormalities. Called also British bulldog or English bulldog. See also **French bulldog**.

American b. a larger dog with longer legs and longer nose than the (British) bulldog. It is said to resemble more closely the earlier version of that breed, as it was when brought to the Americas in colonial times. The breed is affected by inherited neuronal ceroid lipofuscinosis.

bulldog see **nose** lead.

bulldog calves calves that are characterized by short limbs and neck and a swollen cranium with a short, depressed face, with a protruding tongue and cleft palate. There is severe chondrodystrophy and hydrocephalus. The condition is inherited in several breeds of cattle but is very common in Dexters. Called also chondrodystrophic dwarfism with hydrocephalus.

bulldog clamp springloaded crossover clamps used in surgery to clamp off small arteries. They open when squeezed and the serrated-face clamp blades shut when the squeeze is relaxed. See also **Glover bulldog clamp**.

B-53: Bulldog calf. From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

buller pen pen in which **buller steers** are kept in a large feedlot; they usually do not mount each other.

buller steer in groups of feedlot steers, a steer which submits to mounting by the others. Results in skin trauma, subcutaneous hematomas that may become infected, and other traumatic injury. Of unknown etiology but believed to be sometimes due to estrogen implants.

bullet 1. projectile for a humane killer that uses a conventional or free bullet. 2. a metallic, bullet-shaped mass given orally so as to lodge in the reticulum and discharge its critical component over a long period. Bullets containing cobalt, selenium or magnesium are in use. Called also reticular retention bullets.

magnesium reticular b. heavy pellets delivering about 1 g magnesium daily administered orally to cattle as a prevention against hypomagnesemia; the 'bullets' lodge in the reticulum and are retained there until they dissolve completely.

bullfrog (*Rana catesbeiana*) North American bullfrog, largest of the true frogs. They are hunted or farmed commercially to produce frog meat, mainly the legs, for human consumption; sometimes kept as pets.

bullhead see ***Ameiurus***.

bulling acting like a bull. Said of cows when they mount other cows that are in standing estrus. The buller may be a cow with adrenal virilism which always acts in this manner or it may be a cow about to come into estrus. Said also of steers in a feedlot.

bullmask a mask made of leather or aluminum, which is tied across the bull's face. It has downward looking, horizontal slits, like fixed Venetian blinds, which prevent the bull looking forward to attack but permits looking down to graze.

Bullmastiff a large (100–130 lb), powerfully built dog with a large, square head, short muzzle, thick neck, deep chest and tapered tail. The coat is very short and brindle, fawn or red. The breed was developed from the Mastiff and the Bulldog. It is affected by a familial ataxia, progressive retinal atrophy and entropion.

bullnose [*bool'nōz*] see **necrotic** rhinitis.

bullock a mature castrated male cattle destined for meat production or draft.

bullosis [*bul-o'sis*] the production of, or a condition characterized by, bullous lesions.

bullous [*bul'əs*] pertaining to or characterized by bullae.

b. emphysema pulmonary emphysema characterized by the presence of subpleural and interlobular bullae.

b. epidermolysis see **epidermolysis** bullosa.

b. pemphigoid see bullous **pemphigoid**.

bullrout *Notesthes robusta*; a venomous fish in the family Scorpaenidae (scorpionfishes).

bully board plywood or plexiglass shields, similar to those used by riot police, used in the handling and management of animals which are difficult to catch and restrain, e.g. pigs, ostriches, deer.

Bulnesia sarmientii South American plant in the family Zygophyllaceae; toxin thought to be a saponin, causes enteritis, convulsions, pruritus. Called also Palo santo tree, guaiac.

bulrush ***Ornithogalum*** *conicum* subsp. *conicum*, *Typha* spp.

bumblefoot [*bum'bəl-foot*] inflammation of the ball of the foot of birds and guinea pigs caused usually by infection with *Staphylococcus* spp.

bumetanide [*bu-met'ə-nīd*] a potent loop diuretic, with actions similar to furosemide.

bumps [*bumps*] a lay term used to describe a variety of papulonodular dermatoses in horses, including 'heat bumps', 'feed bumps', 'protein bumps', 'wheat bumps' and others. No specific disease or etiology has been assigned to the term and veterinary dermatologists wish it would disappear from use.

BUN blood urea nitrogen. See **urea** nitrogen.

BUN : creatinine ratio see **creatinine**: blood urea nitrogen ratio.

bunamidine [*bu-nam'ĭ-dēn*] a cestocide used extensively for the treatment of tapeworms in dogs and cats. Used usually as the hydrochloride in dogs and cats and as the hydroxynaphthoate in sheep and goats.

bunch group of deer hinds.

bunchflower *Melanthium virginicum*.

Bundaberg disease see **epizootic** ulcerative syndrome.

bundle [*bun'dəl*] a collection of fibers or strands; with muscle fibers, or a fasciculus or band of nerve fibers; in a fleece, fibers that group together to form bundles which, in turn, group together to form a **staple**.

accessory b. of Kent atrioventricular bundle.

atrioventricular b. a subendocardial band of atypical cardiac muscle fibers, specialized for rapid conduction of electrical impulses that originates in the atrioventricular node in the interatrial septum and passes through the right atrioventricular fibrous ring; once in the ventricles, the bundle divides into right and left branches that ultimately spread to convey impulses throughout both ventricles. Called also bundle of His.

Bachmann b. a disputed large muscle bundle between the right and left atria, thought to serve as a specialized conduction pathway.

b. branch see bundle **branch**.

fundamental b. that part of the white matter of the spinal cord bordering the gray matter and containing fibers that travel for a distance of only a few segments of the cord. Called also ground bundle, *fasciculi proprii*.

b. of His see atrioventricular bundle (above).

His b. degeneration associated with sudden unexpected death or periods of viciousness; most common in Doberman and German shepherd dogs.

His b. stenosis inherited in Pug dogs; associated with syncope and sudden death.

Keith's b. see atrioventricular bundle (above).

medial forebrain b. a group of nerve fibers connecting the midbrain tegmentum and elements of the limbic system.

b. of Vicq d'Azyr a band of fibers from the mamillary body to the anterior nucleus of the thalamus.

Bungner's bands [*bēng'nər*] proliferating Schwann cells in nervous tissue may appear as bands of spindle-shaped cells resembling fibroblasts.

buninalike body inclusion body in degenerating nerve cells in horses with some of the pathological characteristics of Bunina bodies in humans.

bunk, bunker large storage bin; a term more commonly used in feedlots. See **feedbunk**.

b. forage forage, usually ensilage stored in a large storage bunk and made available to cattle or other livestock along a face of the storage in small farms or, in larger operations, removed by a front end loader or a silage face grinding machine to a feed mixing truck for incorporation into a total mixed ratiion.

b. management the determination of the amount of feed to offer and how it is fed.

b. reading looking at the bunk contents to decide how much feed should be fed and when it should be fed for each pen of cattle; conducted by a bunk reader.

Bunnell suture pattern [*bə-nel'*] one designed for tendon repair. Most of the path of the suture is intratendinous and it crosses the defect through the cut surfaces on either side and the ends are tied within the defect. See also tendon **suture**.

bunny hopping an abnormal gait in which dogs use their hindlegs simultaneously and symmetrically, rather than advancing one at a time and the legs tend to be greatly extended behind the body before being moved forward. A clinical feature of spinal dysraphism.

bunodont [*bu'no-dont*] having cheek teeth with low, rounded cusps on the occlusal surface of the crown, as in mammals with mixed diet, such as swine and humans.

bunostomiasis [*bu"no-stə-mi'ə-sis*] infestation with the hookworms *Bunostomum phlebotomum* in cattle and *B. trigonocephalum* in sheep causing anemia and anasarca due to blood loss, together with poor growth. Called also hookworm disease.

Bunostomum [*bu"no-sto'məm*] a genus of hookworms of the family of Ancylostomatidae. Includes *B. phlebotomum* (*Bos indicus* and *Bos taurus* cattle) and *B. trigonocephalum* (sheep, goat, deer).

bunting [*bunt'ing*] a behavior of cats in which they rub or push their face against objects, probably depositing **pheromones**; a form of olfactory communication.

b. order the equivalent to peck order of birds in the species that assert themselves by bunting with the head. It is the form of behavior by which Felidae establish themselves in the hierarchy of their social group.

Bunyaviridae [*bun"yə-vir'ĭ-de*] a family of viruses comprising five genera: *Bunyavirus*, which includes Akabane and California encephalitis, *Phlebovirus*, which includes Rift Valley fever virus, *Nairovirus*, which includes Nairobi sheep disease and **Crimean–Congo hemorrhagic fever** viruses, *Uukuvirus*, which does not contain pathogenic viruses, and *Hantavirus*, which infects rodents and causes hemorrhagic fever with renal syndrome in humans.

bunyavirus [*bun'yə-vi"rəs*] a virus in the family ***Bunyaviridae***.

bunyip a mythical animal denizen of Australian swamps. Its ogreish reputation makes it a threatening figure to children.

buphanine a toxic alkaloid in the plant *Boophane disticha*, which has been used as an arrow poison.

buphthalmia [*būf-thal'me-ə*] pathologic enlargement of the globe due to chronically and notably elevated intraocular pressure; pathognomonic change in glaucoma. Inherited as an autosomal recessive trait in New Zealand white rabbits and used as an animal model of glaucoma. Especially notable in young animals because of the relative distensibility of their sclera. See **buphthalmos**, **hydrophthalmos**.

buphthalmos [*būf-thal'mos*] pathologic enlargement of the globe; see **buphthalmia**, **hydrophthalmos**.

bupivacaine [*bu-piv'ə-kān*] a local anesthetic used for peripheral nerve block, infiltration, and sympathetic, caudal or epidural block.

buprenorphine [*bu"prə-nor'fēn*] opiate with mixed agonist-antagonist activity. Its analgesic effects generally equivalent to, but are much greater and last much longer than those of morphine.

buquinolate a quinolone cocciostat used in poultry.

bur [*bər*] a surgical instrument used to ream out the lining of a cavity, for example the lateral ventricle of horses in the operation for roaring, or to debride bone or teeth. A long stem with a round or oval head carrying rasp-like teeth. See also **burr**.

dental b. the variety of hard metal alloy bits for attachment to power driven dental handpieces, or drills, to cut hard dental tissue, mainly during restorative dentistry.

Burdizzo emasculatome an instrument designed for bloodless emasculation in all species but most adaptable to ruminants because of the extended scrotal neck in these species. The spermatic cord is crushed percutaneously by a double actioned forcing together of blunt blades which also have rounded edges so that the skin is not damaged. The instrument works because of the different strengths of the cord and the skin.

burdock common name for plants in the genus ***Arctium***.

greater b. *Arctium lappa*.

buret, burette [*bu-ret'*] a glass tube with a capacity of the order of 25–100 mL and graduation intervals of 0.05–0.1 mL, with stopcock attachment, used to deliver an accurately measured quantity of liquid.

burial see **carcass** disposal.

Burkholderia [*burk"hol-dēr'e-ə*] a genus of gram-negative, aerobic, rod-shaped bacteria.

B-54: Burdizzo emasculatome. From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide. 2nd Edition. Mosby, 2011.

VetBooks.ir

VetBooks.ir

B. mallei the causative agent of **glanders**, a disease of horses that is communicable to humans. Previously called *Malleomyces mallei* and *Pseudomonas mallei*.

B. pseudomallei the causative agent of **melioidosis**, a disease of rodents occasionally transmitted to domestic animal species and humans. Formerly called *Pseudomonas pseudomallei*.

Burkitt's lymphoma, Burkitt's tumor [*bur'kit*] a form of undifferentiated malignant lymphoma in humans and primates, especially marmosets and some gibbons. Usually found in central Africa, but also reported from other areas, and manifested most often as a large osteolytic lesion in the jaw or as an abdominal mass; called also African lymphoma. The Epstein–Barr virus (EB virus), a member of the order *Herpesvirales*, subfamily *Gammaherpesvirinae* in then genus *Lymphocryptovirus*, isolated from human Burkitt's lymphoma cells and is considered the causative agent. The same virus causes the relatively benign, though debilitating, disease, infectious mononucleosis (glandular fever) of humans, particularly young adults.

Burmese a medium-sized, shorthaired breed of cats with a rounded head, short muzzle and a compact, muscular body. The colors recognized are sable, champagne, blue and platinum, all with yellow to gold eyes. The breed is affected by primary endocardial fibroelastosis, meningoencephalocele and lethal midfacial malformations ('head fault'). See also **European** Burmese.

Burmilla a breed of cats developed in the UK from crossing Chinchillas and Lilac Burmese. It has the body of the Burmese, usually with a short, close-lying coat in many colors, but there is also a longhair variety.

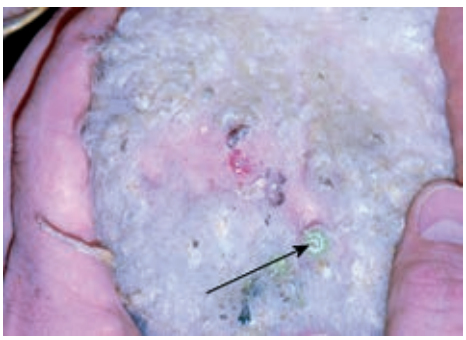
burn [*bərn*] injury to tissues caused by contact with dry heat (fire), moist heat (steam or liquid), chemicals, electricity, lightning or radiation. Burns can be classified by the depth of tissue damage. *First-degree* burns involve only the epidermis; *second-degree* burns include damage to the dermis; *third-degree* burns are full thickness, extending through all layers of the skin. *Fourth-degree* burns involve deeper structures such as fascia, muscle and bone. In addition, damage done by a burn includes shock due to the tissue damage, severe dehydration due to the loss of the protective effect of the skin, infection of the burn site, damage to lungs and eyes by exposure to high temperatures and smoke and debris, damage to external somatic addenda including vulva, teats, prepuce, scrotum. The critical decision in a burn case is whether to allow the animal a faint chance of recovery and therefore to continue with treatment. See also **bushfire injury**.

friction b. the skin is damaged by the heat created by friction as by a rope burn, or when a dog is dragged by its lead behind a car.

full thickness b. involves all of the epidermis and the dermis and may include underlying structures, as well. In alternative classification, it is equivalent to third- and fourth-degree burns.

partial thickness b. involves part or all of the epidermis. Generally, equivalent to first- and second-degree burns.

solar b. sunburn is noticeable mainly in white pigs, white cats and in dogs with little or no pigmentation on the nose (areas not protected by haircoat) or following close clipping. Of little importance in pigs, other than esthetic importance, but in dogs and cats causes actinic dermatitis, which occasionally precedes the development of squamous cell carcinoma. See also solar **dermatitis**, photosensitive **dermatitis**.



B-55: Scrotal lesions of mycotic dermatitis initiated by seed burrs (arrow).

sole b. damage caused to the sensitive laminae of the feet by the prolonged application of an overheated horseshoe during a shoeing session. The horse is very lame and part of the hoof may subsequently slough.

burning bush see ***Kochia scoparia***.

Burow [*boo'rov*] pertaining to Karl August Burow, a German surgeon (1809–1874).

B's. solution a preparation of aluminum subacetate, glacial acetic acid and water; used topically on the skin as an astringent, and as a topical antiseptic and antipruritic in various skin disorders. Called also aluminum acetate solution.

B's. triangle excision of a piece of skin to eliminate a **dog ear**, or to facilitate an advancement **flap**. Called also Burow's operation.

burr [*bər*] 1. a plant seed capsule carrying many hooked spines which catch in animal coats thus promoting dissemination of the plant. The word is also used as a collective name for plants that carry burrs, e.g. Noogoora burr, Buffalo burr, **burr medic**, burr trefoil. 2. a surgical instrument. See **bur**. 3. the irregular cartilage formation seen inside a dog's ear. 4. the irregular bony excrescences that project from the coronet at the base of a mature antler.

Bathurst b. (1) ***Xanthium*** *spinosum*.

buffalo b. (1) ***Solanum*** *rostratum*.

Californian b. (1) ***Xanthium*** *strumarium* complex.

catshead, catshead b. (1) ***Tribulus*** *terrestris*.

b. cell can refer to any of several types of erythrocytes with spicules, including **acanthocyte**, **echinocyte**.

copper b. (1) ***Sclerolaena*** *calcarata*.

Hunter b. (1) ***Xanthium*** *italicum*.

Italian cockle b. (1) ***Xanthium*** *strumarium*.

Narrawa b. (1) ***Solanum*** *cinereum*.

needle b. (1) ***Amaranthus*** *spinosus*.

Noogoora b. (1) ***Xanthium strumarium*** (*X. pungens, X. occidentale*).

red b. (1) ***Bassia*** *hyssopifolia*, ***Sclerolaena*** *calcarata*.

South American b. (1) ***Xanthium*** *cavanillesii*.

star b. (1) ***Acanthospermum*** *hispidum*.

yellow b. (1) ***Centaurea*** *solstitialis*.

burrawang see ***Macrozamia***.

burrhole the hole made surgically in bone to allow access to tissues below. Connecting a series of holes facilitates removal of a bone flap.

burro the Spanish word for **donkey**; commonly used in North and South America.

burrow weed ***Haplopappus*** *heterophyllus*.

burrowing spiders spiders of the family Theraphosidae.

burry said of wool when it contains plant burrs, the adherent seed pods, usually of *Medicago polymorpha*.

bursa [*bur'sə*] pl. *bursae,bursas* [L.] a small fluid-filled sac or sac-like cavity lined with synovial membrane and containing synovial fluid situated in places in tissues where friction would otherwise occur. Bursae function to facilitate the gliding of skin, muscles or tendons over bony or ligamentous surfaces. They are numerous and are found throughout the body, the most important being located around the large limb joints. Inflammation of a bursa is known as **bursitis**. See also **bursal**.

atlantal b. lies between the ligamentum nuchae and the dorsal arch of the atlas. Called also cranial nuchal subligamental bursa. *bursa subligamentosa nuchalis cranialis*.

axial b. under the ligamentum nuchae and over the axis. Called also the caudal nuchal subligamental bursa, *bursa subligamentosa nuchalis caudalis*.

bicipital b. intertuberal bursa. See **bicipital** bursa.

calcanean b. large bursa on the summit of the calcaneus where the superficial digital flexor muscle tendon is partly inserted as it passes distally to the foot; in the horse there may be an additional small subcutaneous bursa over the tendon at this site; its inflammation causes 'capped hock'. Called also *bursa tendinis calcanei*.

cloacal b. bursa of Fabricius.

copulatory b. embraces the female nematode during copulation; the structure is useful for the identification of some species of nematodes.

cranial nuchal subligamental b. see atlantal bursa (above).

b.-dependent lymphocytes see B **lymphocyte**.

b. equivalent tissue an unidentified component of the lymphoid system, analogous to the bursa of Fabricius in birds, which is considered to be the primary site of the origin of B lymphocytes.
b. of Fabricius an epithelial outgrowth of the cloaca in birds, which develops in a manner similar to that of the thymus, atrophying after 5 or 6 months and persisting as a fibrous remnant in sexually mature birds. It contains lymphoid follicles, and before involution is a site of formation of B lymphocytes associated with humoral or antibody **immunity**. May be very large in young chickens and compress the cloaca dorsally. It opens into the proctodeum, the most caudal of the three chambers of the cloaca.
false b. see **hygroma**.
infracardiac b. a small, serous membrane lined pouch ventral to the aorta and to the right of the esophagus and within the caudal mediastinum.
infraspinatus b. beneath the superficial tendon of the infraspinatus muscle as it crosses the greater tubercle of the humerus.
intertuberal b. lies between the tendon of the biceps brachialis muscle and the brachial groove of the humerus. Called also bicipital bursa.
intertubercular b. over the intertubercular groove of the humerus and beneath the tendon of the biceps brachii muscle, in horses and cattle.
b. mucosa, synovial b. a closed synovial sac interposed between surfaces that glide upon each other; it may be subcutaneous, submuscular, subfascial or subtendinous in location.
navicular b. lies between the navicular bone and the insertion of the deep digital flexor muscle tendon. Called also *bursa podotrochlearis manus/pes*.
nuchal b. see atlantal bursa (above).
omental b. the potential cavity contained within the greater omentum. It communicates with the rest of the peritoneal cavity through the epiploic foramen (of Winslow).
ovarian b. see **ovarian** bursa.
b. podotrochlearis manus see navicular bursa (above).
subcutaneous b. bursae which develop in subcutaneous sites over any bony prominence, e.g. coxal tuber, olecranon.
supraspinous b. between the funicular and lamellar parts of the ligamentum nuchae and over the spine of the second thoracic vertebra of horses. Called also *bursa subligamentosa supraspinalis*.
synovial b. see bursa mucosa (above).
testicular b. the space between the body of the epididymis and the testis created by the partly free body of the epididymis relative to its close attachment to the testis.
triceps b. beneath the tendon of the triceps brachii muscle as it passes over the summit of the olecranon. Called also tricipital bursa, *bursa subtendinea m. tricipitis brachii*.
tricipital b. see triceps bursa (above).
trochanteric b. any of the bursae associated with the greater trochanter either between the skin and the trochanter or between any of the gluteal muscles and the greater trochanter.
bursal [*bur'səl*] emanating from or pertaining to bursa.
infectious b. disease (IBD) a disease of young chickens caused by an *Avibirnavirus* which primarily and selectively destroys B lymphocytes in the bursa of Fabricius resulting in a secondary immunodeficiency. Clinical signs are variable and include diarrhea, feather ruffling and droopiness. Death is often a consequence of septicemia associated with normally nonpathogenic strains of bacteria such as *Escherichia coli* or *Salmonella* spp. The morbidity in an initial outbreak will be 100% and the mortality up to 30%. A disease notifiable to the OIE (see Table 22). Called also Gumboro disease, infectious avian nephrosis.
bursatti, bursattee, bursati [*bər-sah'te*] see **swamp cancer**.
bursectomy [*bər-sek'tə-me*] excision of a bursa.
neonatal b. an experimental procedure that removes the bursa of Fabricius, either surgically, hormonally or through infection with the virus of infectious bursal disease. The resulting immunodeficient chick is useful in immunological studies because of the loss of B lymphocytes.
bursitis [*bər-si'tis*] inflammation of a bursa. Acute bursitis comes on suddenly; severe pain and limitation of motion of the affected joint are the principal signs. See also **hygroma**, intra-abdominal abscess. Chronic bursitis may follow the acute attacks. There is continued pain and limitation of motion around the joint.
atlantal b. see **poll** evil.
carpal b. see carpal **hygroma**.
trochanteric b. inflammation, in the horse, of the bursa between the tendon of the middle gluteal muscle and the major trochanter of the femur or its cartilage. Causes lameness and atrophy of muscles in long-standing cases. Called also whirlbone lameness.
bursography radiography using a contrast medium injected into a bursa.
bursolith [*bur'so-lith*] a calculus in a bursa.
bursopathy [*bər-sop'ə-the*] any disease of a bursa.
bursotomy [*bər-sot'ə-me*] incision of a bursa.
burst-forming unit-erythroid (BFU-E) see burst forming unit-**erythroid**.
Burttia prunoides a poisonous African shrub in the plant family Connaraceae; contains an unidentified toxin; causes sudden death in ruminants. Signs include bloat, salivation, running in circles, abdominal pain, convulsions and death.
busereline a gonadotropin releasing hormone analog used to improve fertility in cows.
bushite crystals calcium phosphate crystals
bush-foot see porcine **footrot**.
bush sickness see **cobalt** nutritional deficiency.
bushbaby small, nocturnal, arboreal prosimian in the family Galagidae. They have very large eyes and a long bushy tail.
bushbuck (*Tragelaphus scriptus*) a widely distributed African antelope; it has been incriminated as a reservoir for *Ehrlichia ondiri* that causes bovine petechial fever.
bushfire injury injuries sustained by animals in bushfires have special characteristics compared with fires in buildings. Depending on the nature of the material which burns, there may be injuries chiefly of the feet, limbs and underline, for example in a grass fire or in a hardwood forest fire where litter on the forest floor is the prime source of flame. Alternatively, there may be burning of the entire body in a softwood forest fire. For similar reasons there may be very few survivors or many survivors with either superficial or severe injuries. The excessive heat may cause rupture of the eyeball and fractured limbs and paralysis result from accidental trauma during the frenzied attempts at escape. Native wildlife is particularly affected, not only by burns but the stress of injury and later handling for treatment is often fatal. Called also forest fire injury.
bushman's poison see ***Acokanthera***.
bushpig (*Potamochoerus larvatus*) an animal similar to wild boar with a long snout, pointed ears, big bristles and a mane. They may be carriers of important livestock diseases. The name is also applied to the red river **hog**[1] (*P. porcus*).
Bushy Creek fever leptospirosis.
buspirone [*bu-spi'rōn*] a nonsedating antianxiety drug used in dogs and cats.
buss disease [*bus*] see sporadic bovine **encephalomyelitis**.
Busse–Buschke disease [*boo'sə boosh'ka*] see **cryptococcosis**.
bustard large terrestrial, but not flightless, birds in the family Otididae. They are ostrich-like with a heavy body, broad wingspan and a long neck. The Australian bustard is commonly called 'bush turkey'. The Great bustard is the national bird of Hungary.
busulfan [*bu-sul'fan*] an alkylating antineoplastic agent used in the treatment of chronic myelogenous leukemia and polycythemia.

B-56: Grass fire burns in a cow.There have been severe burns to the skin with damage to the conjunctiva and cornea, as indicated by conjunctival swelling, and to the nasal mucous membranes.

VetBooks.ir

VetBooks.ir

B

butacaine [*bu'tə-kān"*] a local anesthetic; the sulfate salt is used as a topical anesthetic in the eye and on mucous membranes, in solution or ointment.

butalbital [*bu-tal'bĭ-təl*] an intermediate-acting barbiturate used as a sedative and hypnotic.

butamben [*bu-tam'bən*] a local anesthetic used topically for the treatment of painful skin conditions.

butamisole [*bu-tam'ĭ-sōl*] an anthelmintic used as the hydrochloride. Administered by injection in dogs for the treatment of *Trichuris vulpis* and *Ancylostoma caninum*.

butane [*bu'tān*] an aliphatic hydrocarbon, C_4H_{10}, from petroleum.

1,3-butanediol an alkydiol with affinity for liver alcohol dehydrogenase, used in the treatment of ethylene glycol toxicity.

butcher's dog disease nutritional secondary hyperparathyroidism.

butcher's jelly lumps of hemorrhagic edema around sites damaged by larvae of *Hypoderma* spp.

butcher's joints the joints (integrated masses of similar kinds of meat from adjoining muscle masses and still in one piece) as prepared by the meat trade. Carcass meat is sold with the bone in or boned out and in primal cuts of fore- and hindquarters. The retail butcher reduces these to subprimal cuts from which standardized joints or cuts are prepared ready for sale to the consumer.

butenyl isothiocyanate a substance found in some samples of rapeseed and thought to be involved in causing the sudden deaths associated with feeding this material.

Butler gag a gag similar to the **Hauptner mouth gag** except that it can be fitted only so that the handle of the screw is below the bottom jaw. In the Hauptner, the body of the appliance fits over the maxilla and the handle points upwards.

butobarbital [*bu"to-bahr'bĭ-təl*] a short- to intermediate-acting barbiturate; the sodium salt is used as a sedative and hypnotic.

butobarbitone butobarbital.

butoconazole [*bu"to-kon'ə-zōl*] an imidazole antifungal used topically, effective particularly against *Candida*.

butopyronoxyl an insect repellent effective against ticks.

butorphanol a synthetic opioid with both agonist and antagonist activities. It has analgesic, antitussive and antiemetic effects.

butt [*but*] 1. recognized pack for presentation of wool for sale; similar to but smaller than the standard bale; usually an incompletely filled bale. 2. see **butting**.

butter yellow [*but'ər*] *p*-dimethylaminoazobenzene. Used as a laboratory agent. It is a carcinogen and is the type poison for causing hyperplasia of bile ducts involving the smaller interlobular bile ducts and the intralobular cholangioles.

buttercup usually plants in the genus ***Ranunculus***.

Bermuda b. *Oxalis pes-caprae*.

buttercup comb the kind of comb on a domestic chicken that is split longitudinally.

butterfat [*but'ər-fat"*] globules in the milk of all species. It can be separated to make butter. The nutritional value and the price of milk are judged on, among other things, the butterfat content of the milk. A dramatic drop in the content in milk of butterfat may be caused by a too low fiber content of the diet.

butterfly dog [*but'ər-fli*] see **Papillon**.

butterfly fragment [*but'ər-fli*] in comminuted fractures, a fragment resulting from two oblique fracture lines.

buttermilk residual fluid after removal of fat from milk in butter manufacture; a protein-rich supplement fed to pigs.

butting a form of fighting which is characteristic of ruminants in which the antagonists rush at each other at speed with heads lowered and attempt to meet squarely at the poll or forehead. The victor holds his ground. Sometimes an act of aggression against humans.

buttock [*but'ək*] either of the two fleshy prominences formed by the gluteal muscles on either side of the tail. Called also nates.

point of b. the prominence caused by the ischial tuberosity.

button [*but'ən*] 1. a knoblike elevation or structure. 2. an appliance used in surgical anastomosis of the intestine (Murphy's button).

b. tumor see **histiocytoma**.

b. ulcer craterous mucosal defects, the edges of which are raised above the surrounding mucosa. The original necrotic center of the lesion is shed leaving a deep ulcer. They are seen in the large bowel of pigs in subacute *Salmonella choleraesuis* infection and classical swine fever. The lesions are usually few in number, small and deep.

button grass see ***Dactyloctenium radulans***.

button weed see ***Leiocarpa brevicompta***.

buttress a projecting support or reinforcement; usually pertaining to a wall or structure.

b. foot a thickening of the sole of a horse's hoof between the frog and the posterior end of the bar. See **pyramidal** disease.

medial b. palpable enlargement of the medial stifle indicative of cranial cruciate ligament injury in dogs; caused by osteophyte formation on the trochlear ridges and fibrous tissue on the medial condyle and proximal tibia.

butyl [*bu'təl*] a hydrocarbon radical, C_4H_9.

b. aminobenzoate see **butamben**.

b. chloride has been used as an anthelmintic but causes poisoning similar to that caused by **carbon tetrachloride**.

***n*-butyl chloride** a superseded anthelmintic with activity against ascarids, hookworms and whipworms in dogs.

T-butylaminoethanol a coccidiostat which may induce a choline deficiency leading to depressed growth in chickens.

butynorate a drug recommended for the treatment of avian coccidiosis.

Butyrivibrio fibrisolvens one of the common bacteria in the rumen.

butyraceous [*bu"tə-ra'shəs*] of a buttery consistency.

butyrate [*bu'tə-rāt*] a salt of butyric acid.

butyric acid [*bu-tĕr'ik as'id*] a saturated 4-carbon fatty acid found in butter. One of the principal acids formed in the rumen by fermentation.

butyroid [*bu'tə-roid*] resembling butter.

butyrophenone [*bu"tə-ro-fe'nōn*] a chemical class of major tranquilizers which includes droperidol and azaperone.

butyrous [*bu'tə-rəs*] resembling butter.

butyryl CoA [*bu'tə-rəl*] the first reduced intermediate in synthesis of fatty acids.

butyrylcholinesterase the cholinesterase of plasma (a pseudocholinesterase), which is different from the cholinesterase of the myoneural junctions (acetylcholinesterase).

buxine one of the toxic alkaloids in *Buxus sempervirens*.

buxinidine one of the toxic alkaloids in *Buxus sempervirens*.

Buxus sempervirens an ornamental and hedge shrub in the family Buxaceae; causes severe pain, dysentery, convulsions and death from asphyxia in horses. Pigs and cattle develop hemorrhagic enteritis. Called also box.

BVA British Veterinary Association.

BVC British Veterinary Codex.

BVD see **bovine** virus diarrhea.

BVD/MD bovine virus diarrhea/mucosal disease. See **bovine** virus diarrhea.

BVDV bovine virus diarrhea virus.

BVL bovine viral leukosis.

BVP bovine viral papillomatosis.

BW abbreviation for body weight; used in medical records.

BWD bacillary white diarrhea. See **pullorum disease**.

by-products [*by'prod'əkts*] materials generated incidentally to the production of a principal product in an industry or industrial enterprise. In the meat industry by-products include blood, bone, fat, bristle, hair, wool, hide, skin, hoof, horn and offal products prepared in various ways for use as human or animal food, for pharmaceutical and cosmetics and so on.

animal b. all the animal tissues from the livestock industry which are not for direct use as human food and which are rendered to meat and bone meal, blood meal, tallow and animal fats.

Byelorussian having some association with Byelorussia.

B. harness horse multiuse horse, including milk and meat, light draft, coach-horse.

B. red cattle red, dairy cattle from Byelorussia.

Byfield 'fern' *Bowenia serrulata*.

bypass [*bi'pas*] an auxiliary flow; a shunt; a surgically created pathway circumventing the normal anatomical pathway, as an intestinal bypass.

cardiopulmonary b. (CPB) diversion of the flow of blood from the entrance of the right atrium directly into the aorta, usually via a pump oxygenator, avoiding both the heart and the lungs; a form of extracorporeal circulation to allow surgical manipulation of the heart. Used mainly in experimental animals in the investigation of cardiac prosthetic devices.

Byssochlamys nivea a fungus capable of producing **patulin**.

bystander phenomenon [*bi'stan-dər*] seen in secondary hepatic dysfunction caused by extrahepatic inflammatory disease.

C

C chemical symbol, *carbon*; cathode (cathodal); Celsius or centigrade (scale); cervical; clearance; clonus; closure; contraction; cylinder; cytosine; in the electrocardiogram, C stands for chest (precordial) **lead**^{2}; symbol for *complement*.

C3 the third component of complement; a β protein. Split into two fragments, C3a and C3b, by C3 convertase which is triggered via the classical or alternative pathway of complement activation. An inherited deficiency occurs in Brittany spaniels and very low serum concentrations occur in some Finnish-Landrace lambs. See also **complement**.

χ chi, small letter; twenty-second letter in the Greek alphabet. Used in statistical analysis.

C_L lung compliance.

C_T thoracic compliance.

C_{LT} total lung–thorax compliance.

c symbol, *centi-*.

C aberration an abnormal chromosome resulting from the loss, duplication or rearrangement of genetic material.

C banding production of one of the reproducible banding patterns on particular chromosomes by staining the karyotype with Giemsa.

C-bands bands produced in chromosomes after special fixing and staining techniques have been applied. The bands are produced by staining of DNA which has not been removed because it is protected by a nonhistone protein–DNA interaction at the centromere.

C cell a cell type of the thyroid gland, situated between or within the walls of follicles, with numerous small membrane-limited secretory granules in the cytoplasm. The source of calcitonin. Called also parafollicular cell.

C c. tumors (ultimobranchial) adenomas and carcinomas occur most frequently in aged bulls, associated with vertebral osteophytes, osteosclerosis, ankylosis and spondylosis. Believed to be associated with the long-term intake of a diet high in calcium.

C_H domains C_{H1}, C_{H2}, C_{H3} regions of the heavy chain of immunoglobulins with amino acid sequences that are constant in different antibodies of the same class.

CL domain the region of light chain immunoglobulins that is constant in different antibodies of the same class.

C effects genetic speak for the common environment, e.g. the milk supply to a litter of pigs.

C fibers nerve fibers with the slowest conduction speeds; are very slow-conducting, unmyelinated nerve fibers, principally postganglionic sympathetic fibers.

C_1-inactivator one of the six major protease inhibitors of blood; it inhibits clotting factors XIa, XIIa and plasma kallikrein, but not Xa and plasmin.

C_6 oxidative pathway see **glucuronate pathway**.

C-peptide the central connecting polypeptide which is part of the proinsulin molecule. It is released when the two chains of insulin are cleaved off of the single chain looped polypeptide of proinsulin.

C protein a skeletal muscle contractile protein involved in the assembly of myosin.

C-reactive protein (CRP) a serum protein produced by liver and fat cells in response to IL-6 released by macrophages due to inflammation, infection or tissue damage. It is immunosuppressive, promotes phagocytosis and complement binding to foreign or damaged cells. A biomarker of systemic inflammation. See also **acute phase proteins**.

C region see **constant domains**.

C-terminal the end of the peptide chain carrying the free alpha-carboxyl group of the last amino acid, conventionally written to the right.

C-type particle a crescent-shaped formation on the cell membrane of cells associated with the budding of so named C-type retroviruses.

C-type virus a type of retrovirus, the oncoviruses.

C value amount of DNA in the haploid genome of a species.

CA cardiac arrest.

CA-MRSA community-associated methicillin-resistant *Staphylococcus aureus*.

Ca chemical symbol, *calcium*; cathode (cathodal); cancer.

Ca-EDTA calcium ethylenediaminetetraacetic acid. See **edetate**.

Ca^{2+} calcium ions.

Ca^{2+}-ATPase [*a-te-pe'ās*] calcium pump involved in the transport of calcium ions against a concentration gradient across a membrane barrier. The transport requires energy from the hydrolysis of ATP.

CAAHTT Canadian Association of Animal Health Technologists and Technicians.

CAB 1. Commonwealth Agricultural Bureaux. 2. circulation–airway–breathing. An alternate flow chart for cardiopulmonary **resuscitation**.

CAB (1) Abstracts an extensive literature abstract database. See **CAB International**.

CAB (1) Direct an extensive source of reference in the applied life sciences, incorporating the bibliographic databases CAB Abstracts and Global Health.

CABI CAB International.

Caballonema a genus of the subfamily Cyathostominae of equine strongyles (nematodes). Distribution is limited to Russia and China.

cabbage *Brassica oleracea* var. *capitata*, a cultivated plant whose leaves contain SMCO and may cause hemolytic anemia if eaten in large quantities. The seeds contain the glucosinolate progoitrin which, on conversion to an active form (oxazolidone), causes growth inhibition in chickens. Called also drumhead cabbage.

cabbage poison ***Velleia*** *discophora*.

CAB International (CABI) an information gathering and disseminating service for all matters agricultural and veterinary. Communicates by traditional print and paper and electronically through its database for online consultation and general dial-up information service available through DIALOG, CAN/OLE, ESA/IRS, DIMDI and other services. CABI's life sciences bibliographic database, called CAB abstracts, is a comprehensive bibliographic, abstracting and indexing database that covers over 150 countries, and over 50 languages. The subject coverage is extensive, including all aspects of agriculture, environment, veterinary sciences, applied economics, food science and nutrition. Its database recently reached six million records. CD-ROMs containing literature abstracts in a wide range of disciplines are also available for purchase. Periodical publications of major interest to veterinarians are Veterinary Bulletin, Index Veterinarius, Nutritional Abstracts and Reviews, Breeding Abstracts, Livestock Feeds and Feeding, Pig News and Information, Poultry Abstracts, Review of Medical and Veterinary Mycology, and Dairy Science Abstracts. Formerly the Commonwealth Agricultural Bureaux (CAB).

cabergoline [*kə-bur'go-lēn*] a dopamine receptor agonist that suppresses prolactin and progesterone. Used to cause abortion in the bitch.

cacao [*kə-ka'o*] see ***Theobroma cacao***.

Cacatua roseicapilla see **galah**.

cacesthesia disordered sensibility.

Cache Valley virus one of the California serotype bunyaviruses that causes fetal disease when sheep are infected in early pregnancy.

cachectin [*kə-kek'tin*] tumor necrosis factor-alpha.

cachet [*kă-sha'*] [Fr.] a dish-shaped wafer or capsule enclosing a dose of medicine.

cachexia [kə-kek'se-ə] a profound and marked state of constitutional disorder; general ill health and malnutrition. See also **emaciation**.
cardiac c. severe wasting that occurs in association with chronic cardiac insufficiency. The result of anorexia, malabsorption and poor tissue perfusion with cellular anoxia.
pituitary c. that due to diminution or absence of pituitary function. Manifested by progressive loss of body weight associated with muscle atrophy due to lack of protein anabolism in the absence of growth hormone.
cac(o)- word element. [Gr.] *bad, ill*.
cacodylic acid [kak"o-dil'ik] pharmaceutical aliphatic organic arsenical; see also organic **arsenical**.
cacomelia [kak"o-me'le-ə] dysmelia.
cacomistle (*Bassariscus sumichrasti*) an omnivorous, arboreal member of the family Procyonidae, native to Central America; the coat is gray to brown and the bushy tail has black rings. Closely related to the ring-tailed cat.
cacosmia [kak-oz'me-ə] foul odor; stench.
cactinomycin [kak"ti-no-mi'sin] an antibiotic of the actinomycin complex produced by several species of *Streptomyces*. It is a combination of actinomycin D (dactinomycin), actinomycin C_2 and C_3; used as an antineoplastic agent.
Cadaba rotundifolia African plant in the Capparaceae family; toxin unidentified; causes diarrhea, salivation, dyspnea, liver and kidney damage.
cadastral map shows the boundaries and ownership of land parcels, usually also having position of structures, details of land use, adjacent roads, etc. Usually constructed on a GIS and so can be overlaid with other data such as census data, topographical data, and hydrological data.
cadastre a public register showing the details of ownership and value of land owned at the county or shire level. Accurate and frequently updated as it is driven by tax revenue and the need for accuracy in tax assessment. Called also cadaster. See also **cadastral map**.
cadaver [kə-dav'ər] a dead body; generally applied to a body preserved for anatomical study.
c. disposal a serious problem in veterinary practice in the absence of a local government incinerator. Incineration and burial are the only satisfactory methods.
cadaverine [kə-dav'ər-in] a relatively nontoxic ptomaine, $C_5H_{14}N_2$, formed by decarboxylation of lysine.
cadence the rhythm of a horse's gait. The walk is a four beat cadence, the trot is two beat, the canter has three beats and the gallop has four.
CADESI Canine Atopic Dermatitis Extent and Severity Index. A means of objectively assessing the severity of clinical signs in canine atopic dermatitis. The severity of signs is scored on a scale of 0–3 at a large number of specified anatomic sites spanning the whole body.
cadherins [kad-hēr'ins] calcium-dependent cell-adhesion molecules.
cadmium (Cd) [kad'me-əm] chemical element, atomic number 48; its salts are poisonous. See Table 4. Poisoning in animals may be caused by aerial pollution of pastures or by accidental ingestion of fungicides or anthelmintics which contain the element. Nephropathy, anemia, bone demineralization and poor hair, skin and hoof growth result.
c. anthranilate no longer widely used as an anthelmintic for pigs because of its toxicity.
c. chloride causes bleaching of teeth, anemia, cardiac hypertrophy and bone marrow hyperplasia.
c. oxide a toxic compound used at one time as an anthelmintic for pigs.
caduceus [kə-doo'shəs] the wand of Hermes or Mercury consisting of a winged staff with two serpents entwined; used as a symbol of the medical profession and as the emblem of most military Medical Corps. Another symbol of medicine is the staff of Æsculapius, which is the official insignia of the American Medical Association. The American Veterinary Medical Association uses a modification of the caduceus as an emblem. The staff is unwinged, there is a single serpent instead of two, and a large V is imprinted over the whole. An adaptation of the caduceus, with only one snake winding itself around the staff is the emblem of the Veterinary Corps of the US Army.
CAE **caprine** arthritis–encephalitis.
caecal see **cecal**.
caecilian limbless, wormlike amphibian in the order Gymnophiona.
caecum [se'kəm] see **cecum**.
caeruloplasmin see **ceruloplasmin**.
Caesalpinia toxic plant genus in the legume family Caesalpiniaceae; contains tannins; causes vomiting, diarrhea. Includes *C. gilliesii*. Called also bird of paradise tree.
caesarean [sə-za're-ən] cesarean.
CAEV caprine arthritis–encephalitis virus.
café au lait in dogs, a rich, light brown colored coat. Used in the breed description of Poodles.
cafe bravo [Span.] ***Palicourea*** *marcgravii*.
cafezinho ***Palicourea*** *marcgravii*.
caffeine [kă-fēn'] a central nervous system stimulant from coffee, tea, guarana and maté; it also acts as a mild diuretic. The production of more effective drugs has led to caffeine being discarded as an analeptic. It has even been bypassed by the persons who dope horses, especially because it is readily detectable in urine for up to 10 days after its administration.
caffeinism [kaf'ēn-iz-əm] an agitated state induced by excessive ingestion of caffeine.
CAFO see **AFO/CAFO**.
cafta see ***Catha edulis***.
cage [kāj] an animal or bird enclosure with the walls made of rods or mesh to provide maximum restraint with greatest ventilation, reduction in weight, visibility and access to the inhabitant.
bagby c. stainless steel cylinder with perforated walls used for interbody cervical fusion in the treatment of the 'wobbler syndrome' in horses.
battery c. a wire cage in which a number of laying hens are housed for egg laying. A husbandry method of concern for animal welfare.
c. birds companion birds that are customarily kept in cages to restrain and protect them.
c. biter syndrome damage caused to the teeth of caged exotic animals, particularly large cats, from aggressive biting on the cage wire or bars.
c. furniture accessories placed in a cage for birds, reptiles or other small pets. Some are decorative, but most should contribute to husbandry and to environmental enrichment. Includes perches, wheels and toys, baths, dishes, mirrors, shelters and hiding places.
c. layer fatigue birds housed in cages may reach a stage where they are unable to stand up straight. They also develop very fragile bones. This problem is a common target for animal welfare complaints. It is a cause of wastage because of the rate of culling and because of splintering of bones and a resulting downgrading of carcasses at slaughter. Called also cage layer osteoporosis.
c. layer osteoporosis removal of medullary and cortical bone from laying hens being fed a diet deficient in calcium. See also cage layer fatigue (above).
c. paralysis see **thiamine** nutritional deficiency.
c. rearing pigs that are weaned very early, e.g. at 3 weeks, are reared artificially in cages.
squeeze c. cage with one wall capable of being moved inwards, usually by mechanical means, so that the inhabitant can be restrained sufficiently to prevent its movement and to allow access to suitable sites for the administration of injections. An essential piece of equipment for veterinarians working at zoos, circuses and game farms.
cage-side tests various clinicopathologic testing procedures which may be carried out at the location of the animal's cage; includes rapid semiquantitative tests of hemostatic disorders such as buccal mucosa bleeding time and activated coagulation time. The equivalent of bed-side tests for human patients. Now more commonly called point-of-care tests.
caiman crocodilian reptile of the family Alligatoridae, very similar to alligators; native to Central and South America. Occasionally kept as pets, most comonly the spectacled caiman (*Caiman sclerops*).
c. poxvirus causes typical pox lesions on the skin and in the mouth of young caimans and Nile crocodiles.
Cairina moschata see **Muscovy**.
Cairn terrier a small (13–14 lb) active terrier with medium-length shaggy, weather-resistant, double coat, short tail, erect ears and dark eyes giving a foxy appearance. They can be any color except white. The breed is subject to inherited globoid cell

C-1: Cairn terrier.

leukodystrophy, craniomandibular osteopathy, hemophilia and factor IX deficiency.

caixeta *Simarouba amara*.

Cakala technique see paravertebral **block**.

cake the residuum after extraction of oil from oil seeds, used extensively as a protein supplement to diets of all housed animal species.

c. poisoning varies with the seed, linseed cake may cause cyanide poisoning, cottonseed cake may cause gossypol poisoning.

Cal kilocalorie.

cal calorie.

-cal suffix meaning pertaining to.

calabrese *Brassica oleracea* var. *italica* (Italian broccoli).

Caladium cultivated, ornamental plant genus in the family Araceae; contains calcium oxalate raphide crystals, causing stomatitis and salivation. Includes *C. bicolor*.

calamine [*kal'ə-mīn*] a preparation of zinc carbonate with with a small amount of ferric oxide; the lotion is used topically as protectant and astringent.

calamus [*kal'ə-məs*] in the shape of a reed or pen.

c. scriptorius pen-nib shaped portion of the floor of the fourth ventricle of the brain where the median sulcus and paired limiting sulci give the region a fountain-pen shaped appearance; a term mainly restricted to the human brain.

Calandrinia genus of the plant family Portulacaceae.

C. balonensis, C. polyandra used commonly as feed for cattle and sheep grazed extensively in arid and semi-arid areas of Australia, these plants have a high oxalate content and are suspected of causing deaths in wethers due to obstructive urolithiasis. Called also parakeelia, parakeelya.

calbindin a calcium-binding protein involved in facilitating the absorption of calcium from the intestine and its reabsorption from the glomerular filtrate in the renal tubules and the deposition of calcium in mineralized tissues; two identified forms of the protein are calbindin-D9k and calbindin-D28k.

calcaneal [*kal-ka'ne-əl*] arising from or pertaining to the calcaneus.

c. epiphysis avulsion occurs in young animals in association with avulsion of the gastrocnemius tendon of insertion.

c. tendon see **Achilles tendon**.

calcaneoapophysitis [*kal-ka"ne-o-ə-pof"ə-zi'tis*] inflammation of the posterior part of the calcaneus, marked by pain and swelling.

calcaneoastragaloid [*kal-ka"ne-o-ə-strag'ə-loid*] pertaining to the calcaneus and talus (astragalus).

calcaneodynia [*kal-ka"ne-o-din'e-ə*] pain in the heel.

calcaneoquartal joint the articulation of the calcaneus with the fourth tarsal bone.

calcaneum [*kal-ka'ne-əm*] see calcaneus.

calcaneus, calcaneum [*kal-ka'ne-əs*] the irregular quadrangular bone at the back of the tarsus. One of the two tarsal bones in the proximal row of bones of the hock joint and, because of its calcaneal tuber and the muscles attached to it, acts as a lever to extend the hock joint. Called also heel bone, os calcis, and fibular tarsal bone. See also Table 10.

calcar [*kal'kər*] a spur or spur-shaped structure.

c. avis the lower of two medial elevations in the lateral cerebral ventricle, produced by the lateral extension of the calcarine sulcus; called also hippocampus minor.

c. metacarpale, c. metatarsale see **ergot**[2].

calcareous [*kal-kār'e-əs*] pertaining to or containing lime; chalky.

calcarine [*kal'kə-rīn*] 1. spur-shaped. 2. pertaining to the calcar avis.

c. sulcus a groove on the medial surface of the occipital lobe of the cerebrum, separating the cuneus from the lingual gyrus.

calcariuria [*kal-ka"re-u're-ə*] the presence of lime (calcium) salts in the urine.

calcemia [*kal-se'me-ə*] excessive calcium in the blood; hypercalcemia.

calcibilia [*kal"sĭ-bil'e-ə*] the presence of calcium in the bile.

calcic [*kal'sik*] of or pertaining to lime or calcium.

calcifediol [*kal"sif-ə-di'ol*] nonproprietary name for 25-hydroxycholecalciferol, used as a calcium regulator in the treatment and management of metabolic bone disease or hypocalcemia associated with chronic renal failure.

calciferol [*kal-sif'ər-ol*] vitamin D; may refer to **vitamin D_2**; ergocalciferol or cholecalciferol.

c.-25-hydroxylase a hepatic microsomal enzyme which controls the conversion of cholecalciferol to 25-hydroxycholecalciferol.

calcific [*kal-sif'ik*] forming lime.

calcification [*kal"sĭ-fĭ-ka'shən*] the deposit of calcium salts in a tissue. The normal absorption of calcium is facilitated by parathyroid hormone and by vitamin D. In poisoning with calcinogenic glycosides and when there are increased amounts of parathyroid hormone in the blood (as in **hyperparathyroidism**), there is deposition of calcium in the soft tissue. (In hyperparathyroidism secondary to renal disease there is deposition in the alveoli of the lungs, the renal tubules, beneath the parietal pleura, the gastric mucosa, and the arterial walls.) Normally calcium is deposited in the bone matrix to insure stability and strength of the bone. In **osteomalacia** there is an excess of unmineralized osteoid because the aged well-mineralized bone is replaced by a matrix that is inadequately mineralized.

dystrophic c. the deposition of calcium in abnormal tissue without abnormalities of blood calcium.

metastatic c. deposition of calcium in tissues as a result of abnormalities of calcium and phosphorus concentrations in the blood and tissue fluids. Seen in gastric mucosa, parietal pleura and other tissues in chronic renal failure. See also **uremia**.

nutritional c. calcification in soft tissues as a result of an increased intake of calcium.

soft tissue c. see metastatic calcification (above), dystrophic calcification (above).

calcify to mineralize by the deposition of calcium salts.

calcifying mineralized.

c. aponeurotic fibroma locally aggressive nodular masses that involve membranous bones, particularly those of the canine skull (zygomatic arch), and rarely metastasize. See also **multilobular** chondroma and osteoma.

c. epithelial odontogenic tumor rare lesion in dogs and cats; epithelial, gingival masses susceptible to surgical excision.

c. epithelioma see **pilomatrixoma**.

c. epithelioma of Malherbe see **pilomatrixoma**.

calcined magnesite the mineral magnesite which has been reduced to a powder by heating, i.e. calcined. It is used as a dietary supplement for cattle and sheep to prevent hypomagnesemia. Used for topdressing pasture with a similar objective. Contains about 90% magnesium oxide.

calcinogenic [*kal"sĭ-no-jen'ik*] conducive to calcinosis.

c. glycoside toxic glycosides with their aglycone an analog of vitamin D_3. Found in plants including *Solanum glaucophyllum (S. malacoxylon)*, *S. linneanum (S. hermannii, S. sodomaeum)*, *S. erianthum, S. torvum, Cestrum diurnum, Stenotaphrum secundatum, Trisetum flavescens, Nierembergia veitchii*.

calcinosis [*kal"sĭ-no'sis*] a condition characterized by abnormal deposition of calcium salts in soft tissues.

c. circumscripta localized deposition of calcium in small nodules in subcutaneous tissues, tongue or attached to tendons or joint capsules in dogs. In horses, circumscribed, hard swellings with granular radiopacity, usually immovable and located on the lateral aspect of the proximal tibia. Called also tumoral calcinosis.

c. cutis cutaneous mineralization, a characteristic lesion in dogs with hyperadrenocorticism. Lesions are commonest on the dorsal midline, ventral abdomen and inguinal region. The skin is usually thin and atrophic.

VetBooks.ir

C-2: Radiograph of calcinosis circumscripta on the carpus of a dog.

C-3: Calcinosis cutis in a dog with Cushing's syndrome.

enzootic c. calcinosis occurring in larger numbers of animals in a local population than chance warrants. Usually a plant poisoning caused by the following calcinogenic plants: *Solanum glaucophyllum (S. malacoxylon), S. linneanum (S. hermannii, S. sodomaeum), S. erianthum, S. torvum, Cestrum diurnum, Stenotaphrum secundatum, Trisetum flavescens, Nierembergia veitchii*. Manifested clinically by chronic wasting, reluctance to walk and constant shifting of weight from limb to limb. Called also enteque seco, Manchester wasting disease, espichamento, Naalehu disease, weidekrankheit.

multicentric periarticular c. described in Hungarian vizsla dogs in association with a renal tubular defect in phosphorus transport, causing progressive lameness.

pulmonary c. see **microlithiasis**.

tumoral c. see calcinosis circumscripta (above).

c. universalis widespread deposition of calcium in nodules or plaques in the dermis, panniculus and muscles.

calcipenia [*kal"sĭ-pe'ne-ə*] deficiency of calcium in the system.

calcipexis, calcipexy [*kal"sĭ-pek'sis, kal'sĭ-pek"se*] fixation of calcium in the tissues.

calciphilia [*kal"sĭ-fil'e-ə*] a tendency to calcification.

calciphylaxis [*kal"sĭ-fə-lak'sis*] the formation of calcified tissue in response to administration of a challenging agent after induction of a hypersensitive state.

calciprivia [*kal"sĭ-priv'e-ə*] deprivation or loss of calcium.

calcitonin [*kal"sĭ-to'nin*] a polypeptide hormone secreted by the parafollicular or C cells of the thyroid gland, which is involved in plasma calcium homeostasis. It acts to decrease the concentration of calcium in the blood by inhibiting osteoclast activity, intestinal absorption and phosphate resorption in the kidney. Salmon calcitonin is used in the treatment of hypercalcemia. Called also thyrocalcitonin.

c. gene-related peptides potent vasodilators widely distributed in periadventitial nerves of blood vessels, sinoatrial and atrioventricular nodes, sensory neurons and the central nervous system generally.

calcitriol [*kal"sĭ-tri'ol*] a nonproprietary name for 1,25-**dihydroxycholecalciferol**; used as a calcium regulator in the management of hypocalcemia.

calcium (Ca) [*kal'se-əm*] a chemical element, atomic number 20, atomic weight 40.08. See Table 4. Calcium is the most abundant mineral in the body. In combination with phosphorus it forms calcium phosphate, the dense, hard material of the bones and teeth. It is an important cation in intra- and extracellular fluid and is essential to the normal clotting of blood, the maintenance of a normal heartbeat, and the initiation of neuromuscular and metabolic activities. Within the body fluids calcium exists in three forms. Protein-bound calcium accounts for about 47% of the calcium in plasma; most of it in this form is bound to albumin. Another 47% of plasma calcium is ionized. About 6% is complexed with phosphate, citrate and other anions. Ionized calcium is physiologically active. One of its most important physiological functions is control of the permeability of cell membranes. Parathyroid hormone, which causes transfer of exchangeable calcium from bone into the bloodstream, and calcitriol maintain calcium homeostasis by preventing either calcium deficit or excess.

avian c. poisoning excess calcium in the avian diet, especially in diets low in phosphorus causes nephrosis, visceral gout and urolithiasis.

c. balance the balance between calcium intake and losses in feces and urine.

c. carbonate an insoluble salt occurring naturally in bone, shells and chalk. A common form of supplementary calcium in dogs and cats on meat-based diets, used because of its high concentration of calcium (40%) and absence of phosphorus.

c. challenge test an intravenous infusion of calcium will cause increased concentrations of gastrin in dogs with a gastrinoma. Often used in combination with a secretin stimulation test.

c. channels see **channel**.

c. chloride a salt used in solution to restore electrolyte balance, to treat hypocalcemia and as an antidote to magnesium poisoning. Is highly irritating and has been discarded generally in favor of less irritating substances, e.g. calcium borogluconate.

diffusible c. see calcium (above).

endogenous c. calcium contributed to the feces by the intestinal secretions.

excess c. in all species may cause **hypercalcitonism** with decreased osteoclastic activity and skeletal remodeling. In dogs, disorders of enchondral ossification with curved radius and osteochondrosis have been demonstrated; secondary iron deficiency anemia occurs in piglets.

c. fluoride naturally occurring mineral. Called also fluorspar, fluorite.

c. gel contains a high concentration of calcium; given to cows as a drench or in the feed as a prophylaxis against bovine parturient hypocalcemia.

c. gluconate a calcium replenisher and antidote to fluoride or oxalate poisoning.

c. homeostasis maintenance of normal calcium metabolism by the combined effects of adequate alimentary intake, renal excretion, parathyroid hormone involvement, 1,25 dihydroxycholecalciferol (or calcitriol) and calcitonin, plasma protein binding and deposition in tissues.

c. hydroxide an astringent compound used topically in solution or lotions; in dentistry used to encourage deposition of secondary dentin. Called also slaked lime. In solution, called lime water.

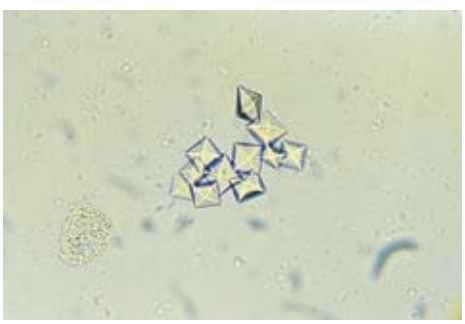
idiopathic c. phosphate deposition thought to be inherited as an autosomal dominant trait in Great Danes commencing in puppies about 5 weeks old, characterized by incoordination with deformity and displacement of the 7th cervical vertebra and mineral deposits in the intervertebral joints, in serous and synovial membranes and mineralization in most other tissues.

ionized c. (iCa) serum calcium that is not bound to protein or complexed; free calcium.

c. lactate used for supplementing the diet with calcium; contains 18% calcium. As calcium sodium lactate, containing 8% calcium, it is more soluble and can be used in drinking water.

C-4: Calcium nutrional deficiency. Osteomalacia resulting from a diet of stored grain fed as the only food available for feeding during a drought which resulted in bare pastures.

c. levulinate a calcium compound used parenterally in the treatment of hypocalcemia; contains 14.8% calcium.
c. mandelate administered orally and used as a urinary antiseptic.
c. nitrate used as an additive during cheese making to control fermentation. Whey from this cheese may cause nitrate poisoning when fed to cattle and bacterial conversion of nitrate to nitrite poisoning in pigs (rare).
nondiffusible c. protein-bound fractions of plasma calcium.
c. nutritional deficiency nutritional deficiency of calcium is rarely primary except in carnivores on an all-meat diet. Secondary deficiency is usually the result of diets having too high a phosphorus content. The outcome of either deficiency may be nutritional **hyperparathyroidism**, **rickets**, **osteomalacia**, **osteodystrophy** in horse and pigs, and degenerative **arthropathy** of cattle, depending on the species, age of the animal and availability of vitamin D. Hypocalcemia may not occur because of the activity of parathyroid hormone, but classical tetany and recumbency can occur if the deficiency is prolonged or if they are precipitated by some other factor.
c. oxalate a compound occurring in the urine in crystals and in certain calculi. See also oxalate **urolith**.
c. oxide alkaline and capable of causing gastroenteritis. There is a high concentration in **basic** slag and this may contribute to that poisoning.
c. pantothenate a calcium salt of the dextrorotatory isomer of pantothenic acid; used as a growth-promoting vitamin.
c. phosphate one of three salts containing calcium and the phosphate radical: dibasic and tribasic calcium phosphate are used as sources of calcium; monobasic calcium phosphate is used in fertilizer and as a calcium and phosphorus supplement. An important constituent of **uroliths**.
c.:phosphorus ratio the ratio of calcium to phosphorus in the diet, 1:1 to 1:2 is usually considered to be adequate for proper calcium nutritional status in most animal species. Diets outside this range are likely to cause osteodystrophies. Animals grazing phosphorus-deficient pasture, and those being intensively fed on grain rations which have an abnormally high phosphorus content, are the principal subjects. Horses on heavy grain diets and dogs and cats on meat diets without calcium supplementation are also targets for the disease.
c. polycarbophil a hydrophilic agent used as a bulk laxative in the treatment of constipation and diarrhea.
c. polysulfide see **lime-sulfur**.
c. propionate see **propionic acid**.



C-5: Calcium oxalate dihydrate crystals in a dog.
From Raskin RE, Meyer D, Canine and Feline Cytology, 2nd Edition. Saunders, 2010.

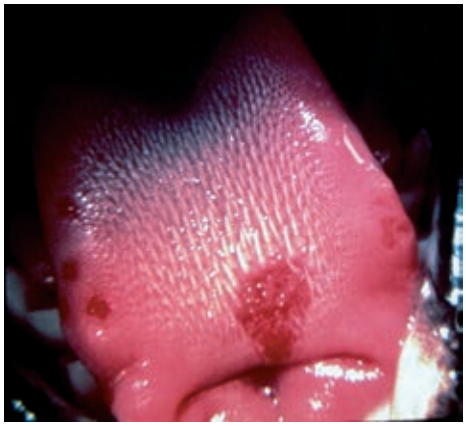
protein bound c. biologically inert fraction of plasma calcium; most is bound to albumin and globulins with a small fraction complexed to organic and inorganic acids.
c. silicophosphate crystals of this mineral are thought to contribute physically to the gastroenteritis caused by basic **slag** poisoning.
c. sulfate the main component of plaster of Paris; also used as a dietary source of calcium and inorganic sulfate sulfur.
c. sulfide, c. polysulfide see **lime-sulfur**.
c. supplements include calcium carbonate, gluconate, lactate and phosphate; bone flour, bone meal, ground limestone and chalk.
total c. (tCa) the sum of serum ionized calcium, complexed calcium and protein-bound calcium.
c. tungstate screens cards coated with calcium tungstate crystals are used to sandwich film in a light-tight cassette. They fluoresce when exposed to X-rays and, together with the beam, affect the film emulsion. They reduce the exposure factor required.
urinary c. calciuria.
calcium-binding protein see **calbindin**.
calcium channel blocker a drug, such as nifedipine or verapamil, that selectively blocks the influx of calcium ions through a specific ion channel (the slow channel or calcium channel) of cardiac muscle and smooth muscle cells; used in the treatment of cardiac arrhythmias. Calcium channel blockers act to control arrhythmias by slowing the rate of sinoatrial (SA) node discharge and the conduction velocity through the atrioventricular (AV) node. Called also calcium blocker, calcium antagonist.
calciuria [*kal"se-u're-ə*] calcium in the urine.
calcofluor white stain used to produce fluorescence of fungal elements for ultraviolet microscopy.
calcospherite one of the minute globular bodies formed during calcification by chemical union of calcium particles and albuminous matter of cells.
calculogenesis [*kal"ku-lo-jen'ə-sis*] the formation of calculi.
calculolytic [*kal"ku-lo-lit'ik*] lysis of calculi, usually in the urinary tract.
c. diet see calculolytic **diet**.
calculosis [*kal"ku-lo'sis*] a condition characterized by the presence of calculi. Called also lithiasis.
calculus [*kal'ku-ləs*] pl. *calculi* [L.] an abnormal concretion, usually composed of mineral salts, occurring within the animal body, chiefly in the hollow organs or their passages. Called also stones, as in kidney stones (**urolithiasis**) and **gallstones**. See also **hippomanes**.
biliary c. a gallstone.
bronchial c. see **bronchial** calculus.
dental c. mineralized dental plaque; found commonly in dogs and cats, sometimes in horses, rarely in ruminants. Plaque deposited on the surface is important in development of periodontal lesions.
c. index an assessment used in dental charting to record the extent of calculus on the buccal and subgingival surfaces of the tooth.
lung c. a concretion formed in the bronchi. See also **bronchial** calculus.
pancreatic c. very small (4–5 mm) calculi in pancreatic ducts, rare and of no pathogenic importance.
prostatic c. concretions of calcium phosphates and carbonates in the prostatic ducts are rare and of no clinical significance.
renal c. see **urolithiasis**.
salivary c. white, hard, laminated concretions in the salivary duct; a sialolith. Occurs most commonly in horses.
urethral c. a calculus lodged in the urethra causes obstruction of the urethra with a potential for causing rupture of the bladder or perforation of the urethra and leaking of urine into subcutaneous or retroperitoneal sites. See also **urolith**, **urolithiasis**.
urinary c. a calculus in any part of the urinary tract. See **urolithiasis**.
vesical c. a urolith in the urinary bladder.
CALD chronic active liver disease.
calefacient [*kal"ə-fa'shənt*] causing a sensation of warmth; an agent that so acts.
calendar charts wall charts or wheels which are valuable management tools because they depict the reproductive and lactation status of each cow or sow in the herd at any given time.
Calendula [*kə-len'du-lə*] plant genus in the family Asteraceae; cause cyanide poisoning; include *C. cuneata*, *C. viscosa* (both = *Dimorphotheca cuneata*).

VetBooks.ir

VetBooks.ir

calf [*kaf*] 1. bovine young less than one year old. 2. young of other species including elephant, larger deer, e.g. red, Japanese sika, wapiti, elk, moose, reindeer, and also pinnipeds and cetaceans. 3. in dogs refers to the region of the hindlimb between the stifle and the hock.
bleeding c. syndrome see bovine neonatal **pancytopenia**.
bull c. male intact (entire) bovine under one year of age.
c. crop the group of calves born to a herd of cows during one breeding season.
c. crop percentage the percentage of calves born to the cows bred or exposed to breeding bulls.
c. diarrhea see **calf scours**.
c. diphtheria see calf **diphtheria**, ***Fusobacterium*** *necrophorum*.
fetal c. includes unborn and stillborn calves. Can be identified by the presence of atelectasis of the entire lungs, patency of the umbilical vessels which also contain unclotted blood, sodden quality of the skin, high water and nil fat content of the tissues, absence of milk from the gut. Called also slink. See also **slink calves**.
c. lymphosarcoma see **bovine** viral leukosis.
c. pneumonia a group of diseases of calves caused primarily by viruses, often complicated by secondary bacterial invasion. The viruses include parainfluenza-3 (PI-3), respiratory syncytial virus (RSV), an adenovirus, a reovirus, bovine herpesvirus 1 and bovine rhinovirus. *Chlamydophila* and *Mycoplasma* spp. are also causative agents. The clinical syndrome is the same with any of the viruses: fever, increased respiratory rate, hacking cough, overloud breath sounds on auscultation of the lungs. The calves show remarkably little toxemia. If secondary bacterial pneumonia follows the additional signs are toxemia, gurgling or squeaky breath sounds, and a fatal outcome. See also **enzootic** pneumonia.
c. puller see **fetal** extractor.
c. scours diarrhea of calves, of most importance in the newborn because of their susceptibility to dehydration and toxemia. See **colibacillosis**, **coccidiosis**, **cryptosporidiosis**, ***Coronaviridae***, ***Rotavirus***, **salmonellosis**, dietary **diarrhea**.
c. starter artificial feeding of calves includes liquid milk replacer and dry calf starter, the latter being provided from about one week of age. At 3–6 weeks the calf is able to exist solely on starter and the milk replacer or milk can be discontinued. Calf starters vary a great deal in composition, quality and price. They need to have a high digestibility coefficient, a high energy content and at least 18% crude protein.
with c. a pregnant cow.
calf-bed uterus of a cow.
calf-kneed a defect of conformation in horses; the cannon is set back behind the line of the radius.
calfeteria farmyard equipment containing a tank, or tanks, for milk which supplies multiple teats on the exterior to provide sucking points for multiple calves.
calfkill ***Kalmia*** *angustifolia*.
caliber [*kal'ĭ-bər*] the diameter of the lumen of a canal or tube.
calibration [*kal"ĭ-bra'shən*] determination of the accuracy of an instrument, usually by measurement of its variation from a standard, to ascertain necessary correction factors.
calicectasis [*kal"ĭ-sek'tə-sis*] dilatation of a calix of the kidney.
calicectomy [*kal"ĭ-sek'tə-me*] excision of a calix of the kidney.
calices [*ka'lĭ-sēz*] plural of *calix*.
Caliciviridae [*kə-lis"ĭ-vir'ĭ-de*] a family of viruses that are about 35 nm in diameter, with a capsid, composed of a single major capsid protein of about 60 kilodaltons that carries 32 shallow, cup-like circular indentations and a single-stranded, plus sense RNA genome of about 8 kilobases. The family comprises five genera: *Vesivirus*, that includes feline calicivirus, vesicular exanthema of swine virus, and San Miguel sea lion virus; *Lagovirus*, that includes rabbit hemorrhagic disease virus and European Brown hare syndrome virus; *Norovirus*, that includes viruses that cause gastroenteritis, principally of humans; *Sapovirus*, which comprise viruses that also cause diarrheic infections in humans; and *Nebovirus*, which includes viruses that cause diarrheic infections in calves. Noroviruses and sapoviruses may infect some other animal species.
Calicivirus [*kə-lis"ĭ-vi"rəs*] a genus in the family ***Caliciviridae***.
calicivirus [*kə-lis"ĭ-vi"rəs*] a virus in the genus *Calicivirus*.
canine c. has been isolated from the feces of dogs with diarrhea; the significance is unknown.
feline c. infection a common cause of upper respiratory disease and ulcerative glossitis in cats. Affected cats show varying degrees of ocular and nasal discharge, coughing and sneezing. Pneumonia sometimes occurs, mainly in young or debilitated cats. Ulceration of the tongue and palate is a regular feature of the disease, but lips, nares and skin are also sometimes involved. Lameness, diarrhea and seizures have also rarely been associated with calicivirus infection. Many recovered cats remain carriers of the virus, shedding infectious virus from the pharynx. Most of these cats are asymptomatic, but some may have chronic oral lesions. Feline calicivirus has also been associated with **feline** lower urinary tract disease, but its role in that disorder remains unclear. See also **feline** viral respiratory disease complex. A *virulent systemic* strain has been identified, which is capable of causing severe systemic disease with high fever, pulmonary edema, abdominal effusion, hepatic necrosis, disseminated intravascular coagulopathy (DIC), facial and limb edema, ulceration of the skin, and death.
porcine c. the cause of **vesicular** exanthema of swine.
rabbit c. the cause of **rabbit hemorrhagic disease**.
calico bush ***Kalmia*** *latifolia*.
calico cat see **tortoiseshell**.
Calicophoron [*kal"ĭ-kof'ə-ron*] stomach flukes of ruminants. Species include *C. calicophorum*, *C. cauliorchis*, *C. ijimai* and *C. raja*. See also paramphistomosis, **paramphistomiasis**.
caliculus [*kə-lik'u-ləs*] a small cup or cup-shaped structure.
c. gustatorius see **taste**.
California black-legged tick see ***Ixodes*** *pacificus*.
California disease coccidioidomycosis.
California encephalitis an encephalitis of humans caused by the La Crosse virus isolated from mosquitoes in California. Occurs experimentally in small laboratory rodents when the virus is injected intracerebrally. Suspected of natural passage through wild and domestic mammals.
California encephalomyelitis virus group mosquito-transmitted viruses of the family *Bunyaviridae*; can cause acute encephalitis in horses. Type viruses are Snowshoe hare and Jamestown Canyon; associated viruses are Main Drain and Cache Valley.
California eyeworm see ***Thelazia*** *californiensis*.
California mastitis test an indirect test for bovine mastitis based on the presence of a high leukocyte count in mastitic milk. The test can be used in the milking shed or in the laboratory and as a test for individual quarters, or cows, or as a herd test. There is a good correlation between the results obtained and the actual leukocyte

C-6: Calf pen with three bucket holes, one for feeding calf starter, one for providing water all the time and one for the bucket used to feed milk replacer.



C-7: Tongue ulcers in a cat with feline calicivirus infection.

C-8: Caliper used to measure an animal's body parts so the settings on a radiograph machine can be determined.
From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide, 2nd edition. Mosby, 2011.

count and with the productivity of the quarter. It has faded in importance with the introduction of milk cell counts carried out electronically on automated equipment. See also **Brabant mastitis test**.

California rose bay ***Rhododendron*** *macrophyllum*.

California spangled a recently developed breed of cats, derived from Siamese, Manx and domestic cats. Its main feature is a short, spotted coat; meant to resemble a small leopard.

Californian rabbit popular as a fancy rabbit and for commercial purposes; it is white with black, chocolate, blue or lilac colored points.

californium (Cf) [*kal"ĭ-for'ne-əm*] a chemical element, atomic number 98, atomic weight 249. See Table 4.

calipers [*kal'ĭ-pərz*] instrument with two bent or curved legs used to measure thickness or diameter of a solid, or the internal dimensions of a hollow object.

electronic c. used in ultrasonography to measure the distance between two points or the circumference of an object.

calix [*ka'liks*] pl. *calices* [L.] a cuplike organ or cavity, e.g. one of the recesses of the kidney pelvis which enclose the tips of the pyramids.

calkins turned down portion of the heel of a horseshoe, designed to reduce slipping on worn stones or icy surfaces. Called also calks, frost studs.

calks see **calkins**.

Call–Exner body [*kahl' eks'nər*] secretory globule resembling an ovum found in abortive follicles in ovarian neoplasms with tumor cells radially arranged around eosinophilic material.

Callicarpa longifolia Australian plant in the family Verbenaceae; an unidentified toxin causes hepatitis and photosensitization.

calling a lay term referring to the vocalization of a female cat in estrus and the associated, characteristic behavior that includes rolling, treading with the front feet and elevation of the hindquarters. Often misinterpreted by an inexperienced owner as signs of pain or illness.

Calliphora [*kə-lif'o-rə*] a genus of flies which includes *C. augur*, *C. australis*, *C. erythrocephala*, *C. fallax*, *C. hilli*, *C. novica*, *C. stygia* and *C. vomitoria*. They may initiate blowfly strike in sheep but mainly assume importance in sheep that are already infested.

calliphorid [*kə-lif'ə-rid*] pertaining to blowflies.

Calliphoridae [*kal"ĭ-for'ĭ-de*] the family containing most of the important blowflies, including *Calliphora*, *Chrysomya*, *Lucilia*, *Callitroga* and *Phormia* spp.

Calliphorinae the blowfly subfamily.

calliphorine myiasis see cutaneous **myiasis**.

Callitroga [*kal"ĭ-tro'gə*] a genus of screw-worms which includes *C. americana*, *C. hominivorax* and *C. macellaria* (called also *Cochliomyia hominivorax* and *C. macellaria*). See also New World **screw-worm,** cutaneous **myiasis**.

callitrichid members of the primate family Callitrichidae; includes marmosets and tamarins.

callosity [*kə-los'ĭ-te*] a callus.

callosum [*kə-lo'səm*] corpus callosum.

callous [*kal'əs*] of the nature of a callus; hard.

callus [*kal'əs*] 1. localized hyperplasia of the horny layer of the epidermis due to pressure or friction. In dogs, these often form over pressure points such as the elbow, hock and (in some breeds) sternum, particularly if the animal is sleeping on a hard surface. 2. an unorganized network of woven bone formed about the ends of a broken bone; it is absorbed as repair is completed (provisional callus), and ultimately replaced by true bone (definitive callus).

bridging c. bridging the callus gap.

external c. around the outside of a fracture, consisting of periosteal new bone.

hard c. fully mineralized.

hypertrophic c. a form of delayed healing in which fibrocartilage forms between fracture fragments, resulting in a false callus. Called also elephant's foot callus.

internal c. between the ends of fractured bones; endosteal new bone.

periosteal c. new bone formed by the proliferation of periosteal osteogenic cells.

provisional c. a subsequently remodeled callus.

c. pyoderma secondary bacterial infection, particularly of pressure point calluses in dogs; can be extensive with deep pyogenic inflammation.

soft c. the originating fibobrocellular tissue before calcification.

sternal c. may develop over a prominent sternum in some breeds of dogs, particularly Dachshunds, in response to pressure.

temporary c. see provisional callus (above).

calmative [*kahm'ə-tiv, kahl'mə-tiv*] 1. sedative; allaying excitement. 2. an agent having such effects.

Calmette–Guérin bacillus [*kahl-met' ga-răN'*] see **BCG**.

calmodulin [*kal-mod'u-lin*] a calcium-binding protein concerned in the response of muscle fibers and other cells to calcium.

calomel see **mercurous** chloride.

calor [*kal'or*] [L.] *heat;* one of the cardinal signs of inflammation.

caloric [*kə-lor'ik*] pertaining to heat or to calories.

c. density measure of the energy contained in food, usually quantified as calories or joules, per unit mass of food.

c. exhaustion see **hypoglycemia**.

c. homeostasis process of regulation of energy intake from food to sustain energy balance.

c. intake measure of amount of food energy as calories eaten by an animal.

c. requirements see **energy** requirements.

c. test irrigation of the external ear canal with hot or very cold water will stimulate the flow of endolymph and will cause nystagmus if the vestibular system and brainstem are intact.

calorie (cal) [*kal'ə-re*] any of several units of heat defined as the amount of heat required to raise the temperature of 1 gram of water by 1 degree Celsius (1˚C) at a specified temperature. The calorie used in chemistry and biochemistry is equal to 4.184 joules. In referring to the energy content of foods it is customary to use the 'large calorie', which is equal to 1 kilocalorie (kcal), 1000 cal. Every bodily process—the building up of cells, motion of the muscles, the maintenance of body temperature—requires energy, and the body derives this energy from the food it consumes. Digestive processes reduce food to usable fuel, which the body burns in the complex chemical reactions that sustain life.

calorific [*kal"ə-rif'ik*] generating heat measurable in calories.

calorigenic effect [*kə-lor"ĭ-jen'ik*] see **specific** dynamic action.

calorimeter [*kal"ə-rim'ə-tər*] an instrument for measuring the amount of heat produced in any system or organism. The material is burned in the calorimeter and the heat energy produced is measured.

calorimetry [*kal"ə-rim'ə-tre*] measurement of the heat eliminated or stored in any system.

direct c. measurement of heat actually produced by the organism which is confined in a sealed chamber or calorimeter.

indirect c. estimation of the heat produced by means of the respiratory differences of oxygen and carbon dioxide in the inspired and expired air.

Calotis scapigera Australian plant in the family Asteraceae; contains cyanogenetic glycosides and is capable of causing cyanide poisoning; called also tufted burr daisy.

calotrope *Calotropis procera*.

Calotropis procera a plant in the family Asclepiadaceae; contains cardiac glycosides. Keratoconjunctivitis has resulted from exposure to its irritant sap. Called also caltrops, king's crown, rubber tree.

calsequestrin [*kal"sə-kwes'trin*] a calcium ion binding protein effecting a sequestration of calcium ions within the smooth endoplasmic reticulum.

Caltha palustris a toxic plant in the family Ranunculaceae; contains a vesicant substance protoanemonin. Ingestion of the plant causes stomatitis, salivation, diarrhea and abdominal pain. Called also marsh marigold, cowslip, kingcup.

caltrops 1. defensive military weapons each consisting of 4 short iron spikes joined together in a star-like formation so that one

VetBooks.ir

always points upwards when thrown onto the ground; employed in numbers against cavalry to lame horses. 2. plants in the family Zygophyllaceae; see ***Tribulus***, *Kallstroemia*. Includes hairy caltrops (*K. hirsutissima*), warty caltrops (*K. parviflora*).

calvaria, calvarium [*kal-var'e-ə, kal-var'e-əm*] the domelike dorsal portion of the cranium, comprising the dorsal portions of the frontal, parietal and occipital bones.

calve act of parturition by a cow or other mammal producing a calf as offspring.

Calvé–Perthes disease [*kahl-va' per'təz*] see **Legg–Calvé–Perthes disease**.

Calvin cycle [*kal'vin*] see dark **reaction**.

calving act of parturition in a bovine female, and presumably in any animal that bears a calf as its newborn.

block c. a breeding management system in which all of the cows in a herd, or an area, are encouraged to calve at approximately the same time. Has the effect of concentrating all of the calving and puerperal problems at one time and having all of the cows begin and terminate their lactations together. Has the disadvantage that the herd's period of maximum productivity is also concentrated, making it subject to much greater risk of loss. Is the opposite of year-round calving. Called also seasonal calving.

c.–to-conception interval interval between calving and the next conception date. Called also 'days open' or 'number of days open'.

difficult c. see **dystocia**.

ease of c. thought to be an inherited trait due to pelvic canal dimensions in the dam, and fetal size in the sire. See also **dystocia**.

c. facilities yards, crush, chute, hot and cold water, shelter, all the resources necessary for capturing and restraining a cow while helping her to deliver a calf.

c.-to-first-estrus interval interval between calving and the first observed estrus. Data used as a measure of reproductive performance, especially dairy herds where block mating needs to be completed in as brief an interval as possible.

c.-to-first-service interval alternative to calving-to-first-estrus interval but does not take into account any deferral of mating for managerial reasons.

c. grounds cows that are run on very extensive grazing may need to be under close surveillance by calving time. A small area of land can be enclosed or the herd herded into it.

c. index any method of expressing reproductive efficiency on the basis of the number of calves produced. May refer to the average calving interval or to the percentage of calves produced by the mated group of cows.

c. induction see **parturition** induction.

c. injury damage to the uterus, vagina and vulva or surrounding tissues, especially obturator and sciatic nerves, caused by the parturition process.

c. interval the average time interval between successive calvings.

median c. date the number of days between the first calving in the herd and the 50th percentile calving; an excellent measure of fertility status of seasonally calving herds; in dairy herds the target is 18 days.

c. pad a small area specifically prepared with sand or limestone base and bedding of material such as rice hulls or sawdust, where all cows are located for calving. Allows intense supervision of periparturient and calving cows.

c. paralysis see maternal obstetric **paralysis**.

c. pattern of a herd is a chronological list of calving dates. In seasonally calving herds a compact list indicates high fertility, a stretched out list indicates an indifferent fertility level.

c. percentage see **calf** crop percentage.

c. record a record of the reproductive efficiency of each dam in the form of dates, events and procedures related to reproductive function.

c. season season of the year at which the herd, or other population of cows, calves, e.g. spring calving.

seasonal c. when the cows in a herd calve at about the same time. Thus spring calving, autumn calving. Usually used as a management tool to take maximum advantage of seasonal feed supplies or climate.

year-round c. herd management system in which cows are mated so that some cows in the herd will calve at all times of the year thus maintaining a regular milk supply for a fresh milk supply.

calx [*kalks*] 1. lime or chalk. 2. heel.

Calycanthus a genus of plants in the family Calycanthaceae; contain indole (pyrrolidinoindoline) alkaloids including calycanthine that produce tetanic seizures in livestock. Includes *C. fertilis* (strawberry bush), *C. floridus* (Carolina allspice), *C. occidentalis* (California allspice). Called also strawberry shrub, sweet shrub, spicebush.

C. australiensis see ***Idiospermum australiense***.

calyculus caliculus.

calystegines polyhydroxy nortropane alkaloids with potent glycosidase inhibitory properties isolated from plants in families Convolvulaceae, Solanaceae and Brassicaceae; suspect of neurotoxicity.

calyx [*ka'liks*] calix.

major c. one of the primary branches of the renal pelvis that bear two or more minor calices; found in pigs, cattle and humans.

minor c. any one of the cup-shaped dilations of the renal pelvis into which renal papillae protrude.

CAM 1. complementary and alternative medicine. 2. cell-adhesion molecule.

CAMAL see **Cornell** alternate-month accelerated lambing system.

Camallanus [*kam"ə-la'nəs*] nematode genus which infests freshwater turtles and aquarium fish.

camarillo a part albino type of horse found only in California; has white hair, pink skin and black eyes.

cambendazole an efficient broad-spectrum anthelmintic. See also **albendazole**.

Cambridge ventilator a powerful machine used in anesthetizing large animals. A hydraulically compressed bellows drives a 'bag-in-bottle' arrangement.

camel humped members of the Camelidae family of ruminants.

Arabian c. called also *Camelus dromedarius*, or single-humped camel or dromedary. Found in the Arabian peninsula, North and Central Africa, East Asia and feral in Australia. There are different breeds for milk production, meat production, riding and draught work and there is selection for racing.

bactrian c. two-humped camel. Called also *Camelus bactrianus*. Found in China, Russia, Mongolia and Iran.

c. bush ***Trichodesma*** *zeylanica*.

dromedary c. one-humped camel. Called also *Camelus dromedarius*.

c. poison ***Gyrostemon*** spp., ***Erythrophleum*** *chlorostachys*, ***Trichodesma*** *zeylanica*.

single-humped c. see Arabian camel (above).

c. thorn ***Acacia*** *erioloba*.

camelid members of the family Camelidae; includes camels and the South American camelids—alpaca, guanaco, llama, vicuña.

Camelidae one of the six families of ruminants in the order **Artiodactyla**.

Camellia [*kə-mel'e-ə*] plant genus in the family Theaceae; includes *C. japonica*, *C. susanqua*, *C. sinensis (Thea sinensis*, tea plant); plants known to reflect the fluorine content of the soil on which they grow. They may contain as much as 2000 ppm of fluorine.

Camelostrongylus a genus of the family Trichostrongylidae of gastrointestinal nematodes. Includes *Camelostrongylus mentulatus* (sheep, camels and wild ruminants).

camelpox [*kam'əl-poks*] a disease of particularly young camels caused by camelpox virus in the genus *Orthopoxvirus*. The lesions are typical of pox lesions and occur on the hairless parts of the body. The disease is transmissible to humans. A disease notifiable to the OIE (see Table 22).

Camelus genus of two-toed ungulates in the family Camelidae. Includes *C. bactrianus* (bactrian camel), *C. dromedarius* (dromedary, one-humped or Arabian camel).

cameo in some countries a recognized color variety of longhaired cats with copper-colored eyes and a coat color that is basically a silver, cream or white undercoat with red tips that vary in intensity on different parts of the body.

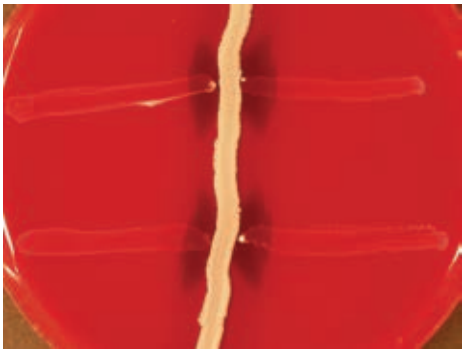
camera [*kam'ə-rə*] pl. *camerae;* a cavity or chamber.

c. anterior bulbi anterior chamber of the eye.

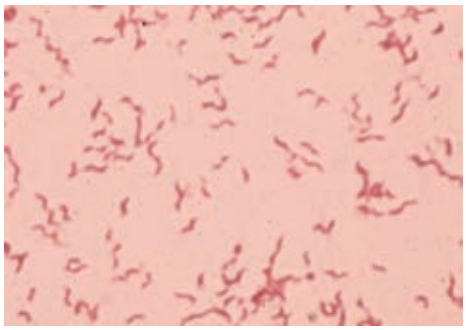
c. posterior bulbi posterior chamber of the eye; small annular space between the posterior surface of the iris and the anterior surface of the lens, and bounded peripherally by the ciliary processes.

c. vitrea bulbi vitreous chamber of the eye, between the crystalline lens and the retina, that contains the vitreous body.

Cammerer rotation fork an instrument used to rotate a fetus which is malpresented. Each arm of the fork carries a canvas cuff for fixation of the limbs to the crutch. The external end of the device is a long crossbar to facilitate the rotation.
camomile chamomile.
cAMP cyclic **adenosine** monophosphate.
cAMP–CAP complex *c*atabolite *a*ctivator *p*rotein binds to cAMP as a first step in the switch from glucose metabolism to lactose metabolism in *Escherichia coli*.
cAMP-dependent protein kinase a tetrameric protein composed of two regulatory subunits that bind cAMP, and two catalytic subunits that catalyze the transfer of a phosphoryl group from ATP to a target enzyme.
CAMP phenomenon a cultural phenomenon produced by most streptococci in Lancefield Group B. Named after the originators Christie, Atkins and Muench-Petersen. These streptococci hemolyze red cells in sheep blood agar plates but only in the presence of beta toxin of staphylococci. The phenomenon is used to presumptively identify *Streptococcus agalactiae* isolated from mastitic cow's milk. Similar synergism in hemolytic activity is observed between *Rhodococcus equi* and *Corynebacterium pseudotuberculosis*, beta toxin of staphylococci or *Listeria monocytogenes*, and can be used for presumptive identification of these species.
Campanulotes a genus of bird lice. Includes *Campanulotes bidentatus compar* (small pigeon louse).
camphechlor [*kam'fə-klor*] see **toxaphene**.
camphor [*kam'for*] a ketone derived from the cinnamon tree, *Cinnamomum camphora*, or produced synthetically; used externally as an antiphlogistic and antiseptic; applied in liniments as a counterirritant; administered as a steam inhalant as an expectorant. Toxicity can follow absorption through the skin, but most products legally available contain very low concentrations of camphor.
Campolino horse bay, sorrel or chestnut light Brazilian horse, bred from native horse with imported breeds.
Camponotus ant genus, second intermediate host to the flukes *Dicrocoelium* spp.
camptodactyly [*kamp"to-dak'tə-le*] permanent flexion of one or more digits.
camptomelia [*kamp"to-me'le-ə*] bending of the limbs, producing permanent bowing or curving of the affected part.
Camptotheca acuminata Asian plant in the family Nyssaceae; contains an alkaloid campothecin; causes diarrhea, dysentery.
Campylobacter [*kam"pə-lo-bak'tər*] a genus of bacteria, family *Spirillaceae*, made up of gram-negative, non-spore-forming, motile, comma-shaped rods, which are microaerophilic to anaerobic. Members of the genus were previously classified as *Vibrio* spp. and many of the diseases caused by these species are still referred to as vibriosis.
C. coli a commensal of the gastrointestinal tract of poulty, pigs and humans; can cause enteritis in pigs and humans.
C. fetus* subsp. *fetus a cause of abortion in sheep and cattle.
C. fetus* subsp. *venerealis causes bovine genital campylobacteriosis (also known as vibriosis and epizootic bovine infertility).
C. hyointestinalis, C. mucosalis associated with, but not the cause of, the porcine proliferative **enteropathy** complex, **proliferative** hemorrhagic enteropathy, **necrotic** enteritis. They are inhabitants of the intestine of normal pigs.



C-9: Augmentation of staphylococcal β-hemolysis by *Streptococcus agalactiae* CAMP protein (CAMP reaction).
From Songer JG, Veterinary Microbiology: Bacterial and Fungal Agents of Animal Disease. Saunders 2005.



C-10: Gram-stained cells of *Campylobacter fetus* ssp. *fetus*.
From Songer JG, Veterinary Microbiology: Bacterial and Fungal Agents of Animal Disease. Saunders, 2005.

C. jejuni causes abortion in sheep and enteritis in dogs, cats and other animals. An important food-borne cause of enteritis in humans, and the cause of avian vibrionic **hepatitis**.
C. sputorum* subsp. *bubulus*, *C. sputorum* biovar *fecalis found in cattle and sheep, but not known to cause disease.
C. upsaliensis may be associated with diarrhea in dogs and humans.
campylobacteriosis [*kam"pə-lo-bak-tēr"e-o'sis*] disease caused by infection with *Campylobacter* spp.
avian c. caused by *Campylobacter coli*, *C. jejuni*, *C. laridis* and characterized by depression and diarrhea.
bovine genital c. a venereal infection with *Campylobacter fetus* subsp. *venerealis* that causes early embryonic death, abortion and infertility in cattle and may be endemic in some areas. A disease notifiable to the OIE (see Table 22). *C. fetus* subsp. *fetus* may be associated with sporadic cases of bovine abortion. Previously called bovine vibriosis.
canine c. caused by *Campylobacter fetus jejuni* and characterized by vomiting and bloody diarrhea. May be a source of infection for humans.
gastrointestinal c. infection by several *Campylobacter* species, particularly *C. jejuni*, is associated with diarrhea in many species, especially in the young. Organisms may be isolated from the feces of asymptomatic animals.
ovine c. abortion caused by *Campylobacter fetus* subsp. *fetus* or *C. jejuni*; previously called ovine vibriosis.
campylognathia curved jaw, a rare congenital defect in calves.
Canaan dog a medium-sized (35–55 lb), spitz-type dog with a sandy to red brown, white or black coat, with white markings. The tail is curled over the body.
Canadian [*kə-na'de-ən*] a black or brown breed of dairy cattle, bred in Canada from cattle imported from France in the late 17th century. Called also Quebec Jersey.
Canadian bluegrass see ***Poa***.
Canadian casting a method for casting a horse. One front limb is tied up with a kneestrap. The hindlimbs are pulled from under the horse by a system of sidelines and hobblestraps.
Canadian Eskimo dog a large (60–100 lb), powerful dog with a heavy, thick double coat in any color. The head is broad, ears short and erect, and tail large and bushy. Called also Husky, Esquimaux. In the United States called the American eskimo dog, which also comes in miniature and toy varieties; always white or cream.
Canadian hairless cat see **Sphinx cat**.
Canadian horsepox a chronic pustular dermatitis caused by *Corynebacterium pseudotuberculosis*. The infection is spread on the harness with most lesions occurring on the harness sites. They are 0.5–1 inch in diameter and painful to touch. Called also acne contagiosa equi and contagious equine pustular dermatitis.
Canadian Kennel Club the principal body for registration of purebred dogs in Canada, incorporated under the federal Animal Pedigree Act.
Canadian Veterinary Medical Association (CVMA) the professional organization representing the veterinary profession in Canada. It publishes the Canadian Veterinary Journal and the Canadian Journal of Veterinary Research.
canal [*kə-nal'*] a relatively narrow tubular passage or channel.
accessory c. see lateral canal (below).
alar c. the canal in the body of the basisphenoid bone that transmits the maxillary artery.

VetBooks.ir

VetBooks.ir

C

alimentary c. the digestive tube from mouth to anus. In the strict sense, it begins at the start of the esophagus and excludes the mouth. See also **alimentary** canal.
anal c. the terminal portion of the alimentary canal, from the rectum to the anus, demarcated by the anorectal line that separates the rectal mucosa from the stratified squamous epithelium of the anal canal.
atrioventricular c. the common canal connecting the primitive atrium and ventricle; it sometimes persists as a congenital anomaly.
birth c. the canal through which the fetus passes during birth; comprising the uterus, cervix, vagina, vestibule and vulva.
carpal c. the passageway on the palmar surface of the carpus between the proximal row of carpal bones and the flexor retinaculum. In horses it occupies the space where the carpal groove is converted into a canal by the flexor retinaculum which stretches from the accessory carpal bone to the medial side of the carpus. It houses the flexor tendons, the median nerve and blood vessels.
cervical c. the part of the uterine cavity lying within the cervix.
Cloquet's c. an approximately cone-shaped tunnel extending through the vitreous from the optic disc to the posterior lens capsule (where it forms the arcuate line of Vogt). During embryological development, this canal surrounds the hyaloid artery.
condyloid c. an inconstant canal in the occipital bone that transmits the occipital emissary vein.
c. of Corti a space between the outer and inner rods of Corti.
external ear c. the canal from the external auditory meatus to the eardrum.
facial c. osseous tube in the temporal bone that transmits the facial nerve.
femoral c. the fascia covered space in the groin on the medial aspect of the thigh; bounded by the gracilis, sartorius, adductor and pectineus muscles that contains the femoral artery, vein, saphenous nerve, fat and lymphatics.
c's of Gartner the slender canals in the ventral wall of the vagina that are remnants of the mesonephric ducts and very variable in their occurrence. Called also ductus epoophori longitudinales.
haversian c. see **haversian** canal.
c's of Hering openings between the bile canaliculi and the cholangioles, the terminal ducts of the biliary duct system. Called also **cholangiole**.
hyaloid c. see Cloquet's canal (above).
hypoglossal c. the opening in the occipital bone, transmitting the hypoglossal nerve and a branch of the posterior meningeal artery; called also anterior condyloid foramen.
infraorbital c. the bony canal running obliquely from the front of the orbit to the side of the muzzle, transmitting the infraorbital vessels and nerve. In the horse it passes through the maxillary sinus.
inguinal c. the oblique passage in the caudal abdominal wall on either side, through which passes the round ligament of the uterus in some females such as the bitch and the spermatic cord in the males.
intestinal c. small and large intestines.
lacrimal c. the nasolacrimal canal.
lateral c. a small canal in the root of a tooth which emerges on the side, rather than the apex. Called also accessory canal.
mandibular c. a passageway within the mandible for conduction of the inferior alveolar vessels and nerve; these structures enter the canal through the mandibular foramen and exit at the mental foramen supplying nerves to the lower cheek teeth in passing.
medullary c. 1. vertebral canal. 2. the cavity, containing marrow, in the diaphysis of a long bone; called also marrow or medullary cavity.
metatarsal c. the proximal and distal canals within the axis of the metatarsal bones of cattle that convey blood vessels between dorsal and plantar surfaces.
modiolar c. the canal within the modiolus of the cochlea of the internal ear that transmits blood vessels and nerves to the cochlea.
nasolacrimal c. the bony canal in the maxilla that transmits the nasolacrimal duct.
nutrient c's the vascular canals through the cortex of bones. There is usually a large one in the diaphysis of long bones, complemented by numerous smaller ones associated with the metaphyses and epiphyses. See also **haversian** canal.
omasal c. the direct passage through the omasum from the reticulum to the abomasum.
optic c. a passage for the optic nerve through the cranium into the orbit.
palatine c. formed by the maxilla and the palatine bone; transmits the palatine artery and nerve.
pterygoid c. the canal in the basisphenoid bone that contains the pterygoid nerve.
root c. see **root** canal.
sacral c. the part of the vertebral canal within the sacrum.
Schlemm's c. a venous sinus of the sclera in the form of a circular canal at the junction of the sclera and cornea that receives the aqueous humour. Called also scleral venous plexus.
semicircular c's the canals (anterior, lateral and posterior) of the bony labyrinth of the ear. See also **semicircular** canals.
spinal c., vertebral c. the canal formed by the series of vertebral foramina together, enclosing the spinal cord and meninges.
supraorbital c. the canal in the frontal bone of pigs and ruminants that transmits the frontal vein and nerve, passing through the zygomatic process to the orbital cavity surrounded by the frontal sinus.
tarsal c. formed by the plantar annular ligament of the tarsus which bridges the tarsal groove and transmits the deep digital flexor tendon and plantar vessels.
triosseus c. the foramen at the junction of the coracoid, clavicle and scapula which transmits the tendon of a flight muscle, the supracoracoideus, in the avian skeleton.
vertebral c. spinal canal.
Volkmann's c's canals communicating with the haversian canals, for passage of blood vessels through bone from the periosteum. See also nutrient canals (above), **haversian** canal.

canaliculops distention of the lacrimal canaliculus with fluid. Compare with **dacryops**.

canaliculus [*kan"ə-lik'u-ləs*] pl. *canaliculi* [L.] an extremely narrow tubular passage or channel.
bile c. fine tubular channels forming a three-dimensional network within the parenchyma of the liver. They join to form the bile ductules and eventually the hepatic duct.
bone c. branching tubular passages radiating like wheel spokes from each bone lacuna to connect with the canaliculi of adjacent lacunae, and with the haversian canal.
dentinal c. see **dentinal** tubules.
intracellular c. intracellular connection between apical plasmalemma and cytoplasm proper of the parietal cells in the gastric mucosa.
lacrimal c. the short epithelial cell-lined channel between the lacrimal punctum in the conjunctiva and the lacrimal sac; part of the lacrimal apparatus which drains tears from the ocular surface to the nose or mouth. See also **lacrimal** apparatus.
mastoid c. a small channel in the temporal bone transmitting the tympanic branch of the vagus nerve.
secretory c. small canals in serous glandular epithelial cells connecting the cells with the luminal surface.

canalis [*kə-na'lis*] pl. *canales* [L.] a canal or channel.

canalization [*kan"ə-lĭ-za'shən*] 1. the formation of canals, natural or morbid. 2. the surgical establishment of canals for drainage.

canaloplasty [*kan'ə-lo-plas"te*] plastic reconstruction of a passage, as of the external acoustic meatus.

canary [*kə-na're*] see ***Serinus canaria***.
c. cholera see avian **pseudotuberculosis**.
c. stain bright yellow stain in a wool fleece caused by bacterial growth. Not removable by usual industrial process.

canary cholera [*kə-na're kol'ər-ə*] see avian **pseudotuberculosis**.

canary grass [*kə-na're gras*] plants in the genus ***Phalaris***. Includes blue canary grass (*P. coerulescens*), gnawed canary grass (*P. paradoxa*), paradoxical canary grass (*P. paradoxa*), reed canary grass (*P. arundinacea*), Toowoomba canary grass (*P. aquatica*).

canarypox [*kə-na're-poks*] a disease caused by a poxvirus in the genus *Avipoxvirus*; it spreads slowly amongst canaries, finches and some other passerines. Characteristic pox lesions occur on eyelids, skin of the head, beak commissures and sometimes on the oral and pharyngeal mucosae. There is blepharitis and pruritus of the eyelids. Morbidity and mortality are very high.

Canavalia [*kan"ə-val'yə*] a genus in the legume plant family Fabaceae; seeds can contain protease inhibitors (trypsin inhibitors). Includes *C. cathartica (C. virosa)* (sem), *C. rosea (C. maritima)* (beach bean).

C. ensiformis seeds of this plant are used as stock feed but are toxic if fed in amounts in excess of 4% of the animal's body weight. Signs include diarrhea, stiffness and inability to eat or drink. Called also jack bean, sword bean, Jamacian horse bean.

canavalin toxic amino acid in *Canavalia* spp.

canavanase see **arginase**.

canavanine [*kə-nav'ə-nēn*] toxic amino acid in *Canavalia* spp.

cancellated [*kan'sə-lāt"əd*] having a lattice-like structure.

cancellous [*kan-səl'əs*] of a reticular, spongy or lattice-like structure; said mainly of bone tissue.

cancellus [*kan-səl'əs*] pl. *cancelli* [L.] the lattice-like structure in bone; any structure arranged like a lattice.

cancer [*kan'sər*] diseases in which abnormal cells divide without control, invade nearby tissues and may spread to other parts of the body through the bloodstream and lymphatic system; any malignant neoplasm. See also **tumor**, **neoplasm**. For individual cancers see under specific types.

cancer eye [*kan'sər i*] see ocular **squamous** cell carcinoma.

canceremia [*kan"sər-e'me-ə*] the presence of cancer cells in the blood.

cancericidal [*kan"sər-ĭ-si'dəl*] destructive to cancer cells; oncolytic.

cancerigenic [*kan"sər-ĭ-jen'ik*] giving rise to a malignant tumor. See **carcinogenesis**.

cancriform [*kang'krĭ-form*] resembling cancer.

cancroid [*kang'kroid*] 1. cancer-like. 2. a skin cancer of a low grade of malignancy.

candela (cd) [*kan-del'ə*] the SI unit of luminous intensity.

candelabra tree ***Euphorbia ingens***.

candicidin [*kan"dĭ-si'din*] a fungicidal, fungistatic antibiotic derived from *Streptomyces griseus* with activity against *Candida albicans* and other fungal infections.

Candida [*kan'dĭ-də*] a genus of yeast, commonly part of the normal flora of the mouth, skin, intestinal tract and vagina, but can cause a variety of diseases. Most infections are associated with predisposing factors, particularly immune suppression. Only *C. albicans* is commonly associated with disease. See also **candidiasis**.

C. albicans causes thrush in the mouth, crop, proventriculus and the gizzard of birds, and stomatitis, pneumonia and miscellaneous infections in other species. See **candidiasis**. Previously called *Monilia albicans*.

C. glabrata, C. guilliermondii, C. krusei, C. pseudotropicalis, C. rugosa, C. tropicalis have been associated with mastitis in cattle.

C. parapsilosis associated with necrotizing placentitis and abortion in cattle.

candidamycosis [*kan"dĭ-də-mi-ko'sis*] see **candidiasis**.

candidate stem cell a stem cell in the hemopoietic system whose function is only assumed.

candidemia [*kan"dĭ-de'me-ə*] the presence in the blood of fungi of the genus *Candida*.

candidiasis [*kan"dĭ-di'ə-sis*] infection by fungi of the genus *Candida*, generally *C. albicans*. Three specific syndromes are recorded as being caused by *C. albicans*: (1) mycotic stomatitis of baby pigs which can spread to the lower alimentary tract and cause fatal enteritis; (2) chronic pneumonia in cattle in feedlots; (3) thrush-like lesions in the mouth of many species and esophagus, crop, proventriculus and gizzard of birds. Many other secondary infections occur, e.g. keratoconjunctivitis, stomatitis, bovine mastitis, esophagitis and ulcerative dermatitis in dogs. *Candida* can be a pathogen in immunosuppressed dogs or cats, or secondary to other systemic disease such as diabetes mellitus or hyperadrenocorticism.

candidin [*kan'dĭ-din*] a skin test antigen derived from *Candida albicans*, used in testing for the development of delayed-type hypersensitivity to the microorganism. Little used in veterinary medicine.

candidosis [*kan-dĭ-do'sis*] candidiasis.

candiduria [*kan"did-u're-ə*] the presence of *Candida* organisms in the urine.

candle nut tree [*kan'dəl*] ***Aleurites moluccana***.

candling said of eggs; holding a hen's egg up to a lighted candle in a darkened room to detect a developing embryo.

candyup poison ***Stypandra glauca***.

Cane Corso an Italian breed of large (88–110 lb), mastiff-type dog with a muscular body, broad head with ears that fold over or may be cropped, a tail that may be docked, and a short dense coat in black, gray, fawn or red. Called also Italian mastiff.

cane toad [*kān*] the giant tropical toad. Introduced into many areas such as Australia and Hawaii to control insect pests. Absorption of the toxins through the oral mucosa of dogs, and less often cats, results in varying degrees of salivation, pulmonary edema, cardiac arrhythmias, cyanosis and seizures which may culminate in death of the animal.

canecutter's disease, cane-cutter fever, canefield fever see **leptospirosis**.

canicola fever canine **leptospirosis** due to *Leptospira canicola*.

Canidae [*ka'nĭ-de*] a family in the order Carnivora that includes 14 genera; the two commonest are the dogs (*Canis* spp.) and the foxes (*Vulpes* spp.). Includes exotic Canidae, e.g. dingo.

canine [*ka'nīn*] 1. pertaining to or characteristic of dogs. 2. pertaining to a canine tooth (cuspid). See also **teeth**, **dog**.

c. erythrocyte antigen (CEA) nomenclature revised to dog erythrocyte antigen (DEA).

c. gastrointestinal hemorrhage syndrome see canine hemorrhagic **gastroenteritis**.

c. influenza a highly contagious, mild to severe respiratory infection of dogs caused by influenza A H3N8 virus, which is closely related to that responsible for equine influenza. Affected dogs have a mild to severe cough, which may persist for several weeks, purlent nasal discharge, fever and lethargy; more severe cases develop pneumonia.

c. laryngotracheitis see **kennel cough**.

c. respiratory disease see canine **distemper**, **kennel cough**.

c. tooth see canine **teeth**.

tropical c. pancytopenia (TCP) see canine **ehrlichiosis**.

c. venereal tumor see canine transmissible **venereal** tumor.

c. viral hepatitis see infectious canine **hepatitis**.

Canine Eye Registry Foundation (CERF) an organization of owners, breeders and veterinary ophthalmologists concerned with elimination of heritable eye disease in purebred dogs. It maintains a centralized, national registry and a database on eye diseases.

Canis a genus in the animal family Canidae. Includes the domestic dog (*C. familiaris*), wolf (*C. lupus*), red wolf (*Canis rufus*), Oriental jackal (*C. aureus*), coyote (*C. latrans*), dingo (*C. antarcticus* syn. *C. dingo*).

canker [*kang'kər*] ulceration, especially (1) of the lip or oral mucosa; (2) in horses of the horn of the sole of the foot; (3) often used erroneously to describe otitis externa.

avian c. disease of birds caused by *Trichomonas gallinae* and characterized by accumulations of caseous material in the throat.

ear c. a lay term applied generally to **otitis** externa but sometimes specifically to that caused by ear mites.

equine c. chronic hypertrophy and necrosis of the horn-producing tissues of the horse's foot, usually a hindfoot. The horn is shed or easily removed from a swollen and necrotic corium. There is lameness and a penetrating foul odor.

lapine c. inflammation of the ears of rabbits caused by the mites *Psoroptes communis* or *Chorioptes cuniculi*. The ear canal is filled with an accumulation of serum and sebaceous material.

cannabidiol [*kan"ə-bĭ-di'ol*] a physiologically inactive principle from *Cannabis*; its tetrahydro derivatives are active. Has been used as an anticonvulsant.

C-11: Severe canker in the frog of a horse's hoof.
From Hinchcliff KW, Kaneps AJ, Geor RJ, Equine Sports Medicine and Surgery. Saunders, 2004.

VetBooks.ir

cannabinoid [*kə-nab'ĭ-noid*] any of the active principles of *Cannabis*, including tetrahydrocannabinol, cannabinol and cannabidiol.

cannabis [*kan'ə-bis*] the dried flowering tops of **Cannabis sativa** plants which have euphoric principles (tetrahydrocannabinols) and alkaloids (cannabinoids); grown commercially for the production of cannabis; classified as a hallucinogen and prepared as bhang, ganja, hashish and marihuana. It has excellent activity as a hypnotic and analgesic, especially in horses, but narcotic control regulations severely restrict use. Called also Indian hemp.

c. poisoning dogs show incoordination, alternating somnolence and hyperactivity, salivation and muscular weakness.

Cannabis sativa Asian plant in the family Cannabidaceae; illicit drug in many jurisdictions; contains the hallucinogen tetrahydrocannabinol (THC); poisoning of dogs and cats produces mostly somnolence and ataxia; dried leaves and flowers are called marijuana, Indian hemp, hemp, 'grass', 'pot'; the resin extracted from the plant is called hashish or bhang. Cultivars that produce little THC (industrial hemp) are used for textile fiber production.

cannibalism the eating of flesh of living members of the same or similar species. It is common only in pigs and chickens and is due partly to boredom because of the confined space in which the animals are kept. See also **infantophagia**.

cannon atrial waves waves seen occasionally in the jugular vein of an animal with severe cardiac arrhythmia, particularly complete heart block. When the atria and ventricles contract simultaneously a very large pressure wave runs up the vein. Called also cannon A waves.

cannon bone the 3rd metapodial (metacarpal or metatarsal) of the horse, or the 3rd and 4th metapodials (metacarpals or metatarsals) of ruminants.

cannon keratosis bilateral areas of alopecia, scaling and crusting on the anterior surface of the hind cannons. A persistent lesion in mares and stallions. Called also stud crud.

cannula [*kan'u-lə*] a tube for insertion into a duct or cavity; during insertion its lumen may be occupied by a trocar.

nasal c. a means of delivering oxygen to dogs or cats over a long period.

cannulate [*kan'u-lāt*] to introduce a cannula, which may be left in place.

cannulation [*kan"u-la'shən*] introduction of a cannula into a tubelike organ or body cavity.

umbilical vein c. a technique used especially for neonatal collapsed primates which need long-term fluid therapy.

canola see ***Brassica napus***.

Canpak system continuous, conveyorized system of line-slaughtering for use in a modern abattoir developed by Canada Packers in Toronto.

canter a gallop at an easy pace. The rhythm is three-time, first one hind, then the opposite hind with the diagonal fore, then the opposite fore, the leading limb.

collected c. the same action as a canter or gallop but at a very slow pace usually with the head carried high, with almost exaggerated movements but little forward progress, ideal for the show ring.

canthal ligament [*kan'thəl*] broad band of fibrous tissue at the medial and lateral canthus of the eye which loosely anchor the eyelids to the skull and provide tension points against which the orbicularis oculi muscle can cause eyelid closure; contribute to palpebral fissure size and shape; deficient function of the lateral canthal ligament in many broad-skulled dog breeds contributes to ectropion and entropion requiring surgical repair.

cantharides [*kan-thar'ĭ-dēz*] substance obtained from dried beetles (*Cantharis vesicatoria*) and used topically as a counterirritant. The toxin can cause severe irritation of the digestive tract when consumed and even death of livestock. African cattle have been poisoned by drinking water contaminated by flies. In North America poisoning of horses occurs when they consume hay made from alfalfa infested with blister betles. They show excitement, diarrhea, nephritis and vesiculation of the oral mucosa. Called also blistering beetle, Spanish fly.

cantharidin [*kan-thar'ĭ-din*] the most active principle of **cantharides**.

Cantharis vesicatoria [*kan'thə-ris*] the source of commercial cantharides. Called also Spanish fly, *Lytta vesicatoria.*, blister fly.

canthaxanthin a carotenoid used as a coloring agent; also administered orally in humans to produce artificial suntan, and to canaries carrying the red factor to produce a stronger red color.

canthi [*kan'thi*] see **canthus**.

canthitis [*kan-thi'tis*] inflammation of a canthus.

cantholysis [*kan-thol'ĭ-sis*] surgical section of a canthus or a canthal ligament.

canthoplasty [*kan'tho-plas"te*] plastic surgery of a canthus; usually to reduce palpebral fissure size, resect trichiasis or correct entropion/ectropion.

canthorrhaphy [*kan-thor'ə-fe*] the suturing of the palpebral fissure at either canthus.

canthotomy [*kan-thot'ə-me*] incision of a canthus.

canthus [*kan'thəs*] pl. *canthi*; the angular junction of the upper and lower eyelids at their medial and lateral ends, the angles of the palpebral fissure, the medial and lateral canthi.

medial c. the medial angle formed by the junction of the upper and lower eyelids.

recessed medial c. syndrome in many brachycephalic breeds, a deeply recessed medial canthus leads to medial entropion.

cantle the back-most part of the saddle seat.

Cantonese pig black and white, meat and lard pig.

canvassing making personal representation to individual persons to solicit their custom. Usually used in a political sense but also used in the sense of touting for professional patronage, considered to be an unethical practice in most countries.

CAP 1. chloroacetophenone; a gas used for riot control in humans. Causes weeping, the so-called tear-gas. Animals exposed to this lacrimator will also be affected. 2. catabolite gene activator protein; called also cAMP receptor protein; a bacterial gene regulatory protein.

cap [*kap*] 1. the top, to top. 2. an oval or thumb-nail shaped area of light-colored feathers covering the crown of lizard canaries.

dental c. 1. residual deciduous teeth sitting on top of erupting permanent teeth. 2. a crown prosthesis.

dental c. stage a condensation of the oral epithelium of the embryo's dental lamina establishes the cap stage of the developing tooth.

spermatozoal c. invests the head of the spermatozoa. Called also acrosomal cap, head cap.

CAP binding protein *c*atabolite *a*ctivator *p*rotein, a regulatory protein in the switch from glucose to lactose metabolism in *Escherichia coli* that binds to the same sequence recognition site, located immediately in front of the *lac* operator sequence, as RNA polymerase.

cap-Chur one of the original capture darts which inject medicament explosively and are retained in tissue by a barbed needle; have the difficulty of failure to recover the dart.

cap structures of RNA a distinctive formation at the 5′ terminus of mature eukaryotic mRNA, consisting of an 7-methylguanosine base attached via 5′-phosphate-5′-phosphate bonds rather than the usual internucleotide 3′,5′-phosphodiester linkages between adjacent riboses.

capacitance [*kə-pas'ĭ-təns*] 1. the property of being able to store an electric charge. 2. the ratio of charge to potential in a conductor. Previously aclled capacity. Measured in the SI unit, **farad**.

capacitation [*kə-pas"ĭ-ta'shən*] the physiological changes the spermatozoa must undergo in the female tract or in vitro before being capable of penetrating the ovum.

capacitor [*kə-pas'ĭ-tər*] a device for holding and storing charges of electricity.

capacity [*kə-pas'ĭ-te*] the power to hold, retain, or contain, or the ability to absorb; usually expressed numerically as the measure of such ability.

carrying c. see **carrying capacity**.

closing c. (CC) the volume of gas in the lungs at the time of airway closure. See also **closing volume**.

forced vital c. the maximal volume of gas that can be exhaled from full inspiration exhaling as forcefully and rapidly as possible. See also **pulmonary** function tests.

heat c. thermal capacity.

inspiratory c. the volume of gas that can be taken into the lungs in a full inspiration, starting from the resting inspiratory position; equal to the tidal volume plus the inspiratory reserve volume.

maximal breathing c. maximal voluntary ventilation.

thermal c. the amount of heat absorbed by a body in being raised 1°C.

total lung c. the amount of gas contained in the lung at the end of a maximal inspiration.

virus neutralizing c. the ability of a serum to inhibit the infectivity of a virus.
vital c. the volume of gas that can be expelled from the lungs from a position of full inspiration, with no limit to duration of expiration; equal to inspiratory capacity plus expiratory reserve volume.
Cape Barren goose (*Cereopsis novaehollandiae*) large gray and white Australian goose with a green cere.
Cape honey flower ***Melianthus*** *comosus*.
Cape lilac ***Melia*** *azederach*.
capeweed see ***Arctotheca calendula***.
capillarectasia [*kap"ĭ-lar"ək-ta'zhə*] dilatation of capillaries.
Capillaria [*kap"ĭ-lar'e-ə*] a genus of parasitic nematodes of the subfamily Capillariinae and most commonly parasitic in birds. They cause capillariasis. Recently, the genus has been split into a number of genera, including *Eucoleus*, *Hepaticola* and *Calodium*. Those found in birds include *C. anatis*, *C. annulata* (*C. contorta*), *C. caudinflata* and *C. obsignata*. Those found in mammals include *C. aerophila*, *C. bilobata*, *C. bovis*, *C. brevipes*, *C. didelphis*, *C. entomelas*, *C. erinacea*, *C. feliscati* (in cats), *C. hepatica*, *C. megrelica*, *C. mucronata*, *C. philippinensis*, *C. plica* and *C. putorii*. There are others which occur in small rodents and in fish.
capillariasis [*kap"ĭ-lə-ri'ə-sis*] infection with nematodes of the genus *Capillaria*. In birds the disease is manifested by chronic gastroenteritis and affected birds are emaciated. The disease in mammals may be enteritis with diarrhea (*C. bovis, C. entomelas*), cystitis (*C. felis cati*, *C. plica*), hepatitis (*C. hepatica*) or bronchopneumonia (*C. aerophila*, *C. didelphis*).
capillariomotor [*kap"ĭ-lar"e-o-mo'tər*] pertaining to the functional activity of the capillaries.
capillaritis [*kap"ĭ-lər-i'tis*] inflammation of the capillaries.
capillarity [*kap"ĭ-lar'ĭ-te*] the action by which the surface of a liquid where it is in contact with a solid, as in a capillary tube, is elevated or depressed.
capillary [*kap'ĭ-lar"e*] 1. pertaining to or resembling a hair. 2. one of the minute vessels connecting arterioles and venules, the walls of which act as a membrane for interchange of various substances between the blood and tissue fluid. (See **circulatory** system.) The walls consist of thin endothelial cells through which dissolved substances and fluids can pass. At the arterial end, the blood pressure within the capillary is generally higher than the pressure in the surrounding tissues, and the blood fluid and some dissolved solid substances pass outward through the capillary wall. At the venous end of the capillary, the pressure within the tissues is generally higher, and waste material and fluids from the tissues pass into the capillary, to be carried away for disposal. See **Starling's hypothesis**.
continuous c. a capillary with no pores or other interruptions in the endothelial walls, e.g. in muscle, lung, nervous system.
fenestrated c's capillaries with pores scattered throughout the endothelial walls, as those in endocrine glands, intestines, kidneys and other tissues.
c. fragility see capillary **fragility**.
lymph c. the smallest lymphatic vessel. Consists of an endothelial tube embedded in connective tissue.
perforated c. see fenestrated capillary (above).
c. permeability ability of large molecules to pass out of the capillary lumen into surrounding tissue spaces; inflammation, allergy, poisoning, burns cause increased permeability resulting in plasma leakage and edema in surrounding tissues.
c. refill time (CRT) the time required for mucosa (oral in horse or dog, vaginal in cow, sheep) which has been blanched by finger pressure to return to a normal pink color. Failure to return promptly is an indication of peripheral circulatory failure, due for example to dehydration or hypovolemic shock.
sinus c's part of the vasculature of avian skin. Occur together with standard capillaries but they are larger in diameter and may have some smooth muscle cells associated with the endothelial cells.
sinusoidal c's large and irregularly shaped; occur in endocrine glands, aortic and carotid bodies and liver.
capillus [*kə-pil'əs*] pl. *capilli* [L.] a hair; used in the plural to designate an aggregation of hairs.
capital [*kap'ĭ-təl*] pertaining to the head.
c. femoral epiphysis epiphysis of the head of the femur; its detachment represents a specific syndrome in pigs.

C-12: Fracture of the capital epiphysis of the right femur in a 6-month-old Collie.

capitation [*kap"ĭ-ta'shən*] the annual fee paid to a professional person of any sort as payment for providing services on a continuous basis. The fee paid is based on the number of animal participants in the scheme—the capitation fee.
capitular [*kə-pit'u-lər*] pertaining to a capitulum or the head of a bone.
capitulum [*kə-pit'u-ləm*] pl. *capitula* [L.] a small eminence on a bone such as the rounded one on the distal end of the humerus, by which it articulates with the head of the radius.
costal c. see **caput** costae.
c. humeri the articular part of the lateral distal end of the humerus that articulates with the head of the radius.
capn(o)- prefix meaning carbon dioxide.
Capnocytophaga canimorsus [*kap"no-si-tof'ə-gə*] a species of small, microaerophilic, gram-negative, rod-shaped bacteria that are commensals of the mouth and nasopharynx of dogs and cats and have been implicated in septicemia, meningitis, endocarditis and have been isolated from dog and cat bite wounds in humans; they closely resemble *Bacteroides ochraceus*. Formerly called DF-2 and DF-2-like.
capnogram [*kap'no-gram"*] continuous measurement of carbon dioxide concentrations in the exhaled air especially of anesthetized animals.
capnography [*kap-nog'rə-fe*] the technique of taking capnograms.
mainstream c. uses an in-line infrared CO_2 sensor connected directly to the airway, between the endotracheal tube and the breathing circuit.
sidestream c. airway gas samples are collected from the breathing circuit; the infrared sensor is located in a remote monitor.
capnometer [*kap-nom'ə-tər*] an instrument for monitoring breathing rate and adequacy of ventilation. It attaches to the endotracheal tube and measures the partial pressure of carbon dioxide in expired gases.
capon [*ka'pon*] castrated male fowl, larger than broiler, weighing up to 7 lb; produced either by administration of estrogenic substances or by surgical excision of the testicles.
caponization technique of creating a capon.
caponizing castration by surgical removal of testicles through a surgical incision behind the last rib of a male bird; chemical castration is also practiced, usually by the implantation of a pellet containing stilbestrol or hexestrol.
capotement [Fr.] a splashing sound heard in dilatation of the stomach.
Capparis tomentosa African plant in the family Capparaceae; contains an unidentified hepatoxin; causes hepatic insufficiency, jaundice, photosensitization and encephalopathy. Called also hekkabit, gulum, haujeri.
capped elbow [*kapt*] see elbow **hygroma**.
capped hock [*kapt*] see hock **hygroma**.

cappie [*kap'e*] see **double scalp**.

capping [*kap'ing*] the provision of a protective or obstructive covering.

c. phenomenon the movement of anitibody-induced clustering of plasma membrane molecules (patching) to a single pole of the cell.

pulp c. the covering of an exposed dental pulp with some material to provide protection against external influences and to encourage healing.

Capra the genus of goats and ibexes in the family Bovidae, subfamily Caprinae; includes the **markhor** (*C. falconeri*), domestic **goat** (*C. hircus*), wild goat (*C. aegagrus*), and **ibex** (*C. ibex* spp.).

capreomycin sulfate [*kap"re-o-mi'sin*] a polypeptide antibiotic produced by *Streptomyces capreolus*, which is active against human strains of *Mycobacterium tuberculosis* and sometimes considered for the treatment of mycobacterial infections in animals.

capric acid, *n*-capric acid [*kap'rik*] a 10-carbon fatty acid that occurs in butter. Called also decanoic acid.

Caprinae a subfamily in the family Bovidae; as well as sheep and goats, it includes the **takins**, **serows**, **tahrs**, **gorals**, and **chamois**.

caprine [*kap'rin*] pertaining to or emanating from goats.

c. arthritis–encephalitis (CAE) a multisystem disease of goats involving synovial lined connective tissue, caused by a a member of the family *Retroviridae*, subfamily *Lentivirinae*. There is a high degree of relatedness with the lentivirus associated with maedi-visna (ovine progressive pneumonia) in sheep. It causes chronic arthritis in adults and leukoencephalomyelitis, characterized by ataxia, proprioceptive loss and paralysis, in young kids. Indurative mastitis, and less commonly chronic pneumonia and chronic encephalomyelitis, occur in older goats. The primary mode of transmission is through the colostrum and milk. A disease notifiable to the OIE (see Table 22). Called also big knee, caprine leukoencephalomyelitis, and the indurative mastitis—hardbag.

c. encephalomyelitis see caprine arthritis–encephalitis (above).

c. enzootic nasal granuloma see **enzootic** nasal tumor.

c. herpesvirus-1 (CpHV-1) an alphaherpesvirus within the family *Herpesviridae*. Restriction endonuclease analysis indicates that there are different strains but these are not geographically clustered. Causes abortion, neonatal disease, vulvovaginitis and balanposthitis and may cause abortion.

c. herpesvirus-2 (CpHV-2) a gammaherpesvirus isolated from goats which is closely related antigenically to ovine herpesvirus-2 (OvHV-2), the sheep associated malignant catarrhal fever virus. Another, also closely related virus, called deer herpesvirus (DHV), has been isolated. The pathogenicity of these newly recognized viruses is not known.

caprinized vaccine see caprinized **vaccine**.

Capripoxvirus [*kap'ri-poks"vi-rəs*] a genus in the order *Poxvirales*, family *Poxviridae* members of which cause sheep and goat pox and lumpy skin disease of cattle.

caproate [*kap'ro-āt*] any salt or ester of caproic acid (hexanoic acid).

caprolactum see **Vetafil**.

Capromyces see ***Mycoplasma***.

caprylic acid [*kə-pril'ik*] an eight-carbon saturated fatty acid found in milk. Called also octanoic acid.

capsaicin [*kap-sa'ĭ-sin*] the active ingredient in chili peppers, it is an inhibitor of substance P. Used topically on acral lick granulomas in dogs to relieve the pain or pruritus that perpetuates the licking cycle.

capsid [*kap'sid*] the shell of protein that protects the nucleic acid of a virus; it is composed of individual morphological units called capsomers. For icosahedral viruses, there are two kinds of capsomers called pentamers, which occupy the 12 corner positions of the icosahedral shell, and hexamers, which occupy the face and edges. The number of hexamers varies between different viruses. The capsomers of helical viruses are composed of a single polypeptide and are also called protomers. All viruses of animals, except for poxviruses which have a complex structure, are minimally composed of a nucleocapsid which is the capsid surrounding the nucleic acid. In addition some viruses have a lipid bilayer envelope surrounding the nucleocapsid.

capsomer, capsomere [*kap'so-mər, kap'so-mēr*] a morphological unit of the capsid of a virus.

capsula [*kap'su-lə*] pl. *capsulae* [L.] capsule.

capsular plexus [*kap'su-lər*] terminal branches of the renal interlobular arteries which continue to the surface and terminate beneath the capsule of the kidney in the form of a plexus.

capsulation [*kap"su-la'shən*] enclosure of medicine in a capsule.

capsule [*kap'səl*] 1. an enclosing structure, as a soluble container enclosing a dose of medicine. 2. a cartilaginous, fatty, fibrous or membranous structure enveloping another structure, organ or part.

adipose renal c. the investment of fat surrounding the fibrous capsule of the kidney, continuous at the hilus with the fat in the renal sinus. In cattle this forms a thick hard layer of fat known as suet.

articular c. the saclike envelope that encloses the cavity of a synovial joint by attaching to the circumference of the articular ends of the participating bones. Called also joint capsule.

bacterial c. a gelatinous layer of polysaccharide surrounding a bacterial cell, usually polysaccharide but sometimes polypeptide in nature; it inhibits phagocytosis and can be associated with the virulence of pathogenic bacteria.

Bowman's c. glomerular capsule.

brain c's three layers of white matter in the substance of the brain. See also external capsule, internal capsule and extreme capsule (below).

external c. the layer of white fibers between the putamen and claustrum.

extreme c. the thin lamina of white fibers separating the claustrum from the cortex of the insula. See also internal capsule (below).

fibrous renal c. the connective tissue investment of the kidney, which continues through the hilus to line the renal sinus.

Glisson's c. a sheath of connective tissue accompanying the hepatic ducts and vessels within the liver.

glomerular c. the globular dilatation forming the beginning of a uriniferous tubule within the kidney, and surrounding the glomerulus. Called also Bowman's capsule and malpighian capsule.

heart c. outmoded term for the pericardium.

internal c. the major mass of nerve fibers by which the cerebral cortex is connected with the brainstem and spinal cord. It consists of a thick fanlike mass of white fibers that separate the lentiform nucleus laterally from the head of the caudate nucleus, the dorsal thalamus, and the tail of the caudate nucleus medially; it is continuous laterally and dorsally with the corona radiata, while caudally and medially it becomes smaller and continues as the crus cerebri.

joint c. articular capsule.

lens c. the elastic sac enclosing the lens of the eye.

malpighian c. see glomerular capsule (above).

Tenon's c. the connective tissue enveloping the sclera from which it is separated by a narrow cleft-like episcleral space; it is attached near the corneoscleral junction. Called also vagina bulbi.

capsulectomy [*kap"su-lek'tə-me*] excision (partial or complete) of a capsule, especially a joint capsule or lens capsule.

capsulolenticular [*kap"su-lo-len-tik'u-lər*] pertaining to the lens of the eye and its capsule.

capsuloma [*kap"su-lo'mə*] a capsular or subcapsular tumor of the kidney.

capsuloplasty [*kap'su-lo-plas"te*] plastic repair of a joint capsule.

capsulorrhaphy [*kap"su-lor'ə-fe*] suture of a joint capsule.

capsulorrhexis [*kap"su-lo-rek'sis*] tearing of the lens capsule; performed during cataract surgery to permit removal of the lens fibers.

capsulotomy [*kap"su-lot'ə-me*] incision of a capsule, as that of the lens or of a joint.

captan group of organic sulfur compounds used as fungicides, including topical treatment of dermatophytosis. Poisoning of birds causes loss of egg production, anorexia and slow growth.

captive said of naturally wild or feral animals kept in captivity for educational and scientific investigation with no attempt being made to domesticate them.

captive bolt pistol a handheld weapon used for euthanasia of large animals. The muzzle is placed against the subject's forehead. When the trigger is pulled, or the firing pin struck a sharp blow, a 3 cm rod, 1 cm diameter exits sharply from the muzzle and pierces the skull and damages the brain. The rod does not leave the weapon and there is no possible risk of injuring a bystander.

captive breeding mating programs designed for use with animals kept in captivity. See also hand **mating**.

captopril [*kap'to-pril*] an angiotensin-converting enzyme (ACE) inhibitor used as a vasodilator in the treatment of congestive heart

failure, mitral regurgitation and hypertension. Now often replaced by newer ACE inhibitors such as enalapril, lisinopril.

capture [*kap'chər*] the snaring and restraint of an escaped domesticated animal or a feral animal. It requires safety for the captor and the subject. Includes physical means of trap cages, the thrown lariat, a handheld net for small companion animals. Thrownets for birds are still favored by lay persons. Veterinarians are more inclined to use immobilizing agents delivered by darts from bows and arrows or from dart guns. See also **restraint**.

c.–mark–release–recapture technique for establishing the nature of animal movements and the size of populations.

c. shock syndrome in recently captured animals with death 1–6 hours after capture. Signs include shallow, rapid respiration, tachycardia, physical collapse, hyperthermia, small pulse, elevated CPK concentrations, general vascular congestion at necropsy.

c. stress syndrome **stress** syndrome in wild animals in captivity.

capture myopathy see exertional **rhabdomyolysis**.

capture–recapture method a method of estimating the prevalence of a condition in a population. Initially used in populations of wild animals, which were captured, marked, released and recaptured, but the same statistical process is now used in other types of population. See also **Lincoln-Petersen method**.

caput [*kap'ət*] pl. *capita;* the head; a general term applied to the expanded or chief extremity of an organ or part.

c. mallei head of the malleus in the middle ear; it articulates with the incus.

c. costae the head of a rib; it characteristically bears one or two articular facets that articulate with the adjacent costal foveae of contiguous vertebrae and their intervening fibrocartilage.

c. mandibulae the head of the mandible that articulates with the squamous part of the temporal bone.

c. stapedis the head of the stapes; it articulates with the incus through the interposed minute ossicle, the os lenticulare.

capybara (*Hydrochoerus hydrochaeris*) in the family Caviidae, which includes guinea pigs, which it resembles except in size. Native to South America, it is the largest rodent (over 100 lb) with a barrel-shaped body, short legs and no tail. It is largely aquatic and easily domesticated. Called also carpincho.

CAR congenital articular rigidity.

car sickness see **motion sickness**.

cara inchada [Port.] swollen or enlarged face; a purulent periodontitis, halitosis, progressive loss of premolar teeth, mainly of the upper jaw, and emaciation in young cattle grazing new pastures sown in ground of recently cleared forest areas in Brazil. The cause is unknown but *Arcanobacterium pyogenes* and *Bacterioides melaninogenicus* have been isolated from periodontal lesions.

carabao (*Bubalus bubalis carabanesis*) a domesticated subspecies of water buffalo found in the Philippines and elsewhere in Southeast Asia.

caracal (*Caracal caracal*) a long-legged desert cat, native to Africa and Asia, with distinctive elongated, black-tufted ears.

caracara a group of predatory birds in the family Falconidae that are characterized by long legs and reddish skin on the cheeks and throat. Called also carrion hawks.

caracul see **Karakul**.

caramiphen ethanedisulfonate [*kə-ram'ĭ-fen*] an anticholinergic and antitussive.

carapace the dorsal shell of turtles and tortoises. Abnormalities are caused by trauma, dietary deficiencies (particularly nutritional hyperparathyroidism), infections, environmental factors and tumors.

Carassius a genus of fish in the family *Cyprinidae*, generally referred to as Crucian carps.

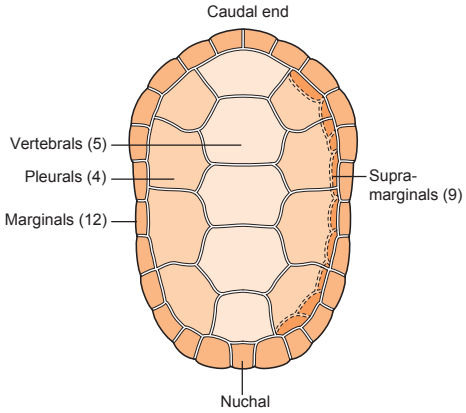
C. auratus see **goldfish**.

C. carassius farmed finfish in family Cyprinidae; called also Crucian carp.

carazolol a non-specific β-adrenergic receptor blocking agent; used to prevent stress or facilitate parturition and placental expulsion in pigs.

carbachol [*kahr'bə-kol*] a potent choline ester with muscarinic and nicotinic effects. Used mainly in ophthalmology to produce miosis and increase aqueous outflow.

carbadox [*kahr'bə-doks*] a substituted quinoxaline antibiotic used as feed additive in the prevention of swine dysentery and growth promotant. Its use is strictly controlled and subject to withdrawal periods in many countries and banned altogether in the European Union and Canada.



C-13: Carapace of the tortoise.
From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.

carbamates [*kahr'bə-māts*] effective insecticides which exert their effect by temporarily inhibiting cholinesterase activity. They are also capable of poisoning. Clinical signs are pupillary constriction, muscle tremor, salivation, ataxia and dyspnea.

carbamazepine [*kahr"bə-maz'ə-pēn*] an anticonvulsant and analgesic used in the treatment of pain and for control of partial or generalized tonic–clonic seizures, often in combination with other drugs; rarely effective as a sole agent in the control of seizures in dogs.

carbamide [*kahr'bə-mīd*] urea in anhydrous, lyophilized, sterile powder form; injected intravenously in dextrose or invert sugar solution to induce an osmotic diuresis in the treatment of cerebral edema and glaucoma. Now largely superseded by more effective agents.

c. peroxide urea hydrogen peroxide; a ceruminolytic agent used in cleaning ear canals.

carbaminohemoglobin [*kahr-bam"ĭ-no-he"mo-glo'bin*] a combination of carbon dioxide and hemoglobin, CO_2HHb, being one of the forms in which carbon dioxide exists in the blood.

carbamoyl [*kahr-bam'o-əl*] the radical $NH_2–CO–$.

c. phosphate synthetases enzymes catalyzing the synthesis of carbamoyl phosphate. Carbamoyl-phosphate synthetase I is the starting enzyme of the urea cycle. Carbamoyl-phosphate synthetase II is the starting enzyme of pyrimidine synthesis.

carbamoyltransferase [*kahr-bam"o-əl-trans'fər-ās*] see ornithine carbamoyl **transferase**.

carbamylcholine chloride [*kahr"bə-məl-ko'lēn klor'īd*] carbachol.

carbamylmethylcholine [*kahr"bə-məl-meth"əl-ko'lēn*] bethanechol.

carbanilides drugs, e.g. imidocarb, with therapeutic efficiency against *Babesia* spp.

carbapenems [*kahr"bə-pen'əmz*] a class of β-lactam antibiotics with a wide range of antibacterial activity; includes **imipenem**, **meropenem** and **thienamycin**.

carbarsone an arsenical compound once used as a feed additive for the prevention of histomoniasis in chickens and turkeys.

carbaryl [*kahr'bə-rəl*] carbamate insecticide used widely in companion animals to control ectoparasites.

carbasalate calcium an analgesic and antipyretic, metabolized to aspirin with similar effects.

carbenicillin [*kahr"bən-ĭ-sil'in*] an extended-spectrum penicillin, prepared as both the disodium and the potassium salt, particularly effective against gram-negative bacteria, including some strains of *Pseudomonas aeruginosa* and *Proteus* spp. Carbenicillin indanyl is suitable for oral administration.

carbimazole an antithyroid drug, metabolized to **methimazole**; used in the treatment of feline hyperthyroidism.

carbofuran a carbamate acaricide and nematocide; banned in many countries because of toxicity.

carbohydrase [*kahr"bo-hi'drās*] any of a group of enzymes that catalyze the hydrolysis of higher carbohydrates to lower forms.

carbohydrate [*kahr"bo-hi'drāt*] a compound of carbon, hydrogen and oxygen, the latter two usually in the proportions of water $(CH_2O)_n$. They are classified into mono-, di-, tri-, poly- and heterosaccharides. Carbohydrates in food are an important and immediate source of energy for the body; 1 gram of carbohydrate yields

3.75 calories (16 kilojoules). They are present, at least in small quantities, in most foods, but the chief sources are the sugars and starches of plants. Herbivores are able to utilize the insoluble polysaccharides (crude fiber) because of bacterial conversion to volatile fatty acids by fermentation in the rumen and cecum. Carbohydrates may be stored in the body as glycogen for future use. If they are eaten in excessive amounts they are converted to and stored as fat. Rapid ingestion of very large amounts in ruminants and horses causes **carbohydrate engorgement**.

complex c. polysaccharides containing either α- and β-type glycosidic bonds. Usually occurring in mixtures in food.

dietary c. the carbohydrate components of food.

c. loading depletion/repletion means of maximally loading glycogen into type II muscle for increased power of muscle contraction.

c. loss glucose loss in urine due to diabetes mellitus or chronic renal disease.

c. metabolism series of related enzymic reactions involved in the synthesis and catabolism of carbohydrates.

c. tolerance test see **glucose** tolerance test.

carbohydrate engorgement [*kahr"bo-hi'drāt en-gorj'mənt*] engorgement by ruminants and horses on carbohydrate-rich food which results in fermentation in the rumen, or stomach in the case of horses, with the production of large amounts of lactic acid. Absorption of the acid results in the development of a lactic acidemia. Retention in the alimentary tract causes osmotic withdrawal of fluid from the body tissues and severe dehydration. The resulting clinical syndrome includes abdominal enlargement, hypovolemic shock, ruminal stasis, severe toxemia, weakness, recumbency and a very high mortality rate. The pH of the ruminal contents is usually less than 5. Absorption causes severe systemic acidosis. Horses also suffer dehydration and lactic acidosis after engorgement on grain. Laminitis is an additional sequel. Called also grain engorgement, rumen overload, grape engorgement.

carbohydraturia [*kahr"bo-hi"drət-u're-ə*] excess of carbohydrates in the urine.

carbolic acid [*kahr-bal'ik*] the common or trivial name for phenol a caustic poison obtained by distillation of coal tar or produced synthetically; used as an antiseptic and disinfectant, e.g. in some of the early cattle and sheep dips.

carbolic dip [*kahr-bal'ik*] see **carbolic acid**.

carbolineum a disinfectant used as a spray for poultry houses. Excessive use causes damage and irritation to the wattles and comb, and acute hepatic inefficiency.

carbolism [*kahr'bəl-iz-əm*] **phenol** (carbolic acid) poisoning.

carbomycin a macrolide antibiotic used as a feed additive and growth promotant.

carbon (C) [*kahr'bən*] a chemical element, atomic number 6, atomic weight 12.011. See Table 4.

asymmetric c. atom one bonded to four different atoms. See also **isomer**.

c. fiber made by the pyrolization of polymer fibers at very high temperatures and used in various forms as soft tissue implants, particularly in tendon and ligament repair.

c. fixation see dark **reaction**.

carbon dioxide [*kahr'bən di-ok'sīd*] an odorless, colorless gas, CO_2, resulting from oxidation of carbons, formed in the tissues and eliminated by the lungs; used with oxygen to stimulate respiration and in solid form (carbon dioxide snow—see below) as an escharotic, as a gas to euthanize laboratory rabbits and rodents.

c. d. anesthesia exposure of pigs for 45 seconds in a mixture of 60 to 70% CO_2 in air is an adequate pre-slaughter anesthetic for pigs.

c. d. combining power the ability of blood plasma to combine with carbon dioxide; indicative of the alkali reserve and a measure of the acid–base balance of the blood.

c. d. content the amount of carbonic acid and bicarbonate in the blood; reported in millimoles per liter.

c. d. dissociation curve a graph demonstrating the relationship between the blood content of CO_2 and the Pco_2.

c. d. narcosis respiratory acidosis.

c. d. snow solid carbon dioxide, formed by rapid evaporation of liquid carbon dioxide; it gives a temperature of about −110°F (−79°C), and is used as an escharotic in various skin diseases. Called also dry ice.

c. d. tension the partial pressure of carbon dioxide in the blood; noted as Pco_2 in **blood gas analysis**. See also **respiration**.

c. d. transport carbon dioxide passes from tissues to blood by diffusion, in the blood by solution and via reactions within plasma and erythrocytes, from blood to pulmonary alveoli by diffusion.

carbon dioxide–bicarbonate buffer system major body buffering system for acid–base balance.

carbon dioxide–oxygen therapy administration of a mixture of carbon dioxide and oxygen (commonly 5% CO_2 and 95% O_2, or 10% CO_2 and 90% O_2); used for improvement of cerebral blood flow or stimulation of deep breathing. Carbon dioxide acts by stimulating the respiratory center; it also increases heart rate and blood pressure.

carbon disulfide an inflammable, volatile liquid used for treatment of bot fly larvae in the stomach of horses. Administered by stomach tube. Mixed with air it is dangerously explosive. Excess doses cause excitement, weakness and collapse.

carbon monoxide a colorless, odorless, tasteless gas, CO, formed by burning carbon or organic fuels with a scanty supply of oxygen; inhalation causes central nervous system damage and asphyxiation. Carbon monoxide is present in the exhaust of petrol engines, in the smoke of wood and coal fires, in manufactured gas such as that used in the household, and wherever carbon burns without a sufficient supply of oxygen.

c. m. poisoning poisoning by carbon monoxide; one of the most common types of gas poisoning. When carbon monoxide is inhaled, it comes in contact with the blood and combines with hemoglobin. Since carbon monoxide combines more readily with hemoglobin than does oxygen, it takes the place of oxygen in the erythrocytes, and the tissues are thus deprived of their normal oxygen supply. Death from asphyxia results if a large enough quantity of carbon monoxide is inhaled. Because death is very sudden, carbon monoxide has been used as a euthanatizing agent for dogs in large numbers, but is not widely accepted as a humane method.

carbon tetrachloride a clear, colorless, mobile liquid; the inhalation of its vapors can depress central nervous system activity and cause degeneration of the liver and kidneys. It has now been replaced as a fasciolicide so that poisoning by it is not as common as it used to be. It is a potent hepatoxin especially in sheep, in which it can cause serious losses at dose rates which on most occasions are innocuous, and in cattle when it is administered by mouth instead of by injection.

carbonate [*kahr'bə-nāt*] a salt of carbonic acid.

c. calculi see carbonate **urolith**.

carbonic acid [*kahr-bon'ik*] acid with the formula H_2CO_3. Also refers to an aqueous solution of carbon dioxide, which contains a small amount of H_2CO_3.

c. a. anhydrase see **carbonic anhydrase**.

carbonic anhydrase [*kahr-bon'ik an-hi'drās*] an enzyme which catalyzes the reversible conversion of carbon dioxide to bicarbonate ions and thus facilitates the transport and elimination of carbon dioxide from tissues. The enzyme is also important in making adequate calcium available for the deposition of shells on birds' eggs. See also carbonic anhydrase **diuretics**.

carbonuria the presence in the urine of carbon dioxide or other carbon compounds.

carbonyl [*kahr'bə-nəl*] the bivalent organic radical, C=O or C:O, characteristic of aldehydes, ketones, carboxylic acid and esters.

carbophenothion an organophosphorus cholinesterase inhibiting insecticide used on plants and animals; it is effective but has the usual potential toxicity of this group. In some countries, its use is not permitted on food producing animals.

carboplatin [*kahr'bo-plat"in*] a **cisplatin** analog, but with fewer side-effects and safe for use in cats.

γ-carboxy glutamic acid-containing protein [*kahr-bok"se-gloo-tam'ik*] protein containing the unusual amino acid γ-carboxy-glutamate. Several blood clotting factors and osteocalcin found in bone are of this type of protein.

carboxy-lyase [*kahr-bok"se-li'ās*] any of a group of lyases that catalyze the removal of a carboxyl group; it includes the carboxylases and decarboxylases.

carboxyatractyloside hepatic toxin in the cotyledons of ***Xanthium*** spp. and in *Cestrum, Wedelia* spp.

carboxyhemoglobin [*kahr-bok"se-he'mo-glo"bin*] hemoglobin combined with carbon monoxide, which occupies the sites on the hemoglobin molecule that normally bind with oxygen and which is not readily displaced from the molecule; exposure to carbon monoxide thus results in cellular anoxia. See also **hemoglobin**.

carboxyhemoglobinemia [*kahr-bok"se-he"mo-glo"bin-e'me-ə*] excessive concentrations of carbon monoxide in the blood.
carboxyl [*kahr-bok'səl*] the monovalent radical, −COOH, found in those organic acids termed carboxylic acids.
carboxylase [*kahr-bok'sə-lās*] an enzyme that catalyzes the addition of a carboxylic acid to a substrate.
carboxylation [*kahr-bok"sə-la'shən*] the addition of a carboxyl group, as to pyruvate to form oxaloacetate.
carboxylesterase [*kahr-bok"səl-es'tər-ās*] an enzyme that catalyzes the hydrolysis of the esters of carboxylic acids.
carboxylic acid an organic compound containing the carboxy group (−COOH), which is weakly ionized in solution forming a carboxylate ion (−COO−).
carboxyltransferase [*kahr-bok"səl-trans'fər-ās*] an enzyme that catalyzes carboxylation.
carboxymethylcellulose sodium [*kahr-bok"se-meth"əl-sel'u-lōs*] a hygroscopic powder that forms an emollient gel; used as a bulk laxative. See also **methylcellulose**.
carboxymyoglobin [*kahr-bok"se-mi"o-glo'bin*] a compound formed from myoglobin on exposure to carbon monoxide.
carboxypeptidase [*kahr-bok"se-pep'tĭ-dās*] an exopeptidase enzyme secreted by the pancreas that acts only on the peptide linkage of a terminal amino acid containing a free carboxyl group; includes carboxypeptidases A and B.
Carbozoo anthrax vaccine to which saponin has been added as an adjuvant.
carbuncle [*kahr'bang-kəl*] a focus of infection in the skin consisting of multiple abscesses and sinuses.
carcase carcass.
carcass [*kahr'kəs*] 1. the body of an animal killed for meat. The head, the legs below the knees and hocks, the tail, the skin and most of the viscera are removed. The kidneys are left in and, in most instances, the body is split down the middle through the sternum and vertebral bodies. Pig carcasses are dehaired (see below). Bird carcasses are not split; the feathers are removed after scalding but the skin is not removed and no viscera are left in place. In New York dressed poultry the viscera are left in. 2. the body of any dead animal.
c. condemnation meat inspection is carried out on the live animal and on viscera but the principal activity is during the carcass stage. If specific abnormalities are found which indicate that the carcass, or part of it, is unfit for human consumption, it is condemned. It may be used for other purposes, e.g. after special processing for fertilizer.
c. contamination bacterial contamination of the carcass is a serious cause of deterioration of meat during storage. It is contributed to by having the animal come onto the abattoir floor with the hair and hide badly contaminated, by dust from contaminated hides, by careless handling of the hide and the viscera, especially the alimentary tract, by contamination of the water in scalding tanks for birds and pigs, and by lack of personal hygiene on the part of abattoir workers.
c. cutability estimate of the percentage of saleable meat from a carcass versus percentage of waste fat. USDA prediction evaluation allows an estimate the percentage of retail yield of carcass weight based on hot carcass weight, ribeye area, fat thickness, and estimated percent of kidney, pelvic, and heart fat. Measurements of carcass cutability are categorized into numerical categories, called yield grade, with 1 being the leanest and 5 being the fattest.
c. dehairing pig carcasses are not skinned. They are scalded and the bristles and superficial layers of skin scraped off. The scalding vat can be a source of serious contamination.
c. differentiation identification of the species, sex and age of a carcass is an important function of meat hygiene because of the need to guarantee the authenticity of the description of meat at the retail point. Much of this can be done on gross examination but final determination may require laboratory tests, especially in cases where fraudulent substitution is suspected.
c. disposal is necessary in an abattoir for condemned carcasses. Complete incineration is necessary in cases of highly infectious disease. Heat treatment sufficient to sterilize the tissues is carried out on less dangerous materials, leading to the preparation of agricultural fertilizer. At practice premises the problem is a serious one if local government provisions do not include incineration of animal material. On site incineration may be prohibited by local legislation and the need to avoid unpleasant smells. Burial is satisfactory but tedious.
c. dressing removal of the hide, appendages and viscera.
c. drip see **weeping**.
c. electrical stimulation a method of tenderizing meat by the application of electrical stimulation so as to cause muscle contraction, lowering of pH and faster autolysis.
fevered c. congestion of the vessels so that the surfaces of tissues have a redder appearance, and individual vessels are more readily seen.
c. merit scale used in assessing carcass traits.
c. setting rigor mortis. The muscles are hard, the joints fixed, muscle tissue loses its translucence. Proper setting is an indication of satisfactory preparation for storage of the meat without deterioration.
c. traits criteria used in assessing quality of a carcass. Important in determining price, suitability of breeding program, value of sire. Includes length, weight, proportion of fat and lean, distribution of fat, relative size of valuable cuts.
c. yield proportion of the animal's liveweight salvaged at carcass point. Called also dressed weight, killing out percentage.
carcin(o)- prefix meaning cancer.
carcinoembryonic antigen [*kahr"sĭ-no-em"bre-on'ik*] an oncofetal glycoprotein antigen found in colonic adenocarcinoma and other cancers and in certain nonmalignant conditions. See also oncofetal **antigen**. Called also CEA.
carcinogen [*kahr-sin'ə-jen*] a substance that causes cancer. Classified into groups by the WHO: Group 1, carcinogenic to humans; Group 2A, probably carcinogenic to humans; Group 2B, possibly carcinogenic to humans; Group 3, not classifiable as to carcinogenicity in humans; and Group 4, probably not carcinogenic to humans.
primary c's. substances that react directly with a specific biological group in living tissue resulting in the development of a neoplasm. They are mostly synthetic compounds or metals.
secondary c's. relatively inert substances that are converted by a host-mediated reaction to an active carcinogen, e.g. nitrosamines, pyrrolizidine alkaloids.
carcinogenesis [*kahr"sĭ-no-jen'ə-sis*] literally, the production of cancer. See also **oncogenesis**
biological c. viruses and some parasites are capable of initiating neoplasia. See viral **oncogenesis**, ***Spirocerca*** *lupi*.
chemical c. numerous chemicals have been identified as carcinogenic.
physical c. includes ultraviolet radiation, ionizing radiation and asbestos.
carcinogenic [*kahr"sin-o-jen'ik*] having a capacity for carcinogenesis.
carcinogenicity [*kahr"sĭ-no-jə-nis'ĭ-te*] the ability or tendency to produce cancer.
carcinoid [*kahr'sĭ-noid*] a tumor of the gastrointestinal tract formed from the endocrine (argentaffin, APUD) cells of the mucosal lining of a variety of organs including the stomach and intestine. In dogs they occur in the duodenum, colon and rectum. Rarely, they may produce the so-called carcinoid syndrome. Called also argentaffinoma, argentaffin tumor.
goblet-cell c. a rare tumor recorded in a dog; more common in human appendix; has characterisitics of carcinoid and adenocarcinoma. Called also adenocarcinoid.
hepatic c. a rare tumor originating from neuroectodermal tissue in the liver.
pulmonary c. seen sporadically in dogs.
carcinolysis [*kahr"sĭ-nol'ə-sis*] destruction of cancer cells; oncolytic.
carcinoma [*kahr"sĭ-no'mə*] a malignant new growth (neoplasm) made up of epithelial cells tending to infiltrate surrounding tissues and to give rise to metastases. Carcinomas make up the majority of malignancies of the mammary gland, uterus, intestinal tract, skin and tongue.
acinic cell c. locally invasive salivary gland tumors of dogs, and rarely other species, composed of glandular epithelium in an acinar pattern.
adenocystic c., adenoid cystic c. carcinoma marked by cylinders or bands of hyaline or mucinous stroma separated or surrounded by nests or cords of small epithelial cells, occurring in the mammary and salivary glands, and mucous glands of the respiratory tract. Called also cylindroma.
alveolar c. alveolar adenocarcinoma.

VetBooks.ir

VetBooks.ir

C

apocrine c. see **apocrine** tumors.
basal cell c. an epithelial tumor of the skin that seldom metastasizes but has potential for local invasion and destruction. Common in dogs and cats.
basosquamous c. carcinoma that histologically exhibits both basal and squamous elements.
bronchogenic c. carcinoma of the lung, so called because it arises from the epithelium of the bronchial tree.
cholangiocellular c. primary carcinoma of the liver originating in bile duct cells.
chorionic c. choriocarcinoma.
colloid c. mucinous carcinoma.
cylindrical cell c. carcinoma in which the cells are cylindrical or nearly so.
embryonal c. a highly malignant primitive form of carcinoma, probably of germinal cell or teratomatous derivation, usually arising in a gonad.
epidermoid c. that in which the cells tend to differentiate in the same way as those of the epidermis; i.e. they tend to form prickle cells and undergo cornification.
giant cell c. carcinoma containing many giant cells.
hepatocellular c. primary carcinoma of the liver cells. See **hepatocellular** carcinoma.
Hürthle cell c. see **Hürthle cell** tumor.
c. in situ a neoplastic entity wherein the tumor cells have not invaded the basement membrane but are still confined to the epithelium of origin; often applied to such cells in the uterine cervix.
large-cell c. a bronchogenic tumor of undifferentiated (anaplastic) cells of large size.
medullary c. stroma type of thyroid carcinoma that is probably derived from C-cells of ultimobranchial origin.
mucinous c. adenocarcinoma producing significant amounts of mucin.
oat-cell c. highly malignant neoplasm, rare in animals, possibly arising from APUD cells in many tissues, but usually associated with lung. Called also small-cell carcinoma.
papillary c. carcinoma in which there are papillary excrescences; called also papillocarcinoma.
scirrhous c. carcinoma with a hard structure owing to the formation of dense connective tissue in the stroma.
c. simplex an undifferentiated carcinoma.
c. of skin squamous cell carcinomas occur on the third eyelid, cornea or the eyelid of cattle and horses, on the penis and prepuce of horses, from the mucosa of the frontal sinus to invade the horn core of cattle (called also horn cancer), on the ears and nose of white-faced sheep in high radiant sunlight areas of the world, on the vulva of ewes when the tail is docked too short. In goats the ears, udder, base of the horn and perineum are also susceptible sites. The tumors grow rapidly, show considerable invasiveness and often metastasize to local lymph nodes. In dogs and cats, squamous cell carcinomas are common, particularly on the face and pinnae of white cats. See also **squamous** cell carcinoma.
small-cell c. see oat-cell carcinoma (above).
spindle cell c. squamous cell carcinoma marked by fusiform development or rapidly proliferating cells.
stomach c. squamous cell carcinomas occur in the stomach of the horse and the bovine rumen. The associated clinical syndrome in the horse is one of indigestion and weight loss. Metastasis occurs commonly. In cows there may be vagus indigestion or chronic tympany of the rumen.
transitional cell c. occurs in the urinary bladder or urethra of older dogs. Several structural types may be observed: papillary, polypoid, fungoid or sessile. Metastasis to regional lymph nodes and lungs is likely.
udder c. occurs rarely in mares and doe goats.
carcinomatosis [*kahr"sĭ-no-mə-to'sis*] the condition of widespread dissemination of cancer throughout the body. Sometimes used to refer to widespread neoplastic involvement of an organ, e.g. abdominal carcinomatosis.
carcinomatous [*kahr"sĭ-nom'ə-təs*] pertaining to or of the nature of cancer; malignant.
carcinophilia [*kahr"sĭ-no-fil'e-ə*] special affinity for cancerous tissue.
carcinosarcoma [*kahr"sĭ-no-sahr-ko'mə*] a malignant tumor composed of carcinomatous and sarcomatous tissues.

C-14: Carcinoma on the nose of a whiteface sheep.
Courtesy of B. Vanselow.

embryonal c. a rapidly developing, malignant mixed tumor of the kidneys, made up of embryonal elements.
carcinosis carcinomatosis.
miliary c. that marked by development of numerous nodules.
card test a test in which the reagent or antigen, usually dyed, is impregnated into absorbent paper. The subject specimen of urine, blood, plasma or serum is placed on the impregnated card and a color or similarly easily seen change is recorded.
brucellosis c. t. an agglutination test for antibody in serum performed using a dyed whole-cell suspension of *Brucella abortus* as antigen. Only a positive or negative result is recorded.
cardenolide one of the two groups of naturally occurring **cardiac** glycosides; found in plants including *Digitalis*, *Nerium*, *Cascabela*, *Thevetia*, *Cryptostegia*, *Euonymus*, *Gomphocarpus*, *Asclepias*, *Corchorus*, *Convallaria*, *Gerbera*, *Adonis*, *Acokanthera* spp. Those from *Digitalis* spp. are used medicinally.
carder a grooming device consisting of a small, flat board with multiple, fine wire teeth on one side, and a short handle. It is used to comb out hair mats from the coats of dogs. Called also slicker brush.
cardia [*kahr'de-ə*] 1. the cardiac opening of the esophagus into the stomach. 2. the cardiac part of the stomach; that part of the stomach surrounding the esophagogastric junction, distinguished by the presence of cardiac glands.
cardiac [*kahr'de-ak*] 1. pertaining to the heart. See also **heart**. 2. pertaining to the gastric cardia.
c. afterload the impedance to ventricular emptying presented by aortic pressure.
c. area see **precordium**.
c. biopsy an uncommon clinical procedure. May be performed via thoracotomy or with a biopsy catheter introduced intravenously.
c. catheterization the insertion of a catheter into a vein or artery and guiding it into the interior of the heart for purposes of measuring cardiac output, determining the oxygen content of blood in the heart chambers, surgery and evaluating the structural components of the heart.
c. compensation in cardiac disease the compensation for the inefficiency of the heart's pump action by enlisting the various reserves of the heart such as hypertrophy, enlargement, increase in rate, so as to maintain circulatory equilibrium and prevent the appearance of signs of congestive heart failure.
c. compression an emergency measure to empty the ventricles of the heart in an effort to circulate the blood, and also to stimulate the heart so that it will resume its pumping action. Involves the application of pressure through the thoracic wall. More commonly used in animals than other forms of cardiac massage.

c. conducting cells specialized cardiac fibers modified to conduct impulses from the A-V node via the septum to the ventricles. Called also Purkinje fibers.
c. conducting system the cardiac tissue responsible for electrical conduction, made up of the sinoatrial node, the atrioventricular node, and the atrioventricular bundle and cardiac conducting fibers.
c. depressor nerve a branch of the vagus nerve composed of afferent nerve fibers which arise around the base of the heart and aortic arch; its stimulation elicits a brainstem reflex that slows the heart, dilates the peripheral vessels and lowers blood pressure. Called also aortic nerve, depressor nerve of Ludwig.
c. dilatation the heart volume is increased but the effective mass of cardiac muscle is not. A dilated heart has lost some of its reserve.
c. dullness the area of the chest wall over which a dull sound, indicating the position of the heart, can be elicited by percussion.
c. failure see **heart failure**.
c. fibrillation see ventricular **fibrillation**.
c. fibrosis see cardiac **cirrhosis**.
c. flow load the work required of the heart can be increased by a need for an increased flow rate of blood, e.g. when there is an anastomosis, congenital arteriovenous defect, portosystemic shunt.
c. function curves statistical curves used in modeling the cardiovascular functions, (e.g. venous return to cardiac output).
c. glands in the cardiac region of the gastric wall; branched, tubular, coiled, mucus-secreting.
c. glycosides the glycosides of *Digitalis purpurea* (digitoxin, gitalin and gitoxin) and digoxin (from *D. lanata*). Strophanthin and ouabain are glycosides found in *Strophanthus* spp. Other cardiac glycosides are present in the skin of toads (*Bufo maritimus*, *B. vulgaris*).
c. horse sickness see **African** horse sickness.
c. hypertrophy enlargement of the heart coincident with an increase in muscle mass; an indication of response to an increase in load which may or may not be associated with disease. It is an expression of cardiac compensation but some of the cardiac reserve has been lost.
c. impulse see cardiac **impulse**. Called also apex beat.
c. index cardiac output divided by the animal's body surface area in m^2. The normal range for dogs is 1.8–3.5 L/m^2. In horses, the usual measure for body size is body weight in kilograms and the range for the adult horse is 7.2–8.8 L/kg/min.
left-sided c. enlargement may involve either the left ventricle or atrium, or both, and can be demonstrated on radiographs and electrocardiography. Seen most commonly in mitral valvular disease in dogs.
c. massage manual massage of the heart or stimulation with an electrical current through an open thoracic wall. The term is sometimes used interchangeably with cardiac compression.
c. mucosa the most cranial of the gastric mucosa; secretes only mucus, except in pigs, in which the area covered by this mucosa is much larger than in the other species and bicarbonate is also secreted.
c. murmur see heart **murmur**.
c. output the volume of blood pumped per unit of time. May be calculated by oxygen consumption measurement, carbon dioxide excretion (Fick methods), indicator dilution (indocyanine green or lithium), thermo dilution (cold saline). These require invasive methods such as cardiac catheterization and are done in experimental studies but very seldom in the clinical setting. Doppler **echocardiography** is a noninvasive ultrasound-based technique that offers potential. In the clinical setting, cardiac output and the hemodynamic status is determined by heart rate, peripheral pulse quality, temperature of extremities, and mucous membrane color and capillary refill time. Ancillary diagnostics, such as indirect blood pressure, hemoglobin saturation by pulse oximetry or blood gas analysis, and blood lactate may be used. See also **Fick principle**.
c. pacing employing cardiac pacemakers to control heart rate where there are bradyarrhythmias. Temporary pacing, using transcutaneous or transvenous pacing, can be used to stabilize the patient until normal rhythm is re-established or a permanent pacemaker can be implanted.
c. preload ventricular end-diastolic volume.
c. pressure load the stress of working against an elevated blood pressure in the arterial circuit; one of the two major groups of causes of heart disease; the other is flow load.
c. racing syndrome a disease of companion birds manifested by a sudden increase in heart rate, up to 1000/min, in the period immediately after being restrained. Death occurs within a few seconds.
c. reserve the reserve mechanisms in the heart to compensate for defects which could make the heart's pumping action ineffective. The reserve mechanisms include hypertrophy, enlargement, increase in heart rate and an increase in stroke volume, a result of the increase in muscle mass and the enlargement of the ventricles.
right-sided c. enlargement may involve either the right ventricle or atrium. Occurs in heartworm disease in dogs.
c. rupture penetration of the myocardium by a reticular foreign body in cows, or rupture of a patch of chronic fibrotic myocarditis in horses, causes cardiac tamponade and sudden death.
c. size may increase as a result of hypertrophy, dilatation or a combination of the two. A common belief with some scientific support is that performance of horses in sprint races is closely related to heart size.
c. stroke volume the amount of blood ejected with each systole.
c. tamponade see cardiac **tamponade**.
c. thrill see **thrill**.
c. troponin proteins see **troponins**.
c. valve fenestration the valve surface is incomplete, creating a lattice effect; mostly congenital defects in foals.
c. valve hematocysts congenital, blood-filled cysts on the atrioventricular valves considered to be of no pathogenic significance.
c. valve laceration tearing of the valve tissue or attachment to myocardium may occur spontaneously or as a sequel to endocarditis; adds a significant additional flow load to the heart.
c. valve rupture see cardiac valve laceration (above).
c. valves heart valves formed by evaginations of the cardiac and vascular endothelium supported by connective tissue; includes atrioventricular and semilunar valves on both sides of the heart.
c. valvular disease see **valvular** disease.
c. vascular shunts includes patent foramen ovale, ventricular septal defect, tetralogy of Fallot, patent ductus arteriosus.
c. work includes **effective** work—that needed for the onward propulsion of blood through the correct channels against arterial pressure, **total** work—includes all of the work performed by the heart including some involved in moving blood in the wrong direction.
Cardigan Welsh corgi see **Welsh corgi**.
cardinal flower [*kahr'dĭ-nəl*] ***Lobelia berlandieri***.
cardinal signs [*kahr'dĭ-nəl*] the most important clinical signs: those that are of pre-eminent importance to a disease or syndrome, e.g. heat, swelling and pain to inflammation; polydipsia and polyuria to diabetes.
carding [*kahr'dĭng*] industrial process which flattens wool, draws fibers into a continuous sliver.
c. wool see carding **wool**.
cardi(o)- word element. [Gr.] *heart*.
cardioaccelerator [*kahr"de-o-ak-sel'ər-a-tər*] quickening the heart action; an agent that so acts.
cardioactive [*kahr"de-o-ak'tiv*] having an effect on the heart.
cardioangiography [*kahr"de-o-an"je-og'rə-fe*] the technology of radiological examination of the heart and blood vessels. Called also angiocardiography.
cardioangiology [*kahr"de-o-an"je-ol'ə-je*] the study of the diseases of the heart and blood vessels.
cardiocele [*kahr'de-o-sēl"*] hernial protrusion of the heart through a fissure of the diaphragm or through a wound.
cardiocentesis [*kahr"de-o-sen-te'sis*] surgical puncture into the pericardial space and aspiration of fluid for therapeutic or diagnostic purposes. Therapeutically, the procedure is used as an emergency measure to relieve life-threatening cardiac tamponade. Other clinical situations in which cardiocentesis may be employed include pericardial effusion, traumatic perforation or rupture of the myocardium, and effusion secondary to a tumor or thoracic injury.
cardiochalasia [*kahr"de-o-kə-la'zhə*] relaxation or incompetence of the sphincter action of the cardiac opening of the stomach.
cardiocirculatory [*kahr"de-o-sur'ku-lə-tor'e*] pertaining to blood flow through the heart and vascular system.
cardiodiaphragmatic [*kahr"de-o-di"ə-frag-mat'ik*] pertaining to the heart and the diaphragm.

VetBooks.ir

cardiodilator [*kahr"de-o-di'-la-tər*] an instrument for dilating the cardia.
cardiodiosis dilatation of the cardiac opening of the stomach.
cardiodynamics [*kahr"de-o-di-nam'iks*] study of the forces involved in the heart's action.
cardioesophageal [*kahr"de-o-ə-sof"ə-je'əl*] pertaining to the cardia of the stomach and the esophagus, as the cardioesophageal junction or sphincter.
Cardiofilaria pavlovsky a tissue-invading filarioid worm found in many birds but appearing to cause little if any disease.
cardiogenesis [*kahr"de-o-jen'ə-sis*] development of the heart in the embryo.
cardiogenic [*kahr"de-o-jen'ik*] originating in the heart.
c. plate the mesodermal primordium of the heart.
cardiogram [*kahr'de-o-gram"*] a tracing of a cardiac event produced by cardiography. See also **electrocardiogram**.
apex c. graphic recording of the apex beat.
cardiograph [*kahr'de-o-graf"*] an instrument for recording some element of the heartbeat.
cardiography [*kahr"de-og'rə-fe*] the graphic recording of a physical or functional aspect of the heart, e.g. echocardiography, electrocardiography, kinetocardiography, phonocardiography, vibrocardiography.
apex c. graphic recording of low-frequency pulsations at the chest wall over the apex of the heart.
ultrasonic c. echocardiography.
vector c. see **vectorcardiography**.
cardiohepatic [*kahr"de-o-hə-pat'ik*] pertaining to the heart and liver.
c. syndrome see **round heart disease** of turkeys.
cardioinhibitor [*kahr"de-o-in-hib'ĭ-tər*] an agent that restrains the heart's action.
cardiokinetic [*kahr"de-o-kĭ-net'ik*] 1. exciting or stimulating the heart. 2. an agent that excites or stimulates the heart.
cardiokymography [*kahr"de-o-ki-mog'rə-fe*] the recording of the motion of the heart by means of the electrokymograph.
cardiologist [*kahr"de-ol'ə-jist*] a physician who specializes in the diagnosis and treatment of heart disease.
cardiology [*kahr"de-ol'ə-je*] study of the heart and its functions.
interventional c. see **transcatheter**, balloon **valvuloplasty**.
cardiolysis [*kahr"de-ol'ə-sis*] the operation of freeing the heart from its adhesions to the sternal periosteum.
cardiomalacia [*kahr"de-o-mə-la'shə*] morbid softening of the muscular substance of the heart.
cardiomegaly [*kahr"de-o-meg'ə-le*] enlargement of the heart.
cardiomelanosis [*kahr"de-o-mel"ə-no'sis*] melanosis of the heart.
cardiomotility [*kahr"de-o-mo-til'ĭ-te*] the movement of the heart; motility of the heart.
cardiomyoliposis [*kahr"de-o-mi"o-lĭ-po'sis*] fatty degeneration of the heart muscle.
cardiomyopathy [*kahr"de-o-mi-op'ə-the*] a general diagnostic term designating disease of the myocardium, cardiomyocyte and supporting collagen and interstitial matrix; may be idiopathic or primary, or secondary other disease. Common in dogs and cats.
arrhythmogenic right ventricular c. a familial disease in Boxers characterized by syncope, typically occurring with exercise or excitement, ventricular arrhythmias, and sudden death. Many affected dogs are normal on clinical examination and thorough cardiac investigation, including electrocardiogram and echocardiography, may be required to diagnose the condition. Called also Boxer cardiomyopathy.
Boxer c. generally a reference to arrhythmogenic right ventricular cardiomyopathy (above), but Boxers also develop dilated cardiomyopathy (below).
congestive c. see dilated cardiomyopathy (below).
dilated c. 1. characterized by cardiac enlargement and poor myocardial contractility, especially of the left ventricle, and associated with cardiac arrhythmias, congestive heart failure and often sudden death. Occurs most commonly in young to middle-aged dogs of the large and giant breeds with rapidly developing signs of biventricular failure, atrial fibrillation and occasionally systolic murmurs. In cats, associated with taurine deficiency. Called also congestive cardiomyopathy. 2. **round heart disease** of turkeys.
Doberman c. a distinctive cardiomyopathy is seen in Doberman pinscher dogs, often presenting as an acute pulmonary edema, cardiogenic shock and sometimes sudden death.

C-15: Cross section of the heart from a cat with hypertrophic cardiomyopathy showing gross thickening of the left ventricular wall and papillary muscles. From Kittleson MD, Kienle RD, Small Animal Cardiovascular Medicine. Mosby, 1998.

hypertrophic c. occurs most commonly in cats, sometimes secondary to **hyperthyroidism**, occasionally in dogs and rarely in cattle in association with generalized **glycogenosis**. There is myocardial hypertrophy, primarily in the left ventricle and ventricular septum, resulting in increased resistance to filling and sometimes an outflow obstruction. In cats there is often an associated aortic thromboembolism. Inherited in Maine Coon and Ragdoll cats, due to mutations in the cardiac myosin binding protein C gene (*MYBPC3*).
infiltrative c. myocardial disease secondary to deposition in the heart tissue of abnormal substances such as amyloid or neoplastic infiltration.
inherited c. occurs in calves and probably in the other species. In calves it causes death due to acute heart failure up to the age of 3 months. Recorded in polled Hereford and Japanese black cattle. There may be a brief period of dyspnea and blood-stained frothy nasal discharge before death. Myocardial degeneration is obvious at necropsy. See also **woolly haircoat syndrome**.
obliterative c. see restrictive cardiomyopathy (below).
occult c. in the subclinical stage, but detectable with echocardiography and ambulatory electrocardiographic recording methods.
ovine c. fatal primary dilated cardiomyopathy of sheep, possibly familial; reported in Switzerland.
primary c. disease originating in the myocardium and not secondary to other cardipulmonary or systemic disease.
restrictive c. impaired left ventricular compliance reduces ventricular filling. Uncommon in animals but seen most often in cats, caused by endomyocardial fibrosis or abnormal left ventricular moderator bands. Called also obliterative cardiomyopathy.
spontaneous c. a dilated cardiomyopathy that causes heart failure and death in young turkeys. See **round heart disease**.
cardiomyopexy surgical removal of the epicardium and application of a pedicled flap of adjacent muscle to the denuded myocardium and pericardium, as a means of supplying collateral circulation to the heart.
cardionatrin see **atrial** natriuretic peptide.
cardionector the conduction system of the heart, comprising the sinoatrial node, bundle of His and atrioventricular node.
cardionephric [*kahr"de-o-nef'rik*] pertaining to the heart and kidney.
cardioneural [*kahr"de-o-nŏŏ'rəl*] pertaining to the heart and nervous system.
cardio-omentopexy suture of a portion of the omentum to the heart.
cardiopathy [*kahr"de-op'ə-the*] any disorder or disease of the heart.
cardiopericardiopexy [*kahr"de-o-per"ĭ-kahr'de-o-pek"se*] surgical establishment of adhesive pericarditis, to provide ancillary blood supply to the myocardium.
cardiopericarditis [*kahr"de-o-per"ĭ-kahr-di'tis*] inflammation of the heart and pericardium.
cardiophrenic [*kahr"de-o-fren'ik*] pertaining to the heart and diaphragm.
c. angle viewed on radiographs as the angle formed by shadows of the diaphragm and the heart. Alterations may be used to assess changes in the size and position of the heart.
c. ligament see phrenicocardial **ligament**.

cardioplasty [kahr'de-o-plas"te] plastic surgery of the esophagus and stomach. Sometimes performed in the management of megaesophagus in dogs.
cardioplegia [kahr"de-o-ple'jə] arrest of myocardial contraction, as by use of chemical compounds or cold in cardiac surgery.
cardiopneumatic [kahr"de-o-noo-mat'ik] pertaining to the heart and respiration.
cardiopneumograph [kahr"de-o-noo'mo-graf] an apparatus for registering cardiopneumatic movements.
cardioptosis [kahr"de-op-to'sis, kahr"de-o-to'sis] downward displacement of the heart.
cardiopulmonary [kahr"de-o-pool'mə-nar-e] pertaining to the heart and lungs.
c. arrest (CPA) cessation of effective external respiration and beating of the heart. The common causes in animals are inadequate ventilation, caused by general anesthetic, thoracic trauma, airway obstruction, and impediments to movement of the lung, thoracic wall or diaphragm, acidemia, hypotension, electrolyte imbalance, or extreme changes in body temperature (hypothermia, hyperthermia).
c. resuscitation (CPR) the re-establishment of heart and lung action. The basic steps are: *A*irway, *B*reathing, Circulation. A patent airway must be established and maintained; any obstruction is relieved and an endotracheal or tracheostomy tube inserted. Adequate ventilation with oxygen is provided by intermittent positive pressure and, if required, cardiac (chest) compression or massage is commenced.
cardiopuncture [kahr"de-o-pungk'chər] cardiocentesis.
cardiopyloric [kahr"de-o-pi-lor'ik] pertaining to the cardiac opening of the stomach and the pylorus.
cardiorenal [kahr"de-o-re'nəl] pertaining to the heart and kidneys.
cardiorrhaphy [kahr"de-or'ə-fe] suture of the heart muscle.
cardiorrhexis [kahr"de-o-rek'sis] rupture of the heart.
cardiosclerosis [kahr"de-o-sklə-ro'sis] fibrous induration of the heart.
cardioselective [kahr"de-o-sə-lek'tiv] having greater activity on heart tissue than on other tissue.
cardiospasm [kahr'de-o-spaz"əm] see **achalasia**.
cardiosphygmograph [kahr'de-o-sfig'mo-graf] a combination of the cardiograph and sphygmograph for recording the movements of the heart and an arterial pulse.
cardiosplenopexy suture of the parenchyma of the spleen to the denuded surface of the heart for revascularization of the myocardium.
cardiotachometer [kahr"de-o-tə-kom'ə-tər] an instrument for continuously portraying or recording the heart rate.
cardiotachometry [kahr"de-o-tə-kom'ə-tre] continuous recording of the heart rate for long periods.
cardiotherapy [kahr"de-o-ther'ə-pe] the treatment of diseases of the heart.
cardiotomy [kahr"de-ot'ə-me] 1. surgical incision of the heart. 2. surgical incision into the cardia.
cardiotonic [kahr"de-o-ton'ik] having a tonic effect on the heart; an agent that so acts, e.g. positive inotropic drugs.
cardiotoxic [kahr'de-o-tok"sik] having a poisonous or deleterious effect upon the heart.
c. glycosides see **cardiac** glycosides.
cardiovalvular [kahr"de-o-val'vu-lər] pertaining to the valves of the heart.
cardiovalvulotome [kahr"de-o-val'vu-lə-tōm"] an instrument for incising a heart valve.
cardiovascular [kahr"de-o-vas'ku-lər] pertaining to the heart and blood vessels.
c. accident includes **aortic** rupture, **Marfan's syndrome**, acute **heart failure**, **cardiac** valve rupture, cardiac **tamponade**.
c. collapse see circulatory **collapse**.
c. reserve see **cardiac** reserve.
c. system see **circulatory** system.
cardioversion [kahr'de-o-vur"zhən] the delivery of a direct current shock synchronized with the **QRS complex** to the myocardium as an elective treatment to end tachydysrhythmias; called also countershock and precordial shock. Used in humans, it has also been effectively used in dogs with atrial fibrillation and ventricular tachycardias.
cardioverter [kahr'de-o-vur"tər] an energy-storage capacitor-discharge type of condenser that is discharged with an inductance; it delivers a direct-current shock which restores normal rhythm of the heart.
Cardiovirus [kahr'de-o-vi"rəs] a genus in the family *Picornaviridae* that includes encephalomyocarditis (EMC) virus which causes disease in rodents, pigs, humans and some exotic species.
carditis [kahr-di'tis] inflammation of the heart; **myocarditis**.
cardivalvulitis [kahr-de-val"vu-li'tis] inflammation of the heart valves.
Carduus a genus of thistles in the plant family Asteraceae (Compositae); has a high nitrate content, causing nitrite poisoning in ruminants. Includes *C. pycnocephalus*, *C. tenuifloris* (slender or winged thistle).
careless weed ***Amaranthus reflexus***.
caret the symbol ^ above a number indicating the expected value or expected frequency.
Carex vulpina European plant in family Cyperaceae of sedges; contains cyanogenetic glucosides.
carfentanil an opioid analgesic; a very potent derivative of fentanyl used mainly in the capture of wild animals.
caribou (*Rangifer tarandus caribou*) an Artic and subarctic deer in the family Cervicae; known as the reindeer outside North America. See **reindeer**.
Carica papaya [kar'ĭ-kə] pawpaw tree, source of the proteolytic enzyme papain.
caries [kar'ēz] decay, as of bone or teeth.
dental c. plaque-induced demineralization and loss of substance of the hard tissues of the teeth, leading to continued destruction of enamel and dentin, and cavitation of the tooth. Deep occlusal pits or fissures, deep peridontal pockets and tight contact between teeth predispose to the formation of caries. Infrequently diagnosed in dogs; occurs occasionally in sheep. Called also a cavity.
infundibular c. see **infundibular** necrosis.
carina [kə-ri'nə] pl. *carinae* [L.] a ridgelike structure.
c. apex the most cranial point of the keel of the sternum of birds.
sternal c. the keel of the sternum, as in birds and horses.
c. tracheae a ridge between the openings of the right and left principal bronchi.
carinate [kar'ĭ-nāt] said of birds, having a carina or keeled sternum, compared with **ratite**.
Carmalt forceps conventional ratcheted, box-jointed hemostat forceps with grooves on the blade surfaces that run in the same direction as the length of the blades.
carminative [kahr-min'ə-tiv] 1. relieving flatulence. 2. an agent that relieves flatulence.
carmustine (BCNU) [kahr-mus'tēn] a nitrosourea, used as an **antineoplastic** agent.
Carmyerius a genus of rumen (digenetic trematode) flukes found in Asia; member of the family Paramphistomatidae. Includes *Carmyerius gregarius* and *C. spatiosus* (small rumen flukes of Asia).
carnassial tooth [kahr-nas'e-əl] a large, shearing cheek tooth; the upper fourth premolar and lower first molar in dogs and the upper third premolar and lower first molar in cats. Called also sectorial tooth.
c. abscess abscess at the root of a carnassial tooth. See **malar** abscess.
carnification [kahr"nĭ-fĭ-ka'shən] development of fleshy fibrous tissue in the lung.
carnitine [kahr'nĭ-tēn] compound required for the transport of fatty acyl groups into the matrix of the mitochondria where they undergo β-oxidation; also participates in acetyl transfer reactions in alanine and aspartate metabolism; often designated vitamin B_T, due to its vitamin role in *Tenebrio* sp. Present in high concentrations (5% dry weight) in meat extracts. Has been incorporated into low-calorie diets for obese dogs to maintain muscle mass while promoting loss of fat and weight reduction.
c. acetyltransferase enzyme associated with buffering of acetyl groups from acetyl CoA.
c. deficiency associated with dilated cardiomyopathy and lipid storage myopathies in dogs.
carnivore [kahr'nĭ-vor] any animal, particularly mammals of the order Carnivora, that eats primarily flesh. Includes cats, dogs, etc.
carnosinase [kahr'no-sĭ-nās"] an enzyme that hydrolyzes carnosine (amino-acyl-L-histidine) and other dipeptides containing L-histidine into their constituent amino acids.
carnosine [kahr'no-sēn] a dipeptide composed of beta-alanine and histidine, found in skeletal muscle of vertebrates.

VetBooks.ir

carotenase an enzyme that converts provitamin A carotenoids into vitamin A; not present in cats.

carotene [*kar'ə-tēn*] a yellow or red pigment from carrots, sweet potatoes, milk and body fat, egg yolk, etc.; it is a chromolipoid hydrocarbon existing in several forms. α-, β- and γ-carotene are provitamins which can be converted into vitamin A in the body by all animals except cats. β-carotene is the most important because of a quantitatively greater activity.

β-carotene see **carotene**.

carotenemia [*kar"ə-tə-ne'me-ə*] the presence of high concentrations of carotene in the blood.

carotenodermia [*kə-rot"ə-no-dur'me-ə*] yellowness of the skin due to carotenemia.

carotenoid [*kə-rot'ə-noid*] 1. any member of a group of red, orange or yellow pigmented polyisoprenoid lipids found in carrots, sweet potatoes, green leaves and some animal tissues; examples are the carotenes, lycopene and xanthophyll. α-carotene, β-carotene and β-cryptoxanthin are provitamin A carotenoids and can be converted by mammals to retinol. 2. marked by yellow color. 3. lipochrome.

c. pigments contribute to the yellow staining of fatty tissues especially in horses, Channel Island breeds of cattle and old cats.

carotenosis [*kar"o-tə-no'sis*] deposition of carotene in tissues, especially the skin.

caroticotympanic [*kə-rot"i-ko-tim-pan'ik*] pertaining to the carotid canal and the tympanum of the middle ear.

carotid [*kə-rot'id*] relating to the carotid artery, the principal artery of the neck. See Table 9.

c. body a small neurovascular structure lying in the bifurcation of the common carotid arteries, containing chemoreceptors that monitor oxygen content in blood and help to regulate respiration. Called also glomus caroticum.

c. body tumors usually unilateral nonfunctional adenoma, chemodectoma, nonchromaffin paraganglioma, or locally invasive carcinoma which may cause deviation of the trachea.

c. canal the canal in the tympanic part of the temporal bone of carnivores that transmits the internal carotid artery to the cranial cavity.

c. sheath contains the common carotid artery, internal jugular vein and vagosympathetic trunk.

c. sinus a dilatation of the proximal portion of the internal carotid or distal portion of the common carotid artery at its bifurcation into external and internal carotids, containing in its wall baroreceptors which when are stimulated by changes in blood pressure slow the heart, cause vasodilation and lower blood pressure; innervated mainly by the glossopharyngeal nerve.

c. sinus reflex slowing of the heart rate when pressure is applied over the carotid sinus.

c. sinus syndrome syncope sometimes associated with convulsive seizures due to overactivity of the carotid sinus reflex.

carotidynia [*kə-rot"o-din'e-ə*] tenderness along the course of the carotid artery.

carp [*kahrp*] a freshwater fish used extensively for human food in some countries, a pest in others. There are many varieties, including decorative ones. See also ***Carassius***, ***Ctenopharyngodon edella***. Called also *Cyprinus carpio*, *C. cyprinus*.

bighead c. ***Hypophthalmichthys*** *nobilis*.

c.-dropsy complex the cause is unknown; the clinical syndrome includes ascites and exophthalmos.

common c. see ***Cyprinus carpio***.

crucian c. see ***Carassius*** *carassius*.

c. erythrodermatitis see **erythrodermatitis**.

grass c. see ***Ctenopharyngodon idella***.

c. pox an infectious disease caused by Cyprinid herpes virus 1 (CyHV-1) that causes unsightly, wart-like lumps on the sking, mouth and fins. Lesions may persist for life, but the mortality rate is low. Stress and low water temperatures may predispose to infection.

silver c. ***Hypophthalmichthys*** *molitrix*.

carpal [*kahr'pəl*] pertaining to the carpus.

c. bones are located between the radius and ulna and metacarpals. Typically, there are six to eight bones, depending on the species, arranged in two rows and numbered from medial to lateral. See Table 10.

c. canal syndrome see carpal tunnel syndrome (below).

c. flexion posture at parturition the fetus is presented with the carpal joints flexed, thus increasing the diameter of initial parts entering the pelvic canal, resulting in dystocia in some patients.

c. fracture see **chip fractures**, slab **fracture**.

c. instability/flexion syndrome seen in young puppies, particularly Doberman pinschers and Shar peis; the carpi remain slightly flexed when standing and the paws are deviated inwards.

c. necrosis necrosis of skin on the anterior aspect of the carpus of piglets due to abrasion from rough floors or floors disinfected with caustic chemicals. Necrosis may also be present on the posterior aspect of the hocks.

c. organ a group of tactile, sinus hairs located on the posterior aspect of the forelimbs of cats, sensitive to touch. See also **tactile** hair organ.

c. pad the footpad of carnivores found on the palmar surface of the carpus, just distal to the accessory carpal bone which it may serve to protect; also called (in greyhounds and some other dogs) the stopper pad. Its remnant in horses is thought to be the chestnut. See also **footpad**.

c. sheath common synovial sheath in the forelimb of the horse, shared by the superficial and deep flexor tendons as they pass through the carpal canal.

c. tunnel the osseofibrous passage for the flexor tendons and median nerve, formed by the flexor retinaculum and the carpal bones.

c. tunnel syndrome a complex of signs resulting from compression of the median nerve in the carpal tunnel. In horses there is lameness with pain on extreme carpal flexion. There are no lesions on the anterior carpal bones.

carpal joint [*kahr'pəl joint*] a series of joints that includes the antebrachiocarpal, formed by the distal ends of the radius/ulna and the proximal carpal row, the intercarpal joint between the two rows of carpal bones, the carpometacarpal joint(s) between the distal row of carpal bones and the metacarpal bone(s). The joint capsule is continuous throughout all of the joints and has three major sacs, the radiocarpal, the intercarpal and the carpometacarpal sacs. Called also (in ungulates) the knee. See also **carpus**.

c. j. luxation a major injury in horses while racing, usually involving fractures of carpal bones and rupture of ligaments. The animal is unable to bear weight on the leg and there is excessive mobility and crepitus. In dogs and cats, violent hyperextension of the carpus damages soft tissue support for the joint so that the animal walks with the carpus on or near the ground.

c. j. osteochondrosis osteochondrosis dissecans and subchondral cysts occur in the carpal joints of horses, causing lameness, pain on passive extension and sometimes distention of the joint capsule.

c. j. subluxation may occur in the dog as a result of trauma but is also recorded as a familial disease associated with the simultaneous occurrence of hemophilia A.

Carpathian brown cattle dark brown to gray dual purpose cattle from Ukraine.

carpectomy [*kahr-pek'tə-me*] excision of a carpal bone.

carpet weed ***Kallstroemia*** *hirsutissima*.

Carpetmaster a New Zealand carpetwool sheep derived by mutation from the Perendale. It has a white face, dark hooves, and wool of 35–45 microns.

carpetwool see carpet **wool**.

carpetwool sheep breeds used extensively for the production of wool for carpet manufacture include Carpetmaster, Elliottdale, fat-tailed breeds generally, Scottish blackface, Swaledale, Tukidale.

carpincho see **capybara**.

carpitis [*kahr-pi'tis*] common acute or chronic inflammation of the joint capsule of the carpus and the associated structures in horses. There is pain and swelling and there may be exostoses in chronic cases. Called also popped knee in horses.

Carpoglyphus [*kahr"po-gli'fəs*] a genus of the insect family of Acaridae. Includes *Carpoglyphus lactis* (the cause of dried fruit mite dermatitis).

carpometacarpal [*kahr"po-met"ə-kahr'pəl*] pertaining to the carpus and metacarpus.

c. joint the articulation between the distal row of carpal bones and the metacarpals in which there commonly is very limited movement.

carpopedal [*kahr"po-ped'əl*] affecting the carpus and foot.

carpophalangeal [*kahr"po-fə-lan'je-əl*] pertaining to the carpus and phalanges.

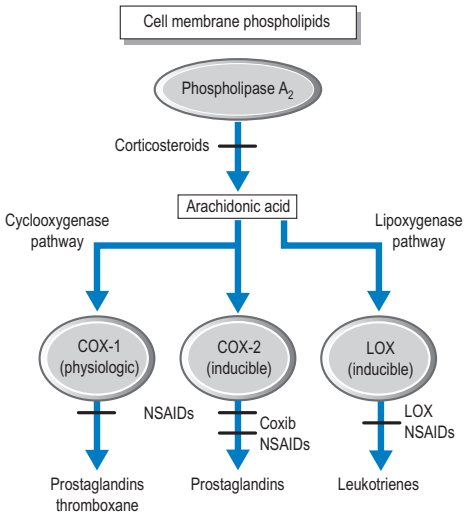
carprofen a propionic acid derivative, nonsteroidal anti-inflammatory agent used as an analgesic in dogs and cats.

carpus [*kahr'pəs*] the segment of the limb between the radius and ulna and metacarpus, made up of six to eight bones, depending on the animal species, arranged in two rows and numbered from medial to lateral. Called also the knee in horses and cattle and the wrist in dogs and cats. See also Table 10 and entries under **carpal**.
dropped c., broken-down c. hyperextension injury in the dog or cat that results in weight-bearing on the carpus and metacarpals.
Carré's disease canine distemper.
carriage dog see **Dalmatian**.
carrier [*kar'e-ər*] 1. an animal which harbors a disease organism in its body without manifest signs, thus acting as a carrier or distributor of infection. A carrier may be one with a latent infection and which appears healthy or a persistently infected animal. Other types of carriers are the incubatory carrier, when the animal is not yet showing clinical signs, or a convalescent carrier when it has passed the clinical stage. 2. a heterozygote, i.e. an animal which carries a recessive gene, autosomal or sex-linked, together with its normal allele. 3. an edible material used in the formulation of processed feeds. The carrier is used to absorb or attach other ingredients by impregnation or coating so that they are evenly mixed throughout the feed. 4. a component of a vaccine that is more immunogenic than the primary antigen and included in order to elicit a greater immunologic response by the recipient.
c. detection in genetic terms the detection of a heterozygote which carries the gene which is under investigation.
c. effect use of a hapten conjugated to a carrier protein in a primary immune response will result in a secondary immune response to the same combination, but not to the hapten alone or in association with a different carrier protein.
obligate c. the subject is always available as a carrier of the infection.
c. protein membrane proteins that have a high affinity for particular solutes, e.g. glucose, and which facilitate the passage of these solutes through membrane barriers. See also **carrier-mediated transport**.
c. register in genetic terms is a list of all the animals which have produced an affected offspring.
c. state the state of being a carrier of an infectious disease or of a genetic defect.
c. test herd a herd consisting entirely of known carriers of a gene which is under investigation; a definition which could be extended to include a herd comprising only individuals known to carry a specific infectious agent.
carrier-free [*kar'e-ər-fre*] a term denoting a radioisotope of an element in pure form, i.e. essentially undiluted with a stable isotope carrier.
carrier-mediated transport movement which occurs across membranes, such as the blood–brain barrier and the gastrointestinal mucosa. Inherent in the mechanism is a rapidly reversible reaction between the substance being transported and components of the membrane. The membrane component is the 'carrier'. The mechanism is also characterized by (1) being saturable; (2) like substances being able to compete for the services of the carrier so that competitive inhibition occurs. There are two forms of carrier-mediated transport, active transport and facilitated diffusion. The rapid transfer of drug metabolites into urine is by active transport. Entry of glucose into most cells is by facilitated diffusion but its passage across the gastrointestinal mucosa is by active transport. Active transport requires a direct expenditure of energy, whereas facilitated diffusion is not energy dependent. Active transport can move substances against a concentration gradient, facilitated diffusion cannot.

C-16: Many infectious agents are carried by animals at sites not associated with overt disease. *Dermatophilus congolensis* is present in this minor lesion but can be spread by flies from this to other regions of the skin to result in clinical dermatophilosis when excessive skin moisture or trauma allows infection.

carrion eating chewing of bones or other carcass material; a species trait, or a sign of nutritional deficiency, usually phosphorus.
Carrion's disease [*kah-re-ōn'*] see ***Bartonella***.
carrot bush [*kar'ət*] ***Eremophila*** *deserti*.
carrying capacity the number of animal units that a farm or area will carry on a year round basis, including that needed for conservation of winter feed. The concept is used mainly with arid and semi-arid lands. Usually stated as dry cows or dry sheep equivalents per acre (or hectare).
CARS compensatory anti-inflammatory response syndrome.
cartilage [*kahr'tĭ-ləj*] a specialized, gristly connective tissue present in both mature animals and embryos, providing a model in which most of the bones develop, and constituting an important part of the organism's growth mechanism; the three most important types are hyaline cartilage, elastic cartilage and fibrocartilage. Also, a general term for a mass of such tissue in a particular site in the body.
alar c's the cartilages of the wings of the nose.
annular ear c. a ring of cartilage interposed between the rolled-up auricular cartilage and the skull.
arthrodial c., articular c. the hyaline cartilage, and rarely the fibrocartilage, clothing the articular surfaces of synovial joints.
arytenoid c's two pyramid-shaped cartilages of the larynx.
auricular c. cartilage of the pinna and much of the external ear canal.
c. canals tunnels containing blood vessels incorporated in developing cartilage.
connecting c. that connecting the surfaces of an immovable joint.
costal c. a bar of hyaline cartilage that attaches a rib to the sternum in the case of true ribs, or to the immediately cranial rib in the case of the more cranial false ribs, or tapers to a point to end in the musculature in floating ribs. They are broadest dorsally where they form costochondral joints with the bony ribs.
cricoid c. a ringlike cartilage forming the caudal part of the larynx.
diarthrodial c. articular cartilage.
elastic c. cartilage that is more opaque, flexible and elastic than hyaline cartilage, and is further distinguished by its yellow color. The ground substance is penetrated in all directions by frequently branching fibers that give all of the reactions for elastin.
c. emboli see fibrocartilaginous embolic **myelopathy**.
ensiform c. xiphoid process.
fibrous c. fibrocartilage.
floating c. a detached portion of semilunar cartilage in the stifle joint.
hoof c. see ungal cartilage (below).
hyaline c. flexible, somewhat elastic, semitransparent cartilage with an opalescent bluish tint, composed of a basophilic fibril-containing substance with cavities in which the chondrocytes occur.
interarytenoid c. an occasional cartilage located between the two arytenoid cartilages.
lateral c. see ungal cartilage (below).
nasal c. rostral end to the internasal septum, separating the nasal cavities and anchoring the other cartilages around the nostrils. Called also septal cartilage.
parapatellar c. cartilaginous plates medial and lateral to the patella in some species, e.g. dogs.
permanent c. cartilage that does not normally become ossified.
retained enchondral c. cores occur in ulnar metaphysis and lateral femoral condyles of young, giant breed dogs. Visible radiographically as radiolucent inverted cones, extending into the metaphysis, they are often associated with growth deformities such as forelimb valgus and genu valgum.
reticular c. elastic cartilage.
scapular c. dorsal extension of the blade of the scapula, mainly in ungulates; tends to calcify with age.
c. scissors used for ear cropping in dogs.
semilunar c. one of the two intra-articular cartilages of the stifle joint.

temporary c. cartilage that is normally destined to be replaced by bone.
thyroid c. the unpaired cartilage of the larynx to which the vocal folds attach.
tibial c. the bed of cartilage located on the caudal surface of the intertarsal joint of birds; the tendons of the digital flexors pass through it.
ungual c's. the medial or lateral cartilage of the hoof of horses born on the palmar processes of the distal phalanyx. These flat or L-shaped plates of hyaline cartilage lie mainly against the inner wall of the hoof with their proximal borders being free, subcutaneous and palpable on each side of the pastern joint. They are clad with venous plexuses on their superficial and deep surfaces and are significant contributors to the vasular pump. Calcification of the cartilages results in **sidebone**. Called also lateral cartilages.
vomeronasal c. either of the two narrow strips of cartilage, one on each side, of the nasal septum supporting the vomeronasal organ.
xiphoid c. posterior continuation of the sternum; supports the anterior abdominal wall, especially the linea alba.
yellow c. elastic cartilage.
cartilage-forming tumor tumors containing principally cartilage (chondroma, chondrosarcoma); some contain bone. Only a small proportion of skeletal neoplasms, except in sheep, are cartilaginous.
cartilaginiform [*kahr"tĭ-lə-jin'ĭ-form*] resembling cartilage.
cartilaginous [*kahr"tĭ-laj'ĭ-nəs*] consisting of, or of the nature of, cartilage.
c. joint the bones of the joint are joined together by fibrocartilage or hyaline cartilage. See **synchondrosis**, **symphysis**.
c. metaplasia occurs in normal tendons; is classified as abnormal only when the metaplasia is bony.
multiple c. exostosis see multiple cartilaginous **exostosis**.
c. osteoid degenerate cartilage which has lost its basophilic quality and stains like osteoid.
c. tumor see **cartilage-forming tumor**.
cartogram a map showing the distribution of a population by area.
cartography map making.
epidemiological c. making maps which show epidemiological data about distribution of disease or its causes by land area.
cartwheel flower plant see ***Heracleum mantegazzianum***.
carumonam a monobactam antibiotic, very resistant to β-lactamase, with activity against gram-negative bacteria, including most *Pseudomonas aeruginosa*.
caruncle [*kar'əng-kəl*] 1. a small fleshy eminence, often abnormal. 2. one of the fleshy protuberances on the head, face and neck of a Muscovy duck.
lacrimal c. small rounded piece of modified skin at the medial canthus of the eye from which hairs often protrude; sometmes called the medial caruncle.
maternal c. see uterine caruncle (below).
medial c. see lacrimal caruncle (above).
sublingual c. an eminence on either side of the frenulum of the tongue (frenulum linguae), on which the major duct of the sublingual gland and the duct of the submandibular gland open.
uterine c. fleshy masses on the wall of the uterus of pregnant ruminants. The placenta is attached only at these points. There are about 100 of them and they are very much smaller in the non-pregnant female.
caruncula [*kə-rung'ku-lə*] pl. *carunculae* [L.] caruncle.
caruncul itis inflammation of the uterine caruncles in ruminants.
carvedilol a third generation beta-adrenergic blocker used in the treatment of congestive heart failure in dogs.
Cary-Blair medium a transport medium particularly used for *Salmonella* spp.
cary(o)- for words beginning thus, see those beginning *karyo-*.
Caryophanon see ***Simonsiella muelleri***.
Caryophyllaeus a genus of the family of cestodes Caryophyllaeidae, found in the intestines of freshwater fishes. Includes *Caryophyllaeus fimbriceps*, *C. laticeps* (carp).
Caryospora apicomplexan protozoan parasites affecting mostly reptiles and raptors.
C. bigenetica an occasional cause of pyogranulomatous dermatitis in puppies.
caryosporiosis infection by a protozoa in the genus *Caryospora*.



C-17: Simplified illustration of the arachidonic acid cascade. From Maddison JE, Page SW, Church DB, Small Animal Clinical Pharmacology, 2nd Edition. Saunders, 2008.

CAS RN Chemical Abstracts Service Registry Number.
casanthranol [*kə-san'thrə-nōl*] cascara.
Cascabela South American shrub genus in the plant family Apocynaceae. Contains cardiac glycosides, e.g. thevetin. Causes sudden death in animals eating any part of the plant. Includes *C. thevetia (Thevetia peruviana)*. Called also *T. nereifolia*, yellow oleander, cook tree, daffodil tree, be-still tree.
cascade [*kas-kād'*] a series of steps or stages (as of a physiological process) which, once initiated, continues to the final step by virtue of each step being triggered by the preceding one, sometimes with cumulative effect. For example, the coagulation cascade or arachidonic acid cascade.
cascado [Indonesian] a bovine dermatitis caused by *Stephanofilaria dedoesi*.
cascara [*kas-kah'rə*] dried bark of *Rhamnus purshiana*, used as an irritant cathartic. Called also cascara sagrada.
case [*kās*] in epidemiology, an animal which has the specified disease or condition which is under investigation.
c. abstract a structured summary of a case report suitable for computer entry; permits machine sorting and retrieval and leads an investigator to the original paper records on which detailed descriptions must be based.
primary c. the patient which brings the disease into the population.
c.-control sampling selection of cases as a sample to use in a case-control study (below).
c.-control study a retrospective, analytical, epidemiological study. A group of pre-existing cases of the disease are matched with a selected group of control animals that do not have the disease so that the presence or otherwise of an hypothesized disease determinant can be ascertained in both groups.
c. definition the determination of the set of criteria (individual clinical signs, postmortem, laboratory findings) that define the characteristics of an animal, or herd, to be chosen as a case for a case-control study.
c. fatality rate the proportion of cases with a specified condition which die within a specified time.
c. finding the strategy of surveying a population to find the sick animals that are the foci of infection; an essential early step in the eradication of any disease.
c. history the collected data concerning an individual, contact and related animals, environment and management procedures, including any past medical history and any other information that may be useful in analyzing and diagnosing the case or for instructional or research purposes.
index c. the first case recorded in an outbreak.
c. management care of a sick animal including specific and supportive medication, surgical intervention, housing, bedding, nutrition, restraint, collection of specimens for submission to laboratory or stall-side tests.
c. population the group of animals in the total population which are sick or infected, as distinct from the control population, which are not sick or infected.

c. recording entry in records of the clinical findings of individual sick animals. May be structured or unstructured, paper or machine, with or without the accounting record for the case.

caseation [*ka"se-a'shən*] 1. the precipitation of casein. 2. a form of necrosis in which tissue is changed into a crumbly, amorphous mass resembling cheese.

casein [*ka'sēn*] a phosphoprotein, the principal protein of milk, the basis of curd and of cheese. Found in milk in colloidal suspension and precipitated by acid and by rennet. Called also caseinogen.

c. clot the insoluble form of caseinogen produced by the action of rennin in the presence of calcium.

c. digestion an identification test for bacteria assessed by inoculation of milk agar.

caseinogen [*ka-sēn'o-jen*] outside North America, the term for casein.

caseopurulent the lesion is partly caseous, partly purulent, or consistently of a consistency midway between the two.

caseous [*ka'se-əs*] resembling cheese or curd; cheesy.

caseous lymphadenitis [*ka'se-əs lim-fad"ə-ni'tis*] a chronic disease of sheep and goats caused by *Corynebacterium pseudotuberculosis*. The source of infection is discharge from pulmonary or skin abscesses with infection through intact skin or skin wounds. Characterized by caseopurulent abscesses in lymph nodes but with little effect on general health, except respiratory or wasting disease associated with internal abscesses.

cashmere, cashmere wool fine, downy hair fiber from the Kashmiri goat.

cashmere goat see **Central Asiatic Pashmina**.

Caslick E.A. Caslick, a veterinarian who pioneered in the field of equine reproduction in the early 20th century.

C. operation a means of reducing the mucocutaneous cleft of the vulva to prevent the aspiration of air and thus reduce the amount of infection and inflammation in the urogenital tract. The simplest version of the operation is the suturing together of the lips of the vulva, after removal of a narrow strip of mucosa, over most of their length.

Casoni's test [*kə-so'ne*] a traditional test for hydatid infection (echinococcosis) used in humans. The production of a wheal and flare reaction at the site of intradermal injection was indicative of infection.

caspase [*kas'pās*] cystein-aspartic acid protease; essential in cells for apoptosis.

caspofungin [*kas"po-fun'jin*] a beta-glucan synthase inhibitor used as a broad spectrum antifungal agent.

cassaine cardiotoxic diterpenoid alkaloid in the bark of *Erythrophloeum guineense* tree. Causes anorexia, defective vision, increased heart sounds and dyspnea.

cassava [*kə-sah'və*] see ***Manihot***.

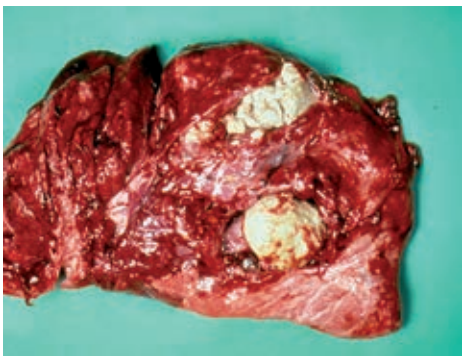
cassette [*kə-set'*] 1. a light-proof housing for X-ray film, containing front and back intensifying screens, between which the film is placed and held during exposure. Although it is usual to have two screens, there may be only one where there is a special need for a high detail picture. 2. a magazine for film or magnetic tape.

computed radiography c. lightproof housing for a computed radiography plate.

c. grid composed of alternating strips of lead and radiotranslucent material such as aluminum. Placed on top of the cassette it permits the passage only of the X-rays that are passing directly to the film. Scattered rays are absorbed by the lead and this reduces the effect of scatter on the film and provides a more clearcut image.

c. holder a radiolucent holder, into which the cassette fits, is on a long handle permitting the person holding the cassette to stay well clear of the X-ray beam.

c. tunnel a device which enables the operator to pass a number of cassettes past the X-ray beam and the grid without the need to open and reload cassettes.



C-18: Caseous lymphadenitis. Abscesses in lung of sheep which, when ruptured into a bronchus, provide a source of infection to other sheep through infected nasal discharges.

Cassia legume genus of the Caesalpiniaceae family of plants; can contain anthraquinone glycosides which causes diarrhea and an unidentified toxin causing myopathy. Most species in the genus have been reclassified as *Senna* spp.

Cassine buchanani African plant in the family Celestraceae; an unknown toxin causes nephrosis. Called also *Elaeodendron buchananii*.

Cassou artificial insemination gun an instrument used for artificial insemination and embryo transfer. Consists of a very narrow diameter stainless steel plunger with a knob handle. The plunger is fitted into a plastic straw from which the semen or embryo is expelled.

cassowary a large Australian ratite bird with a brightly colored head and neck and a bony helmet on top of its head. Called also *Casuaris* spp.

CAST Council for Agricultural Science and Technology

cast [*kast*] 1. a positive copy of an object, e.g. a mold of a hollow organ (a renal tubule, bronchiole, etc.), formed of effused plastic matter and extruded from the body, as a urinary cast; named according to constituents, as epithelial, fatty, waxy, etc. 2. a restraint procedure used in horses and cattle, and occasionally in large beasts such as elephants, to pull them to the ground so that surgical procedures can be performed. Used less nowadays than previously because of the advent of new anesthetic techniques. There are many techniques and special harnesses for special purposes. 3. an animal lies down but is unable to right itself into a position of sternal recumbency so that it can rise, e.g. a horse in a loose box when it is lying too close to a wall, a sheep in heavy fleece in wet weather. When helped to the sternal posture the animal is able to rise. 4. to form an object in a mold, as a replica of teeth made in an impression. 5. a stiff dressing or casing, usually made of plaster of Paris, used to immobilize body parts. More modern, lightweight casts are made of polyurethane resins. 6. culled, e.g. cast for age. 7. shedding of velvet by deer stags and bucks.

full leg c. see long-leg cast (below).

bivalve c. one that is cut into two parts, longitudinally, to allow frequent cast changes, particularly to allow access to a wound.

half c. see walking cast (below).

hyaline c. see urinary **cast**.

long-leg c. a rigid material, usually plaster of Paris, is applied from the toes to as high as possible over the humerus or femur. Used for immobilization of fractures of the radius, ulna or tibia.

renal c's (1) see urinary casts (below).

stone c. a reproduction of the jaw and dentition made from powdered gypsum stone and water in an impression mold.

urinary c's precipitates of mucoprotein or plasma protein in the shape of the renal tubular laminae in which they form, often with cellular elements. Observed in the examination of urinary sediment, they indicate renal tubular or epithelial damage. Hyaline casts are composed of mucoproteins or plasma proteins without formed cellular elements. Waxy, granular, epithelial, erythrocyte and leukocyte casts may occur, each representing a type of cellular reaction or stage of degeneration within the cast. Fatty casts are formed from degenerating tubular epithelial cells and, particularly in cats, lipid in these cells. Casts may dissolve in alkaline urine. Called also cylindroids.

walking c. one that does not extend above the elbow or stifle, thereby permitting movement of those joints so that the animal can walk on the leg. Suitable for fractures of the metacarpus or metatarsus.

Castalis spectabilis African member of the plant family Asteraceae; causes cyanide poisoning. Called also *Dimorphotheca spectabilis*, blue bitou, Transvaal bitou.

castanospermine polyhydroxylated indolizidine alkaloid in the ripe seeds of *Castanospermum australe*. Powerful inhibitor of mononuclear cell beta-glucosidase which is however not the cause of the seeds' toxicity.

VetBooks.ir

C-19: Red cell cast in urine sediment.
From Raskin RE, Meyer D, Atlas of Canine and Feline Cytology. Saunders, 2001.

VetBooks.ir

C

Castanospermum australe Australian tree in the legume family Fabaceae; contains **castanospermine**; an unidentified toxin in ripe seeds (not castanospermine) causes severe enteritis in livestock, but only if eaten in large numbers. Humans can be severely affected by less than one seed. Called also Moreton Bay chestnut, black bean.

casters the small rubber wheels on surgical trolleys, patient stretchers, mobile equipment.
conductive c. the casters are impregnated with carbon to facilitate the dispersal of static electricity from equipment. This is enhanced if the floor also has a conductive covering.

Castilleja a North American genus of the plant family Scrophulariaceae; selenium converter plants which selectively absorb selenium from the soil. Called also paintbrushes.

casting [*kast'ing*] the technique of using a rope or a special harness designed for the purpose to make an animal fall to the ground or onto a specially prepared area. Used for large animals especially horses and cattle.
c. bed the area designated for a cast animal to fall. It is usually cushioned with straw or, in the case of a permanent facility, rubber or other synthetic padding.
Burley c. method one that uses a rope centered over the shoulders, crossed between the front legs, crossed over the back and then passed between the hindlegs, avoiding the scrotum or udder and with traction backwards. Used in cattle.
half hitches c. method suitable only for cattle; a non-slip knot is applied around the neck and half-hitches are placed behind the front legs and around the flanks. Traction is applied backwards.
c. harness an arrangement of leather or webbing straps, ropes and rings is applied to the hindlegs below the pasterns with ropes running forward through a shoulder harness. Traction on the ropes pulls the legs forward and the horse falls to one side. The ropes are used to tie the legs in a convenient position. Not suitable for use with cattle.
c. injury may be injury or even fracture of a limb bone, or injury to a nerve, especially facial or radial nerves.
London c. a complicated technique for casting a horse using two ropes and three hobbles. It is very easy on the horse and gives excellent exposure of the inguinal region.
Parker c. a method of casting a horse using two ropes, one of which pulls the feet of two limbs on one side together, while the other pulls the horse over.
c. pen used at abattoirs to restrain animals that are to be slaughtered according to the Jewish law. It is a restraint cage or cradle which enables the operator to tip the animal onto its back so that it can be slaughtered while it is still conscious.
Reuff c. using a single rope, a loop is passed around the horns, followed by three half hitches, one around the neck, one around the chest behind the elbows and one just in front of the udder.

castor bean see ***Ricinus communis***.
castor bean tick see ***Ixodes ricinus***.
castor oil a fixed oil obtained from the seed of the castor bean plant (***Ricinus communis***); it has an irritant effect on the intestines and acts as a powerful purgative. Castor oil is also used externally as an emollient in seborrheic dermatitis and other skin diseases. It does not contain significant amounts of ricin.
c. o. plant *Ricinus communis*.
false c. o. plant ***Datura*** *stramonium*, *D. ferox*.

Castor Rex see **Rex** (2).

castrate [*kas'trāt*] 1. to deprive of the gonads, rendering the animal incapable of reproduction. 2. a castrated animal. The strictly correct usage of the word is to apply it to animals of both sexes. Common usage is to restrict its use to the male.

castration [*kas-tra'shən*] excision of the gonads.
Burdizzo c. see **Burdizzo emasculatome**.
closed c. see covered castration (below).
covered c. the covering of the scrotal sac is incised and the testicle released still enclosed in its tunica vaginalis. The cord is ligatured and the testicle and its enveloping tunic removed *in toto*. Preferred for adult stallions or when the inguinal canal is considered to be sufficiently enlarged to permit eventration. Called also closed castration.
elastic ring c. see **elastrator**.
elastrator c. see **elastrator**.
female c. removal of the ovaries, or bilateral **oophorectomy**; spaying.
male c. removal of the testes, or bilateral **orchiectomy**.
mutilatory c. castration of companion animal males is thought by some to be an unnecessary mutilation. The view applies particularly to dogs. In the conflict between the animal liberators and those concerned with restraining the growth of the cat and dog populations, the zero population growth advocates hold most of the cards.
open c. incision through the tunica vaginalis and direct ligation of the spermatic vessels and vas deferens. Compare with covered castration (above).
prepubertal c. in sheep, castration of males before puberty may result in a greater risk of subsequent obstructive urolithiasis because of failure of the urethra to fully develop its potential for dilatation. In companion animals, practised most commonly in animal shelters prior to re-homing stray animals.
c.-responsive dermatosis an alternate name **alopecia X**, based on the observation that hair re-growth occurs in some dogs after castration.
standing c. one done under sedation with local anesthetic with the animal standing. Most commonly done in horses, llamas and camels.

Castroviejo pertaining to Ramon Castroviejo, a Spanish/American ophthalmologist (1904–1987) whose name is applied to a range of ophthalmic surgical instruments including corneal scissors, forceps and trephines, razor blade holder, eyelid speculum and needle holder.

casualty [*kazh'oo-əl-te*] an accident; an accidental wound; death or disablement from an accident; also the animal so injured.
c. slaughter abattoir slaughtering of injured or sick animals. Rarely done these days because of the difficulty of getting cattle with fractured or dislocated limbs onto the abattoir floor. The modern, highly automated meat packing plant is not geared to such interruptions. Prohibited in some countries because of animal welfare concerns.

Casuaris see **cassowary**.

CAT computerized axial tomography. See computed **tomography**.

cat [*kat*] any member of the family Felidae, including the domestic cat, *Felis catus*, and many exotic (here taken to mean nondomestic or zoological, rather than extraterritorial) species. See also **feline**.
c.-bite abscess a common sequela to a frequent injury. Particularly during the mating season, but also at other times, cats are likely to inflict or be subjected to bites or scratches during fighting or even vigorous play with each other. These contaminated puncture wounds, which are prone to abscessation, can be located anywhere on the body, but most often occur at the tail base, lower limbs and around the head and neck. *Pasteurella* spp., ***Prevotella*** spp., ***Porphyromonas*** spp., fusiform bacilli and β-hemolytic streptococci are commonly involved.
c. breeds are generally of two groups, the longhair and shorthair types. Within these, there are numerous specific breeds whose differences may be great, in conformation, color and certain distinctive features, or slight, on the basis of coat and/or eye coloring. The longhaired breeds, also called Persians, are of short, stocky (cobby) build with broad, short heads, small ears, large round eyes, and short, thick legs. One variety, the **Peke-faced**, has an extremely short nose. There are some specific breed types, but in general, they are divided on the basis of coat color, sometimes qualified by pattern of pigmentation or eye color, and the list is very long. The major groups are: solid colors (black, blue-eyed white, orange-eyed white, odd-eyed white, blue, chocolate,

lilac, red, cream), broken colors (tabbies, **tortoiseshell**, cream, bicolors and harlequin), shaded colors (**smoke**, **Chinchilla**, silver and **cameo**), **Himalayan** (1)/**Colorpoint** (various colors). Additional longhaired breeds are the **Angora**, **Birman**, **Balinese**, **Cymric**, **Javanese**, **Maine coon**, **Ragdoll** and **Turkish van**. The shorthaired breeds include: **Abyssinian**, **American curl**, **Bengal**, **Bombay**, **British shorthair**, **Burmese**, **California spangled**, **Exotic shorthair**, **Havana brown**, **Korat**, **Manx** (may be longhair or shorthair), **Oriental** (many different color groups), **Rex**, **Russian blue**, Siamese (further divided on the basis of color in their points), **Singapura**, **Somali** and **Tonkinese**. In addition, there is the **Sphinx** cat, or Canadian hairless.

c. fancy a term used in reference to breeders, registration bodies, clubs and societies, and any other groups sharing a common interest in cats (cat fanciers).

c. fever see **feline** panleukopenia.

c. flu see **feline** viral respiratory disease complex, feline ***Calicivirus*** infection, feline viral **rhinotracheitis**.

c. foot in dog conformation describes a round, compact foot with tightly bunched, arched toes.

c. plague see **feline** panleukopenia.

pouting c. see fat-**chin**.

c. pox see feline **cowpox**.

scabby c. disease feline miliary **dermatitis**.

c. scratch fever see **cat-scratch disease**.

swimming c. see **Turkish van**.

cat-bite fever an infectious disease of humans transmitted by the bite of a cat, caused by *Pasteurella multocida* and marked by the formation of an abscess at the site of inoculation. NOTE: Not to be confused with **cat-scratch disease**.

cat-scratch disease a benign, subacute, regional lymphadenitis of humans believed to be caused by *Bartonella henselae* and usually associated with a scratch or bite of a cat or a scratch from a surface contaminated by a cat. Called also benign lymphoreticulosis. Not to be confused with **cat-bite fever**.

cat(a)- word element. [Gr.] *down, lower, under, against, along with, very*.

catabasis the stage of decline of a disease.

catabiosis the natural senescence of cells.

catabolic [*kat"ə-bol'ik*] see **catabolism**.

fractional c. rate the percentage of an available pool of body component, e.g. protein, iron, which is replaced, transferred or lost per unit of time. Takes account of the size of the pool of available metabolite in determining the absolute amount of it which is lost or transferred. Same principle applies in fractional transfer rate.

catabolin one of the monokine group of substances which stimulates bone resorption but only in the presence of osteoblasts. Called also IL-1, interleukin-1.

catabolism [*kə-tab'o-liz-əm*] any destructive process by which complex substances are converted by living cells into simpler compounds, with release of energy. See also **metabolism**.

catabolite [*kə-tab'o-lit*] a compound produced in catabolism.

catacrotism [*kə-tak'ro-tiz-əm*] a pulse anomaly in which a small additional wave or notch appears in the descending limb of the pulse tracing.

catadicrotism [*kat"ə-di'kro-tiz-əm*] a pulse anomaly in which two small additional waves or notches appear in the descending limb of the pulse tracing.

catadromous said of fish; those living most of their lives in fresh water, but entering marine waters to spawn. Compare with **anadromous**.

catadromy migration of fish, as subadults or adults, from fresh to sea water.

catagen [*kat'ə-jən*] a transitional stage in the cycle of hair growth between active growth (anagen) and resting (telogen).

Catahoula leopard dog an American dog breed, named after a parish in Louisiana where it was used to herd hogs, but is now used for cattle. It is a large dog (50–90 lb) with a distinctive short, merled black, red or brown coat, which can be coarse, smooth or woolly. Heterochromia is common. Called also Catahoula hog dog.

Catalan ass a Spanish black, dark gray or brown donkey with paler underline.

Catalan sheepdog a medium-sized (44 lb) dog with a rough, long, flat or wavy, fawn, sable or gray coat covering the body and face.

catalase [*kat'ə-lās*] a heme-containing enzyme that specifically catalyzes the decomposition of hydrogen peroxide and found in bacteria that grow anerobically. The reaction is used as a test in the identification of bacteria.

catalepsy [*kat'ə-lep"se*] a condition of diminished responsiveness usually characterized by a trancelike state and constantly maintained immobility, often with flexibilitas cerea (a waxy rigidity of muscles). In humans, the patient with catalepsy may remain in one position for minutes, days, or even longer.

cataleptiform resembling catalepsy.

catalysis [*kə-tal'ə-sis*] increase in the velocity of a chemical reaction or process produced by the presence of a substance that is not consumed in the net chemical reaction or process; negative catalysis denotes the slowing down or inhibition of a reaction or process by the presence of such a substance.

covalent c. one type of enzyme reaction with substrates forming very unstable, covalently joined enzyme–substrate complexes which undergo further reaction.

catalyst [*kat'ə-list*] any substance that brings about catalysis.

catalytic constant [*kat"ə-lit'ik*] first-order rate constant (k_{cat}) reflecting the turnover number of the enzyme, or the number of molecules of substrate converted to product per unit time, when the enzyme is working at maximum efficiency. Called also turnover number.

catalyze [*kat'ə-līz*] to cause or produce catalysis.

catamnesis [*kat"am-ne'sis*] the follow-up history of a patient after it is discharged from treatment or a hospital.

catamnestic [*kat"am-nes'tik*] pertaining to catamnesis.

cataphora lethargy with intervals of imperfect waking.

cataphoresis [*kat"ə-fə-re'sis*] in **electrophoresis**, the movement of charged particles toward the cathode, or negative pole.

cataphoria [*kat"ə-for'e-ə*] a downward turning of the visual axes of both eyes after visual functional stimuli have been removed.

cataphylaxis [*kat"ə-fə-lak'sis*] deterioration of the body caused by an infection

cataplasia [*kat"ə-pla'zhə*] atrophy with tissues reverting to earlier, or more embryonic conditions.

cataplasm [*kat'ə-plaz"əm*] see **poultice**.

cataplexy [*kat'ə-plek"se*] a condition, often associated with **narcolepsy**; marked by abrupt attacks of a loss of voluntary muscular function (flaccid paralysis), except those controlling respiration and eye movement. Observed in dogs, cats and horses, especially Shetland ponies. In dogs these have been precipitated by extreme excitement, vigorous physical or sexual activity. Usually of short duration. Most cases are idiopathic, but can be associated with lesions of the brainstem.

food-elicited c. test cataleptic dogs demonstrate repeated attacks of catalepsy when presented with several individual pieces of food.

cataract [*kat'ə-rakt*] opacity of the ocular lens or its capsule or both. May affect the entire lens or be localized, e.g. posterior polar cataract. May result from ocular injuries, exposure to great heat or radiation, diabetes mellitus, chronic uveitis or inherited factors. Rare in cattle and swine, common in dogs. Treatment consists of surgical removal of the lens (lens extraction or cataract extraction).

acquired c. any non-congenital cataract; usually inherited or the result of trauma, diabetes mellitus, or chronic uveitis.

after-c. any membrane over the pupillary area after extraction of the lens, due to posterior capsule wrinkling and lens fiber regrowth. More notable in young animals. See secondary cataract (below).

capsular c. cataract involving the lens capsule.

congenital c. present at birth; sometimes non progressive, not always inherited.

cortical c. a cataract involving the posterior or anterior lens cortex. Relatively common in dogs; inherited in many breeds. Posterior cortical cataracts are often associated with progressive **retinal** atrophy.

developmental c. one that occurs at any age before the animal becomes an adult.

diabetic c. one associated with diabetes mellitus.

electric c. one caused by electrical current as in electrocution.

embryonal c. one caused by prenatal influences.

galactosemic c. see **galactosemia**.

hyaloid c. a focal opacity at the point where the hyaloid artery meets the posterior lens capsule. See also **Mittendorf's dot**.

VetBooks.ir

C-20: Congenital cataract in a foal. From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

VetBooks.ir

hypermature c. one in which the lens has begun to mineralize and resorb with subsequent leakage of lens proteins. This, in turn, is associated with lens-induced uveitis.
immature c. cataract occupying less than 100% of the lens.
incipient c. a very small cataract causing no detectable impairment of vision.
inherited c. cataract proven or suspected to have a genetic basis; occurs in a number of breeds of all common domestic species, sometimes in combination with other abnormalities of the eye. Inherited cataracts can be congenital or acquired.
intumescent c. a mature cataract that has become swollen; typical of the rapid-onset cataracts seen with diabetes mellitus in dogs.
juvenile c. one developing in very young animals, for example dogs less than 6 months of age.
mature c. one involving 100% of the lens.
Morgagnian c. advanced stage of cataract progression seen in some cataracts and in which liquefaction of the cortical lens fibers permits the nucleus to drop to the bottom of the lens capsule, shrinkage of the lens capsule, and usually lens-induced uveitis due to leakage of lens proteins.
nuclear c. one involving the nucleus of the lens; commonly congenital or nutritional in origin.
nutritional c. cataract occurring as a result of a nutritional cause such as arginine deficiency. See also **galactosemia**.
polar c. cortical cataract involving the anterior or posterior pole of the lens.
radiation c. one caused by radiation, as in radiotherapy.
secondary c. 1. a membrane over the pupillary area after surgical extraction of the lens, due to posterior capsule wrinkling and lens fiber regrowth. More notable in young animals. 2. non-inherited cataract.
senile c. cataract that occurs as a result of normal aging in all species, typically accompanied by nuclear **sclerosis**.
subcapsular c. cataract occurring immediately beneath the lens capsule; may be anterior or posterior.
suture-line c. cataract involving the 'Y' suture lines where lens fibers meet. Can be in the anterior or posterior lens cortex or nucleus.
toxic c. one caused by exposure to a toxic substance.
traumatic c. one caused by trauma.

cataracta [*kat"ə-rak'tə*] [L.] *cataract*.

cataractogenic [*kat"ə-rak"to-jen'ik*] tending to induce cataract formation.

catarrh [*kə-tahr'*] inflammation of a mucous membrane (particularly of the head and throat), with free discharge.
bovine malignant c. see **malignant catarrhal fever**.
nasal c. see **nasal** catarrh of rabbits.

catarrhal [*kə-tahr'əl*] having the characteristic of catarrh.
bovine c. fever see **malignant catarrhal fever**.
ovine c. fever see **bluetongue**.

catarrhine [*kat'ə-rīn*] a member of the parvorder Catarrhini of **primates**.

catastrophe theory the mathematical basis for the study of large changes in a total system which may result from small changes in a critical variable in the system.

catatricrotism [*kat"ə-tri'kro-tiz-əm*] a pulse anomaly in which three small additional waves or notches appear in the descending limb of the pulse tracing.

Catatropis a genus of intestinal flukes (digenetic trematodes) of the family Notocotylidae. Includes *Catatropis verrucosa* (avian ceca).

catching pens small enclosures in the shearing shed from which the sheep are dragged onto the shearing floor to be shorn.

catchment area 1. the geographical area drained by a river and its tributaries. 2. the region from which the data in a particular study are drawn. More commonly called study area.

catclaw [*kat'klaw*] ***Acacia gregii***.

catechol [*kat'ə-kol*] a compound, *o*-dehydroxybenzene, used as a reagent and comprising the aromatic portion in the synthesis of catecholamines. Previously known as pyrocatechol.

catecholamine [*kat"ə-kol'ə-mēn*] any of a group of sympathomimetic amines (including dopamine, epinephrine and norepinephrine), the aromatic portion of whose molecule is catechol. The catecholamines play an important role in the body's physiological response to stress. Their release at sympathetic nerve endings increases the rate and force of muscular contraction of the heart, thereby increasing cardiac output; constricts peripheral blood vessels, resulting in elevated blood pressure; elevates blood glucose concentrations by hepatic and skeletal muscle glycogenolysis; and promotes an increase in blood lipids by increasing the catabolism of fats.
c.-depleting agents cause depletion of neuronal stores of norepinephrine, thereby reducing adrenergic responses, e.g. reserpine.

catecholaminergic [*kat"ə-kol-əm"in-ur'jik*] activated by or secreting catecholamines.
c. receptor there are a variety of receptors that react differently with each of the catecholamine agonists and antagonists. It is therefore possible to blockade these receptors selectively.

catechu [*kat'ə-ku*] a powerful astringent formerly used internally for the treatment of diarrhea. Contains 25–35% catechutannic acid. Prepared from the heartwood of the leguminous tree *Acacia catechu*.

categorical data data relating to category such as qualitative data, e.g. dog, cat, female. It may be nominal when a name is used, e.g. location, breed, or ordinal when a range of categories is used, e.g. calf, yearling, cow.

caterpillar [*kat'ər-pil"ər*] the larval stage of insects of the Lepidoptera family.
army c. see ***Pseudoletia separata***.
c. cell see **Anitschkow cell**.
Eastern tent c. (*Malcosoma americanum*) is the suspected cause of **mare reproductive loss syndrome**. Eggs overwinter on branches in large egg masses and hatch to form larvae that live as social insects in 'tents' from which they emerge to feed on leaves until approximately 2 inches in 4–6 weeks, after which they pupate to form a moth. Larvae (caterpillars) are hairy and black with a white stripe on the back and yellow stripes on the sides. Moths are red/brown with two diagonal stripes on each wing.
hairy c. elongated mucosal erosions occur in mouths of horses grazing pasture infested with hairy caterpillars. See also **erosive stomatitis**.

catfish [*kat'fish*] primitive, eel-like, freshwater fish; naked or covered with spines or plates but not scales, and with characteristic barbels, the slender, whisker-like structures around the mouth ('cat's whiskers'). Members of the suborder Siluriformes, catfish are divided into many families, genera and species, including the blue catfish (*Ictalurus furcatus*) and channel catfish (*I. punctatus*), important in aquaculture, and *Corydoras* spp., which are popular as aquarium fish. See also ***Ictalurus*** and ***Ameiurus*** (the bullheads).
ghost c. see ***Kryptopterus***.
glass c. ***Kryptopterus*** spp.

catgut [*kat'gut*] an absorbable sterile strand derived from the intestinal submucosa of sheep and fixed in formalin, used as a surgical ligature and suture.
chromic c. treated with basic chromate salts; the suture does not absorb as much water as ordinary catgut and has a longer life and is stronger than the untreated product.

Catha edulis [*kath'ə*] small, rare African tree of the family Celastraceae. Contains an unidentified toxin which causes depression, muscle spasms and dysentery. The leaves are chewed by humans for their narcotic effect. Called also khat, gat, caffa.

Cathaemasiidae a family of alimentary tract flukes (digenetic trematodes) of birds.

Catharanthus a genus of the plant family of Apocynaceae; contains an unidentified toxin which causes incoordination and

convulsions; includes *C. pusillus* (*Vinca pusilla, lochnera pusilla*, milagaipoondu), *C. roseus*.

C. roseus souce of vincine alkaloids used in cancer chemotherapy; called also Madagascan periwinkle, *Vinca rosea*.

catharsis [*kə-thahr'sis*] a cleansing or purgation.

Cathartes aura see **vulture**.

cathartic [*kə-thahr'tik*] 1. causing bowel evacuation, usually of liquid feces; an agent that so acts. 2. producing catharsis.

bulk c. one stimulating bowel evacuation by increasing fecal volume.

irritant c. contact irritants that directly or indirectly cause diarrhea. May cause superpurgation in susceptible animals, especially horses. Drastic purgatives such as croton oil are no longer used. Castor oil, danthron, senna and cascara are still used, but much less than more bland agents such as mineral oil.

lubricant c. one that acts by softening the feces and reducing friction between them and the intestinal wall.

osmotic c. agents which retain water into the intestinal lumen, thereby producing liquid feces; includes saline cathartics (below).

saline c. one that increases fluidity of intestinal contents by retention of water by osmotic forces, and indirectly increases motor activity.

stimulant c. one that directly increases motor activity of the intestinal tract.

cathepsin [*kə-thep'sin*] any of a group of proteinases (cathepsins A-G) found in most cells, which takes part in cell autolysis and self-digestion of tissues.

c. D an acid hydrolase isolated from cartilage which plays a part in the endogenous degradation of proteoglycans in degenerative diseases of joints.

catheter [*kath'ə-tər*] a tubular, flexible instrument, passed through body channels for withdrawal of fluids from (or introduction of fluids into) a body cavity.

angiographic c. one through which a contrast medium is injected for visualization of the vascular system of an organ. Such catheters may have preformed ends to facilitate selective locating (as in a renal or coronary vessel) from a remote entry site. They may be named according to the site of entry and destination, such as *femoral–renal* and *brachial–coronary*.

arterial c. one inserted into an artery and utilized as part of a catheter–transducer–monitor system to continuously observe the **blood pressure** of critically ill patients. An arterial catheter also may be inserted for X-ray studies of the arterial system and for delivery of chemotherapeutic agents directly into the arterial supply of malignant tumors.

butterfly c. a metal needle with flexible plastic 'wings' and a short length of tubing. The 'wings' assist in placement and facilitate fixation with tape.

cardiac c. a long, fine catheter especially designed for passage, usually through a peripheral blood vessel, into the chambers of a heart under fluoroscopic control. See also **cardiac** catheterization.

C-21: Balloon-tipped angiographic (Berman) catheter.
From Darke P, Bonagura JF, Kelly DF, Color Atlas of Veterinary Cardiology. Mosby, 1995.

C-22: Butterfly catheter.
From Hall L, Clarke KW, Trim C, Veterinary Anaesthesia, 10th ed, Saunders, 2000.

cardiac biopsy c. introduced intravenously under the direction of fluoroscopy, can be positioned in the right or left ventricle and an endocardial biopsy obtained.

central venous c. a long, fine catheter inserted into a vein for the purpose of administering through a large blood vessel parenteral fluids (as in parenteral **nutrition**), antibiotics and other therapeutic agents. This type of catheter is also used in the measurement of central venous pressure. See also **central** venous catheterization.

column disk c. an indwelling device for continuous peritoneal dialysis. It is implanted within the peritoneal cavity, resting against the body wall. The attached Silastic tubing is used for infusing and draining the dialysate at intervals.

double-lumen c. one having two channels; one for injection and one for removal of fluid.

c. drainage a catheter left in place to keep the bladder drained. Preferably should have a one-way valve to avoid aspiration of air and infection.

elbowed c. a catheter bent at an angle near the beak.

indwelling c. one especially designed so that it is held in place in the urethra for the purpose of draining urine from the bladder.

nasal c. placed in the nasal cavity through a nostril; a means of delivering oxygen therapy.

over-the-needle c. a large-bore sharp needle housed with an indwelling stilette, inside a thin-walled plastic tube. An incision is made over the filled vein, the needle-cannula inserted, the stilette withdrawn, then the needle, leaving the plastic cannula *in situ*.

self-retaining c. one constructed to remain in the bladder, effecting constant drainage.

through-the-needle the catheter is housed within the needle which is used to enter the blood vessel. After insertion, the needle may be removed by withdrawing, but leaving the catheter in place. A protective housing may be provided to cover the needle.

tracheal c. one with small holes at the terminal 1 inch, especially designed for removal of secretions during tracheal **suctioning**.

ureteral c. a long, extremely small gauge catheter designed for insertion directly into a ureter.

urethral c. any of various types of catheters designed for insertion via the urethra into the urinary bladder. See also **catheterization**.

catheterization [*kath"ə-tur"-ĭ-za'shən*] passage of a catheter into a body channel or cavity. See also **cardiac** catheterization and **central** venous catheterization. The most common usage of the term is in reference to the introduction of a catheter via the urethra into the urinary bladder (transurethral catherization).

balloon c. see balloon **valvuloplasty**.

catheterize [*kath'ə-tər-īz*] to introduce a catheter into a body cavity, usually into the urinary bladder for the withdrawal of urine.

cathode [*kath'ōd*] 1. the negative electrode, from which electrons are emitted and to which positive ions are attracted. 2. the electrode through which current leaves a nerve or other substance.

c. beam, c. ray the beam of electrons, accompanied by high electrical potential which flows from the cathode to the anode in the X-ray tube and interacts with the tungsten target to produce X-rays.

c. filament the source of electrons in the cathode tube that interacts with the anode target to produce X-rays.

cathomycin [*kath'o-mi"sin*] see **novobiocin**.

cation [*kat'i-on*] an ion carrying a positive charge. In serum and in calculation of **anion gap**, the measured major cations are Na^+ and K^+; the minor anions, (usually unmeasured) include Ca^{2+} and Mg^{2+}.

c.–anion balance the balance in serum or plasma between the anions and cations must equilibrate near to the concentration of 155 mEq/L. Estimation of any imbalance, usually by chloride and bicarbonate measurement, is basic to any determination of acid–base abnormality. See also **anion gap**.

c. channels channels through selectively permeable membranes via which only cations can migrate.

c.-exchange resin ion-exchange resin.

cation-exchange chromatography see ion-exchange **chromatography**.

cationic [*kat"i-on'ik*] having qualities dependent on having free cations available.

c. detergents are wetting agents that disrupt or damage cell membranes, denature proteins and inactivate enzymes. Examples are the quaternary ammonium compounds.

catnip [*kat'nip*] a plant in the mint family (*Nepeta cataria*) that contains the volatile terpenoid, nepetalactone. It has distinctive aromatic qualities that are particularly attractive to cats, inducing behavior that is variously described as sexual, playful, and sometimes as hallucinatory. Often included in stuffed toys marketed for the domestic cat. Used as a tea in Western herbal medicine.

Catostomus commersoni the common sucker fish (North America), a secondary host for *Metorchis conjunctus*, a fluke of cats and dogs.

catpox [*kat'poks*] see **feline** cowpox infection.

cat's ear ***Hypochaeris radicata***.

catshead, catshead burr see catshead **burr**.

cattalo produced by mating British beef bulls to bison cows. See also **beefalo**.

cattery a housing facility for cats; usually for boarding or breeding.

cattle members of the family Bovidae. There are wild cattle (*Bibos* spp.) including Banteng, Gaur and Gayal. They resemble domestic cattle but have a hump on their back. Domestic cattle are all members of the *Bos* genus. There are two species: *Bos taurus* or European or British breeds of cattle, and *Bos indicus* (the Zebu) or oriental domestic cattle. Interbreeding between the species is common, the offspring being called taurindicus or zeboid cattle.

beef c. breeds of cattle bred especially for the economic production of meat. See **beef** breeds.

c. breeding herds commercial cattle herds which produce beef calves for sale to fatteners.

fat c. a class of beef cattle of any age but usually greater than one year, well-covered and judged ready for slaughter to provide prime cuts of beef.

commercial c. cattle used to produce milk or meat for the general market.

company c. feedlot term for cattle are owned and fed by the feedlot as opposed to custom fed cattle where the feedlot feeds, manages and markets cattle for customers for a fee.

conditioned c. see **preconditioning**.

c. cycle increase and decrease in herd size over time as a result of cow-calf producers' response to high or low cattle prices. The cycle usually lasts between 8 and 12 years.

dairy c. cattle used solely for the production of dairy products. Called also milk or milch cows. See **dairy** breeds.

c. dog dogs used to herd and work cattle. See **Australian** cattle dog, **Stumpy-tail cattle dog**, **working dogs**.

dual-purpose c. most breeds of cattle in continental Europe are of this type. They produce heavy yields of milk and are also good carcass cattle. See **dual-purpose**.

eared c. cattle with Brahman blood; refers to the length of the ears but usually used as a term of reference to their heat resistance.

feeder c. steers or heifers mature enough to be placed in a feedlot to be fattened prior to slaughter; usually 600–900 lb at entry.

grade c. purebred cattle that are not registered. For example, most dairy herds are comprised of purebred cattle, but they are not registered.

grass c. feedlot term for cattle grown on grass prior to placement in the feedlot and not backgrounded. cattle with low condition.

green c. cattle with low condition.

high risk c. term for cattle expected to experience significant disease when accepted into the feedlot and in which morbidity and death loss in excess of 20% and 1.5%, respectively, may occur. Usually because of young age, long transport and risk factor predisposition to respiratory diseases.

light c. store class cattle off range and destined for movement onto irrigated pasture or into feedlot for fattening.

low risk c. cattle expected to experience minimal health problems at the feedlot because of their age, background or preconditioning.

c. on feed US survey census term for cattle at the time of the survey that are being fed a ration of grain, silage, hay and/or protein supplement and that will be shipped from their current location directly to slaughter market.

pedigree c. cattle that are registered in a recognized stud book.

purebred c. cattle produced by matings between members of the same breed, not necessarily pedigreed cattle.

put together c. feedlot term for a group of cattle assembled from various sources rather than one single ranch; at greater risk for disease.

retained c. calves retained on a farm after weaning as stockers.

stud c. pedigree cattle maintained as a separate herd, whose offspring are often sold as breeders, forming a major source of income for the enterprise.

young c. farmers' term for weaned calves, yearlings and 2-year old-cattle.

cattle grid see **stock** guard.

cattle plague see **rinderpest**.

cattle tick fever see **babesiosis**. Called also Texas fever, redwater fever.

Caucasian brown cattle brown with dark markings, dual-purpose cattle from Russia.

cauda [*kaw'də*] pl. *caudae* [L.] a tail or tail-like appendage.

c. equina the collection of spinal roots that stream caudally from the end of the spinal cord and occupy the vertebral canal.

c. equina compression see **lumbosacral** stenosis.

c. equina syndrome see **cauda equina neuritis**.

c. helicis caudal process of the helix of the ear of the dog.

cauda equina neuritis [*kaw'də*] a nonsuppurative inflammation of the nerve trunks of the cauda equina in horses. It is characterized by paralysis of the tail, slackness of the anus and rectum which may lead to fecal incontinence, paralysis of the bladder sometimes with urinary incontinence, paresthesia or anesthesia of the tail and perineum, and incoordination of the hindlimbs. There may also be involvement of isolated cranial nerves. It is believed to be an immune-mediated disorder. Called also polyneuritis equi.

caudad [*kaw'dad*] directed toward the tail or distal end; opposite of cephalad.

caudal [*kaw'dəl*] 1. pertaining to a cauda. 2. situated more towards the cauda, or tail, than some specified reference point; toward the inferior (in humans) or hinder (in animals) end of the body. See also **posterior**.

c. anesthesia a type of regional anesthesia in which the anesthetizing solution is injected into the caudal area of the spinal canal through the caudal end of the sacrum and tail or between the first and second coccygeal vertebrae. It affects the caudal nerve roots, and renders the cervix, vagina and perineum insensitive to pain. See also epidural **anesthesia**.

c. cervical instability see **cervical** spondylomyelopathy (wobbler syndrome).

c. cervical malformation/malarticulation see **cervical** spondylomyelopathy (wobbler syndrome).

c. fold test the single intradermal (SID) fold tuberculin test for tuberculosis.

c. impression of liver the renal impression.

c. sheath part of the maturation process of spermatid to spermatozoa; a caudal sheath of microtubules develops at the caudal edge of the head cap. Called also manchette.

c. tailfold when the cow's tail is lifted there are two, rarely a single central, folds of skin from the edges of the ventral surface of the tail to beside the anus. The site of injection and a control for the single intradermal test. See also caudal fold test (above).

c. tract usually refers to the tubular part of the female genital tract.

c. vena caval thrombosis thrombosis of the caudal vena cava arises from a hepatic abscess. The commonest result is the subsequent shedding of emboli and the development of a chronic pulmonary disease often terminated by massive pulmonary hemorrhage and bleeding to death through the mouth and nostrils. Others suffer a chronic course with anemia, dyspnea and persistent cough and are euthanatized because of cachexia and prolonged distress.

caudate [*kaw'dāt*] having a tail.

caudatum the caudate nucleus.

caudectomy [*kaw-dek'tə-me*] removal of a tail; sophisticated terminology for tail docking as practiced in dogs.

cosmetic c. done to conform with breed standards.

epididymal c. see **epididymectomy**.

therapeutic c. done for medical reasons, usually traumatic injury, infection or neoplasm.

caul, caul fat [*kawl*] meat hygiene term for the omentum and its contained fat depots.

Caucasian Ovcharka a large (102–160 lb), powerful, heavy boned dog with a bear-like appearance. The head is large, the ears may be cropped and the tail is long and plumed. There is thick, long or short coat in gray, fawn or red with a dark mask. Called also Caucasian sheep dog., Caucasian shepherd.

cauliflower ***Brassica*** *oleracea* var. *botrytis*.
c. saltwort ***Salsola*** *tuberculatiformis*.
causal [*kaw'zəl*] relating to or emanating from cause. The combination of necessary and sufficient factors, that is attributes and exposures, which alone or in combination, at some time during an individual's life, inevitably result in disease in that individual.
c. association a noxious agent is said to have a causal association with a particular disease when it can be shown that it plays some role in producing the occurrence of the disease. Generally, strength of association, biological information, biologic plausibility and statistical information are combined to infer causal associations. In a **direct causal association** the factor exerts its effect in the absence of intermediary risk factors. This is uncommon. In an **indirect causal relationship** the factor exerts its effect via intermediary risk factors.
c. inference preliminary diagnosis.
c. modeling construction of models which set out the various relationships between causal agents and the initiation of a disease.
causality the relationship between cause and effects.
principle of c. the postulate that every phenomenon has a cause or causes, i.e. that events do not occur at random but in accordance with physical laws so that, in principle, causes can be found for each effect.
causation [*kaw"za'shən*] the relation of cause to effect.
c. analysis comparison of the rate of occurrence of the disease in animals which were exposed to the suspected agent to the occurrence rate in animals which were not so exposed.
multiple c. a disease in which a combination, or alternative combinations, of causes, are required to produce it. Called also multifactorial etiology.
cause [*kawz*] an event, condition or characteristics which plays an essential role in producing an occurrence of the disease.
constitutional c. an inherent characteristic of the patient. Usually a systemic defect, e.g. protoporphyria.
direct c. there must be no known variable intervening between the suspect factor and the disease.
endogenous c. the cause comes from within the patient. See also constitutional cause (above).
exogenous c. the cause comes from outside the patient, e.g. a virus infection.
indirect c. all causes other than the direct cause (see above).
host c. see endogenous cause (above).
necessary c. a minimal combination of risk factors that may be associated with the agent, the host and the environment that produce disease. There can be a different set of sufficient causes for the same disease. An example would be respiratory disease in housed calves.
precipitating c. the trigger mechanism that initiates the commencement of the disease state.
predisposing c. a mechanism that makes a patient more susceptible to the precipitating cause.
primary c. the principal factor in causing the disease.
secondary c. a factor that assists the primary cause. A cause of secondary importance.
specific c. the single cause in a single cause–single disease relationship.
sufficient c. a risk factor essential for the cause of a disease, although its occurrence does not necessarily cause disease. An example would be the clostridial enterotoxemias.
caustic [*kaws'tik*] 1. burning or corrosive; destructive to tissue. 2. having a burning taste. 3. a corrosive or escharotic agent.
c. bush ***Sarcostemma*** spp.
bottle tree c. ***Eremophila*** spp.
c. creeper ***Euphorbia*** *drummondii*, ***Sarcostemma*** spp.
lunar c. toughened silver nitrate.
c. pencil see **silver** nitrate (toughened).
c. plant ***Sarcostemma*** spp.
c. potash potassium hydroxide.
c. soda sodium hydroxide.
c. treated grain grain treated with caustic agent to improve its digestibility; can cause abomasal ulcer and interstitial nephritis in cattle.
c. treated roughage roughage treated with caustic to improve its digestibility; can cause interstitial nephritis when fed to cows over long periods.
c. vine ***Sarcostemma*** spp. Called also caustic bush.
c. weed ***Euphorbia*** *drummondii*.
cauterant [*kaw'tər-ənt*] 1. any caustic material or application. 2. caustic.
cauterization [*kaw"tər-ĭ-za'shən*] destruction of tissue with a cautery.
cautery [*kaw'tər-e*] 1. the application of a caustic agent, a hot instrument, an electric current, or other agent to destroy tissue. 2. an agent so used.
cold c. cauterization by carbon dioxide, called also cryocautery.
CAV canine adenovirus.
CAV-1 canine adenovirus type 1; the cause of infectiious canine hepatitis.
CAV-2 canine adenovirus type 2; a cause of canine respiratory disease.
cava [*ka'və*] [L.] 1. plural of *cavum*. 2. a vena cava.
cavagram a radiograph of a vena cava.
caval syndrome [*ka'vəl sin'drōm*] syndrome caused by the presence of large number of heartworms (*Dirofilaria immitis*) in the posterior vena cava which may lead to the sudden onset of signs of hemolytic anemia and liver failure, often without preceding cardiopulmonary signs. Disseminated intravascular coagulopathy is a common complication and the mortality rate is high. Called also vena caval syndrome.
caval vessels [*ka'vəl ves'əls*] the principal vessels draining blood to the right atrium of the heart from the body; the cranial and caudal caval vessels drain blood of quadrupeds, the superior and inferior caval vessels drain the blood of bipeds. See also **vena** cava and Table 15.
cavaletti 1. a small, portable jump for schooling horses. Constructed of light poles, 4–6 ft long, resting on a cross of timber at each end so that the pole is 12–18 inches above the ground. 2. parallel rails placed as obstacles used in physical therapy of small animals.
Cavalier King Charles spaniel a small (10–18 lb) dog with prominent eyes, short nose and floppy ears. The haircoat is long and silky. Several colors or combinations are recognized: black and tan, ruby (rich chestnut red), Blenheim (white with chestnut red patches), and tricolor (called Prince Charles in the USA) (white with black patches and tan markings). Similar to, but larger than, the King Charles spaniel, and with a longer nose (at least 1.5 inches long). The breed suffers from mitral valvular disease, **syringomyelia**, **Chiari-like malformation** and the neurological condition known as episodic falling.
cave sickness [*kāv*] histoplasmosis.
caveola [*ka-ve-o'lə*] pl. *caveolae* [L.] one of the minute pits or incuppings of the cell membrane formed during pinocytosis.
caveolae membrane-lined cavities.
caveolated cell flask-shaped cells characterized by an apical tubulovesical system or tuft which are scattered through the epithelial cells of the small intestine. Their function is unknown. Called also tuft cells.
caverna [*ka-vur'nə*] pl. *cavernae* [L.] a cavity.
cavernitis [*kav"ər-ni'tis*] inflammation of the corpora cavernosa or corpus spongiosum of the penis.
cavernoma [*kav"ər-no'mə*] cavernous hemangioma. See also **hemangioma**.
cavernosal venal shunt [*kav"ər-no'səl*] vascular shunt between the corpus cavernosum penis and the exterior circulation of the penis. Too many of them results in inability to erect the penis.
cavernositis [*kav"ər-no-si'tis*] cavernitis.
cavernosogram a radiographic picture of the vascular system in a penis. Radiopaque material is injected into the corpus cavernosum penis and a series of radiographs taken.
cavernostomy [*kav"ər-nos'tə-me*] operative drainage of a pulmonary abscess of the lung.
cavernous [*kav'ər-nəs*] pertaining to a hollow, or containing hollow spaces.
c. hemangioma see **telangiectasia**.
c. sinus see cavernous **sinus**.
cavesson a leather head harness including a cheek strap that goes over the poll and supports a noseband that usually goes right around the head, and a brow band. Used as a point of attachment for a martingale or a leading shank. See also **noseband**.
Cavia [*ka've-ə*] a genus of the rodent family of Caviidae, the guinea pigs.
C. porcellus see **guinea pig**.
Caviacoptes caviae see ***Trixacarus*** *caviae*.

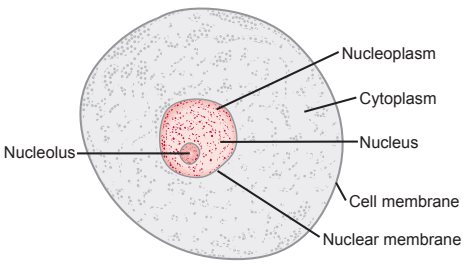
VetBooks.ir

cavitary [*kav'ĭ-tar"e*] characterized by the presence of a cavity or cavities.
cavitas [*kav'ĭ-təs*] pl. *cavitates* [L.] cavity.
cavitate formation of cavities.
cavitation [*kav"ĭ-ta'shən*] the formation of cavities; also, a cavity.
cavitis [*ka-vi'tis*] inflammation of a vena cava.
cavity [*kav'ĭ-te*] 1. a hollow or space, or a potentional space, within the body (e.g. abdominal cavity) or one of its organs (e.g. cranial cavity). 2. in teeth, either the space occupied by dental pulp and surrounded by developing dentin or the lesion produced by dental **caries**. See also dental cavity (below).
absorption c's cavities in developing compact bone due to osteoclastic erosion, usually occurring in the areas laid down first.
amniotic c. the closed sac between the embryo and the amnion, containing the amniotic fluid.
cranial c. the space enclosed by the bones of the cranium.
dental c. 1. the central space, often branched or multiple in compound teeth, of each tooth; carries the nerve and blood supplies to the teeth. 2. the defect caused by decay on a tooth surface. Called also **caries**.
glenoid c. the shallow, socket-like depression in the ventral angle of the scapula for articulation with the head of the humerus.
infraglottic c. the space in the larynx caudal to the vocal folds and rima glottides; reflects the shape of the cricoid cartilage.
medullary (marrow) c. the cavity, containing marrow, in the diaphysis of a long bone; called also medullary canal.
nasal c. the proximal part of the respiratory tract, within the nose, bisected by the nasal septum and extending from the nares to the pharynx. Much of the cavity is occupied by the turbinate bones or conchae which also divide it into dorsal, medial and ventral meatuses. The common meatus is the narrow, vertical passage close to the nasal septum. The rostral end of the cavity just inside the nostril is the nasal vestibule, and the caudal part opening into the pharynx is the nasopharyngeal meatus.
oral c. the cavity of the mouth, made up of a vestibule and oral cavity proper. See also **mouth**.
pelvic c. the space within the walls of the pelvis.
pericardial c. the potential space between the epicardium and the parietal layer of the serous pericardium.
peritoneal c. the potential space between the parietal and the visceral peritoneum.
pleural c. the potential space between the parietal and the visceral pleura.
pulp c. the pulp-filled central chamber in a tooth; called also dental cavity.
serous c. a celomic cavity, like that enclosed by the pericardium, peritoneum or pleura, not communicating with the outside of the body and lined with a serous membrane, i.e. one which secretes a serous fluid.
tension c. cavities of the lung in which the air pressure is greater than that of the atmosphere.
thoracic c. the space within the thoracic walls cranial to the diaphragm and caudal to the base of the neck. Called also *cavitas thoracica*.
tympanic c. an air chamber in the tympanic bone medial to the tympanic membrane that contains the ear ossicles; it is lined with mucous membrane and continuous with the auditory tube; called also the cavity of the middle ear, *cavum tympani*, *cavitas tympani*.
uterine c. the Y-shaped space within the uterus communicating cranially on either side with the uterine tubes and caudally with the vagina. Called also *cavum uteri*.
CAVM complementary and alternative veterinary medicine.
cavography [*ka-vog'rə-fe*] radiography of the vena cava.
cavoodles a hybrid name used to describe dogs produced from crossing Cavalier King Charles spaniels and Poodles. Called also cavapoo. Not a recognized breed.
cavum [*ka'vəm*] pl. *cava* [L.] cavity.
c. conchae that part of the external ear canal supported by the deeper, conchal part of the auricular cartilage.
c. tympani see tympanic **cavity**.
c. uteri see uterine **cavity**.
cavus [*ka'vəs*] [L.] *hollow*.
cavvy, cavy the group of saddle horses on a cattle ranch used to work cattle. Called also remuda.
cavy [*ka've*] a **guinea pig**, *Cavia porcellus*.
spotted c. see **paca**.
cayenne tick see ***Amblyomma*** *cajennense*.
cayuse the strong, hardy pony used by American Indians.
CBC complete blood (cell) count.
CBG corticosteroid-binding globulin.
CBH cutaneous basophil hypersensitivity.
CBP competitive protein binding.
CBPP see **contagious** bovine pleuropneumonia.
Cb_5R cytochrome-b_5 reductase.
CC medical record abbreviation for chief complaint.
cc cubic centimeter; not recommended for hand written medication-related documention; cm^3 is the preferred abbreviation.
CCD 1. colony collapse disorder; 2. charge-coupled device.
CCK, CCK–PZ see **cholecystokinin**.
CCl_4 see **carbon tetrachloride**.
CCNU see **lomustine**.
CCoV canine coronavirus.
CCPP contagious caprine pleuropneumonia.
CCS canine Cushing's syndrome.
CCT craniocerebral trauma
CCU critical care unit.
CD^1 1. canine distemper. 2. curative dose; that which is sufficient to restore normal health. 3. Companion Dog; the first level title earned in obedience trials.
CD^2 cluster of differentiation or cell differentiation proteins; serve as cell surface markers that define cell lineages or functions.
CD antigen a group of cell surface molecules which act as markers on leukocytes.
CD3 cell marker present on both helper (Th) and cytotoxic (Tc) T lymphocytes; a component of the T cell receptor complex.
CD4 cell marker found on monocytes, macrophages, dendritic cells and helper (Th) and regulatory (Treg) T lymphocytes; interacts with class II MCH molecules on antigen presenting cells to assist in Th cell activation.
CD8 found on T cytotoxic and variably on NK lymphocytes; an adhesion molecule that interacts with class I MHC molecules to assist Tc cell activation.
CD_{50} median curative dose.
Cd 1. chemical symbol, *cadmium*. 2. caudal or coccygeal in a vertebral formula.
cd candela.
CD virus canine **distemper** virus.
CDAA allidochlor.
CDC Centers for Disease Control and Prevention; previously Communicable Disease Center.
CDEC sulfallate.
Cdk cyclin-dependent protein kinase.
cDNA copy DNA; a DNA copy of mRNA which contains only regulatory and coding sequences, i.e. introns have been removed. mRNA is copied into double-stranded DNA using reverse transcriptase; the cDNA can then be cloned and amplified and introduced into an expression vector (plasmid or phage) and its protein product produced in either bacterial, yeast, insect or mammalian cells.
cDNA library a collection of cloned, double stranded, complementary DNA molecules obtained by reverse transcription of mRNA.
CDP 1. cytidine diphosphate. 2. a cancer chemotherapy protocol that utilizes chlorambucil, dactinomycin, and prednisone. A modification of the COP protocol with less severe side effects and lower costs.
CDR complementarity-determining regions of a T-cell receptor or antibody.
CDS method calibrated dichotomous sensitivity test; a form of the disk diffusion antimicrobial sensitivity test.
CDV canine distemper virus.
CDX Companion Dog Excellent; the second level title, after CD, earned in obedience trials.
CE 1. continuing education. 2. client education.
Ce chemical symbol, *cerium*.
ce- for words beginning thus, see also those beginning *coe-*.
CEA carcinoembryonic antigen; collie eye anomaly; previously, canine erythrocyte antigen, which is now replaced by dog erythrocyte antigen (DEA).
CEAH Centers for Epidemiology and Animal Health.
Cebalges members of Psoroptidae family of mange mites. Includes *Cebalges gaudi* (primates).
ceca [*se'kə*] plural of **cecum**.

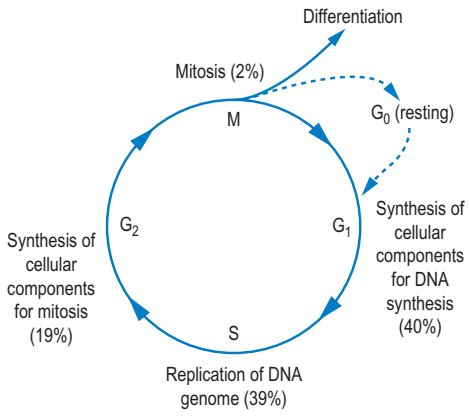
cecal [*se'kəl*] arising from or pertaining to the **cecum**.
c. blackhead see ***Histomonas*** *meleagridis*.
chicken c. worms *Heterakis*, *Subulura* spp., *Strongyloides avium*, *Trichostrongylus tenuis*, *Aulonocephalus lindquisti*.
c. coccidiosis see **coccidiosis**.
c. coliform granuloma a nodular condition of the intestines, liver and cecum.
c. dilatation a disease of cows which occurs soon after calving characterized by moderate abdominal pain, reduction in fecal volume, and a distended viscus in the upper right flank detectable externally or by rectal examination. Called also cecal dilatation and torsion but the circulation of the organ is rarely compromised. In horses it is usually part of tympany of the large intestine. See flatulent **colic**.
c. dilatation and torsion see cecal dilatation (above).
c. impaction in the horse can prove to be a serious problem because of the difficulty of moving a large volume of dry ingesta from such a large atonic viscus. The clinical picture is one of continuous low-grade colic with scant feces. A feature of mucoid enteropathy in rabbits.
c. inflammation see **typhlitis**.
c. intussusception see intestinal obstruction **colic**, **intussusception**.
c. inversion see cecocolic **intussusception**.
c. rupture is a specific entity in horses because it occurs during the act of foaling. Death occurs very quickly due to toxic shock.
c. torsion in cows is part of the syndrome of cecal dilatation. In horses constitutes a very serious threat to life. See also intestinal obstruction **colic**, **red gut syndrome**.
c. tympany see cecal dilatation (above), flatulent **colic**. Also occurs as an independent entity in young foals and causes acute colic with abdominal distention. The cause is unknown. It also occurs in newborn foals in conjunction with retained **meconium**.
cecectomy [*se-sek'tə-me*] excision of the cecum.
cecitis [*se-si'tis*] see **typhlitis**.
cec(o)- word element. [L.] *cecum*.
cecocele [*se'ko-sēl*] a hernia containing part of the cecum.
cecocolic [*se"ko-kol'ik*] pertaining to the cecum and the colon.
c. intussusception see cecocolic **intussusception**.
c. ostium opening between cecum and colon.
c. volvulus a rare occurrence in dogs and cats requiring aggressive supportive treatment and surgery.
cecocolopexy [*se"ko-ko'lə-pek"se*] an operation for fixation or suspension of the cecum and ascending colon.
cecocolostomy [*se"ko-kə-los'tə-me*] surgical anastomosis of the cecum and the colon.
cecoileostomy [*se"ko-il"e-os'tə-me*] ileocecostomy; surgical anastomosis of the ileum to the cecum.
cecopexy [*se'ko-pek"se*] fixation or suspension of the cecum to correct excessive mobility.
cecoplication [*se"ko-plĭ-ka'shən*] plication of the cecal wall to correct ptosis or dilatation. An inverting stitch, e.g. Lembert, will also plicate the cecum. This could be used over a weakened wall which is still viable, e.g. needle decompression site.
cecorrhaphy [*se-kor'ə-fe*] suture or repair of the cecum.
cecostomy [*se-kos'tə-me*] surgical creation of an artificial opening or fistula into the cecum.
cecotomy [*se-kot'ə-me*] incision of the cecum.
cecotroph [*se'ko-trōf*] soft fecal pellets, ingested by rabbits directly from the anus during the night and early morning. Called also night feces.
cecotrophy [*se'ko-trōf-e*] ingestion of cecotrophs; occurs in rabbits. See **coprophagy**.
cecum [*se'kəm*] 1. the first or proximal part of the large intestine, forming a dilated pouch distal to the ileum and proximal to the colon. There is a great deal of variation in the relative size between species. The dog's cecum is a small, coiled organ. In the horse it is a very large fermentation chamber stretching from the upper right flank to the xiphoid process of the sternum. Birds are different again. They have a double cecum which appears to compensate digestively for the absence of a significant colon. 2. any blind pouch. See also **cecal**.
c. cupulare one of the blind ends of the cochlear duct of the inner ear; associated with the cupula of the cochlea.
c. vestibulare the other blind end of the cochlear duct of the inner ear; associated with its origin in the cochlear recess of the vestibule of the osseous labyrinth.
cecum–colon appertaining to the cecum and colon together.
c.–c. rupture rupture of the dorsal sac of the cecum or the colon in mares at foaling.
c.–c. tympany idiopathic in foals.
cefacetrile a first generation **cephalosporin** antibiotic used in cattle for the treatment of mastitis.
cefaclor [*sef'ə-klor*] a second generation **cephalosporin** antibiotic, administered orally.
cefadroxil [*sef"ə-droks'il*] a first generation **cephalosporin** antibiotic.
cefalexin cephalexin
cefaloridine cephaloridine.
cefalotin cephalothin.
cefapirin cephapirin.
cefazolin a first generation **cephalosporin** antibiotic, given by injection; it has a long half-life. Called also cephazolin.
cefdinir [*sef'dĭ-nir*] a third generation **cephalosporin** effective against gram-negative and gram-positive bacteria.
cefepime [*sef'ə-pēm*] a fourth generation **cephalosporin** antibiotic with greater resistance to β-lactamases.
cefixime [*sə-fik'sēm*] a third generation **cephalosporin** antibiotic.
cefmetazole [*sef-met'ə-zōl*] a second generation **cephalosporin** antibiotic.
cefoperazone [*sef"o-per'ə-zōn*] a third generation **cephalosporin** antibiotic, active against *Pseudomonas aeruginosa*.
cefotaxime [*sef"o-tak'sēm*] a third generation **cephalosporin** antibiotic.
cefotetan [*sef'o-te"tən*] a second generation **cephalosporin** antibiotic.
cefovecin a semi-synthetic broad-spectrum **cephalosporin** antibiotic used to treat skin infections in dogs and cats.
cefoxitin [*sə-fok'si-tin*] a second generation **cephalosporin** antibiotic, especially effective against gram-negative organisms, with strong resistance to degradation by β-lactamase.
cefpodoxime a third generation, extended spectrum **cephalosporin**, active against most gram-positive and gram-negative bacteria, excluding *Pseudomonas aeruginosa*. Used orally as the prodrug, cefpodoxime proxetil, in the treatment of pyoderma in dogs.
cefpodoxime proxetil [*sef"po-dok'sēm prok'sə-til*] a third generation **cephalosporin**, effective against gram-positive and gram-negative bacteria, but not *Pseudomonas aeruginosa*.
ceftazidime [*sef'ta-zĭ-dēm"*] a third generation **cephalosporin** antibiotic, active mainly against gram-negative bacteria and particularly *Pseudomonas*.
ceftiofur [*sef-ti'o-foor*] a third generation **cephalosporin**, active against gram-positive and gram-negative bacteria.
ceftizoxime [*sef"tĭ-zok'sēm*] a third generation **cephalosporin** antibiotic.
ceftriaxone [*sef"tri-ak'sōn*] a third generation **cephalosporin** antibiotic.
cefuroxime [*sef"u-rok'sēm*] a second generation **cephalosporin** antibiotic resistant to β-lactamase.
cegadera see ***Heterophyllaea pustulata***.
celandine a common name applied to plants in several genera.
greater c. see ***Chelidonium majus***.
lesser c. ***Ranunculus*** *ficaria*.
c. poppy *Stylophorum diphyllum*
-cele word element. [Gr.] *tumor, hernia;* in American English, may also mean 'cavity'.
celery ***Apium graveolens***.
celiac [*se'le-ak*] pertaining to the abdomen.
c. artery see Table 9.
c. disease a malabsorption syndrome in humans characterized by marked atrophy and loss of function of the villi of the jejunum (and rarely, the cecum). Called also celiac sprue, gluten-induced enteropathy, nontropical sprue, and adult, childhood or infantile celiac disease. See also wheat-sensitive **enteropathy** of Irish setters.
celiacomesenteric ganglion the autonomic ganglion enmeshed in the celiacomesenteric plexus; located at origins of celiac and cranial mesenteric arteries.
celiectomy 1. excision of the celiac branches of the vagus nerve. 2. excision of an abdominal organ.
celio- abdominal. [Gr.] *abdomen, through the abdominal wall, cavity, hollow*.
celiocentesis puncture into the abdominal cavity.
celiocolpotomy [*se"le-o-kol-pot'ə-me*] incision into the abdomen through the vagina.

VetBooks.ir

celioenterotomy [*se"le-o-en-tər-ot'ə-me*] incision through the abdominal wall into the intestine.
celiogastrotomy [*se"le-o-gas-trot'ə-me*] incision through the abdominal wall into the stomach.
celiography [*se"le-o'grə-fe*] radiography of the abdomen.
celiomyomectomy [*se"le-o-mi"o-mek'tə-me*] myomectomy by abdominal incision.
celiomyositis [*se"le-o-mi"o-si'tis*] inflammation of the abdominal muscles.
celioparacentesis [*se"le-o-par"ə-sen-te'sis*] paracentesis of the abdominal cavity; more often the term abdominocentesis is used.
celiopathy [*se"le-op'ə-the*] any abdominal disease.
celiorrhaphy [*se"le-or'ə-fe*] suture of the abdominal wall.
celiotomy [*se"le-ot'ə-me*] incision into the abdominal cavity.
vaginal c. incision into the abdominal cavity through the vagina.
cell [*sel*] 1. the basic structural unit of living organisms. 2. a small more or less enclosed space. All living cells arise from other cells, either by division of one cell to make two, as in mitosis and meiosis, or by fusion of two cells to make one, as in the union of the sperm and ovum to make the zygote in sexual reproduction. Cells are bounded by cell membrane or plasma **membrane**, which is a lipid bilayer composed of two layers of phospholipids. Each layer is one molecule thick with the charged, hydrophilic end of the lipid molecules on the surface of the membrane and the uncharged hydrophobic fatty acid tails in the interior of the membrane. Cells are divided into two classes, **eukaryotes**, which have a true nucleus and are found in higher plants and animals, fungi, protozoa and most algae, and **prokaryotes**, which are without a nucleus and found in bacteria. The lipid bilayer of eukaryotic cells is impermeable to many substances, such as ions, sugars and amino acids; however, membrane proteins selectively move specific substances through the cell membrane by active or passive transport. Water, gases such as oxygen and carbon dioxide, and nonpolar compounds pass through the cell membrane by *diffusion*. Materials can also be engulfed and taken into the cell enclosed in a portion of the cell membrane. This is called *phagocytosis* when solids are ingested and *pinocytosis* when liquids are ingested. The reverse process is called *exocytosis*. All of these processes permit the cell to maintain an internal environment different from its exterior. See also body **fluids**. The cells of the body differentiate during development into many specialized types with specific tasks to perform. Cells are organized into tissues and tissues into organs. See also **APUD cells**, **Betz cells**, **Clara cell**, **Gaucher's cells**, **Golgi's cells**, **Hela cells**, **Hürthle cell**, **Kupffer's cells**, **Langerhans' cell**, **Leydig's cell**, **Merkel cell**, **mesangial** cell, **neuroendocrine** cell, **Reed-Sternberg cell**, **Schwann cell**, **Sertoli cell**, **Türk cell**, **Vero cell**.
011A c. suggested common progenitor cell for type 2 astrocyte and the oligodendrocyte.
accessory c's an antigen presenting cell; a dendritic cell or macrophage presenting an antigen on its surface in the context of the appropriate MHC antigen, capable of being recognized by the T-cell receptor.
acinar c., acinous c. any of the cells lining an acinus, especially applied to the zymogen-secreting cells of the pancreatic acini.
adherent c. one that adheres to the glass or plastic container in cell cultures, to form the monolayer. See also cell culture (below).
alpha c's 1. cells in the islets of Langerhans that secrete glucagon. 2. acidophilic cells of the anterior pituitary.
argentaffin c's enterochromaffin cells containing cytoplasmic granules capable of reducing silver compounds, located throughout the gastrointestinal tract, chiefly in the basilar portions of the gastric glands and the crypts of Lieberkühn. They secrete serotonin.
band c. an immature neutrophil in which the nucleus is not lobulated but is in the form of a continuous band, horseshoe shaped, twisted or coiled. Called also band-form granulocyte, band neutrophil and stab neutrophil.
basal c. an early keratinocyte, present in the basal layer of the epidermis.
basket c's 1. cells in the cerebellar cortex whose axons carry basket-like groups of fibrils which enclose the cell body of each Purkinje cell. 2. a ruptured erythrocyte seen in a blood smear.
beta c's 1. basophilic cells in the pancreas that secrete insulin and make up most of the bulk of the islets of Langerhans; they contain granules that are soluble in alcohol. 2. basophilic cells of the anterior pituitary.
blood c. one of the formed elements of the blood. See also **blood**.
c. body the nucleus of the cell and the adjacent cytoplasm in cells which have processes, e.g. neurons which consist of a cell body, an axon and dendrites.
bone c. a nucleated cell in the lacunae of bone. Called also osteocyte.
cartilage c. chondrocyte.
chromaffin c's cells whose cytoplasm shows fine brown granules when stained with potassium bichromate, occurring in the adrenal medulla and in scattered groups in various organs and throughout the body.
cleavage c. any of the cells derived from the fertilized ovum by mitosis; a blastomere.
c. count see **erythrocyte**, **leukocyte**, **somatic** cell counts.
c. culture [*sel kul'chər*] the artificial culture of living cells outside a living body. Animal cells were originally grown in culture as *explant cultures*, i.e. small pieces of tissue. If pieces of tissue are treated with enzymes such as trypsin, single cell suspensions can be obtained which will settle onto glass or plastic surfaces and grow to form a *monolayer cell culture*. *Primary cell cultures* can be passaged to form *secondary cell cultures*. Cells in culture can be passaged a finite number of times before reaching a crisis which can be compared with aging. The number of passages, before reaching crisis, has been termed the Hayflick limit and is related to the longevity of the species from which the tissue was originally derived. Within the Hayflick limit the cells are referred to as a *cell strain*. Cells that survive the crisis and continue to grow are referred to as a *cell line*. Cell lines can also be derived directly from cancer cells. There are many properties that distinguish cell lines from cell strains, including altered chromosome number, changes at the cell membrane, and reduced requirement for certain growth factors.
c. cycle the cycle of biochemical and morphological events occurring in a dividing cell population; it consists of the S phase, occurring toward the end of interphase, in which DNA is synthesized; the G_2 phase, for gap 2, the interval between S and M; the M phase, for mitosis, consisting of the four phases of mitosis; and the G_1 phase, which lasts from the end of M until the start of S phase of the next cycle. Fully differentiated cells are nondividing and are said to be in G_0.
daughter c. a cell formed by division of a mother cell.



C-23: Structure of the cell as seen by light microscopy.
From Guyton AC, Hall JE, Textbook of Medical Physiology, 10th Edition. Saunders, 2000.

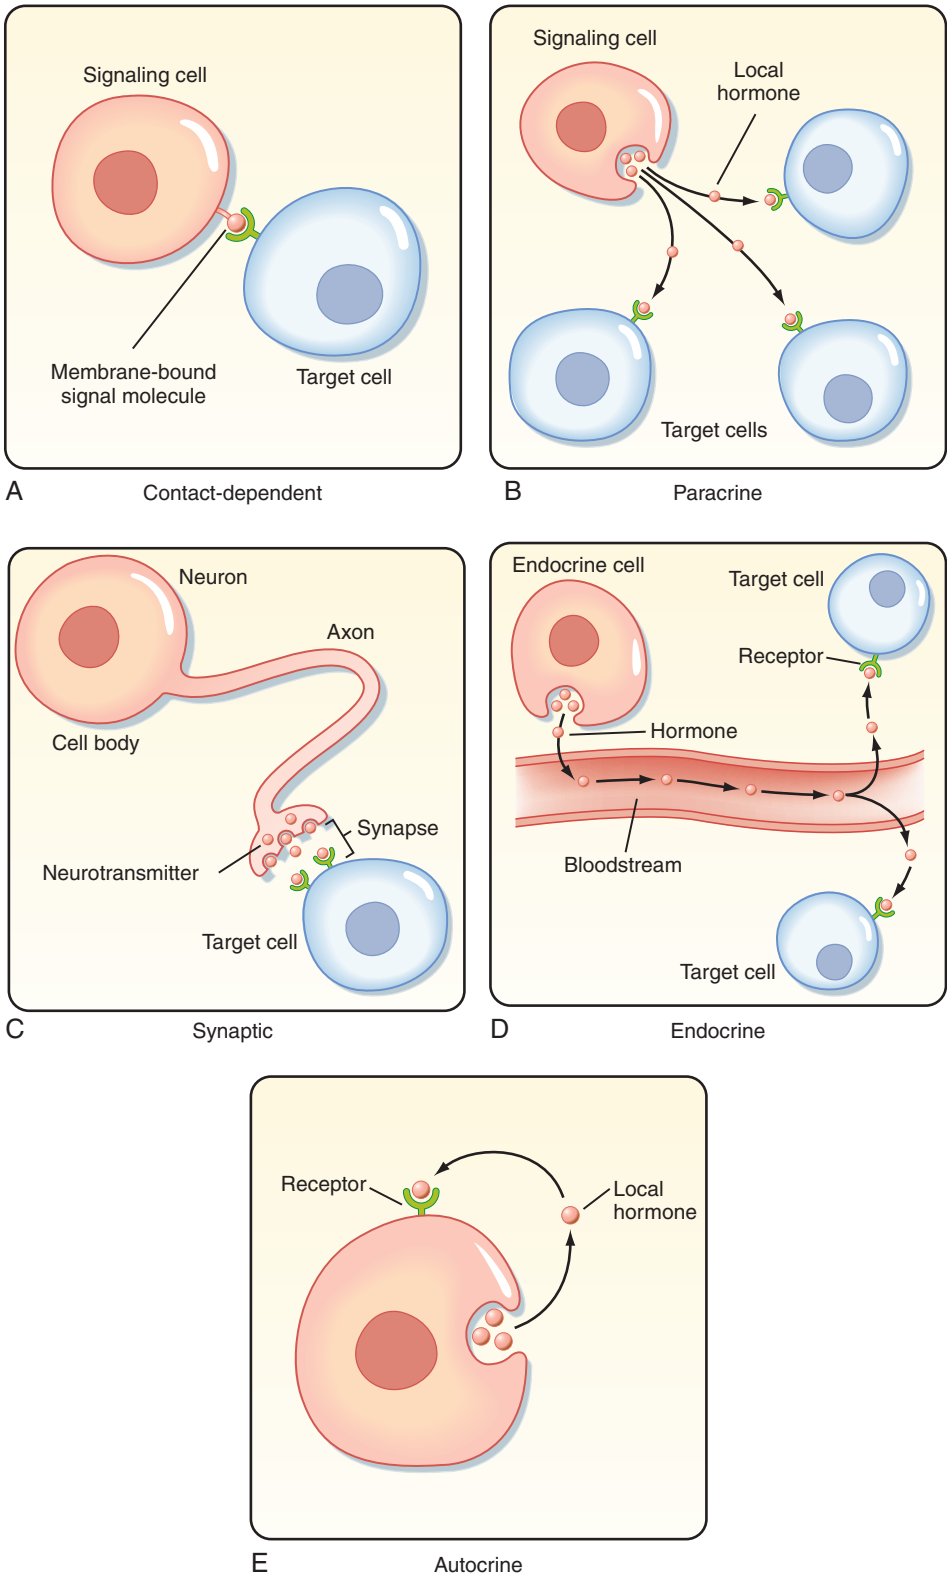


C-24: Cell cycle.
From Maddison JE, Page SW, Church DB, Small Animal Clinical Pharmacology, 2nd Edition. Saunders, 2008.

c. dehydration fluid loss from cells due to elevation of the osmotic pressure of blood and tissue fluid; a potent stimulus to thirst.
dendritic c. immune system cells located in skin and other tissues near external environments, whose primary function is trapping, processing and presenting antigens to lymphocytes. See also **Langerhans' cell**.
c. differentiation the process whereby cells become specialized usually with concurrent loss of reproductive capacity.
doughnut c. see **torocyte**.
embryonic stem c. a stem cell of fetal origin. See stem cell (below).
epithelioid c. enlarged macrophages with enlarged lysosomes and much endoplasmic reticulum. May fuse to form multinucleated **giant cell** (2).
epsilon c. one of the groups of acidophilic cells in the adenohypophysis. Contains granules that stain with azocarmine dye.
foam c. a cell with a vacuolated appearance due to the presence of complex lipoids; seen in xanthoma.
c. fusion see **syncytial** giant cell.
ganglion c. a large nerve cell, especially one of those of the spinal ganglia.
germ c. direct descendants of the primordial cells which originate from the yolk sac endoderm and migrate to the gonadal ridges of the embryo, where they give rise to either ova or spermatozoa. Called also gonocytes, sex cells.
gitter cells microglial phagocytic cells of the central nervous system which are laden with degenerating myelin. The cells are spherical with a bubbly margin and with a reduced nucleus. Called also compound granular corpuscles, scavenger cells, Hortega cells, fat-granule cell.
glial c's neuroglial cells.
goblet c. a mucous secreting cell found in the epithelium of various mucous membranes, especially that of the respiratory passages and intestines.
granular c. one containing granules, such as a keratinocyte in the stratum granulosum of the epidermis, when it contains a dense collection of darkly staining granules.
gustatory c. see **taste** bud.
heart failure c's, heart lesion c's iron-containing, rust-colored macrophages found in the pulmonary alveoli in congestive heart failure.
helmet c. schizocyte.
helper c. Th cells; a subset of T lymphocytes which interact with B lymphocytes, cytotoxic T lymphocytes and macrophages to enhance immune responses; they play an integral role in immunoregulation.
hybrid c. a mononucleate cell produced from a binucleate heterokaryon after the latter undergoes mitosis. Such cells are initially unstable, tending to lose randomly some of the double complement of chromosomes. Used for mapping genes to particular chromosomes. See also **heterokaryon**, **hybridoma**.
immunologically competent c. see **immunocyte**.
interstitial c's the cells of the connective tissue of the ovary or of the testis (Leydig's cells) which furnish the internal secretion of those structures, i.e. testosterone.
islet c's cells composing the islets of Langerhans in the pancreas. See alpha cells, beta cells (above).
juxtaglomerular c's specialized cells, containing secretory granules, located in the tunica media of the afferent glomerular arterioles. They cause aldosterone production by secreting the enzyme renin and play a role in the regulation of blood pressure and fluid balance.
K c's, killer c's T lymphocytes or null lymphocytes capable of cytotoxic activity against target cells after activation by cytokines induced by viral infection, cells coated with specific IgG antibody (antibody-dependent cell-mediated cytotoxicity or ADCC) or other regulatory signals.
lacis c. accumulation of cells between the arterioles at the glomerular hilus. Called also granular cell.
lacunar c. precursor of the malignant interdigitating reticular cell in Hodgkin-like lymphoma in humans.
LE c. a mature neutrophilic polymorphonuclear leukocyte characteristic of lupus erythematosus. See also **lupus erythematosus**.
Leydig's c's interstitial cells of the testis, which secrete testosterone.
c. line see cell culture (above).
luteal c's., lutein c's the plump, pale-staining, polyhedral cells of the corpus luteum.
lymph c. lymphocyte.
lymphoid c's lymphocytes and plasma cells.
mast c. a connective tissue cell that has basophilic, metachromatic cytoplasmic granules that contain histamine, heparin, hyaluronan, slow-reacting substance of anaphylaxis (SRS-A), and, in some species, serotonin. Express Fc receptors specific for IgE on their cell surface.
c.-mediated immune reaction see cellular **immunity**.
memory c. an expanded clone of small lymphocytes derived from stimulated antigen-sensitized B and T lymphocytes. They have antigen receptors of the same specificity as the parent cell. Important in the secondary immune response.
mesenchymal c. see **mesenchyme**.
c. migration movement of cells from their place of origin to other tissues; one of the fundamental processes of development.
microglial c. see **microglia**. See also neuroglia cells (below).
milk c. count see **somatic** cell counts.
mother c. a cell that divides to form new, or daughter, cells.
Mott c. a plasma cell with large, clear cytoplasmic pockets.
natural killer c's, NK c's null lymphocytes capable of cytotoxic activity against target cells after activation by cytokines induced by viral infection, cells coated with specific IgG antibody (antibody-dependent cell-mediated cytotoxicity or ADCC) or other regulatory signals.
nerve c. any cell of the nervous system; a **neuron**.
c. nests see **isogenous groups**.
neuroglia c's, neuroglial c's see **neuroglia**.
null c's lymphocyte-like cells that lack specific antigen receptors and other surface markers characteristic of B and T lymphocytes; they include K and NK cells; their numbers are elevated in active systemic lupus erythematosus and other disease states.
olfactory c's a set of specialized cells of the mucous membrane of the nose; the receptors for smell.
P c's. found in the sinoatrial and atrioventricular nodes. May be a source of electrical impulses.
parafollicular c's see **C cell**.
Pick's c's round, oval or polyhedral cells with foamy, lipid-containing cytoplasm found in the bone marrow and spleen in Niemann–Pick disease.
plasma c. a spherical or ellipsoidal cell with a single, eccentrically placed nucleus containing dense masses of chromatin in a wheel-spoke arrangement, an area of perinuclear clearing which contains the Golgi apparatus, and generally abundant cytoplasm. Plasma cells are produced by cell division of B lymphocytes following antigen stimulation and are involved in the synthesis and release of antibody. Called also plasmacyte and plasmocyte.
prickle c. a dividing keratinocyte of the prickle-cell layer of the epidermis, with delicate radiating process connecting with other similar cells.
prokaryotic c. see **prokaryote**.
Purkinje's c's large branching cells of the middle layer of the cerebellar cortex.
red c., red blood c. erythrocyte.
reticular c's the cells forming the reticular fibers of connective tissue; those forming the framework of lymph nodes, bone marrow and spleen. They are weakly phagocytic, stromal in origin and are distinct from the monocyte–macrophage system.
reticuloendothelial c. a cell of the **reticuloendothelial system**.
scavenger c. see gitter cell (above).
sickle c. a crescent or sickle-shaped erythrocyte seen in some humans and deer. The abnormal shape caused by the presence of varying proportions of hemoglobin S.
c. signaling communicating system between and within cells that regulates and co-ordinates cellular responses; enables cells to perceive and respond appropriately to changes in their environment.
signet-ring c. a cell in which the nucleus has been pressed to one side by an accumulation of intracytoplasmic mucin.
somatic c's the cells of the body other than the germ cells.
c. sorting see **fluorescence**-activated cell sorting.
c. specialization conversion of a simple cell type into a specialized cell type capable of a special function, e.g. a secretory

VetBooks.ir

C



C-25: Cell to cell communication.
From Koeppen BM, Stanton BA, Berne & Levy Physiology, 6th Edition. Mosby, 2008.

cell; a major part of the growth of an embryo and the differentiation of basic mesenchymal tissue into specialized organs.
spindle c. spindle shaped cells of the dermis or subcutis; principal component of spindle cell tumors.
spur c. spiculed mature erythrocyte. See also **acanthocyte**.
squamous c's flat, scale-like epithelial cells.
stab c. see band cell (above).
stellate c. any star-shaped cell, as a Kupffer cell or astrocyte, having many filaments extending in all directions.
stem c. 1. a cell that is able to proliferate into identical copies (daughter cells) the same as itself and can also make daughter cells that are not identical and which can differentiate into more than one type of specialized cell. 2. a primitive hematopoietic cell that is capable of self-replicating or differentiating into precursor cells of erythrocytes or any of the leukocytes.
stipple c. an erythrocyte containing granules that take a basic or bluish stain with Wright's stain.
c. suicide **apoptosis**

suppressor c's a subset of T lymphocytes that act to suppress activation of both antibody and cell-mediated immune responses. They play a role in immunoregulation, suppressing active immune responses after clearance of antigens, and suppression of anti-self immune responses. See also T **lymphocytes**.
target c. 1. an abnormally thin erythrocyte showing, when stained, a dark center and a peripheral ring of hemoglobin, separated by a pale, unstained zone containing less hemoglobin; seen in regenerative anemia and hypochromic states such as iron deficiency. Called also codocyte, Mexican hat cell. 2. any cell selectively affected by a particular agent, such as a hormone or drug. 3. cell expressing surface nonself antigens that induce nonimmune and immune cytolysis, e.g. a virus-infected or tumor cell.
taste c's cells in the taste buds associated with the nerves of taste.
c. therapy see **glandular therapy**.
totipotential c. an embryonic cell that is capable of developing into any type of body cell.
white c., white blood c. leukocyte.
cell-adhesion molecule membrane proteins expressed by endothelial cells which regulate the movement of molecules and leukocytes from the blood to tissues.
cell-mediated effected by cellular rather than chemical elements.
c.-m. hypersensitivity see delayed **hypersensitivity**.
c.-m. immunity see cellular **immunity**.
cellobiase an enzyme associated with bacteria and protozoa (particularly in ruminants) catalyzing the hydrolysis of β1→4 glycosidic bonds of the disaccharide, cellobiose. See also **glucosidase**.
cellobiose [*sel"lo-bi'ōs*] a simple polysaccharide composed of two molecules of glucose and formed by the digestion of cellulose by cellulase.
cellophane band [*sel'o-fān*] used to occlude blood flow in extrahepatic portosystemic shunts.
cellular pertaining to, or made up of, cells.
c. genetics see **cytogenetics**.
cellularity [*sel"u-lar'i-te*] the state of a tissue or other mass as regards the number of its constituent cells.
cellules claveleuses [*sel'ūlz*] mononuclear cells that accumulate in the dermis in lesions of sheeppox. They are virus-infected cells and their cytoplasm contains one or more eosinophilic inclusion bodies.
cellulicidal [*sel"u-lis'i-dəl*] destroying cells.
cellulitis [*sel"u-li'tis*] a diffuse inflammatory process within solid tissues, characterized by edema, redness, pain and interference with function. It may be caused by infection with streptococci, staphylococci or other organisms. Cellulitis usually occurs in the loose tissues beneath the skin, but may also occur in tissues beneath mucous membranes or around muscle bundles or surrounding organs.
anaerobic c. see **malignant edema**.
canine juvenile c. see juvenile **pyoderma**.
epidemic equine c. see **equine** viral arteritis, **equine** influenza.
periapical c. see apical **abscess**.
periesophageal c. caused by perforation of the esophagus and establishment of a mixed infection into the tissues surrounding the esophagus.
cellulofibrous [*sel"u-lo-fi'brəs*] partly cellular and partly fibrous.
celluloneuritis [*sel"u-lo-nŏŏ-ri'tis*] inflammation of neurons.
cellulose [*sel'u-lōs*] a polysaccharide containing β1→4 linked glucose carbohydrate forming the skeleton of most plant structures and plant cells. In herbivores, digested by bacteria in the rumen or cecum, primarily to volatile fatty acids which can be used as a source of energy.
absorbable c. an absorbable oxidation product of cellulose, applied locally to stop bleeding. Called also oxidized cellulose.
oxidized c. see absorbable cellulose (above).
cellulytic breakdown of cellulose, e.g. by hydrolysis. Occurs at a sufficient level to provide a source of energy only in ruminants and species with a large intestine adapted to fermentation.
c. bacteria bacteria in the rumen which digest cellulose to volatile fatty acids especially acetic, butyric and propionic.
celo- cavity. [Gr.] *cavity*.
CELO virus chicken embryo lethal orphan virus. See **quail** bronchitis.
celoblastula the common type of blastula, consisting of a hollow sphere composed of blastomeres.
celom [*se'ləm*] coelom.
celoschisis [*se-los'kĭ-sis*] congenital fissure of the abdominal wall.
celoscope an endoscope for use in celoscopy.
celoscopy [*sə-los'kə-pe*] examination of a body cavity, especially the abdominal cavity, through a celoscope. See also **laparoscopy**.
celosomia [*se"lo-so'me-ə*] congenital fissure or absence of the sternum, with hernial protrusion of the viscera.
celothelioma abdominal mesothelioma.
Celsius [*sel'se-əs*] pertaining to Anders Celsius, Swedish astronomer (1701–1744).
C. scale a temperature scale with the ice point at 0 and the normal boiling point of water at 100 degrees (100°C). For equivalents of Celsius and Fahrenheit temperatures, see Tables 5 and 18.
C. thermometer a centigrade thermometer employing the Celsius scale. The abbreviation 100°C should be read as 'one hundred degrees Celsius'.
Celtic pony group of pony breeds including **Connemara**, **Icelandic**, **Shetland**.
Celtic red see **brachyceros**.
CEM contagious equine metritis.
CEM selective medium chocolate agar made with Eugon agar and 5% horse blood; used to cultivate *Taylorella equigenitalis*.
cement [*sə-ment'*] 1. a substance that produces a solid union between two surfaces. 2. cementum.
bone c. usually an acrylic compound used in fracture repair and positioning of bone pins.
dental c. materials used to affix dental restorations and to fill cavities.
glass ionomer c. a material used for restorative dentistry. In veterinary dentistry, these are used for treatment of neck lesions on feline teeth and filling access holes after endodontic procedures.
c. lines basophilic lines in histological sections of bone that represent highly mineralized connective tissue that binds the elements of the bone together.
cementasome see **keratinosome**.
cementicle [*sə-men'ti-kəl*] a small, discrete globular mass of cementum in the region of a tooth root.
cementoblast [*sə-men'to-blast*] a large cuboidal cell, found between fibers on the surface of cementum, which is active in the formation of cementum.
cementoblastoma [*sə-men"to-blas-to'mə*] an odontogenic fibroma whose cells are developing into cementoblasts and in which there is only a small proportion of calcified tissue.
cementoclasia [*sə-men"to-kla'zhə*] disintegration of the cementum of a tooth.
cementoclast [*sə-men'to-klast"*] phagocytes of dental cement. See also **osteoclast**.
cementocyte [*sə-men'to-sīt*] a cell found in lacunae of cellular cementum, frequently having long processes radiating from the cell body toward the periodontal surface of the cementum.
cementoenamel junction [*sə-men"to-ə-nam'əl*] a line on the surface of a tooth where the enamel on the crown meets the cementum on the root. Called also cervical line, neck.
cementogenesis [*sə-men"to-jen'ə-sis*] development of cementum on the root dentin of a tooth.
cementoma [*se"mən-to'mə*] a periapical, cementum producing, odontogenic tumor.
cementosis [*se"mən-to'sis*] proliferation of cementum.
cementosome see **keratinosome**.
cementum [*sə-men'təm*] the bonelike connective tissue covering the root of a tooth and assisting in tooth support.
Cenchrus ciliaris see ***Pennisetum ciliare*** (buffel grass).
cenosis a morbid discharge.
cenosite [*se'no-sīt*] a facultative commensal organism that can live away from its host. Called also coinosite.
censor [*sen'sər*] a member of a committee on ethics or for critical examination of a medical or other society.
censoring in epidemiology, a loss of information from a study, whether by subjects dropping out of the study or because of infrequent measurement.
census measurement of a parameter of population by total counts of individuals.
centaur a mythological race of savage men who lived in Greece. They were depicted as men from the head to the loins and horses from there back. A common emblem for veterinary organizations.
Centaurea [*sen-taw're-ə*] a genus of thistles of the Asteraceae family of plants; some contain sesquiterpene lactones which cause

VetBooks.ir

C-26: *Centaurea solstitialis.* From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

VetBooks.ir

nigropallidal encephalomalacia in horses. Includes *C. melitensis* (Maltese cockspur, tocalote), *C. repens* (*C. picris*, Russian or creeping knapweed, hard heads), *C. solstitialis* (yellow star or St. Barnaby's thistle), and previously *Rhaponticum repens* (*C. repens*, Russian or creeping knapweed, hard heads).

Centaurium a genus of plants in family Gentianaceae. Contain an unidentified toxin which causes diarrhea, hepatic damage and nephrosis. Includes *C. beyrichii* (mountain pink, rock centaury), *C. calycosum* (mountain pink).

centaury common name for plants in the genus ***Centaurium***.
- **buckley c.** *Centaurium calycosum*.
- **rock c.** *Centaurium beyrichii*.

Centella uniflora New Zealand plant member of the family Apiaceae; suspected on one occasion of causing convulsions, recumbency, and liver and kidney damage in sheep. Called also centella.

center [*sen'tər*] a point from which a process starts, especially a plexus or ganglion giving off nerves that control a function.
- **accelerating c.** one in the brainstem involved in acceleration of heart action.
- **appetite c.** located in the hypothalamus; controls appetite.
- **auditory c.** the center for hearing, in the more anterior of the transverse temporal gyri.
- **cardioinhibitory c.** one in the medulla oblongata that exerts an inhibitory influence on the heart.
- **deglutition c.** a nerve center in the medulla oblongata that controls swallowing.
- **diaphragmatic c.** see **diaphragmatic** tendon.
- **emetic c.** located in the reticular formation of the brainstem, this center controls vomiting.
- **eructation c.** controls eructation in ruminants; located in the medulla oblongata.
- **germinal c.** the collection of mitotically active stem cells and lymphoblasts that forms the center of a lymphoid follicle within a lymph node or spleen.
- **gustatory c.** the cerebral center supposed to control taste.
- **lymph node germinal c.** centers in lymph nodes where lymphocytes are produced.
- **medullary respiratory c.** the center in the medulla oblongata that coordinates respiratory movements.
- **motor c.** any center that originates, controls, inhibits or maintains motor impulses.
- **nerve c.** a collection of nerve cells in the central nervous system that are associated together in the performance of some particular function.
- **perineal c.** see **perineal** body.
- **reflex c.** any nerve center at which afferent sensory information is converted into efferent motor impulses.
- **respiratory c's** a series of the centers (the apneustic, pneumotaxic and medullary respiratory centers) in the medulla and pons that coordinate respiratory movements.
- **c.-surround retinal organization** the arrangement of cells in the receptive field of the retina; the sensitivity of a certain spot in the retina is affected by what is occurring in adjacent areas.
- **swallowing c.** deglutition center.
- **thermoregulatory c's** hypothalamic centers regulating the conservation and dissipation of heat.
- **vasomotor c.** a combination of two centers in the reticular formation of the brainstem; includes a pressor and a depressor center.
- **vomiting c.** see emetic center (above).

Center for Veterinary Medicine (CVM) regulates the manufacture and distribution of food additives and drugs that will be given to animals. These include animals from which human foods are derived, as well as food additives and drugs for pet (or companion) animals. A body within the United States Food and Drug Administration.

center-tie a method for tethering cows in fixed stalls in barns. A chain is fixed overhead and to the center of the front edge of the feed trough. The cow is attached to this by a curved yoke that slides up and down the chain.

centerencephalic pertaining to the center of the encephalon.

centering aid a device used when radiographing a part to ensure that the center of the beam of the X-ray will pass through the part at the correct angle and that the part will be in the center of the beam. Modern machines must all have a light beam diaphragm which acts as the centering aid as well as the beam collimator.

Centers for Disease Control and Prevention (CDC) an agency of the US Department of Health and Human Services, located in Atlanta, Georgia, which serves as a center for the control, prevention and investigation of diseases.

Centers for Epidemiology and Animal Health (CEAH) a grouping within the USDA formed to explore and analyze animal health and related agricultural issues to facilitate informed decision-making in government and industry. Includes the Center for Animal Health Information and Analysis, the National Animal Health Monitoring System (NAHMS), the National Surveillance Unit (NSU) and the Office for International Collaboration and Coordination (OICC).

centesimal scale [*sen-tes'ĭ-məl*] in homeopathy, the scale of dilution of a remedy. Each dilution is one in a hundred.

-centesis word element. [Gr.] *puncture and aspiration of.*

centi- (c) [L.] *hundred*; prefix used in the metric system of naming units of measurement to indicate one-hundredth (10^{-2}) of the unit designated by the root with which it is combined, e.g. centigram.

centigrade (C) [*sen'tĭ-grād*] having 100 gradations (steps or degrees), as the Celsius scale. For equivalents of Celsius and Fahrenheit temperatures, see Tables 5 and 18.

centigram (cg) [*sen'tĭ-gram*] one-hundredth of a gram.

centiliter (cL) [*sen'tĭ-le"tər*] one-hundredth of a liter.

centimeter (cm) [*sen'tĭ-me"tər*] one-hundredth of a meter, or approximately 0.3937 inch.
- **cubic c.** a unit of capacity, being that of a cube 1 cm on a side; abbreviated cm^3, cu.cm. or cc.

centimorgan [*sen"tĭ-mor'gən*] a measure of the degree of recombination between two genes. One centimorgan is approximately 1000 kilobases. Named after T.H. Morgan. See also **genetic** map.

centipedes [*sen'tĭ-pēdz*] many-legged arthropods in the class Chilopoda. They are relatively harmless, but they can inflict a painful bite.

centrad [*sen'trad*] toward a center.

central [*sen'trəl*] pertaining to a center; located at the midpoint.
- **c. artery** the vessel within some or most of the optic nerve that becomes visible with an ophthalmoscope after it emerges from the optic disc to radiate in part or whole over the fundus of the eye. The vessel gives rise to the embryonic hyaloid artery that nourishes the developing lens. Formally called *arteria centralis retinae*. See Table 9.
- **c. channel** the fast-flowing channel through the capillary bed, the rate controlled by the metarterioles which exert a sphincter-like action on the system.
- **c. cord syndrome** injury to the central portion of the cervical spinal cord resulting in disproportionately more weakness or paralysis in the forelimbs than in the hindlimbs; pathological change is caused by hemorrhage or edema.
- **c. layer** central of the three layers of gray matter in the cerebellum; the principal cell type is piriform.
- **c. nervous system** see central **nervous** system.
- **c. progressive retinal degeneration** see **retinal**.
- **c. respiratory oscillator** pool of nerve cells in the pons and medulla oblongata which are responsible for the rhythmic to-and-fro movements of respiration.
- **c. tendon of diaphragm** see **diaphragmatic** tendon.
- **c. vein** the centrally placed drainage vessel of each hepatic lobule, receiving blood from the hepatic sinusoids.
- **c. venous catheterization** insertion of an indwelling catheter into a central vein for the purpose of administering fluid and

medications and for the measurement of central venous pressure (see below).

c. venous pressure (CVP) the intravascular pressure of blood within the thoracic vena cava, measured by an in situ catheter positioned in the intrathoracic cranial (introduced via the jugular vein) or caudal vena cava (introduced via the lateral saphenous or femoral vein). Measurements of pressure are made using a calibrated manometer or an electronic pressure transducer. The technique is used mainly in dogs and cats.

Central and Upper Belgian a white, blue pied or blue breed of dairy cattle produced in Belgium by crossing Shorthorn and Friesian with local red cattle.

Central Asiatic Pashmina a white or black-and-white goat, maintained for its haircoat, which produces cashmere fiber. Called also cashmere or Kashmiri goat.

Central Europe tickborne fever see Russian spring–summer **encephalitis**.

central ray the center of the area of radiation created as the X-ray beam diverges. The further from the center of the ray one is, the more distortion there is and, if the beam is not correctly centered over the part to be viewed, there will be more distortion still. The central point is the point of minimum distortion.

centri- word element. [L., Gr.] *center, central location*.

centric [*sen'trik*] pertaining to a center.

chromosome c. fusion replacement of two chromosomes by one produced by fusion of the centromeres of two acrocentric chromosomes. Called also Robertsonian translocation.

centriciput [*sən-tris'ĭ-pət*] the central part of the upper surface of the head, located between the occiput and sinciput.

centrifugal [*sen-trif'ə-gəl*] moving away from a center.

centrifugate [*sən-trif'u-gāt*] material subjected to centrifugation.

centrifugation [*sen-trif''u-ga'shən*] the process of separating elements of a solution, mixture or suspension from the heavier portions by centrifugal force.

density gradient c. a procedure for separating particles such as viruses or ribosomes or molecules such as DNA in which the sample is placed on a preformed density gradient such as sucrose or cesium chloride. Upon centrifugation either by rate zonal or equilibrium procedures, the macromolecules are 'banded' in the gradient and can be collected as a pure fraction.

centrifuge [*sen'trĭ-fūj*] 1. to rotate, in a suitable container, at extremely high speed, to cause the deposition of solids in solution, or to separate substances on the basis of their density. 2. a laboratory device for subjecting substances in solution to relative centrifugal force up to 25 000 times gravity. See also **cytocentrifuge**.

centrilobular [*sen''trĭ-lob'u-lər*] pertaining to the central portion of a lobule, usually with reference to liver parenchyma. Corresponds to 'periacinar' when the **acinar** concept of liver structure is used.

c. necrosis necrosis restricted to the hepatocytes immediately surrounding the central (hepatic) venule. Called also periacinar necrosis.

centriole [*sen'tre-ōl*] either of the two cylindrical organelles located in the centrosome and containing nine triplets of microtubules arrayed around their edges; centrioles migrate to opposite poles of the cell during cell division and serve to organize the spindles. They are capable of independent replication and of migrating to form basal bodies.

centripetal [*sən-trip'ə-təl*] moving toward a center.

centro- see **centri-**.

centrodistal joint [*sen''tro-dis'təl*] formed between the central tarsal bone and the first, second and third tarsal bones.

centrokinesia [*sen''tro-kĭ-ne'zhə*] movement originating from central stimulation.

centromere [*sen'tro-mēr*]the clear constricted portion of the chromosome at which the chromatids are joined and by which the chromosome is attached to the spindle during cell division.

Centrorhynchus thorny-headed (acanthocephalan) parasites of birds. See also ***Macracanthorhynchus***.

centrosclerosis [*sen''tro-sklə-ro'sis*] osteosclerosis of the marrow cavity of a bone.

centrosome [*sen'tro-sōm*] a specialized area of condensed cytoplasm containing the centrioles and playing an important part in mitosis.

centrosphere [*sen'tro-sfēr*] centrosome.

centrum [*sen'trəm*] pl. *centra* [L.] 1. a center. 2. the body of a vertebra.

c. commune the solar plexus.

Centruroides [*sen''troo-roi'dēz*] genus of bark **scorpions**.

century plant see ***Agave americana***.

cenuriasis see **coenurosis**.

Cephaelis [*sef''ə-e'lis*] see ***Psychotria***.

cephalad [*sef'ə-lad*] toward the head.

cephaledema [*sef''əl-ə-de'mə*] edema of the head.

cephalexin [*sef''ə-lek'sin*] a first generation **cephalosporin** antibiotic which is effective following oral administration. It is widely used in bacterial infections of the skin in dogs and cats. Called also cefalexin (INN).

cephalhematocele [*sef''əl-he-mat'o-sēl*] a hematocele under the pericranium, communicating with the venous sinuses of the dura mater.

cephalhematoma [*sef''əl-he''mə-to'mə*] a localized effusion of blood beneath the periosteum of the skull of the newborn, due to disruption of the vessels during parturition.

cephalic [*sə-fal'ik*] pertaining to the head, or to the head end of the body.

c. index the width of the skull divided by the length. Sometimes expressed as 100 times the breadth divided by the length.

c. vein the vein on the cranial aspect of the forearm of most domestic mammals; much favored for intravenous injection in dogs; see Table 15.

cephalin [*sef'ə-lin''*] a group of phospholipids found particularly in the brain and other nerve tissue.

cephalitis [*sef''ə-li'tis*] encephalitis.

cephal(o)- word element. [Gr.] *head*.

cephalocele [*sef'ə-lo-sēl''*] protrusion of a part of the cranial contents. See also **encephalocele**.

cephalocentesis [*sef''ə-lo-sen-te'sis*] surgical puncture of the head.

cephalodactyly [*sef''ə-lo-dak'tə-le*] malformation of the head and digits.

cephalogyric [*sef''ə-lo-ji'rik*] pertaining to turning motions of the head.

cephalohematoma [*sef''ə-lo-he''mə-to'mə*] cephalhematoma.

cephalomelus [*sef''ə-lom'ə-ləs*] a fetus with an accessory limb growing from the head.

cephalomotor [*sef''ə-lo-mo'tər*] moving the head; pertaining to motions of the head.

Cephalomyia see ***Rhinoestrus***.

cephalonia [*sef''ə-lo'ne-ə*] a condition in which the head is abnormally enlarged, with sclerotic hyperplasia of the brain.

cephalonium a first generation **cephalosporin**, used in intramammary and topical preparations. Called also cefalonium.

cephalopagus [*sef''ə-lop'ə-gəs*] craniopagus.

cephalopathy [*sef''ə-lop'ə-the*] any disease of the head.

cephalopelvic [*sef''ə-lo-pel'vik*] pertaining to the head of the fetus and the pelvis of the dam.

c. disproportion the head of the fetus is disproportionately large and will not pass through the pelvis of the dam. Caused usually by hydrocephalus.

Cephalopina titillator see ***Cephalopsis*** *titillator*. The nasal bot of camels.

cephalopods [*sef'ə-lo-podz''*] members of the class Cephalopoda, including cuttle fish, squid and octopus.

Cephalopsis a member of the genus of flies in the family Oestridae. Current name is *Cephalopina titillator*.

C. titillator nasal bot fly of camels. The larvae inhabit the nasal sinuses.

cephaloridine a first generation **cephalosporin** antibiotic.

cephalosporinase [*sef''ə-lo-spor'in-ās*] an enzyme that hydrolyzes the −CO−NH− bond in the lactam ring of cephalosporin, converting it to an inactive product.

cephalosporins [*sef''ə-lo-spor'inz*] a group of broad-spectrum, semisynthetic antibiotics, derived from *Cephalosporium*, a genus of soil-inhabiting fungi, which share the nucleus 7-aminocephalosporanic acid. Cephalosporins named before 1975 are spelled with 'ph', while those named later are spelled with 'f'. *First generation* preparations (cefaclor, cephazolin, cefadroxil, cephalexin, cephaloridine, cephalothin, cephapirin, cephradine) are active mainly against gram-positive bacteria. *Second generation* preparations (cefmetazol and cefoxitin) have a broader spectrum of activity and *third generation* preparations (cefoperazone, cefotaxime and moxalactam) are active mainly against gram-negative organisms, including *Pseudomonas aeruginosa*. *Fourth generation* preparations

VetBooks.ir

(cefepime) have an extended spectrum and increased resistance to hydrolysis to β-lactamases. In a more recently introduced system of classification, cephalosporins are grouped according to their route of administration and antimicrobial activity. The orally active cephalosporins, with fair activity against gram-positive bacteria and modest activity against gram-negative, but not *Pseudomonas*, form one group. Included are cephalexin, cephadrine, cefadroxil, cefachlor and cephaloglycin. Those active by parenteral administration are placed into four groups: Group I, which includes cefapirin, cefacetrile, cephaloridine, cephalothin and cephazolin, has high activity against gram-positive bacteria and moderate activity against gram-negative, but not *Pseudomonas*; Group II, which includes cefamandole, cefmenoxime, cefotaxime, cefotiam, ceftiofur, cefuroxime and cefotriaxone, has high activity against Enterobacteriaceae; Group III, which includes cefulodin, ceftazidime and cefoperazone, has high activity against *Pseudomonas* and other gram-negative bacteria; Group IV, which includes cefoxitin, loxalactam, cefmetazole and cefotetan, is resistant to β-lactamase.

Cephalosporium acremonium [sef"ə-lo-spor'e-əm] the fungal species that produces the naturally occuring cephalosporin antibiotics.

cephalothin [sə-fal'o-thin] a first generation **cephalosporin** antibiotic with an antibacterial spectrum similar to cefazolin and cephalexin. Called also cefalothin (INN).

cephalothoracic [sef"ə-lo-thə-ras'ik] pertaining to the head and thorax.

cephalothoracopagus [sef"ə-lo-thor"ə-kop'ə-gəs] conjoined twins united at the head, neck and thorax.

cephalotomy [sef"ə-lot'ə-me] 1. the cutting up of the fetal head to facilitate delivery. 2. dissection of the fetal head.

cephalotrypesis trephination of the skull.

cephamycins [sef"ə-mi'sins] semisynthetic, β-lactam antibiotics produced by *Streptomyces* spp.; includes **cefoxitin sodium**, **cefmetazole** and **cefotetan**.

cephapirin [sef-ə-pi'rin] a first generation **cephalosporin** antibiotic, resistant to β-lactamase. Most commonly used as an intramammary infusion in cows. Called also cefapirin (INN).

cephazolin cefazolin.

Cephenemyia a genus of bot flies in the family Oestridae. Includes *Cephenemyia apicata*, *C. auribarbis*, *C. jellisoni*, *C. phobifer*, *C. pratti*, *C. stimulator*, *C. trompe* and *C. ulrichi* (nasal cavities of wild mammals).

cephradine [sef'rə-dēn] a first generation **cephalosporin** antibiotic with a spectrum of activity similar to cephalexin.

cera [L.] *wax*.

ceramidase [sə-ram'i-dās] an enzyme occurring in most mammalian tissue that catalyzes the reversible acylation–deacylation of ceramides.

ceramide [ser'ə-mīd] any of a group of naturally occurring sphingolipids in which the NH_2 group of sphingosine is acylated with a fatty acyl CoA derivative to form *N*-acylsphingosine.

c. glucoside the major sphingolipid accumulated in **Gaucher's disease**. Called also glucocerebroside.

c. lactosidosis a sphingolipidosis in which ceramide lactoside accumulates in neural and visceral tissues owing to a deficiency of a β-galactosidase.

cerate a medicinal preparation for external use, compounded of fat or wax, or both, intermediate in consistency between an ointment and a plaster.

cerat(o)- for words beginning thus, see also those beginning *kerato-*.

Ceratocephalus testiculatus see ***Ranunculus***.

Ceratocystis an obsolete name for the perfect state of the fungus *Sporothrix schenckii*. See ***Ophiostoma stenoceras***.

ceratohyoid short rods of the hyoid bone that connect the body of the hyoid bone to the epihyoid (dog, cat, ruminants, pig) or stylohyoid (horse).

Ceratomyxa a genus of protozoa in the class Myxosporea.

C. shasta important parasite of young salmonids limited in occurrence to the Columbia river basin. Causes severe losses in young fish in culture ponds. Signs include swelling at vent, distended abdomen and subcutaneous boils. Can also infect polychaetes, such as *Manayunkia speciosa*.

Ceratophyllus [ser"ə-to-fil'əs] a genus of fleas in the order Siphonaptera. Includes *Ceratophyllus columbae*, *C.* (*Nosopsyllus*) *fasciatus*, *C. gallinae*, *C. garei* and *C. niger* (Western chicken flea—rodents and wild birds).

Ceratopogonidae [ser"ə-to-po-gon'i-de] a family of biting midges of the order Diptera; the most important genus is ***Culicoides***.

Ceratostomella fimbriata a fungus that grows on green celery stalks; induces production of a furocoumarin which causes primary photosensitization.

Cerbera plant genus in the family Apocynaceae; contain a cardenolide cardiac glycosides in seed kernels which can cause sudden death. Includes *C. manghas* (sea mango), *C. floribunda* (gray milkwood), *C. dilatata, C. odollam* (pink-eyed cerbera, odallum).

cercaria [sər-kar'e-ə] pl. *cercariae* [Gr.] the final, free-swimming larval stage of a trematode parasite.

cercarial pertaining to or emanating from cercariae.

c. dermatitis see ***Trichobilharzia***.

cerclage [ser-klahzh'] [Fr.] encircling of a part with a wire ring or loop, as for fixation of fragments in a fractured bone. Also used to prevent rotation of oblique fractures managed by intramedullary pin fixation. See also **hemicerclage**.

cable and crimp c. multifilament cable secured with a crimp.

Cercocarpus a North American genus of the Rosaceae plant family; includes *C. breviflorus*, *C. montanus*; contains cyanogenetic glycosides and may cause cyanide poisoning. Called also mountain mahogany.

cercus [sur'kəs] a bristle-like appendages on the rear of most insects and some arthropods.

cere the firm, fleshy bond lying across the base of the beak of birds. Most obvious in the pigeon as a white, saddle-like object. The cere is blue in male budgerigars and light brown to pink in females, so offering a convenient means of sexing these birds. The color may fade in males with testicular tumors.

c. hypertrophy occurs in psittacine birds, particularly budgerigars; overgrowth may occlude the nares. Called also brown hypertrophy of the cere.

cereal [sēr'e-əl] cultivated grain crops of barley, wheat, rye and oats, members of the plant family Poaceae (Graminae). See also **barley**, **wheat**, **rye**, **oat**.

c. crop oats, wheat, barley, rye crops used as grazing when immature or failed and short. Usually used when other feed is short and livestock are hungry. Hypomagnesemia, nitrate/nitrite poisoning and photosensitization may occur on immature green crops and lactic acid indigestion due to ingestion of grain on stunted mature crops.

cerebellar [ser"ə-bel'ər] pertaining to the cerebellum.

c. agenesis absence of the cerebellum due to its non-appearance in the embryo.

c. aplasia see cerebellar atrophy (below).

c. ataxia the incoordination of gait characterized by exaggerated movements. There is no paresis. There is exaggerated strength and distance of movement—hypermetria. Caused usually by damage to the cerebellum or to the spinocerebellar tracts. May be congenital due to cerebellar atrophy or acquired due to inflammation or malacia of the cerebellum.

c. atrophy degeneration and loss of cells of the cerebellum as a result of *in utero* viral infection. Purkinje cells are most predominantly affected, leading to abnormal migration of other cell types

C-27: Hypertrophy of the cere and overgrowth of the beak in a budgerigar.

C-28: Cerebellar hypoplasia.
From Van Dijk JE, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

within the developing cerebellum of the fetus. Clinical signs of cerebellar disease are present at birth and stabilize or improve subsequently. Commonly affects cattle and cats infected with bovine virus diarrhea virus or feline panleukopenia virus. Distinguished from cerebellar abiotrophy in which the cerebellum forms normally but undergoes premature degeneration after birth. In the latter the animals are normal at birth but develop progressive signs of cerebellar dysfunction later. Segmental atrophy occurs in pigs but is asymptomatic.

c. coning see cerebellar lipping (below), **brain** herniation.

c. cortex the superficial gray matter of the cerebellum.

c. dysfunction see cerebellar ataxia (above).

c. dysmelinogenesis recorded in Chow Chow dogs; characterized by congenital head tremor.

feline c. ataxia see **feline** panleukopenia; cerebellar atrophy (above).

c. hypomyelinogenesis abnormally reduced myelination in the cerebellum; characterized clinically by severe neonatal tremor.

c. hypoplasia deficiency of cells of the cerebellum, the degree and distribution of which is variable. See cerebellar atrophy (above).

inherited c. defects includes cerebellar abiotrophy, atrophy, agenesis, hypoplasia, neuraxonal dystrophy.

c. lipping caused by diffuse cerebral edema. The vermis of the cerebellum protrudes through the foramen magnum and lies like a tongue over the medulla.

c. neuronal abiotrophy see cerebellar abiotrophy (above).

c. neuraxonal dystrophy reported in collie sheepdogs. The lesion is limited to axons and there are no lesions in the cerebellar folial neurons.

c. syndrome see cerebellar ataxia (above).

cerebellitis [*ser"ə-bel-i'tis*] inflammation of the cerebellum.

idiopathic c. see **shaker dog disease**.

cerebello-olivary [*ser"ə-bel"o-ol'i-var"e*] conducting or passing from the cerebellum to the olivary nucleus.

cerebellomedullary cistern [*ser"ə-bel"o-med'ə-lar"e*] see **cisterna** cerebellomedullaris.

cerebellopontine [*ser"ə-bel"o-pon'tēn*] conducting or passing from the cerebellum to the pons varolii.

c. abscess usually complications of otitis media generated by pharyngeal infection. See also **brain** abscess.

cerebelloreticular tract [*ser"ə-bel"o-rə-tik'u-lər*] part of the reticular formation, matched by a reverse pathway of reticulocerebellar tract, and therefore of the modulating mechanism of the integration centers in the brain.

cerebellum [*ser"ə-bel'əm*] the part of the metencephalon situated on the back of the brainstem, to which it is attached by three cerebellar peduncles on each side; it consists of a median lobe (vermis) and two lateral lobes (the hemispheres). Structures in the cerebellum include cingulum, cerebellar **cortex**, **culmen**, **pyramid** of cerebellum, **arbor** vitae, **folia cerebelli**, dentate **nucleus, uvula** and **vermis**. See also **brain**.

vestibular c. see **archicerebellum**.

cerebral [*sə-re'brəl*] pertaining to the cerebrum. See also **brain**.

c. circulation arterial blood supply reaches the anterior, middle and posterior cerebral arteries via the circle of Willis, in some species originating directly from the internal carotid and basilar arteries, in others via an interposed *rete mirabile*. See also **blood–brain barrier**, blood–CSF **barrier**, **cerebrospinal** fluid.

c. contusion contusion of the brain following a head injury. See also cerebral **contusion**, **brain** trauma.

c. cortex the convoluted layer of gray matter covering the cerebral hemispheres, which governs thought, memory, sensation and voluntary movement. See also **brain**, **pyramidal** tracts, **extrapyramidal** system.

c. cortical dysplasia encompasses a range of disorders including neuronal heterotopia, microgyria, ulegyria, lissencephaly, pachygyria.

c. diencephalic syndrome the clinical signs associated with lesions of the cerebral cortex and diencephalon. They include seizures, behavioral or mental change, abnormal movements such as circling and head pressing, deficits in contralateral postural responses and sometimes visual impairment.

c. dura mater the membranous cover around the brain. Endosteal and meningeal layers are separated only by the cranial venous sinuses. Continuous with the spinal cord dura and the sheaths of the spinal nerves. Has three internal folds which separate sections of the brain. See **falx** cerebri, **tentorium** cerebelli, **sella** turcica.

c. edema abnormal accumulation of fluid within the brain. Can be subdivided into *vasogenic* edema (below), *cytotoxic* edema (below), *hydrostatic* edema (below), and *interstitial* edema (below).

cytotoxic c. edema caused by the intracellular accumulation of water due to energy failure within neurons and glia. Occurs in both gray and white matter and is most commonly the result of ischemia or hypoxia.

c. flush the congestion of the cerebral vessels causing a pink coloration; of infections by *Babesia bovis* and *B. bigemina* it is the former in which the cerebral flush occurs.

c. gyri convolutions on the surface of the cerebrum.

c. hemisphere symmetrical right and left halves of the cerebrum divided by the longitudinal fissure.

hydrostatic c. edema caused by the sudden flooding of capillary beds with extracellular accumulation of protein-poor fluid due to a sudden increase in intravascular pressure. Occurs most commonly in areas of the brain following removal of mass lesions such as tumors.

interstitial c. edema caused by accumulation of water in periventricular white matter due to a sudden increase in intraventricular pressure as a result of acute obstructive hydrocephalus.

c. peduncle see cerebral **peduncle**.

c. pia mater thin connective tissue membrane that lies closely against the cerebral surface and carries blood vessels into the tissues of the brain.

c. piriform lobe on the floor of the brain medial to the lateral olfactory tract.

c. pole frontal (rostral) and occipital (caudal) poles of the cerebrum.

c. substantia nigra occupies the interior of the cerebral peduncles.

c. syndrome characterized by abnormal mental state, abnormal movements such as pacing or head pressing, visual impairment and seizures.

c. vascular accident (CVA) see **cerebrovascular** accident.

vasogenic c. edema that characterized by increased permeability of capillary endothelial cells; the most common form of brain edema.

c. ventriculography see **ventriculography**.

cerebration [*ser"ə-bra'shən*] functional activity of the brain.

cerebritis inflammation of the cerebrum.

cerebroangiography [*ser"ə-bro-an"je-og'rə-fe*] see cerebral **arteriography**.

cerebrocerebellar [*ser"ə-bro-ser"ə-bel'ər*] pertaining to the cerebrum and the cerebellum.

cerebrocortical [*ser"ə-bro-kor'tĭ-kəl*] pertaining to the cerebral cortex.

c. malacia see **polioencephalomalacia**.

c. necrosis see **polioencephalomalacia**.

cerebroid [*ser'ə-broid*] resembling brain substance.

cerebroma any abnormal mass of brain substance.

cerebromalacia [*ser"ə-bro-mə-la'shə*] abnormal softening of the substance of the cerebrum. See also **leukoencephalomalacia**, **polioencephalomalacia**.

cerebromeningitis [*ser"ə-bro-men"in-ji'tis*] meningoencephalitis.

cerebronic acid [*ser"ə-bron'ik*] a fatty acid derived from sphingomyelin, which is the principal hydroxy saturated acid from the brain.

cerebropathy [*ser"ə-brop'ə-the*] any brain disorder.

VetBooks.ir

cerebrophysiology [ser"ə-bro-fiz"e-ol'ə-je] the physiology of the brain.
cerebropontile [ser"ə-bro-pon'tīl] pertaining to the cerebrum and pons.
cerebrosclerosis [ser"ə-bro"sklə-ro'sis] morbid hardening of the substance of the cerebrum.
cerebroside [sə-re'bro-sīd"] a general designation for sphingolipids in which sphingosine is combined with galactose or glucose; found chiefly in nervous tissue.
cerebrosis [ser"ə-bro'sis] any disease of the cerebrum.
cerebrospinal [ser"ə-bro-spī'nəl] pertaining to the brain and spinal cord.
c. abscess see **brain** abscess.
c. angiopathy is thought to be a sequel to subclinical edema disease due to an *Escherichia coli* toxemia of pigs. The disease is sporadic within a group and is characterized by incoordination, apathy, aimless walking and circling. Emaciation occurs rapidly and most affected animals are euthanatized on humanitarian grounds.
c. dysmyelinogenesis a characteristic lesion in the brain of newborn piglets affected by congenital tremor caused by swine fever infection of the dam during early pregnancy. See also **congenital tremor syndrome** of piglets.
c. embolism see fibrocartilaginous **embolism**.
c. fluid (CSF) the fluid within the subarachnoid space, the central canal of the spinal cord, and the four ventricles of the brain. The fluid is formed continuously by arachnoid granulations as well as the choroid plexus in the ventricles, and is reabsorbed into the blood by the arachnoid villi at approximately the same rate at which it is produced. Examination of the CSF for the presence of abnormal or excessive numbers of cells, protein content, pressure is an important source of information about the nervous system.
c. fluid–blood barrier CSF passes into the CSF system (brain ventricles, the central canal of the spinal cord and the subarachnoid space) at the choroid plexus and passes out of the subarachnoid space into the sagittal sinus. The confining membranes of the system control selectively the passage of certain materials between it and the brain tissue (CSF–brain barrier) and between it and the blood (CSF–blood barrier).
c. fluid–brain barrier see cerebrospinal fluid–blood barrier (above).
c. nematodiasis invasion of the central nervous system by the microfilaria of *Setaria labiatopapillosa* (*S. digitata*) in most species causes an acute focal encephalomyelomalacia. The clinical picture is one of incoordination, then paralysis of the limbs, especially the hinds. *S. equina* may cause endophthalmitis in horses by similar invasion.
c. thrombosis see fibrocartilaginous **embolism**.
c. vasculitis see **vasculitis**.
cerebrovascular [ser"ə-bro-vas'ku-lər] pertaining to the blood vessels of the cerebrum or brain.
c. accident (CVA) failure of blood supply to part of the brain, also called infarction. Infarction can occur either as the result of hemorrhage from a vessel (hemorrhagic infarct) or occlusion of a vessel (ischemic infarct). In both cases, disruption of the blood supply leads to failure of oxygen and hence energy supply to brain tissue within the associated vascular territory. Cerebrovascular accidents occur more commonly in dogs than in cats, and common sites of infarction include the cerebral hemispheres, thalamus and cerebellum. Underlying conditions that may be associated with CVA include hypertension, endocrine disease, kidney disease, heart disease and metastatis disease. See also feline ischemic **encephalopathy**.
cerebrum [sə-re'brəm] the main portion of the brain, occupying the front part of the cranial cavity; its two cerebral hemispheres are united by the corpus callosum. The term is sometimes applied to the postembryonic forebrain and midbrain together or to the entire brain. See also **brain**.
Cereopsis novaehollandiae see **Cape Barren goose**.
CERF Canine Eye Registry Foundation.
cerium (Ce) [sēr'e-əm] a chemical element, atomic number 58, atomic weight 140.12. See also Table 4.
ceroid an insoluble polymer of oxidized lipid and protein; an acid-fast, sudanophilic, pigment found in the liver, the nervous system and muscle. See also ceroid **lipofuscinosis**.
ceroid lipofuscinosis see ceroid **lipofuscinosis**.
certain safety factor margin of safety of a drug measured from the ratio of the median lethal dose and the median effective dose. Called also therapeutic index, LD_{50}/ED_{50}.
certainty confidence in a certain event or outcome occurring; a subjective judgment by a decision maker. The sure thing, the guaranteed happening, the certain winner.
c. required refers to the making of a diagnosis. The criterion on which a decision can be made about how far to go in the investigation of a case is the degree of certainty required.
certificate written certification of an examination, treatment, necropsy carried out by a veterinarian. Because the certificates are often the instruments on which compensation is made and lawsuits decided they are very important to the reputation of the veterinarian who prepares them and to the profession and its status in the community. The two areas of common error are the incomplete certificate that omits critical matters, especially the accurate identification of the patient, and the omission of the required entries which are left for the owner to complete, providing an opportunity and temptation to defraud.
ceruletide a cholecystokinin-like decapeptide, originally isolated from the skin of an Australian frog. It causes contraction of the gallbladder and relaxation of the sphincter of Oddi. Used in humans to treat paralytic ileus and in radiography during cholecystography.
ceruloplasmin [sə-roo"lo-plaz'min] an alpha$_2$-globulin of the plasma, being the form in which most of the plasma copper is transported. Used as a measure of the copper status of animals.
cerumen [sə-roo'mən] a waxy secretion of the glands of the external acoustic meatus; ear wax.
c. glands modified sweat glands in the epithelial lining of the external auditory meatus. The wax serves to maintain the microenvironment of the ear canal, especially its relative humidity; the accumulated wax gradually migrates outwards from the eardrum carrying debris with it.
ceruminolysis [sə-roo"mĭ-nol'ə-sis] dissolution or disintegration of cerumen in the external acoustic meatus. The therapeutic effect of some medications used in the treatment of otitis externa.
ceruminosis [sə-roo"mĭ-no'sis] excessive or disordered secretion of cerumen.
cervical [sur'vĭ-kəl] pertaining to the neck or to the cervix.
c. ankylosis ankylosis of the intervertebral joints. See also **hypervitaminosis** A.
c. aplasia segmental aplasia of the genital tract may be manifested by the absence or deformity of the cervix. Infertility is absolute. Diagnosis in large animals can be performed by transrectal palpation; small animals may require surgical exploration.
c. cirrhosis caused by severe laceration at parturition; a rare cause of dystocia.
c. curve one of the vertebral curves of the body.
c. dislocation a physical method of euthanasia for laboratory mice, immature rats and poultry. Must be performed by an experienced person in order to achieve rapid and humane death.
c. fixation suturing of the cervix through the vaginal floor to the prepubic tendon. Used in the treatment of vaginal prolapse in cows.
c. incompetence damage to the cervix during parturition in the mare may cause its deformity and render it incapable of effectively closing off the uterus from the vagina. Infection of the uterus and infertility result.
incomplete c. dilation incomplete dilation of the cervix during parturition in adult cows, less commonly in heifers, may necessitate obstetrical, even cesarean, assistance; thought to be hormonal. See also **ringwomb** in ewes.
c. inflammation see **cervicitis**.
c. instability, c. malformation, c. malarticulation see cervical spondylomyelopathy (below).
c. line lesions of the tooth neck characterized by progressive, subgingival, osteoclastic resorption. These occur commonly in cats. See feline **odontoclastic** resorptive lesions.
c. lymphadenitis infection with abscessation of cervical lymph nodes in guinea pigs; usually caused by *Streptococcus zooepidemicus*.
c. malarticulation see cervical spondylomyelopathy (below).
c. malformation see cervical spondylomyelopathy (below).
c. massage suitable for use only in cows. The fetus is pulled up into the cervix and light traction maintained while a well-lubricated

hand is pushed gently between the cervix and the fetus. This is done repeatedly and continued if there is no evidence of trauma. The cervix may dilate sufficiently to allow normal delivery of the calf.

c. mucus from the cervix. Its presence in liberal amounts is used as an indication of estrus.

c. paralysis inability to lift the head, usually accompanied by paralysis of all four limbs.

c. plexus see cervical **plexus**.

c. rib see cervical **rib**.

c. spinal cord lesion any lesion affecting the spinal cord between the first and eighth spinal cord segments. Includes fracture–dislocation, cervical vertebral abscess, compression due to exostosis, spinal myelitis and myelacia, congenital lesions including spinal canal stenosis.

c. spine the part of the spine made up of cervical vertebrae.

c. spondylolisthesis see cervical spondylomyelopathy (below).

c. spondylomyelopathy compression of the cervical spinal cord in dogs caused by either soft tissue or bony changes affecting the surrounding structures. Seen most commonly in large and giant breed dogs, particularly Great Danes and Doberman pinschers. Compression of the spinal cord may occur as the result of hypertophy of the dorsal anulus fibrosus of affected intervertebral discs, hypertrophy of the ligamentum flavum, enlargement of articular facet joints, stenosis of the spinal canal and tipping or dorsal angulation of vertebral bodies. Changes are thought to be degenerative in nature and have been proposed to be the result of subclinical instability, possibly related to the breed conformation. Affected dogs show signs related to the level of compression - commonly an ataxia of the hindlimbs with a base-wide hindlimb stance, together with a short stride, stiff forelimb gait. As a result of the uncertain etiology of the condition a large number of names have been used to describe the condition, including canine wobbler syndrome, cervical instability, cervical malformation, cervical malarticulation syndrome, disc-associated wobbler syndrome and cervical stenotic myelopathy, amongst others. Cervical spondylomyelopathy seems to be the most widely accepted terminology currently, although this may change in the future.

c. spondylopathy see cervical spondylomyelopathy (above).

c. static stenosis one of the two syndromes listed under cervical vertebral stenotic myelopathy; characterized by compression of the cord at C5 to C7 in large male horses 1–4 years of age; the position of the neck is immaterial; the resulting syndrome is characterized by an insidious onset of ataxia. See also **enzootic** equine incoordination.

c. stenotic myelopathy focal myelopathy caused by compression of the spinal cord by excessive flexion of the neck in patients, especially dogs, in which there is a pre-existing narrowing of one of the two vertebral foramina in one or more vertebrae, especially cervical vertebrae. See also degenerative **myeloencephalopathy**.

c. swab swab of the os cervix for bacterial and virological examination for pathogens likely to affect fertility adversely. Used in fertility examination of cases of prolonged infertility in ruminants. See also **uterine** swab.

c. syndrome clinical signs caused by a lesion of the spinal cord between C1 and C5. They include tetraparesis to tetraplegia or hemiparesis to hemiplegia, hyperreflexia, hypertonia, depressed postural responses and sometimes cervical pain.

c. trauma most common are lacerations during parturition; resulting adhesions and fibrosis may cause subsequent dystocia.

c. vertebrae the skeleton of the neck, in most mammals comprising seven vertebrae, in birds up to 25.

c. vertebra fracture in horses occurs as a result of head-on collisions at speed; causes recumbency and inability to move limbs voluntarily, but there is full consciousness and patient can eat and drink if assisted.

c. vertebral malformation malarticulation syndrome see cervical spondylomyelopathy (above).

c. vertebral stenotic myelopathy one of the causes of incoordination in young horses. See **enzootic** equine incoordination.

cervical abscess of pigs streptococcal abscess of the lymph nodes of the throat; a specific disease of pigs which exerts its importance at slaughter because of the rejection of affected parts. The cause is infection with beta-hemolytic streptococci of Lancefield Group E.

cervicectomy [*sur"vĭ-sek'tə-me*] excision of the cervix uteri.

cervicitis [*sur"vĭ-si'tis*] inflammation of the cervix uteri.

cervic(o)- word element. [L.] *neck, cervix*.

cervicobrachialgia [*sur"vĭ-ko-bra"ke-al'jə*] pain in the neck radiating to the forelimb, due to compression of nerve roots of the cervical spinal cord.

cervicocolpitis [*sur"vĭ-ko-kol-pi'tis*] inflammation of the cervix uteri and cranial vagina.

cervicofacial [*sur"vĭ-ko-fa'shəl*] pertaining to the neck and face.

cervicofemoral angle [*sur"vĭ-ko-fem'or-əl*] the angle at which the neck of the femur joins the shaft. Called also the angle of inclination. Important in assessment for hip dysplasia in dogs.

cervicopexy [*sur'vĭ-ko-pek"se*] suture of the uterine cervix to the prepubic tendon to retain a previously prolapsed cervix.

cervicoplasty [*sur'vĭ-ko-plas"te*] plastic surgery on the neck.

cervicospinal arthropathy [*sur'vĭ-ko-spi'nəl*] see **cervical** vertebral stenotic myelopathy.

cervicothoracic ganglia [*sur"vĭ-ko-thə-ras'ik*] the staging post for most sympathetic nerve impulses going to the heart; called also stellate ganglia.

cervicothoracic syndrome [*sur"vĭ-ko-thə-ras'ik*] clinical signs associated with lesions of the spinal cord segments from C6 to T2. Includes tetraparesis to tetraplegia or hemiparesis to hemiplegia, neurogenic muscle atrophy in the forelimbs, depressed postural responses, and hypalgesia to analgesia caudal to the level of the lesion. Horner's syndrome is sometimes present.

cervicotomy [*sə"vĭ-kot'ə-me*] incision of the circular muscle layers of the cervix to permit the passage of a normal sized fetus through a stenosed cervix. Performed only in the cow and not conducive to subsequent fertility.

cervicovaginal [*sər"vĭ-ko-vaj'ĭ-nəl*] pertaining to the cervix and the vagina.

cervicovesical [*sur"vĭ-ko-ves'ĭ-kəl*] relating to the cervix uteri and urinary bladder.

cervid a member of the family Cervidae; deer, elk, reindeer, moose, wapiti, muntjacs and sikas.

Cervidae [*sur'viks*] the family of the order Artiodactyla, which contains the true deer, elk, moose, muntjacs and caribou (reindeer).

cervix pl. *cervices;* neck; the front portion of the neck (collum), or a constricted part of an organ (e.g. cervix uteri, see below).

double c. incomplete fusion of the müllerian ducts leads to duplication of all or parts of the female genital tract. In cows one of these is a duplication of the cervix but with only one uterus. More common is a double external os but a single internal os. Both represent an inconvenience at artificial insemination and are detectable on transrectal or vaginal examination.

c. uteri the narrow caudal end of the uterus that opens into the vagina.

c. vesicae the caudal constricted part of the urinary bladder, proximal to the opening of the urethra.

Cervus a genus of deer in the family Cervidae. Includes *C. albirostris* (White-lipped deer), *C. alfredi* (Philippine spotted deer), *C. canadensis* (elk or wapiti), *C. duvaucelii* (Barasinga), *C. elaphus* (European red deer), *C. eldii* (Eld's deer), *C. mariannus* (Philippine Sambar), *C. nippon* (Sitka deer), *C. schomburgki* (Schomburgk's deer; extinct), *C. timorensis* (Rusa deer), *C. wallichi* (Central Asian red deer), *C. unicolor* (Sambar).

cesarean section [*sə-zar'e-ən*] delivery of a fetus by incision through the abdominal wall and uterus. The procedure takes its name from the Latin word *caedere*, to cut, and has no relation to the birth of Caesar as is sometimes believed.

cesarotomy see **cesarean section**.

cesium (Cs) a chemical element, atomic number 55, atomic weight 132.905. See Table 4.

c.-137 a product of atomic fission by explosion or breakdown of a reactor. It is feared as a pollutant because of its very long half-life.

Cesky terrier a long, low set terrier with pendulous ears, long tail and wavy, silky coat of gray-blue or light brown with yellow and gray markings; clipped to a short length, except on the upper part of the head, lower legs, over the ribs and the belly. A Czechoslovakian breed, developed from Scottish and Sealyham terriers. Called also Bohemian terrier.

cesspit a pit to retain the sediment, usually fecal, of a drain.

cestocidal destructive to cestodes.

cestocide an agent that destroys cestodes.

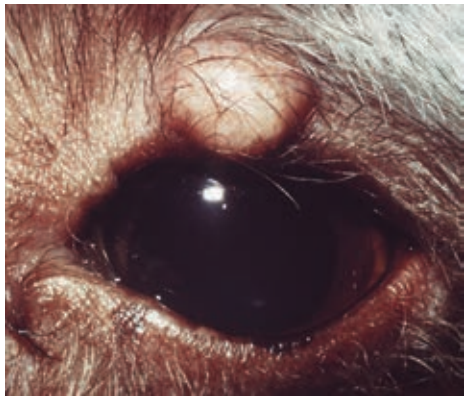
cestodal cysts the larval (metacestode) stage of cestodes in mammal hosts, e.g. *Echinococcus* spp. cysts in humans, *Cysticercus tenuicollis* cysts in sheep.

VetBooks.ir

VetBooks.ir

C

cestode [*ses'tōd*] 1. any individual of the class Eucestoda. 2. cestoid.
cestodiasis [*ses"to-di'ə-sis*] infestation with tapeworms.
cestodology [*ses"to-dol'ə-je*] the scientific study of cestodes.
cestoid [*ses'toid*] resembling a tapeworm.
Cestrum [*ses'trum*] a genus of shrubs in the family Solanaceae. *C. aurantiacum* (orange-flowered cestrum), *C. corymbosum* var. *hirsutum*, *C. elegans* (*C. newelii*, *C. purpureum*), *C. fasciculatum* (red cestrum), *C. hartwegii*, *C. laevigatum* (inkberry bush), *C. nocturnum* (night-flowering cestrum), *C. parqui* (green cestrum) cause liver necrosis. The toxins are diterpenoid (kaurene) glycosides parquin and carboxyparquin allied to carboxyatractyloside. *C. diurnum* (jasmine, wild jasmine) causes generalized calcinosis through a calcinogenic glycoside. See also **enzootic** calcinosis.
cestrum [*ses'trum*] common name for plants in the genus ***Cestrum***. Includes green cestrum and willow-leafed cestrum (*Cestrum parqui*), night-flowering and night-scented cestrums (*C. nocturnum*), orange-flowered cestrum (*C. auranticum*), red cestrum (*C. fasciculatum*). See also **jessamine**.
Cetacaine [*se'tə-kān*] a combination local anesthetic containing tetracaine, benzocaine and butamben used topically on mucous membranes.
cetacean marine mammals of the order Cetacea, that includes whales, dolphins and porpoises.
cetalkonium chloride [*sət-əl-ko'ne-əm*] a cationic quaternary ammonium surfactant, used as a topical anti-infective and disinfectant.
cetirizine [*sə-tir'ĭ-zēn*] an H_1- antihistamine used in treating allergic conditions.
Cetonia aurata see ***Macrodactylus subspinosus***.
cetrimonium bromide [*set"rĭ-mo'ne-əm*] a quaternary ammonium antiseptic and detergent, applied topically to the skin to cleanse wounds, as a preoperative disinfectant; also used to cleanse utensils and to store surgical instruments.
cetylpyridinium chloride [*se"təl-pir"ĭ-din'e-əm*] a cationic disinfectant used as a local anti-infective applied topically to intact skin or mucous membrane.
cevadine one of the alkaloids of *Veratrum californicum* but not one known to be implicated in the production of congenital defects that occur in sheep fed on this plant.
cevitamic acid [*se-vi-tam'ik*] see **ascorbic acid**.
Ceylonocotyle a genus of flukes (digenetic trematodes) in the family Paramphistomatidae. Includes *Ceylonocotyle scoliocoelium*, *C. streptocoelium* (rumen, reticulum). See under **paramphistomosis**.
CF see **folinic acid**.
Cf chemical symbol, *californium*.
CFT complement fixation test.
CFU see **colony**-forming units.
cg centigram.
CGIAR Consultative Group for International Agricultural Research.
cGMP 3′5′ cyclic guanosine monophosphate; a common cellular regulator; mediates vasodilation of blood vessels; essential in regulation of sodium channels of the retina. Decrease in cGMP concentration leads to hyperpolarization of the retinal membrane.
CGS, cgs centimeter–gram–second (system), a system of measurements based on the centimeter as the unit of length, the gram as the unit of mass, and the second as the unit of time.
Ch a title denoting Champion; used for dogs to designate one that has accrued the specified number of points in competitions.
CH_{50} the dose of complement that lyses 50% of a red cell suspension.
Chabertia [*shah-ber'te-ə*] a genus of nematodes in the superfamily Strongyloidea. *Chabertia ovina* (colon of ruminants). See **chabertiasis**.
chabertiasis [*shah-bər-ti'ə-sis*] infestation with *Chabertia ovina*. Characterized by weight loss and the passage of soft feces containing much mucus. Called also chabertiosis.
chabertiosis see **chabertiasis**.
chaerophyllin toxic principle in *Chaerophyllum*.
Chaerophyllum a genus in the plant family Apiaceae. Contains a toxin chaerophyllin capable of causing diarrhea and incoordination. Includes *C. sylvestre*, *C. temulentum* (rough or wild chervil, ass's parsley).
chaeta see **seta**.
chafe [*chāf*] to irritate the skin by friction, usually from harness, or the rubbing together of body surfaces, such as the thighs, when they are damp with perspiration, or the rubbing together of opposing skin folds.
chaff 1. chaffed hay; called also chop. 2. the winnowings from a threshing, consisting of awns, husks, glumes and other relatively indigestible materials.
Chagas' disease, Chagas–Cruz disease [*chah'gəs*] see ***Trypanosoma cruzi***, American **trypanosomiasis**.
chagoma [*chə-go'mə*] skin tumor in trypanosomiasis due to *Trypanosoma cruzi*.
Chailletia cymosa [*ka-il-e'she-ə*] ***Dichapetalum*** *cymosum*.
chain [*chān*] a collection of objects linked together in linear fashion, or end to end, as the assemblage of atoms or radicals in a chemical compound, or an assemblage of individual bacterial cells.
c. binomial model model of an outbreak of an infectious disease in which the outbreak is depicted as a series of steps with a binomial statement of the probability of an outcome at each step.
branched c. an open chain of atoms, usually carbon, with one or more side chains attached to it.
heavy c. any of the large polypeptide chains of five classes that, paired with the light chains in most vertebrate species, make up the antibody molecule. Heavy chains bear the antigenic determinants that differentiate the immunoglobulin classes. See also **heavy-chain disease**.
heavy c. switch see **class** switching.
J c. a polypeptide component of polymeric IgM and IgA molecules.
kappa c. one of the two light chains types that are a component of **immunoglobulin**. The other is lambda (λ).
lambda c. one of the two light chain types that are a component of **immunoglobulins**; the other is kappa (κ).
light c. either of the two small polypeptide chains (molecular weight 22 000) that, when linked to heavy chains by disulfide bonds, make up the antibody molecule; they are of two types, kappa and lambda, which are unrelated to immunoglobulin class differences.
light c. disease the overproduction of immunoglobulin light chain molecules by certain B cell tumors (plasmacytomas). See monoclonal **gammopathy**.
obstetric c. used in obstetrics in cattle and horses to snare extremities and for traction. Made of rustproof metal with links designed not to kink or to jam. They have a loop link at each end to facilitate single-handed formation of a loop. The links are shaped so that the ring-grip handles used for traction will grip at any point and stay put with the strongest pull.
c. shank a leather lead with a short section of chain at the proximal end. It can be placed over the horse's nose, through the mouth or across the upper gum for greater control.
side c. a chain of atoms attached to a larger chain or to a ring.
stallion c. strong chain, 1–2 ft (0.5 m) long, at the end of a solid lead. For leading a stallion with little chance of his biting through the lead.
c. termination method See **Sanger–Coulson method**.
chalasia [*kə-la'zhə*] relaxation of a bodily opening, such as the cardiac sphincter. See also **megaesophagus**.
chalazae strands of albumen which come from each pole of a bird's egg and suspend the yolk in the approximate center of the egg. The chalazae are often twisted because of rotation of the yolk.
chalazion [*kə-la'ze-on*] eyelid mass resulting from obstruction and inflammation of a meibomian gland.
chalcosis [*kal-ko'sis*] copper deposits in tissue.



C-29: Chalazion in a dog. From Maggs DJ, Miller PE, Ofri R, Slatter's Fundamentals of Veterinary Ophthalmology, 4th Edition. Saunders, 2008.

chalk bones [*chawk*] see **osteopetrosis**.
challenge feeding [*chal'ənj*] a system of feeding dairy cows which provides more feed than is justified by the level of the individual cow's milk production. In the early part of the lactation the cow is challenged to produce more milk and in many instances does so. If the cow does not respond the level of feeding is reduced. Called also lead feeding because the cow is led to produce more heavily.
chalone [*kal'ōn*] a group of tissue-specific, water-soluble substances that are produced within a tissue and that inhibit mitosis of the cells of that tissue and whose action is reversible.
chalybeate containing or charged with iron.
Chamaecytisus proliferus a tree legume in the family Favaceae used as a browse plant for ruminant nutrition; rarely, an unidentified toxin is associated with congenital leucoencephalopathy of calves and a staggers syndrome in cattle. Called also *Cytisus proliferus*, tagasaste, tree lucerne, escobon.
chamber [*chām'bər*] an enclosed space.
anterior c. that part of the aqueous humor-containing space of the globe between the cornea and anterior iris face.
posterior c. that part of the aqueous humor-containing space of the globe between the posterior iris and the lens.
vitreous c. the vitreous humor-containing space in the globe, bounded anteriorly by the lens and ciliary body and posteriorly by the retina and optic nerve.
chambering [*chām'bər-ing*] a technique of modifying the padding in harness over a gall or other sore spot. The stuffing is worked away with an awl or needle and stitched to the felt to stop it from working back into the cavity.
chameleon lizard in the family Chamaeleonidae, they have a very long tongue, independently mobile eyes and feet with two toes pointing forward and three backwards; many species have a prehensile tail. They are best known for their ability to change color to match or blend with their surrounds. Useful as camouflage and communication but exploited as novelty pets
chamois 1. sheepskin specially impregnated with fish oil to make it pliable; used for cleaning. 2. (*Rupicapra rupicapra*) a high altitude, medium-sized, East European goat-antelope with short, slightly-curved horns; also introduced into New Zealand for recreational hunting.
chamomile [*kam'ə-mēl*] derived from flowerheads of two species of Compositae; used for its anti-inflammatory and antiseborrheic activity, usually topically but also administered orally as a tea for indigestion and in the treatment of calf scours. Called also camomile.
champignon a mushroom-like swelling the forms in **scirrhous** cord.
chancre [*shang'kər*] the 2–4 inch, hard, hot, painful lesion which develops at the site of tsetse-fly bites when the fly is a transmitter of trypanosomiasis. In human medicine, refers to the primary lesion of syphilis.
chandelier plant see ***Bryophyllum*** *delagoense*.
Chandlerella a nematode parasite genus belonging to the family Onchocercidae, found in birds.
channel [*chan'əl*] in biophysical terms these are the 'pores' in semi-permeable membranes through which specific physicochemical units, e.g. cations, calcium ions, can pass; the rate of passage of some channels may be much slower than others, hence there is an expansive nomenclature, e.g. slow calcium channel, fast calcium channel.
channel aeration a modification of the activated **sludge** method of disposing of sewage. The sewage is aerated in a long channel rather than in a lagoon.
Channel Island breeds usually used in reference to the Jersey and Guernsey breeds of dairy cattle.
channelopathy [*chan"nəl-op'ə-the*] dysfunction of ion channels affecting excitability of cell membranes in neurons and skeletal myocytes; includes myotonia, **hyperkalemic periodic paralysis**.
Chanos chanos an important food fish in Southeast Asia. Called also milkfish.
Chantilly/Tiffany a semi-longhaired, North American breed of cat, similar to the **Tiffanie**, which is recognized in the UK. Although originally chocolate, many coat colors are seen.
chaperone [*shap'ər-ōn*] a family of proteins that aid in the folding of target proteins.
chaperonin [*shap"ər-o'nin*] a class of **chaperone** proteins.
char salmonid fish in the genus ***Salvelinus***. Includes the Arctic char (*S. alpinus*).
character [*kar'ak-tər*] a quality or attribute indicative of the nature of an object or an organism. 1. in genetics, the expression of a gene or group of genes as seen in a phenotype. 2. in wool, the evenness of the crimp.
acquired c. a noninheritable modification produced in an animal as a result of its own activities or of environmental influences.
dominant c. a mendelian character that is expressed when it is transmitted by a single gene.
mendelian c's in genetics, the separate and distinct traits exhibited by an animal or plant and dependent on the genetic constitution of the organism.
primary sex c's those characters of the male and female directly concerned in reproduction.
recessive c. a mendelian character that is expressed only when transmitted by both genes (one from each parent) determining the trait.
secondary sex c's those characters specific to the male and female but not directly concerned in reproduction.
sex-conditioned c., sex-influenced c. an autosomal trait whose full expression is conditioned by the sex of the individual, e.g. cryptorchism.
sex-linked c. one transmitted consistently to individuals of one sex only, being carried in the sex chromosome.
charbon [Fr.] see **anthrax**.
Charbray a taurindicus breed of beef cattle, white to light red in color, produced by crossing Brahman and Charolais.
Charchesium polysinum a protozoa which parasitizes the skin of tadpoles. Lesions may cover the gills and cause asphyxia.
charcoal [*chahr'kōl*] carbon prepared by charring wood or other organic material.
activated c. the residue of destructive distillation of various organic materials, treated to increase its adsorptive power; used as a general purpose antidote.
Charcot–Bottcher crystals characteristic intracellular cytoplasmic crystals which occur in normal canine Sertoli cells, but do not occur in Sertoli cell tumors.
Charcot triad [*shahr-ko'*] biliary colic, jaundice and fever, three signs associated with acute cholecystitis.
charge-coupled device (CCD) [*chahrj*] photosensitive computer chip made of crystalline silicone; used to record light images and generate computer graphic image files. Various imaging applications including digital photography and digital radiography.
charlatan a pretender to knowledge or skills not possessed; in veterinary medicine, a quack.
Charles' law [*shahrlz*] at a constant pressure the volume of a given mass of perfect gas varies directly with the absolute temperature.
charlock ***Sinapis*** *arvensis*.
jointed c. see ***Raphanus*** *raphanistrum*. Called also wild radish.
Charolais a white or cream breed of cattle with pink mucosae, produced in central France and used for dairy, beef or draft purposes.
Charollaise sheep meat and wool polled sheep, originated from Leicester longwool plus local breed.
charque South American dried salted beef.
chart [*chahrt*] a record of data in graphic or tabular form.
pedigree c. a graph showing various descendants of a common ancestor, used to indicate those affected by genetically determined disease.
time c. a graph on which the values of a variable are plotted on one axis and time on the other.

C-30: Charolais beef bull. From Sambraus HH, Livestock Breeds. Mosby, 1992.

VetBooks.ir

VetBooks.ir

C

charting [*chahr'ting*] the keeping of a clinical record of the important facts about a patient and the progress of its illness. The patient's chart most often contains a medical history, a nursing history, results of physical examinations, laboratory reports, results of special diagnostic tests, and the observations of the nursing staff. See also problem-oriented **medical** record.

Chartreux an old French breed of cats; it has a blue-gray, medium-length, double coat and gold to copper colored eyes.

chase pursuit of a lure on a racetrack or of a dragged hare in a field by a Greyhound.

chaser a secondary or follow-up breeding male put in with a herd of cows or ewes when the fertility of the first stud is suspect.

Chastek paralysis see **thiamine** nutritional deficiency.

chauffage [Fr.] treatment with a low-heated cautery that is passed to and fro close to the tissue.

CHD canine hip dysplasia.

check ligament one of the two ligamentous accessory heads to the digital flexors of the horse. See also **suspensory** ligament.

c. l. desmotomy a treatment for contracted flexor tendons in horses.

checkerboard [*chek'ər-bord*] the pattern of a chess or draft board; used in many circumstances to display the results of mixing a specific number of variables. The variables are listed in columns designated along the horizontal border and the same or different variables in lines along the vertical border; the results of each mixing are recorded in the box where the columns and lines carrying the ingredients of the mix intersect.

checkpoint [*chek'point"*] points in the cell cycle of eukaryotic cells which prevent progress until each stage is satisfactorily completed.

Chediak–Higashi syndrome [*cha'de-ahk he-gah'she*] an inherited disease in humans, cattle, cats, Aleutian mink, white tigers and killer whales. There is dilution of color in the hair and ciliary processes of the eye, with large granules, believed to be lysosomes, in all cell types and particularly noticeable in circulating neutrophils and eosinophils. Leukocytes are defective in chemotaxis and intracellular killing. Affected individuals suffer from an increased susceptibility to infection and bleeding tendencies caused by a platelet storage defect.

cheek [*chēk*] the fleshy portion of either side of the face, forming the sides of the mouth and continuing rostrally to the lips. Attached to alveolar borders of maxillae and mandibles. Called also bucca.

cleft c. facial cleft caused by developmental failure of union between the maxillary and primitive frontonasal processes.

c. pouches fur-lined evaginations of the oral cavity extending alongside the head and neck, as far as the scapulae, in hamsters. Used to transport food.

c. swelling caused usually by osteomyelitis of the jaw bones, local neoplasia, packing of food in a chronically malfunctioning cheek or a large foreign body stuck in the cheek space (buccal vestibule).

c. teeth molars and premolars.

cheese a food produced industrially by the precipitation of milk protein and capable of acting as a vector of animal disease caused by resistant bacteria but especially by viruses, especially foot-and-mouth disease.

c. fly infests cheese but of esthetic importance only. Called also cheese **skipper**, *Piophila casei*.

c. mite *Tyroglyphus siro*.

cheese-washer's lung a hypersensitivity pneumonitis of humans caused by inhalation of *Penicillin caseii* spores present in cheese casings.

cheeseweed *Malva parviflora*.

cheesewood ***Alstonia*** *scholaris*.

cheesy gland [*che'ze*] chronic disease characterized by hard swelling of one or more peripheral lymph nodes containing semiliquid to caseous pus; may rupture spontaneously or be lacerated during shearing and discharge pus to the exterior; colloquial for caseous lymphadenitis in sheep and goats.

cheetah (*Acinonyx jubatus*) a spotted, long-legged, nonclimbing, big cat; the fastest of land animals. Easily trained and used for hunting; some are illegally placed in private collections. Because of loss of habitat and prey, it is considered an endangered species. Called also hunting leopard.

Cheilanthes [*ki-lan'thēz*] a fern member of the family Sinopteridaceae; known toxic components include ptaquiloside and thiaminase. Called also cloak ferns, rock ferns.

C. distans, C. tenuifolia a rock fern that causes incoordination and somnolence in sheep.

C. sieberi has caused hemorrhagic disease and enzootic hematuria in cattle through ptaquiloside, and polioencephalomalacia in sheep. Called also rock or mulga fern.

C. sinuata causes polioencephalomalacia ('jimmies') in grazing ruminants. Called also jimmy fern.

cheilectropion [*ki"lek-tro'pe-on*] eversion of the lip.

cheilitis [*ki-li'tis*] inflammation of the lips.

cheil(o)- word element. [Gr.] *lip*.

cheilognathopalatoschisis [*ki"lo-na"tho-pal"ə-tos'kĭ-sis*] cleft of the lip, upper jaw, and hard and soft palates.

cheilognathoschisis [*ki"lo-na-thos'kĭ-sis*] cleft of the upper lip and jaw.

cheiloplasty surgical repair of a lip defect.

anti-drool c. suspension of the lower lip to the inside of the upper cheek by a mucosal flap to reduce the leakage of saliva and food in dogs with excessive lip folds or denervated lower lip.

cheilorrhaphy [*ki-lor'ə-fe*] suture of the lip; surgical repair of a harelip.

cheiloschisis [*ki-los'kĭ-sis*] see **cleft** lip.

cheilosis [*ki-lo'sis*] fissuring and dry scaling of the lips and angles of the mouth, a characteristic of riboflavin deficiency.

Cheilospirura a genus of nematodes of the family Acuariidae.

C. hamulosa found in the gizzard of fowls and turkeys. Heavy infestations cause emaciation, weakness and anemia. Called also *Acuaria*.

cheilotomy [*ki-lot'ə-me*] incision of the lip.

chelate [*ke'lāt*] to combine with a metal in complexes in which the metal is part of a ring; by extension, a chemical compound in which a metallic ion is sequestered and firmly bound into a ring within the chelating molecule. Chelates are used in treatment of metal poisoning.

chelating agent a substance which combines with a metallic ion to produce an inert chelate, e.g. ethylenediamine tetra-acetic acid, penicillamine.

chelerythrine a toxic alkaloid found in the plant ***Chelidonium majus***.

chelicerae pair of movable oral appendages adapted for cutting carried by acarids, including ticks.

chelidonine a toxic alkaloid found in the plant ***Chelidonium majus***.

Chelidonium majus temperate zone plant of the family Papaveraceae; contains the isoquinoline alkaloid chelidonine; causes vomiting, colic and diarrhea, possibly somnolence. Called also greater celandine, celandine poppy.

Chelonia sea turtles in the family Cheloniidae; includes green sea turtle (*Chelonia mydas*).

C. mydas green turtle.

chelonian generally refers to members of the superorder Chelonia that includes tortoises, terrapins, turtles, and sea turtles. More specifically, refers to sea turtles in the family *Cheloniidae* or superfamily *Chelonioidea*.

Chelopistes a genus of the superfamily Ischnocera of lice. Includes *C. meleagridis* (turkeys).

chemabrasion [*kēm"ə-bra'zhən*] superficial destruction of the epidermis and the upper layer of the dermis by application of a cauterant to the skin.

chemical [*kem'ĭ-kəl*] 1. pertaining to chemistry. 2. a substance composed of chemical elements, or obtained by chemical processes.

agricultural c. chemical used in agriculture. Includes pesticides, anthelmintics, fertilizers, algacides, herbicides and soil fumigants.

c. environment that part of the animals' environment that is composed of chemicals. For farm livestock this includes fertilizers, defoliants, worm drenches, insect sprays and adjuvants to feed. For companion animals see household chemical (below).

household c. the roster of chemicals that one can expect to find in the average household. Includes insect sprays and repellents, snail bait, rodenticide, garden sprays, human medicines and the like.

c. senses see **olfaction** (2), **taste**.

Chemical Abstracts Service Registry Number (CAS RN) a unique number for every drug in all its forms.

cheminosis [*kem"e-os-mo'sis*] any disease due to chemical agents.

chemiosmosis a process in which a proton gradient across a mitochondrial membrane and ATP synthesis pump metabolites across a membrane.

chemist [*kem'ist*] 1. an expert in chemistry. 2. sometimes used as an abbreviation for pharmaceutical chemist or pharmacist.

chemistry [*kem'is-tre*] the science that treats of the elements and atomic relations of matter, and of the various compounds of the elements.

colloid c. chemistry dealing with the nature and composition of colloids.

inorganic c. the branch of chemistry dealing with inorganic compounds.

organic c. the branch of chemistry dealing with organic compounds, those characterized by carbon–carbon bonds, i.e. all compounds containing carbon except oxides of carbon, carbides and carbonates.

chem(o)- word element. [Gr.] *chemical, chemistry.*

chemoattractant [*ke"mo-ə-trak'tant*] a chemical (chemotactic) agent that induces an organism or a cell, a leukocyte, to migrate toward it.

chemoautotroph [*ke"mo-aw'to-trōf*] organism which obtains energy from chemical reactions and is able to synthesize all the organic compounds it requires from carbon dioxide.

chemocautery [*ke"mo-kaw'tər-e*] cauterization by application of a caustic substance.

chemodectoma [*ke"mo-dek-to'mə*] nonchromaffin paraganglionoma: any tumor of the chemoreceptor system, e.g. a carotid body tumor, **aortic** body tumor. Brachycephalic breeds of dogs are predisposed, possibly due to genetic factors and chronic hypoxia.

chemohormonal [*ke"mo-hor-mo'nəl*] pertaining to drugs having hormonal activity.

chemoimmunization used in the control of protozoal diseases; consists of simultaneous administration of virulent protozoa and an appropriate babesicide.

chemokines [*ke'mo-kīnz*] a large family of *chemo*tactic cyto*kines* which stimulate cell movements with roles in inflammation, immune responses, and angiogenesis.

chemokinesis [*ke"mo-kī-ne'sis*] the movement of cells in response to chemokines.

chemolithotroph [*ke"mo-lith'o-trōf*] an organism that derives its energy from oxidation of inorganic compounds and its carbon from carbon dioxide.

chemolithotrophic [*ke"mo-lith"o-tro'fik*] deriving energy from the oxidation of reduced inorganic compounds such as ferrous iron, ammonia, nitrite, phosphite, hydrogen sulfide or hydrogen; said of bacteria.

chemoluminescence [*ke"mo-loo"mĭ-nes'əns*] the emission of light by chemical reactions, most commonly oxidation. (1) Used as a measure of metabolic activity of phagocytic cells, e.g. neutrophils, monocytes and macrophages. (2) A developing technique for marking the state of preservation of food. As the food deteriorates it begins to emit fluorescent light.

chemolysis [*ke-mol'ĭ-sis*] chemical decomposition.

chemonucleolysis [*ke"mo-noo"kle-ol'ə-sis*] dissolution of a portion of the nucleus pulposus of an intervertebral disk by injection of a chemolytic agent for treatment of a herniated intervertebral disk.

chemo-organotroph [*ke"mo-or'gə-no-trōf"*] an organism that derives its energy and carbon from organic compounds.

chemo-organotrophic [*ke"mo-or"gə-no-tro'fik*] deriving energy from the oxidation of organic compounds; said of bacteria. Called also chemoheterotrophic.

chemopallidectomy [*ke"mo-pal"ĭ-dek'tə-me*] destruction of tissue of the globus pallidus by a chemical agent.

chemoprophylaxis [*ke"mo-pro"fə-lak'sis*] prevention of disease by chemical means.

chemoreception [*ke"mo-re-sep'shən*] the physiological reception of chemical stimuli.

chemoreceptor [*ke"mo-re-sep'tər*] any of the special cells or organs adapted for excitation by chemical substances and located outside the central nervous system. There are chemoreceptors in the large arteries of the thorax and the neck; called carotid and aortic bodies. These receptors are responsive to changes in the oxygen, carbon dioxide and hydrogen ion concentration in the blood. When oxygen concentration falls below normal in the arterial blood, the chemoreceptors send impulses to stimulate the respiratory center so that there will be an increase in alveolar ventilation, and consequently, an increase in the intake of oxygen by the lungs. Other chemoreceptors are the taste buds, which are sensitive to chemicals in the mouth, and the olfactory cells of the nose, which detect certain chemicals in the air.

c. trigger zone (CTZ) located in the floor of the fourth ventricle; sensitive to motion, uremia, apomorphine. Activation stimulates neurons of the emetic center.

c. tumors see **chemodectoma**.

chemoreflex [*ke"mo-re'fleks*] a physiological reflex initiated by a chemical substance.

chemosensitive [*ke"mo-sen'sĭ-tiv*] sensitive to changes in chemical composition.

chemosensory [*ke"mo-sen'sər-e*] relating to the perception of chemical substances, as in odor detection.

chemosis [*ke-mo'sis*] edema of the conjunctiva.

chemostat [*ke'mo-stat*] a vessel that provides constant growth conditions for bacteria.

chemosterilants [*ke"mo-ster'ĭ-lənts*] chemicals used to render an animal sterile. To date, used principally in creating sterile male insects in the control of single mating insects such as screw-worm.

chemosurgery [*ke"mo-sur'jər-e*] the destruction of tissue by chemical agents for therapeutic purposes; originally applied to chemical fixation of malignant, gangrenous or infected tissue, with use of frozen sections to facilitate systematic microscopic control of its excision.

chemosynthesis [*ke"mo-sin'thə-sis*] the building up of chemical compounds under the influence of chemical stimulation, specifically the formation of carbohydrates from carbon dioxide and water as a result of energy derived from chemical reactions.

chemotactic factor [*ke"mo-tak'tik*] soluble molecules which attract and guide the movement of cells such as bacteria, sperm cells, embryonic cells, and phagocytes.

chemotaxin [*ke"mo-tak'sin*] a substance that induces chemotaxis.

chemotaxis [*ke"mo-tak'sis*] taxis or directional movement of cells in response to a chemical signal.

leukocyte c. the response of leukocytes to products formed in immunological reactions, wherein leukocytes are attracted to and accumulate at the site of the reaction; a part of the inflammatory response. See also **inflammation**.

chemotherapy [*ke"mo-ther'ə-pe*] the treatment of illness by chemical means; that is, by medication.

adjuvant c. given postoperatively.

cancer c. the use of antineoplastic agents in the treatment of malignant growths; usually employed because treatment by other means, such as surgical removal, is not possible. A variety of malignancies in dogs and cats have been successfully managed with some of the chemotherapeutic agents used in the treatment of cancer in humans. See also **protocol** (2).

combination c. several drugs are used in parallel or in sequence. See also **COP** (2), **DMAC**, **MOPP**, **VAC**, **VMC**.

multimodal c. chemotherapy combined with other forms of treatment, e.g. surgical excision.

neoadjuvant c. given preoperatively, generally to reduce tumor size.

c. protocol see **protocol** (2).

chemotic [*ke-mot'ik*] pertaining to or affected with chemosis.

chemotrophic [*ke"mo-tro'fik*] deriving energy from the oxidation of organic (chemo-organotrophic) or inorganic (chemolithotrophic) compounds; said of bacteria.

chemotropism [*ke-mot'ro-piz-əm*] tropism in response to the influence of chemical stimulation.

C-31: Severe chemosis of the right eye of a goat. From Stummer P, Fuchs-Baumgartinger A, Franz S, Nell B. Severe chemosis caused by nephrotic syndrome in a goat: A case report. Vet J 175:141-143, 2008. Elsevier.

VetBooks.ir

chenodeoxycholic acid [*ke"no-de-ok"se-kol'ik*] a primary bile acid, $C_{24}H_{40}O_4$, administered as an anticholelithogenic agent. Called also chenodiol.

chenodiol [*ke"no-di'ol*] see **chenodeoxycholic acid**.

Chenopodium [*ke"no-po'de-əm*] a plant genus of the Chenopodiaceae family; many plants in the genus contain soluble oxalates and can cause acute oxalate poisoning. Includes *C. album* (fat hen, lambsquarters, white goosefoot), *C. atriplicinum* (*Scleroblitum atripliclinum*, lambstongue). Other plants can cause cyanide poisoning, e.g. *C. carinatum* (green crumbweed, Boggabri), *C. glaucum* (oak-leaved goosefoot), *C. melanocarpum* (black crumbweed), *C. rhadinostachyum* (*Dysphania radinostachya*, *C. chenostachyum*, mouse-tailed crumbweed).

C. ambrosioides contains wormseed oil; previously used as an anthelmintic. Capable of causing gastroenteritis; oil of chenopodium has caused deafness in dogs and cats at the therapeutic doses if not given with a purgative. Called also *C. antheminticum* var. *ambrosioides*, wormseed.

Cherax a genus of crayfish found in Australia.

cherry [*cher'e*] common name for many plants, mostly in the genera ***Prunus*** and ***Physalus***, but also in the name of plants of other genera. Includes bird, fire, and wild red cherry (*Prunus pennsylvanica, P. padus*), black cherry (*Prunus serotina*), finger cherry (***Rhodomyrtus macrocarpa***), Jerusalem, madeira winter, and winter cherry (***Solanum*** *pseudocapsicum*), wild cherry (*Prunus serotina*), wild ground cherry (*Physalis*).

cherry eye [*cher'e i*] lay term for eversion of the nictitating membrane (third eyelid) caused by hypertrophy and prolapse of the gland of the third eyelid, over the free margin of the membrane.

cherry-pie ***Lantana*** *camara*.

chervil see ***Chaerophyllum***.

Chesapeake Bay retriever a medium-sized (55–80 lb), muscular dog with short, thick, slightly wavy, water-repellent coat and woolly undercoat. The color is distinctive, from dark brown to faded tan or 'deadgrass'. Hereditary cataracts occur in the breed.

chest [*chest*] see **thorax**, **thoracic**, **flail** chest.

c. compression a means of external cardiac massage; most likely to be effective in small dogs and cats, but very difficult in large animals.

c. wound common in horses and cattle, damage to the underlying chest wall with communication to the pleural cavity and pneumothorax is the main danger.

Chester White pig a fat, white breed of meat pigs developed in the USA. Known originally as Chester County White, and subsequently as Ohio Improved Chester.

chestnut [*chest'nət*] 1. flattened, oval masses of horn on the medial surface of the forearm and the hock of the horse. Those on the forelimb are just proximal to the carpus, those on the hindlimb are at the distal end of the tarsus. In donkeys the hindlimb chestnut is very small, in mules it is absent. They are regarded as being vestiges of the carpal and tarsal pads. 2. fruit of the chestnut tree *Castanea sativa*. 3. a popular coat color in horses. A deep reddish brown varying from a red dominance or light chestnut, to a heavier brown tone, liver or deep chestnut. Mixed with white hairs is a chestnut roan.

c. rule mating two chestnut horses will not produce offspring with black, gray, brown or bay coat colors.

c. slough occurs in cattle when limb badly swollen or injured in grass fire.

Cheviot long-woolled, meat sheep from the UK, characterized by a prominent Roman nose, woolless face, polled head and medium-quality wool.

C-32: Cherry eye.
From McCurnin D, Poffenbarger EM, Small Animal Physical Diagnosis and Clinical Procedures. Saunders, 1991.

A

B

C-33: Location of chestnuts in horses.
From Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians Lab Manual. Mosby, 2009.

chevrotain any of four species of mammals which constitute the family Tragulidae in the order Artiodactyla. The water chevrotain (*Hyemoschus aquaticus*) is found in west-central Africa, the Indian chevrotain (*Tragulus meminna*), the larger Malay chevrotain (*T. napu*), and the lesser Malay chevrotain (*T. javanicus*). They are very small (6–10 inches high), hornless and have protruding canine teeth which serve as tusks. Known also as mouse deer.

chewing see **mastication**.

c. disease see **nigropallidal encephalomalacia**.

chewing the cud see **rumination**.

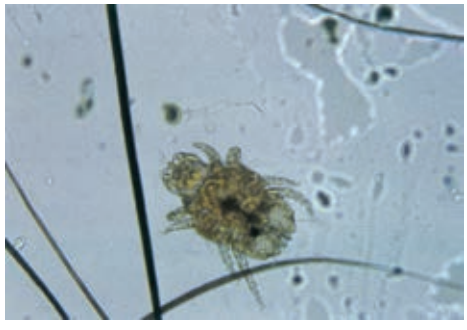
Cheyletiella [*ki"lə-te-el'ə*] a genus of mites in the family Cheyletidae. Host specificity is not certain; in general *C. blakei* infests cats, *C. parasitovorax* infests rabbits and hares, and *C. yasguri* infests dogs. Cause **cheyletiellosis**.

cheyletiellosis [*ki"lə-te"el-o'sis*] infestation by *Cheyletiella* spp. Causes a mild, scaling dermatitis in dogs and cats, a more severe, pruritic dermatitis, mainly on the back of rabbits, and intensely pruritic vesicles in humans.Called also cheyletiella dermatitis, 'walking' dandruff.

Cheyletoides uncinata ***Syringophilus*** *uncinatus*.

Cheyletus eruditus housedust mite capable of causing dermatitis in indoor companion animals.

Cheyne–Stokes respiration [*chān stōks'*] breathing characterized by rhythmic waxing and waning of the depth of respiration; the patient breathes deeply for a short time and then breathes very



C-34: An adult *Cheyletiella* mite.
From Kummel BA, Color Atlas of Small Animal Dermatology. Mosby, 1989.

C-35: Cheyletiellosis in a cat with diffuse scaling and erythema.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

slightly or stops breathing altogether. The pattern occurs over and over again every 45 seconds to 3 minutes. Periodic breathing of this type is caused by disease affecting the respiratory centers.

CHF congestive heart failure.

chi [*ki*] [X, χ] the twenty-second letter of the Greek alphabet.

ch'i see **Qi**.

chi-square distribution in statistical terms this is said of a variable with K degrees of freedom if it is distributed like the sum of the squares of K independent random variables each of which has a normal distribution with mean zero and variance of 1.

chi-squared test one of the statistical techniques for determining (1) if there are significant differences between two or more series of frequencies or proportions and (2) whether one series of proportions is significantly different from a control series. Pearson's chi-square is used for unmatched data and McNemar's chi-square for matched data.

Chiana a very tall, white with black points and mucosae, breed of dairy cattle, used also for draft. Called also Chianina.

Chiangus a black, polled beef breed of cattle produced by crossing Chianina and Angus cattle.

Chianina cattle Italian spelling for the **Chiana** breed of white with black points, meat cattle.

Chiari-like malformation [*ke-ah'rē*] in humans, a congenital abnormality of the brain in which the cerebellar tonsils descend through the foramen magnum and may be associated with abnormal flow of cerebrospinal fluid. A similar, but not identical, condition most like the Chiari-type 1 malformation of humans, is found in Cavalier King Charles spaniels, and possibly Brussels griffon dogs, with hypoplasia of the occipital fossa, cerebellar herniation and **syringomyelia**. Called also caudal occipital malformation.

chiasm [*ki'az-əm*] a decussation or X-shaped crossing.

optic c. a structure in the forebrain formed by the decussation of fibers of the optic nerves from the left and right retina, the degree of **decussation** depending on the species.

chiasma [*ki-az'mə*] pl. *chiasmata* [L., Gr.] chiasm; in genetics, the points at which members of a chromosome pair are in contact during the prophase of meiosis and because of which recombination, or crossing over, occurs on separation.

c. formation the process by which a chiasma is formed; it is the cytological basis of genetic recombination, or crossing over.

chibata ***Arrabidaea*** *bilabiata*.

Chicago disease blastomycosis.

chick [*chik*] abbreviation for **chicken** (1). The term is usually used for recently hatched chickens until their yellow down feathers are replaced with white ones.

chicken [*chik'ən*] 1. a young domestic fowl up to the age at which the bird can survive without supplementary heat and feed. In some poultry industries that is about 4 weeks. However, the endpoint varies with the type of husbandry practiced. In the North American poultry industry a chicken is any domestic fowl up to about 20 weeks of age. 2. any young bird.

c. anemia bone marrow hypoplasia with thymic and bursal atrophy with concomitant immunosuppression in young chickens caused by a circovirus (genus *Gyrovirus*). The disease is characterized by weakness, pallor and a high mortality rate. Secondary bacterial, viral and fungal infections are commonplace including hemorrhagic syndrome, anemia, dermatitis and blue wing disease. Growth retardation and mortality rate can pose a significant threat to industry.

c. body louse ***Menacanthus*** *stramineus*.

c. bronchitis see avian infectious **bronchitis**.

day old c's newly hatched chicks are delivered in large flat cardboard boxes from the multiplier to the broiler grower—the universal means of shipping live chickens.

c. edema disease a disease of broiler chickens fed on a diet containing fat contaminated by one of several toxic factors which cause hepatic necrosis. It is manifested clinically by drooping, dyspnea, death. At necropsy there are large accumulations of fluid in body cavities and a swollen liver and kidneys. The disease is caused by a toxic fat containing dioxin added to the ration of the birds. Called also toxic fat disease.

c. embryo chondrodystrophy caused by nutritional deficiency of manganese. Characterized by short, thick legs, short wings, parrot beak, retarded down and body growth.

c. embryo lethal organ (CELO) virus see **quail** bronchitis.

c. hemorrhagic syndrome see **inclusion body** hepatitis.

c. pox see ***Avipoxvirus***.

sticky c. sticky, edematous chickens caused by hatching at too low or too high humidities.

chickpea [*chik'pe*] a drought-resistant legume with a 20% protein content in the seeds. Used for livestock and human consumption. Called also *Cicer arietinum*, gram, garbanzo.

chickweed common name for a number of plants, e.g. *Stellaria media*.

tropical c. ***Drymaria*** *diandra*.

chiclero ulcer leishmaniasis, particularly *L. braziliensis*.

chicory common chicory, see ***Cichorium intybus***.

California c. see ***Rafinesquia californica***.

chief cells the zymogenic or peptic cells of the gastric mucosa which secrete pepsinogen.

chief complaint the most apparent clinical sign in a patient's illness. Called also cardinal sign, key sign.

chigger [*chig'ər*] the six-legged larva of mites of the family Trombiculidae. See ***Trombicula***, **trombiculosis**. Some species are vectors of the rickettsiae of scrub typhus of humans. Called also chigger mite, harvest mite and red bug.

North American c. see ***Eutrombicula*** *alfreddugesi*.

chigoe [*chig'o*] the sand flea, *Tunga penetrans*, of tropical and subtropical America and Africa. Called also chigger or chigoe flea. Not to be confused with chigger mites. See also **chigger**.

Chihuahua a very small (1–6 lb) dog originating in Mexico. It has a prominent, domed skull, erect ears and medium-length tail carried over the back. There are long coat and smooth coat varieties in many colors. The breed is predisposed to hydrocephalus and the presence of an open fontanelle (molera) is allowed for in the breed standard.

chill [*chil*] see **rigor**, **hypothermia**.

Chillagoe horse disease esophageal ulceration caused by *Crotalaria aridicola* or *C. medicaginea* (in Australia).

chilled meat meat preserved by chilling to and maintaining at no more than 45°F (7°C), 37°F (3°C) for offal, immediately after slaughter. Quick chilling has many advantages and maintenance of a low humidity is favored because of the prevention of mold growth.

Chilodonella [*ki"lə-də-nel'ə*] a genus of protozoa; *C. piscicola* and *C. hexasticha* are pathogenic for fish. See **chilodonellosis**.

chilodonellosis disease of freshwater fish caused by the protozoa *Chilodenella* spp. Characterized by hyperplasia of the epithelium of the gill and difficult respiration, and infection of the skin.

Chilomastix [*ki"lo-mas'tiks*] a genus of parasitic protozoa found in the intestines of vertebrates. Members of the order Trichomonadida.

C. bettencourti, C. caprae, C. cuniculi, C. equi, C. gallinarum, C. intestinalis, C. wenrichi non-pathogenic protozoa found in the

C-36: Chianina dual-purpose bull.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

VetBooks.ir

ceca of, respectively, rodents, goats, rabbits, horses, chickens, turkeys and guinea pigs.

Chilomitus non-pathogenic protozoa of the order Trichomonadida.
C. caviae, C. connexus found in the cecum of the guinea pig.

Chilopoda [*ki-lop'ə-də*] a class of the phylum Arthropoda embracing the centipedes. See also ***Myriapoda***.

chimaera [*ki-mēr'ə*] chimera.

chimera [*ki-mir'ə*] 1. a mythological, fire-spouting monster with a lion's head, goat's body and serpent's tail. 2. an animal whose body contains different cell populations derived from different zygotes of the same or different species, occurring spontaneously or produced artificially; i.e. an individual composed of a mixture of genetically different cells.
c. protein see fusion **protein**.

chimerism [*ki-mēr'iz-əm*] the state of being a chimera; the presence in an animal of cells of different origin, e.g. XX/XY chimerism.
blood c. twins that have a common circulation develop immune tolerance. Each of them is then a chimera. When the twins are of opposite sex, the female twin may be a **freemartin**. Sterilization of the female is brought about by the transfer of H-Y antigen to the female gonad.

chimpanzee [*chim-pan-ze'*] (*Pan troglodytes*) a primate in the family Hominidae (great apes and humans); closely related to the **bonobo**. A large anthropoid ape with the most highly developed brain of all animals other than humans. Dark colored, 5–6 ft high, with large out-turned ears, they are arboreal and live in families. Used widely in biomedical research.

chin [*chin*] the anterior prominence of the lower jaw; the mentum.
fat-c., c. edema lower lip swelling or nodules; part of the feline **eosinophilic** granuloma complex.
stripped c. see labial **avulsion**.

chin-ball a ball worn in a harness fitted to a ram at mating time; it rotates through a reservoir of brightly colored paste which is smeared onto the rump of ewes which stand for the ram in its early seeking activity of resting its chin on the ewe just prior to mounting.

China clay see **kaolin**.

chinaberry [*chi'nə-ber"ry*] ***Melia azederach***.

chinchilla small, South American rodent (*Chinchilla laniger*), valued for its silver-gray fur, but popular as pets.

Chinchilla cat a coat color variety of longhaired cats that consists of white hairs with black tips.

Chinchilla laniger member of the Chinchillidae family of rodents. See **chinchilla**.

Chinchilla rabbit a rabbit whose silky coat closely resembles that of the real *Chinchilla laniger*; popular for fur and meat, as well as exhibition. There are three sizes or varieties recognized, American Chinchilla, Standard Chinchilla and Giant Chinchilla.

Chinchilla Rex see **Rex** (2) rabbit.

chine the animal's backline.
c. bone butcher's term for parts or all of the vertebral column.

Chinese black and white cattle black and white, Chinese, dual-purpose cattle, originated from Dutch Holstein.

Chinese blistering beetle see ***Mylabris phalerata***.

Chinese crested a very small (6–12 lb), fine-boned dog with a hairless body. Small numbers of long hairs are present on the lower legs (socks), tail (plume) and the head (crest). The hairlessness is a dominant trait and specimens of the breed are heterozygotes, the homozygous dominant state being lethal prenatally. The completely haired offspring of crosses (homozygous recessive) are called 'powderpuffs'.

C-37: Fat-chin in a cat.

C-38: Chinese crested dog. A normally hairless breed.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

Chinese evergreen see ***Aglanonema***.

Chinese hawthorn see ***Photinia***.

Chinese herbal medicine see **herbal medicine**.

Chinese traditional medicine see **traditional Chinese medicine**.

Chinese Shar pei see **Shar Pei**.

Chinese yellow Chinese draft cattle of zebu origin. Usually yellow, also brown, red or black in color.

chinkerinchee, chincherinchee see ***Ornithogalum*** *thrysoides, Ornithogalum* spp.
Transvaal c. *Ornithogalum saundersiae*.
vlei c. *Ornithogalum ornithogaloides*.

Chinook a medium-sized (55–90 lb) breed of sled dog originating in the Northeast of the USA. The tawny coat is medium length, but unlike that of spitz-type dogs. The numbers are small.

chintz cat see **tortoiseshell**.

chip fractures [*chip*] small pieces of bone which are chipped off a bone, causing minor but sometimes significant lameness, pain and swelling. In horses, usually involve one of the carpal bones.

chipmunk a small, burrowing rodent in the genus *Tamias*, similar to a squirrel, with longitudinal stripes along the back, but lacking the bushy tail, silky coat and tufted ears; commonly kept as pets, but require plenty of area for exercise as they are very active. Called also ground squirrel.

Chippendale legs, front a term used in dogs to describe front legs that turn out at the elbows and feet, but with the carpi close together, resembling Chippendale-style furniture legs.

Chirodiscoides cutaneous mite of the suborder Sarcoptiformes. Includes *Chirodiscoides caviae* (guinea pigs).

chiropractic, chiropracty [*ki"ro-prak'tik*] a system of treating disease by manipulation of the vertebral column. Chiropractic is based on the theory that most diseases are caused by pressure on the nerves because of faulty alignment of the bones, especially the vertebrae, and that the nerves are thus prevented from transmitting to various organs of the body the neural impulses for proper functioning. Medical science has never found a scientific basis for this theory. Veterinary science has a small number of persons, sometimes without any formal training or qualifications, who practice this in this field. Acting on the theory that the pinching of nerves is the critical factor in the pathogenesis of disease, the chiropractor manipulates various parts of the spine in treating the complaint. If the patient is suffering from a displaced vertebra, the manipulation may bring relief. If they have some other disorder or disease, however, manipulation will have little if any effect.

chiropractor [*ki'ro-prak"tər*] a practitioner in chiropractic.

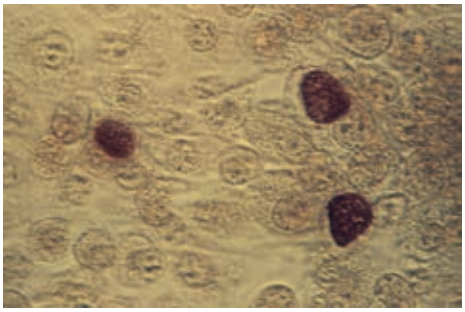
chiropracty [*ki'ro-prak"te*] see **chiropractic**.

Chiroptera [*ki-rop'tə-rə*] the order of bats; mammals with frontlimbs modified into wings which enables true flight. There are two suborders: Megachiroptera (fruit bats, flying foxes) and the more numerous Microchiroptera, which are usually insectivorous and have poor vision, relying on echolocation.

chirurgenic arising as a result of a surgical procedure.

chirurgery see **surgery**.

chisel [*chis'əl*] an instrument designed to be driven by a hammer to pare away at a surface. It has a cutting edge across the distal end with a bevel on one of its sides.
army c. a heavyweight steel chisel used for paring of the surface of bones.
dental c. see **dental** hoe.
obstetric c's have been largely discarded because of the danger associated with their use in fetotomy. A semisharp spatula may be used for the same purposes.
symphysiotomy c. used to divide the pubis at the pubic symphysis in immature heifers carrying large calves. The chisel point is angled inward toward the center of the blade so that the cutting surface will stay on the bone when it disappears from view.
chital deer see chital **deer**.
chitin [*ki'tin*] a horny polysaccharide of *N*-acetylglucosamine, the principal constituent of shells (exoskeleton) of arthropods and found in certain fungi.
c. synthase inhibitors used as antifungals and for control of flea infestation. See also **lufenuron**.
chitinoclastic destructive of chitin.
chitinous [*ki'tin-əs*] made of **chitin**.
chitterlings cross-sectional rings of the large intestine of the pig; usually deepfried quickly to a crackling, crisp delicacy.
chives ***Allium schoenoprasum***.
chlamydemia [*klam"ĭ-de'me-ə*] the presence of chlamydiae in the blood.
Chlamydia [*klam"ĭ-de'me-ə*] a genus of bacteria in the family *Chlamydiaceae* previously comprising three species: *C. trachomatis*, *C. pneumoniae* and *C. psittaci*. *C. psittaci*, *C. pecorum* and *C. pneumoniae* are now in the genus *Chlamydophylia*. *C. trachomatis* is in the genus *Chlamydia*, with the species infecting mice and swine.
C. muridarum associated with respiratory tract infections in mice and hamsters. Previously classified as *C. psittaci*.
C. psittaci see *C. muridarum*, *C. suis*, *Chlamydophila abortus*, *C. caviae*, *C. felis*, *C. pneumoniae*, *C. pecorum*, and *C. psittaci*.
C. suis associated with enteritis, pneumonia and conjunctivitis in pigs. Previously classified as *C. psittaci*.
chlamydia [*klə-mid'e-ə*] pl. *chlamydiae*; any member of the family *Chlamydiaceae*.
Chlamydiaceae [*klə-mid"e-a'se-e*] a family of obligately intracellular gram-negative bacterial pathogens that parasitize the host cell for ATP. Outside the host cell they exist as elementary bodies, which are 200–300 nm in diameter, have a rigid cell wall and adhere to host cells and are phagocytosed. Inside the host cell phagosome, they form larger reticulate bodies, which replicate, then form elementary bodies, which are released by cell lysis. Cultivable in cell cultures and the yolk sacs of chick embryos. Contains two genera, *Chlamydia* and *Chlamydophila*.
chlamydial [*klə-mid'e-əl*] pertaining to members of the family *Chlamydiaceae*.
c. abortion abortion in cows, ewes, sows and goat does caused by *Chlamydophila abortus* and *C. pecorum*. See **enzootic** abortion of ewes.
Chlamydiales [*klə-mid'e-a"lēz*] an order of bacteria in the phylum *Chlamydiae*. There are four families, *Chlamydiaceae, Parachlamydiaceae, Waddliaceae, and Simkaniaceae*.
chlamydiosis [*klə-mid"e-o'sis*] any disease or infection caused by members of the family *Chlamydiaceae*; takes many forms including: **psittacosis** and **ornithosis** in birds, placentopathy manifested by abortion in **enzootic** abortion of ewes, sporadic bovine encephalomyelitis, pneumonitis in all species except pig, conjunctivitis in sheep, cats and laboratory rodents, **polyarthritis** in sheep, cattle, horse, enteritis in cattle and lagomorphs, and septicemia in **epizootic** chlamydiosis in lagomorphs.



C-39: *Chlamydia psittaci* in a direct fluorescent antibody-stained impression smear of infected mouse brain. From Songer JG, Veterinary Microbiology: Bacterial and Fungal Agents of Animal Disease. Saunders, 2005.

Chlamydonema see ***Physaloptera praeputialis***.
Chlamydophila [*klam"ĭ-dof'ĭ-lə*] a genus of obligately intracellular bacteria in the family *Chlamydiaceae*. Members were previously in the genus *Chlamydia*.
C. abortus causes **enzootic** abortion of ewes. Previously called *Chlamydia psittaci*.
C. caviae causes conjunctivitis in guinea pigs. Previously called *Chlamydia psittaci*.
C. felis cause of upper respiratory tract disease, principally involving conjunctivitis, in cats. Also recovered from the reproductive tract, where its pathogenic significance is uncertain. Previously called *Chlamydia psittaci*.
C. pecorum causes sporadic bovine **encephalomyelitis**, but also associated with enteritis, polyarthritis, pneumonia and conjunctivitis in ruminants, and reproductive tract disease and conjunctivitis in koalas. Previously classified as *Chlamydia psittaci* and *C. pecorum*. Also causes conjunctivitis in sheep, where it was previously called *Colesiota conjunctivae*.
C. pneumoniae different biovars infect horses, koalas and humans. Pathogenic significance in koalas and horses is uncertain, but in humans it is a significant cause of pneumonia. Previously classified as *Chlamydia psittaci* and *Chlamydia pneumoniae*.
C. psittaci cause of psittacosis and ornithosis, systemic disease of psittacine and other avian species, including domestic poultry. Zoonotic. Previously called *Chlamydia psittaci*.
chlamydospore [*klam'ĭ-do-spor"*] a thick-walled intercalary or terminal, usually asexual fungal spore formed by the rounding-up of a cell; it is not shed. Formed by differentiation of hyphae; seen in *Candida* and *Histoplasma* spp.
chloasma [*klo-az'mə*] see **melasma**.
chloral [*klor'əl*] 1. an oily liquid with a pungent, irritating odor, prepared by the mutual action of alcohol and chlorine; used in the manufacture of chloral hydrate and DDT. 2. vernacular contraction of the term chloral hydrate.
c. betaine formed by the reaction of chloral hydrate with betaine; used as a sedative.
c. hydrate rarely if ever used in small animals. Once used as a hypnotic and anesthetic agent in large animals, especially in horses. Has many disadvantages and has been superseded by many much more satisfactory preparations. Chloral hydrate may be administered orally but is erratic and slow-acting in its effects by this route. Intravenously the effects are immediate; injection outside the vein causes a very severe cellulitis usually terminating in an extensive slough of tissue. Chloral hydrate is a poor analgesic and severe depressant of respiratory and vasomotor centers in the medulla.
c. hydrate and guaiacol glyceryl ether used as an anesthetic combination in horses; combines muscular relaxation with hypnotic effect.
c. hydrate and magnesium sulfate an anesthetic preparation used in horses. Combines the hypnotic effect of chloral and the neuromuscular blocking effect of magnesium.
c. hydrate, magnesium sulfate and pentobarbital sodium see **Equithesin**.
α-chloralose a compound with anesthetic properties but not used in clinical work because of the poor level of anesthesia induced, the prolonged recovery period and the inconvenience of having to prepare the solution, by mixing equal quantities of glucose and chloral hydrate, and heating, just before use. There are two isomers. Only the α-chloralose has anesthetic properties. It has also been used to control rodents and pest birds.
chloramben a hormonal herbicide, relatively nontoxic if used correctly. Massive doses cause anorexia, weight loss, limb weakness and recumbency.
chlorambucil [*klor-am'bu-sil*] a nitrogen mustard akylating agent used mainly in dogs and cats for treating leukemias and lymphomas. Adverse effects include bone marrow suppression.
chloramine [*klor'ə-mēn*] a chlorine disinfectant, used for wound treatment, in drinking water. Called also chloramine T.
chloramine B [*klor'ə-mēn*] sodium benzenesulfochloramine.

VetBooks.ir

VetBooks.ir

C

chloramphenicol [*klor"əm-fen'ĭ-kol*] a broad-spectrum antibiotic with specific therapeutic activity against gram-positive and gram-negative bacteria, rickettsiae, chlamydia and anaplasmae. Side-effects in animals are uncommon, but its use in food-producing animals is discouraged or prohibited because of the danger of residues to humans. The palmitate preparation is a suspension administered orally and chloramphenicol sodium succinate is water soluble for parenteral use.

chlorate [*klor'āt*] as sodium or potassium chlorate, one of the original chemical herbicides but now largely superseded. Animals may be poisoned if they eat pasture or plant contaminated by the spray or the dry powder. It may also be administered accidentally because of its similarity to sodium chloride. Causes gastroenteritis with diarrhea and methemoglobinemia in ruminants similar to nitrate/nitrite poisoning.

chlorazanil an aminouracil diuretic.

chlorazepate dipotassium see **clorazepate**.

chlorbenside an acaricide used to spray trees and crops; has low toxicity but heavy, continued use may cause hepatic insufficiency.

chlorbenzoic acid [*klor-ben-zo'ik*] a hormonal herbicide, safe for animals if used according to instructions. Heavy dosing may cause anorexia, weight loss and muscle weakness.

chlorbutol [*klor-bu'tol*] chlorobutanol.

chlorcyclizine [*klor-si'klĭ-zēn*] an H_1 antihistamine.

chlordane [*klor'dān*] see **chlorinated hydrocarbons**.

chlordiazepoxide [*klor"di-az"ə-pok'sīd*] an early benzodiazapene derivative; used as a tranquilizer with activity similar to diazepam.

Chlorella [*klo-rel'ə*] a green alga, thought to be the origin of the achloric alga *Prototheca* spp., occasionally an animal pathogen. See ***Prototheca***.

chloremia [*klor-e'me-ə*] hyperchloremia.

chlorfenethol an acaricide used on agricultural crops and trees. It has a low toxicity but can cause depression, diarrhea, dyspnea, salivation and lacrimation.

chlorfenvinphos [*klor-heks'ĭ-dēn*] an organophosphorus insecticide used in the control of ectoparasites in large and small animals.

chlorhexidine a bisbiguanide antiseptic with antibacterial, antifungal and some antiviral activity; used in skin cleansers for surgical scrub, preoperative skin preparation, cleansing skin wounds and teat dips. Used as the acetate, gluconate or hydrochloride salts. Proprietary names are Hibitane, Nolvasan.

c. digluconate used as a sclerosing agent for chemical vasectomy in dogs.

c. teat dip 0.5–1.0% chlorhexidine in polyvinylpyrrolidone or as 0.3% solution in water.

chlorhydria [*klor-hi'dre-ə*] an excess of hydrochloric acid in the stomach.

chloride [*klor'īd*] 1. a salt of hydrochloric acid; any binary compound of chlorine. 2. the principal anion in extracellular fluid and gastric juice. Because of its domination of the anions in extracellular and intravascular fluid, it has profound importance for acid–base balance and for the regulation of osmotic pressure in these fluid compartments.

c. shift diffusion of chloride ions from the plasma into the erythrocytes to compensate for the loss of bicarbonate ions from the cells as a result of carbon dioxide metabolism. Called also Hamburger shift.

chloridorrhea [*klor"i-dor'e-ə*] diarrhea with an excess of chlorides in the stool.

chloriduria [*klor"ĭ-du're-ə*] chloruria.

chlorinated hydrocarbons [*klorĭ-nāt"əd*] insecticidal substances which are no longer recommended for use on food animals because of their persistence in animal tissues and entry into the human food chain. Many of them still find industrial and nonanimal use and poisoning of animals can occur. Poisoning is manifested by nervous excitement, tremor, convulsions and death. Includes aldrin, benzene hexachloride, chlordane, DDD, DDT, dieldrin, endrin, heptachlor, isodrin, lindane, and methoxychlor.

chlorinated naphthalenes [*klorĭ-nāt"əd*] additives to lubricants, fire-retardants and insulants. They are poisonous and on low level intake over long periods cause hypovitaminosis A manifested by cutaneous hyperkeratosis, emaciation and death. See also **hyperkeratosis**.

chlorine (Cl) [*klor'ēn*] a gaseous chemical element, atomic number 17, atomic weight 35.453. See Table 4. It is a disinfectant, decolorizer and irritant chemical. It is used for disinfecting, fumigating and bleaching, either in an aqueous solution or in the form of chlorinated lime. See also **hypochlorite**, **chloramine**.

c. dioxide used in the aging of flour to make it more suitable for baking. Process does not produce toxic amino acid derivatives as other agents do. See also **agene process**.

c. disinfectants compounds which have a high content of free chlorine and exert a disinfectant effect by releasing the chlorine.

c. gas liberated from chlorine disinfectants and in factory effluents. Causes irritation to respiratory mucosa up to the point of pulmonary edema.

Chloriopsoroptes a genus of mange mites in the family Psoroptidae. Includes *Chloriopsoroptes kenyensis* (African buffalo).

Chloris a genus of grasses in the family Poaceae; some contain cyanogenic glycosides but have not caused cyanide poisoning. Includes *C. distichophylla*, *C. truncata*, *C. ventricosa*. Called also windmill grass.

C. gayana rarely contains potentially toxic amounts of nitrate and causes nitrite poisoning of ruminants if lush. Called also Rhodes grass.

C. truncata causes photosensitization, possibly through steroidal saponins. Called also windmill grass.

chlorite [*klor'īt*] a salt of chlorous acid; disinfectant and bleaching agent.

chlorleukemia [*klor-loo-ke'me-ə*] see **chloroma**.

chlormadinone acetate [*klor-mad'ĭ-nōn*] a progestagen with antigonadotropic, antiestrogenic and antiandrogenic activity. Used for prevention of estrus in small animals.

chlormequat chloride a low toxicity herbicide.

chlormerodrin [*klor-mer'o-drin*] a mercurial diuretic. Labeled with Hg^{-197} or $^{-203}$ it was previously used to assess renal function.

chlormezanone a nonbarbiturate sedative, used as a muscle relaxant and tranquilizer.

chloro-acetotoluidine (2-chloro-4-acetotoluidine) poisoning used commercially to poison bird pests.

chloro-p-toluidine (3-chloro-p-toluidine) poisoning used commercially to poison bird pests.

chloroanisoles substances liberated from wood preservatives by bacteria when shavings of the wood are used in deep litter. They taint meat of animals housed on the litter.

chloroazodin a chlorine-releasing antiseptic and disinfectant, similar to chloramine T.

chlorobenzilate an insecticide used on agricultural crops and plants. Has low toxicity if handled properly.

chlorobutanol. [*klor"o-bu'tə-nol*] an antimicrobial preservative in pharmaceutical preparations. Called also chlorbutol.

chlorodyne an antiquated remedy for diarrhea in humans and dogs. Similar to tinct. chlor. et morphinae co. Contains liquid opium extract, chlorofom, proof spirit, glycerine and capsicum.

1-(2-chloroethyl)-3-cyclohexyl-1-nitrosourea (CCNU) see **lomustine**.

chloroform [*klor'ə-form*] $CHCl_3$; a liquid with an ethereal odor and sweet taste, used as a solvent; once used widely as an inhalation anesthetic and analgesic, and as an antitussive, carminative and counterirritant. An effective but dangerous anesthetic used commonly at one time especially in horses. Requires a proper mask. Prolonged anesthesia often results in severe liver damage.

chlorolabe the pigment in retinal cones that is more sensitive to the green portion of the spectrum than are the other pigments (cyanolabe and erythrolabe).

chloroleukemia [*klor"o-loo-ke'me-ə*] see **chloroma**.

chloroma, chlorolymphosarcoma [*klor-o'mə*] a malignant, green-colored tumor arising from myeloid tissue, associated with myelogenous leukemia, and occurring anywhere in the body. See also **granulocytic** sarcoma, eosinophilic **leukemia**.

Chloromycetin [*klor"o-mi-se'tin*] trademark for preparations of **chloramphenicol**, a broad-spectrum antibiotic.

chloromyeloma [*klor"o-mi"ə-lo'mə*] chloroma with multiple growths in bone marrow.

chloropexia [*klor"o-pek'se-ə*] the fixation of chlorine in body tissues.

chlorophacinone an anticoagulant rodenticide.

chlorophenols [*klor"o-fe'nolz*] compounds used as fungicides, including timber preservation, as herbicides and in termite control. They are quite poisonous. See **trichlorophenol**, **pentachlorophenol**.

chlorophyll [*klor'o-fəl*] any of a group of green pigments, containing a magnesium–porphyrin complex, that are involved in oxygen-producing photosynthesis in plants. Preparations of water-soluble chlorophyll derivatives are applied topically for deodorization of skin lesions and to stimulate healing. It is also administered orally to deodorize ulcerative lesions and the urine and feces. A chlorophyll metabolite, **phylloerythrin**, generated by intestinal bacteria, is the common photodynamic agent in pastured animals with liver damage. The phylloerythrin accumulates because its excretory pathway is the biliary system.

chloropicrin a disinfectant for use on cereal grains. Can cause intense lacrimation if inhaled. Taken orally it causes vomiting, colic and diarrhea. Called also trichloronitromethane.

chloroprivic [*klor"o-priv'ik*] deprived of chlorides; due to loss of chlorides.

chloroprocaine [*klor"o-pro'kān*] a local anesthetic, used as the hydrochloride salt.

chloroquine [*klor'o-kwin*] an antiprotozoal agent, used in the treatment of avian malaria, anaplasmosis and theileriosis in cattle and amebiasis in non-human primates.

c. poisoning the drug has an affinity for melanin and ocular tissues with melanin; causes a drug-induced retinopathy.

chlorothiazide [*klor"o-thi'ə-zīd*] a thiazide diuretic.

chloroxylenol [*klor"o-zi'lə-nol*] a chlorinated phenolic antiseptic, used in presurgical preparation of skin, cleaning wounds and in the treatment of bacterial, fungal and yeast infections of the skin and claws.

chlorphenesin carbamate [*klor-fen'ə-sin*] a centrally acting skeletal muscle relaxant, similar in action to mephenesin, used in the treatment of skeletal muscle spasms and trauma to tendons and ligaments.

chlorpheniramine [*klor"fən-ir'ə-mēn*] a histamine H_1-receptor antagonist, used as the maleate salt in the treatment of hypersensitivity reactions and as an antipruritic.

chlorphenoxy herbicide includes 2,4-D and 2,4,5-T. Can cause gastrointestinal problems in orally exposed animals; myotonia has been reported in dogs.

chlorpromazine [*klor-pro'mə-zēn*] a phenothiazine used as an antipsychotic agent and antiemetic. It has been largely superseded in veterinary work by acetylpromazine. Its principal use was as premedication for anesthesia.

chlorpropamide [*klor-pro'pə-mīd*] a first generation sulfonylurea derivative, used as an oral hypoglycemic drug in the treatment of diabetes mellitus.

chlorpropham a thiocarbamate herbicide (does not inhibit cholinesterase activity) of low toxicity for animals if used according to instructions. Can cause muscle weakness, anorexia, weight and hair loss.

chlorprothixene [*klor"pro-thik'sēn*] a thioxanthene derivative, related to the phenothiazine tranquilizers. Used as a tranquilizer, especially in pigs.

chlorpyrifos, chlorpyriphos [*klor-pi'rĭ-fos*] an organophosphorus insecticide once used for the control of ectoparasites on animals and in the treatment of their environment. Now banned or restricted to agricultural uses in many countries.

chlortetracycline [*klor"tet-rə-si'klēn*] a broad-spectrum antibiotic obtained from *Streptomyces aureofaciens*, used in the form of the hydrochloride salt as an antibacterial (effective against both gram-positive and gram-negative bacteria) and as a feed additive to promote growth in calves, pigs and poultry. See also **tetracycline**.

chloruresis [*klor"u-re'sis*] excretion of chlorides in the urine.

chloruria [*klor-u're-ə*] an excess of chlorides in the urine. Called also chloriduria.

chlorzoxazone [*klor-zok'sə-zōn*] a skeletal muscle relaxant.

chloxyle see **hexachloroparaxylene**.

choana [*ko'ə-nə*] pl. *choanae* [L.] 1. any funnel-shaped cavity or infundibulum. 2. *choanae*, the paired openings between the nasal cavity and the nasopharynx.

choanal [*ko'ə-nəl*] pertaining to or arising from the choanae.

c. atresia see imperforate **buccopharyngeal** membrane.

c. slit the sagittal slit in the hard palate of the normal bird.

c. stenosis choanal atresia.

Choanotaenia [*ko-a"no-te'ne-ə*] a genus of non-pathogenic tapeworms in the family Dilepididae. Includes *C. infundibulum* (fowl and turkey intestine).

C-40: Choana. The glottis (yellow arrow) opens from the floor of the snake's oral cavity into the choana (red arrow) on the dorsal surface of the mouth.
From Mader DR, Reptile Medicine and Surgery, 2nd Edition. Saunders, 2006.

chocolate [*chok'ə-lət*] a medium-brown (milk chocolate) coat color described for some dog breeds, most commonly the Labrador retriever; in cats where it occurs on the extremities of chocolate-pointed Siamese and Colorpoints and as a variety of Burmese; and in some rabbits.

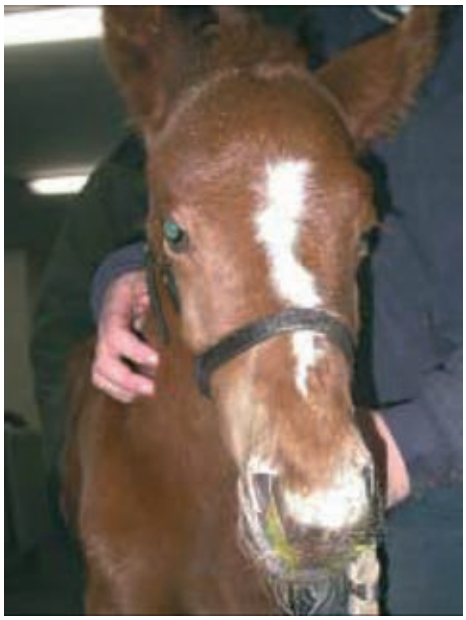
chocolate-point [*chok'ə-lət*] see **points**.

chocolate toxicity [*chok'ə-lət*] dogs commonly ingest chocolate and they may show signs of methylxanthine toxicity, which include vomiting, diarrhea, tachycardia, tachypnea, polyuria, and ataxia, tremors and seizures. Death may occur. Dark chocolate and baking chocolate have much higher concentrations of methylxanthines than milk or white chocolate. See also **theobromine** poisoning. Called also **cacao** poisoning.

Choix fever Rocky Mountain spotted fever.

choke [*chōk*] to interrupt respiration by obstruction or compression, or the condition resulting from such interruption. See also **esophageal** obstruction.

c. chain a string of metal links which, when looped through an end link, forms a noose. It is commonly used as a collar for dogs, particularly in training or for control of large, strong or unruly



C-41: Ingesta at the nostrils of a foal with choke.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

dogs as tension on the attached lead tightens the noose around the dog's neck giving great control.

c. chain injury soft tissue injury and fracture on luxation of the hyoid apparatus can occur with excessive force. Choke chains may also become imbedded in the tissues of growing dogs.

chokecherry [*chōk'cher"e*] ***Prunus virginiana***.

western c. *Prunus virginiana* var. *melanocarpa*.

choking [*chōk'ing*] pertaining to choke. Used to describe a syndrome in horses with dorsal **soft palate** displacement. A clinical sign of laryngeal disease.

cholagogue [*ko'lə-gog*] an agent that stimulates gallbladder contraction to promote bile flow.

cholangiectasis [*ko-lan"je-ek'tə-sis*] dilatation of a bile duct.

cholangiocarcinoma [*ko-lan"je-o-kahr"sĭ-no'mə*] see **cholangiocellular** carcinoma.

cholangiocellular [*ko-lan"je-o-sel'u-lər*] pertaining to the bile ducts.

c. adenoma solid or cystic; may be neoplastic or congenital or acquired cystic lesions.

c. carcinoma multiple, firm, white tumors occurring usually in dogs and cats. Capsular lesions have a typical umbilication of their serosal surface. Metastatic spread is constant. Called also bile duct carcinoma.

c. cystadenoma a variety of bile duct adenoma in which the tumor is composed of multilocular cystic structures lined with epithelium resembling that of bile ducts.

cholangioenterostomy [*ko-lan"je-o-en"tər-os'tə-me*] surgical anastomosis of a bile duct to the intestine.

cholangiogastrostomy [*ko-lan"je-o-gas-tros'tə-me*] surgical anastomosis of a bile duct to the stomach.

cholangiogram [*ko-lan'je-o-gram"*] the film obtained by cholangiography.

cholangiography [*ko-lan"je-og'rə-fe*] X-ray examination of the bile ducts, using a radiopaque dye given intravenously or orally, as contrast medium. Little used in veterinary medicine.

cholangiohepatitis [*ko-lan"je-o-hep"ə-ti'tis*] inflammation of the biliary system and, by extension, of the periportal hepatic parenchyma. In large animals, it is nearly always the result of parasitic infestation, sometimes complicated by the presence of bacteria; sporidesmin, the toxin of *Pithomyces chartarum*, causes a specific cholangiohepatitis. Crystal-associated cholangiohepatopathy has a similar pathogenesis. Primary bacterial cholangiohepatitis is uncommon in animals. See also feline **cholangitis**.

cholangiohepatoma [*ko-lan"je-o-hep"ə-to'mə*] primary carcinoma of the liver of mixed liver cell and bile duct cell origin.

cholangiohepatopathy [*ko-lan"je-o-hep"ə-top'ə-the*] disease of the liver parenchyma associated with and probably derived from disease of the biliary system.

crystal-associated c. hepatopathy characterized by crystals in the biliary system; always a plant poisoning due to steroidal sapogenins always present in some plants (e.g. *Agave lecheguilla*) and sometmes sporadically in others (e.g. *Panicum* spp.).

cholangiolar [*ko"lan-je'o-lər*] pertaining to or emanating from the tissues of the biliary system.

cholangiole [*ko-lan'je-ōl*] one of the fine terminal elements of the bile duct system.

cholangiolitis [*ko-lan"je-o-li'tis*] inflammation of the cholangioles.

cholangioma [*ko-lan"je-o'mə*] cholangiocellular carcinoma.

cholangiostomy [*ko"lan-je-os'tə-me*] fistulization of a bile duct.

cholangiotomy [*ko"lan-je-ot'ə-me*] incision into a bile duct.

cholangitis [*ko"lan-ji'tis*] inflammation of a bile duct.

feline c. previously called cholangiohepatitis; occurs mainly in cats, often in association with pancreatitis and gastrointestinal disorders. Three forms occur: neutrophilic cholangitis, arising from ascending infection from the gastrointestinal tract; lymphocytic cholangitis, a slowly progressive disease with bile duct proliferation and possibly progressive fibrosis; and chronic cholangitis, associated with liver flukes (*Metorchis albidus* and *Opisthorchis felineus*).

hyperplastic c. see **fascioliasis**.

cholanopoiesis [*ko"lə-no-poi-e'sis*] the synthesis of bile acids or of their conjugates and salts by the liver.

cholanopoietic [*ko"lə-no-poi-et'ik*] 1. promoting synthesis of bile (cholanopoiesis). 2. an agent that promotes cholanopoiesis.

cholate [*ko'lāt*] a salt or ester of cholic acid.

chole- word element. [Gr.] *bile*.

cholecalciferol [*ko"lə-kal-sif'ər-ol*] vitamin D_3, an oil-soluble antirachitic vitamin. It is used commercially as a rodenticide, which in poisoned animals leads to multiple systemic effects associated with a persistent hypercalcemia and hyperphosphatemia. See also **hypervitaminosis** D.

cholecystagogue [*ko"lə-sis'tə-gog*] an agent that promotes evacuation of the gallbladder.

cholecystalgia [*ko"lə-sis-tal'jə*] biliary colic.

cholecystectasia [*ko"lə-sis"tek-ta'zhə*] distention of the gallbladder.

cholecystectomy [*ko"lə-sis-tek'tə-me*] excision of the gallbladder.

cholecystenterostomy [*ko"lə-sis"ten-tər-os'tə-me*] see **cholecystoenterostomy**.

cholecystic [*ko"lə-sis'tik*] pertaining to the gallbladder.

cholecystitis [*ko"lə-sis-ti'tis*] inflammation of the **gallbladder**.

cholecystoduodenostomy [*ko"lə-sis"to-doo"o-də-nos'tə-me*] surgical anastomosis of the gallbladder and the duodenum.

cholecystoenterostomy [*ko"lə-sis"to-en"tər-os'tə-me*] surgical anastomosis of the gallbladder and intestinal tract, usually indicated if the common bile duct has been disrupted by injury or neoplasia and, as is the case in dogs and cats, repair or **choledochoenterostomy** is technically impractical. See also **cholecystoduodenostomy**, **cholecystojejunostomy**.

cholecystogram [*ko"lə-sis'to-gram*] a radiograph of the gallbladder.

cholecystography [*ko"lə-sis-tog'rə-fe*] radiography of the gallbladder and bile ducts, using a radiopaque dye as contrast medium.

cholecystojejunostomy [*ko"lə-sis"to-jə-joo-nos'tə-me*] surgical anastomosis of the gallbladder and jejunum.

cholecystokinin (CCK) [*ko"lə-sis"to-ki'nin*] a gastrointestinal hormone liberated from the intestinal mucosa in response to arrival of the products of digestion from the stomach. It stimulates secretion of pancreatic enzymes and gallbladder contraction. Sometimes abbreviated CCK–PZ. Called also cholecystokinin–pancreozymin, pancreozymin.

cholecystokinin–pancreozymin [*ko"lə-sis"to-ki'nin pan'kre-o-zi"min*] see **cholecystokinin**.

cholecystolithiasis [*ko"lə-sis"to-lĭ-thi'ə-sis*] cholelithiasis.

cholecystotomy [*ko"lə-sis-tot'ə-me*] incision of the gallbladder.

choledochal [*ko-led'ə-kəl*] pertaining to the bile duct.

choledochitis [*ko"lə-do-ki'tis*] inflammation of the common bile duct.

choledoch(o)- word element. [Gr.] *common bile duct*.

choledochoduodenostomy [*ko-led"ə-ko-doo"o-də-nos'tə-me*] surgical anastomosis of the bile duct and the duodenum. Not commonly performed in animals.

choledochoenterostomy [*ko-led"ə-ko-en"tər-os'tə-me*] surgical anastomosis of the common bile duct to the intestine.

choledochogastrostomy [*ko-led"ə-ko-gas-tros'tə-me*] surgical anastomosis of the common bile duct to the stomach.

choledochography [*ko-led"ə-kog'rə-fe*] radiology of the common bile duct.

choledocholithiasis [*ko-led"ə-ko-lĭ-thi'ə-sis*] calculi in the common bile duct.

choledochoplasty [*ko-led'ə-ko-plas"te*] plastic repair of the common bile duct.

choledochotomy [*ko-led"ə-kot'ə-me*] incision into the common bile duct.

choledochus [*ko-led'ə-kəs*] the ductus choledochus, or bile duct.

choleic [*ko-le'ik*] pertaining to the bile.

cholejejunoduodenostomy [*ko-le-jə-joo"no-doo"o-də-nos'tə-me*] surgical anastomosis of the gallbladder, jejunum and duodenum.

cholelith [*ko'lə-lith*] see **gallstone**.

cholelithiasis [*ko"lə-lĭ-thi'ə-sis*] the presence or formation of gallstones. Uncommon in animals, they are usually found in the gallbladder probably secondary to mild cholecystitis. Usually asymptomatic, but occasionally they may cause obstruction of bile ducts or lead to erosion and perforation of the gallbladder with peritonitis. Calcareous stones may form in the bile ducts of cattle with **distomiasis**.

obstructive c. blockage of the common bile duct by a gallstone; characterized clinically by severe jaundice, abdominal pain.

cholelithotomy [*ko"lə-lĭ-thot'ə-me*] incision of the biliary tract for removal of gallstones.

cholelithotripsy, cholelithotrity [*ko"lə-lith'o-trip-se*] crushing of a gallstone.

cholemesis [*ko-lem'ə-sis*] vomiting of bile.

cholemia [*ko-le'me-ə*] bile or bile pigment in the blood.

cholemic [*ko-le'mik*] pertaining to or emanating from the bile.
c. nephrosis renal tubular nephrosis caused by a high concentration of bilirubin in the urine and subsequently in the tubular epithelium.
choleperitoneum [*ko"lə-per"ĭ-tə-ne'əm*] the presence of bile in the peritoneum.
cholepoiesis [*ko"lə-poi-e'sis*] the formation of bile in the liver.
choleresis [*ko-ler'ə-sis*] the secretion of bile by the liver.
choleretic [*ko"lər-et'ik*] 1. stimulating bile production by the liver. 2. an agent that stimulates bile production by the liver.
cholestasis [*ko"lə-sta'sis*] stoppage or suppression of bile flow; inadequate bile drainage. See also **jaundice**.
canalicular c. engorgement of the interhepatocellular bile canaliculi with bile as a result of overproduction, as in hemolytic disease or downstream bile duct obstruction.
intrahepatocellular c., hepatocellular c. failure of bile excretion into canaliculi by hepatocytes due to an intoxication (e.g. *Lantana* poisoning in ruminants) or to a heritable defect in bilirubin conjugation.
cholesteatoma [*ko"lə-ste"ə-to'mə*] a cystlike mass with a lining of stratified squamous epithelium, filled with desquamating debris frequently including cholesterol, which occurs in the meninges, central nervous system and bones of the skull, but most commonly in the choroid plexus of the ventricles, and especially in horses and other Equidae. Causes signs of increased intracranial pressure, initial excitement followed by somnolence and apathy. Hydrocephalus may be the end-stage.
cholesteatosis [*ko"lə-ste"ə-to'sis*] fatty degeneration due to cholesterol esters.
cholesteremia hypercholesterolemia.
cholesterol [*kə-les'tər-ol"*] a steroid alcohol found in animal fats and oils, bile, blood, brain tissue, milk, egg yolk, myelin sheaths of nerve fibers, liver, kidneys and adrenal glands. It is a necessary component of all cell plasma and intracellular membranes and a constituent of myelin in nervous tissue; it is a precursor of bile acids and steroid hormones, and it occurs in the most common type of gallstone, in atheroma of the arteries, in various cysts, and in carcinomatous tissue. More than half of the body's cholesterol is synthesized and the remainder is obtained from the diet. The importance in human medicine of the relationship between cholesterol and the development of atheromatous plaques in the coronary arteries is not reflected in veterinary medicine. The importance of cholesterol to the veterinarian is limited to the measurement of blood cholesterol concentration as an indicator of organic disease, particularly in hypothyroidism, hyperlipidemias, nephrotic syndrome and liver disease, but increased concentrations can also be seen in diabetes mellitus, hyperadrenocorticism and necrotizing pancreatitis. Decreased concentration (hypocholesterolemia) is most commonly associated with portosystemic shunts.
c. pneumonia see endogenous-lipid **pneumonia**.
cholesterolemia [*kə-les"tər-ol-e'me-ə*] hypercholesterolemia.
cholesterolosis [*kə-les"tər-ol-o'sis*] a condition in which cholesterol is deposited in tissues in abnormal amounts.
c. bulbi see **synchysis** scintillans.
cholesteroluria [*kə-les"tər-ol-u're-ə*] the presence of cholesterol in the urine.
cholesterosis [*kə-les"tər-o'sis*] cholesterolosis.
cholestiatosis see **cholesteatoma**.
cholestyramine [*ko"lə-sti'rə-mēn*] a bile-acid binding resin used to treat hyperlipidemia and as an absorbent to prevent intestinal absorption of toxins.
choleuria [*ko"le-u're-ə*] choluria.
cholic acid [*ko'lik*] a major bile acid formed in the liver from cholesterol that plays, with other bile acids, an important role in digestion.
choline [*ko'lēn*] a quaternary amine which occurs in the phospholipid phosphatidylcholine and the neurotransmitter acetylcholine, and is an important methyl donor in intermediary metabolism. It was formerly considered to be a B-vitamin and was used to treat fatty degeneration of the liver.
c. acetylase, c. acetyltransferase an enzyme that brings about the synthesis of acetylcholine.
c. esters choline has some of the activity of a cholineric drug but the effect is multiplied many times over by combining it with an acid, e.g. acetic acid, to form an ester, e.g. acetylcholine. Other choline esters with important pharmacological activity are **carbachol**, **bethanechol**, **methacholine**.
c. nutritional deficiency requirements for choline are largely dependent on the amount of methionine in the diet. In dogs and cats, under normal circumstances, deficiency is unlikely, but choline is a dietary essential for pigs and young calves. Incoordination, weakness, dyspnea and hock swelling occur in experimental deficiency, but there is little evidence of naturally occurring disease. Poultry fed diets deficient in choline develop **perosis**.
c. salicylate the choline salt of salicylic acid, which has analgesic, antipyretic and anti-inflammatory properties.
c. theophyllinate a theophylline derivative used as a bronchodilator. Called also oxtriphylline.
cholinergic [*ko"lin-ur'jik*] 1. parasympathomimetic; activated or transmitted by acetylcholine; said of nerve fibers that liberate acetylcholine at a synapse when a nerve impulse passes, i.e. the parasympathetic fibers. 2. an agent that resembles acetylcholine or simulates its action.
c. blockade selective inhibition of cholinergic nerve impulses at autonomic ganglionic synapses, postganglionic parasympathetic effectors, or neuromuscular junctions.
c. antagonist see **anticholinergic**.
c. neurotransmission that form of neurotransmission which depends on the production of acetylcholine at synapses.
c. receptors receptor sites on effector organs or at nerve synapses that are stimulated by acetylcholine released by the nerve terminal. There are two types: muscarinic receptors, present primarily on autonomic effector cells, and nicotinic receptors, present primarily on autonomic ganglion cells and on the motor end plates of skeletal muscle.
cholinesterase [*ko"lin-es'tər-ās*] an enzyme that splits acetylcholine into acetic acid and choline. Called also acetylcholinesterase. This enzyme is present throughout the body, but is particularly important at the neuromuscular junction, where the nerve fibers terminate. Acetylcholine is released when a nerve impulse reaches a neuromuscular junction. It diffuses across the synaptic cleft and binds to cholinergic receptors on the muscle fibers, causing them to contract. Cholinesterase splits acetylcholine into its components, thus stopping stimulation of the muscle fibers. The end products of the metabolism of acetylcholine are taken up by nerve fibers and resynthesized into acetylcholine.
c. inhibitor the drugs neostigmine, physostigmine and pyridostigmine inhibit cholinesterase. These drugs are used to treat **myasthenia** gravis, a disease in which the cholinergic receptors are attacked by autoantibodies. The drugs extend the effect of acetylcholine on the muscle fiber.
c. reactivator choline-reactivating oximes are effective antidotes in organophosphorus insecticide poisoning, a state of acetylcholine excess because of cholinesterase inhibition. 2-PAM (2-pyridine aldoxime methchloride) is the most popular oxime for this purpose.
cholinoceptive [*ko"lin-o-sep'tiv*] pertaining to the sites on effector organs that are acted upon by cholinergic transmitters.
cholinoceptor [*ko"lin-o-sep'tər*] cholinergic receptor.
cholinolytic [*ko"lin-o-lit'ik*] 1. blocking the action of acetylcholine, or of cholinergic agents. 2. an agent that blocks the action of acetylcholine in cholinergic areas, i.e. areas supplied by parasympathetic nerves and voluntary muscles.
cholinomimetic [*ko"lin-o-mi-met'ik*] having an action similar to that of acetylcholine; called also **parasympathomimetic**.
c. alkaloids naturally occurring plant alkaloids which have cholinomimetic actions are **arecoline**, **pilocarpine**, **muscarine**.
chol(o)- word element. [Gr.] *bile*.
cholohemothorax [*kol"o-he"mo-thor'aks*] the presence of bile and blood in the thorax.
chololithiasis [*kol"o-lĭ-thi'ə-sis*] cholelithiasis.
cholothorax [*kol"o-thor'aks*] cholohemothorax.
choluria [*kol-u're-ə*] the presence of bile in the urine; discoloration of the urine with bile pigments.
chondral [*kon'drəl*] pertaining to cartilage.
chondralgia [*kon-dral'jə*] pain in a cartilage.
chondrectomy [*kon-drek'tə-me*] excision of a cartilage.
chondrification [*kon"drĭ-fĭ-ka'shən*] conversion into cartilage.
chondri(o)- word element. [Gr.] *cartilage, granule*.
chondritis [*kon-dri'tis*] inflammation of a cartilage.
auricular c. see relapsing **polychondritis**.
chondr(o)- word element. [Gr.] *cartilage*.
chondroadenoma [*kon"dro-ad"ə-no'mə*] adenochondroma.

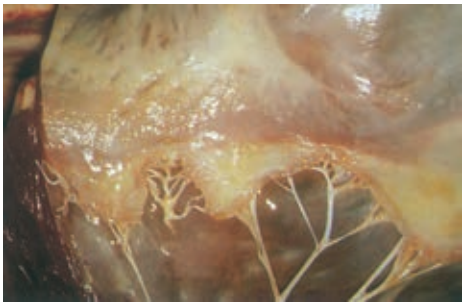
VetBooks.ir

chondroangioma [*kon"dro-an"je-o'mə*] a benign mesenchymoma containing chondromatous and angiomatous elements.
chondroblast [*kon'dro-blast*] an immature cartilage-producing cell.
chondroblastoma [*kon"dro-blas-to'mə*] a benign tumor arising from young chondroblasts in the epiphysis of a bone.
chondrocalcin [*kon"dro-kal'sin*] a calcium-binding protein found in the parts of the skeleton where bone proliferation or remodeling are taking place.
chondrocalcinosis [*kon"dro-kal"si-no'sis*] deposition of calcium salts in the cartilage of joints.
chondroclast [*kon'dro-klast*] a giant cell believed to be concerned in absorption of cartilage.
chondrocostal [*kon"dro-kos'təl*] pertaining to the ribs and costal cartilages.
chondrocranium [*kon"dro-kra'ne-əm*] the cartilaginous cranial structure of the embryo in early pregnancy when it is a unified cartilaginous mass without clear boundaries indicating the limits of future bones.
chondrocyte [*kon'dro-sīt*] a mature cartilage cell embedded in a lacuna within the cartilage matrix.
Chondrodendron plant genus in the family Menispermaceae from which **curare** is extracted.
chondrodynia [*kon"dro-din'e-ə*] pain in a cartilage.
chondrodysplasia [*kon"dro-dis-pla'zhə*] abnormal growth of cartilage; may be used to include achondroplasia. Causes disproportionate dwarfism and occurs as an inherited recessive trait in cattle (several breeds but notably Dexter, Telemark lethal and Hereford 'snorter dwarf'), sheep (Ançon and Cheviot) and dogs (Alaskan malamute, miniature poodles and Norwegian elkhound). This type of dwarfism haas been eliminated in most breeds of cattle by selective breeding or elimination of breeding lines. See also **achondroplasia**, **enchondromatosis**.
deforming hereditary c. inherited chondrodysplastic defects characterized by skeletal deformity, e.g. chondrodysplastic dwarfism.
chondrodysplastic dwarf [*kon"dro-dis-plas'tik*] see **chondrodysplasia**.
chondrodystrophia, chondrodystrophy [*kon"dro-dis'trə-fe*] a disorder of cartilage formation.
c. fetalis see **epiphyseal** dysplasia.
chondrodystrophoid having chondrodystrophy as a characteristic.
c. breeds in dogs, e.g. Dachshund, Bulldog, Bassett hound, the features of chondrodystrophy are established as the breed type. Angular deformities of the limbs and degeneration of the mucinous nucleus pulposus of the intervertebral disk at an early age are unfortunate accompaniments of this trait. See **achondroplasia**.
chondrodystrophy any disorder of cartilage formation. See also **chondrodysplasia**.
chicken embryo c. see **chicken** embryo chondrodystrophy.
chondroendothelioma [*kon"dro-en"do-the"le-o'mə*] an endothelioma containing cartilage tissue.
chondroepiphyseal [*kon"dro-ep"i-fiz'e-əl*] pertaining to epiphyseal cartilage.
chondroepiphysitis [*kon"dro-ep"i-fiz-i'tis*] inflammation of the epiphyseal cartilages.
chondrofibroma [*kon"dro-fi-bro'mə*] a fibroma with cartilaginous elements.
chondrogenesis [*kon"dro-jen'ə-sis*] formation of cartilage.
chondrogenic [*kon"dro-jen'ik*] giving rise to or forming cartilage.
chondroid [*kon'droid*] 1. resembling cartilage. 2. the name given to oval masses of inspissated pus in the guttural pouch of horses with guttural pouch empyema.
chondroitin sulfate [*kon-dro'i-tin*] a glycosaminoglycan (mucopolysaccharide) which is widespread in connective tissue, particularly cartilage, and in the cornea.
chondrolipoma [*kon"dro-li-po'mə*] a tumor containing cartilaginous and fatty tissue.
chondroma [*kon-dro'mə*] a tumor or tumor-like growth of cartilage cells. It may remain in the interior arising from the cartilage of the medullary cavity (true chondroma, or enchondroma), or may develop on the surface of a cartilage and project under the periosteum of a bone (ecchondroma, or ecchondrosis).
c. rodens see **multilobular** chondroma and osteoma.
chondromalacia [*kon"dro-mə-la'shə*] abnormal softening of cartilage.
chondromatosis [*kon"dro-mə-to'sis*] formation of multiple chondromas.
synovial c. a rare condition in which cartilage is formed in the synovial membrane of joints, tendon sheaths or bursae, sometimes becoming detached and producing a number of loose bodies.
chondromatous [*kon-dro'mə-təs*] pertaining to or of the nature of cartilage. More correctly, chondroid.
c. hamartoma a congenital anomaly of the lung. See also **hamartoma**.
chondromere [*kon'dro-mēr*] a cartilaginous vertebra of the fetal vertebral column.
chondrometaplasia [*kon"dro-met"ə-pla'zhə*] chondroid metaplasia.
chondromyoma [*kon"dro-mi-o'mə*] a benign tumor with myomatous and cartilaginous elements.
chondromyxoma [*kon"dro-mik-so'mə*] myxoma with cartilaginous elements.
chondromyxosarcoma [*kon"dro-mik"so-sahr-ko'mə*] a sarcoma containing cartilaginous and mucous tissue.
chondronectin a glycoprotein found in cartilage.
chondro-osseous [*kon"dro-os'e-əs*] composed of cartilage and bone.
chondropathy [*kon-drop'ə-the*] any disease of cartilage.
chondroplasia [*kon"dro-pla'zhə*] the formation of cartilage by specialized cells (chondrocytes).
chondroplast [*kon'dro-plast*] chondroblast.
chondroplasty [*kon'dro-plas"te*] plastic repair of cartilage.
chondroporosis [*kon"dro-po-ro'sis*] the formation of sinuses or spaces in cartilage.
chondroprotective [*kon"dro-pro-tek'tiv*] agents that retard degradation of articular cartilage and promote chondrocyte metabolism in the treatment of osteoarthritis in dogs and cats. See also **pentosan polysulfate**, **glycosaminoglycan** polysulfate.
chondrosarcoma [*kon"dro-sahr-ko'mə*] a malignant tumor derived from cartilage cells or their precursors.
chondrosis [*kon-dro'sis*] the formation of cartilage.
chondrosteoma [*kon-dros"te-o'mə*] a cartilage capped by knobby projection of the sternal surface of endochondral bone. They may recur singly or multicentrically (multiple cartilaginous **exostoses**). Inherited as an autosomal dominant trait in horses, dogs and humans.
chondrosternal [*kon"dro-stur'nəl*] pertaining to the costal cartilages and sternum.

C-42: Texel lamb with chondrodysplasia. Note the short legs and wide-based stance.
From Thompson KG, Piripi SA, Dittmer KE: Inherited abnormalities of skeletal development in sheep. Vet J 177:324-333, 2008. Elsevier.

C-43: Simmental cow with swellling at the proximocranial aspect of the right scapula due to a chondrosarcoma.
From Martinek B, Bago Z, Flöck M, Hochsteiner W, Schilcher F, Kofler J: Chondrosarcoma in a simmental cow: Clinical, ultrasonographic, radiographic and pathological findings. Vet J 172:181-184, 2006. Elsevier.

c. depression see **pectus** excavatum.
chondrotomy [*kon-drot'ə-me*] the dissection or the surgical division of cartilage.
chondroxiphoid [*kon"dro-zi'foid*] pertaining to the xiphoid cartilage.
Choniangium a genus of roundworms of the family Strongylidae. Includes *Choniangium epistomum*, *C. magnostomum* (Indian elephant cecum).
chook an Australian colloquialism for chicken or fowl.
CHOP a cancer chemotherapy protocol that utilizes cyclophosphamide, doxorubicin (hydroxydaunomycin), vincristine (Oncovin®), and prednisone. Used in the treatment of lymphomas in dogs and cats.
chop chopped hay; used extensively when pastured animals need supplementary roughage and are required to eat the meal provided in a short time. Housed animals receive the same supply in the form of hay in a rack or net. Called also chaff.
green c. green feed that has been put through a chopper or forage harvester.
chops the jowls or flesh of lips and jaw in dogs.
chord [*kord*] cord.
chorda [*kor'də*] pl. *chordae* [L.] a cord or sinew.
c. magna Achilles tendon.
c. tendineae tendinous cords connecting adjacent cusps of each of the two atrioventricular valves to the appropriate papillary muscles in the heart ventricles.
c. tendineae rupture causes acute, massive, cardiac insufficiency leading to congestive heart failure and an early death; called also detachment.
c. tympani a nerve originating from the facial nerve, distributed to the submandibular, sublingual and lingual glands and the anterior two-thirds of the tongue that gets its name from coursing over the handle of the malleus in the tympanic cavity; it is both a parasympathetic and a special sensory nerve.
c. umbilicalis umbilical cord.
c. vocalis vocal cord.
chordal tissue [*kor'dəl*] the tissue of the notochord.
Chordata [*kor-da'tə*] a phylum of the animal kingdom comprising all animals having a notochord during some developmental stage.
chordate [*kor'dāt*] 1. an animal of the Chordata. 2. having a notochord.
chordectomy [*kor-dek'tə-me*] excision of a vocal cord.
chordee [*kor'de*] downward deflection of the penis, due to a congenital anomaly (hypospadias) or to urethral infection.
chorditis [*kor-di'tis*] inflammation of vocal or spermatic cords.
chordoma [*kor-do'mə*] a malignant tumor arising from embryonic remains of the notochord.
Chordopoxvirinae [*kor"do-poks"vir-i'ne*] subfamily in the order *Poxvirales* that includes viruses that infect vertebrate animals.
chordotomy [*kor-dot'ə-me*] **cordotomy** (2).
chorea [*kə-re'ə*] in humans the ceaseless occurrence of rapid, jerky involuntary movements, as is seen commonly in patients with Huntington's disease. In dogs, the term is usually applied to the **myoclonus** seen in dogs associated with infection by distemper virus.
choreiform [*ko-re'ĭ-form*] resembling chorea.
chorioadenoma [*kor"e-o-ad"ə-no'mə*] adenoma of the chorion.
chorioallantoic vesicle [*kor"e-o-al"an-to'ik*] the vesicle formed in early pregnancy around the embryo by the chorion; contains the allantoic sac, the yolk sac, the allantoic fluid and the embryo. Palpation of the sac is used for early manual pregnancy diagnosis in cows and mares.



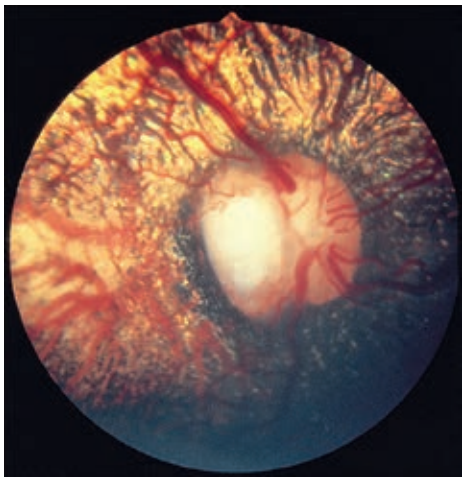
C-44: Ruptured chorda tendineae in a horse heart at necropsy.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

chorioallantois [*kor"e-o-ə-lan'to-is*] an extraembryonic structure formed by union of the chorion and allantois, which by means of vessels in the associated mesoderm serves in gas exchange; in many mammals, it forms the placenta.
chorioamnionitis [*kor"e-o-am"ne-o-ni'tis*] inflammation of the fetal membranes.
chorioamniotic folds [*kor"e-o-am"ne-ot'ik*] a pair of folds consisting of extraembryonic somatopleure which grow out from the vitelline membrane and meet over the top of the embryo, fusing to complete the chorion and the amnion.
chorioangioma [*kor"e-o-an"je-o'mə*] an angioma of the chorion.
choriocapillaris [*kor"e-o-kap"ĭ-lar'is*] innermost layer of choroid; composed of a fine network of capillaries and separated from the retinal pigment epithelium by Bruch's membrane.
choriocarcinoma [*kor"e-o-kahr"sĭ-no'mə*] a malignant neoplasm of trophoblastic cells formed by abnormal proliferation of the placental epithelium, without production of chorionic villi.
choriocele [*kor'e-o-sēl"*] protrusion of the chorion through an aperture.
chorioepithelioma [*kor"e-o-ep"ĭ-the"le-o'mə*] choriocarcinoma.
choriogenesis [*kor"e-o-jen'ə-sis*] the development of the chorion.
chorioid [*kor'e-oid*] choroid.
chorioma [*kor"e-o'mə*] any trophoblastic proliferation, benign or malignant.
choriomeningitis [*kor"e-o-men"in-ji'tis*] cerebral meningitis with inflammation of the choroid plexus.
lymphocytic c. see **lymphocytic** choriomeningitis.
chorion [*kor'e-on*] the outermost of the fetal membranes, composed of trophoblast lined with mesoderm.
avascular c. the normally avascular and villous tips of the chorioallantoic membranes in pig, sheep and cattle placentas; colored white to brown, wrinkled; called also the necrotic tips.
c. laeve the nonvillous, membranous part of the chorion.
chorionic [*kor"e-on'ik*] pertaining to the chorion.
c. girdle a circular band of cells of placental origin that invade the endometrium and form the endometrial cups in the mare.
c. girdle cells see chorionic girdle (above).
c. gonadotropin a hormone with properties similar to those of luteinizing hormone; it is secreted in large amounts by the placenta during gestation. It stimulates the formation of interstitial cells in the testes of the fetus and causes the secretion of testosterone. In mares, pregnant mare serum gonadotropin-PMSG (called also eCG) is found in high concentration in serum and is used primarily for stimulation of ovaries (superovulation) in ruminants. It has much more FSH than LH activity. In women (human chorionic gonadotropin - HCG) is found in high concentration in urine. It is used for induction of ovulation because of its high LH activity.
c. somatomammotropin see **placental** lactogen.
c. vesicle the early embryonic vesicle before the allantois has developed and encircled the embryo to form the chorioallantoic vesicle and supplant it.
choriopmalaria see **avian** malaria.
Chorioptes [*kor"e-op'tēz*] a genus of mange mites of the family Psoroptidae.
C. bovis found on the pasterns of horses and cattle, on the scrotum of sheep and on the perineal region of cattle. Causes **chorioptic mange**.
C. texanus occurs on goats and reindeer.
chorioptic mange [*kor"e-op'tik*] the common form of mange in cattle, sheep, goats and horses caused by *Chorioptes bovis*. Cattle show small scabs on the perineum, tailhead and back of the udder without irritation. Horses show severe dermatitis behind the pastern with severe itching at first and then soreness. Sheep show a scaly dermatitis on the poll (poll mites), the legs and on the scrotum of the ram, and may suffer from infertility. Called also leg mange, tail mange, symbiotic mange.
chorioretinal [*kor"e-o-ret'ĭ-nəl*] pertaining to the choroid and retina.
c. dysplasia abnormal development of the choroid and retina; occurs in **Collie** eye anomaly and other conditions/breeds.
chorioretinitis [*kor"e-o-ret'ĭ-ni'tis*] inflammation of the choroid and retina. Occurs with numerous infectious and non-infectious diseases in all species. Can be seen as a distinct ocular entity or as part of a broader systemic disease.
chorioretinopathy [*kor"e-o-ret"ĭ-nop'ə-the*] a pathologic process involving both the choroid and retina.

VetBooks.ir

VetBooks.ir

C-45: (A) Lesions of chorioptic mange on the escutcheon of a Jersey cow, a common site for infestation. (B) Infestation of the poll of a ram with sheep-adapted *Chorioptes bovis* (poll mites).



C-46: Choroidal hypoplasia and coloboma of the optic nerve head in a collie. From Peiffer R, Petersen-Jones S, Small Animal Ophthalmology, 4th Edition. Saunders, 2009.

chorista defective development due to, or marked by, displacement of the primordium, the earliest sign of development of an organ.

choristoma [*kor"is-to'mə*] a mass of histologically normal tissue in an abnormal location.

choroid [*kor'oid*] the posterior portion of the middle, vascular (uveal) tunic of the eye, located between the sclera and the retina. It contains an abundant supply of blood vessels and (in all but albino and subalbinotic individuals) melanin which reduces reflection and scattering of light not absorbed by the retinal photoreceptors. Responsible for outer retinal nutrition. See also **tapetum**, **vascular** lamina.

c. plexus see choroid **plexus**.

choroidal [*kor-oid'əl*] pertaining to or emanating from the choroid.

c. hypoplasia genetically determined relative lack of choroid formation leading to funduscopically visible sclera and sometimes overlying retinal detachment; a hallmark sign of **Collie** eye anomaly, and also seen in association with inherited coat color dilution characteristics, e.g. blue merles and harlequins.

c. inflammation see **choroiditis**.

choroidea [*kor-oid'e-ə*] choroid.

choroiditis [*kor"oid-i'tis*] inflammation of the choroid.

choroidocapillary layer [*kor-oi"do-kap'ĭ-lar"e*] one of the five laminae in the choroid coat of the eye.

choroidocyclitis [*kor-oi"do-sik-li'tis*] inflammation of the choroid and ciliary body.

choroidoiritis [*kor-oi"do-i-ri'tis*] inflammation of the choroid and iris.

choroidoretinitis [*kor-oi"do-ret"ĭ-ni'tis*] chorioretinitis.

chou moellier ***Brassica*** *oleracea* var. *acephala*.

Chow Chow a medium-sized dog with a distinctive short-coupled body, erect ears and typically very thick, medium length coat; a smooth, but there is also a short-coated variety. The breed is distinguished by a blue-black coloring on the tongue and much of the mouth. It is subject to myotonia congenita, believed to be inherited as an autosomal recessive trait, dysmyelinogenesis and a tyrosinase deficiency, and is predisposed to malignant melanomas and entropion.

christmas bells [*kris'məs*] see ***Bryophyllum*** *delagoense*.

Christmas berry [*kris'məs*] see ***Photinia***.

Christmas disease [*kris'məs*] (hemophilia B) a hereditary hemorrhagic diathesis clinically similar to, but less common than, hemophilia A (classic hemophilia), caused by deficiency of clotting factor IX (Christmas factor, plasma **thromboplastin** component). It is an X chromosome-linked trait and occurs in human males, some breeds of dogs and British shorthaired cats. It is a mild to moderate disease in Cairn terrier, American Cocker spaniel and French bulldog, and a severe disease in Coonhounds, St. Bernards and Alaskan malamutes. Carrier females can be easily identified by quantitative coagulation assays.

Christmas factor [*kris'məs*] clotting factor IX; deficiency is the cause of **Christmas disease** (hemophilia B). See also plasma **thromboplastin** component.

Christmas rose [*kris'məs*] ***Helleborus*** *niger*.

chromaffin [*kro-maf'in*] taking up and staining strongly with chromium salts.

c. reaction application of Zenker's solution to the flat cut surface of freshly excised chromaffin tumor forms a dark pigment within 20 minutes.

c. tissue a tissue composed largely of chromaffin cells, well supplied with nerves and vessels; it occurs in the adrenal medulla and also forms the paraganglia of the body, e.g. the carotid bodies, along with the sympathetic nerves, and in other organs.

chromaffinoma [*kro-maf"ĭ-no'mə*] 1. any tumor containing chromaffin cells. 2. pheochromocytoma.

chromaphilic substance granular cytoplasmic reticulum and ribosomes found in nerve cell bodies; called also Nissl bodies or substance.

chromate any salt of chromic acid.

C-47: Chow Chow.

c. poisoning occurs accidentally as a result of exposure to chromate residues. Signs are abdominal pain, diarrhea and severe dehydration.

chromated copper arsenate a once popular wood preservative. Treated pine is also a very popular material for the construction of horse yards. It is virtually nonpoisonous; horses with pica cannot nibble enough of the soft timber to be poisoned. However, ash piles resulting from burning treated lumber can be a risk for animals (from the arsenic).

chromatic [*kro-mat'ik*] 1. pertaining to color; stainable with dyes. 2. pertaining to chromatin.

chromatid [*kro'mə-tid*] either of two parallel filaments joined at the centromere which make up a chromosome, and which divide in cell division, each going to a different pole of the dividing cell and each becoming a chromosome of one of the two daughter cells.

sister c. a chromatid formed by a replicating chromosome during interphase; because they are derived from the one homolog and joined at the center they are exact copies of each other.

chromatin [*kro'mə-tin*] the substance of the chromosomes, composed of nucleic acids and basic proteins (histones), the material in the nucleus that stains with basic dyes.

sex c. Barr body; the persistent mass of the material of the inactivated X chromosome in cells of normal females. See also **drumstick**.

chromatin-negative [*kro"mə-tin-neg'ə-tiv*] lacking sex chromatin; characteristic of the nuclei of cells in a normal male.

chromatin-positive [*kro"mə-tin-poz'ĭ-tiv*] containing sex chromatin; characteristic of the nuclei of cells in a normal female.

chromat(o)- word element. [Gr.] *color, chromatin.*

chromatogenous [*kro"mə-toj'ə-nəs*] producing color or coloring matter.

chromatogram [*kro-mat'o-gram*] the record produced by chromatography.

chromatograph [*kro-mat'o-graf*] 1. to analyze by chromatography. 2. the apparatus used in chromatography.

chromatography [*kro"mə-tog'rə-fe*] a technique for analysis of chemical substances. The term *chromatography* literally means color writing, and originally referred to a method by which the substance to be analyzed is poured into a vertical glass tube containing an adsorbent, the various components of the substance moving through the adsorbent at different rates, according to their degree of attraction to it, and producing bands of color at different levels of the adsorption column. The term now includes other methods utilizing the same principle, although no colors are produced and the stationary phase may be paper, a thin layer coated on a flat plate or packed in a column. The mobile phase of chromatography refers to the fluid that carries the mixture of substances in the sample through the adsorptive material. The stationary phase (or adsorbent) refers to the solid material that takes up the particles of the substance passing through it. Kaolin, alumina, silica and activated charcoal have been used as adsorbing substances or stationary phases. Classification of chromatographic techniques tends to be confusing because it may be based on the type of stationary phase, the nature of the adsorptive force, the nature of the mobile phase, or the method by which the mobile phase is introduced. The technique is a valuable tool for the research biochemist and is readily adaptable to investigations conducted in the clinical laboratory. For example, chromatography is used to detect and identify in body fluids certain sugars and amino acids associated with inborn errors of metabolism.

adsorption c. that in which the stationary phase is an adsorbent.

affinity c. a method of chromatography that utilizes the biologically important binding interactions that occur on protein surfaces. For example, an enzyme substrate is covalently coupled to an inert matrix such as a polysaccharide bead. The enzyme binds to the substrate when passed through a column of such beads while other macromolecules pass through. The enzyme can then be eluted from the column, enabling separation when present in very low concentration in a very complex mixture of other macromolecules.

column c. the technique in which the various solutes of a solution are allowed to travel down a column, the individual components being adsorbed by the stationary phase. The most strongly adsorbed component will remain near the top of the column; the other components will pass to positions farther and farther down the column according to their affinity for the adsorbent. If the individual components are naturally colored, they will form a series of colored bands or zones. Column chromatography has been employed to separate vitamins, steroids, hormones and alkaloids and to determine the amount of these substances in samples of body fluids.

exclusion c. that in which the stationary phase is a gel having a closely controlled pore size. Molecules are separated based on molecular size and shape, those which are larger than the exclusion size pass through while smaller molecules are temporarily retained in the pores.

gas c. a type of chromatography in which the mobile phase is an inert gas. Volatile components of the sample are separated in the column and measured by a detector. The method has been applied in the clinical laboratory to separate and quantify steroids, barbiturates and lipids.

gas–liquid c. gas chromatography in which the substances to be separated are moved by an inert gas along a tube filled with a finely divided inert solid coated with a nonvolatile substance; each component migrates at a rate determined by its solubility in the stationary phase and its vapor pressure.

gel-filtration c., gel-permeation chromatography exclusion chromatography.

high performance liquid c. (HPLC) a miniaturized method in which the solution to be analyzed is passed, under high pressure, through a long, thin column packed with tiny beads such that analyses are completed in minutes rather than hours and with improved resolution.

ion-exchange c. that utilizing resins to which are coupled either cations or anions that will exchange with other cations or anions in the material passed through their meshwork.

molecular sieve c. exclusion chromatography.

paper c. a form of chromatography in which a sheet of special paper is substituted for the adsorption column. After separation of the components as a consequence of their differential migratory velocities, they are stained to make the chromatogram visible. In the clinical laboratory paper chromatography is employed to detect and identify sugars and amino acids.

partition c. a form of separation of solutes utilizing the partition of the solutes between two liquid phases, namely the original solvent and the film of solvent on the adsorption column.

thin-layer c. that in which the stationary phase is a thin layer of an adsorbent such as silica gel coated on a flat plate. It is otherwise similar to paper chromatography, but is more useful for the separation of lipids.

chromatolysis [*kro"mə-tol'ə-sis*] 1. the solution and disintegration of the chromatin of cell nuclei. 2. disintegration of the Nissl bodies of a neuron as a result of injury, fatigue or exhaustion.

chromatophil [*kro'mə-to-fil"*] a cell or structure that stains easily.

chromatophore [*kro-mat'o-for"*] any pigmentary cell or color-producing plastid.

chromatophoroma see malignant **melanoma**.

chromatosome [*kro-mat'o-sōm"*] the basic nucleoprotein structural unit which consists of 166 base pairs of DNA in association with core and linker histones.

chromaturia [*kro"mə-tu're-ə*] abnormal coloration of the urine.

chromhidrosis [*kro"mĭ-dro'sis*] secretion of colored sweat.

chromic acid 1. a dibasic acid, H_2CrO_4; its salts are called chromates. 2. chromium trioxide.

chromidium [*kro'me-əm*] pl. *chromidia;* a granule of extranuclear chromatin in the cytoplasm of a cell.

chromidrosis see **chromhidrosis**.

chromium (Cr) a chemical element, atomic number 24, atomic weight 51.996. See Table 4.

c.-51 (^{51}Cr) a radioisotope of chromium having a half-life of 27.8 days; used to label red blood cells to determine red cell volume and red cell survival time. See also **Cr ^{51} EDTA**.

c. nutritional deficiency possibly causally related to the onset of diabetes mellitus in primates.

c. poisoning characterized by severe gastroenteritis, diarrhea and dehydration.

c. trioxide possibly carcinogenic in humans. See also **chromate**.

chrom(o)- word element. [Gr.] *color.*

chromo body large, sclerotic bodies seen in subcutaneous microabscesses in chromoblastomycosis.

VetBooks.ir

Chromobacterium violaceum [kro"mo-bak-tēr'e-əm] a gram-negative bacteria found in tropical and subtropical areas. It is associated with pneumonia and other infections in several species.

chromoblast [kro'mo-blast] an embryonic cell that develops into a pigment cell.

chromoblastomycosis [kro"mo-blas"to-mi-ko'sis] infections of skin and subcutaneous tissues caused by dematiaceous fungi.

chromoclastogenic [kro"mo-klas"to-jen'ik] giving rise to or inducing chromosomal disruption or damage.

chromocystoscopy [kro"mo-sis-tos'kə-pe] cystoscopy of the ureteral orifices after oral administration of a dye which is excreted in the urine.

chromocyte [kro'mo-sīt] any colored cell or pigmented corpuscle.

chromodacryorrhea [kro"mo-dak"re-o-re'ə] blood-stained tears; seen with marked ulcerative conjunctivitis or obstruction or disease of the nasolacrimal apparatus in any species. This term has also been applied to **sialodacryoadenitis** in rodents, when excessive porphyrins rather than blood are secreted with tears.

chromogen [kro'mo-jən] any substance giving origin to a coloring matter.

chromogenesis [kro"mo-jen'ə-sis] the formation of color or pigment.

chromogenic [kro"mo-jen'ik] producing color or pigment.

chromogranin A [kro"mo-gran'in] see **parathyroid** secretory protein.

chromolysis see **chromatolysis**.

chromomere [kro'mo-mēr] 1. any of the beadlike granules occurring in series along a chromonema. 2. granulomere.

chromomycosis [kro"mo-mi-ko'sis] a subcutaneous mycotic infection caused by a deeply pigmented fungus, e.g. ***Curvularia*** and ***Phialophora***.

chromonema [kro"mo-ne'mə] pl. *chromonemata* [Gr.] the coiled central thread of a chromatid along which lie the chromomeres.

chromophil [kro'mo-fil] any easily stainable structure.

chromophobe [kro'mo-fōb] any cell, structure or tissue that does not stain readily; applied especially to the chromophobe cells (ACTH-secreting) of the anterior lobe of the pituitary gland.

c. adenoma a benign neoplasm derived from chromophobe cells of the pars distalis of the pituitary gland. May be functional, producing excess ACTH and hence hyperadrenocorticism. Nonfunctional tumors of the pars distalis usually cause clinical signs by compression of the pituitary gland and other nearby structures. Clinical signs include incoordination, weakness and exercise intolerance, muscle atrophy, sexual inactivity, blindness and dilatation and fixation of the pupils.

c. carcinoma rare nonfunctional pituitary tumors are usually large and invasive causing destruction of the pars distalis leading to panhypopituitarism and diabetes insipidus. There is extensive invasion of the brain and cranial bones, and metastases to spleen and liver and to regional lymph nodes may occur.

chromophobia [kro"mo-fo'be-ə] the quality of staining poorly with dyes.

chromophore [kro'mo-for] any chemical group whose presence gives a decided color to a compound and which unites with certain other groups (auxochromes) to form dyes; called also color radical.

chromophoric [kro"mo-for'ik] 1. bearing color. 2. pertaining to a chromophore.

chromoprotein [kro"mo-pro'tēn] a protein combined with a pigment, e.g. hemoglobin.

chromoscopy [kro-mos'kə-pe] the diagnosis of renal function by the color of urine following the administration of dyes.

gastric c. diagnosis of gastric function by the color of the gastric contents.

chromosomal [kro"mo-sōm'əl] emanating from or pertaining to chromosome.

c. aberration see chromosomal abnormality (below).

c. abnormality abnormal karyotype; abnormalities can be detected before birth by means of amniocentesis, or after birth, but many are probably never observed because they cause death and disposal of the fetus. The abnormalities are either of number, or of composition of the individual chromosomes. Monosomy and trisomy are examples of numerical abnormalities. Translocations are examples of abnormalities of structure where parts of one chromosome have been transferred to another. The cause of these abnormalities is not known. Their importance is that many of them are linked with structural or functional defects of the animal body. The best known ones in veterinary medicine are those that are related to infertility, e.g. translocation 1/29, translocation 27/29.

c. analysis fetal cells obtained by **amniocentesis** or lymphocytes from a blood sample can be cultured in the laboratory until they divide. Cell division is arrested in mid-metaphase by the drug Colcemid, a derivative of colchicine. The chromosomes can be stained by one of several techniques that produce a distinct pattern of light and dark bands along the chromosomes, and each chromosome can be recognized by its size and banding pattern. The chromosomal characteristics of an animal are referred to as its *karyotype*. This also refers to a photomicrograph of a cell nucleus that is cut apart and rearranged so that the individual chromosomes are in order and labeled. The autosomes are numbered roughly in order of decreasing length. The sex chromosomes are labeled X and Y. Karyotyping is useful in determining the presence of chromosome defects.

c. banding see **banding** (2).

c. chimerism see **chimera**.

c. crossover see **crossover**.

c. deletion in genetics, loss from a chromosome of genetic material.

c. inversion see **inversion** (2).

c. linkage see **linkage** (2).

c. mapping see **genetic** map.

c. non-disjunction failure of the chromatids or chromosomes to separate (disjoin) during meiosis.

c. replication see **replication**.

c. walking a technique for identification and isolation of contiguous sequences of genomic DNA.

c. X inactivation only one of a pair of female (X) chromosomes in the one cell is active, the other is inactivated.

chromosome [kro'mo-sōm] in animal cells, a structure in the nucleus, containing a linear thread of **deoxyribonucleic acid** (DNA), which transmits genetic information and is associated with **ribonucleic acid** and histones. During cell division the material composing the chromosome is compactly coiled, making it visible with appropriate staining and permitting its movement in the cell with minimal entanglement. Each organism of a species is normally characterized by the same number of chromosomes in its somatic cells. The diploid numbers (number of total chromosomes per cell) are: cattle, 60; sheep, 54; horse, 64; donkey, 62; pig, 38; dog, 78; cat, 38; human, 46. The chromosomes are arranged in pairs and one of the pairs is the sex chromosomes (XX or XY), which determines the sex of the organism. See also **heredity**.

compound c. a genetic engineering procedure which produces two chromosomes in one of which the left arms of the two original chromosomes are joined together and the two original right arms are also joined together; used in genetic control of insect populations.

homologous c's the chromosomes of a matching pair in the diploid complement that contain alleles of specific genes.

lampbrush c. so named because of the bristling appearance given them by many open loops of chromatin along the extended chromosome.

ring c. a chromosome in which both ends have been lost (deletion) and the two broken ends have reunited to form a ring-shaped figure.

sex c's the chromosomes responsible for determination of the sex of the individual that develops from a zygote, in mammals constituting an unequal pair, the X and the Y chromosome.

somatic c. autosome.

submetacentric c. see **submetacentric**.

W c. sex chromosome in animals such as poultry in which the female is the heterogametic state, the male has the ZZ genotype and the female the ZW genotype.

X c. the female sex chromosome, being carried by half the male gametes and all female gametes; female diploid cells have two X chromosomes, the male has the XY genotype.

Y c. the male sex chromosome, being carried by half the male gametes and none of the female gametes; male diploid cells have an X and a Y chromosome; females carry the XX genotype.

Z c. sex chromosome in animals, such as poultry, in which the female is the heterogametic sex; the male has the ZZ genotype and the female the ZW genotype.

chronaxie, chronaxy [*kro'nak-se*] the minimum time at which an electric current must flow at a voltage twice the rheobase to cause a muscle to contract.

chronic [*kron'ik*] persisting for a long time; the period is undefined and varies with circumstances; usually more than one week. US National Center for Health Statistics defines it as a condition of 3 months duration or longer. Also has the sense of the disease showing little change or very slow progression over a long period.

c. obstructive pulmonary disease (COPD) see chronic obstructive **pulmonary** disease.

c. respiratory disease a disease of chickens caused by infection with *Mycoplasma gallisepticum*. It is characterized by coughing, nasal discharge, respiratory rales, a long course and the complication of airsacculitis. There is a loss of egg production and wastage by culling of carcasses at the abattoir but mortality is low.

chronics [*kron'iks*] a feedlot term for cattle that were sick, treated and never fully recovered and do poorly and periodically relapse. Commonly, they have a significant proportion of the lung affected with consolidating bronchopneumonia and if so they may be called lungers.

chron(o)- word element. [Gr.] *time*.

chronobiology [*kron"o-bi-ol'ə-je*] the scientific study of the effect of time on living systems and of biological rhythms.

chronograph [*kron'o-graf*] an instrument for recording small intervals of time.

chronological tactics [*kron"o-loj'ĭ-kəl*] techniques of planning experiments or analyzing retrospective data in order to make the most use of the passage of time, e.g. analysis of the relationship between a prior disease and a subsequent outcome.

chronotropic [*kron"o-tro'pik*] affecting the time or rate.

chronotropism [*kro-not'ro-piz-əm*] interference with regularity of a periodical movement, such as the heart's action.

chronotropy affecting a time or rate, as in heart rate.

Chrosperma muscaetoxicum see ***Amianthium muscaetoxicum***.

Chrozophora plicata African plant in the family Euphorbiaceae; contains an unidentified toxin; causes dyspnea, diarrhea and fatal pulmonary edema. Called also terba.

Chrysanthemum [*krĭ-san'thə-məm*] plant genus in the family Asteraceae; contains sesquiterpene lactones; causes contact dermatitis. Garden plants called also feverfew, marguerite.

C. cinerariaefolium the plant from which pyrethrum is extracted. Called also *Pyrethrum cinerarifolia*.

chrysanthemum-faced dog [*krĭ-san'thə-məm*] an early name for the Shih tzu.

chrys(o)- word element. [Gr.] *gold*.

Chrysocoma ciliata Southern African plant in the Asteraceae family; contains an unidentified toxin causing diarrhea, dermatitis, intestinal obstruction, myelomalacia in three syndromes, kaalsiekte (in lambs), lakseersiekte (adults), valsiekte. Called also *C. tenuifolia*, bitterbush, beesbossie, beeskaroo, bitterkaroo, bitterbos. See also **lakseersiekte**, **kaalsiekte**, **valsiekte**.

Chrysolina quadrigemina a beetle used in the biological control of St. Johns wort—*Hypericum perforatum*.

Chrysolophus the genus of pheasants; includes *C. amherstiae* (Lady Amherst's pheasant), *C. pictus* (golden pheasant).

Chrysomya a genus of flies of the family Calliphoridae. See also **screw-worm**.

C. albiceps, C. bezziana (Old world screw-worm).

C. chloropyga, C. mallochi, C. rufifacies cause cutaneous **myiasis**. See also ***Lucilia***, ***Callitroga*** and ***Phormia***.

Chrysops [*kris'ops*] a genus of blood-sucking tropical flies of the family Tabanidae. *C. discalis* (deer fly), a vector of tularemia in the western USA, and *C. silacea*, an intermediate host of *Loa loa*, a filarial parasite. Called also chrysops flies.

C. discalis, C. dimidiata, C. silacea these flies cause painful bites and 'worry' livestock when they are about. They also mechanically transmit anthrax, anaplasmosis, the virus of infectious equine anemia, tularemia and the larvae of the filariid parasite *Loa loa*. A number of trypanosome species are also transmitted mechanically by this important means.

Chrysosporium [*kris"o-spor'e-əm*] saprophytic soil fungal organisms, which when inhaled have been the cause of granulomatous inflammation of the lungs (adiaspiromycosis). Formerly *Emmonsia*. The main species are *C. parvum* var. *parvum* (*E. parva*) and *C. parvum* var. *crescens* (*E. crescens*).

C. guarroi a cause of dermatomycosis in pet green iguanas (*Iguana iguana*).

chrysotherapy [*kris"o-ther'ə-pe*] the use of gold salts in the treatment of disease, e.g. autoimmune skin diseases and rheumatoid arthritis in dogs. They have antimicrobial, anti-inflammatory, anti-immunological and antienzymatic activity.

chthonophagia the habit of eating clay or earth; geophagia.

chuck a hand grip to be attached to intramedullary pins to enable the surgeon to rotate or drive them into bone.

chuckering form of restraint for South American camelids where a loop of rope is tied around the lumbar area and the hind limbs are tucked into the loop which is then tightened.

chukka, chukker a term used in polo; a polo match is divided into six chukkas of 7 minutes each.

chun see **tsun**.

churrido equino [Port.] equine monocytic ehrlichiosis. Called also churrio

chute 1. a device used to restrain large animals especially cattle and horses. It is a small stall into which the animal is encouraged to walk. The head is fixed, in cattle by a head bail, the back is closed and the animal can then be examined or treated. The quality of the chute depends on its freedom from injury to the animal and the operator and the accessibility of the animal for the procedures to be conducted. Speed of throughput is also an important consideration when large numbers are to be handled in repetitive treatments and quick-release gates are an essential part of the unit. Called also stocks, crush. 2. a similar crate or stall at a rodeo in which a wild animal can be saddled and mounted before being released to buck with the rider.

hydraulic c. one where the functions of closing the head catch, closing the tail gait and applying the side-squeeze are done hydraulically using separate controls for each function. Installed on operations where large numbers of cattle are being handled to relieve the manual labor associated with hand operated levers.

c. charge fee charged by some feedlots each time cattle are worked through the chute.

specialist c's other special chutes are available including those which include tilt tables, hoof repair platforms, and mobile chutes.

squeeze c. one in which the sides of the chute can be moved inwards by a lever to squeeze and restrain the animal from moving. Common chutes used for beef cattle.

CHV canine herpesvirus.

chylangioma [*ki-lan"je-o'mə*] a tumor of intestinal lymph vessels filled with chyle.

chyle [*kīl*] the milky fluid taken up by the lacteals from the intestine during digestion, consisting of lymph and triglyceride fat (chylomicrons) in a stable emulsion, and conveyed by the thoracic duct to empty into the venous system.

chylemia [*ki-le'me-ə*] the presence of chyle in the blood.

chylifaction, chylification the formation of chyle. Called also chylopoiesis.

chyliform [*ki'lĭ-form*] resembling chyle.

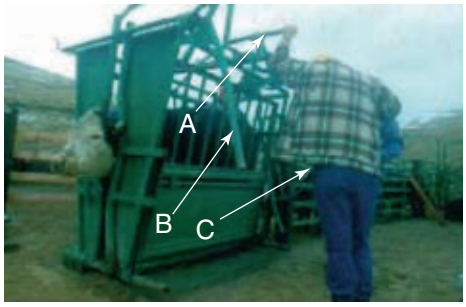
chyl(o)- prefix meaning chyle.

chyloabdomen [*ki"lo-ab'də-mən*] chyloperitoneum.

chylocele [*ki'lo-sēl*] distention of the tunica vaginalis testis with effused chyle.

chylofibrosis [*ki"lo-fi-bro'sis*] pleural fibrosis resulting from chylothorax.

chyloid [*ki'loid*] resembling chyle.



C-48: Cow restrained in squeeze chute. Head catch is controlled by lever A, side squeeze by lever B and tail gate C by a lever hidden behind operator in this picture.

VetBooks.ir

VetBooks.ir

c. effusion effusions, usually pleural, with a milky appearance, containing cholesterols or protein–lecithin compounds but not chylomicron globules, may be mistaken as chylous by their gross appearance. Seen in cats with cardiomyopathy or cardiac disease. Called also pseudochylous effusion.

chylomediastinum [ki"lo-me"de-əs-ti'nəm] the presence of effused chyle in the mediastinum.

chylomicron [ki"lo-mi'kron] a stable droplet containing principally triglyceride fat, but also cholesterol, phospholipids and protein; found in intestinal lymphatics (lacteals) and blood during and after meals.

c. remnant lipoprotein particle formed by the action of lipoprotein lipase on chylomicrons; carries lipids of dietary origin to the liver for processing.

c. test in chilled serum, chylomicrons rise to form a creamy top layer and the serum clears; very low-density lipoproteins remain dispersed and the serum is turbid. See also **lipemia** refrigeration test.

chylomicronemia [ki"lo-mi"kro-ne'me-ə] hyperchylomicronemia.

chylopericardium [ki"lo-per"ĭ-kahr'de-əm] the presence of effused chyle in the pericardium.

chyloperitoneum [ki"lo-per"ĭ-to-ne'əm] the presence of effused chyle in the peritoneal cavity.

chylopleura [ki"lo-ploor'ə] chylothorax.

chylopneumothorax [ki"lo-noo"mo-thor'aks] the presence of effused chyle and air in the pleural cavity.

chylopoiesis [ki"lo-poi-e'sis] production of chyle.

chylothorax [ki"lo-thor'aks] the presence of effused chyle in the pleural cavity. Occurs most commonly in dogs and cats, caused by traumatic injury to the thoracic duct, neoplasms in the cranial mediastinum, or a congenital abnormality of the duct, but often the cause is not known. Clinical signs are attributed to the pleural effusion. When withdrawn, the chylous fluid is characterisitic.

chylous [ki'ləs] pertaining to, mingled with, or of the nature of chyle.

c. ascites distention of the abdomen with chyle.

c. effusion accumulation of chyle, usually in a cavity, e.g. pleural cavity.

c. hydrothorax see **chylothorax**.

chyluria [kīl-u're-ə] the presence of chyle in the urine, giving it a milky appearance, due to obstruction of lymph flow, which causes rupture of lymph vessels into the renal pelves, ureters, bladder or urethra.

chyme [kīm] the semifluid, homogeneous, creamy or gruel-like material produced by action of the gastric juice on ingested food and discharged through the pylorus into the duodenum.

chymification [ki"mĭ-fĭ-ka'shən] conversion of food into chyme; gastric digestion.

chymodenin a polypeptide secreted by the duodenum that specifically stimulates pancreatic secretion of chymotrypsinogen.

chymopapain [ki"mo-pə-pān'] a proteolytic enzyme (a sulfhydryl proteinase) from the tropical tree *Carica papaya*, used in **chemonucleolysis**.

chymosin [ki'mo-sin] the milk-curdling enzyme found in the abomasal juice of preweaned calves (before pepsin formation); a preparation from the stomach of the calf is used to coagulate milk protein in the preparation of junket and thus to facilitate its digestion. Catalyzes the conversion of caseinogen from a soluble to an insoluble form (casein or curd). Called also rennin. See also **rennet**.

C-49: Chylous pleural effusion in a cat. The pink tint indicates some degree of hemorrhage is present.
From Raskin RE, Meyer D, Canine and Feline Cytology, 2nd Edition. Saunders, 2010.

chymotrypsin [ki"mo-trip'sin] an endopeptidase with action similar to that of trypsin, produced in the intestine by activation of chymotrypsinogen from the exocrine pancreas; a product crystallized from an extract of the pancreas of the ox has been used clinically as an anti-inflammatory agent and for enzymatic zonulolysis and débridement.

c. test see **BT-PABA test**.

chymotrypsinogen [ki"mo-trip-sin'o-jən] the inactive precursor of chymotrypsin, the form in which it is secreted by the pancreas.

chytridiomycosis a cause of mortalities and population decline in amphibians. Caused by the fungus *Batrachochytrium dendrobatidis*. There has been a significant impact on the diversity of wild amphibian populations and has resulted in extinctions or threatened extinction of species. A disease notifiable to the OIE (see Table 22).

Ci curie. See **becquerel**.

CI 634 see **tiletamine**.

cib. [L.] *cibus* (food); used in prescription writing, e.g. post cib. = after meals.

cicatrectomy [sik"ə-trek'tə-me] excision of a cicatrix.

cicatricial [sik"ə-trish'əl] pertaining to a cicatrix.

c. tissue the dense fibrous tissue forming a cicatrix, derived directly from granulation tissue. Called also scar tissue.

cicatrix [sik-a'triks] pl. *cicatrices* [L.] the fibrous tissue left after the healing of a wound; a scar.

cicatrization [sik"ə-trĭ-za'shən] the formation of a cicatrix or scar; scarring. Surgical cicatrization, performed by injection of a strongly irritating substance such as iodine, is used in horses to tighten the patellar ligaments in the treatment for patellar luxation.

Cicer arietinum [si'sər] see **chickpea**.

Cicherelli rongeur a rongeur with tapered jaws and a sharp tip; used in neurosurgery.

cichlid fish of the family Cichlidae encompassing more than 1000 species from Africa and South America. Some species are important in aquaculture andothers are kept as aquarium fish.

Cichorium intybus member of the Asteraceae plant family; the roots contain an unidentified toxin which causes salivation, diarrhea in cattle. Called also chicory.

ciclacillin cyclacillin.

ciclopirox [si"klo-pēr'oks] a wide-spectrum antifungal drug used topically to treat *Candida* and fungal infections of the skin.

Ciconiphilus pectiniventris a louse of duck and geese.

Cicuta [sik'u-tə] a genus of the plant family Apiaceae; these plants contain a toxic polyalkyne, cicutoxin, which causes hypersalivation, muscle weakness, violent convulsions and sudden death from respiratory arrest in grazing livestock, often within minutes of being eaten. Roots and tubers are most toxic. Includes *C. bolander*, *C. bulbifera*, *C. curtisii*, *C. douglasii* (*C. vagans, C. californica*), *C. maculata* (*C. occidentalis*), *C. virosa* (*C. mackenziana*). Called also water hemlock, cowbane.

cicutoxin [sik'u-toks"in] toxic polyalkyne (highly unsaturated aliphatic alcohol) separable from plant material of ***Cicuta***.

CID combined immune deficiency; cytomegalic inclusion body disease.

-cide word element. [L.] *destruction or killing* (homicide); *an agent that kills or destroys* (germicide).

CIDR controlled-intravaginal drug releasing devices; contain primarily progesterone and are used for the synchronization of estrus in cattle, sheep and goats.

CIE counter immunoelectrophoresis.

ciguatera [se"gwə-ta'rə] poisoning by consumption of the flesh or viscera of tropical predatory fish of a wide range of species. The causative heat-stable toxins (ciguatoxin, maitotoxin and others) originate in the dinoflagellate (*Gambierdiscus toxicus*) and possibly others or from associated bacterial microflora. The toxins are subject to bioaccumulation in fish which eat the dinoflagellates, and subsequently in the predators. Growth of the dinoflagellates is promoted by the destruction of their coral reef habitat. Poisoning characterized by vomiting, diarrhea and paresis in cats, dogs, humans. See also ***Lyngbya***.

cilastatin [si"lə-stat'in] an inhibitor of dehydropeptidase I, an enzyme found in renal tubules. Used in association with the antibiotic, imipenem, to prevent its inactivation.

cilia [*sil'e-ə*] [L.] plural of *cilium*. 1. the eyelashes. 2. minute hair-like processes that extend from a cell surface, composed of nine pairs of microtubules around a core of two microtubules. They beat rhythmically to move the cell or to move fluid or mucus over the surface. Of particular importance in the respiratory epithelium, contributing greatly to the **mucociliary** escalator.

c.-associated respiratory (CAR) bacillus gram-negative bacterium associated with severe respiratory disease in rodents; most closely related to species in the genera *Flexibacter* and *Flavobacterium*; usually associated with *Mycoplasma pulmonis* infection.

ectopic c. misdirected cilia emerging through the palpebral conjunctival surface and usually causing corneal irritation.

eyelid c. the eyelashes; absent on the lower lids of most domestic species. There are also longer tactile hairs (vibrissae) on the external surface of the eyelids.

immotile c. syndrome see **immotile cilia syndrome**.

ciliariscope [*sil"e-ar'ĭ-skōp*] an instrument for examining the ciliary region of the eye.

ciliarotomy [*sil"e-ə-rot'ə-me*] surgical division of the ciliary zone of the iris for the treatment of glaucoma. Not done in veterinary ophthalmology.

ciliary [*sil'e-ar"e*] pertaining to or resembling cilia; used particularly in reference to certain eye structures, such as the ciliary body or muscles.

c. adenoma tumor arising from the ciliary body epithelium; evident as an intraocular mass or due to signs of secondary uveitis or glaucoma.

c. body that section of the vascular tunic of the eye (uvea), connecting choroid and iris, made up of the ciliary muscle and the ciliary processes. The processes radiate from the ciliary muscle and give attachments to zonules supporting the lens of the eye. The ciliary muscles modify accommodation and aqueous humor outflow.

c. body inflammation cyclitis.

c. epithelium a double layer of epithelium lining the inner ciliary body. The innermost layer is non-pigmented, the outermost typically is pigmented. They continue anteriorly as the iris epithelium and dilator muscle, respectively; and posteriorly as the neurosensory retina and retinal pigment epithelium, respectively

c. flush dilation and hyperemia of episcleral blood vessels causing perilimbal redness. Associated with keratitis, anterior uveitis and glaucoma; not simply conjunctivitis. Called also ciliary hyperemia or injection.

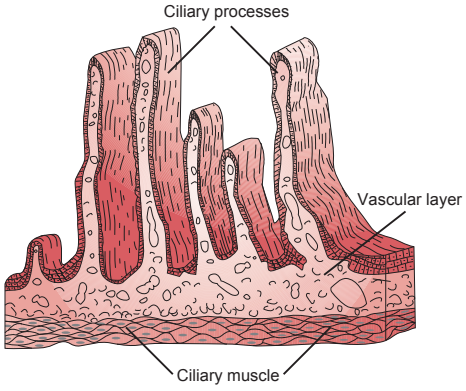
c. glands modified sweat glands situated at the edge of the eyelids. Called also glands of Moll.

c. muscle the smooth (mammals) or striated (birds and reptiles) muscle that forms the pars muscularis of the ciliary body and functions in accommodation of the eye and modification of aqueous humor outflow.

primary c. dyskinesia abnormality of ciliary function leading to diseases of respiratory and reproductive tracts including sinusitis and bronchiectasis. May be associated with cardiac displacement. Results in asthenospermia. See also **Kartagener's syndrome**.

c. process folded structures on the inner aspect of the ciliary body, responsible for aqueous humor production, and stabilization of the lens via the lens zonules.

c. reflex constriction of the pupil that occurs as part of the accommodation **reflex**.



C-50: Anatomy of the ciliary processes. From Guyton AC, Hall JE, Textbook of Medical Physiology, 10th Edition. Saunders, 2000.

c. sulcus poorly defined transition point between the posterior surface of the iris and the anterior surface of the ciliary body.

c. zone one of the three regions of the iris. the ciliary zone forms the outermost region of the iris (sometimes called the iris root). See also **pupillary zone** and **iris collarette**.

c. zonules fibrous extensions from the ciliary processes of the ciliary body connecting it to the lens and responsible for transferring accommodative forces from the ciliary body muscles to the lens. Called also lens zonules.

Ciliata [*sil"e-a'tə*] a class of protozoa (subphylum Ciliophora) whose members possess cilia during their life cycle; a few species are parasitic.

ciliate [*sil'e-āt*] 1. having cilia. 2. any member of the class Ciliata; in veterinary medicine the important group is the ciliate protozoa.

ciliated [*sil'e-āt"əd*] provided with cilia.

ciliectomy [*sil"e-ek'tə-me*] 1. excision of a portion of the ciliary body. 2. excision of the portion of the eyelid containing the roots of the eyelashes.

cili(o)- word element. [L.] *cilia, ciliary (body)*.

Ciliophora [*sil"e-of'ə-rə*] a subphylum of Protozoa, including two major groups, the ciliates and suctorians, and are distinguished from the other subphyla by the presence of cilia at some stage during the life cycle.

ciliospinal [*sil"e-o-spi'nəl*] pertaining to the ciliary body and the spinal cord.

c. reflex ipsilateral pupil dilatation when the skin of the neck is stimulated, especially painfully. Not recognized in veterinary medicine.

ciliovitreolenticular pertaining to the ciliary body, vitreous and lens of the eye.

c. block obstruction to normal anterior flow of aqueous humor at the ciliary body and lens equator causing aqueous humor to be misdirected into the vitreous body, resulting in forward pressure on the lens, iris and ciliary body and impairment of aqueous humor outflow. Causes a form of glaucoma seen most commonly in aged cats. See **aqueous** misdirection.

cilium [*sil'e-əm*] pl. *cilia* [L.] an eyelash; see **cilia**.

cillosis [*sil-o'sis*] spasmodic quivering of the eyelid.

cilofungin an antifungal agent, effective aginst yeasts, especially *Candida albicans*.

cimetidine [*si-met'ĭ-dēn*] a histamine H_2-receptor antagonist that inhibits the action of histamine at cell surface receptors of the gastric parietal cells and reduces basal gastric acid secretion and secretion stimulated by food, histamine, gastrin and insulin. It is used for short-term treatment of peptic ulcer and for treatment of pathological hypersecretory conditions.

Cimex [*si'məks*] a genus of the insect family Cimicidae.

***C. hemipterus* (*C. rotundatus*)** parasitic bugs of poultry.

C. lectularius blood-sucking insects parasitizing humans for the most part, but can affect pigeons and poultry causing anemia, ill thrift and reduced production. Called also bed bugs.

cinch [*sinch*] a saddle girth on an American stock saddle. Tightens with a knot on a ring instead of with straps and buckles.

cinchocaine [*sin'ko-kān"*] see **dibucaine**.

cinchona bark [*sin-ko'nə*] dried bark of the stem or root of various South American trees of the genus *Cinchona*. It is the source of quinine, cinchonine and cinchonidine. Used as a bitter and antipyretic.

cine- word element. [Gr.] *movement;* see also words beginning *kine-*.

cineangiocardiography [*sin"ə-an"je-o-kahr"de-og'rə-fe*] the photographic recording of image intensification fluoroscopy of the heart and great vessels by motion picture techniques.

cineangiography [*sin"ə-an"je-og'rə-fe*] the photographic recording of fluoroscopic images of the blood vessels by motion picture techniques.

cinefluorography [*sin"ə-floo"or-og'rə-fe*] see **cineradiography**.

cinemicrography [*sin"ə-mi-krog'rə-fe*] the making of motion pictures of a small object through the lens system of a microscope.

cineole [*sin'e-ol*] see **eucalyptol**.

cineradiography [*sin"ə-ra"de-og'rə-fe*] the making of a motion picture record of successive images appearing in image intensification fluoroscopy.

cinerea [*si-nēr'e-ə*] the gray matter of the nervous system.

cinerolone one of the ketoalcohols in *Chrysanthemum cinerariaefolium* that combines with carboxylic acids to produce pyrethrins.

cinesi- for words beginning thus, see those beginning *kinesi-*.

cinet(o)- for words beginning thus, see those beginning *kinet(o)-*.

cingulate gyrus [sing'gu-lāt] the gyrus running dorsal and parallel to the corpus callosum. Called also *gyrus cinguli*.

cingulum [sing'gu-ləm] pl. *cingula* [L.] 1. an encircling part or structure; a girdle. 2. a bundle of association fibers partly encircling the corpus callosum not far from the median plane, interrelating the cingulate and hippocampal gyri. 3. the ridge at the base of the crown of some teeth. 4. an annular band at the vestibulovaginal junction in the female genital tract; may be the site of a vestigial hymen.

c. membri pelvini see **pelvic** girdle.

c. membri thoracici see shoulder **girdle**.

Cinnamomum camphora [sin"ə-mo'məm] see **camphor**.

cinnamon [sin'ə-mən] a herbal preparation obtained from the bark of *Cinnamomum* spp. It is used as an astringent in the treatment of diarrhea and flatulence. Cinnamon oil, sometimes used as a name for Cassia oil, has similar activity, but contains cinnamaldehyde, which has been associated with hypersensitivity reactions.

cinoxacin [sin-ok'sə-sin] a quinolone antibiotic with activity similar to nalidixic acid. Used in urinary tract infections and bacterial prostatitis in dogs.

ciodrin an organophosphorus insecticide for use on animals as a powder or spray.

Cionella lubrica [si"o-nəl'ə] a terrestrial snail, the first intermediate host of ***Dicrocoelium*** *dendriticum*.

ciprofloxacin [sip"ro-flok'sə-sin] a fluoroquinolone antibiotic with particularly good activity against gram-negative bacteria, including Enterobacteriaceae and *Pseudomonas aeruginosa*. It is used mainly in urinary tract infections.

circadian [sər-ka'de-ən] denoting a period of about 24 hours.

c. clock the daily rhythm of physiological activity as expressed by the Chinese circadian clock. This explains the flow of energy or *Qi* through the body, via the meridians, each meridian having two hours of maximum and two of minimum function in every day.

c. rhythm the regular recurrence of certain phenomena in cycles of approximately 24 hours, e.g. biological activities that occur at about the same time each day (or night) regardless of constant darkness or other conditions of illumination.

circannual [sər-kan'u-əl] occurring rhythmically every year.

circhoral pertaining to biological rhythms.

circinate [sur'sĭ-nāt] resembling a ring or circle.

circle [sur'kəl] a round figure, structure or part.

cerebral arterial c. anastomotic ring of vessels near the base of the brain. Called also *circulus arteriosus cerebri*. See cerebral **arterial** circle and Table 9.

ciliary arterial c. the ring of arteries within the ciliary muscle formed from the anterior ciliary arteries.

iridal arterial c. the major ring of arteries near the ciliary border of the iris formed from the posterior long ciliary arteries and supplying blood to the iris; this ring gives off radial branches that supply the minor ring near the papillary margin. Called also *circulus arteriosus iridis major* and *circulus arteriosus iridis minor*. See Table 9.

iridal vascular c. a ring of vessels formed by the anterior ciliary arteries; provide fine branches to the iris and ciliary body. See also ciliary arterial circle, iridal arterial circle (above).

c. of safety see flight **distance**.

c. system see breathing **circuit**.

c. test walking a horse in a small circle, first one direction then the other, is used in a neurological examination to detect ataxia and abnormalities in proprioception.

c. of Willis anastomotic ring of vessels near the base of the brain. See cerebral **arterial** circle, Table 9.

circling [sur'kling] persistent walking in circles; it may be caused by deviation of the head because of a bend in the neck, or be due to rotation of the head, e.g. caused by listeriosis or brain abscess. A sign of unilateral vestibular disease or prosencephalic lesions affecting the cerebral hemispheres or diencephalon (toward the side of the lesion; adverse syndrome).

c. disease see **listeriosis**.

Circoviridae a virus family that comprises two genera, *Circovirus* that includes porcine circoviruses, pigeon circovirus, and psittacine beak and feather disease virus, and *Gyrovirus* that includes chicken anemia virus. They are the smallest animal viruses, 17–24 nm in diameter, contain a single-stranded circular DNA genome composed of about 2500 nucleotides and replicate in the nucleus of cells and are assumed to be dependent on the host cell for many functions required for viral replication and probably, like parvoviruses, replicate in cells that are in the S-phase of the cell cycle.

circovirus virus in the family *Circoviridae*. See also **porcine** circovirus, **psittacine** beak and feather disease, **chicken** anemia, **pigeon** circovirus, postweaning multisystem **wasting** syndrome.

circuit [sur'kət] a round course, or course followed by, for example, electrical current, anesthetic gas, a traveling judge.

Bain coaxial c. a variant of the T-piece circuit of delivery of anesthetic gas in which the fresh gas passes up a central tube and the expired gas passes out through the outer sleeve.

breathing c. of an anesthetic machine is the pathway by which the volatile anesthetic agent and oxygen are conveyed to the patient and carbon dioxide is removed. The two methods for removal of carbon dioxide are that of venting all expired gases to the exterior, and the method of absorbing the CO_2 chemically and rebreathing the expired gas. The two basic circuits are the open circuit in which the patient has access to environmental air as well as the anesthetic-oxygen mixture and exhales into the environment, and the closed system in which all gases are rebreathed. The latter may be a to-and-fro system or a circle system, the latter based on the use of unidirectional valves to ensure that the gases always pass in the correct direction. See also Bain coaxial circuit (above), circle breathing circuit (below), coaxial circuit (below), Lack circuit (below), Magill circuit (below), **Schimmelbusch mask**, T-piece circuit (below), Universal F-circuit (below).

circle breathing c. in an anesthetic machine; the flow of gases is directed by an inclusion in the system of two unidirectional valves, one in an expiratory and one in an inspiratory tube. The rebreathing bag and the canister of sodalime for CO_2 absorption are located between the two tubes.

coaxial c. a system for the delivery of gaseous anesthetic which has separate conduits for fresh gas and expired air and is essentially the same as the T-piece system except that one conduit is inside the other. An attractive system because the exhaust gases can be ducted to the exterior.

Lack c. a coaxial breathing circuit used in anesthesia. Fresh gas flows up the outer sleeve, expired air and gas pass down the inner tube.

Magill c. a breathing circuit used in anesthesia. It includes a reservoir bag, wide-bore corrugated tubing and a spring-loaded expiratory valve. It is a semiclosed system in which rebreathing is prevented by having the gas flow rate from the cylinders slightly in excess of the patient's minute respiratory volume.

Mapleson c. an anesthetic breathing circuit in which the fresh gas flow is used to remove exhaled carbon dioxide. The Mapleson A circuit is called also the Magill circuit (above), Mapleson D circuit is called also the Bain circuit (above), and the **Jackson Rees T-piece** is the Mapleson F circuit.

non-rebreathing c. anesthetic breathing circuits in which exhaled gases are discharged to the environment and do not pass back to the patient. See Magill circuit (above).

parallel c. a variation on the Bain and Lack circuits (above) in which there are two tubes running side by side instead of one inside the other.

rebreathing c. anesthetic breathing circuits in which the exhaled gas is recirculated to the patient with CO_2 removed.

T-piece c. a breathing circuit used in anesthesia. Shaped like a T. The exhaled gases are passed into a reservoir tube from which they are pushed by fresh gas from the anesthetic machine as it passes from the stem to the other arm of the T during expiration. There are no valves.

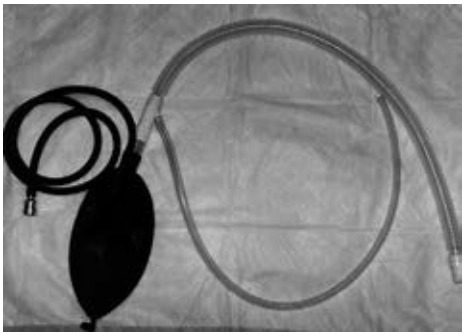
Universal F-c. a breathing circuit shaped like an F. A portion of the circuit is coaxial while the limbs allow connection to unidirectional valves. Operation is similar to a circle circuit.

X-ray c. a complete path along which an electrical current flows. In its simplest form it includes a source of electrons (power source), a load or resistance, and a conductor.

circulation [sur"ku-la'shən] movement in a regular or circuitous course, returning to the point of origin, as the circulation of the blood through the heart and blood vessels. See also **circulatory** system.

antegrade c. circulation in the normal direction of flow.

artificial c. is maintained in cardiopulmonary arrest by cardiac compression.



C-51: Bain coaxial system: Fresh gas enters via the clear tube; exhaust gas leaves via the reservoir bag and black hose.
From Holmstrom SE, Veterinary Dentistry for the Technician and Office Staff. Saunders, 2000.

collateral c. circulation carried on through secondary channels after obstruction of the principal channel supplying the part. See also collateral **vessel**.
coronary c. that within the coronary vessels, which supply the muscle of the heart.
cutaneous c. cutaneous vessels are innervated by sympathetic adrenergic vasoconstrictor fibers; vasodilation is an important mechanism for losing heat after the body has been warmed.
enterohepatic c. the cycle in which bile salts and other substances excreted by the liver in the bile are absorbed by the intestinal mucosa and returned to the liver via the portal circulation.
extracorporeal c. circulation of blood outside the body, as through a **hemodialyzer** or an **extracorporeal** circulatory support unit.
fetal c. circulation of blood through the body of the fetus and to and from the placenta through the umbilical cord. See also **fetal** circulation.
hepatic c. includes the hepatic arterial blood supply and the supply from the portal vein; drainage is via the hepatic veins to the caudal vena cava.
lymph c. see **lymph**.
maternal c. the circulation of the dam during pregnancy, including especially that of the uterus.
micro-c. see **microcirculation**.
neonatal c. circulation in the newborn immediately after birth; the umbilical vessels contract forcing blood into the fetal veins; the foramen ovale closes, the ductus arteriosus narrows and eventually closes at day 1 to 2 after birth.
ocular c. consists of the uveal and retinal blood vessels supported by the aqueous humor and vitreous body.
placental c. consists of the umbilical arteries, the vessels of the placenta proper and the umbilical veins; approximates the fetal corporeal circulation in volume.
portal c. a general term denoting the circulation of blood through larger vessels from the capillaries of one organ to those of another; applied especially to the passage of blood from the gastrointestinal tract, pancreas and spleen through the portal vein to the liver.
pulmonary c. the flow of blood from the right ventricle through the pulmonary artery to the lungs, where carbon dioxide is exchanged for oxygen, and back through the pulmonary vein to the left atrium. See also **pulmonary** circulation.
splenic c. flow of blood through the splenic artery and arterioles to either the capillaries, e.g. white pulp, or the highly permeable sinuses of the red pulp. Splenic venous blood drains into the portal vein and passes through the liver before re-entering the general circulation.
systemic c. the flow of blood from the left ventricle through the aorta, carrying oxygen and nutrient material to all the tissues of the body, and returning through the superior and inferior venae cavae to the right atrium.
c. time the time required for blood to flow between two given points. It is determined by injecting a substance into a vein and then measuring the time required for it to reach a specific site.

circulatory [*sur'ku-lə-tor"e*] pertaining to circulation.
c. arrest see cardiac **arrest**.
c. collapse **shock**; circulatory insufficiency without congestive heart failure.
c. failure includes cardiac or central circulatory failure and peripheral circulatory failure. Although the mechanisms, causes and clinical syndromes are different the pathogenesis is the same, the circulatory system fails to maintain the supply of oxygen and other nutrients to the tissues and to remove the carbon dioxide and other metabolites from them. The failure may be hypovolemic, distributive.
c. response changes in the cardiac and vascular functions in response to such factors as emotional stress, physical exercise, temperature change.
c. shock see **shock**.
c. support see **extracorporeal** circulation.
c. system the major system concerned with the movement of blood and lymph; it consists of the heart and blood vessels. The circulatory system transports to the tissues and organs of the body the oxygen, nutritive substances, immune substances, hormones and chemicals necessary for normal function and activities; it also carries away waste products and carbon dioxide. It helps to regulate body temperature and helps maintain normal water and electrolyte balance. The rate of blood flow through the vessels depends upon several factors: force of the heartbeat, rate of the heartbeat, venous return and control of the arterioles and capillaries by chemical, neural and thermal stimuli.

circulus [*sur'ku-ləs*] see **circle**.
c. arteriosus cerebri the ring of arteries which serves as the major source of blood supply to the brain; a circle around the stalk of the pituitary gland ventral to thalamus; previously called circle of Willis. See Table 9.

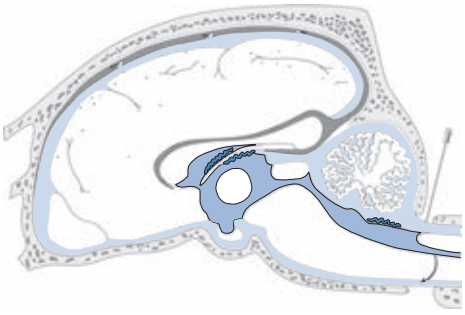
circum- word element. [L.] *around*.
circumanal gland [*sur"kəm-a'nəl*] sebaceous glands in the skin around the anus of dogs and other carnivores. See **perianal** gland.
circumcise [*sur'kəm-sīz*] to perform circumcision. See also preputial **prolapse**.
circumcision [*sur"kəm-sizh'ən*] surgical removal of part of the prepuce. Performed only to repair a prolapse of the prepuce, encountered in all species but especially in *Bos indicus* cattle. Called also posthioplasty.
circumclusion [*sur"kəm-kloo'zhən*] compression of an artery by a wire and pin.
circumduction [*sur"kəm-duk'shən*] circular movement of a limb or of the eye.
circumflex [*sur'kəm-fleks*] curved like a bow.
circumscribed [*sur'kəm-skrībd"*] bounded or limited; confined to a limited space.
circumvallate [*sur"kəm-val'āt*] surrounded by a ridge or trench, as the vallate (circumvallate) papillae.

Circus see **harrier**.
Cirneco dell'Etna a small (17–26 lb) Italian hound with slender build and a fine, short tan coat. The ears are large and erect and the tail long and tapered.
cirrhosis [*sĭ-ro'sis*] chronic liver disease characterized by atrophy and fibrosis combined with focal attempts at regeneration that produce nodules of various sizes in a matrix of scar tissue. It results in marked remodeling of gross and microscopic hepatic structure. Usually there is also enough fatty change in surviving hepatocytes to impart some pallor (*kirrhos* [Gr.] 'tawny yellow'). Can be caused by nearly any agent capable of causing chronic liver disease.
cardiac c. fibrosis of the liver resulting from the anoxia and centrilobular (periacinar) necrosis associated with the passive congestion of congestive heart failure. There is no nodular degeneration, however, so this is an inappropriate term for this condition.

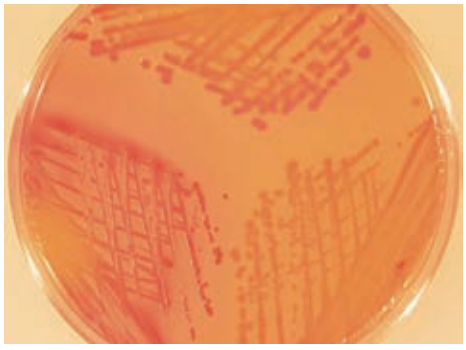
C-52: Macronodular cirrhosis of the liver in a dog.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

VetBooks.ir

cirrus [sər'əs] coarse hairs, longer than those in the normal coat and less coarse than tactile hairs.
c. capitis hairs of the forelock.
c. caudae hairs of the tail.
c. metacarpeus the tuft of long hairs around the fetlock of the forelimb of horses; also called the forelimb feather.
c. metatarseus the tuft of long hairs around the fetlock of the hindlimb of horses; also called the hindlimb feather.
Cirsium arvense plant member of the family Asteraceae; may cause nitrate–nitrite poisoning. Called also Canada thistle.
cis [L.] in organic chemistry, having certain atoms or radicals on the same side; in genetics, having the two mutant genes of a pseudoallele on the same chromosome; in molecular biology, two genes encoded in proximity on the same DNA molecule. Compare *trans*. See also *cis-trans* **test**.
c. acting in molecular biology, a sequence or regulatory protein that is part of the same DNA molecule as the gene of interest. See also **trans** acting.
c.-acting mutation in the lactose operon a mutation in the attenuator region that disrupts base pairing in the double-stranded portion of the termination hair pin and permits the RNA polymerase to 'read through' the termination signal.
c.-dominant mutation occurs in regulatory sequences that are recognized by DNA binding proteins that affect only genes encoded on the same operon.
***cis*-active** [sis] a DNA sequence that controls a gene on the same chromosome.
cis face the proximal (or forming or *cis*) face of the Golgi apparatus.
cisapride [sis'ə-prīd] a substituted benzamide, similar to metoclopramide, which stimulates gastrointestinal motility. Used as an antiemetic by promoting gastric emptying.
cisplatin, *cis*-platinum [sis'plat-in] a platinum-containing complex whose main mode of action as a chemotherapy drug resembles that of alkylating agents—production of cross-links between the two strands of DNA in the double helix so that DNA cannot be replicated and the cells cannot divide. Used in the treatment of osteosarcomas and transitional cell carcinomas in dogs. Contraindicated in cats.
Cissus quadrangularis African plant in family Vitaceae; contains unidentified toxin causing gastroenteritis.
cistern a closed space serving as a reservoir for lymph or other body fluids, especially one of the enlarged subarachnoid spaces containing cerebrospinal fluid.
cisterna [sis-tur'nə] pl. *cisternae;* cistern.
c. cerebellomedullaris, c. magna the enlarged subarachnoid space between the caudal surface of the cerebellum and the dorsal surface of the medulla oblongata.
c. chyli the dilated portion of the thoracic duct at its origin in the lumbar region. Called also receptaculum chyli.
c. magna see cisterna cerebellomedullaris (above).
cisternal [sis-tur'nəl] pertaining to a cistern, especially the cisterna cerebellomedullaris.
c. puncture puncture of the cisterna cerebellomedullaris (magna) with a hollow needle inserted through the aperture between the occipital crest and the anterior border of the atlas. A sample of CSF may be collected, contrast medium injected or pressure measured. See also **spinal** puncture.
c. space a channel between opposing layers of a highly convoluted single membrane in the endoplasmic reticulum of all cells.
c. tap see cisternal puncture (above).
cisternography [sis"tər-nog'rə-fe] radiography of the basal cistern of the brain after subarachnoid injection of a contrast medium.
cistron [sis'tron] a DNA segment corresponding to one polypeptide chain plus the start-and-stop codon. The smallest unit of genetic material that must be intact to function as a transmitter of genetic information; as traditionally construed, approximately synonymous with gene.
citalopram [si-tal'o-pram] a selective serotonin reuptake inhibitor (SSRI) used in humans in the treatment of obsessive-compulsive disorders. Has been used to treat canine acral lick dermatitis.
citrate [sit'rāt] any salt of citric acid. Citrate is the first intermediate of the citric acid cycle (tricarboxylic acid (TCA) cycle). It also plays an important role in fatty acid synthesis which takes place in the cytoplasm. It is an allosteric activator of the pathway and it also acts to transport the substrate, acetyl-CoA, out of the mitochondria into the cytosol. The movement is assisted by two enzymes, citrate-condensing enzyme, which catalyzes the condensation of the acetyl unit with oxaloacetate in the mitochondria, and citrate-cleavage enzyme (citrate lyase), which catalyzes the release of the acetyl radical in the cytoplasm of the cell. Ruminants lack citrate lyase, as acetate derived from the rumen is converted to acetyl CoA outside mitochondria in these species.
c. cleavage enzyme important in fatty acid synthesis from glucose; catalyzes the split of citrate to acetyl CoA and oxaloacetate. Called also citrate lyase or ATP-citrate lyase.
c. synthase first enzyme of the TCA cycle catalyzing the formation of citrate from acetyl CoA and oxaloacetate.
citreoviridin [sĭ"tre-o-vir'ĭ-din] the metabolite of *Penicillium citreoviride* thought to be the cause of yellow rice poisoning, manifested in humans and experimental animals by respiratory and circulatory failure, paralysis, convulsions and death. Identical to beriberi, originally considered to be a thiamine nutritional deficiency.
citric acid [sit'rik] a tricarboxylic acid occurring in citrus fruits and acting as an antiscorbutic and diuretic. It functions as an anticoagulant in the blood preservatives, acid citrate dextrose and citrate phosphate dextrose. See also **citrate**.
c. a. cycle see **tricarboxylic acid cycle**.
citrinin [sit'rĭ-nin] mycotoxin produced by the fungi *Penicillium viridicatum*, *P. palitans* and *Aspergillus ochraceus*; causes tremor, recumbency, convulsions, nephrosis.
Citrobacter [sit'ro-bak"tər] a genus of gram-negative, lactose fermenting rods, members of the Enterobacteriaceae. Found in water, feces and urine. Opportunistic pathogens causing mastitis and septicemia.
C. freundii an occasional cause of septicemia in dogs and have been identified as the cause of **septicemic** cutaneous ulcerative disease of turtles. The disease is characterized by cutaneous hemorrhage and ulceration, loss of claws and digits, flaccidity and paralysis.
C. rodentium the cause of **transmissible** murine colonic hyperplasia.
citronella oil [sit"ron-el'ə] a volatile oil obtained from the grass *Cymbopogon nardus* or *C. winterianus*. Used as an insect repellent.
citrovorum factor see **folinic acid**.
citrulline [sit'rə-lēn] an alpha amino acid involved in the urea cycle.
c. phosphorylase see ornithine carbamoyl **transferase**.
citrullinemia [sit-rul"in-e'me-ə] a disease caused by a defect of urea metabolism resulting in a marked low concentration of citrulline. Caused by an inherited deficiency of arginosuccinate synthetase; reported in dogs and cattle. In cattle, it is characterized clinically



C-53: Cisternal puncture for spinal fluid collection. From Silverstein D, Small Animal Critical Care Medicine. Saunders, 2009.



C-54: Lactose-fermenting colonies on MacConkey agar. *Klebsiella*, *Enterobacter*, and *Citrobacter* spp. From Songer JG, Veterinary Microbiology: Bacterial and Fungal Agents of Animal Disease. Saunders, 2005.

by a sudden onset of depression, recumbency, opisthotonos and seizures in previously normal calves of up to 3 days of age.

citrullinuria [*sit-rul"in-u're-ə*] the presence in the urine of large amounts of citrulline, with increased concentrations also in both plasma and cerebrospinal fluid.

Citrullus [*sĭ-trul'əs*] genus of plants in family Cucurbitaceae; contains cucurbitacin, colocynthin, tetracyclic terpenes causing diarrhea; includes *C. colocynthis* (*C. vulgaris*), *C. lanatus*.

Citrus [*sit'rəs*] plant genus in the family Rutaceae; contains furanocoumarins and can cause primary photosensitization. Includes *C. aurantiifolia* (lime), *C. x limon* (lemon), *C. x bergamia* (bergamot).

citrus oil [*sit'rəs*] an extract of citrus peel; the source of **D-limonene** and **linalool**, topical insecticides. Some preparations are toxic for cats.

cittosis see **pica**.

Cittotaenia a tapeworm genus of the family Anoplocephalidae.

C. denticulata heavy infestations cause digestive disturbances, emaciation and some deaths in rabbits and hares.

Civatte body [*se-vaht'*] see **apoptotic body**, **colloidal** body.

civet arboreal carnivore in the family Viverridae, native to Africa, southern China and Southeast Asia. There are a number of species in different genera, but they are generally a small cat-like animal with short legs and a long muzzle; some have a spotted coat and claws that may be non-, semi-, or retractable. They have anal or perineal glands used for territorial marking, but also harvested for making perfumes (musk). The masked palm civet (*Paguma larvata*) gained notariety in 2003 when it was identified as a carrier of the coronavirus that was causing **severe acute respiratory syndrome** (SARS) in the human population.

c. cat a term used for any of several civets and for animals that are not civets, including in the USA the spotted skunk (*Spilogale* spp.) and the ring-tailed cat (*Bassariscus astutus*). Not a correct name for any of them.

CJD Creutzfeldt-Jakob disease.

CK creatine kinase.

Cl chemical symbol, *chlorine.*

cL centiliter.

Cl$^-$/HCO$_3^-$ exchanger transport of anions, particularly in erythrocytes by facilitated diffusion carried out by anion exchanger 1 (band-3 protein), catalyzing the exchange of bicarbonate anion from inside the cell for a chloride anion outside the cell.

CLAD canine **leukocyte** adhesion deficiency.

Cladophialophora a genus of dematiaceous (dark-walled) fungi.

C. bantiana previously *Cladosporium trichoides.* A cause of phaeohyphomycosis.

C. carrionii previously *Cladosporium carrionii*. A cause of hyphomycosis in animals.

Cladophora a genus of algae found in large numbers in the gills of fish dead of asphyxia.

cladosporiosis [*klad"o-spor"e-o'sis*] any infection with the fungus *Cladosporium* spp.

Cladosporium [*klad"o-spor'e-əm*] a genus of dematiaceous fungi.

C. carrionii see **Cladophialophora** *carrionii*.

C. herbarum causes black spot on meat in cold storage, growing at a temperature of 18°F (−8°C); spores are a common allergen.

C. trichoides see **Cladophialophora** *bantiana*.

Cladotaenia a genus of cestodes found in wild birds; larval stages in the livers of rodents.

clam digger's itch **schistosome** dermatitis.

clamp [*klamp*] a device for compressing a part or structure.

beam c. a scissors-like instrument originally used to pick up large blocks of ice. Consists of two inward pointing, sharp pointed hooks, pivoting around a pin at their middle, like scissors, and connected to each other at their blunt ends by a short chain. As beam hooks the points of the two blades are hooked into an overhead beam and a weight such as an animal's limb hung from the connecting chain. The animal's weight ensures that the clamp bites deeply.

silage c. a mass of ensilage held together at the sides between solid walls but open at the ends.

surgical c. a surgical instrument designed to compress a part, e.g. umbilicus.

vascular occluding c. used to completely or partially occlude the flow of blood in vessels.

C-55: Umbilical clamp on the umbilicus of a newborn foal.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

vulvar c. various designs are available but all have as their objective the physical prevention of a prolapse of the vagina or uterus.

Claoxylon australe plant member of the family Euphorbiaceae; may cause nitrate–nitrite poisoning.

clapotement [*klah-pawt-maw'*] [Fr.] a splashing sound, as in succussion.

Clara cell [*klah'rah*] nonciliated, secretory bronchiolar epithelial cells; function as stem cells for repair in the bronchioles and can divide into ciliated or nonciliated bronchiolar cells.

clarificant [*klar-if'ĭ-kənt*] a substance that clears a liquid of turbidity.

clarithromycin [*klə-rith"ro-mi'sin*] a macrolide antibiotic derived from erythromycin, with similar properties; active against atypical mycobacteria and used to treat mycobacteriosis in dogs and cats.

clasp-knife release sudden release from rigidity in a limb when passive flexion is attempted.

class [*klas*] 1. a group of similar objects or values selected as a part of a classification. 2. a taxonomic category subordinate to a phylum and superior to an order. 3. a group of variables all of which show a value falling between certain limits.

c. limits the highest and lowest values eligible to be included in a class when data are being classified or grouped.

c. mark the value selected to represent all of the values in a class. It may be the median or average value.

c. midpoint the average of the upper and lower limits of a class.

c. switching when a B lymphocyte changes over from producing one immunoglobulin class (isotype) to another.

classic hemophilia [*klas'ik*] see **hemophilia** A.

classical, classic [*klas'ĭ-kəl, klas'ik*] the first recognized form of the item; serving as a standard model or guide.

classical swine fever now the universally accepted name for hog cholera and different from African swine fever (ASF). A highly infectious disease of pigs caused by a pestivirus and characterized in its classical form by high fever, lassitude, purple discoloration of abdominal skin, conjunctivitis and nervous signs including circling, incoordination, tremor and convulsions. Most affected pigs die at 5–7 days with a characteristic petechiation under the kidney capsule—turkey egg kidney. There is a second form, characterized by nervous signs and caused by a strain of virus of lower virulence. Other syndromes caused by low virulence strains are

C-56: Atraumatic vascular clamps.
From Slatter D, Textbook of Small Animal Surgery, 3rd Edition. Saunders, 2002.

VetBooks.ir

reproductive inefficiency and congenital defects including myotonia congenita. Also known as congenital trembles. A disease notifiable to the OIE (see Table 22).

classification [*klas"ĭ-fĭ-ka'shən*] division of diagnoses, diseases, pathological findings, microbiological findings into categories or classes. See also **nomenclature**.

virus c. see Table 21.1.

classing [*klas'ing*] categorizing according to quality, usually relative to a prestated set of rules, e.g. wool classing, sheep classing, cow classing. In some breed stud books animals may have to pass specific tests to be admitted to a special register of superior animals.

bulk wool c. small amounts of wool from small flocks are mixed together in a wool store to make a useful sized lot, then classed lines.

sheep c. classifying sheep and drafting into classes on the basis of wool yield, wool quality and conformation. Carried out as a basis for making up mating groups or groups of sheep for sale when even lines are required by purchasers.

wool c. grading of the wool into even lines based on type, fiber diameter, yield after cleaning, and eventual commercial value.

clastic [*klas'tik*] 1. undergoing or causing division. 2. separable into parts.

clastogenic [*klas"to-jen'ik*] giving rise to or inducing disruption or breakages, as of chromosomes.

clathrate having the shape or appearance of a lattice; pertaining to clathrate compounds.

c. compounds inclusion complexes in which molecules of one type are trapped within cavities of the crystalline lattice of another substance.

clathrin [*klath'rin*] a highly conserved, fibrous protein, mol. wt 180 000, which forms a characteristic polyhedral coat on the surface of coated pits and coated vesicles.

Clathrocystis see ***Microcystis***.

claudication [*klaw'dĭ-ka'shən*] limping or lameness.

intermittent c. a complex of signs characterized by absence of pain or discomfort in a limb when at rest, the commencement of pain, tension and weakness after walking is begun, intensification of the condition until walking is impossible, and the disappearance of signs after the limb has been at rest. It is seen in occlusive arterial disease of the limbs, e.g. iliac thrombosis.

venous c. intermittent claudication caused by venous stasis.

claustrum [*claws'trəm*] pl. *claustra* [L.] the thin layer of gray matter lateral to the external capsule of the brain, separating it from the white matter of the insula.

Clavaria a genus of mushrooms in the Basidiomycetes class of fungi. Thought to be the cause of fatal poisoning in cattle manifested clinically by mucosal erosions, ocular lesions and abortion. Loss of hair and hooves and nervous signs are also attributed to them.

clavate [*kla'vāt*] club-shaped, as in the microconidia of *Microsporum nanum*.

Clavibacter toxicus now classified as *Rathayibacter toxicus*.

Claviceps [*klav'ĭ-seps*] the ergot fungi, members of the Ascomycetes class. Parasites of seedheads of grasses including cereal grains.

C. cinerea this ergot causes the same poisoning syndrome as paspalum ergot. See **paspalum ergot**.

C. fusiformis this ergot grows on bulrush millet (*Pennisetum typhoides*) and causes agalactia in sows fed on it. Called also millet ergot.

C. paspali see **paspalum ergot** and **paspalum staggers**.

C. purpurea the cause of rye **ergot**[1], but also the common ergot capable of infecting most grass species.

claviceptaceous emanating from or pertaining to *Claviceps* spp. fungi.

Clavicipitaceae [*klav"ĭ-sip"ĭ-ta'se-e*] a family of fungi to which *Claviceps* spp. belong. Members have long tubular asci and thread-like ascospores.

clavicipitaceous belonging to the *Clavicipitaceae* family of fungi.

clavicle [*klav'ĭ-kəl*] the collar bone; reduced or absent from many domestic animals but present in animals that can grasp with their forelimbs such as the cat, many rodents, and primates. See also **clavicular intersection**.

clavicular intersection [*klə-vik'u-lər*] a vestigial clavicle. A small tendinous band embedded in the brachiocephalic muscle near the point of the shoulder in animals such as the horse and dog.

clavulanic acid, clavulanate a β-lactam product of *Streptomyces* spp. It binds irreversibly and inhibits β-lactamase produced by many organisms. Used commonly in combination with **amoxicillin**.

clavus [*kla'vəs*] a corn or callus.

claw [*klaw*] 1. integumentary appendages at the extremities of the digits of carnivores and some other animals. Because of their sharp ends they are effective in their role of holding and tearing prey. They are sheathed by the action of elastic ligaments unless the flexor muscles are tensed, but can be actively retracted in Felidae, except the cheetah. 2. an alternative name for a digit in cloven-footed animals such as cattle, sheep, goats and pigs. 3. metal manifold in a milking machine cluster which connects the teat cups and the milk line; carries the air admission hole which allows the controlled entry of air from the environment to the vacuum unit of the milking machine.

c. amputation a surgical procedure that removes one digit of cattle, usually as a salvage procedure in septic pedal arthritis.

curved c. see **corkscrew** claw.

dew c. see **dewclaw**.

c. fold the skin fold covering the base of the nail in dogs and cats.

c. fracture fractures of the third phalanx in cattle occur uncommonly, usually due to trauma, nutritional disease and penetrating wounds.

ingrown c. likely to develop in Felidae denied the opportunity to rake with their claws, and in Canidae, especially dewclaws.

overgrown c. common in old inactive birds. Causes difficulty in moving.

clay pigeon target used at gun clubs. The coal tar pitch used as a binder causes severe hepatic necrosis. See also **coal tar pitch**.

clay pipestem fibrosis fibrosis of portal triads, sometimes with mineralization, associated with chronic parasitic irritation by *Schistosoma* spp. or *Fasciola hepatica* in the portal triads.

Clayia theresae guinea fowl lice.

Cl_e elimination clearance.

clean pasture pasture that has been rested from grazing by the same, or parasitologically similar, species for a long, but variable period, the time depending on the parasite concerned and the climate. The pasture rarely if ever becomes completely clean, but it should be relatively so in terms of being a source of infection.

cleaning 1. a major part of sanitation procedures in veterinary preventive medicine because of the heavy contamination of animal accommodation by feces and urine, and in abattoirs because of the rapid accumulation of fat. High pressure cleaning with hot water and detergents is the only practicable procedure but brings its own attendant problems of disposal of effluent. 2. colloquial term for placenta of mare or cow.

cleanings see **placenta**.

clear canary [*klēr*] one with no dark colored feathering seen on the surface as the bird stands normally on its perch. Regarded as a desirable trait in classifying canary features.

clear cells [*klēr*] cells with vacuolated cytoplasm and only the basal nucleus and cytoplasmic outline visible which are found in renal carcinoma.

clear layer [*klēr*] **stratum** lucidum.

clearance (Cl) [*klēr'əns*] the act of clearing; in pharmacokinetics, the complete and irreversible elimination of a drug from the body; expressed as the volume of blood cleared of drug per unit time.

blood-urea c. the volume of the blood cleared of urea per minute by renal elimination.

Bromsulphalein c. see **sulfobromophthalein** clearance test.

creatinine c. see **creatinine**.

inulin c. an expression of the renal efficiency in eliminating inulin from the blood, a measure of glomerular function.

phenolsulfonphthalein (PSP) c. test after an injection of the dye, urine samples are collected at timed intervals and the amount of excreted dye is determined and plotted against time as an indicator of renal function, particularly renal blood flow, tubular excretion, and to some extent glomerular filtration.

c. time the time required for a drug to be eliminated after administration. Eliminated means to the point where it can no longer be detected. Of most importance in avoiding drug residues in food animals and charges of doping in sports animals.

urea c. see blood-urea clearance (above).

free water c. the capacity to excrete urine of lower osmolality than plasma, thus avoiding depletion of salt reserves.

VetBooks.ir

clearing [*klēr'ing*] clarification.
c. agent added to skin scrapings to digest keratin and permit better visualization of ectoparasites or fungal hyphae and spores. Potassium hydroxide is used most commonly.
c. time in radiographic processing is the time required for the fixative to dissolve away the 'milkiness' of developed halides on the film.
cleat, cleave [*klēt, klēv*] claw of any cloven-footed animal.
cleavage [*kle'vəj*] 1. division into distinct parts, e.g. the double helix. 2. the early successive splitting of a fertilized ovum into smaller cells (blastomeres) by mitosis. See also **holoblastic**, **meroblastic**.
c. line tension line.
c. site the places on a strand of DNA where the restriction enzyme cleaves the DNA.
cleave[1] [*klēv*] in molecular biology, to break bonds in DNA or protein.
cleave[2] see **cleat**.
cleft [*kleft*] a fissure or longitudinal opening, especially one occurring during embryonic development.
branchial c's the slit-like openings in the gills of fish between the branchial arches; also, the homologous branchial grooves between the branchial arches of mammalian embryos.
c. chin occasionally seen in cattle particularly Herefords. There is a notch at the mandibular symphysis and the central incisors may be directed centrally.
frog c. the sagittal cleft in the frog of the horse's foot. Called also *sulcus cunealis centralis*.
glottic c. entrance to the larynx; called also rima glottidis.
infundibular c. common opening of the auditory tubes in birds.
interdigital c. separates the hooves of ruminants.
c. lip a defect in fusion between the central prolabium and one or both lateral mesodermal masses. Most common in dogs of the brachycephalic breeds and Persian and Siamese cats; may be inherited or caused by environmental factors. Also, known to be inherited in some breeds of cattle. Often combined with defects in the palate. Supplementation with folic acid has been shown to reduce, but not eliminate, the risks of cleft palate in some dog breeds. Called also primary cleft palate, harelip, cheiloschisis. Congenital fissure, or split, may involve the hard or soft palate. A common cause of nasal regurgitation in neonates, especially foals. Called also secondary cleft palate, palatoschisis.
c. palate see cleft lip (above). Also occurs commonly as a defect without cleft lip in diseases manifest with arthrogryposis, both hereditary as in Charolais cattle and with lupine-induced crooked calf, where it may occur with or without arthrogryposis. In the latter, teratogenic alkaloids reduce fetal movement and, if acting on the bovine fetus between 40 and 50 days gestational age, result in persistent head flexion keeping the tongue between closing palate shelves which results in a cleft palate.
Rathke c. see **Rathke's pouch**.
c. tongue the anterior portion is divided by a longitudinal cleft.
Cleiodiscus a genus of the family Dactylogyridae of monogenetic flukes which infest the gills of fish.
clemastine fumarate [*klem'əs-tēn*] a histamine H_1-receptor antagonist used in the treatment of allergic disorders.

C-57: Cleft lip (harelip) in a calf.
From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

C-58: Cleft palate in a newborn puppy.

Clematis [*klem'ə-tis*] a genus of the plant family Ranunculaceae; contains toxin protoanemonin causing anorexia, thirst, violent diarrhea, convulsions when ingested, lacrimation, rhinorrhea when inhaled, vesication when rubbed on; includes *C. aristata*, *C. glycinoides*, *C. microphylla*, *C. vitalba* (travellers' joy).
clenbuterol [*klen-bu'tər-ol*] a long-acting, β_2-adrenergic agonist. Causes bronchodilatation, decreases bronchial secretion and impedes uterine contraction. Used in the treatment of equine COPD. Has been used illegally as a non-steroidal anabolic in show animals and some states require testing of animals at fairs and livestock shows.
clenches the turned down portions of the nails used to keep horseshoes in place. Where the nails come out of the hoof wall they are twisted off and turned down as clenches to prevent the nails from working out. Called also clinches.
Cleome serrulata toxic plant in the family Capparaceae; may cause nitrate–nitrite poisoning; called also Rocky Mountain bee plant.
Clethra arborea toxic plant in family Clethraceae; contains grayanotoxin (andromedotoxin); causes diarrhea and sudden death. Called also lily-of-the valley tree.
Cleveland Bay English coach horse used for driving. Bay the only color, 16–16.2 hands high.
click–murmur syndrome mitral valve prolapse.
clicking [*klik'ing*] the sound made by a horse when the shoe of the hindfoot hits the shoe of the front foot while it is trotting. Called also forging.
Clidemia hirta plant in family Melatostomataceae; contains toxic hydrolysable tannins; causes hepatitis, nephrosis and weight loss. Called also harendong.
clidinium bromide [*klī-din'e-əm*] a quaternary ammomium compound with anticholinergic activity. Used in the treatment of irritable bowel syndrome in dogs.
client the animal's owner, owner's agent or other person responsible for the animal and whose animal(s) the veterinarian in question has had in his/her care during a finite period. The court usually operates on the basis that one or two years is sufficient to establish a continuing relationship.
c. files the clinical and financial and other records that a veterinarian maintains as a permanent history of his/her association with each of his/her clients and their animals.
c. rights a client is entitled to receive service from his/her regular veterinarian unless he/she has been advised that the client/doctor relationship has been terminated, that is assuming that the client is a *bona fide* one. A client is also entitled to be served or be advised that service is not available at the usual address but a comparable service is available at another practice and that arrangements have been made with that practice. As to quality of service, the client can expect to receive service of the quality that would be provided by any other veterinarian—the 'reasonable man' policy.
c. target what the owner is trying to achieve by consulting the veterinarian.
climate [*klī'mət*] the total environmental effect of ambient temperature, barometric pressure, radiation, oxygen concentration, water precipitation, humidity, wind speed, wind direction and sunlight hours or cloud cover. Called also weather. See also **macroclimate**.

VetBooks.ir

c. envelope the range of climatic variation in which a species can persist in the face of competitors, predators and disease.

ground-level c. the microclimate at the ground surface; critical to the welfare of insect intermediate stages, helminth larvae and fungal spores.

c. impact includes overall statements of total effect of climate such as **wind chill** index, **temperature–humidity index**, **effective** temperature.

climatic pertaining to or emanating from climate.

c. stress deleterious physical effects of climate on animals.

climatogram the elements of the climate, e.g. temperature, rainfall, are plotted against each other graphically. Establishes the type of climate such as winter rainfall. See also **bioclimatogram**.

climatological sheath an enclosed climatic area, e.g. a calf barn which is protected against the variations in the external climate. May be man-made or naturally occurring.

climatotherapy [*kli"mə-to-ther'ə-pe*] treatment of disease by means of a favorable climate, e.g. moving horses with anhidrosis from tropical climates, cattle with altitude sickness to lower altitudes.

climax [*kli'maks*] the period of greatest intensity, as in the course of a disease.

climazolam a potent benzodiazapine used as an anxiolytic, sedative and immobilizing agent.

clinches see **clenches**.

clindamycin [*klin"də-mi'sin*] a semisynthetic bacteriostatic antibiotic derivative of lincomycin with improved activity against anaerobic bacteria. It also has some antiprotozoal activity.

c.-associated colitis occurs in rabbits and hamsters; produced experimentally in horses and characterized by the presence of *Clostridium cadaveris*.

clinic [*klin'ik*] 1. historically—a clinical lecture; examination of patients before a class of students; instruction at the bedside. 2. classically—an establishment where patients are admitted for special study and treatment by a group of physicians practicing medicine together. 3. realistically—is used in most veterinary contexts to describe an establishment conducted by a veterinarian at which patients are examined and treated as outpatients, in contrast to a hospital where patients are admitted for treatment.

clinical [*klin'ĭ-kəl*] 1. pertaining to a clinic or to the bedside and therefore carried out on the living animal. 2. pertaining to or founded on actual observation and treatment of patients, as distinguished from theoretical or experimental. 3. productive of clinical signs; thus clinical disease as distinct from subclinical.

c. assessment an overall statement on the patient's state of health.

c. data storage storage of clinical data about patients; may be paper or computerized.

c. decision analysis the application of clinical, epidemiological and other data to influence outome probability and alternative decisions in such areas as surgery and pharmaceutical treatment.

c. examination an examination of a patient including taking the history, physical examination by palpation, auscultation and percussion, clinicopathological examination and examination of the environment.

c. judgment exerted while the patient is still alive; the critical decisions made on the basis of scientific observations but with the added skill provided by long experience of similar cases. To this must be added an innate ability to make balanced judgments based not only on the state of the animal and its predictable future but also on some consideration for the patient's overall well-being and the client's financial status and degree of psychological, or in some cases actual, dependence on the patient.

c. nomenclature a catalog of the names given to diseases and problems of animals; usually alphabetical, may be numerical. Should contain keywords (including key diagnoses and key signs) and synonyms with each list related to the other. Because of the need to sort banks of clinical data into categories it is essential that recording be accurate and that the catalog be limited—a policy of limited vocabulary.

c. pathologist a veterinarian skilled in clinical pathology.

c. pathology the examination of diseased tissues, fluids or other materials from a living patient, using all of the techniques available including chemistry, hematology, enzymology, cytology, microbiology, parasitology, protozoology, immunology and histopathology.

c. pharmacology the study of the actions and metabolism of drugs in living animals.

c. policies professional rules of thumb which are used to decide on the management of a case when there are no research results on which to base decisions. They are policies originated by the senior members of the profession, especially those in academic posts.

c. propedeutics preliminary training in the clinical sciences; the introduction to veterinary medicine, surgery and animal reproduction.

c. qualifiers adjectives used to qualify diagnoses using terms from within a group of standard variables, e.g. chronic or acute, ovine or bovine, benign or malignant, clinical or latent.

c. record the record, made at the time, of clinical examinations, treatments and advice given, complete with dates, names of individuals concerned and drugs or tests used. The record is desirable for the purpose of evaluating the patient's progress, and essential from the legal point of view if arguments should arise about competence or justness of charges made.

c. signs the abnormalities of structure or function observed in the patient by the veterinarian or the client. These are customarily graded according to severity, e.g. severe, moderate, mild, and according to speed of onset and progress, e.g. peracute, acute, subacute, chronic, intermittent.

c. vocabulary a catalog of terms approved for use in the description of clinical signs and problems, and for the definition of diagnoses and diseases.

clinically in terms used to express the results of a clinical examination.

c. dead as far as can be ascertained by a clinical examination the patient is dead. There is no pulse, no respiratory movement and no corneal reflex.

c. normal the patient is normal in all clinical parameters.

clinician [*klĭ-nish'ən*] a veterinarian skilled in working at first hand with sick animals in clinical surroundings, which may be in a closed environment such as a hospital, or in a field environment. May be medically, surgically or reproductively inclined.

clinicopathological pertaining to clinical pathology, i.e. to both signs of disease and its pathology.

clinocephaly [*kli"no-sef'ə-le*] congenital flatness or concavity of the vertex of the head.

clinodactyly [*kli"no-dak'tə-le*] permanent deviation or deflection of one or more digits.

Clinostomum complanatum*, *C. marginatum flukes in the family Clinostomidae. Parasitize fauces of piscivorous birds. The first hosts are snails, the second are fish which infest the birds when they are eaten.

clioquinol [*kli"o-kwin'ol*] a topical antifungal and antiprotozoal agent. Called also iodochlorhydroxyquin.

clioxanide an anthelmintic used specifically as a flukicide. Because of its large dose size and greater variability in efficacy depending on whether the dose goes into the rumen or not, it has been largely superseded.

CLIP corticotropin-like intermediary peptide.

clip [*klip*] 1. a metallic device for approximating the edges of a wound or for the prevention of bleeding from small individual blood vessels. 2. the small, upturned flange on the front of the front shoe, on the sides of the hind shoe of a set of horseshoes, which helps to prevent lateral movement of the attached shoe. 3. to remove the wool of a sheep by cutting with shears, usually hand shears. 4. the total wool produced by a flock or a farm at one shearing.

c. suture see **Michel** clip.

Versa c. a hemostatic clip or staple applied with a special forceps.

clipping [*klip'ing*] cutting of the hair or wool coat with clippers which may be equipped with blades of different sizes, depending on the purpose and degree of hair removal required. Fine-toothed blades are used in surgical preparation of the skin; coarse blades give various cosmetic results.

c. machine usually refers to electric clippers.

clition [*klit'e-on*] the midpoint of the anterior border of the clivus.

Clitocybe [*kli-tos'ĭ-be*] genus of toxic Basidiomycete mushrooms; contain an unidentified toxin; causes diarrhea, vomiting. Includes *C. discolor*, *C. rivulosa*.

clitoral [*klĭ-tor'əl*] pertaining to or emanating from the clitoris.

c. hypertrophy may occur in Cushing's syndrome as a result of increased androgens produced by a hyperplastic or neoplastic adrenal cortex.

c. sinus three to five of these cavities invade the glans of the clitoris in the mare; are the site of infection in contagious metritis in this species and require the excision of the clitoris for importation into some countries.

c. sinusectomy ablation of the clitoral sinus, e.g. of mares as a treatment for contagious equine metritis.

clitorectomy [klit"ə-rek'tə-me] clitoridectomy.

clitoridectomy [klit"ə-rĭ-dek'tə-me] excision of the clitoris. Used to control contagious equine metritis.

clitoriditis [klit"ə-rĭ-di'tis] clitoritis.

clitoridotomy [klit"ə-rĭ-dot'ə-me] incision of the clitoris.

clitorimegaly [klit"ə-rĭ-meg'ə-le] enlargement of the clitoris.

clitoris [klit'ə-ris] the small, elongated, erectile body in the female; it consists of a body (corpus clitoridis) composed of fused corpora cavernosa that bear a superficial glans clitoridis that occupies the clitoral fossa in the ventral commissure of the vulva; it is attached to the ischial arch by two crura. It is homologous with the penis in the male.

enlarged c. as seen in masculinized patients.

clitorism [kli'tə-riz"əm] 1. hypertrophy of the clitoris. 2. persistent erection of the clitoris.

clitoritis [klit"ə-ri'tis] inflammation of the clitoris.

clitoromegaly [klit"ə-ro-meg'ə-le] clitorimegaly.

clitoroplasty [klit'ə-ro-plas"te] plastic surgery of the clitoris.

CLIVE Computer-aided Learning in Veterinary Education. A consortium of six veterinary schools in the United Kingdom providing computer based learning in veterinary undergraduate courses.

Clivia miniata African plant in the family Liliaceae; the leaves and rhizomes of the plant contain toxic isoquinoline alkaloids including lycorine.

clivus [kli'vəs] pl. *clivi* [L.] a sloping bony surface in the posterior cranial fossa made up of part of the basisphenoid and basal part of the occipital bone; it slopes forwards and upwards from the foramen magnum to the dorsum sellae.

CLL chronic lymphocytic leukemia.

cloaca [klo-a'kə] pl. *cloacae* [L.] 1. a common passage for fecal, urinary and reproductive discharge in most lower vertebrates. See also **coprodeum**, **proctodeum**, and **urodeum**. 2. the terminal end of the hindgut before division into rectum, bladder and genital primordia in mammalian embryos. 3. an opening in the involucrum of a necrosed bone.

avian c. in birds the cloaca is divided into three poorly defined compartments: a coprodeum or a continuation of the rectum, a urodeum into which the urogenital ducts open (in the female the left genital duct is the oviduct) and the proctodeum which carries the cloacal bursa and the proctodeal glands.

common c. the urorectal septum fails to develop; defecation and urination share a common cavity. Seen in Manx cat.

cloacal [klo-a'kəl] emanating from or pertaining to cloaca.

c. kiss the contact which occurs during insemination in birds when the vent of the female is everted exposing the cloacal mucosa against which the phallus of the male is pressed.

c. membrane caudal boundary of the cloaca; membranous in the embryo, ruptured during organogenesis.

c. prolapse occurs secondary to chronic straining in egg-laying or abdominal masses.

cloacitis [klo"ə-si'tis] inflammation of the cloaca.

cloacogenic [klo"ə-ko-jen'ik] originating from the cloaca or from persisting cloacal remnants; said of a group of rare transitional-cell nonkeratinizing epidermoid anal cancers.

cloacolithiasis [klo"ə-ko-lĭ-thi'ə-sis] occur in birds and reptiles; may result from previous egg binding, malnutrition, dehydration (reptiles) or infectious causes.

cloacopexy surgical treatment for chronically prolapsed cloaca. The repositioned cloaca is fixed to the last rib or sternum so it can form adhesions.

clofazimine [klo-faz'ĭ-mēn] a human antileprosy drug used in the treatment of feline leprosy.

clofibrate [klo-fi'brāt] an antihyperlipidemic drug.

cloisonne kidney a nonclinical condition of the kidney in goats in which the cortices are brown or black due to ferritin and hemosiderin deposits in the basement membranes of tubular epithelium.

clomiphene citrate [klo'mĭ-fēn] a selective estrogen receptor modulator that blocks estrogen receptors in the pituitary and hypothalamus and stimulates ovulation.

clomipramine [klo-mip'rə-mēn] a tricyclic antidepressant that inhibits neuronal reuptake of serotonin and norepinephrine. Used in the treatment of behavioural disorders in dogs and cats.

clonal [klo'nəl] referring to a clone.

c. expansion occurs, for example, when antigen specific B cells, when Th lymphocyte help, are triggered to proliferate.

clonal selection theory a onetime theory now accepted as an established part of immunological dogma. Each lymphocyte during its development is committed to respond to one antigenic determinant. Accordingly each lymphocyte has a single type of antigen-specific receptor on its surface. Following contact with antigen, a single lymphocyte expands to form a clone of cells with the identical specificity.

clonality [klo-nal'ĭ-te] the ability to form clones.

clonazepam [klo-naz'ə-pam] a benzodiazepine derivative used as an anticonvulsant in dogs and cats.

clone [klōn] 1. the genetically identical or closely similar progeny produced by the natural or artificial asexual reproduction of a single organism, cell or gene, e.g. plant cuttings, a cell culture descended from a single cell, or genes reproduced by recombinant DNA technology. 2. to establish or produce such a line of progeny.

c. bank see **gene** bank.

c. site the site on a cloning vector engineered to permit ready insertion of DNA segment of interest.

clonic [klon'ik] pertaining to or characterized by clonus, e.g. clonic seizures.

c.–tonic seizures a seizure in which there are clonic and tonic phases with jerking and flexing of muscles alternating with relaxation.

clonicity [klo-nis'ĭ-te] the condition of being clonic.

clonicotonic [klon"ĭ-ko-ton'ik] both clonic and tonic.

clonidine [klo'nĭ-dēn] a centrally acting, α-adrenergic, antihypertensive agent; known to stimulate growth hormone release in dogs.

c. stimulation test used in the diagnosis of pituitary dwarfism. Administration of clonidine causes a marked increase in blood concentrations of growth hormone in normal dogs.

c. suppression test used in the diagnosis of pheochromocytoma in humans. Normally, clonidine suppresses the release of catecholamines, but it does not have this effect on tumor function.

cloning [klōn'ing] creating an exact copy of some biological entity (a gene, organism or cell). In domestic animal reproduction, a laboratory process of reconstruction of an embryo from an embryonic or somatic cell (somatic cell nuclear transfer). See also **recombinant** DNA technology.

directional c. the insertion of a segment of foreign DNA which has a defined polarity, e.g. different restriction enzyme sites at each end, into a plasmid vector.

clonism [klon'iz-əm] a succession of clonic spasms.

clonogenic [klo"no-jen'ik] giving rise to a clone of cells.

clonograph [klon'o-graf] an instrument for recording spasmodic movements of parts and tendon reflexes.

clonorchiasis [klo"nor-ki'ə-sis] see **opisthorchiasis**.

Clonorchis [klo-nor'kis] a genus of liver flukes in the family Opisthorchiidae.

***C. sinensis* (syn. *Opisthorchis sinensis*)** found in bile ducts, sometimes pancreatic ducts and duodenum of dogs, cats, pigs, some small wild mammals and humans. Causes diarrhea, abdominal pain, jaundice and ascites in humans. Called also oriental or Chinese liver fluke.

clonospasm [klon'o-spaz"əm] clonic spasm.

clonotype [klo'no-tīp] the phenotype of a clone of cells.

clonus [klo'nəs] alternate involuntary muscular contraction and relaxation in rapid succession. A sign of upper motor neuron disease.

clopidogrel [klo-pid'ə-grel] an antiplatelet drug.

clopidol [klo'pĭ-dol] a pyridinol coccidiostat used in poultry.

cloprostenol [klo-pros'tə-nol] a prostaglandin $F_{2\alpha}$ analog used in several species to destroy the corpus luteum in the treatment of misalliance, termination of pregnancy, treatment of pyometra and fetal mummification, females with retained corpora lutea which are failing to come into estrus, and for estrus synchronization.

Cloquet's canal [klo-ka'] a tubular to conical virtual space containing remnants of the primary vitreous, located between the posterior aspect of the lens and the retina in the vicinity of the optic disk. See also **Mittendorf's dot** and **Bergmeister's papilla**.

VetBooks.ir

clorazepate [klor-az'ə-pāt] a benzodiazepine compound with a longer half-life than diazepam; used in dogs and cats.
clorsulon [klor'su-lon] a benzenesulfonamide anthelmintic and flukacide used in cattle and sheep.
closantel [klo'sən-təl] an anthelmintic effective against *Fasciola hepatica*, *Haemonchus contortus* and nasal bots. Has a long residual effect on *H. contortus*.
close-coupled a characteristic of conformation, used usually to refer to a horse, meaning that the body is short and compact with no weakness in the loin; the costal arch to stifle distance is short and the flank region well muscled.
close junction one of the complex structural alterations between adjacent cells. In contradistinction from tight junction the two cells are separated by 20 nm of intercellular space; composed of hexagonal subunits, the connexons.
close-up dry cow see dry **cow**.
closed-circle anesthesia see circle breathing **circuit**.
closed nucleus breeding schemes genetic programs in which no genetic material is introduced to the breeding population.
closeout, closure the finalization of a feeding program in a feedlot. The cattle are sold and a balance sheet is struck which includes the costs of feeding and housing or confining them.
closing volume (CV) the volume of gas in the lungs in excess of the residual volume (RV) at the time when small airways in the dependent portions of the lungs close during maximal exhalation. CV normally increases with age and is also increased in obstructive airways disease. It can be used to detect the disease in high-risk patients before clinical signs appear. The closing capacity (CC) is equal to CV plus RV.
clostridia members of the genus *Clostridium*.
enterotoxic c. produce enterotoxins. See also **enterotoxemia**.
histotoxic c. cause extensive destruction of tissue characterized by the formation of gas. Include *C. chauvoei*, *C. colinum*, *C. hemolyticum*, *C. novyi*, *C. perfringens* type A and C, *C. septicum* and *C. sordellii*.
neurotoxic c. produce neurotoxins. Include *C. botulinum*, *C. tetani*.
clostridial [klos-trid'e-əl] pertaining to or emanating from infection by *Clostridium* spp.
c. dermatomyositis see **malignant edema**.
c. enteritis see **enterotoxemia**.
c. food poisoning diarrhea in humans caused by ingestion of preformed toxin produced by *C. perfringens* type A.
c. gangrenous dermatitis see **blue wing disease**.
c. gas gangrene see histotoxic **clostridia**.
c. hemoglobinuria see **bacillary** hemoglobinuria.
c. intestinal hemorrhage syndrome of dogs see canine hemorrhagic **gastroenteritis**.
c. myositis see **blackleg**.
c. necrotic enteritis 1. caused in birds by *Clostridium perfingens* types A and C. Characterized by short course with severe depression, diarrhea and high mortality and necropsy findings of pseudomembranous enteritis. 2. an alternate name for enterotoxemia in piglets caused by *Clostridium perfringens* type C.
c. swelled head see ovine **bighead**.
c. ulcerative enteritis a disease of quail caused by *Clostridium colinum*. Characterized in young quail by acute hemorrhagic enteritis and very high case fatality and morbidity rates. Necrosis and ulceration of the intestinal wall occur in birds which survive for several days.
clostridiosis [klos-trid"e-o'sis] any disease caused by *Clostridium* spp.
intestinal c. a disease of the horse manifested by an acute, highly fatal diarrhea associated with the presence in the gut of large numbers of *Clostridium perfringens* type A and *C. difficile*. See also antibiotic-associated **colitis**.
Clostridium [klos-trid'e-əm] a genus of anaerobic spore-forming bacteria of the family *Clostridiaceae*. Most are gram-positive rods.
C. bifermentans, C. sordelli see **malignant edema**.
C. botulinum causes botulism from neurotoxin produced during vegetative growth. *C. botulinum* types B, C and D are associated with disease in animals but the type prevalence varies geographically. See **botulism**.
C. butyricum involved in the spoilage of meat.
C. cadaveris may be associated with colitis X in horses.
C. chauvoei formerly called *C. feseri*; the cause of **blackleg**.
C. colinum cause of ulcerative enteritis and liver necrosis in quail, turkeys, grouse, partridge and chickens.
C. difficile see antibiotic-associated **colitis**.
C. feseri now called *C. chauvoei* (above).
C. haemolyticum formerly called *C. novyi* type D. See **bacillary** hemoglobinuria.
C. histolyticum a species found in feces, soil and sometimes wound infections. An important cause of meat spoilage.
C. nigrificans a thermophilic spoiler of canned meat producing hydrogen sulfide gas and causing purple staining of the inside of the can. Now called *Desulfotomaculum nigrificans*.
C. novyi see **infectious** necrotic hepatitis. See also *C. haemolyticum* (above). Previously called *C. oedematiens*. Type A causes **malignant edema** in cattle and sheep, and big head in rams, type B causes **infectious** necrotic hepatitis (black disease), and type C has been associated with osteomyelitis in buffalo.
C. overgrowth see **bacterial** overgrowth.
C. parabotulinum a proteolytic subgroup of *C. botulinum*; not a valid species.
C. perfringens cause of **enterotoxemia**. Type A causes **malignant edema** and **necrotic** enteritis, type B causes dysentery in lambs and enterotoxemia, type C causes struck in sheep and necrotic enteritis in piglets, type D causes enterotoxemia and type E causes necrotic enteritis. Previously called *C. welchii*.
C. piliforme the cause of Tyzzer's disease.
C. putrefaciens causes deep bone taint in hams. See also *C. putrificum* (below).
C. putrificum a cause of bone taint in cured hams. There is no detectable abnormality on the surface of the ham.
C. septicum formerly called *C. septique*. See **malignant edema**, **braxy**.
C. sordelli cause of a small proportion of cases of gas gangrene in ruminants. See also **abomasitis**.
C. spiroforme associated with enteritis and enterocolitis in rabbits, guinea pigs and foals.
C. sporogenes an apathogenic clostridium often found in lesions of gas gangrene.
C. tetani a common inhabitant of soil and human and horse intestines, and the cause of **tetanus** in humans and domestic animals.
C. villosum found in fight abscesses and pleurisy in cats.
C. welchii see *C. perfringens* (above).
clostridium [klos-trid'e-əm] pl. *clostridia* [Gr.] any individual of the genus *Clostridium*.
closure [klo'zhər] usually refers to suturing of a surgical incision.
clot [klot] 1. a semisolidified mass, as of blood or lymph. 2. to form such a mass.
dilute whole blood c. retraction test an indirect measure of fibrinolytic activity. Whole blood is diluted with saline, chilled, then warmed. The time for clot retraction, and later clot lysis, is measured.
chicken-fat c. clots that develop after death; largely devoid of red blood cells. More common in animals that have had anemia or in which blood sedimentation was increased. Seen more often in horses than in other species.
currant-jelly c. the blood clot in the heart at post mortem that contains erythrocytes. Is indicative of clotting before sedimentation of the cells has occurred.
c. formation see **clotting**.
c. lysis the time required for a clot to lyse at 98.6°F (37°C) is a reflection of the plasmin content of the blood. Clot retraction and fibrinogen content of the blood sample are also influential.
c. retraction the drawing away of a blood clot from a vessel wall, a function of thrombasthenin, released by blood platelets.
c. retraction test a test for platelet numbers and function. Clotted whole blood should retract away from the sides of a glass tube in 1 to 2 hours.
cloth chewing a vice, usually of cats and Siamese in particular. Believed to be an abnormal extension of sucking behavior. See also **wool** sucking.
cloth of gold ***Baileya multiradiata***.
clothing artificial covering for protection or decoration or as a livery.
animal c. includes rugs for cattle and horses and for **Sharlea** sheep in sheds. For dogs there is a great variety of decorative clothing limited only by the imagination of the owner. Pleasure horses are also likely to have a wardrobe of rugs including a lightweight cooling-off rug and a waterproof mackintosh, a hood to cover the head and neck, a cap to cover the head only, hoof boots of various sorts, protective leg bandages, a tail sock and eye goggles.

protective c. for the veterinarian; this includes coveralls, rubber knee boots, rubber or plastic sleeves and gloves, obstetric gowns, surgical gowns, caps, masks, overshoes and a variety of other personal protective equipment that may be required when exposed to serious zoonotic diseases.

clotrimazole [*klo-trim'ə-zōl*] a synthetic imidazole derivative with antifungal activity, similar to ketoconazole; applied topically in the treatment of diseases caused by dermatophytes and yeasts.

clotting [*klot'ing*] the formation of a jellylike substance over the ends or within the walls of a blood vessel, with resultant stoppage of the blood flow. Clotting is one of the natural defense mechanisms of the body when injury occurs. A clot will usually form within 5 minutes after a blood vessel wall has been damaged. The clotting mechanism is triggered by the platelets, which disintegrate as they pass over rough places in the injured surface. As they disintegrate they release serotonin and thromboplastin. Serotonin causes constriction of the blood vessels and reduction of local blood pressure. Thromboplastin unites with calcium ions and other substances which promote the formation of fibrin. When examined under a microscope, a clot consists of a mesh of fine threads of fibrin in which are embedded erythrocytes and leukocytes, small amounts of fluid (serum), and platelets.

c. defects see **coagulopathy**.

c. factors a series of plasma proteins which are related through a complex cascade of enzyme-catalyzed reactions involving the sequential cleavage of large protein molecules to produce peptides, each of which converts an inactive zymogen precursor (factor II) into an active enzyme (IIa) leading to the formation of a fibrin clot. They are designated by Roman numerals, and an additional 'a' to indicate the activated state. They are: factor I (**fibrinogen**), factor II (**prothrombin**), factor III (tissue **thromboplastin**), factor IV (**calcium**), factor V (proaccelerin), factor VI (no longer considered active in hemostasis), factor VII (**proconvertin**), factor VIII (**antihemophilic** factor), factor IX (plasma **thromboplastin** component; Christmas factor), factor X (**Stuart factor**), factor XI (plasma **thromboplastin** antecedent), factor XII (**Hageman factor**), factor XIII (fibrin stabilizing **factor**).

c. time see **activated** clotting time.

tissue c. factor clotting factor III; tissue **thromboplastin**.

cloudburst [*cloud'bərst*] a problem in doe goats. Pseudopregnancy is terminated by the sudden evacuation of a large volume of fluid from the uterus. Abdominal distention subsides and the doe begins an indifferent lactation.

cloudy swelling [*clou'de*] a term which has been discarded. It was used to describe an early stage of toxic degenerative changes, especially in protein constituents of organs in infectious diseases, in which the tissues appear swollen, parboiled and opaque but revert to normal when the cause is removed. Called also albuminoid, or albuminous, degeneration.

clove hitch [*klōv*] see **Miller's suture tie**.

cloven hoofed a two-toed ungulate. Found on members within the mammalian order **Artiodactyla**.

clover [*klo'vər*] members of plant family Fabaceae; essential legume component of improved and irrigated pastures, and highly adapted to haymaking. Some annuals, e.g. sweet clover, are used as forage crops. They provide a large bulk of fiber and energy and a high content of protein and calcium. They play a part in preventing hypomagnesemia in cattle on pasture. Common varieties, including species and cultivars, are: *Trifolium alpestre* (alpestrine), *T. fragiferum* (strawberry), *T. hybridum* (alsike), *T. pratense* (red), *T. repens* (ladino, white), *T. subterraneum* (subterranean), *Melilotus alba* (sweet, white sweet, Bokhara), *M. officinalis* (yellow sweet), *Medicago minima* (burr).

c. disease see **estrogenism**.

c. poisoning clovers can cause poisoning in a number of ways. They are important in their contribution to the occurrence of ruminal tympany, of urolithiasis, and chronic copper poisoning. Individual poisonous plant species are sweet clover, not poisonous when grazed green, but which contains coumarins that in moldy sweet clover hay can be metabolized to the anticoagulant dicoumarol, alsike clover which is reputed to be hepatoxic, and white clover, ladino, red and particularly subterranean clovers which contain estrogenic substances.

c. stone see clover **uroliths**.

c. tree ***Goodia*** *lotifolia*.

Cloward technique a subtotal laminectomy for the treatment of vertebral body malformations and spinal cord trauma causing compression of the cervical spinal cord in the horse.

clownfish (*Amphiprion* spp.) a small, colorful tropical fish with distinctive orange, white and black stripes or patches. Instantly familiar as 'Nemo', the movie character. They live symbiotically with the sea anemone, being unaffected by its poison. Very popular as aquarium fish.

cloxacillin [*klok"sə-sil'in*] a semisynthetic penicillin, resistant to β-lactamase and active against gram-positive bacteria.

club colony so-called sulfur granules in lesions of actinomycosis, actinobacillosis and botryomycosis which consist of central colonies of *Actinomyces bovis*, *Actinobacillus lignierisii*, or *Staphylococcus aureus* surrounded by club-shaped structures of reactive protein.

club lamb fungus a recently described ringworm infection of lambs in the US, usually recently shorn, caused by *Trichophyton* spp. Occurs over the body with circular areas of matting and loss of the wool staple. Infection of human handlers is common. One cause of rejection from admission to shows.

clubbed down a condition in chickens suffering from a nutritional deficiency of riboflavin: the erupting feathers do not rupture the feather sheaths properly, causing the feathers to have a coiled structure.

clubfoot [*klub'foot*] see **dactylomegaly**.

Clumber spaniel a heavy (55–85 lb), powerfully built dog with long body, short legs and very large head. The tail may be docked or natural. The coat is flat, silky and white with small lemon-colored markings mainly around the head. It has a distinctive slow, rolling gait.

clumping [*klump'ing*] the aggregation of particles, such as bacteria or other cells, into irregular masses.

Clun Forest sheep English shortwool, meat sheep with brown face and legs.

cluneal [*kloo'ne-əl*] pertaining to the buttocks.

clunis [*kloo'nis*] pl. *clunes* [L.] buttock.

cluster [*klus'tər*] 1. in epidemiological terms a naturally occurring group of similar units, e.g. animals which resemble each other, with respect to one or more variables, more than animals in different groups do, or a group of cases of a single disease in time or space. 2. assembly of claw and teat cups, as part of a milking machine.

c. analysis 1. statistical methods used to group variables or observations into strongly interrelated subgroups. 2. a statistical analysis of the relationships between clusters in time and/or space.

c. sampling see cluster **sampling**.

time c. a cluster of cases at particular points along a time axis.

clustering [*klus'tər-ing*] the gathering together of disease events. The clustering may be in space, geographical clustering, or in time, temporal clustering. See also **cluster**.

clutch 1. the number of eggs laid by a hen on consecutive days in an uninterrupted series. Clutch lengths vary from 2 to 6 days but may be as many as 360. 2. a setting of eggs. 3. a group of chickens hatched by a hen from a setting of eggs.

Clydesdale Scottish medium to heavy draft horse, bay, brown or black in color, usually with white on the face and limbs, about 16.2 hands high. Very well behaved and showy because of eager action, white points and long leg feather.

clysis [*kli'sis*] the administration other than orally of any of several solutions to replace lost body fluid, supply nutriment, or raise blood pressure; also, the solution so administered.

clyster [*klis'tər*] an enema.

Cm chemical symbol, *curium*.

cM centimorgan.

cm centimeter.

cm^2 square centimeter.

cm^3 cubic centimeter.

C_{max} in pharmcokinetics, the maximum plasma concentration of the drug.

cmH_2O centimeters of water.

CMI cell-mediated immunity.

CML cell-mediated lympholysis.

CMM cervical malformation and malarticulation.

c mm cubic millimeter.

CMO craniomandibular osteopathy.

CMP cytidine monophosphate.
CMPAF cattle material prohibited in animal feed.
CMT California mastitis test.
CMV cytomegalovirus.
CMVI chronic mitral valve insufficiency.
cnemial pertaining to the shin.
Cnemidocoptes a genus of the family Sarcoptidae of mites. Called also *Knemidocoptes*.
C. jamaicensis causes scaly leg in a Jamaican wild bird.
C. laevis gallinae causes depluming itch of fowl, pheasants and geese.
C. laevis laevis causes depluming scabies in pigeons.
C. mutans causes scaly leg in fowls and turkeys.
C. pilae causes scaly leg and a crumbly, honeycomb-like mass at the cere of the budgerigar or parakeet, called scaly face.
cnemidocoptic mange a series of diseases of birds, including scaly leg of poultry (*Cnemidocoptes mutans*), depluming itch of poultry (*C. gallinae*) and scaly face and tassel foot of cage birds (*C. pilae*).
Cnephia small black flies which cause intense livestock 'worry'. Called also black fly. Includes *Cnephia pecuarum*.
cnidia see **nematocysts**.
CNS central nervous system.
Co chemical symbol, *cobalt*.
co-dominance [*ko-dom'ĭ-nəns*] where both alleles of a pair are fully expressed in the heterozygote; called also incomplete dominance.
co-dominant gene action [*ko-dom'ĭ-nənt*] see **co-dominance**.
CO_2 see **carbon dioxide**.
CO_2 content see **carbon dioxide** content.
CO_2 pistol a weapon for firing darts containing immobilizing agents at animals. Powered by compressed CO_2 and effective only at very short ranges—ranges at which cordite powered projectiles would cause trauma.
CoA coenzyme A.
COAD chronic obstructive airways disease. See chronic obstructive **pulmonary** disease.
coadaptation [*ko-ad"ap-ta'shən*] the mutual, correlated, adaptive changes in two interdependent organs.
coagglutination [*ko"ə-gloo"tĭ-na'shən*] the aggregation of particulate antigens with multiple surface agglutinins.
coagglutinin [*ko"ə-gloo'tĭ-nin*] partial agglutinin.
coagulability [*ko-ag"u-lə-bil'ĭ-te*] the state of being capable of forming or of being formed into clots.
coagulant [*ko-ag'u-lənt*] promoting, accelerating, or making possible coagulation of blood; also, an agent that so acts.
coagulase [*ko-ag'u-lās*] a protein produced by pathogenic species of staphylococci, which may be causally related to thrombus formation.
c. test enzymatic conversion of fibrinogen in plasma to fibrin is used as a means of identifying pathogenic species of staphylococci. The test is performed overnight in a tube. Most coagulase-positive staphyloccoci are pathogenic; coagulase-negative ones commonly are not. Correlated with production of clumping or bound coagulase, which can be tested for rapidly on a slide.
coagulate [*ko-ag'u-lāt*] 1. to cause to clot. 2. to become clotted.
coagulation [*ko-ag"u-la'shən*] 1. formation of a clot. 2. in surgery, the disruption of tissue by physical means to form an amorphous residuum, as in **electrocoagulation** and photocoagulation.
activated c. time (ACT) see **activated** clotting time.
bipolar c. the use of tissue forceps as the active electrodes to produce electrocoagulation of tissues.
biterminal c. see monopolar **electrocoagulation**.
c. cascade the sequence of enzymatic reactions leading to the formation of a blood clot. Each is initiated by the preceding and, in turn, produces the enzyme that catalyzes the next with an amplification of the process as it progresses.
cerebrospinal c. normal cerebrospinal fluid does not coagulate. Inflammation of the meninges or contamination of the fluid by blood, possibly during collection, can cause coagulation in a sample.
c. defects see **coagulopathy**.
disseminated intravascular c. (DIC) widespread formation of thromboses in the microcirculation, mainly within the capillaries. It is a secondary complication of a wide variety of disorders all of which activate in some way the intrinsic coagulation sequence. Paradoxically, the intravascular clotting ultimately produces hemorrhage because of rapid consumption of fibrinogen, platelets, prothrombin, and clotting factors V, VIII and X. Because of this pathology, DIC is sometimes called defibrination syndrome or consumption coagulopathy. Called also diffuse intravascular coagulation. Called also consumption coagulopathy, defibrination syndrome, defibrinogenation syndrome.
c. factors see **clotting** factors, **platelet** factors.
c. inhibitors these systems prevent widescale intravascular coagulation as a result of minor injury. The important systems are **C_1-inactivator**, **antithrombin III**, **α_1-antitrypsin**, **α_2-macroglobulin**, factor XIa inhibitor, **lipoprotein** factor Xa inhibitor.
c. necrosis see **coagulative necrosis**.
c. pathways the coagulation cascade can follow alternative routes depending on the initiating factor. The *extrinsic* pathway is initiated by tissue thromboplastin (factor III) and involves calcium ions and factor VII. In the *intrinsic* pathway, factors XII, XI, IX and VIII are activated by exposure to subendothelial collagen or foreign surfaces. Both pathways lead to the activation of factor X and proceed along the *common* pathway, involving factors V, II, I and XIII, to the formation of a fibrin clot.
c. proteins see **clotting** factors.
synovial c. normal synovial fluid does not clot, but gels on standing (thixotropism). It contains no fibrinogen, nor any of the coagulation factors. Clotting is an indication of damage to the synovial membrane.
c. tests are used to determine the integrity of the coagulation pathways, and platelet function. In general, the common tests for the intrinsic or common pathways are the activated partial thromboplastin time (APTT) and activated clotting time (ACT). One-stage prothrombin time (OSPT) is usually used to evaluate the extrinsic or common pathways, and platelet count, clot retraction, bleeding time and activated coagulation time reflect platelet numbers and function.
three stage model of c. a theory of the coagulation, alternative to that of the coagulation cascade (above); consists of *initiation*, which involves primarily the extrinsic system and the production of thrombin; *amplification*, which involves thrombin activating platelets and coagulation factors; and *propagation*, in which fibrin is formed.
c. time see **clotting** time.
unipolar c. see bipolar **electrocoagulation**.
coagulative necrosis [*ko-ag'u-lə-tiv*] necrotic tissue which is firm, retains its architectural pattern and is dense in comparison to surrounding tissue. See also liquefactive **necrosis**, Zenker's **necrosis**.
coagulopathy [*ko-ag"u-lop'ə-the*] any disorder of blood coagulation. See also **hemophilia**.
consumption c. a bleeding tendency due to a reduction in clotting factors caused by their utilization. See also disseminated intravascular **coagulation**.
disseminated intravascular c. (DIC) see disseminated intravascular **coagulation**.
hepatic c. impaired synthesis of most clotting factors, including factors I, II, V, VII, IX and X, as well as other substances involved in the fibrinolytic system, in severe liver disease can cause significant abnormalities in coagulation.
coagulum [*ko-ag'u-ləm*] pl. *coagula* [L.] a clot.
coal dust [*kol*] causes black discoloration in lungs and bronchial lymph nodes in animals living in urban areas where coal is used for energy. Called anthracosis.
coal gas [*kol*] a cause of poisoning where coal gas is still used because of its carbon monoxide content. Other heating gases are less poisonous and produce carbon monoxide only if they are burned in an inadequate oxygen supply. See also **carbon monoxide**.
coal oil bush [*kol*] see ***Tetradymia glabrata***.
coal tar [*kol*] a by-product obtained in destructive distillation of bituminous coal or wood; useful for its keratolytic, keratoplastic and antiseborrheic effects in ointments and shampoos for the treatment of skin disease.
coal tar creosote [*kol*] see **creosote**.
coal tar pitch [*kol*] a cause of severe hepatic necrosis in pigs that nibble at pitch-coated pens and floors. The syndrome includes anemia, jaundice and emaciation.
coalescence [*ko"ə-les'əns*] a fusion or blending of parts.

COAP a cancer chemotherapy protocol that utilizes cyclophosphamide, vincristine (Oncovin®), cytosine arabinoside, and prednisone. Used in the treatment of lymphomas in dogs and cats.
coapt [*ko-apt'*] to approximate, as the edges of a wound.
coaptation [*ko-ap-ta'shən*] having been coapted.
external c. for fractures by the use of external appliances, e.g. various splints, and casts.
coarctate [*ko-ahrk'tāt*] 1. to press close together; contract. 2. pressed close together; restrained.
coarctation [*ko"ahrk-ta'shən*] stricture or narrowing.
c. of aorta a localized malformation characterized by deformity of the tunica media of the aorta, causing narrowing, usually severe, of the lumen of the vessel. See also **aortic** coarctation.
reversed c. pulseless disease.
coast disease a combination of copper and cobalt nutritional deficiencies. See **copper**, **cobalt**.
coast myall ***Acacia*** *glaucescens*.
coastal fever see **East Coast fever**.
coat [*kōt*] 1. haircoat—the overall coating of hair on all our species of domestic animals. 2. a membrane or other tissue covering or lining an organ; in anatomic nomenclature called also tunica.
bristle c. (1) in dogs, a short, stiff wire-haired coat.
broken c. (1) in dogs, a harsh, wiry outer layer with a softer undercoat. See also **wirehair**.
brush c. (1) a short, straight stiff coat.
corded c. (1) in dogs, a coat that forms ringlets or dreadlocks. Seen in Komondors and Pulis.
dry c. (1) syndrome see **anhidrosis**.
c. licking (1) excessive self-grooming in farm animals, commonly a manifestation of nutritional deficiency, e.g. salt deficiency.
smooth c. (1) usually short hair that lies flat and close to the body.
stand-off c. (1) one that projects out from the body, generally supported by a thick undercoat, giving a bushy appearance; seen in spitz-type dogs.
winter c. longer and less lustrous coat that is grown by cattle and horses housed outside in cold climates and shed in the spring.
wire c. (1) see broken coat (above).
coat color the overall or main color of the animal. If the points are distinctively colored that is also noted, e.g. black with white points.
cat c. c. besides the conventional black, white, gray, orange, there are **blue**, **lilac**, **seal** (2), **chocolate**, **tortoiseshell** (tortie), **bicolor**, **Chinchilla cat**, **smoke**, **cameo**, pewter.
c. c. change diets deficient in tyrosine have been associated with a coat color change from black to reddish brown in cats. Restoring normal dietary concentrations reversed the color change.
dog c. c. besides the conventional black, brown, white, gray, there are **badger** (1), **belton**, **blanket**, **blue**, **brindle**, **deadgrass**, **dapple**, **grizzle**, **harlequin**, **merle**, **roan**, **liver** (2), **pied**, **sable** (1), **saddle** (2), **ticking**, **tricolor**, **wheaten**.
horse c. c. see **bay**, **chestnut**, **cremello**, **brown**, **black**, gray, **palomino**, **cream** (3), **dun**, **piebald**, **skewbald**, **roan**.
coat funk the name given to **alopecia** X in Alaskan Malamutes.
coated pits regions of the cell membrane which are coated with bristle-like structures on their cytoplasmic surface and are involved in endocytosis. The coated pit is pinched off to form a coated vesicle, which is involved in intracellular vesicle transport between the cell's organelles.
coati member of the family Procyonidae of two genera, *Nasua narica* spp. and *Nasuella olivacea* (mountain or Andean coati); native to Central and South America, They resemble their close procyonid relatives, raccoons and kinkajous; small to medium-sized with a long snout, long body and a long, bushy, non-prehensile tail. They are commonly kept as pets with health care requirements similar to those of dogs and cats, including vaccination against canine distemper and feline parvovirus. Literally, the term coatimundi refers to a lone, male coati; it is often misused as a synonym for coati.

C-59: Winter coat (arrows) now largely shed by this bull in spring.

coatimundi see **coati**.
coaxial circuit see coaxial **circuit**.
cob 1. a short-legged, thickset, strong type of horse, usually 13.2 to 14.2 hands high but not more than 15.2. Useful as a light cart horse or for riding as a means of transportation and for heavyweight riders wanting a steady rather than a flashy ride. Produced by mating polo pony stallions to carriage or light draft horses. 2. the central stem of a cob of corn (3); common as a cause of esophageal and intestinal obstruction in dogs. 3. male swan.
cobalamin [*ko-bal'ə-min*] a cobalt-containing complex common to all members of the vitamin B_{12} group. Intestinal absorption occurs in the distal small intestine. Decreased serum concentrations are found in diseases of the small intestine and exocrine pancreas in dogs and cats and cobalt deficiency in cattle.
cobalt (Co) [*ko'bawlt*] a chemical element, atomic number 27, atomic weight 58.933. A component of vitamin B_{12}. See Table 4.
c.-57 (^{57}Co) a radioisotope of cobalt having a half-life of 270 days; used as a label for cyanocobalamin.
c.-60 (^{60}Co) a radioisotope of cobalt having a half-life of 5.27 years and a principal gamma ray energy of 1.33 MeV; used as a radiation therapy source.
c. nutritional deficiency causes anorexia and poor weight gain. Identification of the disease is based on chemical analysis of pasture and soil and biochemical analysis of animal tissues and fluids. Called also enzootic marasmus, Grand Traverse disease and other regional names.
c. poisoning accidental overdosing with cobalt causes listlessness, weight loss and incoordination.
Cobboldia a genus of parasitic flies whose maggots inhabit the alimentary tract or tissues of mammalian hosts; members of the family Gasterophilidae. Includes *Cobboldia elephantis* (Indian elephant), *C. loxodontis* (African elephant, rhinoceros).
cobby in conformation, a short and sturdy build; said of horses, dogs and cats.
cobra [*ko'brə*] a venomous snake of the family Elapidae. There are a number of genera and types of cobras, but the best known is *Naja naja* (Indian cobra) characterized by their defensive display in which they rear up and flatten their neck into a 'hood'.
c. venom a component, cobra venom factor, causes depletion of complement and is used experimentally to reproduce genetic complement deficiencies. Pharmaceutical preparations have been used intralesionally in **acral** lick dermatitis to cause a local hypalgesia.
coca [*ko'kə*] see **cocaine**.
cocaine [*ko-kān'*] an alkaloid obtained from the leaves of various species of *Erythroxylon* (coca plants) or produced synthetically; used as an indirect-acting sympathomimetic and as a short-acting topical anesthetic for surgery of mucous membranes. Called also coca. Almost entirely replaced by synthetic analgesics because of the problems that arise through human addiction to cocaine. It is a controlled substance of the highest priority in most countries. Accidental or malicious exposure by companion animals results in restlessness, hyperactivity, tremors, tachycardia, hypotension, tachypnea and seizures.
cocarcinogen [*ko-kahr-sin'ə-jən*] an agent that increases the effect of a carcinogen by direct concurrent local effect on the tissue.
cocarcinogenesis [*ko-kahr"sĭ-no-jen'ə-sis*] the development, according to one theory, of cancer only in preconditioned cells as a result of conditions favorable to its growth.
cocci [*kok'si*] [L.] plural of *coccus*.
coccidia [*kok-sid'e-ə*] a group of sporozoa in the family *Eimeriidae* commonly parasitic in epithelial cells of the intestinal tract, but also found in the liver and other organs; it includes three genera, ***Eimeria***, ***Isospora*** and ***Cystoisospora***.
coccidia [*kok-sid'e-ə*] plural of coccidium.
coccidial [*kok-sid'e-əl*] of, pertaining to, or caused by Coccidia.
coccidian [*kok-sid'e-ən*] 1. pertaining to Coccidia. 2. any member of the Coccidia; coccidium.

VetBooks.ir

VetBooks.ir

coccidioidal [*kok-sid"e-oi'dəl*] pertaining to or emanating from ***Coccidioides***.

c. granuloma the lesions of the generalized disease, **coccidioidomycosis**, are granulomas, occurring mostly in the lung, but also bone and skin.

Coccidioides [*kok-sid"e-oi'dēz*] a genus of pathogenic fungi.

C. immitis the etiological agent of **coccidioidomycosis**. A common infection in desert rats whose feces act as the vehicle for spread of the infection.

coccidioidin [*kok-sid"e-oi'din*] a sterile preparation containing by-products of growth products of *Coccidioides immitis*, injected intradermally as a test for coccidioidomycosis.

coccidioidoma [*kok-sid"e-oi-do'mə*] residual pulmonary granuloma or granulomas seen radiographically as solid round foci in coccidioidomycosis.

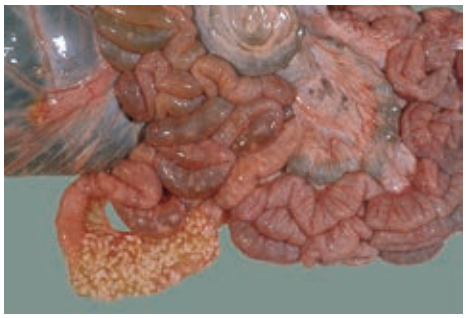
coccidioidomycosis [*kok-sid"e-oi"do-mi-ko'sis*] a fungal disease of humans and animals caused by infection with *Coccidioides immitis*. This fungus grows in hot, dry areas, especially in the southwestern USA, Mexico, and parts of Central and South America. It is characterized by granulomatous lesions, especially in the respiratory system and bones, which resemble tuberculosis in cattle and caseous lymphadenitis in sheep. In dogs, the predominant lesions are in bone, lungs and skin. In endemic areas, many people and animals experience asymptomatic or mild, undiagnosed respiratory infection. Dissemination is more common in some races of humans and in dogs, Boxers and Doberman pinschers. Called also San Joaquin Valley fever, valley fever, desert fever.

coccidioidosis [*kok-sid"e-oi-do'sis*] coccidioidomycosis.

coccidiomycosis [*kok"sid-e-o-mi-ko'sis*] coccidioidomycosis.

coccidiosis [*kok"sid-e-o'sis*] infection by coccidia causes predominantly enteritis and sometimes hepatitis. The clinical picture varies among species. In calves causes serious diarrhea and dysentery, and death may occur because of the blood and protein loss and dehydration. In sheep the effects are poor production and poor weight gain, although diarrhea and dysentery can occur. The clinical disease is rare in pigs and horses, but outbreaks, similar clinically to those in cattle, may occur in young animals. In dogs and cats, infection is most common in young puppies and kittens where it can be the cause of severe diarrhea and even death. In rabbits, infections can be intestinal or hepatic. Adult animals usually experience only mild and self-limiting infections. All poultry species can suffer severe outbreaks of the disease, characterized by diarrhea and dysentery. Subclinical infections causing reduced productivity are a feature of the disease in birds. Affected fish are cachectic and trail long mucoid fecal casts. The disease in all species except fish is caused by ***Eimeria***, ***Isospora*** or ***Cystoisospora***. The species infecting fish include *Eimeria* (*Epieimeria*) and *Goussia*.

C-60: Disseminated coccidioidomycosis in the radius and ulna of a dog.
From Ettinger SJ, Feldman E, Textbook of Veterinary Internal Medicine, 6th Edition. Saunders, 2004.



C-61: Lesions of coccidiosis in the mucosa of the small intestine of a goat.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

disseminated visceral c. of cranes causes granulomatous nodules in many organs in sandhill cranes; caused by *Eimeria* spp. penetrating the blood or lymphatic system from the intestine and dissemination results.

hepatic c. infection of the bile ducts of lagomorphs (rabbits and hares) with *Eimeria stiedai*; reported in goats and rarely in calves.

nervous c. a small number of calves in an outbreak of classical coccidiosis may develop severe nervous signs including hyperesthesia, nystagmus, tremor, orthotonus and convulsions and can die within a few hours. There is no detectable lesion in the brain.

coccidiostatic drugs [*kok-sid"i-o-stat'ik*] drugs which control coccidiosis. The greatest importance of coccidiosis is in the chicken industry and many agents have been developed in an attempt to reduce losses. The important drugs or groups of drugs for this purpose are **clopidol**, **quinolones**, **monensin**, **lasalocid**, **salinomycin**, **robenidine**, **amprolium**, **dinitolmide**, **nicarbazin**, **sulfonamides** and **halofuginone**.

coccidiostats [*kok-sid'i-o-stats"*] see **coccidiostatic** or **anticoccidial** drugs.

Coccidium [*kok-sid'e-əm*] see ***Eimeria***, ***Isospora***, ***Sarcocystis***, ***Toxoplasma***, ***Hammondia***, ***Besnoitia***, ***Cryptosporidium***.

Coccinella septempunctata seven spot ladybug (ladybird). Ingestion of larvae by cattle has been associated with photosensitivity.

coccobacilliform bodies bacterial cells with the physical characteristics of coccobacilli often associated with cultures of mycoplasma.

coccobacillus [*kok"o-bə-sil'əs*] an oval bacterial cell with morphology intermediate between the coccus and bacillus forms.

coccoid [*kok'oid*] resembling a coccus.

coccus [*kok'əs*] pl. *cocci* [L.] a spherical bacterium, usually slightly less than 1 μm in diameter. One of the three basic forms of bacteria, the other two being bacillus (rod-shaped) and spirillum (spiral-shaped).

coccyge- prefix meaning coccyx or tail.

coccygeal [*kok-sij'e-əl*] pertaining to or located in the region of the tail.

c. muscle see Table 13.2.

c. vertebrae called also caudal vertebrae; see Table 10.

coccygectomy [*kok"si-jek'tə-me*] excision of the tail.

coccygeus [*kok-sij'e-əs*] pertaining to the tail.

c. muscle forms part of the pelvic diaphragm; important in the cause and surgical repair of perineal hernia in dogs.

coccygodynia [*kok"si-go-din'e-ə*] pain in the tail.

coccygotomy [*kok"si-got'ə-me*] incision of the tail.

coccyx [*kok'siks*] collection of fused coccygeal vertebrae found in humans and apes.

Cochin heavy Asiatic breed of poultry; black, white or buff; yellow beak and legs, heavy leg feathers. Weighs up to 13 lb. Called also Cochin-China.

Cochin-China see **Cochin**.

cochle- prefix meaning cochlea.

cochlea [*kok'le-ə*] a spiral tube of three and a quarter turns (in dogs) forming part of the inner ear, shaped like a snail shell, which is the essential organ of hearing. The cochlea is filled with three

fluid-filled tubes that wrap around a hollow, nerve-filled central core or modiolus. Two of the tubes are connected with the middle ear by two membrane-covered openings, the oval window (*fenestra vestibuli*) and the round window (*fenestra cochleae*). Running between these two tubes is a sandwiched cochlear duct that supports the organ of Corti, a structure of highly specialized cells that translate sound vibrations into nerve impulses. The cells of this organ have tiny hairlike strands (cilia) that protrude into the fluid of the cochlea. Sound vibrations are relayed from the tympanic membrane (eardrum) by the ear ossicles in the middle ear to the vestibular (oval) window of the cochlea, where they set up corresponding vibrations in the fluid of the cochlea. These vibrations move the cilia of the organ of Corti, which then sends nerve impulses to the brain. Called also osseus cochlea. See also **hearing**.

tibial c. articular surface of the distal extremity of the tibia, characteristically set at an oblique angle in horses. Called also cochlea tibiae.

cochlear [*kok'le-ər*] pertaining to or emanating from the cochlea.

c. duct the coiled portion of the membranous labyrinth located inside the cochlea; contains endolymph and the organ or Corti. See also **scala** media.

c. nerve see Table 14.

Cochlearia armoracia [*kok"le-ar'e-ə*] see ***Armoracia rusticans***.

cochleariform [*kok"le-ar'ĭ-form*] spoon-shaped.

cochleitis [*kok"le-i'tis*] inflammation of the cochlea.

cochleosaccular [*kok"le-o-sak'u-lər*] pertaining to the cochlear duct and saccule.

c. degeneration degeneration of the membranous cochlea including the organ of Corti, the saccular macula, and the walls of the cochlear and saccular membranous labyrinth, and degeneration of the neurons in the spiral ganglion. The defect is inherited as deafness associated with incomplete pigmentation of the haircoat and the ocular uvea and occurs in cats, dogs and probably cattle. See also **Waardenburg's syndrome**.

cochleotopic [*kok"le-o-top'ik*] relating to the organization of the auditory pathways and auditory area of the brain.

cochleovestibular [*kok"le-o-ves-tib'u-lər*] pertaining to the cochlea and vestibule of the ear.

Cochliomyia [*kok"le-o-mi'yə*] a genus of the fly family of insects Calliphoridae. See ***Callitroga***. Includes *C. hominivorax* (New world screw-worm), *C. macellaria*.

Cochlosoma a protozoan parasite of the family Cochlosomatidae.

C. anatis found in the large intestine of domestic and wild ducks and turkeys. May cause a catarrhal enteritis and diarrhea.

cock [*kok*] male bird.

c. fighting contests, usually with wagering riding on them, between adult male birds of fighting stock; frowned on in most developed countries because the fights are to the death.

cock-throttled heavy-jowled giving the head a heavy appearance.

Cockapoo a non-recognized dog breed, popular in the USA, produced by crossing a Cocker spaniel and a Poodle.

cockatiel small, canary-sized Australian parrot, crested and brown with a yellow head. Popular as cage pets because of their speed in learning to converse with humans and engaging personalities. Called also quarrian, *Nymphicus hollandicus*.

cockatoo a group of birds in the family Psittacidae, characterized by a topknot of erectile feathers. Includes the *Kakatoe* and *Microglossus* genera. There are many species with different colors.

c. beak and feather disease see **psittacine** beak and feather disease.

Cocker spaniel a small to medium-sized dog with long hair, particularly under the body and from behind the legs, a short, docked tail, and low set, long ears. There are two varieties, usually regarded as distinct breeds: The *English Cocker spaniel* is larger and taller (15–17 inches), and a longer muzzle, somewhat like that of a setter. The *American Cocker spaniel* is smaller (14–15 inches tall), has a short muzzle, large, prominent eyes and profuse coat. The breeds are, among other things, affected by an inherited renal cortical dysplasia, seborrhea, glaucoma, progressive retinal atrophy, cataracts, neuronal ceroid lipofuscinosis, hemophilia A, factor X deficiency, patent ductus arteriosus and intervertebral disk disease.

cockerel young male domestic fowl, older than 4 weeks, up to sexual maturity at about 5 months.

C-62: English cocker spaniel.

cockle [*kok'əl*] 1. a dermatitis of sheep consisting of inflammatory nodules, especially on the neck and shoulders. Due to skin parasitic infestations such as with the body louse (*Bovicola ovis*) that leads to an allergic dermatitis. Devalues pelts from lambs. 2. see ***Agrostemma***.

corn c. (2) *Agrostemma githago*.

cockleburr [*kok'əl-bər*] see ***Xanthium***.

cockles [*kok'əlz*] ***Saponaria officinalis***.

cockroaches [*kok'rōch*] insects which may carry *Salmonella* spp. in their gut and play a part in the spread of the disease.

cock's comb 1. ***Amaranthus hybridus***. 2. see **comb**.

cock's weed ***Amaranthus deflexus***.

cocksfoot see ***Dactylis glomerata***.

coconut [*ko'kə-nət*] fruit of the coconut palm.

c. meal residue after the extraction of coconut oil and used as a protein supplement in livestock diets.

c. oil a natural source of fatty acids of short and medium length.

cocoyam *Xanthosoma*.

cod [*kod*] scrotum and contents.

c. fat a mass of fat around the inguinal part of the spermatic cord; reaches its greatest development in castrated ruminants.

c. lock wool from the scrotum; usually heavily stained with yolk.

COD cystic ovarian degeneration.

cod liver oil an oil pressed from the fresh liver of the cod and purified. It is one of the best-known natural sources of vitamin D, and a rich source of vitamin A. Because cod liver oil is more easily absorbed than other oils, it was formerly widely used as a nutrient and tonic, but it is rarely used today since more efficient sources are available. The oil has a fishy odor, especially in pork, when the animals are fed on cheap grades of the oil before slaughter. The fat is most tainted and is discolored yellow brown. The oil gives its name to a form of aspiration or lipid pneumonia caused by overzealous and inefficient oral dosing of cats with the oil.

c. l. o. poisoning premixed animal feeds in which cod liver oil has been incorporated are damaged if they are exposed to air. The oil rancidifies and the oxidation destroys the vitamin E in the feed. Cod liver oil also contains a muscle damage agent. Excessive supplementation in young puppies and kittens can also lead to hypervitaminosis A and D.

code [*kōd*] 1. a set of rules governing one's conduct. Called also ethical code. 2. a system by which information can be communicated. 3. a set of alphabetical or numerical markers which are an index to a much larger bank of information.

c. of practice/conduct a document produced by an authoritative body to provide a guide to people in their conduct relative to, for example, animal welfare, or their practice, for example, in the housing and feeding of pigs. It is the sort of document that is used when testing in a practical situation rules which are planned to be included in subsequent legislation.

c. of veterinary regulations veterinary practice laws established by each US state government generally include provisions of licensing requirements, laws concerning the state veterinary board, veterinary records laws, and the laws governing disciplinary actions for impaired or incompetent practitioners.

codeine [*ko'dēn*] an alkaloid obtained from opium or prepared from morphine by methylation; used as the phosphate or sulfate salt for analgesia and as an antitussive.

Codex Alimentarius [*ko'deks*] a collection of international food standards that have been adopted by the Codex Alimentarius Commission. The WHO and FAO have been the international

VetBooks.ir

sources of scientific advice on matters related to the safety of food. Codex provisions concern the hygienic and nutritional quality of food, including microbiological norms, food additives, pesticide and veterinary drug residues, contaminants, labeling and presentation, and methods of sampling and risk analysis. They cover all the main foods, whether processed, semi-processed or raw and include materials used in the further processing of food products.

Codex Alimentarius Commission [*ko'deks*] an intergovernmental body established to implement the FAO/WHO food standards with the aim of protecting the health of consumers and to facilitate the trade of food by setting international standards.

coding strand the strand of double stranded DNA that is transcribed. Called also sense strand.

Codiostomum a genus of nematodes of the family Strongylidae.

C. struthionis strongylid nematode found in the large intestine of the ostrich. Heavy infestations may cause pathogenic effects.

Codman's spur [*kod'mən*] see **Codman's triangle**.

Codman's triangle a localized, triangular ridge of new bone formed where periosteum is elevated. Associated with neoplasms, particularly osteosarcoma and osteomyelitis lesions. Called also Codman's spur.

codocyte see target **cell**.

codon [*ko'don*] a triplet in a chain of nucleic acids in mRNA that specifies a specific amino acid to be are added to a polypeptide. The codon triplet pairs with a sequence of three complementary nucleotides, called the anticodon, present in the anticodon arm of tRNA. Called also triplet. See also **deoxyribonucleic acid**.

start c. see **initiation** codon.

stop c's three codons, UAG, UAA and UGA, also referred to as amber, ochre and opal codons, in mRNA which terminate translation.

termination c. see stop codons (above).

coefficient [*ko"ə-fish'ənt*] 1. an expression of the change or effect produced by the variation in certain factors, or of the ratio between two different quantities. 2. in chemistry, a number or figure put before a chemical formula to indicate how many times the formula is to be multiplied.

absorption c. 1. the fraction of a beam of radiation that is absorbed in passing through a unit length of absorbing material. 2. a number indicating the volume of a gas absorbed by a unit volume of a liquid at 32°F (0°C) and at a pressure of 760 mmHg.

alienation c. a measure of the *lack* of association between two variables. Called also the coefficient of nondetermination.

Bunsen c. see absorption coefficient (2) (above).

contingency c. a measure of association between qualitative assessments of two variables.

correlation c. a measure of association which indicates the degree to which two or more sets of observations fit a linear relationship. Denoted by 'ρ' (rho), it can vary from −1.0 to 1.0.

determination c. the coefficient of determination is the square of the correlation coefficient (r^2). It describes the proportion of the variation of one of the correlated variables, explainable by the variation of the other variable. The value of the coefficient must lie between 0 and 1.

digestibility c. percentage of the food ingested that is absorbed.

disarray c. the measure of the degree of discord between two variables.

c. of nondetermination see alienation coefficient (above).

phenol c. a measure of the bactericidal activity of a chemical compound in relation to phenol. The activity of the compound is expressed as the ratio of dilution in which it kills in 10 minutes under specified conditions. It can be determined in the absence of organic matter, or in the presence of a standard amount of added organic matter.

sedimentation c. the ratio of molecular velocity to centrifugal force usually expressed in Svedberg (S) units.

solubility c. in anesthetics, a measure of the distribution of anesthetic agent between equilibrating phases such as blood and gas, oil and gas, or blood and tissue. The greater the solubility, the greater the uptake of anesthetic agent by blood and the slower the period of induction and recovery.

-coele word element; for words beginning thus see words beginning *-cele*. [Gr.] *cavity, space*.

coelenteron the digestive cavity of coelenterates. Has a single opening into which all food is taken and through which all waste products are ejected.

coeli(o)- word element. See **celio-**.

coel(o)- for words beginning thus, see words beginning *cel(o)-*.

coelom [*se'lom*] body cavity, especially the original cavity in the mammalian embryo between the somatopleure and splanchnopleure, which is both intra- and extraembryonic; the principal cavities of the trunk, the pericardial, pleural and peritoneal sacs, arise from the intraembryonic portion.

c. partitioning separation of the pleural and pericardial sacs in the embryo is established by the pleuropericardial septum formed by the fusion and extension of the pleuropericardial folds.

coeloscope celoscope.

coeloscopy celoscopy.

Coelosphaerium genus of toxic cyanobacteria in water bloom; causes sudden death, hepatitis.

coelozoic [*e"lo-zo'ik*] inhabiting the intestinal canal of the body; said of parasites.

coenurosis [*se"nu-ro'sis*] infection with the metacestode (larval) stage of *Taenia multiceps* which invades the brain and spinal cord of sheep and causes a variety of syndromes characteristic of slowly developing space-occupying lesions of the nervous system. Ataxia, head-pressing, somnolence and occasional convulsions are common signs of brain involvement. Paralysis and recumbency are the usual signs in spinal cord involvement. Called also gid or sturdy.

Coenurus [*se-nu'rəs*] a metacestode, a larval stage (metacestode) of a tapeworm belonging to the genus *Taenia* (*Multiceps*).

C. cerebralis metacestode of *Taenia multiceps* found in the brain and/or spinal cord of sheep and other ruminants, but sometimes in other organs of goats. See also **coenurosis**.

C. serialis metacestode of the tapeworm *Taenia serialis* of dogs and foxes found in the subcutaneous tissues and muscles of the intermediate host, a lagomorph.

coenzyme [*ko-en'zīm*] an organic molecule, usually containing phosphorus and some vitamins, often separable from the enzyme protein but essential as a cosubstrate in catalysis; a coenzyme and an apoenzyme must unite in order to function (as a holoenzyme).

c. A (CoA) essential for carbohydrate and fat metabolism; among its constituents are pantothenic acid and a terminal SH group, which forms thioester linkages with various acids, e.g. acetic acid (acetyl-CoA) and fatty acids (acyl-CoA).

c. A acetoacetyl see **acetoacetyl CoA**.

c. A acetyl see **acetyl CoA**.

c. Q any of a group of related quinones with isoprenoid units in the side chains (the ubiquinones), occurring in the lipid fraction of mitochondria and serving, along with the cytochromes, as an intermediate in electron transport; they are similar in structure to vitamin K_1.

c. R see **biotin**.

coerulein a decapeptide; a potent stimulator of pancreatic and other exocrine secretions.

cofactor [*ko'fak-tər*] an element or principle, e.g. a coenzyme, with which another must unite in order to function.

COFAL test the complement fixation test for avian **leukosis**.

coffee [*kof'e*] a number of plants incorporate the word coffee into their common name. Coffee itself is a product of *Coffea* spp. plants and contains the xanthine alkaloid caffeine.

c. bean see ***Sesbania***.

c. bush see ***Breynia oblongifolia***.

c. tree ***Gymnocladus*** *dioica*.

c. weed *Sesbania* spp.; called also coffee bean, rattlebrush.

wild c. see ***Senna*** *occidentalis*.

coffee grounds a term used to describe vomited blood. See **hematemesis**.

coffin [*kof'in*] pertaining to the coffin bone.

c. bone distal phalanx in the horse. See **navicular** bone. Called also pedal bone.

c. joint distal interphalangeal joint, between the second and third phalanges, in the horse.

cog-wheel respiration jerky auscultation sounds, with a clicking sound on inspiration; due to swelling of the bronchial mucosa.

cogener [*ko'jə-nər*] congener.

cogenic genetic differences between individuals at a locus.

Coggins test the agar-gel, double diffusion immunodiffusion test for detection of antibodies to **equine** infectious anemia virus.

cognate describes two biomolecules that normally interact such as an enzyme and its normal substrate or a receptor and its normal ligand.

cognitive dysfunction syndrome [*kog'nĭ-tiv*] age-related deterioration of cognitive functions in dogs characterized by multiple behavioral changes, disorientation, loss of housetraining, reduced level of interaction with others, and loss of sensory perception. Called also 'old dog syndrome'.

cohesion [*ko-he'zhən*] the force causing various particles to unite.

cohesive end [*ko-he'siv*] single-strand extension on each end of a duplex DNA molecule that is usually produced by restriction endonuclease digestion and which facilitates ligation of two similarly cut DNA molecules due to complementarity of the extensions. Called also sticky ends.

Cohnheim's theory [*kōn'hīm*] 1. the emigration of leukocytes is the essential feature of inflammation. 2. tumors develop from embryonic rests which do not participate in the formation of normal surrounding tissue.

cohort [*ko'hort*] in epidemiology a group of individuals who share a characteristic acquired at the same time. The term usually refers to a birth cohort, which contains animals born in a specified time period.

c. studies a prospective or follow-up, analytical, epidemiological study. The investigation identifies a group of animals which have the hypothesized cause and which are free of the disease of interest, and a comparison group of animals which are free of the hypothesized cause. Both groups, the cohorts, are followed over time to determine the incidence rates of the disease in question in each of the two groups.

coil [*koil*] a winding structure or spiral; called also helix.

coiled-c. a protein structure motif marked by amphipathic α-helical regions that can self-associate to form stable, rod-like oligomeric proteins; commonly found in fibrous proteins and some transcription factors.

coin test an auscultatory test for pulmonary consolidation in which a coin is used as a pleximeter. A sound is produced by striking the coin with a hard object such as a screwdriver used as a plexor. The coin is placed over the area to be examined. If the lung below is consolidated the sound produced by striking the coin is transmitted with greater clarity than if it were filled with air. Obviously designed for the farmyard veterinarian.

coital exanthema [*ko'ĭ-təl*] see infectious pustular **vulvovaginitis**. Called also coital vesicular exanthema.

bovine c. vesicular exanthema see infectious pustular **vulvovaginitis**.

equine c. e. venereal disease of the skin of the genitalia and perineum in stallions and mares caused by equine herpesvirus 3. Characterized by discomfort and discharge locally and the presence of vesicopustular lesions on the penis, prepuce, vulva and vaginal mucosa, and sometimes on the mare's teats and the lips of the foal at foot.

coition [*ko-ish'ən*] coitus.

coitus [*ko'ĭ-təs*] sexual union by vagina between male and female. See also **mating**.

Coix lachryma-jobi a robust, tropical grass with shiny grains like tears. Perennial grass in the family Poaceae. Grown as a fodder crop. Called also Adlay, Job's tears.

col [*kol*] a slight depression in the underlying interdental papilla where two teeth contact each other.

colation [*ko-la'shən*] the process of straining or filtration, or the product of such a process.

Colbred a crossbred meat sheep produced by crossing the European East Friesland breed with three British breeds, Border Leicester, Dorset Horn and Clun Forest. The characteristics of the breed are a high twinning rate and a high milk yield.

colcemid a compound related in structure and function to **colchicine**.

colchiceine one of the two poisonous alkaloids in ***Colchicum autumnale***. See also **colchicine**.

colchicine [*kol'chĭ-sēn*] a water-soluble antimitotic drug that blocks the addition of tubulin subunits to the ends of existing microtubules, preventing spindle formation. It is a poisonous alkaloid from ***Colchicum autumnale*** which causes violent purgation, abdominal pain and is often fatal. In research it is used to induce polyploidy by delaying mitosis. In humans it is used in the treatment of gout. See also **colchiceine**.

Colchicum autumnale [*kol'chi-kəm*] toxic plant in the family Liliaceae; a cultivated plant that does survive also in the wild. Causes severe, often fatal, enteritis, characterized by diarrhea and abdominal pain. It contains two poisonous alkaloids, colchicine and colchiceine. Called also meadow saffron, saffron, autumn crocus.

COLD chronic obstructive lung disease. See chronic obstructive **pulmonary** disease (COPD).

cold [*kōld*] 1. an acute disease of the upper respiratory tract characterized by cough, sneezing, running at the eyes and nose and mild fever, similar to the common cold of humans, occurring in captive primates. Not generally applied to respiratory infections in other animal species. 2. a relatively low temperature; the lack of heat. A total absence of heat is absolute zero, at which all molecular motion ceases. See also **hypothermia**.

c. acclimation short-term adjustments to carbohydrate and fat metabolism in response to exposure to low environmental temperatures.

c. acclimatization heat production is not increased, but heat loss is reduced by changes in haircoat and vascular supply to the skin.

c. applications the primary effect of cold on the surface of the body is constriction of the blood vessels. Cold also causes contraction of the involuntary muscles of the skin. These actions result in a reduced blood supply to the skin and produce a marked pallor. If cold is prolonged there may be damage to the tissues because of the decreased blood supply. The secondary effects of cold are the opposite of its primary action. There is increased cell activity, dilatation of the blood vessels, and increased sensitivity of the nerve endings.

c. barn see cold housing (below).

c. cow syndrome see **shock**.

c.-enrichment a procedure that promotes growth of some bacteria during laboratory isolation. Suspensions of specimens are held at refrigerator temperatures for extended periods before being cultured. Used for recovery of *Listeria monocytogenes* from neural listeriosis and *Yersinia* spp.

c. exposure see **hypothermia**.

c. housing thin-walled, uninsulated barns with no central heating.

c. injury includes **hypothermia** and **frostbite**.

c.-nosed refers to a hound which is able to follow a cold (very old) scent.

c. receptors receptors in the skin which are sensitive to low temperatures.

c. rooms walk-in refrigerator; temperature used varies with material stored, e.g. meat needs 32–45°F (0–7°C), offal needs less than 28°F (−2°C).

c. shortening shrinkage of meat when temperature is excessively low in early stages of chilling.

c. steel surgery that using unheated cutting instruments; the normal surgical procedure in contrast to electrosurgery or cryosurgery.

c. storage for meat to be stored for more than 72 hours the chilling temperature should be below 35°F (3°C) and the humidity less than 90%.

c. stress occurs at temperatures less than 50°F (10°C), varying with chill factor, wetness, protection from wind.

c. therapy see **cryosurgery**, therapeutic **hypothermia**.

c. tray the container used for immersion of instruments in a cold sterilization solution, usually with a rack that allows instruments to be lifted above the fluid level to drain before use.

c. water hemolytic anemia see cold **anemia**.

cold-blooded poikilothermic.

cold-insoluble globulin see **fibronectin**.

coldblood horses with no Arab blood in their ancestry; generally the draft breeds, Clydesdale, Shire, Percheron, Rhenish, Black Forest, Schleswig, South German.

coldwater disease a disease of fish kept in temperate water caused by the bacteria *Flavobacterium psychrophilum* when the tank water temperature is maintained at too low a level. Called also peduncle disease. See also **rainbow trout** fry syndrome.

cole [*kōl*] ***Brassica napa*** subsp. *campestris*.

Cole endotracheal tube [*kōl*] see Cole-pattern **endotracheal** tube.

Cole infant tube [*kōl*] a very small diameter uncuffed endotracheal tube suitable for use in a small animal.

colectomy [*ko-lek'tə-me*] excision of the colon or of a portion of it.

VetBooks.ir

VetBooks.ir

C-63: Cold sterilization tray.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

Coleoptera [*kol"e-op'tər-ə*] an order in the class Insecta—the beetles.
Coleosporium solidagensis toxic fungal rust occurs on *Solidago* spp. (goldenrod).
Colesiota conjunctivae see ***Chlamydophila pecorum***.
colibacillary enterotoxemia see **colibacillosis**.
colibacillemia the presence of *Escherichia coli* in the blood.
colibacillosis [*ko"lī-bas-ĭ-lo'sis*] infection with *Escherichia coli*; takes many forms, some of them septicemic, some toxemic due to absorption of the enterotoxin and some locally toxigenic. See also **coliform** mastitis, **mastitis–metritis–agalactia** of sows, neonatal colibacillosis (below), **coliform** gastroenteritis of weaned pigs, **edema** disease, **cerebrospinal** angiopathy, **coligranuloma**.
enteric c. the form of colibacillosis characterized by varying degrees of diarrhea. It occurs in all species, especially in the very young less than one week old. In pigs it occurs also immediately after weaning. Specific serotypes, distinct from those that cause septicemia, cause this enteric form of the disease. They have two virulence factors: (1) fibrial (pilus) attachment antigens that allow them to attach to the enterocyte. (2) the ability to produce enterotoxins that alter fluid absorption and excretion in the small intestine. The cardinal sign is diarrhea, varying from pasty to profuse and watery, foul smelling and pale in color. Most affected calves continue to feed and recover spontaneously in a few days. The others become anorectic, dehydrated and weak and die in 3–5 days. In newborn pigs the disease is much more serious and the majority of piglets die. In weaned pigs the situation is the same with many pigs dying quickly before other signs become evident. The critical clinical sign is a profuse diarrhea with death due to dehydration and electrolyte losses. The enteric form of the disease is uncommon in foals and lambs where the septicemic form prevails.
enterotoxemic c. toxin produced by a specific serotype is absorbed from the gut and exerts its toxicity on remote tissues. See also **edema** disease. Called also enterotoxic colibacillosis.
neonatal c. a highly fatal form of colibacillosis which can occur in the young of all species during the first 48 hours of life. A high prevalence is usually associated with a low intake of colostrum and colostral antibodies and the presence of pathogenic serotypes. The disease may take the form of a septicemia or a profound endotoxemia or be limited to the gut lumen and cause severe diarrhea.
post-weaning c. post-weaning **coliform** gastroenteritis.
septicemic c. invasion of the systemic circulation, with the probability of infection of all tissues, with *Escherichia coli*. The source of infection may be mastitis, metritis, cystitis, omphalophlebitis or enteritis. Characterized clinically by toxic shock, cardiovascular collapse, hypothermia, coma, a short course and a high mortality rate. Survivors may develop disease due to localization in joints, meninges, etc. Commonest in foals, calves and piglets.

C-64: South-German coldblood horse.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

C-65: Septicemic colibacillosis. Calf that has just been rotated to lie on other side showing shock with open moth breathing and lack of response to surroundings.

colibacilluria [*ko"lī-bas"ĭl-u're-ə*] the presence of *Escherichia coli* in the urine.
colibacillus [*ko"lī-bə-sil'əs*] see ***Escherichia coli***.
Colibri forceps corneal forceps with very narrow blades and fine points which may be straight or angled. The blades may meet or overlap.
colic [*ko'lik*] 1. pertaining to the colon. 2. a syndrome caused by severe paroxysmal pain due to disease of an abdominal organ. Usually due to alimentary tract disease, and rarely to infection or calculus in the urinary tract involving the renal pelvis, ureter, bladder or urethra.
bovine c. is characterized mainly by recurrent bouts of downwards arching of the back, restless walking, looking at the flank, lying down, rolling, and getting up again. Colic is evident for a few hours only and is followed by spontaneous recovery in most cases. These cases are probably caused by intestinal spasm. The next most common cause is intestinal obstruction by **phytobezoar**, **volvulus**, **strangulation** (2), or **intussusception**. In these the colic disappears but no feces are passed for some days. Rectal examination reveals scant, pasty gray or blood-stained feces, and possibly the presence of distended loops of intestine. Enterotomy or enterectomy is essential for survival. Rare cases also occur due to renal infarction or to ureteric obstruction.
functional c. colic in the absence of a structural fault, e.g. spasmodic colic, paralytic ileus.
colon impaction c. impaction of the colon on a diet high in tough fiber is common in horses and pigs. There is mild abdominal pain and hard fecal masses are passed. See also **meconium** ileus, impaction colic (below).
equine c. most cases are due to intestinal disease. Characteristic signs are bouts of pain marked by pawing, looking at the flank, lying down and getting up restlessly, rolling; the gut sounds are either absent or excessive. Mild cases recover spontaneously or after medical treatment for gut spasm or impaction with dry feed. Life-threatened cases have shock, circulatory collapse and usually positive findings on abdominal paracentesis. Surgery is often obligatory. Acute colic is also an important part of the syndrome in acute enteritis and colitis in which diarrhea is a paramount sign. Peritonitis is usually manifested as subacute colic.

C-66: A horse with colic, rolling.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

flatulent c. of horses is due to gas accumulation in the large intestine when grazing on lush pasture. There is severe pain, obvious distention of the abdomen, and the rectum is obstructed by distended loops of bowel. Sporadic cases occur as a result of partial obstruction of the intestine by fibrous adhesions. Trocarization through the flank or rectum is often necessary. Called also tympanitic colic. Previously called intestinal meteorismus.

gastric dilatation c. of horses due to gastric dilatation is a severe acute disease due to gorging on hay or grain, especially immediately after racing, or due to lipoma causing strangulation at the pylorus. Regurgitation through the nostrils or the discharge of large quantities of fluid gastric contents through a nasal tube is a frequent sign. Death is common as a result of gastric rupture.

impaction c. in horses is due to dry or indigestible feed, or bad teeth, or in foals by the retention of meconium. Subacute pain bouts occur at long intervals and over several days; death in untreated cases is due to exhaustion. Effective treatment is large oral doses of mineral oil (paraffin) administered by nasal tube. See also colon impaction colic (above).

intestinal obstruction c. in horses is caused by intestinal obstruction consisting mostly of acute life-threatening cases due to intussusception, strangulation or volvulus, usually affecting the small intestine, although sometimes it is the cecum or colon. Typical signs are shock, absence of gut sounds, very severe pain, short course, positive findings of blood-stained fluid on paracentesis, distended loops of gut on rectal examination and death due to shock and dehydration unless the blockage is relieved by surgery. Less severe cases are caused by impaction of the ileocecal valve by undigested fine fiber or grain, by sand accumulation, obstruction by phytobezoars, enteroliths or linear foreign bodies, usually in the small colon. See also under **enterolith**, **phytobezoar**, linear **foreign body**, **volvulus**, **intussusception**, **strangulation**.

lead c. colic due to lead poisoning.

neurogenic c. colic in the horse, caused by stimulation of nerve supply to intestine by verminous aneurysm. Colic is spasmodic.

recurrent c. equine colic that recurs at intervals of weeks or months. Due usually to repeated dietary indiscretions or to a persisting defect, e.g. bad teeth, verminous aneurysm.

renal c. intermittent and acute pain usually resulting from the presence of one or more calculi in the kidney or ureter.

sand c. is caused by the ingestion of soil or sand and can be an acute syndrome due to ileocecal valve impaction or chronic mild pain with diarrhea for a period of months.

spasmodic c. cause of this form of colic in horses is unknown, but suggestions include excitement or drinking cold water. Bouts of sharp pain are accompanied by loud, frequent gut sounds, and spontaneous recovery is usual within an hour. Occasional cases develop volvulus during bouts of rolling.

thromboembolic c. is caused by infarction of a section of gut wall or by stimulation by migrating strongyle larvae and may appear as intermittent spasmodic colic or subacute colic for a number of days followed by development of peritonitis. See also **strongylosis**.

tympanitic c. see flatulent **colic**.

colicky [*kol'ik-e*] pertaining to or affected by colic.

coliform [*ko'li-form*] pertaining to fermentative gram-negative enteric bacilli, sometimes restricted to those fermenting lactose, i.e. *Escherichia*, *Klebsiella*, *Enterobacter* and *Citrobacter*.

avian c. septicemia a disease of chickens, ducklings and young turkeys causing high mortality. Characterized at necropsy by fibrinous exudates on the surface of all viscera and *E. coli* in all organs. The route of infection is generally via the respiratory tract.

c. gastroenteritis a disease of recently weaned pigs characterized by sudden death or severe diarrhea and caused by pathogenic serotypes of *E. coli*. The pigs often die of dehydration and toxemia. Those that survive have lost a lot of condition. Called also post-weaning diarrhea.

c. mastitis peracute bovine mastitis caused by *E. coli* and other members of the *Enterobacteriaceae* and characterized by minor enlargement and inflammation of the udder, thin serous milk containing small flakes. There is profound shock, the mortality rate is high and the quarter is lost. See also **mastitis–metritis–agalactia** of sows.

c. pyometra the more severe form of pyometra in bitches and queens, characterized by severe toxemia and a fetid, viscous, red-brown uterine exudate.

c. septicemia see septicemic **colibacillosis**.

c. septicemia, ducks manifested by moist granular to curd-like exudate in the pericardial sac, pleural and peritoneal cavities and air sacs.

coligranuloma [*ko"li-gran"u-lo'mə*] a disease of birds caused by *Escherichia coli* and characterized by granulomas in the intestinal wall, liver and lungs. Called also Hjärre's disease.

Colinus virginianus see **quail**.

coliplication coloplication.

colipuncture colocentesis.

colisepsis infection with *Escherichia coli*.

colisepticemia [*ko"li-sep"ti-se'me-ə*] septicemia due to *Escherichia coli*.

colistimethate [*ko-lis"ti-meth'āt*] an antibiotic prepared of **colistin**.

colistin [*ko-lis'tin*] a polymyxin antibiotic, active against gram-negative organisms and used in the treatment of urinary tract infections. Available in two forms, colistin sulfate and colistimethate sodium. Called also polymyxin E.

colitides plural of *colitis;* inflammatory disorders of the colon considered collectively.

colitis [*ko-li'tis*] pl. *colitides;* inflammation of the colon. There are many types of colitis, each having different etiologies. The differential diagnosis involves the clinical history, fecal examinations, proctoscopy, radiological studies such as barium enemas, and sometimes biopsy.

antibiotic-associated c. colitis associated with antimicrobial therapy occurs in humans and animals. It can range from mild nonspecific colitis and diarrhea to severe fulminant pseudomembranous colitis (see below) with profuse watery diarrhea. The inflammation may be caused by a toxin produced by *Clostridium difficile*, a microorganism that is not normally present in the resident bowel flora. Presumably, the disruption of the normal flora allows the growth of *C. difficile*. There is developing evidence that, in foals and adult horses, *C. difficile* can be associated with diarrheal disease that can vary from mild to self-limiting to an acute and fatal enterocolitis. Evidence for this association is the biological plausibility, some evidence that this syndrome can be reproduced experimentally, and the ability to demonstrate the organism or its toxin in the feces of horses with the enterocolitis in comparison with the low prevalence and absence of toxin in the feces of non-diarrheic horses. This syndrome commonly occurs in horses following antimicrobial therapy and/or hospitalization. It is possible that enterotoxin from intestinal *C. perfringens* may also contribute in horses and the syndrome has been called equine clostridiosis.

ciliate c. colitis in primates caused by *Troglodytella* spp. and characterized by diarrhea.

c. cystica profunda dilated, grossly visible colonic glands protrude through the muscularis mucosae into the submucosa; no specific cause attributed; an incidental necropsy finding, especially in pigs.

eosinophilic ulcerative c. occurs in humans and dogs, either as a primary disease or as part of an eosinophilic gastroenteritis. Characterized histologically by eosinophilic infiltration of the lamina propria and submucosa. May be caused by hypersensitivity reactions, parasites or foreign body reactions.

granulomatous c. see histiocytic ulcerative colitis (below).

histiocytic ulcerative c. a chronic, debilitating inflammation of the colon occurring predominantly in young Boxer dogs. Affected dogs have a chronic hemorrhagic diarrhea with tenesmus, occasionally vomiting, inappetence and weight loss. Colonic mucosa is thickened, friable and ulcerated. PAS-positive histiocytes are found in the mucosa and submucosa. The cause of this disease is unknown. It is similar, but not identical to, ulcerative colitis, granulomatous colitis and Whipple's disease of humans.

idiopathic c. a disease similar to histiocytic ulcerative colitis (above), occurring predominantly in dogs other than Boxers and lacking the PAS-positive granules in histiocytes.

mucous c. see irritable **colon** syndrome.

nonspecific c. diarrheic disease of growing pigs resembling a mild form of swine dysentery; associated with infection by *Serpulina innocens*. Called also grower pig scours.

plasmacytic–lymphocytic c. mucosal infiltration by plasmacytes and lymphocytes associated with sign of colitis in dogs. Dietary hypersensitivity is considered an important cause.

pseudomembranous c. a severe acute inflammation of the bowel mucosa, with the formation of pseudomembranous plaques.

VetBooks.ir

It is most commonly associated with antimicrobial therapy (see antibiotic-associated colitis (above)). Called also pseudomembranous enterocolitis.

psychologically induced c. see irritable **colon** syndrome.

uremic c. an outstanding lesion in cattle dying of uremia.

c.-X a peracute colitis of horses, sometimes occurring as outbreaks, characterized by a short course of about 24 hours, profuse diarrhea, sometimes with colic and dysentery, profound dehydration and a high mortality rate. The cause is unknown, but it may be due to factors described under colitis (above).

colitoxicosis [*ko"lĭ-tok"sĭ-ko'sis*] toxemia caused by absorption of *Escherichia coli* toxin from the intestine; it affects newborn animals within the first week of life and pigs after weaning. Older animals are affected from other sites such as mammary gland or uterus. The common syndrome, especially in calves, is collapse with circulatory failure, hypothermia and death within about 6 hours. In weanling pigs the outstanding feature is edema of the eyelids and other sites. A high morbidity and mortality are usual in a group of pigs which also show incoordination, weakness and paralysis. The course of the disease is about 24 hours. See also **mastitis–metritis–agalactia**, **coliform** mastitis.

colitoxin [*ko'lĭ-tok"sin*] a toxin from *Escherichia coli*.

coliuria [*ko"lĭ-u're-ə*] the presence of *Escherichia coli* in the urine.

collagen [*kol'ə-jən*] a fibrous structural protein that constitutes the protein of the white fibers (collagenous fibers) of skin, tendon, bone cartilage and all other connective tissues. The most abundant protein in mammals. It also occurs dispersed in a gel to provide stiffening, as in the vitreous humor of the eye. It is made of monomers of tropocollagen. Different types of collagen (types I, II, III, IV and V and others) occur in different locations and have differing chemical compositions and physical characteristics.

c. diseases a group of diseases having in common certain clinical and histological features that are manifestations of involvement of **connective tissue**, i.e. those tissues that provide the supportive framework (musculoskeletal structures) and protective covering (skin and mucous membranes and vessel linings) for the body. The basic components of connective tissue are cells and extracellular protein fibers embedded in a matrix or ground substance of large carbohydrate molecules and carbohydrate–protein complexes called mucopolysaccharides. For the sake of clarity and organization, collagen diseases may be divided into two major groups: (1) those that are genetically determined and are a result of structural and biochemical defects, and (2) those that are acquired and in which immunological and inflammatory reactions are taking place within the tissues. Among the first group are those diseases caused by a lack of a specific enzyme necessary for proper storage and excretion of one or more mucopolysaccharides, such as Ehlers–Danlos syndrome. These disorders are distinguished by structural defects affecting the formation of collagen. Acquired connective tissue diseases are believed to develop as a result of at least two causative factors: a genetic factor and an abnormal immunological response. Examples of collagen diseases that are most probably the result of an aberration of the immunological reactions that mitigate injury and inflammation of connective tissues are systemic lupus erythematosus, rheumatoid arthritis, polymyositis and dermatomyositis.

c. dysplasia see **hereditary** collagen dysplasia.

c. fascicles interspersed with patches of cartilage in fibrous cartilage (fibrocartilage).

c. fibers the principal component of connective tissue, providing strength and resisting stretching; a structural protein in fiber form.

c. fibrils collagen fibers are composed of fibrils visible only by electron microscope.

c. footpad disorder footpads in young German shepherd dogs become soft, tender, depigmented and ulcerated. Some dogs later develop renal amyloidosis. The cause is unknown.

microcrystalline c. a surface hemostatic agent.

c. nevus see **nevus**.

c. shield form of corneal protection in the shape of a contact lens, but manufactured from collagen rather than plastic; used in the treatment of ulcerative and nonulcerative keratitis. Ultimately these dissolve in the tear film.

c. sponge surgical sponge made of collagen; used to fill surgical space and to control hemorrhage. Is not absorbable but has enormous fluid absorption capacity and has excellent wet strength and is very pliable and easy to use.

c. suture an absorbable suture of natural material; made from bovine flexor tendon. May be plain or chromic.

collagenase [*kə-laj'ə-nās*] an enzyme that catalyzes the degradation of collagen. Synthesized and released by host cells, especially leukocytes, and various infectious organisms, especially gram-negative bacteria. Of particular importance in the cornea where, unopposed by serum anticollagenases, they can cause rapid malacia and even corneal perforation. See also collagenase **ulcer**.

c. ulceration a rapidly spreading ulceration of the cornea triggered by the liberation of collagenase from necrotic cells. See collagenase **ulcer**.

collagenation [*kə-laj"ə-na'shən*] the appearance of collagen in developing cartilage.

collagenic [*kol"ə-jen'ik*] 1. producing collagen. 2. pertaining to collagen.

collagenitis inflammatory involvement of collagen fibers in the fibrous component of connective tissue.

collagenoblast [*kə-laj'ə-no-blast*] a cell arising from a fibroblast and which, as it matures, is associated with collagen production; it may also form cartilage and bone by metaplasia.

collagenocyte [*kə-laj'ə-no-sīt"*] a mature collagen-producing cell.

collagenogenic [*kə-laj"ə-no-jen'ik*] pertaining to or characterized by collagen production; forming collagen or collagen fibers. See also **collagenic**.

collagenolysis [*kol"ə-jən-ol'ə-sis*] dissolution or digestion of collagen.

collagenosis [*kol"ə-jĕ-no'sis*] see **collagen** diseases.

collagenous [*kə-laj'ə-nəs*] made of collagen.

c. nevus see **nevus**.

c. tissue composed of collagen, reticular and elastic fibers; may be loose or dense; the latter may be regular or irregular.

collapse [*kə-laps'*] 1. a state of extreme prostration and depression, with failure of circulation. 2. abnormal falling in of the walls of a part or organ.

circulatory c. **shock**; circulatory insufficiency without congestive heart failure.

lung c. see **atelectasis**.

collar [*kol'ər*] a decoration or harness worn around the neck. The primary means of restraint for domestic dogs. Used in cats as ornaments or to carry identification. See also **Elizabethan collar**.

choke c. see **choke** chain.

buster c. see **Elizabethan collar**.

flea c. see **flea** collar.

c. galls friction sores caused by rubbing of a saddlery collar on a horse's shoulder.

horse c. part of draft, cart or buggy harness. Made of leather, stuffed and lined with felt, they are fitted to the neck of the horse. They carry the metal hames to which plow chains or leather traces are attached.

tube c. a rigid cylinder, usually fashioned from X-ray film, applied around the neck to prevent the animal or bird from turning around to traumatize parts of the body with their mouth or beak.

collarette [*kol"ər-et'*] a small collar; see **epidermal** collarette, **iris**[1] collarette.

collateral [*ko-lat'ər-əl*] 1. secondary or accessory; not direct or immediate. 2. a side branch, as of a blood vessel or nerve.

c. circulation see collateral **vessel**, collateral **circulation**.

c. recruitment the utilization of many small arterial–capillary units in pulmonary tissue during exercise and increased cardiac output, for increased exchange of gases.

c. relationship where two individuals have a common ancestor.

collected a term describing the balance of a horse and rider, or a horse alone, while moving; smooth coordination of all parts working in unison.

collecting duct system part of the urinary drainage that includes collecting tubules, both straight and arched, and papillary ducts.

c. tubule see collecting **tubule**.

collective noun a word used to indicate a group of things, e.g. animals as in gaggle of geese, pod of whales. See Table 16.

colliculectomy [*kə-lik"u-lek'tə-me*] excision of the seminal colliculus.

colliculitis [*kə-lik"u-li'tis*] inflammation about the seminal colliculus.

colliculus [*kə-lik'u-ləs*] pl. *colliculi;* a small elevation.

caudal c. see midbrain colliculus (below).

midbrain c. one of the four colliculi in the tectum of the midbrain, two caudal (inferior) and two rostral (superior) containing the visual and auditory reflex centers. Called also corpora quadrigemina.

seminal c., c. seminalis a prominent portion of the male urethral crest, on either side of which, depending on the species, are the openings of the vasa deferentia or ejaculatory ducts; called also verumontanum.

superior c. see midbrain colliculus (above).

Collie a large dog with a distinctive elongated, flat head and nose. There are two varieties, the rough-coated (longhaired) and the smooth-coated (shorthaired), which are regarded as separate breeds in the United Kingdom. In the more common rough Collie, a thick, long coat forms a ruff or mane around the neck and front of the chest. The breed originated in Scotland as shepherd's dog and the rough-coated variety is also called a Scotch collie. The breed is affected by group of inherited abnormalities in ocular development, collectively called collie eye anomaly, inherited epilepsy, hemophilia A, patent ductus arteriosus, cerebellar degeneration and cyclic neutropenia. It is also predisposed to nasal solar dermatitis (so-called collie nose).

C. ectasia syndrome see collie eye anomaly (below).

C. eye anomaly a congenital inherited ocular syndrome with a wide range of defects in the posterior vascular, neural, and fibrous tunics of the eye, presumably due to failed mesodermal differentiation and development. The hallmark sign is choroidal hypoplasia (often limited to the area lateral to the optic disc). This can be associated with any combination of scleral ectasia, optic nerve coloboma, retinal detachment and microphthalmia. Although this appears to be an autosomal recessive trait, there is much pleomorphism in the phenotypic appearance. Seen almost exclusively in Collies, Border collies and Shetland sheepdogs. Formerly called also collie ectasia syndrome.

C. granuloma see nodular granulomatous **episcleritis**.

miniature C. see **Shetland sheepdog**.

C. nose a depigmenting, crusting dermatitis of the planum nasale, adjacent skin on the dorsum of the nose, and sometimes lip and eyelid margins. Occurs most commonly in sunny climates and in individual dogs with the greatest exposure to sunlight. Once believed to be a breed-specific disorder related to the long nose of collies, it is now known that several diseases produce similar clinical features and in many breeds. These include discoid and systemic **lupus erythematosus**, **pemphigus** erythematosus and **pemphigus** foliaceus, as well as solar **dermatitis**.

silver C. syndrome see canine **cyclic** neutropenia.

collie a general term referring to collie type dogs, or sheep herding dogs, although it may have specific meaning in some locations, such as in North America where it refers to the Collie breed, or in Great Britain where it usually refers to the Border collie breed.

collimation [*kol"ĭ-ma'shən*] in microscopy, the process of making light rays parallel; the adjustment of two or more optical axes with respect to each other. In radiology, the restriction of the beam size to the area under investigation. This reduces the scattered radiation reaching the X-ray film and the exposure of attendants.

collimator [*kol'ĭ-ma"tər*] 1. a device, sometimes a diaphragm, or series of diaphragms, which control the direction and the dimensions of the X-ray beam. 2. in nuclear scintigraphy, a perforated lead plate mounted on a scintillation camera to absorb gamma rays not aligned perpendicular to the surface of the camera.

C-67: Collie (smooth), blue merle color.

C-68: Collie nose.

collinearity very high correlation between variables.

colliquative [*kə-lik'wə-tiv*] characterized by excessive liquid discharge, or by liquefaction of tissue.

collisional interactions collisions which occur when an electronic target is bombarded with high energy electrons as in X-rays. The collisions result in heat loss.

collodiaphyseal [*kol"o-di"ə-fiz'e-əl*] pertaining to the neck and shaft of a long bone, especially the femur.

collodion [*ko-lo'de-on*] a highly flammable syrupy liquid compounded of pyroxylin dissolved in ether and alcohol, which dries to a clear tenacious film; used as a topical protectant applied to the skin to close small wounds, abrasions and cuts, to hold surgical dressings in place, and to keep medications in contact with the skin.

flexible c. a mixture of collodion, camphor and castor oil; used topically as a protectant.

salicylic acid c. flexible collodion containing salicylic acid, used topically as a keratolytic.

colloid [*kol'oid*] 1. gluelike. 2. the translucent, yellowish, gelatinous substance resulting from colloid degeneration. 3. a chemical system composed of a continuous medium (continuous phase) throughout which are distributed small particles, 1–1000 nm in size (disperse phase), which do not settle out under the influence of gravity. For example, if the disperse phase is a solid and the dispersing phase a liquid, the system is called a *sol*, such as glue. Milk is an example of an emulsion, in which both phases are liquid, one an oil and one water. Colloidal particles are not capable of passing through a semipermeable membrane, as in dialysis. Solutes that can pass through a semipermeable membrane are sometimes called crystalloids.

c. solution a crystalloid-based solution containing large molecules too large to freely cross the semipermeable membrane defining the intravascular space. Used in the resuscitation and maintenance of intravascular volume and systemic blood flow, typically in conjunction with **crystalloid** solutions to restore interstitial fluid volume; used in the treatment of various conditions in which there is intravascular volume depletion and poor tissue perfusion. Includes whole blood, plasma, hetastarch, pentastarch and dextran 70.

stannous sulfur c. a sulfur colloid containing stannous ions formed by reacting sodium thiosulfate with hydrochloric acid, then adding stannous ions; a diagnostic aid in bone, liver and spleen imaging.

colloidal [*ko-loid'əl*] of the nature of a colloid.

c. bath a bath prepared by adding soothing agents, such as gelatin, starch, bran or similar substances, to the bath water, for the purpose of relieving skin irritation and pruritus. The patient is dried by patting rather than rubbing the skin. Care must be taken to avoid chilling.

c. body a homogeneous, eosinophilic structure found in the lower epidermis in systemic or discoid lupus erythematosus and any other skin disease in which there is damage to the basal cells. They are formed from degenerated epidermal basal cells and contain

VetBooks.ir

VetBooks.ir

immunoglobulin, complement, fibrin and glycoprotein. Called also Civatte body, hyaline body.

c. degeneration the assumption by the tissues of a gumlike or gelatinous character.

c. goiter see **goiter**.

c. osmotic pressure largely the osmotic pressure exerted by plasma proteins; see also oncotic **pressure**.

c. solution see **colloid** solution.

colloidin [ko-loid'in] a jelly-like principle produced in colloid degeneration.

collum [kol'əm] pl. *colla* [L.] the neck, or a necklike part such as the part just below the head of the humerus, penis, malleus, stapes or mandible. The collum of the omasum is its narrow fusion with the reticulum.

c. distortum torticollis.

c. valgum coxa valga.

collunarium a nosewash; a nasal douche.

collutorium a mouthwash. Called also collutory.

collutory [kol'u-tor"e] collutorium.

collyria eyewash.

Collyriclum a trematode genus of the family Troglotrematidae. Includes *Collyriclum faba* (subcutaneous cysts in fowls, turkeys and wild birds).

collyrium [kə-lir'e-əm] an eyewash; a lotion for the eyes.

col(o)- word element. [Gr.] *colon*.

coloboma [kol"o-bo'mə] pl. *colobomata*; an absence or 'notch-type' defect of ocular tissue(s), usually due to failure of a part of the fetal fissure to close; it may affect the choroid, ciliary body, eyelid (palpebral coloboma, coloboma palpebrale), iris (coloboma iridis, iridodiastasis), lens (coloboma lentis), optic nerve or retina (coloboma retinae). Can occur uni- or bi-laterally and cause minimal to severe visual impairment depending on location, severity, and secondary complications. Inherited in many domestic animal species, especially several breeds of cattle and Collie dogs as part of **Collie** eye anomaly.

atypical c. one occurring at a location other than the fetal fissure (ventrally on the vertical meridian)..

typical c. one occurring in or near to the fetal cleft (ventrally on the vertical meridian)..

colobomatous pertaining to or emanating from a coloboma.

Colocasia a plant genus in the family Araceae. Rhizomes may cause cyanide poisoning; leaves also oral irritation on ingestion because of presence of calcium oxalate raphide crystals. Includes *C. esculenta* (*C. antiquorum*). Called also taro, elephant ears, dasheen.

colocecostomy cecocolostomy.

colocentesis [ko"lo-sen-te'sis] surgical puncture of the colon.

Coloceras a genus of feather-eating lice of the family Philopteridae which infest pigeons and doves. Includes *Colocera damicorne* (pigeons).

coloclysis [ko"lok'li-sis] irrigation of the colon.

cloclyster an enema introduced into the colon through the rectum.

colocolostomy [ko"lo-kə-los'tə-me] surgical formation of an anastomosis between two portions of the colon.

colocutaneous [ko"lo-ku-ta'ne-əs] pertaining to the colon and skin, or communicating with the colon and the cutaneous surface of the body.

colocynth [kol'o-sinth] ***Citrullus*** *colocynthis*.

colocynthin [kol"o-sin'thin] plant toxin in *Citrullus* spp., causes diarrhea, enteritis.

Colocynthis vulgaris ***Citrullus*** *colocynthis*.

coloenteritis [ko"lo-en"tər-i'tis] enterocolitis.

colofixation [ko"lo-fik-sa'shən] the fixation of the colon in cases of ptosis.

coloileal [ko"lo-il'e-əl] ileocolic.

colon [ko'lən] the part of the large intestine extending from the cecum to the rectum. It has the same basic design in all mammalian species. There is an ascending colon which begins at the cecum, passes forward to the cranial part of the abdominal cavity then crosses to the left side as the transverse colon. It then turns caudally again to become the descending colon. In the caudal abdomen the colon curves to the midline and joins the rectum. See also **colonic**. In herbivores and omnivores there is a variation on this general plan in that the ascending colon is greatly lengthened. In the ruminants and the pig this takes the form of a spiral colon of centrifugal and centripetal loops which occupy the right side of the abdomen. In the horse the ascending colon forms an uncoiled loop reflexed upon itself, beginning at the cecum as the right ventral colon, passing to the left ventral, to the left dorsal at the pelvic flexure, then to the right dorsal, then back into the standard pattern at the transverse colon. In the horse there is the additional oddity of a significant reduction in diameter at the small colon, the terminal part which joins the rectum.

ascending c. the first segment of the colon which is either a short, cranially directed segment, as in the dog, or is greatly expanded to form the spiral colon in ruminants or a cone-shaped mass in pigs, or the great colon of horses (right ventral, sternal flexure, left ventral, pelvic flexure, left dorsal, diaphragmatic flexure, right dorsal colons).

coiled c. see spiral colon (below).

descending c. the third and last of the three main divisions of the colon which runs caudally and terminates in the rectum. It is not extensive in the horse, in which it has an unusually long mesentery and is known as the small colon.

floating c. small or descending colon in horses.

irritable c. syndrome stress and psychological factors can cause the frequent passage of soft to watery feces, often with mucus, in dogs. Called also mucous colitis, spastic colon, psychologically induced colitis, and irritable bowel. See also spasmodic **colic**.

large c. the ascending colon of the horse.

left c. displacement colic forward displacement of the left dorsal colon is an uncommon cause of moderate colic in the horse. Characteristic findings include a palpable medial displacement of the spleen and the absence of the pelvic flexure of the colon from its usual site in front of the pelvis. Surgical removal of the displaced colon from its entrapment across the top of the gastrosplenic ligament is the only effective treatment.

short c. see descending colon (above).

redundant c. extra bends in the descending colon. Seen on X-rays, especially in large breed dogs.

right dorsal c. displacement displacement of the right dorsal colon in the horse to the area between the right body wall and the cecum, in an anterior direction so that the pelvic flexure comes to lie against the diaphragm.

small c. the terminal colon in the horse between the transverse colon and the rectum. Because of its small diameter it is a common site for obstruction by phytobezoars and similar bodies.

spiral c. the coiled ascending colon of ruminants, made up of two centripetal gyri, a central flexure and two centrifugal gyri.

colonic [ko-lon'ik] pertaining to or arising from the colon.

c. aganglionosis see colonic **aganglionosis**.

c. atony see **megacolon**.

c. atresia affected neonates appear normal at birth but develop abdominal distention quickly. No feces are passed and death occurs at about one week unless surgical repair is effected. The defect occurs sporadically in most species. In horses and cattle it can be inherited, in cattle it can result from over-vigorous palpation of the fetus between 35 and 41 days gestation at pregnancy diagnosis, but the cause is not determined in most cases.

c. bands see **tenia** coli.

c. constriction due to contraction of peritoneal adhesions in horses; causes chronic or intermittent colic.

c. contraction permanent inability of colon to dilate due to congenital aganglionosis.

c. crypt straight tubular glands in the colonic mucosa.

c. entrapment see left **colon** displacement.

c. foreign body foreign bodies, e.g. halter shanks, are found in the colon in horses, having passed the gastric sphincter and the ileocecal valve; quickly encrusted with salts.

c. impaction intractable constipation occurs in dogs and cats, primarily with obstruction by foreign material and secondarily when there is an obstruction to the normal passage of feces, including retention because of pain at defecation. See also colon impaction **colic** of horses.

c. infarction see thromboembolic **colic**.

c. ischemia deprivation of blood supply to all or part of the colon. See also **intestinal** torsion, **intestinal** strangulation, intestinal obstruction **colic**.

c. obstruction see colonic impaction (above), **intestinal** obstruction.

c. rupture occurs, apparently spontaneously, in mares at foaling, death occurring soon afterwards.
c. torsion in horses, see under equine **colic**. In cattle, torsion of the coiled colon is an acute obstruction with coils of gas-distended colon visible in the right flank and palpable per rectum.
c. wash fecal samples can be collected from reptiles by flushing the colon with saline through a catheter inserted through the cloaca and into the colon.
colonitis inflammation of the colon; colitis.
colonoileoscope an elongated flexible fiberoptic endoscope which permits visual examination of the luminal surface of the colon and ileum.
colonoileoscopy inspection of the lumen of the colon and ileum with an endoscope.
colonopathy [*ko"lo-nop'ə-the*] any disease or disorder of the colon.
colonorrhagia hemorrhage from the colon.
colonorrhea mucous colitis.
colonoscope [*ko-lon'o-skōp*] an elongated flexible fiberoptic endoscope which permits visual examination of the lining of the entire colon.
colonoscopy [*ko"lən-os'kə-pe*] endoscopic examination of the colon, either transabdominally during laparoscopy, or transanally by means of a colonoscope.
colony [*kol'ə-ne*] a discrete group of organisms, as a single cluster of bacteria in a culture that was produced from a single starting bacterium.
c.-forming units 1. a unit of measurement of the number of viable bacteria in a liquid. 2. colonies of pluripotent stem cells located and quantified in the spleen. Colonies grown in vitro interact with erythropoietin to give rise to morphologically identifiable erythroid cells.
c.-stimulating factors cytokines produced by a variety of tissues, which stimulate the growth and differentiation of hematopoietic cells. Includes granulocyte–macrophage colony-stimulating factor, monocyte–macrophage colony-stimulating factor and granulocyte colony-stimulating factor.
colony collapse disorder (CCD) a syndrome of sudden die-off of honey bee colonies characterized by a lack of adult bees in the hive, the presence of a queen bee and some recently emerged young bees, little to no build-up of dead bees, and abundant honey and pollen stored within the nest. A cause has not been identified.
colopexy [*ko'lo-pek"se*] surgical fixation or suspension of the colon, usually to the dorsolateral abdominal wall to prevent recurring rectal prolapse.
coloplication [*ko"lo-plī-ka'shən*] the operation of taking a reef or fold in the colon. An inverting stitch, e.g. Lembert, will also plicate the colon. This could be used over a weakened wall which is still viable, e.g. needle decompression site.
coloproctectomy [*ko"lo-prok-tek'tə-me*] surgical removal of the colon and rectum.
coloproctitis [*ko"lo-prok-ti'tis*] inflammation of the colon and rectum; colorectitis.
coloproctostomy [*ko"lo-prok-tos'tə-me*] anastomosis of the colon to the rectum.
coloptosis [*ko"lo-to'sis*] caudal displacement of the colon.
colopuncture [*ko'lo-pungk'chər*] colocentesis.
color [*kul'ər*] 1. a property of a surface or substance due to absorption of certain light rays and reflection of others within the range of wavelengths (roughly 370–760 nm) adequate to excite the retinal receptors. 2. radiant energy within the range of adequate chromatic stimuli of the retina, i.e. between the infrared and ultraviolet. 3. a sensory impression of one of the rainbow hues.
broken c. in describing coat color, a solid color broken up by another color, usually white.
c. dilution reduction of the concentration of the color pigment in tissue; most important in hair and other fiber coats, in the skin and in the ocular iris.
c. dilution alopecia see color dilution **alopecia**.
c. pigments the pigments influencing skin color are melanin, melanoid, oxygenated hemoglobin, reduced hemoglobin, carotene.
c. radical see **chromophore**.
solid c. said of animal haircoats; the same color all over the animal.
color-marking bulls bulls fitted with chin-ball marking harness for the detection of cows in estrus.
Colorado rubber tree ***Hymenoxys*** *richardsonii*, Colorado rubberweed.
Colorado tick fever a disease of humans caused by *Coltivirus*, transmitted from small mammals by the tick, *Dermacentor andersoni*.
colorectal [*ko"lo-rek'təl*] pertaining to or of the nature of the colon and the rectum.
c. polyp benign or malignant; most commonly occurs at the anorectal junction in middle-aged dogs, causing diarrhea, dyschezia and rectal bleeding.
colorectitis [*ko"lo-rek-ti'tis*] inflammation of the colon and rectum; coloproctitis.
colorectostomy [*ko"lo-rek-tos'tə-me*] see **coloproctostomy**.
colorectum [*ko"lo-rek'təm*] the distal portion of the colon and the rectum, regarded as a unit.
colorimetry a system for determining the concentration of a substance in solution by its absorbance of light of specified wavelengths.
Colorpoint, Colourpoint in cats, a light-colored body with darker pigmentation on the ears, face, legs and tail (points), as seen in Siamese cats from which this was genetically derived. It has been developed in shorthair and longhair varieties. The colors and patterns developed by selective breeding appear to be endless.
C. longhair generally regarded as a color variation of the Persian cat. See **Himalayan**.
C. shorthair essentially a Siamese cat with colored points other than the classic seal, chocolate, blue and lilac. In North America these are regarded as a separate breed, the Colorpoint shorthair, but in Britain they are regarded as separate varieties of Siamese.
colorrhaphy [*ko-lor'ə-fe*] suture of the colon.
colorsided said of cattle of any breed that have head, back and underline, tail and legs of one, or a mixture of other colors and sides that are differently marked and colored, e.g. Banteng, Telemark.
coloscope [*kol'o-skōp*] see **colonoscope**.
coloscopy [*ko-los'ko-pe*] see **colonoscopy**.
colostomy [*kə-los'tə-me*] an artificial opening (stoma) created in the large intestine and brought to the surface of the abdomen for the purpose of evacuating the bowels; also the opening (stoma) so created. Has been used successfully in the treatment of rectal tears in horses.
end-on c. the colon is transected and the distal portion is removed.
loop c. the colon remains intact; usually temporary.
colostral supplement products such as an ultrafiltrate of whey containing significant quantities of immunoglobulins are available for oral use as colostral supplements.
colostrogenesis secretion of colostrum.
colostrometer commercially available hygrometer for measurement of immunoglobulin concentraion in colostrum. Commonly used for this purpose but there are limitations to its accuracy for this purpose.
colostrum [*kə-los'trəm*] the thick, yellow secretion present in the mammary gland in increasing amounts for several days or weeks, depending on the species, before parturition. It is very rich in maternal antibodies and is essential in providing passive immunity to the neonate. An adequate amount of colostrum must be ingested during the first few hours after birth while the intestinal epithelium is still permeable to the large molecules of the immunoglobulins. Immunoglobulin concentrations in colostrum vary between species and are much higher than those found later in the milk. The predominant immunoglobulin in the colostrum of all major domestic animals is IgG. Swine have, in addition, high concentrations of IgA. See also colostral **immunoglobulins**. Called also beestings.
c.-induced anemia occurs in lambs fed cow colostrum; thought to be an immune-mediated hemolytic anemia.
bloody c. see **hemolactia**.
cross species c. preserved colostrum fed to a young animal from other than a dam of the same species. There is a risk for anemia in lambs and kids fed cow colostrum.
c. replacements commercially available products containing immunoglobulins derived from the processing of serum collected at cattle slaughter or second-milking colostrum purchased from dairies. The majority have sub-optimal concentrations of immunoglobulin to replace natural colostrum. Some are labeled as colostrum supplements but marketed as colostrum replacements.

VetBooks.ir

C-69: Colostrometer.

synthetic c. although referred to as colostrum, formulas can only attempt to duplicate milk of a particular species since they are lacking in immunoglobulins. See **milk** replacer.
c. vacuoles eosinophilic colostrum present in vacuoles in cytoplasm of intestinal epithelial cells in newborn animals.
colotomy [*ko-lot'ə-me*] incision of the colon.
colovaginal [*ko"lo-vaj'ĭ-nəl*] pertaining to or communicating with the colon and vagina.
colovesical [*ko"lo-ves'ĭ-kəl*] pertaining to or communicating with the colon and urinary bladder.
colpalgia [*kol-pal'jə*] pain in the vagina.
colpatresia [*kol"pə-tre'zhə*] atresia, or occlusion of the vagina.
colpectasia [*kol"pek-ta'zhə*] distention or dilation of the vagina.
colpectomy [*kol-pek'tə-me*] excision of the vagina.
colpeurysis [*kol-pu'rĭ-sis*] operative dilatation of the vagina.
colpitis [*kol-pi'tis*] inflammation of the vaginal mucosa; vaginitis.
colp(o)- word element. [Gr.] *vagina*.
colpocele [*kol'po-sēl*] see vaginal **hernia**.
Colpocephalum a genus of lice of the family Menoponidae. Includes *Colpocephalum tausi* (turkey) and *Colpocephalum turbinatum* (pigeons).
colpocleisis [*kol"po-kli'sis*] surgical closure of the vaginal canal.
colpocystitis [*kol"po-sis-ti'tis*] inflammation of the vagina and bladder.
colpocystocele [*kol"po-sis'to-sēl*] hernia of the bladder into the vagina.
colpocytogram [*kol"po-si'to-gram*] a differential listing of the cells observed in smears from the vaginal mucosa.
colpocytology [*kol"po-si-tol'ə-je*] the quantitative and differential study of cells exfoliated from the epithelium of the vagina.
colpoperineoplasty [*kol"po-per"ĭ-ne'o-plas"te*] plastic repair of the vagina and perineum.
colpoperineorrhaphy [*kol"po-per"ĭ-ne-or'ə-fe*] suture of the ruptured vagina and perineum.
colpopexy [*kol'po-pek"se*] suture of a relaxed vagina to the abdominal wall.
colpoplasty [*kol'po-plas"te*] plastic surgery involving the vagina.
colpoptosis [*kol"po-to'sis*] prolapse of the vagina.
colporrhaphy [*kol-por'ə-fe*] 1. suture of the vagina. 2. the operation of denuding and suturing the vaginal wall to narrow the vagina.
colporrhexis [*kol"po-rek'sis*] laceration of the vagina.
colposcope [*kol'po-skōp*] a speculum for examining the vagina and cervix by means of a magnifying lens.
colpospasm [*kol'po-spaz"əm*] vaginal spasm.
colpostenosis [*kol"po-stə-no'sis*] contraction or narrowing of the vagina.
colpostenotomy [*kol"po-stə-not'ə-me*] a cutting operation for stricture of the vagina.
colposuspension [*kol"po-səs-pen'shən*] a surgical procedure used in the treatment of urinary incontinence caused by urethral sphincter mechanism incompetence in female dogs. The procedure aims to move an intrapelvic bladder neck to an intra-abdominal position by suturing the vaginal wall to the prepubic tendon each side of the neck of the urinary bladder. Called also vaginal advancement.
colpotomy [*kol-pot'ə-me*] incision of the vagina with entry into the cul-de-sac to allow access to the abdominal cavity. Used for ovariectomy in mares and cows.
colpoxerosis [*kol"po-ze-ro'sis*] abnormal dryness of the vulva and vagina.
colt a young entire male horse up to 4 years of age; may be qualified, e.g. yearling colt; used also as an adjective, e.g. colt foal.
colt's foot *Tussilago farfara*
Coltivirus [*kol'tĭ-vi"rəs*] a genus in the family *Reoviridae* with only one member virus that causes Colorado tick fever in humans.
Colubridae [*kol-u'brĭ-de*] a large family of snakes in the class Reptilia with a number of subfamilies; members are called colubrids.
Columbia sheep medium wool, mutton type of polled American sheep. Produced using Lincoln rams on Rambouillet ewes. Common breed on western range in the USA.
Columbia SK virus a picornavirus in the genus *Cardiovirus* which causes encephalomyocarditis in zoo animals.
Columbicola a genus of lice in the superfamily Ischnocera. Includes *Columbicola columbae* (pigeons).
columbiformes see **pigeon**.
columbine see ***Aquilegia vulgaris***.
Columbus fancy an American breed of canaries, derived from several English varieties. A medium to large-sized bird with either a smooth or crested head.
Columbus grass ***Sorghum*** x *almum*.
columella [*kol"u-mel'ə*] pl. *columellae* [L.] a little column.
c. auris a connecting rod between the avian eardrum and the perilymph of the inner ear via the rod's footplate.
c. nasi the ridge of tissue separating the two nostrils and usually divided by a furrow (the filtrum).
column [*kol'əm*] an anatomical part in the form of a pillar-like structure; anything resembling a pillar.
anal c's longitudinal folds of mucous membrane at the cranial half of the anal canal; called also rectal columns.
c. of Bertin extensions of renal cortex between the renal pyramids.
c. chromatography see **chromatography**.
dorsal c. the sensory tracts in the dorsal funiculus of the spinal cord, consisting of the fasciculus gracilis and fasciculus cuneatus. In transverse section, seen as a horn.
gray c. the longitudinally oriented parts of the spinal cord in which the nerve cell bodies are found, comprising the gray matter of the spinal cord.
lateral c. the lateral portion of the gray substance of the spinal cord, in transverse section seen as a horn; present only in the thoracic and anterior lumbar regions and especially associated with the sympathetic nervous system.
rectal c's anal columns.
spinal c. the rigid structure in the midline of the back, composed of the vertebrae. Called also vertebral column. See also **spine**.
ventral c. the ventral portion of the gray substance of the spinal cord, in transverse section seen as a horn.
columna [*ko-lum'nə*] pl. *columnae* [L.] column.
columnaris disease an important disease of fish caused by infection with the bacteria *Flavobacterium columnare* (*Cytophaga columnaris*). It is characterized by circumscribed gray-white lesions on the skin about the head, gills and fins and on the body. Called also saddlepatch disease.
false c.d. similar to columnaris disease but caused by infection with the bacteria *Cytophaga johnsonae*. Characterized by skin erosion especially at the fins and jaws.
colza *Brassica rapa* subsp. *campestris*.
coma [*ko'mə*] a state of unconsciousness from which the patient cannot be aroused, even by powerful stimuli, but reflex activity is still present.
alpha c. coma in which there are electroencephalographic findings of dominant alpha-wave activity.
diabetic c. the coma of severe diabetic **acidosis**. See also **diabetes mellitus**.

hepatic c. results from reversible biochemical abnormalities of the cerebrum, caused by elevated blood concentrations of toxic substances such as ammonia, amino acids, short-chain fatty acids and beta hydroxylated biogenic amines that accumulate in severe liver disease. See also hepatic **encephalopathy**.
irreversible c. coma in which for a period of 24 hours there is complete nonreceptivity and nonresponsivity even to the most intensely painful stimuli, no spontaneous movement or breathing, absence of elicitable reflexes, and a flat electroencephalogram. Called also brain death.
myxedema c. the mental stupor caused by severe hypothyroidism; seen most often in Doberman pinchers, it is associated with hypoventilation, hypothermia, hypotension and bradycardia. Death may occur.
c. scale see coma **scale**.
Comandra pallida North American plant in the family Santalaceae; a facultative selenium converter plant; a selenocompound causes poisoning in livestock. Called also bastard toadflax.
comatose [*ko'mə-tōs*] pertaining to or affected with coma.
comb 1. a vascular, red cutaneous structure attached in a sagittal plane to the dorsum of the skull of domestic fowl. It consists of a base attached to the skull, a central mass called the body, a backward projecting blade and upward projecting points. Called also cockscomb. 2. see **ctenidium**.
buttercup c. (1) has no blade and is divided sagittally with a cup shape and with points arranged around the cup.
cushion c. (1) a low, small, oval, smooth body with no points.
nasal c. (1) the red, vascular structure across the base of the beak in the turkey. Called also snood, frontal process.
pea c. (1) has three blades with a row of points arising from each.
rose c. (1) a low elongated comb from which many small points arise. There is a backward projecting spike in lieu of a blade.
Silkie c. (1) similar to the V-comb but without points.
single c. (1) has all of the components without variation; the standard comb.
strawberry c. (1) a small, oval, flattened comb with a wrinkled surface.
V-c. (1) two large, conical points that diverge from a sizeable body. Usually accompanies a crest of feathers.
combinatorial library in immunology, the ligation of cDNAs of light and heavy chains of immunoglobulins, each in a separate bacteriophage vector.
combined immune deficiency syndrome (disease) an inherited defect of immunity, including lack of immunoglobulin synthesis, absence of cell-mediated immunity, thymic hypoplasia and a marked reduction in the number of thymic, splenic and blood lymphocytes, which occurs in foals of Arab breeding. It is inherited as an autosomal recessive trait and due to a five-base-pair deletion (frameshift mutation) at codon 9480. Clinically the foal is normal at birth but as the passive antibody acquired from the mare declines the foal succumbs to a succession of respiratory infections characterized by nasal discharge, cough, dyspnea and noisy breath sounds. The disease is inexorably progressive and fatal. Called also CID and PSCID for primary severe CID and lethal combined immune deficiency syndrome.
combined movements involuntary movements of the head and limbs in which the components of the movement always occur in the same sequence and with the same force.
Combretum platypetalum African plant in the family Combretaceae; the seeds cause vomiting, incoordination and paralysis in the pig. Called also red wings.
combustion [*kəm-bus'chən*] rapid oxidation with emission of heat.
Comeback Australian breed of wool sheep, bred by crossing Merino with Corriedale, Polwarth or Zenith sheep; wool is 21–25 microns. It is a registered breed, but the term is more commonly used in the sense of a type of sheep produced by crossbreeding a crossbred Merino back to Merino.
comedo [*kom'ə-do*] pl. *comedones;* a blackhead; a plug of keratin and sebum within the dilated orifice of a hair follicle frequently containing bacteria. Found in feline and canine **acne**, **hyperadrenocorticism**, Schnauzer comedo syndrome (see below).
Schnauzer c. syndrome a condition in which numerous comedones form in the skin over the back of certain predisposed Schnauzer dogs, usually of the miniature variety. The cause is unknown but believed to be an inherited disorder of keratinization.
comedomastitis [*kom"ə-do-mas-ti'tis*] mammary duct ectasia.
comes [*ko'mēz*] pl. *comites* [L.] an artery or vein accompanying another vessel or nerve.
comet-tail in ultrasonography, a type of reverberation artifact, caused by a number of small, highly reflective interfaces, such as gas bubbles.
comfrey [*kom'fre*] see ***Symphytum***.
rough c. *Symphytum asperum*.
Russian c. *Symphytum* x *uplandicum*.
command points in acupuncture, specific points on each meridian which correspond to each of the five phases of the five elements.
commensal [*ko-men'səl*] 1. living on or within another organism, and deriving benefit without harming or benefiting the host individual. 2. a parasitic organism that causes no harm to the host.
commensalism [*ko-men'səl-iz"əm*] symbiosis in which one population or individual is benefited and the other is neither benefited nor harmed.
commingle to mingle together, e.g. cattle mingling with deer.
comminuted [*kom'ĭ-ˈəd*] broken or crushed into small pieces, as a comminuted fracture.
comminution [*kom"ĭ-noo'shən*] the act of breaking, or condition of being broken, into small fragments.
commissure, commissura [*kom'ĭ-shər, kom"ĭ-su'rə*] a site of union of corresponding parts, as the angle of the lips or eyelids; used also with specific reference to the sites of junction between adjacent cusps of the heart valves, cerebral hemispheres, etc.

C-70: Comminuted fracture of the tibia. From Slatter D, Textbook of Small Animal Surgery, 3rd Edition. Saunders, 2002.

VetBooks.ir

brain c. the bands of fibers connecting the parts of the two cerebral hemispheres. They include the **corpus** callosum, the largest commissure, a rostral commissure which is part of the paleopallium and the fornical commissure which is related to the archipallium, the caudal collicular commissure which connects the caudal colliculi (corpora quadrigemina). Called also cerebral commissure.

cerebral c. see brain commissure (above).

fornical c. interconnection between the right and left hippocampi. Called also fornical commissure.

habenular c. interconnection between the right and left habenular nuclei.

middle c. a band of gray matter joining the optic thalami; it develops as a secondary adhesion and may be absent.

posterior c. a large fiber bundle crossing from one side of the cerebrum to the other dorsal to where the aqueduct opens into the third ventricle.

spinal cord c. the gray and white commissures which connect the two sides of the spinal cord.

commissurorrhaphy [*kom"ĭ-shər-or'ə-fe*] suture of the components of a commissure, to lessen the size of the orifice.

commissurotomy [*kom"ĭ-shər-ot'ə-me*] surgical incision or digital disruption of the components of a commissure to increase the size of the orifice.

mitral c. the breaking apart of the adherent leaves (commissure) of the mitral valve.

commodities in cattle feeding, a term used for feedstuffs such as cotton seed hulls, brewers grains, etc. that are usually by-products from other food industries.

common [*kom'ən*] a shared structure, function, disease. See also under specific name of the item, e.g. atrioventricular **canal**.

c. pathway see **coagulation** pathways.

c. source a point from which a number of animals are infected or affected. The point from which a common source or point epidemic begins.

c. stonecrop see ***Sedum acre***.

c. sucker a fish. See ***Catostomus commersoni***.

Commonwealth Agriculture Bureaux (CAB) see **CAB International.**

commonwealth weed ***Senecio*** *bipinnattisectus*.

communicability transmissibility; ability to spread from infected to susceptible hosts.

c. period the time during which the patient is infectious to others.

communication communication between animals depends on sight and hearing and, especially in dogs, on the sense of smell. The matters about which animals communicate include (1) for recognition between dam and newborn; (2) for mating; (3) for initiating aggression or welcome; (4) for signaling danger or safety. Dogs have several skills taht allow them to respond to different signals given by humans and use human pointing, body posture, gaze direction, touching or marking as cues. See also **vocalization**.

auditory c. communication by all kinds of vocalization.

chemical c. communication by smell, especially by pheromones.

visual c. besides size and color other modes of visual communication which are of great importance in animal life include stance, demeanor, behavior, and the synthesis of all of these in 'body language'.

community [*kə-mu'nĭ-te*] a group of individuals living in an area, having a common interest, or belonging to the same organization.

c. adoption curve graphic display of the rate at which persons in a community adopt new techniques and strategies.

compact cattle [*kom'pakt, kəm-pakt'*] dwarf cattle.

compaction [*kəm-pak'shən*] packing together as in twin births when both fetuses engage the pelvis at the same time, in prolonged constipation in dogs, and in compaction of endochondral bone as a part of normal bone modeling.

companion animal dogs, cats, pleasure horses, birds, mice, guinea pigs and more exotic species kept by humans for company, amusement, psychological support, extrovert display and all of the other functions that humans need to share with animals of other species; companions who will not take emotional or psychological advantage of the person and will, for the most part, stay faithful.

companionship the faculty possessed by most truly domesticated animals. They are social creatures and have a great need for the companionship of other animals. Animals in groups are quieter and more productive as a rule.

comparative a study based on the use of comparison.

c. economic analysis comparison of the performance of an enterprise such as a farm with the performance of a peer group of enterprises.

c. medicine the study of human disease by comparison with the diseases of animals, depending largely on work with naturally occurring diseases of animals that are models for human diseases. May be confined to specialty areas, such as dermatology or ophthalmology. The reverse attitude also applies but not in the same positive sense that humans can be used as experimental animals.

comparison the basis of analytical epidemiology, the statistical comparison between groups.

c. groups the groups between which a statistical comparison is to be made.

c. population the population in which a comparison between groups is to be conducted. All of the groups to be used comprise the population.

compartment [*kəm-pahrt'mənt*] a part of the body as a whole and divided from the rest by a physical partition.

fluid c. that liquid part of the body excluded by cell membranes. Includes intravascular and intercellular compartments.

stomach c's. components of the camelid stomach; see **stomach** compartments.

c. syndrome muscles which are contained in an aponeurotic sheath may be subjected to serious ischemia as a result of increase in the size of the muscle as a result of vigorous muscular activity.

compartmental muscle compression syndrome see **compartment** syndrome.

compatible [*kəm-pat'ĭ-bəl*] capable of existing together without adverse reaction. In therapeutics drugs that can be administered together without reacting together so as to destroy each other's effectiveness.

compensation [*kom"pən-sa'shən*] the counterbalancing of any defect of structure or function. 1. in cardiology, the maintenance of an adequate blood flow without distressing signs. 2. in preventive medicine, the payment of farmers for losses incurred by the destruction of their livestock when controlling an infectious disease.

depth-gain c. see time gain compensation (below).

time gain c. (TGC) in ultrasonography, electronic amplification of returning sound waves, which are weaker because they come through deeper structures, is necessary so there is an even image density through the field. This is usually represented graphically by a TGC curve on most machines.

compensatory [*kəm-pen'sə-tor"e*] pertaining to or emanating from compensation.

c. hypertrophy impaired function of one organ in a paired organ system or of part of an organ in a single organ system is followed by enlargement of the surviving organ or tissue so that functional capacity is maintained.

competent [*kom'pə-tənt*] able.

c. bacterial cells able to take up DNA.

competitive the relationship in which two or more entities contend for association with another.

c. exclusion the feeding of non-pathogenic bacteria to food animals and poultry in order to reduce colonization of pathogenic bacteria in the gastrointestinal tract through bacterial antagonism.

c. inhibitors compounds, often structural analogs of the substrate, that bind reversibly to an enzyme denying the substrates access to the active site and slowing the rate of the reaction.

complement [*kom'plə-mənt*] a complex of enzymatic proteins occurring in normal serum that are triggered in a cascade manner by, and interact with, antibody–antigen complexes, producing lysis when the antigen is an intact cell. Complement comprises 25 to 30 discrete proteins, labeled numerically as C1 to C9, and by letters, i.e. B, D, P, etc., and with C1 being divided into subcomponents C1q, C1r and C1s. Components C3 and C5 are involved in the generation of anaphylatoxin and in the promotion of leukocyte chemotaxis, the result of these two activities being the inflammatory response. C1 and C4 are involved in the neutralization of viruses. The components also combine in various sequences to participate in other biological activities, including antibody-mediated immune lysis, phagocytosis, opsonization and anaphylaxis. The complement system is known to be activated by the **immunoglobulins** IgM and IgG.

alternate c. pathway, alternative c. pathway the sequence in which complement components C3 and C5 to C9 are activated

without participation by C1, C2 and C4 or the presence of an antibody–antigen complex.

c. cascade the sequence of reactions, each being the catalyst for the next, that leads to the terminal complement pathway and cell lysis. There are two pathways for activation of C3, the 'classical' (below) and the 'alternate' (above).

classical c. pathway the complement activation pathway in which all of the complement components C1 to C9 participate and is triggered by antibody–antigen complexes.

c. deficiency various complement components may be deficient without serious effects on the host. C3 deficiency is most severe and occurs in humans, Brittany spaniels and Finnish-Landrace lambs. Increased susceptibility to infections results.

c. fixation tests utilize complement and specific antigen-antibody reactions to determine the presence of specific antibodies in the blood by detection of hemolysis. Involves two stages. In the first, also referred to as the test system, antigen is mixed usually with serial dilutions of a test serum in the presence of complement. If the serum contains antibody, i.e. is positive, an antibody–antigen complex is formed which also activates (fixes) complement. In the second stage, also called the indicator system, sheep red blood cells coated with specific, usually rabbit anti-sheep red blood cell antibody are added. The red blood cells are said to be sensitized. If antibody was not present in stage 1, then the free complement lyses the sensitized sheep red blood cells. The basis of many serological tests including those for glanders, tuberculosis and contagious bovine pleuropneumonia. Called also Bordet–Gengou phenomenon. See also **immunity**.

c. regulatory proteins a set of at least seven proteins that are present in plasma (C1 INH, C4b-binding protein, factor H and factor I) or present in cell membranes (decay-accelerating factor [DAF], membrane cofactor protein [MCP] and homologous restriction factor [HHF]) that modulate the complement proteins and protect 'innocent' bystander cells and tissues from complement damage.

terminal c. pathway the final stages of complement activation in which C5b, C6, C7, C8 and C9 are activated; common to both the alternate and classical pathways; results in formation of the attack complex which forms pores in cell membranes.

complementarity the relationship between bases in the DNA double helix whereby every base on one strand is matched to a complementary base on the other strand by hydrogen bonds.

c.-determining region (CDR) restricted regions within the variable regions of antibodies that bind to antigenic determinants.

complementary, alternative, and integrative therapies [*kom"plə-men'tə-re*] defined by the American Veterinary Medical Association as a heterogeneous group of preventive, diagnostic, and therapeutic philosophies and practices, which at the time they are performed may differ from current scientific knowledge, or whose theoretical basis and and techniques may diverge from veterinary medicine routinely taught in accredited veterinary medical colleges, or both. These therapies incude, but are not limited to, veterinary acupuncture, acutherapy, and acupressure; veterinary homeopathy; veterinary manual or manipulative therapy (i.e. therapies based on techniques practiced in osteopathy, chiropractic medicine, or physical medicine and therapy); veterinary nutraceutical therapy; and veterinary phytotherapy.

complementary and alternative medicine (CAM) [*kom"plə-men'tə-re*] see **complementary, alternative, and integrative therapies**. See also **acupuncture**, **aromatherapy, Ayurvedic medicine, Bach flower therapy**, **bioenergetic medicine**, **traditional Chinese medicine**, **chiropractic**, **ethnoveterinary medicine**, **herbal medicine**, **holistic medicine**, **homeopathy**, **integrative medicine**, **magnetic field therapy**, **massage** therapy, naturopathic medicine, **nutraceutical** medicine, **orthomolecular** therapy.

complementation [*kom"plə-men-ta'shən*] infection of the same cell by two viruses in which one provides a gene product which the other requires.

α-complementation a method for selecting bacteria that have been transformed with a plasmid vector in the pUC series which carries the *N*-terminal coding sequence for β-galactosidase of the *lac* operon.

complete blood count (CBC) a complete assessment of circulating elements in the peripheral blood. Includes a quantitative report on the cellular elements, hemogolobin concentration, packed cell volume, red blood cell indices and a report on red blood cell morphology. See also **blood** count .

complex [*kom'pleks*] 1. the sum or combination of various things, like or unlike, as a complex of clinical signs. 2. that portion of an electrocardiographic tracing that represents the systole of an atrium or ventricle.

antibody–antigen c. a complex formed by the combining of antibody and antigen. Called also immune complex.

Ghon c. see primary complex (below).

Golgi c. a complex cellular organelle involved in the synthesis of glycoproteins, lipoproteins, membrane-bound proteins and lysosomal enzymes. See also **Golgi apparatus**.

immune c. antibody–antigen complex.

major histocompatibility c. (MHC) see major **histocompatibility** complex.

multienzyme c. the bringing together of all of the enzymes involved in a series of reactions such that the product of enzyme A is passed directly to enzyme B and so on to the final product.

olivary nuclear c. gray matter located in the medulla oblongata dorsal to the pyramidal tracts; an important part of the motor feedback regulatory mechanism.

primary c. the combination of a parenchymal pulmonary lesion and a corresponding lymph node focus, occurring in primary tuberculosis. Similar lesions may also be associated with other mycobacterial infections and with fungal infections. Called also Ghon complex.

compliance [*kom-pli'əns*] 1. the quality of yielding to pressure or force without disruption, or an expression of the measure of ability to do so, as an expression of the distensibility of an air- or fluid-filled organ, e.g. the lung or urinary bladder, in terms of unit of volume per unit of pressure. The compliance of the lungs (C_L) and thorax (C_T) determine the elastic resistance to ventilation. The total compliance of the lungs and thorax (C_{LT}) is given by the formula $1/C_{LT} = 1/C_L + 1/C_T$. C_L is measured by determining the intrapleural pressure at different end-inspiratory volumes. A balloon-tipped catheter is used to determine the intrapleural pressure, which is transmitted through the soft wall of the esophagus. C_L is usually divided by the functional residual capacity to give the specific compliance. Lung compliance is decreased in congestive heart failure and interstitial lung disease and increased in emphysema. C_{LT} can be measured by determining the change in lung volume for various amounts of pressure difference between the mouth and chest surface using a body plethysmograph. 2. The willingness to follow a prescribed course of treatment or the extent to which owners follow the veterinary advice given.

blood vessel c. the ability of each blood vessel to expand, or contract, to best accommodate a particular volume, and a particular hydrostatic pressure of blood depends on the proportional composition, and the distribution, of its content of collagen, elastin, smooth muscle.

C. Policy Guide a 1984 addition to the (US) Federal Food, Drug and Cosmetic Act which allows for the extralabel use of drug products, approved for use in other species, to be used in animals.

complication [*kom"plĭ-ka'shən*] 1. a disease(s) concurrent with another disease. 2. the occurrence of two or more diseases in the same patient. 3. the occurrence of a second disease as a consequence of the first.

component therapy [*kom-po'nənt*] in transfusion medicine, use of just that component of blood which is required, e.g. whole blood, packed red blood cells, or plasma.

composite [*kəm-poz'it*] a variety of resins used in restorative dentistry.

composite milk samples [*kəm-poz'it*] a specimen is taken from each of the four quarters, or the two halves in ewes, does and mares, into the same sample bottle. Contrast with quarter samples.

compound [*kom'pound*] 1. made up of diverse elements or ingredients. 2. a substance made up of two or more materials. 3. in chemistry, a substance made up of two or more elements in union. The elements are united chemically, which means that each of the original elements loses its individual characteristics once it has combined with the other element(s).

c. 469 see **isoflurane**.

c. 1080 see **sodium** fluoroacetate.

c. 1081 see **fluoroacetamide**.

c. granular corpuscle see **gitter cells**.

compress [*kom'prəs*] a square of gauze or similar dressing, for application of pressure or medication to a restricted area, or for local applications of heat or cold.

C

compression [*kom-presh'ən*] 1. the act of pressing upon or together; the state of being pressed together. 2. in embryology, the shortening or omission of certain developmental stages.

c. band pulled tightly across an animal on an X-ray table to reduce thickness, restrict respiratory movement and restrain the patient. Both ends of the band are fixed to the table and there is a mechanism for tightening it. May be used to apply pressure to an organ such as the urinary bladder to impede filling with excreted dye, but in other applications has the disadvantage of distorting organs and their disposition.

c./distraction methods a stress-radiographic method of positioning dogs for the assessment of hip laxity for the diagnosis of hip dysplasia. One radiograph is taken with the femoral heads compressed into the acetabula. The other position is with maximal lateral displacement of the femoral heads using a special device for leverage.

hourglass c. in **cervical** spondylomyelopathy (wobbler syndrome), characteristic combination of dorsal and ventral compression of the cervical spinal cord caused by a combination of hypertrophy of the anulus fibrosus, hypertrophy of the ligamentum flavum and degenerative disease of articular facets.

c. plating an internal fixation method of treating fractures by the application of plates across the fracture lines and fixing them in place with specially designed screws. The objective is to provide extreme stability of the fracture. Properly designed plates of the correct size for the patient and the use of screws with maximum holding power make the system independent of any additional form of support.

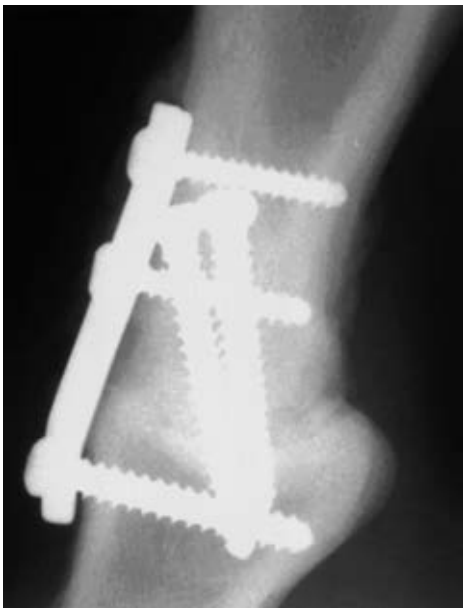
c. plating device a device that is connected to an already fixed end of a compression plate and then connected to the other bone fragment so as to obtain as complete compression as possible. Not commonly used when modern dynamic compression plates are utilized.

spinal cord c. compression of the cord by a space-occupying lesion in the vertebral canal causes an upper **motor** neuron syndrome below and a lower **motor** neuron syndrome at the site of the lesion.

comprest cattle dwarf cattle.

compromised 1. lacking adequate resistance to infection, or lacking the ability to mount an adequate immune response, owing to a course of treatment, e.g. immunosuppressive drugs or infections, irradiation, or to an underlying disorder, e.g. leukemia. 2. lacking a sufficient blood supply to remain viable.

Compton effect [*komp'tən*] one of the three kinds of interaction when ion-pair formation occurs as X-rays pass through an absorbing medium. The interacting photons pass on in a new direction (Compton scatter) having given up part of their energy in ionizing an atom in the absorbing medium (Compton absorption). Important in the upper range of X-ray energies used in veterinary radiography.



C-71: Compression screws used in fracture repair in horses. From Hinchcliff KW, Kaneps AJ, Geor RJ, Equine Sports Medicine and Surgery. Saunders, 2004.

Compton metabolic profile test [*komp'tən*] a test based on the concept that the nutritional status of an animal can be estimated by the chemical measurement of some of the components of the blood. It is used to determine the need for variation in the diet of the animal or herd and is thought to be more accurate and to be effective much earlier than the clinical assessments that are more customary as preventive measures. The testing procedure includes the collection of blood samples on a number of occasions during the year and from cows in various stages of nutritional and lactational stress. Only a small group of cows is examined and proper statistical precautions are taken to ensure that conclusions drawn will be valid. A large number of biochemical estimations are carried out on the blood samples, and in some instances on urine samples, so that the animals' nutritional and metabolic status with respect to most of the significant metabolites can be assessed.

compulsive [*kom-pul'siv*] the state of being subject to compulsion.

c. drinking see primary **polydipsia**.

c. rolling an involuntary movement in which the recumbent patient persists in rolling, always in the same direction, until it meets an obstruction.

c. walking affected animals walk oblivious to their surroundings. They appear to be blind, walk into objects, headpress against them and stay in this position for long periods, are oblivious to danger and may die of misadventure. They may attempt to climb a wall and fall over backwards. Common causes are hepatic encephalopathy and increased intracranial pressure.
